During Simeon's administration seven miracles are said to have taken place. A blessing rested (1) on the offering of the first-fruits, (2) on the two sacrificial loaves, and (3) on the loaves of showbread, in that, although each priest received a portion no larger than an olive, he ate and was satiated without even consuming the whole of it; (4) the lot cast for God (see Lev. xvi. 8) always came into the right hand; (5) the red thread around the neck of the ram invariably became white on the Day of Atonement; (6) the light in the Temple never failed; and (7) the fire on the altar required but little wood to keep it burning (Yoma 39b; Men. 109b; Yer. Yoma vi. 3). Simeon is said to have held office for forty years (Yoma 9a; Yer. Yoma i. 1, v. 2; Lev. R. xxi.). On a certain Day of Atonement he came from the Holy of Holies in a melancholy mood, and when asked the reason, he replied that on every Day of Atonement a figure clothed in white had ushered him into the Holy of Holies and then had escorted him out. This time, however, the apparition had been clothed in black and had conducted him in, but had not led him out—a sign that that year was to be his last. He is said to have died seven days later (Yoma 39b; Tosef., Soṭah, xv.; Yer. Yoma v. 1).

Simeon the Just is called one of the last members of the Great Synagogue, but it is no longer possible to determine which of the four who bore this name was really the last.

Elegy by Ben Sira.

The personality of Simeon the Just, whose chief maxim was "The world exists through three things: the Law, worship, and beneficence" (Ab. i. 2), and the high esteem in which he was held, are shown by a poem in Ecclus. (Sirach) l., which compares him, at the moment of his exit from the Holy of Holies, to the sun, moon, and stars, and to the most magnificent plants. This poem appeared with certain changes in the ritual of the evening service for the Day of Atonement, where it begins with the words אמת מה נהדר; a translation of it is given in Grätz, "Gesch." ii. 239, and in Hamburger, "R. B. T." ii. 111. After Simeon's death men ceased to utter the Tetragrammaton aloud (Yoma 30b; Tosef. Soṭah, xiii.).

W. B. J. Z. L.

SIMEON B. LAḲISH (called also **Resh Laḳish**): One of the two most prominent Palestinian amoraim of the second generation (the other being his brother-in-law and halakic opponent R. Johanan); born *c.* 200; died *c.* 275. Nothing is known of his ancestry except his father's name. According to Grätz ("Gesch." v. 240), his birthplace was Bostra, east of the Jordan; yet even from early youth he appears to have lived in Sepphoris, where he studied with R. Johanan. Like the latter, he ascribed his knowledge of the Torah to his good fortune in having been privileged to see the patriarch Judah ha-Nasi (Yer. Ber. 63a). According to Halevy ("Dorot ha-Rishonim"), he was a pupil of R. Judah Nesiah (grandson of Rabbi), in whose name he transmits many sayings. Bacher supposes that he was a pupil of Bar Ḳappara, since he often hands down sayings in his name ("Ag. Pal. Amor." i. 340). He appears also to have attended the seminary of R. Hoshaiah, whom he cites (Ḳid. 80a; Me'i. 7b; Bek. 13a), questions (Yeb. 57a), and calls the "father of the Mishnah" (Yer. B. Ḳ. 4c).

His Teachers.

Many stories are told of Simeon's gigantic strength and of his corpulence. He was accustomed to lie on the hard ground, saying, "My fat is my cushion" (Giṭ. 47a). Under the stress of unfavorable circumstances he gave up the study of the Torah and sought to support himself by a worldly calling. He sold himself to the managers of a circus ("ludii," "ludiarii"), where he could make use of his great bodily strength, but where also he was compelled to risk his life continually in combats with wild beasts (*ib.*). From this low estate he was brought back to his studies by R. Johanan. It is said that the latter saw him bathing in the Jordan, and was so overcome by his beauty that at one bound he was beside him in the water. "Thy strength would be more appropriate for studying the Law," said R. Johanan; "And thy beauty for women," answered Resh Laḳish. Thereupon R. Johanan said, "If thou wilt turn again to thy studies I will give thee to wife my sister, who is still more beautiful." Resh Laḳish agreed, and R. Johanan led him back to a life of study (B. M. 84a). R. Johanan might be called a teacher of R. Simeon b. Laḳish (Ḥul. 139a; Ber. 31a); but the latter, through his extraordinary talent and his exhaustless diligence, soon attained so complete a knowledge of the Law that he stood on an equal footing with R. Johanan. They are designated as "the two great authorities" (Yer. Ber. 12c). While R. Johanan was still in Sepphoris, teaching at the same time as Ḥanina, Simeon b. Laḳish stood on an equality with him and enjoyed equal rights as a member of the school and council (Yer. Sanh. 18c; Yer. Niddah ii. 50b).

Relations with R. Johanan.

When R. Johanan went to Tiberias and founded an academy there, Simeon accompanied him and took the second position in the school (comp. B. Ḳ. 117a). He exceeded even R. Johanan in acuteness, and the latter himself admitted that his right hand was missing when R. Simeon was not present (Yer. Sanh. ii. 19d, 20a). "When he discussed halakic questions it was as if he were uprooting mountains and rubbing them together," says 'Ula of him (Sanh. 24a). R. Johanan was often compelled by Simeon's logic to surrender his own opinion and accept that of Simeon (Yer. Yoma 38a), and even to act in accordance with the latter's views (Yer. 'Er. 18c). Yet it is said in praise of R. Simeon that all his objections to R. Johanan's conclusions were founded on the Mishnah, and that with him it was not a question of showing himself to be in the right, but of securing a clear and well-established decision, and that when he could find no support for his opinion he was not ashamed to abandon it (Yer. Giṭ. iii. 44d). He had a strong love of truth and an unusually courageous way of saying what he thought. He even declared to the patriarch Judah Nesiah that fear of the latter would never induce him to keep back God's word or any opinion derived from it (Yer. Sanh. 20a); and once he ventured to convey a veiled rebuke to the patriarch for avarice (Gen. R. lxxviii. 16). Neither did he hesitate to revoke decisions of his colleagues, including R. Johanan, even when action had already been taken in accordance with those decisions (Yer. Ket. 32d, 37a; B. B. 16b; Ket. 54b, 84b). On one occasion, when R. Johanan presented a halakic demonstration before R. Yannai, and the latter praised him for it, Simeon boldly declared, "In spite of R. Yannai's great praise, R. Johanan's opinion is not correct" (Yer. Soṭah ii. 18b). He would defend his views fearlessly before the whole faculty (Ḳid. 44a), and sometimes he ventured to give a decision that conflicted with the Mishnah (Yer. Ter. vii. 44c; Yer. Ḥag. iii. 79c). Nevertheless, his opinions, when they differed from those of R. Johanan, were not recognized as valid, except in three cases mentioned in the Babylonian Talmud (Yeb. 36a).

His Independence of Judgment.

No one equaled Simeon ben Laḳish in diligence and eagerness to learn. It was his custom regularly to repeat a section from the Mishnah forty times (Ta'an. 8a); he boasted that even R. Ḥiyya, who was renowned for his diligence, was no more diligent than he (Yer. Ket. xii. 3). In order to urge his pupils to continual industry, he often quoted a proverb which he ascribed to the Torah: "If thou leavest me one day, I shall leave thee for two" (Yer. Ber. ix. 14d). His conscientiousness and delicately balanced sense of honor are also celebrated. He avoided association with people of whose probity he was not fully convinced; hence the testimony of any one allowed to associate with Simeon b. Laḳish was accredited even in the absence of witnesses (Yoma 9a). Simeon ben Laḳish was faithful to his friends, and was ever ready to render them active assistance. This is shown by the way in which, at the risk of his own life, he rescued R. Assi, who had been imprisoned and was regarded as practically dead by his colleagues (Yer. Ter. 46b). Once his vigorous interference saved R. Johanan's property from injury (*ib.*).

His Haggadot.

Examples of His Exegesis.

The independence which Simeon ben Laḳish manifested in the discussion of halakic questions was equally pronounced in his treatment of haggadic matters. In haggadah, also, he held a prominent position, and advanced many original and independent views which struck his contemporaries with amazement and which did not win respect until later. His haggadot include exegetical and homiletical interpretations of the Scriptures; observations concerning Biblical characters and stories; sayings concerning the Commandments, prayer, the study of the Law, God, the angels, Creation, Israel, and Rome, Messianic and eschatological subjects, as well as other dicta and proverbs. Some of his haggadic sentences are as follows: "Should the sons of Israel find rest with the people among whom they are scattered, they would lose their desire to return to Palestine, the land of their fathers" (Lam. R. i. 3). "Israel is dear to God, and He takes no pleasure in any one that utters calumnies against Israel" (Cant. R. i. 6). "The proselyte, however, is dearer to God than was Israel when it was gathered together at Sinai, because Israel would not have received the Law of God without the miracles of its revelation, whereas the proselyte, without seeing a single miracle, has consecrated himself to God and accepted the kingdom of heaven" (Tan., Lek Leka, ed. Buber, p. 32a). "The world exists only by virtue of the breath which comes from the mouths of school-children. The instruction of the young should not be interrupted, even by the building of a sanctuary" (Shab. 119b). "The words of the Torah can be remembered only by one who sacrifices himself for the sake of studying them" (Ber. 63b; Shab. 83b). "Israel took the names of the angels from the Babylonians during the period of the Exile, because Isaiah [vi. 6] speaks only of 'one of the seraphim,' without calling him by name; whereas Daniel names the angels Michael and Gabriel" (Yer. R. H. 56d). "Job never actually existed; he is only the imaginary hero of the poem, the invention of the poet" (Yer. Soṭah 20d).

Simeon ben Laḳish's haggadah is especially rich in maxims and proverbs: "No man commits a sin," says Simeon, "unless struck by momentary insanity" (Soṭah 3a). "Adorn [*i.e.*, instruct] thyself first; afterward adorn others" (B. M. 107b). "Greater is he that lends than he that gives alms; but he that aids by taking part in a business undertaking is greater than either" (Shab. 63a). "Do not live in the neighborhood of an ignorant man who is pious" (*ib.*). "Who commits the sin of adultery only with the eyes is an adulterer" (Lev. R. xxiii. 12; comp. a similar statement in Matt. v. 28).

In his haggadot Simeon frequently makes use of similes, some of which recall the days when he won a livelihood in the circus. In general, he spoke unreservedly of that time; yet an allusion to his earlier calling made by his colleague and brother-in-law R. Johanan wounded him so deeply that he became ill and died. This happened as follows: On one occasion there was a dispute as to the time when the different kinds of knives and weapons might be considered to have been first perfected. The opinion of Simeon ben Laḳish differed from that of R. Johanan, whereupon the latter remarked, "A robber knows his own tools" (B. M. 84a). R. Johanan alluded to Simeon's life as a gladiator, in which a knowledge of sharp weapons was a matter of course. This speech of R. Johanan's not only caused the illness and death of Simeon b. Laḳish, but it had also a disastrous influence on his reputation. The saying, which was certainly used figuratively, was taken literally by many later scholars, and the opinion became current that Simeon had been a robber, or even a robber chief, in his younger days, an opinion which found expression in Pirḳe Rabbi Eli'ezer (xliii.). Yet nowhere is there the slightest authority for such a statement (comp. Weiss, "Dor," iii. 84, and Bacher, *l.c.* i. 344, note 5). R. Johanan was in despair at the death of Simeon, and it is said that he kept calling, "Where is Bar Leḳisha, where is Bar Leḳisha?" He soon followed Simeon to the grave (B. M. 84a).

J. Z. L.
W. B.

SIMEON B. MENASYA: Tanna of the fourth generation, and contemporary of R. Judah ha-Nasi I., with whom he engaged in a halakic discussion (Beẓah 21a). He and Jose b. Meshullam formed a society called "Ḳehala Ḳaddisha" (the Holy Community), because its members devoted one-third of the day to the study of the Torah, one-third to prayer, and the remaining third to work (Yer. Ma'as. Sheni 53d; Eccl. R. ix. 9). Simeon b. Menasya is not mentioned in the Mishnah, his sentence in Ḥag. ii. 7 being a later addition; but some halakic sentences by him have been preserved elsewhere (Tosef., Kelim, B. B. iv. 10; Zeb. 94a, 97).

A larger number of his haggadic sentences have come down, including the following: Referring to Ps. xliv. 23, he says, "It is not possible for one to be killed every day; but God reckons the life of the pious as though they died a martyr's death daily" (Sifre, Deut. 32 [ed. Friedmann, p. 73a]). Prov. xvii. 14, he says, contains a rule for a judge desirous of effecting a compromise between two contending parties. Before the judge has heard the statements of both parties, or before he has made up his mind as to the nature of his decision, he may set aside the

Law and call upon the parties to settle the matter amicably. Afterward, however, he may not do so, but must decide according to the Law (Sanh. 6b). "Canticles was inspired by the Holy Ghost, while Ecclesiastes expresses merely the wisdom of Solomon" (Tosef., Yad. ii. 14). Especially noteworthy is Simeon's interpretation of Ex. xxxi. 14, "Ye shall keep the Sabbath therefore; for it is holy unto you." "The words 'unto you,'" he says, "imply that the Sabbath is given to you, and that you are not given to the Sabbath" (Mek., Ki Tissa [ed. Weiss, p. 109b]; comp. Mark ii. 27, where Jesus says, "The Sabbath was made for man, and not man for the Sabbath").

Bibliography: Heilprin, *Seder ha-Dorot*, ii. 271-272; Frankel, *Hodegetica in Mischnam*, p. 202; Brüll, *Einleitung in die Mischna*, i. 239-240; Bacher, *Ag. Tan.* ii. 489-494.

W. B. J. Z. L.

SIMEON OF MIZPAH: Tanna of the first generation; contemporary of R. Gamaliel I., together with whom he went to the bet din in the hall of hewn stone in order to learn a decision regarding the corner of the field ("pe'ah"; Pe'ah ii. 6). He is said to have made a collection of halakot referring to the services in the Temple on the Day of Atonement ("Seder Yoma"; Yoma 14b).

W. B. J. Z. L.

SIMEON BEN NANOS: Tanna of the second generation; contemporary of R. Ishmael and R. Akiba, with whom he often engaged in halakic discussions. He is often mentioned merely by the name "Ben Nanos." He acquired a high reputation on account of his intimate knowledge of Jewish civil jurisprudence; and R. Ishmael said that whoever wished to occupy himself with the study of this branch of the Law ought to learn from Simeon b. Nanos (B. B. x. 8). Several of Simeon's sayings bearing on civil law have been preserved (B. B. vii. 3, x. 8; Sheb. vii. 5), as well as some of his opinions on other halakic subjects (Bik. iii. 9; Shab. xvi. 5; 'Er. x. 15; Giṭ. viii. 10; Men. iv. 3). Neither the names of his teachers nor those of his pupils are known.

Bibliography: Frankel, *Hodegetica in Mischnam*, p. 129; Brüll, *Einleitung in die Mischna*, i. 132-133; Weiss, *Dor*, ii. 123; Heilprin, *Seder ha-Dorot*, ii. 363.

W. B. J. Z. L.

SIMEON B. NETHANEEL: Tanna of the first generation; pupil of R. Johanan b. Zakkai (Ab. ii. 8), and son-in-law of R. Gamaliel I. (Tosef., 'Ab. Zarah, iii. 10). He belonged to a noble priestly family; and his teacher, R. Johanan b. Zakkai, praised him for his piety and his fear of sinning (Ab. *l.c.*). Simeon held that the most important habit to be acquired by man is that of carefully considering the consequences of each one of his deeds; while the worst practise, which a person should be careful to shun, is that of not paying one's debts (Ab. ii. 9). No halakot by Simeon have been preserved; but the following sentence, indicating his great piety, has been handed down: "Never neglect to recite the 'Shema'' and the daily prayer; and when thou prayest beg mercy of God and be careful to commit no deed of which thine own conscience may accuse thee" (Ab. ii. 13).

Bibliography: Heilprin, *Seder ha-Dorot*, ii. 361; Frankel, *Hodegetica in Mischnam*, pp. 90-91; Brüll, *Einleitung in die Mischna*, i. 87.

W. B. J. Z. L.

SIMEON HA-PAḲOLI (הפקולי): Tanna of the second generation; contemporary of R. Gamaliel II. at Jabneh. He arranged the eighteen benedictions of the daily prayer (Shemoneh 'Esreh) in the sequence in which they have been handed down (Ber. 28a). The name "Paḳoli" is said to have been derived from Simeon's occupation, which was that of a dealer in flax and wool (Rashi on Ber. 18a). Nothing further is known concerning him.

Bibliography: Heilprin, *Seder ha-Dorot*, ii. 361; Brüll, *Einleitung in die Mischna*, pp. 97-98.

W. B. J. Z. L.

SIMEON B. PAZZI: Palestinian amora of the third generation. In Palestine he was called merely "Simon," this being the Greek form of his Hebrew name "Shim'on," but in Babylon he was generally called by his full name, Shim'on b. Pazzi. According to the tosafot (B. B. 149a, *s.v.* רב מרי), "Pazzi" was his mother's name; but according to "Yuḥasin," *s.v.* פזי, and Frankel ("Mebo," 121a), it was a masculine proper name, and, therefore, designated Simeon's father. According to Bacher, "Pazzi" was a family name which several other Palestinian amoraim bore. The Pazzi family, which lived at Tiberias, the seat of the patriarch, was highly respected; and Simeon, so far as is known, was its most important member. Later he lived in the south (Yer. Beẓah 60c), and was the pupil of Joshua b. Levi; but he held friendly intercourse with the authorities of the school of Tiberias, *e.g.*, Eleazar b. Pedat, Abbahu, and Ammi. Simeon lived for a time at Babylon, also, in the house of the exilarch. Here Ze'era requested him not to allow the abuses committed by the exilarchate to pass unreprehended, even though his reproof should prove ineffective (Shab. 55a). In Babylon he delivered haggadic lectures, some sentences of which have been preserved in Babli (Pes. 56a; Soṭah 41b; 'Ab. Zarah 18a).

Simeon was considered a halakic authority also. Rabbah b. Naḥmani was informed by his brothers in Palestine of a halakic decision in which Isaac, Simeon, and Oshaya concurred, this Simeon being taken to be Simeon b. Pazzi (Ket. 111b). Certain instructions which Simeon gave to the computers of the calendar have been preserved. He enjoined them to observe that as a rule neither the feast of the blowing of the shofar (New-Year) nor that of the willow (the seventh day of the Feast of Tabernacles) should fall on the Sabbath, but when necessary that one or the other should be set upon that day, the former rather than the latter should be chosen (Yer. Suk. 54b).

His Haggadah.

Simeon occupies an important position among his contemporaries, chiefly in the field of the Haggadah, both independent and transmitted. He handed down an unusually large number of sentences by his teacher Joshua b. Levi, of whose haggadot he is the principal transmitter. But he handed down also halakic sentences by Joshua (Ḥul. 45a). He furthermore transmitted halakot of Johanan, Simeon b. Laḳish, Ḥanina, Jose b. Ḥanina, Samuel b. Naḥman, Simeon b. Abba, and Bar Ḳappara (comp. Bacher, "Ag. Tan." ii. 438, note 6). His own haggadot contain exegetic and homiletic interpretations and comments, including parables, sentences, and maxims on God, the world, prayer, the study of the Law, Israel, and Rome.

His Exegesis.

The following are examples of Simeon's haggadot: "When God was about to create the first man He consulted with His attendant angels, of whom some were for and some against the proposed creation: 'Mercy and truth are opposed to each other: benevolence and peace have taken up arms against each other' [Ps. lxxxv. 11, Hebr.]. Mercy said, 'Man shall be created; for he will perform works of mercy.' Truth said, 'He shall not be created; for he is full of deceit.' Benevolence said, 'He shall be created; for he will do good works.' Peace said, 'He shall not be created; for he is filled with dissension.' Then God took Truth and threw her to the ground [Dan. viii. 12]. But the angels said, 'Why, O Lord of the world, dost thou thus dishonor Truth? Cause her to spring out of the earth' " (Ps. lxxxv. 12; Gen. R. viii. 5). Simeon explains the word וייצר, employed in Gen. ii. 7 in narrating the creation of man, as if it were composed of the two words "wai" and "yeẓer" or "yoẓer." "It, therefore, implies," he says, "the complaint of man wavering between the sensual and the divine: 'Wo to me because of my impulses ["yeẓer"]; wo to me because of my Creator ["yoẓer"]' " (Ber. 61a; 'Er. 18a). The sentence "but Abraham stood yet before the Lord" (Gen. xviii. 22) is, according to Simeon, an emendation of the scribes, the original having read, "The Eternal stood yet before Abraham" (Gen. R. xlix. 12). The prophecies of Beeri, Hosea's father, consisted of two verses only; and since these were not sufficient to form a separate book, they were included in the Book of Isaiah, being the verses Isa. viii. 19-20 (Lev. R. vi. 6). "When the patriarch Jacob was about to reveal the Messianic time to his children [Gen. xlix. 1], the presence of God departed from him, whereupon he said: 'Has an unworthy child sprung from me, as Ishmael sprang from my grandfather Abraham, and as Esau from my father Jacob?' In answer his sons exclaimed, '"Hear, O Israel: the Lord our God is one Lord" [Deut. vi. 5]; as only one God is in thy heart, so only one God is in ours.' Jacob then said, 'Praised be the name of the glory of His kingdom for ever and ever' " (Pes. 56a, according to the reading in Rabbinowitz, "Variæ Lectiones," *ad loc.*). "Phinehas is called in Judges ii. 1 the angel of the Lord because his face shone like a torch when the Holy Ghost was resting upon him" (Lev. R. i. 1). "The Dardanoi [Romans] are designated by the term 'Dodanim' [Gen. x. 4] or 'Rodanim' [I Chron. i. 7, Hebr.]. The first of these terms connotes the people as the cousins of Israel; the second, as its oppressors" (Gen. R. xxxvii. 1). "Wherever a story in Scripture begins with the words 'After the death of . . . it came to pass,' it refers to a retrogression, to a discontinuance of something that the deceased had brought about: *e.g.*, after Moses' death [Josh. i. 1] the manifestations of mercy [the well, the manna, and the protecting clouds] ceased; after the death of Joshua [Judges i. 1] Israel was again attacked by the remnant of the native population; and after Saul's death [II Sam. i. 1] the Philistines again entered the country" (Gen. R. lxii. 7).

SIMEON THE PIOUS. See SIMEON HE-ḤASID.

SIMEON BEN SAMUEL: Philosopher and cabalist of the fourteenth and fifteenth centuries; of French or German birth. He was the author of a work entitled "Adam Sikli," or "Hadrat Ḳodesh" (Freiburg ? 1560), a philosophical and theological treatise on the Decalogue, the thirteen attributes of God ("shelosh 'esreh middot"), and the thirteen articles of faith, with a commentary entitled "Gillayon." It is followed by a cabalistic meditation in the form of a prayer ("teḥinnah"). This work was written in 1400. One of his reasons for calling it "Hadrat Ḳodesh" is that the numerical value of the letters of its title, added to 7, the number of letters in the title, is equivalent to the numerical value of שמעון בן שמואל ז"ל יסדו. Extracts of the work were given by Hottinger in his "Grammatica Quatuor Linguarum" (Heidelberg, 1658), and by Wolf in his "Dissertatio de Libro מכתם לדוד" (Gera, 1716); in the latter they are accompanied by a Latin translation.

SIMEON BEN SAMUEL OF JOINVILLE: French tosafist and Biblical commentator of the thirteenth century. He is once referred to, erroneously, as Samson b. Samuel ("Sefer ha-Mordekai," B. B. ix., No. 639) and once as Shemaiah ("Haggahot Maimuniyyot" to Ishshut xxiv.). Simeon was a pupil of Isaac b. Samuel ha-Zaḳen (Meïr of Rothenburg, Responsa, No. 76) and the teacher of Eliezer b. Joel ha-Levi ("Sefer ha-Mordekai," Ḳid. iii., No. 530). As a tosafist he is generally quoted as Simeon of Joinville, or Simeon b. Samuel, but is sometimes referred to merely as Simeon (Tos. 'Er. 28b *et passim*). As a Biblical commentator he is quoted by Isaac b. Judah in his "Pa'neaḥ Raza" (section "Maṭṭot").

SIMEON BEN HA-SEGAN (called also simply **Ha-Segan**): Tanna of the second generation. Some halakic sayings of his have been preserved in the Mishnah, all of which have been transmitted by Simeon ben Gamaliel (Sheḳ. viii. 5; Ket. ii. 8; Men. xi. 9). He is perhaps identical with Simeon ben Kahana, in whose name Simeon ben Gamaliel also transmits halakic sayings (Tosef., Parah, xi. 6).

W. B. J. Z. L.

SIMEON BEN SHEṬAḤ: Teacher of the Law and president of the Sanhedrin during the reigns of Alexander Jannæus and his successor, Queen Alexandra (Salome). Simeon was a brother of the queen (Ber. 48a), and on this account was closely connected with the court, enjoying the favor of Alexander.

Vicissitudes Under Alexander Jannæus.

During the reign of this ruler the Sanhedrin consisted almost entirely of Sadducees, Simeon being the only Pharisee; nevertheless he succeeded in ousting the Sadducean members and in replacing them with Pharisees (Meg. Ta'an. x.). Having accomplished this, Simeon recalled from Alexandria the Pharisees who had been compelled to seek refuge there during the reign of John Hyrcanus, among these fugitives being Joshua b. Peraḥyah, the former president of the college (Soṭah 47a, ed. Amsterdam; comp. also Yer. Sanh. 23c and Ḥag. 41d). Joshua was elected president anew, and Simeon assumed the office of vice-president ("ab bet din"; see Weiss, "Dor," i. 135, note 1). Upon the death of Joshua, Simeon became president and Judah ben Ṭabbai vice-president.

The attitude of Alexander Jannæus toward the Pharisees, however, soon underwent a change; and they were again compelled to flee, even Simeon himself being obliged to go into hiding (Ber. 48a; a different reason for Simeon's flight is, however, given in Yer. Naz. 54b). About this time certain Parthian envoys came to Alexander's court and were invited to the king's table, where they noticed the absence of Simeon, by whose wisdom they had profited at previous visits. Upon the king's assurance that he would do the fugitive no harm, the queen caused her brother to return to the court. Upon his reappearance Simeon took his place between the royal couple with a show of self-consciousness which surprised the king; whereupon Simeon remarked, "The wisdom which I serve grants me equal rank with kings" (Yer. Naz. 54b; Ber. 48a).

Activity Under Alexandra.

Founded Popular Schools.

After his return Simeon enjoyed the king's favor, and when, upon the latter's death, Queen Alexandra succeeded to the rulership, Simeon and his party, the Pharisees, obtained great influence. Together with his colleague, Judah ben Ṭabbai, Simeon began to supersede the Sadducean teachings and to reestablish the authority of the Pharisaic interpretation of the Law. He is therefore justly called "the restorer of the Law," who "has given back to the crown of learning its former brightness" (Ḳid. 66a). Simeon discarded the penal code which the Sadducees had introduced as a supplement to the Biblical code (Meg. Ta'an. iv.); and almost all the teachings and principles introduced by him are aimed against the Sadducean interpretation of the Law. Of Simeon's enactments two were of especial importance. One consisted in the restriction of divorces, which were then of frequent occurrence. Simeon arranged that the husband might use the prescribed marriage gift ("ketubah") in his business, but that his entire fortune should be held liable for it (Yer. Ket. viii. 32c). Inasmuch as a husband of small means could ill afford to withdraw a sum of money from his business, Simeon's ruling tended to check hasty divorces. The other important act referred to the instruction of the young. Up to Simeon's time there were no schools in Judea, and the instruction of children was, according to Biblical precepts, left to their fathers. Simeon ordered that schools be established in the larger cities in which the young might receive instruction in the Holy Scriptures as well as in the traditional knowledge of the Law (Yer. Ket. *l.c.*).

His Son's Death.

Simeon was exceedingly strict in legal matters. Upon one occasion he sentenced to death eighty women in Ashkelon who had been convicted of sorcery. The relatives of these women, filled with a desire for revenge, brought false witnesses against Simeon's son, whom they accused of a crime which involved capital punishment; and as a result of this charge he was sentenced to death. On the way to the place of execution the son protested his innocence in so pathetic a manner that even the witnesses were moved to admit the falsity of their testimony. When the judges were about to liberate the condemned man he called their attention to the fact that, according to the Law, a witness must not be believed when he withdraws a former statement, and he said to his father, "If you desire that the welfare of Israel shall be strengthened by thy hand, then consider me as a beam on which you may tread without regret" (Yer. Sanh. 23b). The execution then proceeded. This sad event was probably the reason why Simeon issued a warning that witnesses should always be carefully cross-questioned (Ab. i. 9).

Simeon's fairness toward non-Jews is illustrated by the following narrative: Simeon lived in humble circumstances, supporting himself and his family by conducting a small business in linen goods. Once his pupils presented him with an ass which they had purchased from an Arab. On the neck of the animal they found a costly jewel, whereupon they joyously told their master that he might now cease toiling since the proceeds from the jewel would make him wealthy. Simeon, however, replied that the Arab had sold them the ass only, and not the jewel; and he returned the gem to the Arab, who exclaimed, "Praised be the God of Simeon ben Sheṭaḥ!" (Yer. B. M. ii. 8c: Deut. R. iii. 5).

W. B. J. Z. L.

SIMEON SHEZURI: Tanna of the second generation and pupil of R. Ṭarfon (Men. 31a; Tosef., Demai, v. 22). He was called "Shezuri" after his native place, Shizur, which is probably identical with Saijur, west of Kafr 'Anan (comp. Neubauer, "G. T." p. 278). Simeon's tomb is said to be in the vicinity of this place (Schwarz, "Tebu'at ha-Areẓ," p. 101). A few halakic sentences by him have been preserved in the Mishnah (Demai iv. 1; Sheb. ii. 8; Giṭ. vi. 5; Ḥul. iv. 5; Ker. iv. 3; Kelim xviii. 1; Ṭoh. iii. 2; Ṭebul Yom iv. 5); and the halakic practise follows his opinion (Men. 30b; Ḥul. 75b). Another noteworthy sentence by him also has been preserved (Naz. 45b).

W. B. J. Z. L.

SIMEON OF SHIKMONA: Tanna of the second generation and pupil of Akiba. He was a native of Shiḳmona, a locality in the vicinity of Mt. Carmel (see Neubauer, "G. T." p. 197). Only three sentences of his, exegetic ones, have been preserved. They were transmitted by his fellow pupil R. Ḥidḳa; and all of them express the principle that good and evil are brought about through the respective agencies of good and of evil persons. Thus the Sabbath-breaker mentioned in Num. xv. 32 was the cause of the law relating to the punishment for desecrating the Sabbath (Sifre, Num. 114 [ed. Friedmann, p. 34a]); the pious questioners described in Num. ix. 7 were the cause of the law concerning the Pesaḥ Sheni (Sifre, Num. 68 [ed. Friedmann, p. 17b]); and the demand of the daughters of Zelophehad led to the enunciation of the law relating to the inheritance of property (Sifre, Num. 133 [ed. Friedmann, p. 49b]).

W. B. J. Z. L.

SIMEON B. ṬARFON: Tanna of the second generation. Four exegetic sentences by him have been preserved: (1) "Ex. xxii. 11, 'Then shall an oath of the Lord be between them,' means that the person taking the oath and the one who causes him to do so are alike responsible if perjury is proved." (2) "Ex. xx. 10 should be read 'tan'if' = 'to contribute to the commission of adultery'; and the interdiction applies also to the furnishing of opportunity for adultery." (3) "In Deut. i. 27 [Hebr.] the word 'wa-teragenu,' which should be explained as Noṭariḳon, means: 'You spied out and desecrated God's dwelling among you.'" (4) "In Deut. i. 7 the Euphrates is called 'the great river' [although it is not really such] because it is the boundary river of Palestine, according to the proverb, 'Approach the anointed, and you yourself will smell of ointment'" (Sheb. 47b).

W. B. J. Z. L.

SIMEON OF TEMAN: Tanna of the second generation. He disputed with R. Akiba on a halakic sentence deduced from Ex. xxi. 18 (Tosef., Sanh. xii. 3; B. Ḳ. 90b). He was in collegial relations with R. Judah b. Baba (Beẓah 21a; Tosef., Beẓah, ii. 6). Some of his halakic sentences are included in the Mishnah (Yeb. iv. 13; Ta'an. iii. 7; Yad. i. 3); and a haggadic sentence by him also has been preserved, to the effect that God's intervention in dividing the sea at the time of the Exodus was deserved by Israel because of the covenant of the circumcision (Mek., Beshallaḥ, iii. [ed. Weiss, p. 35b]).

W. B. J. Z. L.

SIMEON B. YANNAI: Palestinian amora of the third century. He transmits a halakic saying of his father's which he had received from his sister, who had heard it uttered (Yer. Shab. 14b, 15d). Some of Simeon's haggadic explanations of Scriptural passages are extant, of which the following may be mentioned: On the passage in Ps. xii. 5, "now will I arise," he remarks: "As long as Jerusalem remains enveloped in ashes the might of God will not arise; but when the day arrives on which Jerusalem shall shake off the dust [Isa. lii. 2], then God will be 'raised up out of His holy habitation'" (Zech. ii. 17 [A. V. 13]; Gen. R. lxxv. 1). On Ps. cvi. 16 *et seq.* he says: "The people had decided to elect as their leaders Dathan and Abiram instead of Moses and Aaron [Num. xiv. 4], with the result that the earth opened and swallowed up Dathan and covered the company of Abiram" (Midr. Teh. to Ps. cvi. 5 [ed. Buber, p. 228a]).

W. B. J. Z. L.

SIMEON BEN YOḤAI: Tanna of the second century; supposed author of the Zohar; born in Galilee; died, according to tradition, at Meron, on the 18th of Iyyar (= Lag be-'Omer). In the Baraita, Midrash, and Gemara his name occurs either as Simeon or as Simeon ben Yoḥai, but in the Mishnah, with the exception of Ḥag. i. 7, he is always quoted as R. Simeon. He was one of the principal pupils of Akiba, under whom he studied thirteen years at Bene-Beraḳ (Lev. R. xxi. 7 *et al.*). It would seem, from Ber. 28a, that Simeon had previously studied at Jabneh, under Gamaliel II. and Joshua b. Hananiah, and that he was the cause of the quarrel that broke out between these two chiefs. But considering that about forty-five years later, when Akiba was thrown into prison, Simeon's father was still alive (see below), and that Simeon insisted upon Akiba's teaching him even in prison, Frankel ("Darke ha-Mishnah," p. 168) thinks Ber. 28a is spurious. Simeon's acuteness was tested and recognized by Akiba when he first came to him; of all his pupils Akiba ordained only Meïr and Simeon. Conscious of his own merit, Simeon felt hurt at being ranked after Meïr, and Akiba was compelled to soothe him with soft words (Yer. Ter. 46b; Yer. Sanh. i. 19a). During Akiba's lifetime Simeon was found occasionally at Sidon, where he seems to have shown great independence in his halakic decisions.

Pupil of Akiba.

The following incident of Simeon's stay at Sidon, illustrating both his wit and his piety, may be mentioned: A man and his wife, who, though they had been married ten years, had no children, appeared before Simeon at Sidon to secure a divorce. Observing that they loved each other, and not being able to refuse a request which was in agreement with rabbinical law, Simeon told them that as their wedding was marked by a feast they should mark their separation in the same way. The result was that both changed their minds, and, owing to Simeon's prayer, God granted them a child (Pesiḳ. xxii. 147a; Cant. R. i. 4). Simeon often returned to Akiba, and once he conveyed a message to him from his fellow pupil Ḥanina ben Ḥakinai (Niddah 52b; Tosef., Niddah, vi. 6).

Simeon's love for his great teacher was profound. When Akiba was thrown into prison by Hadrian, Simeon, probably through the influence of his father, who was in favor at the court of Rome, found a way to enter the prison. He still insisted upon Akiba's teaching him, and when the latter refused, Simeon jestingly threatened to tell his father, Yoḥai, who would cause Akiba to be punished more severely

(Pes. 112a). After Akiba's death Simeon was again ordained, with four other pupils of Akiba's, by Judah b. Baba (Sanh. 14a).

Anti-Roman Feeling.

The persecution of the Jews under Hadrian inspired Simeon with a different opinion of the Romans than that held by his father. On more than one occasion Simeon manifested his anti-Roman feeling. When, at a meeting between Simeon and his former fellow pupils at Usha, probably about a year and a half after Akiba's death (*c.* 126), Judah ben Ila'i spoke in praise of the Roman government, Simeon replied that the institutions which seemed so praiseworthy to Judah were for the benefit of the Romans only, to facilitate the carrying out of their wicked designs. Simeon's words were carried by Judah b. Gerim, one of his own pupils, to the Roman governor, who sentenced Simeon to death (according to Grätz, this governor was Varus, who ruled under Antoninus Pius, and the event took place about 161). Simeon was compelled to seek refuge in a cavern, where he remained thirteen years, till the emperor, possibly Hadrian, died (Yer. Sheb. ix. 38d; Shab. 33b; Pesiḳ. 88b; Gen. R. lxxix. 6; Eccl. R. x. 8; Esth. R. i. 9). Two different accounts of Simeon's stay in the cavern and of his movements after leaving it are given in Shabbat (*l.c.*) and in the five other sources just mentioned. The latter, of which Yer. Sheb. ix. 38d seems to be the most authentic, relate, with some variations, that Simeon, accompanied by his son Eleazar (in Yer. Sheb. Simeon alone), hid himself in a cavern near Gadara, where they stayed thirteen years, living on dates and the fruit of the carob-tree, their whole bodies thus becoming covered with eruptions. One day, seeing that a bird had repeatedly escaped the net set for it by a hunter, Simeon and his son were encouraged to leave the cavern, taking the escape of the bird as an omen that God would not forsake them. When outside the cavern, they heard a "bat ḳol" say, "Ye are [singular in Yer. Sheb.] free"; they accordingly went their way. Simeon then bathed in the warm springs of Tiberias, which rid him of the disease contracted in the cavern, and he showed his gratitude to the town in the following manner:

His Miracles.

Tiberias had been built by Herod Antipas on a site where there were many tombs (Josephus, "Ant." xviii. 2, § 3), the exact locations of which had been lost. The town therefore had been regarded as unclean. Resolving to remove the cause of the uncleanness, Simeon planted lupines in all suspected places; wherever they did not take root he knew that a tomb was underneath. The bodies were then exhumed and removed, and the town pronounced clean. To annoy and discredit Simeon, a certain Samaritan secretly replaced one of the bodies. But Simeon learned through the power of the Holy Ghost what the Samaritan had done, and said, "Let what is above go down, and what is below come up." The Samaritan was entombed; and a schoolmaster of Magdala (but comp. Buber, note 180, to Pesiḳ. x. 90a), who mocked Simeon for his declaration, was turned into a heap of bones.

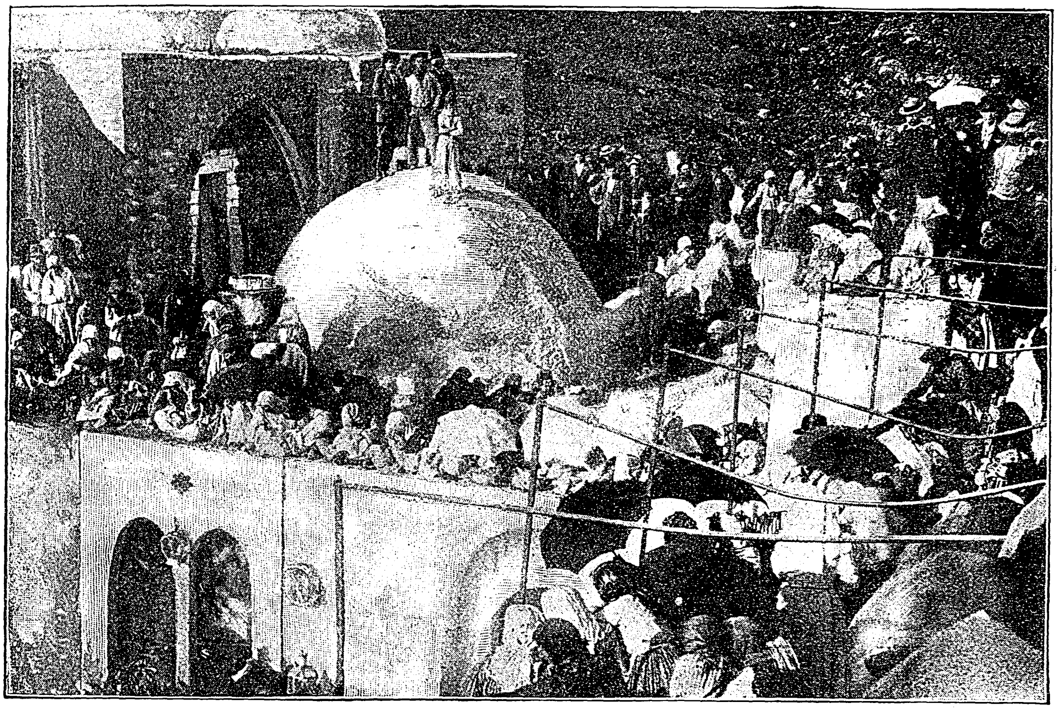
According to the version, in Shab. *l. c.*, Simeon and Eleazar hid in a cavern, whereupon a carob-tree and a spring miraculously appeared there. In order to spare their garments they sat naked in the sand, in consequence of which their skin became covered with scabs. At the end of twelve years the prophet Elijah announced to them the death of the emperor, and the consequent annulment of the sentence of death against them. When they came forth Simeon observed people occupied with agricultural pursuits to the neglect of the Torah, and, being angered thereby, smote them by his glances. A bat ḳol then ordered him to return to the cavern, where he and Eleazar remained twelve months longer, at the end of which time they were ordered by a bat ḳol to come forth. When they did so, Simeon was met by his son-in-law Phinehas b. Jair (comp., however, Zacuto, "Yuḥasin," ed. Filipowski, p. 46), who wept at seeing him in such a miserable state. But Simeon told him that he ought to rejoice, for during the thirteen years' stay in the cavern his knowledge of the Torah had been much increased. Simeon then, in gratitude for the miracle that had been wrought for him, undertook the purification of Tiberias. He threw some lupines into the ground, whereupon the bodies came to the surface at various places, which were then marked as tombs. Not only was the man who mocked at Simeon's announcement of the purification of Tiberias turned into a heap of bones, but also Simeon's pupil and delator, Judah b. Gerim.

School at Tekoa.

It appears that Simeon settled afterward at Meron, the valley in front of which place was filled, at Simeon's command, with gold dinars (Tan., Peḳude, 7; Ex. R. lii. 3; comp. Yer. Ber. ix. 13d; Pesiḳ. x. 87b; Gen. R. xxxv. 2). On the other hand, it is said that Simeon established a flourishing school at Tekoa, among the pupils of which was Judah I. (Tosef., 'Er. viii. [v.] 6; Shab. 147b). It has been shown by Grätz that this Tekoa evidently was in Galilee, and hence must not be identified with the Biblical Tekoa, which was in the territory of Judah (II Chron. xi. 6). Bacher ("Ag. Tan." ii. 76) endeavors to show that Tekoa and Meron were one and the same place.

As the last important event in Simeon's life it is recorded that, accompanied by Eleazar b. Jose, he was sent to Rome with a petition to the emperor for the abolition of the decree against the three main observances of the Jewish religion, and that his mission was successful (Me'i. 17b). The reason Simeon was chosen for this mission is stated (*ib.*) to have been that he was known as a man in whose favor miracles often were wrought. At Rome, too, Simeon's success was due to a miracle, for while on the way he was met by the demon Ben Temalion, who offered his assistance. According to agreement, the demon entered into the emperor's daughter, and Simeon exorcised it when he arrived at the Roman court. The emperor then took Simeon into his treasure-house, leaving him to choose his own reward. Simeon found there the vexatious decree, which he took away and tore into pieces (comp. "Tefillot R. Shim'on b. Yoḥai" in Jellinek, "B. H." iv. 117 *et seq.*, where, instead of "Ben Temalion," "Asmodeus" occurs). This legend, the origin of which apparently is non-Jewish, has been the subject of discussion by modern scholars. Israel Lévi (in "R. E. J." viii. 200 *et seq.*) thinks it is a variation of the legend, found in the "Acta Apostolorum Apocrypha" (ed. Tischendorf, pp. 246 *et seq.*), of the apostle Bartholomew exorcising a demon that had taken possession of the daughter of Polymnius, the King of India. Israel Lévi's opinion was approved by Joseph Halévy (in "R. E. J." x. 60 *et seq.*). Bacher (*ib.* xxxv. 285 *et seq.*) thinks there is another Christian legend which corresponds more closely to the Talmudic narrative, namely, that narrated by Simeon Metaphrastes in "Acta Sanctorum" (vol. ix., Oct. 22, 1896), according to which Abercius exorcised a demon from Lucilla, the daughter of Marcus Aurelius.

Simeon is stated to have said that whatever might be the number of persons deserving to enter heaven he and his son were certainly of that number, so that if there were only two, these were himself and his son (Suk. 45b; Sanh. 97b; comp. Shab. 33b). He is also credited with saying that, united with his son and Jotham, King of Judah, he would be able to free the world from judgment (Suk. *l.c.*; comp. Yer. Ber. ix. 13d and Gen. R. xxxv. 3 [where Simeon mentions Abraham and the prophet Ahijah of Shiloh, instead of his son and Jotham]). Thus, on account of his exceptional piety and continual study of the Law, Simeon was considered as one of those whose merit preserves the world, and therefore during his life the rainbow was never seen, that promise of God's forbearance not being needed (Yer. Ber. *l.c.*).



Traditional Tomb of Simeon ben Yoḥai During a Pilgrimage.
(From a photograph.)

His Halakot.

Simeon's halakot are very numerous; they are met with in all the treatises of the Talmud except Berakot, Ḥallah, Ta'anit, Nedarim, Tamid, and Middot. He greatly valued the teaching of his master Akiba, and he is reported to have recommended his pupils to follow his own system of interpretation ("middot") because it was derived from that of Akiba (Giṭ. 67a). But this itself shows that Simeon did not follow his teacher in every point; indeed, as is shown below, he often differed from Akiba, declaring his own interpretations to be the better (Sifre, Deut. 31; R. H. 18b). He was independent in his halakic decisions, and did not refrain from criticizing the tannaim of the preceding generations (comp. Tosef., Oh. iii. 8, xv. 11). He and Jose b. Ḥalafta were generally of the same opinion; but sometimes Simeon sided with Meïr (Kelim iii. 5; Me'i. 11a). Like the other pupils of Akiba, who, wishing to perpetuate the latter's teaching, systematized it in the foundation of the Mishnah (R. Meïr), Tosefta (R. Nehemiah), and Sifra (R. Judah), Simeon is credited with the authorship of the Sifre (Sanh. 86a) and of the Mekilta de-Rabbi Shim'on, the former work being a halakic midrash to Numbers and Deuteronomy, the latter a similar midrash to Exodus.

The particular characteristic of Simeon's teaching was that whether in a halakah or in a haggadic interpretation of a Biblical command, he endeavored to find the underlying reason therefor (B. M. 115a *et al.*). This often resulted in a material modification of the command in question. From many instances the following may be taken: In the prohibition against taking a widow's raiment in pledge (Deut.

xxiv. 17) it was Judah b. Ila‘i's opinion that no difference is to be made between a rich and a poor widow. But Simeon gives the reason for such a prohibition, which was that if such a pledge were taken it would be necessary to return it every evening (comp. Ex. xxii. 25–26), and going to the widow's home every morning and evening might compromise her reputation; consequently, he declares, the prohibition applies only in the case of a poor widow, since one who is rich would not need to have the garment returned in the evening (B. M. *l.c.*).

Simeon's name was widely identified with this halakic principle of interpretation, and his teacher Akiba approved of it; therefore his contemporaries often applied to him when they wished to know the reason for certain halakot (Tosef., Zeb. i. 8). Simeon also divided the oral law into numbered groups, of which fifteen are preserved in the Talmud. He especially favored the system of giving general rules, of which there are a great number (Bik. iii. 10; Zeb. 119b *et al.*). All this shows that he was systematic, and that he had the power of expressing himself clearly (Sheb. ii. 3; ‘Er. 104b). He was dogmatic in his halakic decisions, but where there was a doubt as to which of two courses should be followed, and the Rabbis adopted a compromise, he admitted the legality of either course (Yeb. iii. 9). He differed from Akiba in that he did not think that particles like "et," "gam," and others contain in themselves indications of halakot (Men. 11b); but in many instances he showed that he was opposed to R. Ishmael's opinion that the Torah speaks as men do and that seemingly pleonastic words can never serve as the basis for deducing new laws (Sifre, Re'eh, 119; R. H. 8b; Zeb. 108b *et al.*).

Simeon is very prominent also in the Haggadah, and his utterances are numerous in both Talmuds. Many of his sayings bear on the study of the Torah, which, according to him, should be the main object of man's life. Notwithstanding the stress he laid on the importance of prayer, and particularly on the reading of the "Shema‘," he declared that one must not, for the sake of either, interrupt the study of the Torah (Yer. Ḥag. ii. 77a). "There are three crowns," he says, "the first being that of the Torah" (Ab. iv. 13); he completes his sentence with the words, "But the crown of a good name mounts above them all," showing that, in addition to studying the Law, one must execute the commands by which he can acquire a good name. The Torah, also, is one of the three good gifts which God gave to Israel and which can not be preserved without suffering (Mek., Yitro, Baḥodesh, 10; Sifre, Deut. 32; Ber. 5a). But recognizing the difficulty of occupying oneself with the study of the Torah and of providing a livelihood at the same time, Simeon said that the Torah was given only for those who ate the manna or the priestly meals (Mek., Beshallaḥ, Wayeḥi, 1, Wayassa‘, 2). He declared also that had he been on Mount Sinai when God delivered the Torah to Israel, he would have requested two mouths for man, one to be used exclusively as a means for repeating and thus learning the Torah. But then he added, "How great also would be the evil done by delators ["moserim"] with two mouths!" (Yer. Shab. i. 3a, b; Yer. Ber. i. 3b).

Among Simeon's many other utterances may be mentioned those with regard to repentance, and some of his ethical sayings. "So great is the power of repentance that a man who has been during his lifetime very wicked ["rasha‘ gamur"], if he repent toward the end, is considered a perfectly righteous man" (Tosef., Ḳid. i. 14; Ḳid. 40b; Cant. R. v. 16).

His Ethical Views.

He was particularly severe against haughtiness, which, he declared, is like idolatry (Soṭah 4b), and against publicly shaming one's neighbor: "One should rather throw himself into a burning furnace than shame a neighbor in public" (Ber. 43b). He denounced the crimes of usury, deceitful dealing, and disturbing domestic peace (Yer. B. M. 10d; B. M. 58b; Lev. R. ix.). His animosity toward the Gentiles generally and toward feminine superstition is expressed in the following utterance: "The best of the heathen merits death; the best of serpents should have its head crushed; and the most pious of women is prone to sorcery" (Yer. Ḳid. iv. 66c; Massek. Soferim xv. 10; comp. Mek., Beshallaḥ, Wayeḥi, 1, and Tan., Wayera, 20). His hostility to the Romans, mentioned above, is expressed also in his maxims; thus, alluding probably to the Parthian war which broke out in the time of Antoninus Pius, he said: "If thou hast seen a Persian [Parthian] horse tied in Palestine, then hope for the arrival of the Messiah" (Cant. R. viii. 10; Lam. R. i. 13).

R. Simeon combined with his rationalism in halakah a strange mysticism in his haggadic teachings, as well as in his practise. He spoke of a magic sword, on which the Name was inscribed, being given by God to Moses on Sinai (Midr. Teh. to Ps. xc. 2; comp. *ib.* to Ps. xxxvi. 8; Gen. R. xxxv.); and he ascribed all kinds of miraculous powers to Moses (Me‘i. 17b; Sanh. 97b). After his death he appeared to the saints in their visions (B. M. 84b; Ket. 77b; Sanh. 98a). Thus his name became connected with mystic lore, and he became a chief authority for the cabalists; for this reason the Zohar first appeared under the name of Midrash de-Rabbi Shim‘on ben Yoḥai (see ZOHAR). There exist, besides, two apocryphal midrashim ascribed to this tanna (published by Jellinek, "B. H." iii. 78 *et seq.*, iv. 117 *et seq.*). The first is entitled "Nistarot de-R. Shim‘on b. Yoḥai"; the second, "Tefillat R. Shim‘on b. Yoḥai"; both of them bear on the Messianic time, but the second is more complete. The main point of these midrashim is that while Simeon was hidden in the cavern, he fasted forty days and prayed to God to rescue Israel from such persecutions. Then Meṭatron revealed to him the future, announcing the various Mohammedan rulers, the last one of whom would perish at the hands of the Messiah. As in similar Messianic apocrypha, the chief characters are Armilus and the three Messiahs—Messiah b. Joseph, Messiah b. Ephraim, and Messiah b. David.

As to the festival called "Hillula de-Rabbi Shim‘on ben Yoḥai," which is celebrated on Simeon's supposed tomb at Meron, on the 18th of Iyyar, see ‘OMER, LAG BE-; PILGRIMAGE.

SIMEON B. ZABDAI (ZEBID): Palestinian amora of the third century; teacher of the son of Assi (Yer. Shab. 9a). A few of his interpretations of Scriptural passages have been preserved. Referring to II Chron. xxx., he assigns as the reason for the postponed Passover feast under King Hezekiah the fact that the skull of the Jebusite Ornan had been found under the altar (Yer. Pes. 36c; Yer. Soṭah 20b; Yer. Ned. 39d). Another explanation of his, relating to II Chron. xxx. 19, is reported together with the contradictory explanation of Samuel b. Naḥman (Yer. Pes. *l.c.*). Two other of his explanations refer to sayings of Ḥanina (Yer. Soṭah 21d) and of Simeon b. Laḳish (*ib.* 22a). Simeon's observations concerning the future world, in reference to Eccl. ii. 1, "This also is vanity," are differently given by Hezekiah and Jonah respectively. Hezekiah's version is: "What thou learnest of the Torah in this world is vain compared with what thou wilt learn in the next; for in the future world there will be no forgetting what has been learned"; Jonah's reads: "What a man sees of prosperity in this world is as nothing compared with that of the next; for in this world the owner of property dies and leaves it to another, while of the future world it is said [Isa. lxv. 22], 'They shall not build, and another inhabit; they shall not plant, and another eat'" (Eccl. R. to ii. 1).

At Simeon's death two prominent men, Levi and Hela, delivered orations (Yer. Ber. 5c; Yer. Hor. 48b; Eccl. R. to v. 11).

SIMFEROPOL: City in the government of Taurida, Russia. In the beginning of the nineteenth century it had a considerable Jewish community, and at present Jews constitute one-fourth of a total population of about 50,000.

The Jews of Simferopol are divided into three classes: Mitnaggedim, Ḥasidim, and the so-called Krimchaks. Of the city's nine synagogues and prayer-houses seven belong to the Mitnaggedim, while the Ḥasidim and the Krimchaks have one each. There are three Jewish schools: a Russian elementary school and two Talmud Torahs. Of the latter, one is supported by the city; the other, which was founded in 1875, by private donations. The Talmud Torah supported by the city has five teachers and about eighty pupils, while the other has two teachers and about fifty pupils. A hospital was founded in Simferopol by Gabriel Jacob Günzburg in 1845. In 1887 the Jews organized a home for the aged, and a house of refuge in which travelers and non-resident poor are given temporary lodging and maintenance.

On May 14, 1905, a riot occurred at Simferopol in which no less than 140 stores belonging to Jews were destroyed by fire.

SIMḤAH (FREUDEMANN) EPHRAIM BEN GERSHON BEN SIMEON BEN ISAIAH HA-KOHEN: Rabbi in Belgrade; born about 1622; died 1669. He succeeded his teacher Judah Lerma as rabbi at Belgrade, and wrote a preface to the latter's "Peleṭat Bet Yehudah" (Venice, 1647).

In 1657 Simḥah published at Venice his "Sefer Shemot," on the orthography of Hebrew personal names as well as of the names of places and rivers in Asia and Europe. In 1660 he was made rabbi at Budapest, but he retained the rabbinate only two months, as he learned that Uri Shraga Feisch, rabbi at Vienna, had, in 1655, excommunicated those rabbis of Buda (Ofen) who had relatives living there. Since Simḥah's relatives were among the most prominent inhabitants of the city, he withdrew to Belgrade, where he remained until his death.

SIMḤAH B. GERSHOM HA-KOHEN PORT RAPA. See Rapa (Portrapa), Simḥah ben Gershom ha-Kohen.

SIMḤAH B. ISAAC B. KALONYMUS HA-KOHEN: One of the Worms Jews who were killed by the pilgrims of the First Crusade on May 25, 1096. When his father, Mar Isaac, and his seven brothers had been slain by the Crusaders, Simḥah declared he would not die without having avenged their deaths. Pretending willingness to accept baptism, he was taken for that purpose to the church. When, however, the sacrament was about to be administered to him, he drew a knife which he had secreted in his garments, and stabbed the nephew of the bishop, whereupon he was slain in the edifice as he had anticipated.

SIMḤAH, ISAAC BEN MOSES. See Luzki, Simḥah Isaac ben Moses.

SIMḤAH OF ROME: Scholar and rabbi of the Roman community in the last quarter of the thirteenth century. He was given an open letter by the community and sent out to find Maimonides' commentary on the Mishnah and bring it back with him. He traveled through Provence and Catalonia without meeting with any success. At Barcelona he applied for assistance to Solomon ben Adret, who gave him a further letter of recommendation. After a prolonged search he found in Huesca the commentary on the first three orders, and shortly afterward the Arabic original of the commentary on the first five orders. The latter was thereupon translated into Hebrew by several scholars (1296-98), and Simḥah returned with it to Rome, after having encountered various dangers on his journey. He appears to have written some books also, although, with the exception of certain fragments in "Shibbole ha-Leḳeṭ," nothing written by him has been preserved.

Bibliography: Vogelstein and Rieger, *Gesch. der Juden in Rom*, pp. 154, 265.

J. S. O.

SIMḤAH B. SAMUEL OF SPEYER: German tosafist of the thirteenth century. Neither the year of his birth nor that of his death is known. He took part in the rabbinical synod held at Mayence in Tammuz (July), 1223, being one of the signers of the decrees and regulations issued by that body (comp. Moses Minz, Responsa, No. 202). He was a nephew of the director ("parnas") Ḳalonymus, a pupil of R. Eliezer of Metz, and a colleague of Eliezer b. Joel ha-Levi.

Simḥah was the author of the following works: (1) commentary on the treatise Horayot, quoted in Tos. Hor. 4b, *s.v.* "Ḳeri"; (2) tosafot and novellæ on the Talmud; (3) "Seder 'Olam," a work divided into paragraphs and containing decisions, comments on Talmudic passages, and regulations for religious practise; quoted in "Haggahot Maimoniyyot," on Ishut, vi. 14 and Tefillah, ix. (all the responsa and decisions which the earlier authors quote in the name of R. Simḥah were probably taken from this work); (4) "Tiḳḳun Sheṭarot," on agreements and documents; quoted in "Haggahot Maimoniyyot," on Gerushin, iv. 12; (5) sections ("she'arim") on the regulations referring to the benedictions; quoted in the same work, on Berakot, viii. Aside from these works decisions and responsa by Simḥah are mentioned in the responsa collection of R. Meïr of Rothenburg (Nos. 573, 927, 931, 932) and in the works of several older authors.

Bibliography: Zunz, *Literaturgesch.* pp. 309-311; Michael, *Or ha-Ḥayyim*, Nos. 12, 15.

S. J. Z. L.

SIMḤAH B. SAMUEL OF VITRY: French Talmudist of the eleventh and twelfth centuries; died in 1105. He was a pupil of Rashi and the compiler of the Vitry Maḥzor (מחזור ויטרי), which contains decisions and rules concerning religious practise, besides responsa by Rashi and other authorities, both contemporary and earlier. The work is cited as early as the twelfth century in R. Jacob Tam's "Sefer ha-Yashar" (No. 620) as having been compiled by Simḥah; and the sources from which the compiler took his material—the "Seder Rab 'Amram," the "Halakot Gedolot," and others—also are mentioned. R. Isaac the Elder, a grandson of Simḥah, also refers (responsum No. 835, in "Mordekai," on M. Ḳ.) to the Vitry Maḥzor compiled by his grandfather. Various additions were afterward made to this maḥzor, a large proportion of which, designated by the letter ת (= "tosafot"), are by R. Isaac b. Dorbolo (Durbal). The latter often appends his name to such additions; and in one place he says plainly: "These explanations were added by me, Isaac b. Dorbolo; but the following is from the Maḥzor of R. Simḥah of Vitry himself" (Vitry Maḥzor, p. 244). Other additions are by Abraham b. Nathan Yarḥi, author of "Ha-Manhig," and are designated by the letters אבן, his initials.

Compiles the Vitry Maḥzor.

Three manuscripts of the Vitry Maḥzor are extant, the oldest of which, according to Berliner in his additions to Hurwitz's introduction to the Vitry Maḥzor (p. 172), is that in Reggio. It contains the Vitry Maḥzor proper without any additions. A second manuscript, in the Bodleian Library, Oxford (Neubauer, "Cat. Bodl. Hebr. MSS." No. 1100), is said to have marginal annotations by Eleazar b. Judah, author of the "Sefer ha-Roḳeaḥ" (Michael, "Or ha-Ḥayyim," No. 1214). The third manuscript is in the British Museum (Cod. Add. Nos. 27,200 and 27,201), and contains still other additions; this manuscript served as a basis for S. Hurwitz's edition of the Vitry Maḥzor published by the Meḳiẓe Nirdamim Society (Berlin, 1893). The edition is very faulty, as the editor used no critical judgment in his work; instead of the original treatises it contains some from the "Sefer ha-Terumah" of Baruch b. Isaac and from the "Eshkol" of RABaD (Vitry Maḥzor, pp. 752 *et seq.*).

Extant Manuscripts of the Maḥzor.

The Vitry Maḥzor contains many prayers and liturgical poems ("piyyuṭim"), which are distributed throughout the work. Besides these scattered poems the British Museum manuscript has (pp. 239-260) a collection of piyyuṭim which was published by Brody under the title "Ḳonṭres ha-Piyyuṭim" (Berlin, 1894). In the published edition of this Maḥzor there is also a commentary on the Pesaḥ Haggadah, which, however, does not agree with that by R. Simḥah b. Samuel of Vitry printed at Wilna in 1886. The latter commentary, which agrees with the one cited by Abudarham as being found in the Vitry Maḥzor, was taken from a manuscript of that maḥzor—probably from the parchment copy owned by Abraham, son of Elijah, gaon of Wilna ("Rab Pe'alim," p. 19), although no particular manuscript is mentioned in the Wilna edition itself.

Additions to the Maḥzor Proper.

There is also in the published edition of the Vitry Maḥzor a commentary on the Pirḳe Abot. This commentary is found in the British Museum manuscript, but in neither of the others. It is really a commentary by Jacob b. Samson, the pupil of Rashi (concerning whom comp. Schechter, "Einleitung zu Abot des R. Natan," p. ix.), amplified in the present Maḥzor. Many midrashic sayings, which are cited as such in the Vitry Maḥzor, have been preserved in that work alone. Thus the passage cited (p. 332) from the Midrash Tehillim is no longer found in the present midrash of that name. Likewise there are found in the Vitry Maḥzor citations from the Palestinian Talmud which are lacking in the existing editions of the latter.

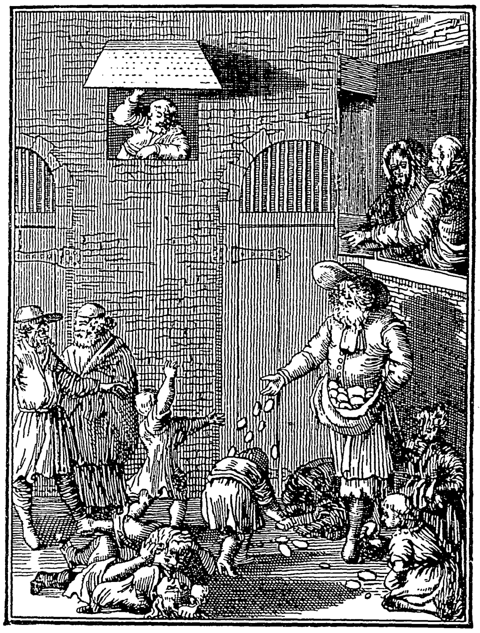
W. B. J. Z. L.

SIMḤAT TORAH ("The Rejoicing over the Law"): Name given to the second day of Shemini 'Aẓeret; it falls on the 23d of Tishri and closes the Feast of Sukkot. The name was not used until a relatively late time. In the Talmud (Meg. 31a), where the hafṭarah for this feast-day is given, it is called simply the second day of Shemini 'Aẓeret; and it is so designated in the prayer for the day. The name "Simḥat Torah" came into use after the introduction of the one-year cycle for the reading of the Law, and was due to the fact that the reading was finished on this day (see Zunz, "Ritus," pp. 86, 87).

Post-Biblical Origin.

In the ninth century the assignment of a new hafṭarah, Josh. i., to this feast is mentioned ("Seder Rab 'Amram," i. 52a). The prayer "Asher bi-gelal abot," the lines of which begin with the successive letters of the alphabet, was already in use in that century, and Saadia Gaon forbade its recitation beyond the line beginning with the letter פ, since the remainder contained irrelevant matter (*ib.*). In the fourteenth century the reading of Genesis was begun immediately upon the completion of Deuteronomy, the reason assigned being, according to Jacob b. Asher (Ṭur Oraḥ Ḥayyim, 669), that Satan might not say the Jews had finished the reading of the Torah and were unwilling to begin anew. In southern countries it then became the general practise to take out all the scrolls of the Law from the Ark on the morning of the feast and to repeat a separate hymn for each scroll. In northern countries it became customary about the same period for those who had finished the reading of Deuteronomy and had begun Genesis to make generous gifts of money to the synagogue, after which the wealthier members of the community gave a dinner to friends and acquaintances. By the end of the fifteenth century it was usual, though scarcely a universal practise, for the children to tear down and burn the Sukkot booths on Simḥat Torah (Joseph Colon, Responsa, No. 26); and shortly afterward the Rabbis permitted dancing in the synagogue at this festival (*ib.*).



Throwing Cakes to Children on Simḥat Torah.
(From Leusden, "Philologus Hebræo-Mixtus," Utrecht, 1657.)

Ḥatan Torah.

In the sixteenth century the practise of taking out the scrolls and of filing solemnly around the almemar on the night of the 22d of Tishri became customary; and on the same evening, after the procession, the passages Deut. xxxiii. 1–29, Gen. i. 1–ii. 3, and Num. xxix. 35–39 were read from three different scrolls, after which the leader took a scroll in his hand, chanting, among other hymns, the one beginning "Hitḳabbeẓu mal'akim zeh el zeh." In Poland, however, it was the custom merely to sell to the members of the congregation on the 22d of Tishri the privilege of executing various functions during the services on Sabbaths and at festivals, the purchasers being called up to the Law, and a blessing being pronounced upon them ("mi sheberak"). On the morning of the 23d of Tishri every member of the congregation read from the Torah, the passage Deut. xxxiii. 1–29 being repeated as many times as was necessary for this purpose; then the children were called up to the Law; and after the leader had read a few sentences, he recited with them the verse Gen. xlviii. 16. The member who had bought the privilege of completing the reading of the Law with Deut. xxxiv. 1–12 then stepped forward; he received the name of "ḥatan Torah" and was summoned with the prayer "Me-reshut ha-El ha-Gadol." After him came the member who was to recommence the reading with Gen. i. 1–ii. 3. He was summoned with the prayer "Me-reshut meromam," and was called "ḥatan Bereshit." The service was concluded by the Mafṭir; and the scrolls were then replaced (Moses Isserles, "Darke Mosheh," on Asheri, Ṭur Oraḥ Ḥayyim, 669; see also Bridegroom of the Law). Even the distribution of fruits to children on this festival is traced back to an ancient custom ("Be'er Heṭeb," *ad loc.*). In the eighteenth century the custom of firing salutes as a sign of rejoicing was also instituted (*ib.*).

In general, the ritual as here described has been preserved unchanged by Orthodox congregations; and the ceremony of filing around the almemar with the scrolls takes place not only on the evening of the 22d and on the morning of the 23d of Tishri, but also on the evening of the 21st of that month, as a sort of preparatory celebration. In this procession the children carry small flags with the colors of the country in which they live, or tiny banners with the inscription "Sisu we-simḥu be-simḥat Torah," or else small torches or candles. After each circuit has been completed the single scrolls are given to other members of the congregation in order that every one may participate in the ceremony, which is frequently prolonged until after midnight.

W. B. S. O.

SIMMLEIN OF HALBERSTADT: German Talmudist; rabbi at Halberstadt from 1620 to 1650. The period of his activity was practically coextensive with that of the Thirty Years' war, which was especially disastrous to the Jews. At Halberstadt, where the war caused much hardship, the already sufficiently hard lot of the Jews was further embittered by the hostility of the Diet. In those troubled times R. Simmlein often risked his life in the interest of his community, and as the government of the city frequently changed, he had the difficult task of gaining the favor of the contending parties. In this he apparently succeeded, for he seems to have been well received both by the Bishop of Halberstadt, Leopold Wilhelm, Archduke of Austria, and by the Swedish governors who subsequently ruled the city. He succeeded in preserving the community from many misfortunes. He also spent his own fortune freely in the relief of his people; his house was always open to others, and formed a home and school for poor orphans.

SIMMONS, LAURENCE MARK: English rabbi; born in London 1852; died at Manchester April 5, 1900. He was educated at the City of London School, proceeding in 1873 to the Rabbinical Seminary at Breslau to complete his studies. He held the degrees of B.A. (London University) and LL.B. (Victoria University, Manchester). In 1877 he accepted a call as minister to the Manchester Congregation of British Jews at the Park Place Synagogue.

Simmons was a diligent student and a frequent contributor to the "Jewish Quarterly Review" and other periodicals. He reprinted from the "Review" Maimun ben Joseph's "Iggeret ha-Shemad" (London, 1893). He married a daughter of Professor Herzfeld of Brunswick, Germany.

SIMON (SIMḤAH) CALIMANI. See Calimani, Simḥah (Simon) ben Abraham.

SIMON CEPHAS (better known as **PETER**): The first of the Twelve Apostles; the chief disciple of Jesus and head of the early Church. His life became at an early stage the subject of popular legends, which extended even to his name. Besides the name of Simon, which had come into use in place of the Biblical "Simeon," he had, in accordance with the custom of the time, the second name of "Kaipha" (Aramaic equivalent for "rock"; whence the Latin "Petrus," from "petra" = "rock"). As legend would have it afterward, Jesus gave him this second name to signify that upon him, as upon a rock, his church should be built (Luke vi. 14; Matt. xvi. 18; John i. 42; Mark iii. 12 significantly omits the reason; comp. Midr. Yalḳ. i. 766 on Num. xxiii. 9: "Upon Abraham as top of the rocks God said I shall build my kingdom"). Simon, the son of Jonah (John i. 42; Matt. xvi. 17), was, like his brother Andrew, a fisherman of Capernaum, or of Bethsaida near by (John i. 44), on the Lake of Gennesaret in Galilee.

According to John i. 35-42, Jesus, at the time of his own baptism in the Jordan by John the Baptist, met the two brothers as disciples of John, and afterward bade them follow him to Galilee. According to the synoptic Gospels, which slightly differ from one another (Matt. iv. 18-22; Mark i. 16-20; Luke v. 1-11), Jesus met them on the Lake of Galilee at the beginning of his career, while they were casting nets from their boats, and told them to follow him and become "fishers of men." The house of Peter in Capernaum is represented by the synoptic Gospels as the starting-point and center of Jesus' activity. Peter's mother-in-law is the first person mentioned as having been cured by Jesus, and to Peter's house all the sick and demoniacs were brought in the evening of the Sabbath to be healed (Mark i. 29-34 and parallels). "Simon and they that were with him followed" Jesus thence throughout Galilee (Mark i. 36-39), and the latter, on his return, again stayed in Peter's house, and ever afterward did there his work of healing in Capernaum (Mark ii. 1, 15; iii. 20; ix. 33). Peter is the favorite disciple, who is always found at the side of Jesus (*ib.* v. 37; ix. 2; xiv. 33, 54), and who is foremost in addressing him or acting for him (*ib.* ix. 5, xiv 29-31; Luke viii. 45, xii. 41, xxii. 8).

He Pronounces Jesus the Messiah.

As the main reason, however, for the prominence (Matt. x. 2) and, afterward, the primateship accorded to Peter, the fact is stated that in answer to Jesus' question, "Whom say ye that I am," he, alone of all the disciples, declared him to be the Messiah, "the anointed of God" (Matt. xvi. 13-20; Luke ix. 18-21; Mark viii. 27-30); and, according to Matthew, the "keys of the kingdom of heaven," with the power of Binding and Loosing, were given to him by Jesus on that occasion. The real history underlying this legend is that Peter is mentioned by Paul (I Cor. xv. 5) and in older traditions (Mark xvi. 7; John xxi. 1-21; comp. Matt. xxviii. 16; Luke xxiv. 12, 34) as the first among the disciples who "saw" the departed Christ. On the other hand, while Jesus was alive Peter is represented as having encountered severe rebukes from his master for his lack of faith and his false zeal, as well as for his listlessness, for his antagonistic attitude at first, and for his cowardly fear at the critical hour (Mark viii. 32, xiv. 30-42, 54-72; Luke xxii. 31; John xviii. 10-11). As a matter of fact, Peter early became as much an object of popular legend as did Jesus his master. Thus, in Matt. xiv. 22-33 Peter walks on the water in the same manner as Jesus does (the original legend is found in John xxi. 1-24; comp. Luke v. 3-9); in the transfiguration story (Matt. xvii. 1-8) he stands out prominently; and he plays the chief rôle in the story of the coin found in the fish's mouth (Matt. xvii. 24-27). Both Matthew (xv. 15, xvii. 21) and Luke (viii. 25, xxii. 8), representing the older tradition, put him in the foreground, while the Pauline and Johannean traditions pushed him more and more into the background (John xiii. 24, xxi. 21, *et al.*).

Head of the Church.

While the acts recorded of Peter (in Acts i. 15, ii. 14 *et seq.*, iii. 1-11, iv. 8 *et seq.*, v. 29 *et seq.*, viii. 14 *et seq.*, ix. 32, x. 1-xi. 18, xv. 4 *et seq.*) can not claim historical character, the fact can not be questioned that he occupied the position of head of the Church of Jerusalem. As such, with his authority as the foremost disciple of Jesus, he exerted a determining influence upon the character and organization of the Church; so much so that the Judæo-Christians in Corinth called themselves, in opposition to the church Paul had organized there, the church "of Cephas" (I Cor. i. 12). At the same time he was regarded only as one of the Twelve Apostles (Acts i. 14, ii. 14, v. 2, vi. 2), and in their name he speaks (Acts iv. 8, 19; v. 2, 29) in defense of the Church and hurls forth his anathemas against the transgressors (Acts viii. 20), the Holy Spirit always prompting his speeches and his acts. But he was also sent forth as a missionary through the land of Judea and Samaria (*ib.* viii. 14, ix. 32, x. 9), where many stories circulated among the people of the supernatural cures he performed, of his miraculous escapes from prison (*ib.* iii., ix., xii.), and of conversions of Gentiles: these could hardly have been inventions of the writer of the Acts. From I Cor. ix. 5 it may be learned that he, like other apostles, used to travel with his wife on his missionary journeys while he was supported by the Church.

Regarding the encounter of Peter with Simon Magus (Acts viii. 14-25) see Simon Magus. The story of the conversion of Cornelius, the Roman centurion in Cæsarea (Acts x. 1-45), in anticipation of which Peter was told in a vision to partake of the food of the heathen in order to win him to a belief in Christ, seems to indicate an early split in the Judæo-Christian Church rather than an intention on the part of the writer to identify Paulinism with that Church. It was probably independently of Paul that the question arose among the Judæo-Christians as to whether certain concessions to the proselytes of the gate were not advisable in the interest of the Church propaganda. Both the traditional and the progressive currents of thought in the Church find expression in the Cornelius story on the one hand, and, on the other, in the rather mythical account of the apostolic council presided over by James, the leader of the conservative side, in which Peter appears as the prime mover (Acts xv. 7 *et seq.*), and by which the observance of the Noachian laws is insisted upon as the condition of admitting proselytes.

A Jewish Teacher, According to the Clementines.

The representation of Peter found in the Clementine writings, especially in those parts based upon older sources (the "Kerygma Petri" [?]; see bibliography in Herzog-Hauck, "Real-Encyc." *s.v.* "Clementinen"), is quite different from that given in the Acts. The speeches of Peter in Acts iii. 13-26 and elsewhere are animated by the same spirit of hostility to the Jews which pervades the Gospels (see New Testament); the Peter of the Clementines is, in speech and mode of living, a Jew. He departs from Judaism only in that he recognizes in the crucified Jesus the "Prophet" predicted by Moses (Deut. xviii. 15), and through whom sacrifice was abolished and baptism substituted therefor ("Recognitiones," i. 36-39, 43, 50), and through whom the heavenly Jerusalem was to be brought down as a habitation of the saints (*ib.* 51). He lays all possible stress upon the Law, while the Prophets are secondary (*ib.* 68). On the other hand, he calls Paul "an enemy" of the Church, who acted in the interests of the high priest while pursuing the faithful, and who, in his fury, while he was hastening to Damascus with the expectation of seizing Peter, came near killing James, the brother of Jesus. In his dispute with the high priest Caiaphas, who finds special fault with "the good tidings for the poor" brought by Jesus, he admits that he is himself but "an unlearned fisherman and rustic" (*ib.* 61-62). He declares the object of baptism to be the remission of sins ("Homilies," vii. 8, xi. 19, 26-29). The articles of his faith are the worship of God as the Maker of heaven and earth, belief in the True Prophet (Jesus), and love coupled with practical benevolence ("Recognitiones," iii. 66; comp. "Homilies," vii. 8). "We worship one God, the Maker of the Universe, and observe His law, by which we are commanded first to worship Him and reverence His name [comp. *ib.* xvii. 7]; and then to honor our parents and to preserve chastity and uprightness" ("Recognitiones," vii. 29). But he is especially insistent on the prohibition against eating with the Gentiles, unless they be baptized, and on "abstaining from the table of devils," that is, from food offered to idols and from dead carcasses, from animals suffocated or torn by wild beasts, and from blood. He insists also upon washing after every pollution, and upon the observance of the Levitical purifications by both sexes ("Homilies," vii. 8, viii. 23, xiii. 4; comp. "Recognitiones," iv. 36).

Peter and Paul.

It is also of interest to note his declaration that the greatest commandment is "fear the Lord thy God . . . and serve Him" (Deut. x. 12), and to observe the harmony between his teaching and that of the Jewish Didache and Didascalia: "As you would not like to be murdered yourself, nor to have your wife commit adultery, nor to have your things stolen from you, so do not these things to others" ("Homilies," vii. 4, xvii. 7). In the original "Preaching of Peter," thirty, or sixty, or one hundred commandments for the Jewish converts are singled out (comp. Ḥul. 92a; Midr. Teh. to Ps. ii. 5; Gen. R. xcviii. 14). "Man is the true image of God" (not Christ only!); "The pure soul bears His likeness"; "therefore we must honor God's image by offering food to the hungry and clothing to the naked, caring for the sick, sheltering the stranger, visiting him who is in prison, and affording the needy all the help we can" ("Homilies," xi. 4, xvii. 7). Accordingly, Peter acts in regard to food, prayers, fasts, and ablutions exactly as does a pious Jew or Essene ("Recognitiones," i. 19; ii. 19, 72; v. 36). Many similar passages show the close relation of this teaching, attributed to Peter, to that of the rabbinical schools.

Little value can, according to this, be attached to Gal. ii. 9 (a spurious epistle; see Saul of Tarsus), where Peter is charged by Paul with hypocrisy. That a disagreement in certain matters arose between the two disciples is certain; but whether it was Peter or Paul who was inconsistent and wavering still remains a matter of dispute.

According to the Clementines, Peter stayed at Cæsarea a long time, and then went, by way of Tripolis, to Rome. In John xxi. 19 his martyrdom is predicted to him by Jesus (comp. I Epistle of Clement of Rome, v.). Regarding his stay in Rome, reliance must be placed upon Eusebius ("Hist.

Eccl." ii. 1; comp. iii. 39, 15); certainly the account of his meeting Philo (*ib.* ii. 17) and Paul in Rome is mythical.

His Supposed Writings.

According to the testimony of Papias (Eusebius, *l.c.*), Peter was not able to write expositions of his system of faith; the epistles that bear his name are products of the second century. The First Epistle, addressed to the (Pauline) churches of Asia, betrays the style and influence of the Pauline school; it was written during the persecutions of the Christians in the East in the second century, and, judging from iv. 3, the writer was a converted Gentile, not a born Jew. Possibly the whole epistle is based upon an older Judæo-Christian document (ii. 11–iii. 16, v. 1–12) that addressed its monitions to "the strangers and sojourners" (ii. 11; comp. i. 1). The epistle claims to have been written in Rome (v. 12). The Second Epistle, which shows in iii. 1 its dependence upon the First, and an acquaintance with apocalyptic literature, is a strong arraignment of the abuses of the Church due to Gnostic libertinism preached in some of the Pauline churches (i. 16, ii. 1–2, iii. 14–18); at the same time it endeavors to reconcile Paul's teachings with Peter's (iii. 15).

The so-called **Gospel of Peter,** of which fragments were found in Akhmym, Upper Egypt, in the year 1886–87 (see Harnack, "Bruchstücke des Evangelium und der Apocalypse des Petrus," 1893; Zahn, "Das Evangelium des Petrus," 1893), is of peculiar interest to the Jewish reader, inasmuch as, to judge from the fragments containing the story of the crucifixion, the whole is a product of fierce hatred toward the Jews, even to a greater extent than is the Fourth Gospel. Peter the Jew was made the mouthpiece of the Church at a time when hostility to his kinsmen had become the distinction of the orthodox Christian.

The Apocalypse of Peter.

The Apocalypse of Peter, a fragment of which was found at Akhmym together with the fragments of the Gospel of Peter, has been identified by Harnack (*l.c.*) with the one known to Clement of Alexandria ("Eclogi," 41, 48, 49) and other Church Fathers. It seems to have drawn its material from a similar Jewish apocalypse (see Kohler, "Pre-Talmudic Haggadah," in "J. Q. R." vii. 605). It shows no traces of Jew-hatred. In it Peter speaks as having, with the other apostles, had intercourse with the departed Jesus on the mountain, and as having been shown by him the reward of the just in Paradise and the punishment of the wicked in Gehenna. Among those subjected to great torture by fire and by scourging are mentioned "those that made idols of wood for themselves and worshiped them instead of God"; also the usurers, the rich that fail to aid the needy, and those "who have forsaken the way of God." The excruciating pains which the wicked suffer wrest from them the confession: "O God, Thy judgment is righteous" (ed. Harnack, *l.c.* pp. 25, 33, 34). The whole work furnishes proof that its writer was still under Jewish influence, if he did not, indeed, simply take his material from a Jewish apocalypse and adapt it to the new creed. K.

SIMON, GUSTAV: German surgeon; born at Darmstadt May 30, 1824; died at Heidelberg Aug. 28, 1876. He studied at Heidelberg and Giessen (M.D. 1848). From 1848 to 1861 he was a surgeon of the Hessian army, residing at Darmstadt, where he practised among the poor. During a postgraduate course in Paris in 1851–52 he became acquainted with Jobert, whose method of operation in cases of fistula of the bladder was improved upon by Simon. The latter was very successful also in resection of the hip-bone and extirpation of the kidneys.

In 1861 Simon became assistant professor, and six months later professor, of surgery at the University of Rostock. During the war between Austria and Prussia in 1866 he was chief of a military hospital in Berlin. In 1867 he became professor of surgery in the University of Heidelberg, where he remained until his death. During the Franco-Prussian war he served as surgeon-general of the reserves of Baden.

Of his many works the following may be mentioned: "Ueber die Heilung der Blasenscheidenfisteln" (Giessen, 1854); "Ueber die Operation der Blasenscheidenfisteln Durch die Blutige Nath und Bemerkungen über die Heilung der Fisteln, Spalten und Defecte Welche an Andern Körpertheilen Vorkommen" (Rostock, 1862); "Chirurgie der Nieren" (2 vols., Stuttgart, 1871 and 1876). Simon contributed many essays to the medical journals, especially on his methods of operation.

SIMON, JEAN HENRI: Belgian engraver and soldier; born at Brussels Oct. 28, 1752; died there March 12, 1834. He was a son of the engraver Jacob Simon, under whom he learned his trade. When not quite fifteen years of age he was appointed engraver to Prince Charles of Lorraine. In 1775 he removed to Paris, where he became engraver to the Duke of Orleans (Chartres), with a yearly salary of 200 thaler. He soon became engraver to the king, which position he held until 1792.

At the beginning of the wars of the French republic, Simon commanded a company under General Dumouriez. The battles of Anderlecht and Boucar, in both of which he was wounded, won him the rank of lieutenant-colonel. Returning to Paris, as a follower of Dumouriez he was accused of treason when the latter went over to the enemy, but he succeeded in proving himself innocent. He next went to Spain, where he became engraver to the court, but was soon recalled to Paris as teacher of engraving at the institute for deaf-mutes. After being banished for a short period, he was recalled and became engraver to the empress Josephine. In 1813 he rejoined the army, and served as colonel of a regiment of lancers in the first corps of the francs-éclaireurs of the department of the Seine. Discharged on half-pay in 1814, he took no prominent part in the campaign of 1815, and in 1816 he went to Brussels, where he passed the rest of his life.

Simon was an excellent engraver; he executed engravings on precious stones, some of which were mistaken for real antiques and were sold to the Empress of Russia. He likewise etched on copper, and his portraits of noted men of the Netherlands especially deserve mention. He also published "L'Armorial Général de l'Empire," of which only vols. i. and ii. appeared, under the patronage of the empress Josephine. Among his pupils were Dubois, Paul, Verger, Lalondre, and his own son Simon.

SIMON, SIR JOHN: English sergeant at law and politician; born in Jamaica Dec. 9, 1818; died in London June 24, 1897. He was descended on the maternal side from the Orobios (see CASTRO family). In 1833 he was sent to England to continue his education at a general school in Liverpool, and he studied Hebrew by himself with the view of becoming a rabbi, his object being to initiate a religious reform movement. His father, however, refused his consent to Simon's plans.

Simon was graduated from the University of London in 1841; was called to the bar at the Middle Temple in 1842; and was the first Jew to practise at the common-law bar, Sir Francis Goldsmid, who had preceded him, practising at the chancery bar. Simon married in 1843 Rachel, fifth daughter of S. K. Salaman of London, and sister of the musical composer Charles Salaman. Later she was the author of "Records and Reflections."

Sir John Simon.

Early Career.

Simon spent the first two years of his married life in Jamaica, where he at once commenced to practise his profession in Spanish Town, then the seat of government. He left the island in 1845 because the climate injured his wife's health, and within a few years of their return to England he became a successful leader of the northern circuit, and soon won distinction in the superior courts in London. In 1858 he was second counsel in the state trial arising out of the Orsini conspiracy; and he successfully defended Dr. Bernard, who was charged with complicity in the attempted assassination of Napoleon III. In the same year Simon acted as assistant to the judges of county courts, thus being the first English Jew who exercised the functions of a judge. In 1864 he was created a serjeant at law (a legal and social rank known as the "Order of the Coif"), and he was one of the last survivors of this order. The degree of serjeant at law carried with it the dignity of a commissioner of assize; and in this capacity Simon again performed the functions of a judge. He repeatedly occupied the bench in Manchester and Liverpool, and presided at the City of London Court. In Jan., 1868, Simon received from the crown a patent of precedence granting him the additional rank of queen's counsel, an exceptional distinction.

Simon was elected to Parliament in Nov., 1868, from the borough of Dewsbury in the West Riding of Yorkshire. He was reelected in 1874, 1880, 1885, and 1886, and sat continuously for twenty years, retiring in Nov., 1888, owing to failing health. Although he had not a single Jewish elector in his constituency, he was regarded as the "Member for Jewry."

In the House of Commons Simon exercised considerable influence with regard to the amendment of the judicature, the alteration of the law which regulated the trial of election petitions being due to his initiative. The resolution adopted Feb. 23, 1875, calling for the appointment of two judges instead of one to conduct such trials, was also the result of his activity. Simon was knighted in 1886.

Work for Jewish Emancipation.

Before the British Parliament was open to Jews, Simon stood in the front rank of those who fought for their civil and political emancipation. That battle won, he availed himself of every opportunity to vindicate the cause of oppressed and persecuted Jews throughout the world. Again and again he caused blue books relating to the condition of the Jews in Rumania, Morocco, Russia, and Servia to be laid before Parliament; and after the death of Sir Francis Goldsmid, M.P. (1878), he became the recognized champion of his race before Parliament and the British public. When the knowledge reached England of the persecution of the Jews in Russia in 1881 and 1882 Simon conceived and carried into effect the idea of securing a protest from the entire English people. Within three weeks he had so aroused the feelings of the public men to whom he had personally submitted the issues, that a requisition, signed by the highest representatives in England, was presented to the lord mayor; and a meeting was convened on Feb. 1, 1882 (see MANSION HOUSE AND GUILDHALL MEETINGS). The only Jewish speakers at this meeting were the present Lord Rothschild (then Sir Nathaniel de Rothschild, M.P.) and Sergeant Simon, who respectively moved and seconded the vote of thanks to the lord mayor. Similar meetings were convened in no less than forty-two cities and towns of England, Scotland, and Ireland under the presidency of the local mayors; and a protest from the University of Oxford, signed by the vice-chancellor, the heads of colleges, the leading professors, and hundreds of graduates, was addressed to the chief rabbi.

In 1890, when the persecutions in Russia were renewed, Simon, who was then in somewhat failing health, took similar steps through the instrumentality of his son, **Oswald John Simon** (born 1855; educated at Balliol College, Oxford; member of the Russo-Jewish Committee and author of "World and Cloister" and "Faith and Experience"). In accordance with Sir John's plan a second requisition, signed by all the surviving signers of the first one, and by many others, was presented to the lord mayor, and a meeting was held at the Guildhall on Dec. 10, 1890, which was no less successful than the first one.

Simon was one of the founders of the Anglo-Jewish Association, which was formed in London in 1871 to cooperate with the Alliance Israélite Universelle of Paris. He was identified with the Reform Synagogue of London from its inception in 1842.

J.

SIMON, JOSEPH: American lawyer and politician; born at Bechtheim, Hesse, Feb. 7, 1851. He accompanied his parents to Portland, Ore., in 1857, when he was but six years of age. He was educated in the public schools of Portland, was admitted to the bar in 1872, and is now (1905) a member of the law firm of Dolph, Mallory, Simon, & Gearin. He early developed a capacity for politics. In 1877 he was elected a member of the city council of Portland, and in 1880, 1884, and 1886 he was chosen chairman of the Republican state committee of Oregon. From 1880 to 1900 he represented Multnomah county, in the Oregon state senate; and he was elected president thereof at five different sessions. He was a delegate to the Republican national conventions that met at Minneapolis in 1892 and at Philadelphia in 1900, and served as a member of the Republican national committee from 1892 to 1896. For many years he was president of the police commission of the city of Portland. A vacancy occurring in Oregon's senatorial representation at Washington, Simon was, in 1898, elected to the United States Senate for the term ending March 3, 1903.

SIMON, JOSEPH: Chief of the bureau of the Progressive communities of Hungary, and reporter on Jewish affairs in the Hungarian Ministry of Public Worship; born at Kapolcs, county of Zala, June 24, 1844; studied law at Budapest. He represented the district of Tapolcza at the Jewish Congress of 1868 and was elected its secretary; and at its conclusion he became secretary of the national committee, and three years later was appointed to a similar position in the national bureau. Since then he has been one of the leaders of the Hungarian Jews. As first secretary of the national committee, Simon, until he retired in 1904 owing to ill health, conducted the affairs of that portion of the Hungarian Jewry which was organized according to the statutes of the Jewish Congress of 1868. He has rendered special service in connection with the establishment and administration of the Landesrabbinerschule (of whose board of governors he has been secretary since the institution's foundation in 1877) and various other institutions. In 1883 he organized the defense in the Tisza Eszlár case. Simon has the title of "Königlicher Rath."

SIMON THE JUST. See Simeon the Just.

SIMON MACCABEUS: Hasmonean prince and high priest; died 135 B.C.; second son of Mattathias. In I Macc. ii. 3 he is called **Thassi;** in Josephus, "Ant." xii. 6, § 31, **Thatis** (with the variant **Matthes).** The meanings of these names are obscure. His father, when dying, praised him as a man of counsel, and exhorted his four brothers to heed his advice. Simon justified his father's high opinion of him, and proved himself uniformly sagacious and circumspect. Even during the lifetime of his brothers Judah and Jonathan, Simon took a prominent part in the war of liberation waged against the Syrians: he succored the hard-pressed Jews in Galilee; avenged, in conjunction with Jonathan, the death of his brother John; and fought successfully against Bacchides (I Macc. v. 17, 23; ix. 37-42, 65-68; "Ant." xii. 8, § 2; xiii. 1, §§ 4-5).

Strategus.

The successes of the Jews rendered it expedient for the pretenders to the throne of Syria to show them special favor, and therefore Antiochus VI. appointed Simon strategus, or military commander, of the coast region from the Ladder of Tyre to Egypt. As strategus Simon conquered the cities of Beth-zur and Joppa, garrisoning them with Jewish troops, and built the fortress of Adida in the plain (I Macc. xi. 53, 65; xii. 33, 38; "Ant." xiii. 5, §§ 4, 6, 10; 6, § 5).

After the capture of Jonathan, Simon was elected leader (ἡγούμενος) by the people, assembled at Jerusalem; he at once completed the fortification of the capital, and made Joppa secure by expelling its Gentile inhabitants and filling it with Jews (I Macc. xiii. 8, 10, 11; "Ant." xiii. 6, § 4). At Hadid he blocked the advance of the treacherous Trypho, who was attempting to enter the country and seize the throne of Syria. Since Trypho could gain nothing by force, he craftily demanded a ransom for Jonathan and the surrender of Jonathan's sons as hostages. Although Simon was fully aware that Trypho would deceive him, he acceded to both demands, so that the people might see that he had done everything possible for his brother. Jonathan was nevertheless treacherously assassinated, and the hostages were not returned. Simon thus became the sole leader of the people. He had Jonathan's remains buried with honor at Modin, where he subsequently erected a monument to him (I Macc. xiii. 25-30; "Ant." xiii. 6, § 5).

As the opponent of Trypho, Simon had every reason to side with Demetrius II., to whom he sent a deputation requesting freedom from taxation for the country. The fact that his request was granted implied the recognition of the political independence of Judea. "Thus the yoke of the heathen was taken away from Israel in the hundred and seventieth year" of the Seleucid era (143-142 B.C.; I Macc. xiii. 41; Josephus, "Ant." xiii. 6, § 6). The statement, found in a rabbinical work (Meg. Ta'an. § 2), that Judah and Jerusalem were released from the payment of the "crown tax" (στέφανος) on Iyyar 27 may refer to this event. The Jews then introduced a new era, dating all their instruments and contracts according to the years of Simon. The independence of Simon may be indicated also by the coins which he minted, for many Jewish shekels and half-shekels bear in Old Hebrew characters the inscription "Holy Jerusalem," and are dated variously "the year 1," "2," "3," "4," or "5," these dates being referred by many scholars to the era of Simon. But it is strange that there are no coins, so far as known, of the years 6 and 7, although Simon was ruling then. These coins, which are somewhat crude and

Coins.

primitive, are differentiated from other Maccabean coins by the absence of the name of the ruling prince (see illustrations in Jew. Encyc., *s.v.* Numismatics); it is therefore not certain that they were struck by Simon, and Schürer is particularly disinclined to ascribe them to his reign ("Gesch." 3d ed., i. 243, 761 *et seq.*).

Simon was still confronted with the task of securing his position in the country. He therefore laid siege to the old and powerful city of Gazara and captured it, after which he expelled the pagan inhabitants, removed the idols from the houses, purified the city, and "placed such men there as would keep the Law" (I Macc. xiii. 43–48; comp. xiv. 34; "Ant." xiii. 6, § 7; Strabo, p. 759). He then attacked the last bulwark of the Syrians in Judea, the Acra of Jerusalem, which was taken on the 23d day of the second month, 142 B.C., and entered by the Jews chanting hymns of thanksgiving to the sound of harps, and bearing palm-branches (I Macc. xiii. 49–52; comp. xiv. 7, 36, 37; "Ant." *l.c.*). Merited punishment was visited on the Hellenists (called "children of the Acra" in Meg. Ta'an. § 2), both in the capital and throughout the country. In this connection, although the actual work was probably done at a later time, Josephus speaks ("Ant." *l.c.*; comp. "B. J." v. 4, § 1) of the laborious demolition of the citadel, which took three years. It is hardly likely that the fortifications were permitted during this time to command the Temple, yet they must have remained standing, for Simon is said to have garrisoned them (I Macc. xiv. 37; comp. xv. 28). At the same time he placed his son John, who resided at Gazara, in charge of a portion of the army (*ib.* xiii. 53).

Alliance with Rome.

The country now enjoyed a lasting peace, and the author of the First Book of Maccabees (xiv. 8–15) describes the felicity of the people in glowing colors, adhering closely to the accounts of the blessings promised in the Bible, and carefully including Simon's services to religion. He then speaks of the honor shown the Jewish people by other nations, declaring (xiv. 16–19) that the Romans renewed their friendship with the Jews on their own initiative (although this is improbable), and that the Spartans, at the request of the Jews, made a documentary declaration of their friendship (xiv. 20–23). Willrich regards this record as spurious, like others of a similar nature. The statement (xiv. 24) that Simon sought to win the favor of the Romans by rich gifts through the agency of Numenius is apparently incorrect, for the friendship of Rome has already been noted in a previous passage. An alliance ("amicitia") between the Romans and the Jews is, however, mentioned in other sources (Justin, "Apologia," xxxvi. 3, § 9).

Hereditary Prince.

The high esteem in which Simon was held by foreign powers impelled the people to show their appreciation of him, and on Elul 18, 141 B.C., the assembly of the priests, the people, the leaders of the people, and the elders of the land resolved that Simon should be the high priest, strategus, and ethnarch of the Jews, "forever, until there should arise a faithful prophet" (I Macc. xiv. 41). By this phrase they probably intended to imply that the time would come when the spirit of prophecy would again appear in Israel, enabling them to learn the will of God; or they may have meant to express their conviction that the prophet Elijah would announce the Messiah, who would belong to the house of David, and in that case there could, of course, be no ruler but him. This resolution was inscribed upon brass tablets and set up in the court of the Temple. According to Willrich, this record can not have been quoted in the original text of the Maccabees, since the inscription states that Simon sent his deputation to Rome before he was recognized by Demetrius, and regards the Roman alliance as the motive for this confirmation, whereas xiv. 3 asserts that Demetrius was taken prisoner by the Parthians before the embassy went to Rome; furthermore, Numenius is said (xv. 15) to have returned in 139–138, when Antiochus Sidetes was already on the throne. Whether the inscription is authentic or not, it is at least certain that Simon bequeathed his dignities to his children, and thus became the founder of the Hasmonean dynasty.

War with the Syrians.

Once more Simon became involved in the Syrian imbroglio. Antiochus VII. (Sidetes), the brother of the captive Demetrius, attempted to seize the throne of Syria; in a letter written at Rhodes, before he landed on the Asiatic coast, he confirmed Simon in all the privileges granted him by previous kings, especially in the prerogative of coinage (I Macc. xv. 1–9), although this was apparently a mere sanction of the actual state of affairs. But as soon as Antiochus felt secure from Trypho he changed his attitude. At the siege of Dora he rejected the reenforcements sent by Simon, and demanded either that Simon should surrender Joppa, Gazara, and the Acra, which, he alleged, had been wrongfully taken by the Jews, or that he should pay an indemnity of one thousand talents. The result was a war in which the Syrians under Cendebeus were defeated by Simon's sons Judah and John (136 B.C.).

The age of Simon had led him to entrust this war to his sons, but the hope which he may have cherished, that in his old age at least he would be able to enjoy the reward of his deeds, was doomed to disappointment. In 135 B.C. Simon, the last of the Maccabean brothers, died by violence. According to his custom, he was traveling through the country holding court, when, in the fortress of Docus, near Jericho, he and his sons Mattathias and Judah were slain by his son-in-law Ptolemeus at a banquet prepared by the last-mentioned (I Macc. xvi. 11–17; "Ant." xiii. 7, § 4). The seven short years of his reign prepared the way for the events of the following one hundred years. He was succeeded by his son John Hyrcanus I.

G. S. Kr.

SIMON MAGUS: A personage frequently mentioned in the history of primitive Christianity. According to Acts viii. 9–23, he was greatly feared throughout Samaria on account of his magic powers; but he permitted himself to be baptized, and wished to purchase the gift of the Holy Ghost, being cursed by Peter for this presumptuousness. In spite of the definiteness of the statements regarding him, the historicity of Simon has been doubted by many critics, especially by Baur and his school, who held that he was a caricature of the "Apostle of the Gentiles." Such a view must, however, be regarded as a grave critical aberration (Harnack, "Dogmengeschichte," 1st ed., i. 179, note 1).

The early Christian Clementine "Recognitiones" (vii.-x.) represent Simon as a Jewish magician instead of a Samaritan, stating that he was a member of a Jewish household in Cæsarea, and that, when pursued by Peter, he fled to Judea. Mention is made, moreover, of a magician named Simon who lived in this very city of Cæsarea about the year 40 of the common era (Josephus, "Ant." xx. 7, § 2); so that some scholars consider the two to be identical (Hilgenfeld, "Ketzergeschichte," p. 170; Albert, "Die Ersten Fünfzehn Jahre der Christlichen Kirche," p. 114, Münster, 1900; Waitz, in "Zeitschrift für Neutestamentliche Wissenschaft," v. 128). This view can hardly be correct, however, although the notice, like other similar ones, serves to show that there were such magicians even among the Jews. The most reliable sources, including Justin Martyr, who was a Samaritan by birth, call Simon a native of Cæsarea; and, in harmony with this statement, the same authorities regard him as a pupil of Dositheus, the Samaritan heresiarch (but see Dositheus). Simon was, furthermore, regarded by all the Church Fathers as the great heretic from whose school and teaching sprang all the later motley heresies of Christianity; and inasmuch as his system contained Gnostic teaching, Gnosticism itself was ascribed to him, and a Gnostic figure was seen in his alleged wife Helena.

Claims Messiahship.

In reality, however, Simon seems at first to have asserted merely that he was a Messiah, though later he claimed that he was a god. The following passage of Irenæus ("Adv. Hæreses," i. 23, § 1) clearly defines his teaching: "He was worshiped by many as a god, and seemed to himself to be one; for among the Jews he appeared as the Son [thus identifying himself with Jesus], in Samaria as the Father, and among other peoples as the Holy Ghost" (comp. "Philosophumena," vi. 19; Tertullian, "De Anima," xxxiv.; Epiphanius, "Panarium," xxi. 1; "Acta Petri et Pauli," in Lipsius, "Apocryphische Apostelgeschichten und Apostellegenden," ii., part 1, pp. 30, 301). Simon is also said to have commanded that a grave be dug for him, from which he was to arise in three days; but this, it is declared, he did not do ("Philosophumena," quoted as from Hippolytus, vi. 20). These traits characterize him as the Christ of the Samaritans, and at the same time show him as a most striking antithesis to the Christ of the Christians. If, as is stated, besides declaring that God is unknowable and is not the creator of the world, but inexpressible, ineffable, and self-created (αὐτογένεθλον; "Constitutiones Apostolicæ," vi. 10, in Migne, "Patrologia Græca," i. 933), he taught that He is not the father of Christ, his teaching diverges widely from the Christian doctrine, although it must be borne in mind that this statement is at variance with all other accounts.

Favored by the Jews.

In their opposition to Christianity the Jews may have felt a certain sympathy with the teachings of Simon, thus accounting for the legends which term them his disciples. When, in his flight from Peter, Simon went to Rome and wished to prove his divinity by flying through the air, the Jews are said to have been his partizans; and when he fell wounded to the earth, and was taken to Aricia, a small town near Rome where his grave is yet shown, Jews are alleged to have escorted him thither; and their descendants lived there until 1600. A later authority declares that the aerial battle with Peter took place on a Sabbath on which the faithful were holding a "proseuche" (synagogal assembly) and keeping a fast especially on account of their teacher Simon (Glycas, "Annales," ed. Bonn, i. 236, 439). While it is true that the Christians were as yet little differentiated from the Jews, and that the "faithful" might equally well have been Christians, yet the fast (the Romans believed that the Jews fasted on the Sabbath), *i.e.*, the rest from work, is characteristically Jewish. The story of this flight to Rome, whether legendary or historic, must have been well known to the Jews, since the remarkable "Toledot Yeshu" tells of a similar aerial battle that took place between Jesus and the champion of the Jews (Krauss, "Das Leben Jesu nach Jüdischen Quellen," p. 179 *et passim*); and this same legend shows that the Jews regarded Simon as one of their own number. The fall of Simon Magus was customarily represented by the Byzantines in their illustrations of Psalm li. = Hebr. lii. (Strzygowski, "Bilder des Griechischen Physiologus," p. 89, Leipsic, 1889). Zacuto ("Yuḥasin," ed. London, p. 244) also mentions Simon Magus; and his name occurs in a Samaritan chronicle recently published ("R. E. J." xlv. 230).

K. S. Kr.

Simon Magus was the founder of a Gnostic sect. In Acts viii. 9-13 he is represented as having been held in awe by the Samaritans as the manifestation of the hidden power of God, and as being called by them "The Great One." He is said to have allowed himself to be baptized by the apostle Philip; but, owing to his greediness, he relapsed into sorcery. While this story is legendary, Justin relates ("Apologia," i. 26, 56) that he was born in Gitta, a Samaritan village, and that he traveled together with a woman named Helena, whom he declared to be the "First Intelligence," he himself claiming to be the first manifestation of the hidden power of God. He went to Rome and performed miracles before the emperor Claudius; and the people erected statues to him. The legendary character of this story has been proved by the fact that the statue said to have been erected to him with the inscription "Semoni Sancto Deo Fidio" has been discovered, and it proves to have been dedicated to an ancient Roman deity.

More authentic facts regarding Simon Magus are contained in Hippolytus' "Refutatio Heresiarum," vi. 7-20, where extracts are given from a work ascribed to Simon and entitled "The Great Revelation." In this work an elaborate Gnostic system of the emanation of the Deity is presented, describing the unfolding of the world in six pairs, male and female, in the upper and lower regions, among which also the sun and the moon ("Selene") play a part and in which he himself is "the standing one; he who stands, has stood, and will stand." His stay at Rome, where he attracted attention by his miracles, and his contest with Peter are mentioned in this work and in all the patristic writings of the early centuries. He is said to have had a celestial chariot upon which he was seen flying through the air. He could not, however, withstand the superior magic powers of Peter, and fell from the chariot, breaking his legs (Syriac "Didascalia," i. 18; Arnobius, "Contra Gentes," ii. 12). He raised the souls of prophets from Hades (Tertullian, "De Anima," xxxiv).

The most elaborate legendary story is told of him, especially with reference to his contest with Peter, in the Clementine writings, where there is an occasional blending of the character and utterances of Simon Magus with those of Paul. Certain characteristic expressions, however, are found there which point to historic facts. He calls himself the manifested power of the great hidden Deity ("Hel Kisai" = "Elkesai" in Gnostic lore; "Recognitiones," i. 72, ii. 37; comp. "the one who will stand [abide] forever"; "Recognitiones," ii. 7, iii. 11; "Homilies," ii. 24); his spouse Helena (or Selene = "the Moon") is the mother Wisdom, one with the highest Deity, who came down to earth under that name ("Recognitiones," ii. 8-9, 39; "Homilies," ii. 23).

The existence of the sect of Simonians called after Simon and related to the other Samaritan sect called after Dositheus, certainly proves the historicity of his existence against the critics who declare him to be a fictitious person and "Simon" to be the pseudonym of Paul. It is remarkable, moreover, that a magician by the name of Simon is mentioned by Josephus as having lived at the very same time as Simon Magus of the Church literature. Felix, appointed governor of Judea by the emperor Claudius between the years 52 and 60, had fallen in love with Drusilla, sister of King Agrippa and wife of King Azizus of Emesa; and he sent Simon, a Jew born in Cyprus and a friend of his who was known for his magical skill, to use incantations (compare the love incantation in Deissman's "Bibelstudien," 1895, p. 21, and Blau, "Das Altjüdische Zauberwesen," 1898, pp. 96–117) to alienate her affection from her husband and to turn it to Felix. In this way the governor succeeded in obtaining Drusilla's consent to marry him ("Ant." xx. 7, § 2). The only difficulty in identifying this Simon with the other lies in the statement of Josephus that the magician was born in Cyprus. The charges brought against the sect of the Simonians are of such a nature as would point to seductions brought about by witchcraft as well as by Gnostic teachings leading to sexual impurity.

K.

SIMON, MORITZ ALEXANDER: German banker and philanthropist; born at Hanover Nov. 27, 1837; died there 1905. Educated at his native town, he became associated there with the banking-house of Ezechiel Simon. Later he spent some years in New York, and, upon returning to Hanover, founded the banking-house of Moritz Alexander Simon. In New York, Simon had become acquainted with the misery of the poor Jewish immigrants from eastern Europe, and he contributed to the funds of the organizations founded in the eighties for the purpose of assisting the Rumanian Jews. Having come to the conclusion that the so-called Jewish question was a social one, which might partially be solved by educating the younger generation to become artisans and farmers, he opened in 1893 the Israelitische Erziehungsanstalt at Ahlem, a small place near Hanover. The aim of this school is to educate its pupils in "agriculture and handicraft — means of living from which the Jews, through the circumstances of time and condition, have been excluded for centuries. . . ." The pupils are divided into two sections: children between six and fourteen years of age, and apprentices between fourteen and seventeen; in the first department the children receive a common-school education together with instruction in horticulture, wood-working, and in the making of pasteboard boxes. The second department gives instruction in various trades. Up to the present (1905) the institution has trained about 170 gardeners, artisans, and teachers, who are employed not only in Germany but also in Russia, Rumania, Galicia, Palestine, and America. Simon bequeathed $750,000 to the "Erziehungsanstalt."

SIMON, OSKAR: German dermatologist; born at Berlin Jan. 2, 1845; died at Breslau March 2, 1882. Educated in his native city (M.D. 1868), he took a postgraduate course at the University of Vienna. During the Franco-Prussian war he saw active service as assistant surgeon. In 1871 he returned to Vienna, but in the following year settled in Berlin, where he became privat-docent. Six years later (1878) he was appointed professor of dermatology at the University of Breslau and chief physician at the Allerheiligen Hospital.

Of Simon's works the following may be mentioned: "Die Localisation der Hautkrankheiten, Histologisch und Klinisch Bearbeitet," Berlin, 1873; "Ueber das Molluscum Contagiosum," *ib.* 1876; "Ueber Prurigo und die Behandlung Derselben mit Pilocarpin," *ib.* 1879; "Ueber Balanopostho-Mykosis," *ib.* 1881.

SIMON, LADY RACHEL: English authoress; born in London Aug. 1, 1823; died there July 7, 1899; daughter of Simeon K. Salaman and Alice Cowen. She grew up amid the intellectual and refined surroundings of a home which was the rendezvous of many distinguished people. On July 12, 1843, she was married to John Simon, LL.B. A woman of striking individuality, Lady Simon kept from her seventeenth year a diary of "Records and Reflections," from which she, in 1893, published a selection covering a period of fifty years, from 1840 to 1890. She wrote also a work on the Psalms, entitled "Beside the Still Waters."

Lady Simon's son **Oswald John Simon** (born in London in 1855) is a communal worker and author. Of his works may be mentioned "The World and the Cloister," a novel; and "Faith and Experience," a volume of essays and sermons.

J. G. L.

SIMON, RICHARD: French scholar and Orientalist; born at Dieppe May 13, 1638; died there April 21, 1721. After studying at the Sorbonne he joined the Congregation of the Oratory, in the library of which he studied Oriental works and manuscripts. When a certain Jew was condemned to the pyre at Metz on a blood accusation, Simon wrote a strong opinion in protest (1670). He translated Leon of Modena's "Historia dei Riti Ebraici," etc. (1674), and wrote "Comparaison des Cérémonies des Juifs et de la Discipline de l'Eglise" (1681). His chief work, however, was his "Histoire Critique du Vieux Testament" (1678), practically the first introduction to the Old Testament written. It dealt with the books of the Old Testament as if they were ordinary writings, and by this means aroused the enmity of Bossuet and the Port Royal, through whose influence the whole edition of 1,300 copies was seized and destroyed and Simon was expelled from the Oratory (May 21, 1678). Notwithstanding the destruction of his book, several pirated editions appeared in Holland. Simon wrote several pamphlets defending his views against the attacks of contemporary writers, such as Vossius, Spanheim, Jurien, Colomies, Le Clerc, and others.

SIMON (SIMEDL, SIMONCINO) OF TRENT: Child victim of an alleged ritual murder by the Jews of Trent. He was the son of Andreas Unverdosben, a cobbler, or tanner, in Trent, and was born Nov. 26, 1472.

The harmonious relations between the Christians and the Jews in Trent had excited the anger of the semidemented Franciscan friar Bernardinus of Feltre, who was a son of a notorious enemy of the Jews. In his Lenten sermons (1475) he endeavored to incite the people against them, but instead provoked displeasure on the part of the Christians.

The Disappearance of Simon.

Then he predicted that at the next Jewish Passover a ritual murder would occur. In accordance with this prediction, the child Simon, twenty-eight months old, disappeared on March 23, 1475. Bernardinus of Feltre, Johannes Schweizer (a neighbor of the Jews), and, at last, the excited people themselves declared that the child would be found among the Jews; but a careful search through the Jewish quarter, ordered by Bishop Hinderbach and executed by the podestà of Trent, Johann Sala, proved fruitless.

On the eve of Easter Monday, March 26, some Jews noticed the body of a child in the river, near the house of one of their number named Samuel. Without a moment's delay three of them, Tobias (a physician), Samuel, and Angelus, hastened to notify the bishop, but were not admitted to his presence. The podestà, however, visited the house of Samuel, took possession of the child's body, and ordered the arrest of those present—Samuel, Angelus, Tobias, Israel, Bonaventura, Toaff, and a second Bonaventura (the cook). After a medical examination of the body it was stated that death was the result of violence, not of accidental drowning. A baptized Jew, Johann of Feltre, who had been a prisoner for several years for theft, seized the apparent opportunity to shorten the term of his imprisonment by declaring that the Jews use the blood of Christians for ritual purposes at the Passover. On the strength of this allegation all the members of the Jewish community, women and children included, were arrested. The proceedings against them began on March 28. The accused pleaded not guilty, and denounced two men: Johannes Schweizer, who had access to the river flowing by Samuel's house and who for a long time had been an enemy of the Jews; and the German tailor Enzelin. Johannes Schweizer and his wife were arrested, but proved an alibi as regards the 23d of March, though only for the daytime; they were finally liberated from prison in a "miraculous" manner.

Torture Suffered by the Jews.

Then began days and nights of torture for the Jews, in which numerous methods of compelling "confession" were tried. For a long time the sufferers remained steadfast and faithful; but after weeks of torture had weakened the will, they "confessed" in the exact words dictated by their clerical tormentors and assassins. These abominable practises caused Duke Sigmund and others to intercede and stop the proceedings (April 21). But the persecutions were resumed on June 5, and were maintained until the Jew Moses, aged eighty years, after terrible tortures and persistent denials, likewise "confessed." Toward the end of June (21-23) eight of the wealthiest Jews, after receiving baptism, were put to death, some being burned at the stake and the rest beheaded.

But the cruelty of the proceedings had aroused general indignation. Pope Sixtus IV., alarmed for the reputation of the Church, commanded Bishop Hinderbach on Aug. 3 to again suspend proceedings, until the arrival of the papal commissary, Bishop Giambattista dei Sindici of Ventimiglia, who, jointly with the Bishop of Trent, would conduct the investigation. The papal agent had been fully instructed beforehand; after making an investigation, he denied the martyrdom of the child Simon and disputed the occurrence of a miracle at his grave. Sixtus IV. had already anticipated this denial in his encyclical of Oct. 10, 1475. The commissary uncovered the tissue of lies, but when he demanded the immediate release of the Jews he was denounced by the bishop and assailed by the mob, being compelled to withdraw to Roveredo. Thence, fortified by his instruc-

Investigation by the Papal Envoy.

tions, he summoned the bishop and the podestà to answer for their conduct. Instead of appearing, Bishop Hinderbach answered by a circular, directed to all churchmen, describing the martyrdom of Simon, justifying his own share in the proceedings, and denouncing the work of the Bishop of Ventimiglia as "corruptam inquisitionem." While the papal commissary was taking Enzelin, the supposed actual murderer, a prisoner to Rome for trial, the Bishop of Trent and the podestà continued their proceedings against the Jews, several of whom they executed (Dec. 2, 1475; Jan. 13 and 16, 1476).

The Bishop of Ventimiglia reported to Rome that, as the result of careful investigations, he found the Jews innocent, that Simon had been killed by Christians with the intention of ruining the Jews, and that Bishop Hinderbach had planned to enrich himself by confiscating the estates of those executed. Sixtus IV. then appointed a commission of six cardinals to investigate the two proceedings. The head of the commission being an intimate friend of Bernardinus of Feltre, the result was a foregone conclusion, especially since the whole Catholic Church would have been involved in the condemnation of the Bishop of Trent. Accordingly, in the decree of June 20, 1478, "Facit nos pietas," Sixtus IV. declared the proceedings against the Jews in Trent to be "rite et recte factum." Both Bernardinus of Feltre and Simon of Trent are said to have been canonized by Gregory XIII., about a century later, the former as a prophet, and the latter as a martyr.

SIMONIAS (modern name, **Samuniyyah**): A city in Galilee, about two hours southwest of Sepphoris. In the Talmud (Yer. Meg. 70a) it is identified with the Shimron of Josh. xi. 1, xii. 20, xix. 15, a name which had already been replaced in all passages of the Septuagint by Συμοών, whence the "Simonias" of the Greek period. Josephus calls the place a village, and states that while there he was attacked at night by the Roman decurion Ebutius, who was forced to withdraw, however, without success, since his cavalry could not be used in that locality ("Vita," § 24). The genuine Jewish spirit of the inhabitants is shown by the story that once when the patriarch Judah I. passed through their city, they asked him to send a scholar to instruct them (Gen. R. lxxxi. 2; Yer. Yeb. 13a). The name of the city occurs also elsewhere (Niddah 24b; Mek. on Deut. in "Hildesheimer Jubelschrift," p. 30), and in the Middle Ages it is mentioned by Estori Farḥi ("Kaftor wa-Feraḥ," ch. xi.).

SIMONS, DAVID: Dutch jurist; born at The Hague Nov. 3, 1860. He studied law at the University of Leyden (J.U.D. 1883), and then established himself as a lawyer in Amsterdam. In 1897 he was appointed professor of penal law at the University of Utrecht. He is the author of: "De Vrijheid van Drukpers in Verband met het Wetboek van Strafrecht" (his doctor's dissertation, for which he was awarded the university gold medal, 1882); "Beknopte Handleiding tot het Wetboek van Strafvordering" (3d ed. 1901, Haarlem); "Leerboek van het Nederlandsche Strafrecht" (vol. i., Gröningen, 1904).

Simons is associate editor of the department of theories on the "Tijdschrift voor Strafrecht," and, since July, 1902, editor-in-chief of the "Weekblad van het Recht."

S. E. Sl.

SIMONSEN, DAVID JACOB: Danish rabbi and author; born in Copenhagen March 17, 1853. He studied at the Von Westenske Institut in his native city, at the same time receiving private instruction in Talmudics and Hebrew literature. In 1874 he was awarded a prize for a treatise on Arabic philology. From 1874 to 1879 he studied at the rabbinical seminary at Breslau; and on passing his examination he received offers of tutorships successively at the Breslau and Ramsgate seminaries, which he declined. A few weeks before he was called to Copenhagen as assistant to Chief Rabbi Wolff, being the first Danish-born rabbi of the Copenhagen congregation. At Wolff's death (1891) Simonsen was unanimously chosen his successor as chief rabbi of Denmark; he resigned his office in 1902, on which occasion King Christian IX. conferred upon him the honorary title of professor. He is a member of the executive board of the Alliance Israélite Universelle.

Simonsen is a prolific contributor to Danish and foreign Jewish periodicals. In 1889 he published in Danish and in French a study of sculptures and inscriptions from Palmyra, belonging to Dr. Jacobsen's famous collection at the Ny Carlsberg Glypothek in Copenhagen.

SIMONSEN, JOSEPH LEVIN: Danish jurist; born in Copenhagen Dec. 26, 1814; died there June 21, 1886. He was graduated from the University of Copenhagen (Candidatus Juris) in 1837, and in 1851 was admitted to the bar of the superior court. He soon demonstrated a profound knowledge of the most intricate matters of law, and his legal opinions were generally quoted as authoritative. In 1859 Simonsen was elected vice-president of the Society of Danish Lawyers; and from 1848 till his death he officiated as legal counselor of the Jewish congregation of Copenhagen.

SIMONYI, SIGMUND: Hungarian linguist; born at Veszprim Jan. 1, 1853; studied at Esztergom, Budapest, Leipsic, Berlin, and Paris; he has embraced Christianity. In 1877 he became lecturer, in 1885 assistant professor, and in 1889 professor, at the University of Budapest. The Hungarian Academy of Sciences elected him a corresponding member in 1879 and a regular member in 1893; he is a member also of the Ugro-Finnic Society of Helsingfors. He is a voluminous writer, and has contributed largely to the development of Hungarian philology, both by his works and by the influence which he has exercised for a generation upon the students of philology at the University of Budapest.

Simonyi has published the following works: "Antibarbarus" (1879), on foreign words in Hungarian; "A Magyar Kötöszók" (3 vols., 1881–83), on Hungarian conjunctions; "A Magyar Határozók" (2 vols., 1888), on Hungarian adverbs; "A Magyar Nyelv" (2 vols., also in German, 1897), on the Hungarian language; "Magyar Nyelvtörténeti Szótár" (3 vols.), a historical dictionary of the Hungarian language; "Német és Magyar Szólások" (1895), on Teutonisms and Magyarisms; and (in collaboration with Balassa) a German-Hungarian dictionary (1899). He has also translated the works of Max Müller and Cox.

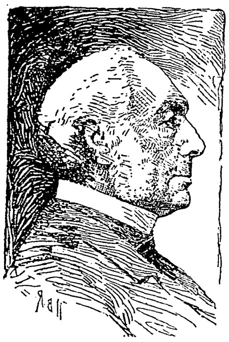
SIMSON. See SAMSON.

SIMSON, MARTIN EDUARD VON: German jurist and statesman; born Nov. 10, 1810, at Königsberg, East Prussia; died at Berlin May 22, 1899. Educated at the universities of Königsberg (LL.D. 1829), Berlin, and Bonn, and at the Ecole de Droit, Paris, he became privat-docent at the university of his native town in 1831; he was appointed assistant professor in 1833 and professor of Roman law in 1836, serving also as judge. In 1846 he received the title of "Rat" at the higher court. He took an active part in the turbulent political life of his time, and in 1848 was sent as deputy from Königsberg to the National Congress of Frankfort. He was elected secretary of this body at its first meeting, later became its vice-president, and on Dec. 19 was chosen as president, in which office he showed great skill in controlling an assembly made up of men animated by vastly diverse political ideas. As president of the congress he was also chairman of the deputation selected to offer the crown of the German empire to King Frederick William IV. of Prussia.



Martin Eduard von Simson.

Resigning from the congress in May, 1849, Simson was in the same year elected to the lower house of the German Parliament, in which he was an adherent of the Constitutional party. In 1850 he presided over the congress at Erfurt. From 1852 to 1859 he took no part in politics, but in the latter year he again became a member of the Prussian lower house, over which he presided in 1860 and 1861. In 1860 he was appointed vice-president and in 1869 president of the higher court of Frankfort-on-the-Oder. A member of the North-German Congress from its opening, Simson was elected its first president in 1867, and in that capacity he offered the crown of Germany to William I. of Prussia in 1870. He was elected a member of the first German Reichstag and became its president, from which position he retired in 1874 on account of failing health, declining reelection in 1877. In 1879 he was appointed first president of the German Supreme Court in Leipsic; in 1888 he received the decoration of the Black Eagle of Prussia and was ennobled. In 1892 he retired to private life.

Simson became a Christian when very young. He was the author of "Geschichte des Königsberger Ober-Tribunals."

W. B. J. Z. L.

SIN: Under the Jewish theocracy, wilful disregard of the positive, or wilful infraction of the negative, commands of God as proclaimed by Moses and interpreted by the Rabbis; it thus includes crimes against God and crimes against society or an individual member thereof. This article is confined, as far as possible, to the former class. Of the three kinds of sin embraced in this division, the lightest is the "ḥeṭ," "ḥaṭṭa'ah," or "ḥaṭṭat" (lit. "fault," "shortcoming," "misstep"), an infraction of a command committed in ignorance of the existence or meaning of that command ("be-shogeg"). The second kind is the "'awon," a breach of a minor commandment committed with a full knowledge of the existence and nature of that commandment ("be-mezid"). The gravest kind is the "pesha'" or "mered," a presumptuous and rebellious act against God; or a "resha'," such an act committed with a wicked intention. These three degrees are mentioned by the Psalmist (cvi. 6): "We have sinned ["ḥaṭa'nu"], . . . we have committed iniquity ["he-'ewinu"], we have done wickedly ["hirsha'-nu"]" (comp. I Kings viii. 47; Dan. ix. 5).

The confession of sin by the high priest in the Holy of Holies on Yom Kippur followed the order here given—"ḥeṭ," "'awon," "pesha'" (Yoma 36b).

Various Sins.

These three classes are subdivided under the terms "‘asham" (guilt), a sin which is later repented; "ma‘al," "me‘ilah" (sacrilege); "tiflah" (vice, depravity); "‘amal" (enormity, corruption); and "awon" (heinous crime, atrocity). The word "resha‘" is generally used to express the idea of ill conduct, viciousness, criminality. The Talmudic word "‘aberah" carries the idea of trespass, transgression, and includes both sin and crime.

The motive ascribed as underlying the prohibition against sin is the benefit of man. Sin defiles the body and corrupts the mind; it is a perversion and distortion of the principles of nature; it creates disorder and confusion in society; it brings mischief, misery, and trouble into communal life. Man, not God, reaps the benefit of obedience to God's laws: "If thou sinnest, what doest thou against him? . . . Thy wickedness may hurt a man as thou art" (Job xxxv. 6, 8).

Original Sin.

Man is responsible for sin because he is endowed with free will ("beḥirah"); yet he is by nature frail, and the tendency of the mind is to evil: "For the imagination of man's heart is evil from his youth" (Gen. viii. 21; Yoma 20a; Sanh. 105a). Therefore God in His mercy allowed man to repent and be forgiven. Jewish theologians are divided in regard to the cause of this so-called "original sin"; some teach that it was due to Adam's yielding to temptation in eating of the forbidden fruit and has been inherited by his descendants; the majority, however, do not hold Adam responsible for the sins of mankind. The Zohar pictures Adam as receiving all the departed souls at his resting-place in the cave of Machpelah and inquiring of each soul the reason of its presence, whereupon the soul laments: "Wo unto me! thou art the cause of my departure from the world." Adam answers: "Verily, I have transgressed one precept and was punished; but see how many precepts and commandments of the Lord thou hast transgressed!" R. Jose said that every soul, before departing, visits Adam, and is convinced that it must blame its own wickedness, for there is no death without sin (Zohar, Bereshit, 57b). R. Ḥanina b. Dosa said: "It is not the wild ass that kills; it is sin that causes death" (Ber. 33a). On the other hand, it is maintained that at least four persons—Benjamin, Amram, Jesse, and Chileab—died without having committed any sin and merely as the result of Adam's weakness in yielding to the temptation of the serpent. To uphold the view of the majority, R. Ammi quoted the Scripture to show that sin causes pain and death: "I visit their transgression with the rod and their iniquity with stripes" (Ps. xxxix. 33); "The soul that sinneth, it shall die" (Ezek. xviii. 4). This verse is in contrast to another: "All things come alike to all: there is apparent one event to the righteous, and to the wicked" (Eccl. ix. 2; comp. Shab. 55a, b); but these two verses may perhaps be reconciled through others which declare "There is no man that sinneth not" (I Kings viii. 46); "For there is not a just man upon earth, that doeth good, and sinneth not" (Eccl. vii. 20; see Sanh. 105a).

The Golden Calf.

Some of the Rabbis, while disclaiming the influence of Adam's sin, made the sin of the golden calf ("the cloven foot") a hereditary one, affecting twenty-four generations, till the final destruction of the Jewish state in the time of King Hezekiah: "In the day when I visit, I will visit their sin upon them" (Ex. xxxii. 34; Sanh. 102a; comp. ‘Ab. Zarah 4b). Moses "was numbered with the transgressors" of the generation in the wilderness, "and he bare the sin of many" who participated in the worship of the golden calf (Soṭah 14a, in reference to Isa. liii. 12).

There is a difference between the sin of the whole people and the sin of the individual. A communal or national sin is the more severely punished as an example to other peoples, that they may be deterred from similar wickedness. For this reason public sins ought to be exposed, while the sins of individuals should rather be concealed (‘Ab. Zarah 5a; comp. Yoma 86b). Rab thought to explain the apparently contradictory verses, "Blessed is he . . . whose sin is covered" (Ps. xxxii. 1) and "He that covereth his sins shall not prosper" (Prov. xxviii. 13), by distinguishing between the confession of a known and the confession of an unknown sin. R. Naḥman distinguishes between a sin against God and a sin against man: the latter must be confessed openly (Yoma 86b). R. Kahana said the man is insolent who recounts his sins (Ber. 34b). The enumeration of sins included in the "‘Al Ḥeṭ" is permitted only on the ground that they are of a general character, concerning the public as a unit; and every individual recites it as part of that unit, using the plural "We have sinned." In strictness, private sins must be confessed to God in silence.

What Constitutes Sin.

The earliest Biblical conception of what constituted sin is illustrated by the story of Adam's punishment, which was due to his failure to obey the divine will and his revolt against the divine government. The catastrophe of the Flood was a punishment for man's demoralization and corruption, his violence and immorality (see Gen. vi. 11, 12). The builders of the Tower of Babel revolted against divine government, and were dispersed (see Gen. xi. 1-9). Sodom and Gomorrah were destroyed for their heinous crimes: "The men of Sodom were wicked and sinners before the Lord exceedingly" (Gen. xiii. 13): they were "wicked" in civil matters, "sinners" in blasphemy "exceedingly," with full appreciation of the enormity of their sins (Sanh. 109a). The Egyptians were punished for the sin of enslaving the Israelites, and for not heeding the command of God to release them. The most serious sin of the Israelites was the worship of the golden calf, contrary to God's commandments delivered from Sinai. Korah rebelled against the authority of Moses, and of the Levites, priests by the choice of God. The Canaanites practised incest and immorality: "For they committed all these things, and therefore I abhorred them" (Lev. xx. 23); "But for the wickedness of these nations the Lord thy God doth drive them out from before thee" (Deut. ix. 5).

The principal sins for which the Israelites forfeited their national existence were idolatry, immorality, judicial corruption and deception (comp. Isa. i. 21–23), desecration of the Sabbath (comp. Jer. xvii. 21–27), and non-observance of the law relating to the release of servants after six years' service (comp. Jer. xxxiv. 16); citing "Arise ye and depart; for this is not your rest: because it is polluted, it shall destroy you" (Micah ii. 10), the Midrash says, "God would not have hastened the destruction of Jerusalem for any transgression other than fornication." The Ten Tribes were exiled for the same cause (Num. R. ix. 4). The shedding of innocent blood was the cause of the destruction of the Temple (Shab. 33a); though other reasons are given in Shab. 119b.

"'Al Ḥeṭ."

In the post-exilic period the inclination toward idolatry was eradicated, and the disposition toward fornication was weakened (Yoma 69b). The list of sins in the confession of Yom Kippur gives an idea of the rabbinical conception of sin. The "'Al Ḥeṭ" was extended from the simple formula in the Talmud (Yoma 87b) to that of the Geonim, which includes the Ashamnu, 'Al Ḥeṭ, and "'Al Ḥaṭa'im" ("Seder R. 'Amram," p. 48a; see also Aḥai Gaon, "She'eltot," § 167). The "Ashamnu" is in alphabetical order and enumerates the following sins: "trespass, treachery, slander, presumptuousness, violence, lying, scoffing, rebellion, blasphemy, oppression, extreme wickedness, corruption." The "'Al Ḥeṭ" qualifies man's sins and makes him ask forgiveness for the sins which have been committed against God "either (1) by compulsion or (2) voluntarily, (3) unwittingly or (4) with knowledge, (5) in private or (6) in public, (7) presumptuously or (8) without intent." The "'Al Ḥaṭa'im" classifies sins as those "for which we were obliged to bring a trespass-offering, . . . a burnt offering, . . . a sin-offering; for the sins for which we were obliged to suffer the penalty of receiving stripes, becoming childless, being extirpated or killed by death from heaven, four modes of death by bet din" ("Seder R. 'Amram," *l.c.*). The single alphabetical list of the "'Al Ḥeṭ" was formulated later; it is mentioned by Maimonides, and is found almost entire in the present "Minhag Sefarad." The double alphabetical list of the "'Al Ḥeṭ," as found in the "Minhag Ashkenaz," dates probably from the thirteenth century (comp. the Vitry Maḥzor, pp. 390-391, and the prayer-book and Maḥzor for the Day of Atonement).

Every Sin Pardonable.

Jewish theology does not admit that there is an unpardonable sin. The Mishnah says that sins are expiated (1) by sacrifice, (2) by repentance at death or on Yom Kippur, (3) in the case of the lighter transgressions of the positive or negative precepts, by repentance at any time. If one persists in sinning, depending upon receiving pardon through subsequent repentance, *e.g.*, at Yom Kippur, his sins are not forgiven. At Yom Kippur, only sins between man and God, not sins between man and his neighbor, are expiated (Yoma viii. 8, 9). The graver sins, according to Rabbi, are apostasy, heretical interpretation of the Torah, and non-circumcision (Yoma 86a). The atonement for sins between a man and his neighbor is an ample apology (Yoma 85b; see Atonement). Repetition of the same sin may be forgiven once, twice, or even thrice, but not a fourth time: "For three transgressions of Moab [I will forgive], and for four, I will not turn away the punishment thereof" (Amos ii. 1); "Lo, all these things worketh God oftentimes [Hebr. "twice and three times"] with man, to bring back his soul from the pit" (Job xxxiii. 29, 30; Yoma 86b).

There are also lighter sins that are not punishable, but nevertheless stain the character of the most pious and righteous man; for instance, the sin of not pleading for mercy for a neighbor, if in position to do so; as Samuel said, "God forbid that I should sin against the Lord in ceasing to pray for you" (I Sam. xii. 23; Ber. 12b). The Nazarite committed a sin in avoiding the moderate use of wine; the learned man sins by fasting instead of studying (Ta'an. 11b). Small sins are generally overlooked in punishment: "I will search Jerusalem with candles, and punish the men" (Zeph. i. 12): not by daylight, nor with the torch, but with candles, so as not to detect venial sins (Pes. 7b). R. Simeon b. Laḳish, however, cites "The iniquity of my heels shall compass me about" (Ps. xlix. 5) to prove that even "small sins that man tramples with his heels will surround him on the day of judgment" ('Ab. Zarah 18a). "Be heedful of a light precept as of a grave one" (Ab. ii. 1). Ben 'Azzai said, "Run to do even a slight precept, and flee from [even a slight] transgression" (Ab. iv. 2). Sometimes one may be justified in committing in private a sin that would, if committed in public, expose the name of God to disgrace ("ḥillul ha-shem"; Ḳid. 40a).

Responsibility for Sin.

The responsibility for sins against Judaism rests forever upon the Jew. Apostasy does not relieve him from responsibility in this respect; "Once a Jew, always a Jew." "Israel hath sinned" (Josh. vii. 11) is cited by R. Abba bar Zabdai to prove that though he "sinned," yet he remains an Israelite (Sanh. 43b). The responsibility of the anointed high priest is the greatest; next is that of the representatives of all Israel; and finally that of the ruler of a faction of Jews. These representatives require each a special sacrifice in accordance with their degree of responsibility (comp. Lev. iv. 3, 13, 22; Hor. iii. 1). The bullock sacrificed for the anointed priest and that for the people are to be burned outside of the camp as "a sin-offering of the congregation"—as a symbol of the vanishing glory of the congregation in consequence of its sins (Yer. Ta'an. ii. 5). "Whosoever is in a position to prevent sins being committed by the members of his household, but refrains from doing so, becomes liable for their sins. The same rule applies to the governor of a town, or even of a whole country" (Shab. 54b). R. Sheshet said, "One is not justified in committing even a slight sin in order to prevent a graver sin by his neighbor" (Shab. 4a). One is responsible, however, only for his action, not for his evil thought, except in the case of idolatry: "That I may take the house of Israel in their own heart, because they are all estranged from me through their idols" (Ezek. xiv. 5; Ḳid. 39b).

As with Cain, sin leaves its mark upon the face of the sinner: "The show of their countenance doth witness against them" (Isa. iii. 9). The cabalist can detect any sinner by observing his forehead (Zohar, Lev., Aḥare Mot, p. 75b). Sin dulls the heart and blunts the understanding (Yoma 39a; Yalḳ. 545, after Lev. xi. 43). R. Johanan said, "Were it not for sin, there would be no need for the books of the Prophets, as Israel would have been satisfied with the Pentateuch and the Book of Joshua" (Ned. 22b). Before Israel had sinned, the Shekinah rested upon it: "For the Lord thy God walked in the midst of thy camp." But sin caused the Shekinah to retire to a distance, "That he see no unclean thing in thee, and turn away from thee" (Deut. xxiii. 14; Soṭah 3b). Sin besets the path even of the righteous, which explains Jacob's fear of Esau (see Gen. xxxii. 7); while David said, "I had fainted, unless I had believed to see the goodness of the Lord in the land of the living" (Ps. xxvii. 13; Ber. 4a). The repetition of a sin makes it appear to the sinner a license (Yoma 86b). For this reason the punishment of one who steals an ox or a sheep and kills it or sells it is to restore it fourfold (see Ex. xxi. 37 [A. V. xxii. 1]), the purpose being to uproot the disposition to repeat an evil action (B. Ḳ. 67b).

How to Prevent Sin.

As a safeguard against sin, Rabbi advised, "Know what is above thee—an eye that sees, an ear that listens, and a record of all thy deeds." Gamaliel taught that the study of the Torah combined with some worldly occupation makes one forget to sin, but that the study of the Torah alone without some manual labor increases the tendency thereto (Ab. ii. 1, 2). R. Ḥanina b. Dosa said, "Whose fear of sin precedes his wisdom, his learning will endure; but where learning precedes the fear of sin, the learning will not endure" (Ab. iii. 11); "One who controls his passion once and twice will find it easy to control the third time"; "A way is left open for the sinner, and one who is willing to lead a pure life is helped." R. Johanan said that one who has passed most of his life without sin is sure to end it so, for "He will keep the feet of the saints" (I Sam. ii. 9; Yoma 38b). R. Eleazar held that residence in the Holy Land tends to prevent sin: "The people that dwell therein shall be forgiven their iniquity" (Isa. xxxiii. 24; Ket. 111a). He who leads others to do good will be saved from doing evil himself. On the other hand, one who leads others to do evil will not be given an opportunity to repent. Thus the righteous will meet in Gan 'Eden those whom he has led to do right, and the sinner will meet in Gehinnom those whom he has misled (Yoma 87a). Anger and excitement are incentives to sin: "A furious man aboundeth in transgression" (Prov. xxix. 22; Ned. 22b). "Refrain from becoming excited, and thou wilt not sin; refrain from becoming drunk, and thou wilt not sin" (Ber. 29b). One must always consider his good and evil deeds as evenly balanced: he will then appreciate the danger of committing even one sin, which would lower the scale on the wrong side. Nay, perhaps the whole world is evenly balanced, needing only one sin to outweigh all the good therein: "One sinner destroyed much good" (Eccl. ix. 18; Ḳid. 40b).

Prayer Against Sin.

Another safeguard against sin is PRAYER: "O lead us not into the power of sin, or of transgression, or of iniquity, or of temptation; . . . let not the evil inclination have sway over us," are the introductory words of the morning prayer. The silent Yom Kippur "'Amidah" ends, "O may it be Thy will, O Lord my God, and God of my fathers, that I may sin no more; and as to the sins I have committed, purge them away in Thine abounding mercy." Other formulas are found in Berakot (16b, 17a, 60b). See ADAM; ATONEMENT; COMMANDMENT; CONFESSION OF SIN; DEVOTIONAL LITERATURE; PUNISHMENT.

SIN (סין): **1.** Egyptian city mentioned in Ezek. xxx. 15 *et seq.*; probably the ancient frontier fortress of Pelusium (so cited in Jerome); the modern Farama or Tine.

2. Desert on the Sinaitic Peninsula, situated "between Elim and Sinai" (Ex. xvi. 1, xvii. 1; Num. xxxiii. 12). It was a camping-place of the Israelites in their wanderings. See also ZIN.

SIN. See SHIN.

SIN-OFFERING.—Biblical Data: The sin-offering proper is a sacrifice consisting of either a beast or a fowl and offered on the altar to atone for a sin committed unwittingly. The rules concerning the sin-offering are as follows: If the anointed priest or the whole congregation commits a sin through ignorance, the sin-offering is a young bullock without blemish. Should the ruler so sin, his offering is a male kid without blemish. But when a private individual sins, his offering must be either a female kid or a female lamb without blemish, or, if he is too poor to provide one of these, a turtle-dove.

Sin-offerings were brought on other occasions also. On the Day of Atonement the high priest inaugurated the festival with two sin-offerings—a bullock as his own offering, and a male kid for the congregation. The flesh of these was not eaten, but after the fat had been removed the carcasses were burned outside the camp (Lev. xvi. 3, 5, 10-11, 25, 27). A woman, after the days of her purification had been fulfilled, was required to bring a dove for a sin-offering, in addition to a burnt offering. A leper, on the day of his cleansing, was required to bring, besides other offerings, a female lamb or, if he were too poor, a dove for a sin-offering (Lev. xii. 6; xiv. 10, 19, 22).

Sin-offerings formed a part of inaugural and dedicatory ceremonies. Thus, when Aaron and his sons were inaugurated into the priesthood, one of the sacrifices was a sin-offering consisting of a bullock, the flesh of which was burned outside the camp (Ex. xxix. 1, 10-14; Lev. viii. 14-17). Eight days later Aaron brought a calf, and the Israelites brought a small kid, as sin-offerings (Lev. ix. 2-10). At the dedication of the altar each of the twelve princes offered a male kid (Num. vii. 16 *et passim*). The sacrifices of those who returned from captivity with Ezra included twelve he-goats (Ezra viii. 35).

Ritual of the Sin-Offering.

The ritual of the sin-offering was as follows: If the victim were a quadruped, the offerer confessed his sins over the head of the victim and slew it himself (comp. Lev. iv. 4, 15, 24, 29). The place of slaughter was on the north side of the altar (comp. *ib.* i. 11 and *ib.* iv. 19 [A. V. 25]). The priest took some of the blood and sprinkled it before the veil (*ib.* iv. 5 [6]), or, on the Day of Atonement, before the mercy-seat (*ib.* xvi. 15); this he did seven times, and then smeared some on the horns of the altar. The remainder of the blood was poured out at the base of the altar of burnt offering. The internal fat of the animal, with the caul, liver, and kidneys, was burned upon the altar of burnt offering. In early times the flesh belonged to the priests (comp. Hos. iv. 8 and Lev. vi. 22 [29]), though it was sacrosanct, making everything which touched it holy, and might be eaten by priests alone. The law of Lev. iv. prescribed that the flesh, together with the hide, head, legs, viscera, and dung, should be burned outside the Temple. The blood was so holy that an earthen vessel which touched it was to be broken, and a brazen vessel scoured (*ib.* vi. 21 [28]).

When the victim was a bird the priest pinched off its head with his thumb-nail (*ib.* v. 8; but see JEW. ENCYC. x. 619b, *s. v.* SACRIFICE), and sprinkled its blood without dividing the carcass. A second bird was offered as a burnt sacrifice. When an offering of fine flour was made, the priest burned a handful of it on the altar and retained the rest for himself (*ib.* v. 11-13).

J. G. A. B.—M. SEL.

——**Critical View:** The sin-offering (חטאת) was an ancient sacrifice. In the later ritual it is associated with the BURNT OFFERING (עלה) and the GUILT-OFFERING (אשם). An early reference to it occurs in Hos. iv. 8. In Ezekiel's proposed reconstruction of the cultus the sin-offering had for its objects: (1) the consecration of the altar (Ezek. xliii. 19 *et seq.*); (2) the annual cleansing of the sanctuary (*ib.* xlv. 18-20); (3) a part of the preparation for the Passover (*ib.* xlv. 22); and (4) preparation for the festivals of the New Moon, etc. (*ib.* xlv. 15 *et seq.*). In the first three cases the offering consisted of a bullock, and in the last of lambs. Ezekiel provided also a table in the north porch of the Temple where the sin-offering might be slain or eaten (*ib.* xl. 39), and one on the south side where it might be laid or eaten (Ezek. xlii. 13). In accordance with the use of the sin-offering in the consecration of the altar, a late supplementary priestly narrative relates that when the altar of the Tabernacle was dedicated a sin-offering was brought for each of the twelve tribes. In this case the victims were he-goats (comp. Num. vii. 16, 22, *et passim*).

In Levitical Ritual.

Somewhat akin to the use of the sin-offering in these cases of consecration is its use in the Levitical ritual in ceremonies of purification, *i.e.*, in the removal of a taboo. Several of these taboos are connected with sexual matters, or mysterious diseases. Of these may be noted: (1) cases of gonorrhea (Lev. xv. 14, 15), in which the offering was a turtle-dove or a young pigeon; (2) cases of menorrhagia (*ib.* xv. 29, 30), when also the offering was a turtle-dove or a young pigeon; (3) purification after childbirth (*ib.* xii. 6), the offering being again a turtle-dove or a young pigeon; (4) it formed a part of the ritual of a leper who had recovered (*ib.* xiv. 19), the victim in this case being a ewe lamb (comp. *ib.* v. 10). With these may be classed (5) the use of the sin-offering as part of the ritual by which a Nazarite's vow was discharged (Num. vi. 14), the victim in this case being a ewe lamb a year old. Evidently the sin-offering in the first four of these cases was offered as a recognition of the mysterious or supernatural character of sexual secretions, childbirth, and leprosy. While the vow of the Nazarite is not really in the same class, yet he also became taboo by virtue of his consecration to the Deity, symbolized by the great length of his hair.

Primitive Origin.

The cases thus far considered have their origin in very primitive thought. A more advanced conception may be looked for in cases where the sin-offering is associated with atonement for the nation. In this connection the DAY OF ATONEMENT comes under consideration (Lev. xvi.), on which the high priest offered a bullock as a sin-offering for himself and for his house. This was done apparently that the priest might not be slain while performing public duty; it had, therefore, a national significance. Two he-goats were then selected as a sin-offering for the congregation. One of these was selected by lot for YHWH; the remaining one was for AZAZEL. The priest then killed the bullock, took the blood together with incense, entered into the Holy Place, and sprinkled the blood on the east side of the mercy-seat and "before the mercy-seat" seven times, "that he die not." The blood of the goat that was YHWH's was brought in and sprinkled in like manner, "to make atonement for the holy place, because of the uncleanness of the children of Israel, and because of their transgressions, even all their sins." The high priest then confessed the sins of the people over the head of the live goat, and it was driven away into the wilderness where Azazel might catch it. Azazel appears to have been a wilderness demon (comp. Ethiopian Book of Enoch, viii. 1; x. 4, 8 *et seq.*).

Akin to the sin-offering of the high priest on the Day of Atonement was the offering prescribed in one of the latest laws (Lev. iv. 3-12) and which an anointed priest was obliged to offer if he had sinned so as to bring guilt on the congregation. This offering also consisted of a bullock. The same law provided that, if the whole people sinned unwittingly, they should bring, when the sin was known, a young bullock for a sin-offering (*ib.* iv. 13-21). These sin-offerings, like those of the Day of Atonement, were of a national character. That which the same law (*ib.* iv. 22-26) prescribed for the ruler may have partaken of the same public nature, because of the prominence of the ruler; but this is not stated, and the offering may have been a purely personal one. The victim was in this case a he-goat.

In Lev. iv. the laws descend finally to the individual. If one of the common people sinned unwittingly (verses 27-32), he was to offer a female goat or a ewe lamb as a sin-offering. The offenses which

Offenses Expiated.

demanded a sin-offering are detailed in Lev. v. 1–6. They are for the most part of a non-moral nature, such as contact with a dead body, with an unclean reptile, or with an unclean discharge from a human being; but two of them have more of a moral character. These latter are (1) cases where a man permits injustice by withholding information (*ib.* verse 1), and (2) cases of rash though ignorant swearing to that which turns out to be false (*ib.* verse 4). A noticeable feature of Lev. iv. and v. is that the expense of the sacrifice is graded according to the dignity or wealth of the offender. Thus in ch. iv. the offering may be a bullock, a he-goat, a she-goat, or a ewe lamb, while in ch. v. it may be a she-goat, a ewe lamb, a turtle-dove, a young pigeon, or the tenth part of an ephah of fine flour (comp. *ib.* verses 6, 7, 11).

It is clear that the sin-offering was not primarily an offering for real sins, but for the unconscious violation of mere taboos. It was demanded in the case of actual sins only sporadically, and then only to a slight degree. There is an exception to this in the ritual of the Day of Atonement; but the words in Lev. xvi. 16 which make the sin-offering cover real sins are probably of late date.

SINAI. See PERIODICALS.

SINAI, MOUNT.—Biblical Data: Mountain situated in the desert of Sinai, famous for its connection with the promulgation of the Law by God through Moses (Ex. xix. 1–xx. 18). The general opinion of modern scholars is that the name "Sinai" is derived from the name of the Babylonian moon-god Sin. Mount Sinai is often referred to as "the mountain" (that is, the mountain par excellence), "the mountain of Elohim" (Hebr.), and "the mountain of YHWH" (Hebr.; Ex. iii. 1, iv. 27, xviii. 5, xix. 2, *et passim*; Num. x. 33), and in many other passages it is called "Horeb" (Ex. iii. 1; Deut. i. 2 *et passim*). The Biblical text, indeed, seems to indicate that this last was its proper name, while "Sinai" was applied to the desert. According to one theory, Sinai and Horeb are the names of two eminences belonging to the same range; if this be so the range became prominent in the history of the Hebrews some time before the promulgation of the Law. When Moses led the flocks of his father-in-law to the desert and came "to the mountain of God, even to Horeb," an angel appeared to him from a flaming bush, and then God Himself spoke to Moses, telling him that where he stood was holy ground, thus foreshadowing the great event that was to occur there. From that mountain God persuaded Moses to go to Pharaoh and deliver the Israelites from his yoke. After the Exodus, when the Israelites who had encamped at Rephidim were suffering with thirst, Moses, by command of God, smote water from a rock in Horeb (Ex. xvii. 6).

Mount Horeb.

Having encamped before Mount Sinai, the Israelites were told that from this mountain they would receive the commandments of God, and that they would hear His very voice. They were commanded to give three days to preparation for that solemnity, for on the third day God would come down on the mountain in sight of all the people. Moses set a boundary up to which they might go, and they were prohibited under penalty of death from even touching the mountain. On the third day the mountain was enveloped in a cloud; it quaked and was filled with smoke as God descended upon it, while lightning-flashes shot forth, and the roar of thunder mingled with the peals of trumpets. Then Moses appeared upon it and promulgated the Ten Commandments, after which God instructed him in many of the laws which form a part of the Pentateuch (Ex. xix. 1–xxiii. 33). Later, Moses, Aaron, Nadab, Abihu, and seventy elders of Israel went together up the mountain, where they saw the God of Israel. Mount Sinai was then enveloped in a cloud for six days, while on its summit, fire, the emblem of God, was seen burning. On the seventh day Moses was commanded by God to ascend the mountain to receive the tables of the Law; he remained there forty days and nights (Ex. xxiv. 9–10, 16–18). The Song of Moses refers to the solemn promulgation of the Law on Mount Sinai (Deut. xxxiii. 2); so does the Song of Deborah (Judges v.), which declares that the "earth trembled," the "heavens dropped, the clouds also dropped water," and the "mountains melted" (comp. Ps. lxviii. 9, 17).

Horeb reappears later as the place to which Elijah escaped after Jezebel had massacred the prophets of YHWH (I Kings xix. 8 *et seq.*).

J. M. SEL.

——**In Rabbinical Literature:** The Rabbis consider "Sinai" and "Horeb" to be two names of the same mountain, which had besides three other names: (1) "Har ha-Elohim" (= "the mountain of God"), the Israelites having received there the knowledge of the divinity of God; (2) "Har Bashan," the latter word being interpreted as though it were "be-shen" (= "with the teeth"), that is to say, mankind through the virtue of this mountain obtains its sustenance; and (3) "Har Gabnunim" (= "a mountain pure as cheese"). The names "Horeb" and "Sinai" are interpreted to mean, respectively, "the mountain of the sword," because through this mountain the Sanhedrin acquired the right to sentence a man to capital punishment, and "hostility," inasmuch as the mountain was hostile to the heathen (Ex. R. ii. 6). Shab. 89a, b gives the following four additional names of Sinai: "Ẓin," "Ḳadesh," "Ḳedomot," and "Paran," but declares that its original name was "Horeb" (comp. Midr. Abkir, quoted in Yalḳ., Ex. 169); according to Pirḳe R. El. xli., it acquired the name "Sinai" only after God had appeared to Moses in the bush ("seneh"; comp. SINAI, BIBLICAL DATA).

Different Names.

Jacob's dream is an allegorical allusion to Sinai (Gen. xxviii. 12), "ladder" being interpreted as meaning the mountain. It is also supposed by the Rabbis that the well near which Jacob met Rachel (*ib.* xxix. 2) symbolizes Mount Sinai. Mount Sinai and Moses had been predestined from the days of Creation to meet each other; and therefore the former, when Moses led his father-in-law's flocks toward it (Ex. iii. 1), moved from its foundation and went to meet him. It stopped only when Moses was upon it; and both manifested great joy at the meeting. Moreover, Moses recognized that it was the mount of God on seeing that birds hovered over but did not alight upon it. According to another authority, the birds fell at Moses' feet (Yalḳuṭ Re'ubeni, Shemot, quoting the Zohar).

Scene of the Law-giving.

Sinai, however, acquired its greatest importance through the promulgation of the Law. God's descent upon the mountain was the sixth of His descents from heaven (Pirḳe R. El. xiv.). He had previously measured all the mountains, and His choice fell on Sinai because it was lower than the others. Then the other mountains, particularly Tabor and Carmel, began to dispute among themselves, each claiming that it ought to be the place of the delivery of the Torah. God, however, said to them: "Do not dispute; you are all unworthy of this occasion, as idols have been placed upon all of you except Sinai" (Soṭah 5a; Mek., Yitro, Baḥodesh, 4; Gen. R. xcix. 1; Lev. R. xiii. 2; Num. R. xiii. 5). Referring to Ex. xix. 17, Mek., *l.c.* 3 concludes that the mountain was torn from its foundation and that the Israelites were placed just under it (but see Shab. *l.c.*). The mountain was not very large, and when God descended upon it He was accompanied by 22,000 companies of archangels and by an equal number of chariots similar to that seen by Ezekiel. God therefore ordered the mountain to extend itself, so as to be capable of receiving such a host (Tan., Ẓaw, 16). In order to reconcile Ex. xix. 20 (where it is said that God descended upon the mountain) with *ib.* xx. 22 (which declares that God spoke to the Israelites from heaven), the Rabbis hold that God lowered the heavens and spread them on Sinai (Mek., *l.c.* 4). A similar statement occurs in Pirḳe R. El. xli., namely, that the mountain was removed from its foundation and that the heavens were rent asunder, the summit of the mountain extending into the opening. Moses, while standing on Sinai, could thus see everything that was going on in the heavens.

Since that time Mount Sinai has become synonymous with holiness (Yalḳ., Ps. 785). Sinai and Moriah are the two sacred mountains, through whose virtue the world exists (Midr. Teh. to Ps. lxxxvii.). After the arrival of the Messiah, God will bring Sinai, Carmel, and Tabor together, and will build the Temple on them; and all three will sing in chorus His praises (Yalḳ., Isa. 391, quoting the Pesiḳta, Midr. Teh. *l.c.*). Rabbah bar bar Ḥana relates that while he was traveling in the desert an Arab showed him Mount Sinai. It was encompassed by a scorpion which had its head raised; and Rabbah heard a Bat Ḳol cry: "Wo is me for having sworn! For who can now make my oath of no effect?" (B. B. 74a).

W. B. M. Sel.

——**Critical View:** Modern scholars differ widely as to the exact geographical position of Mount Sinai. It is generally thought to be situated in the middle of the Sinaitic Peninsula, which apparently acquired its name from the mountain. But there is a whole group of mountains there, known to the Arabs as Jabal al-Ṭur, as it was to Idrisi (ed. Jaubert, p. 332) and Abu al-Fida (Hudson, "Geographiæ Veteris Scriptores Minores," iii. 74, Oxford, 1712); and it appears from Niebuhr ("Description de l'Arabie," p. 200) that this group is still occasionally called Ṭur Sinai, just as it was by Ibn Ḥaukal (ed. Ouseley, p. 29). According to the statement of Josephus ("Ant." iii. 5, § 1) that the Law was promulgated from the highest mountain in that country, the scene must have occurred on the peak now known as Mount Catherine. But the opinion of the natives is that the Biblical Sinai is identical with the peak now called Jabal Musa (Mountain of Moses), which is north of Mount Catherine. Other scholars, again, think that the scene must be placed on the Ras al-Ṣafṣafah (= "peak of the willow-tree"), the highest peak of the supposed Horeb, as at the foot of that peak there is a plain large enough for a camp.

But Grätz ("Monatsschrift," xxvii. 337 *et seq.*) and, later, Sayce ("Imperial and Asiatic Quarterly Review," 1893, vi. 149 *et seq.*) have concluded that the Biblical Sinai must not be looked for at all in the so-called Sinaitic Peninsula. It may be noted, by the way, that this appellation is not ancient; it was not known in the time of Josephus, who described Mount Sinai simply as situated in Arabia Petræa. Von Gall ("Altisraelitische Kultuslätten," p. 15) considers that originally Horeb and Sinai were the names of two distinct peaks, that Horeb was in the Sinaitic Peninsula, and Sinai in Midian, and that the identification of the two mountains is a post-exilic mistake (comp. Mal. iii. 22; Ps. cvi. 19). Von Gall's assertion, however, is not approved by critics like Holzinger and Sayce.

By comparing Num. xxxiii. 8-10 with Deut. i. 1 it is to be concluded that Sinai was between the Gulf of 'Aḳabah and Paran. According to this theory, Sinai-Horeb was either a part of Mount Seir or it was not far west of it, and Deut. xxxiii. 2, as well as Judges v. 4-5, favors the former supposition. The whole region now denominated the Sinaitic Peninsula was then under Egyptian control and strongly garrisoned. Baker Green identified Sinai with Mount Hor, which forms a part of Mount Seir, and Beke identified it with Jabal al-Nur (= "mountain of light"), at the northern end of the Gulf of 'Aḳabah.

It is evident that, long before the promulgation of the Law, Mount Sinai was one of the sacred places in which one of the local Semitic divinities had been worshiped. This is clearly indicated in Ex. iii. 5: the ground was holy, for it was Yhwh's special dwelling-place. The expression "and brought you unto myself" (Ex. xix. 4) means that Yhwh brought the Israelites to His mountain. The two names of Sinai and Horeb, meaning respectively "moon" and "sun," are of a cosmological nature. According to the higher critics, the "mountain of Yhwh" is called "Sinai" in J (Ex. xix. 11, xxxiv. 4) and P (Ex. xvi. 1; xxiv. 16; xxxiv. 28, 32; Lev. xxv. 1, xxvi. 46, xxvii. 34). On the other hand, in E, the earlier source, Horeb is the seat of Yhwh (Ex. iii. 1, xvii. 6, xxxiii. 6; in the last-cited passage the words "from Mount Horeb" belong to verse 9); and so in D, as throughout Deuteronomy, with the exception of Deut. xxxiii. 2, which is not Deuteronomic and which is parallel to Judges v. 3 *et seq.* The wilderness of Sinai is mentioned only in P (Ex. xix. 11 *et seq.*; Lev. vii. 38; Num. i. 1, 19).

The object of E is to show that before the Exodus the Israelites were heathen until YHWH revealed Himself from His mountain to Moses (Ex. iii. 9–14). In E, Jethro is not the priest of Midian, but is connected with the worship of YHWH of Horeb. On the other hand, J makes Jethro the prince of Midian, and omits all the expressions used by E tending to connect the cult of YHWH with the older cult.

J. M. SEL.

SINAITIC COMMANDMENTS: Halakot designated in the Mishnah and the Talmudim as "halakot le-Mosheh mi-Sinai," *i.e.*, as having been transmitted from Moses on Mt. Sinai. There are, however, many halakot so designated which did not originate with Moses and which do not even refer to ancient traditions. With regard to several of these the Talmud itself often makes it clear that the phrase "from Moses on Mt. Sinai" is not to be taken literally. R. Akiba once recited a sentence to his pupils, saying it was a "halakah le-Mosheh mi-Sinai." The Talmud, however, adds immediately that Akiba said this only to sharpen the intellect of his pupils (Niddah 45a). In like manner R. Dimi quotes a saying which he designates as "halakah le-Mosheh mi-Sinai"; and here the Talmud adds that in Palestine no one acts according to the rule given in this saying (Pes. 110b). R. Eliezer quotes in the Mishnah (Yad. iv. 3) a saying which had been transmitted to him by Johanan ben Zakkai, who, in turn, had heard it from his own teacher, the last-named having designated it as originating with Moses on Mt. Sinai. Doubts as to the genuineness of this alleged Sinaitic saying are, however, expressed (comp. the mishnaic commentaries on Yad. *ad loc.*).

Also elsewhere in the Talmud may be found sentences which, though designated as "halakot le-Mosheh mi-Sinai," are, nevertheless, made the subjects of disputations—a procedure in contradiction with the ideas of tradition. It is said of many decisions designated as Sinaitic that in earlier times they had been disputed and invalidated (comp. Jair Ḥayyim Bacharach, "Ḥawwot Yair," No. 192). It may therefore be safely assumed that the designation "halakah le-Mosheh mi-Sinai" was never interpreted literally. Many old halakot of unknown origin were designated in good faith as Sinaitic; but in the cases of many other halakot, according to Asher b. Jehiel, the phrase "halakah le-Mosheh mi-Sinai" was used merely to emphasize the fact that "these regulations are as clear and lucid as if they had been made known to Moses on Mt. Sinai." Every criterion is, however, lacking which might make it possible to distinguish those decisions which really rest on reliable traditions from those which are merely so-called "Sinaitic" laws (see ORAL LAW; TAḲḲANAH).

SINDABAR. See SINDBAD.

SINDBAD: Collection of tales on the wiles of women, the enveloping action of which deals with the attempt of a stepmother on the life of an Indian prince. His seven masters defer the evil day of his execution by telling tales of the wiles of women, somewhat after the fashion of the "Arabian Nights." The original, according to Benfey, was an Indian story-book, the chief tale of which was founded on a story of the life of Asoka; and the original name of the hero was probably Siddhapati. It is likely that the book passed through the same stages from India to the West as "Barlaam and Josaphat" and "Kalilah wa-Dimnah"; namely, translation from the Indian into Zend, and from that into either Syriac or Arabic, and then into the European languages. The Hebrew translation known as "Mishle Sindabar" is attributed to a certain Rabbi Joel, but probably owing to a confusion with the translator of the "Kalilah." It first appeared at the end of the "Chronicle of Moses" (Constantinople, 1516), which was reprinted at Venice (1544 and 1605), and which exists in several manuscripts. A fuller edition was published by Paulus Cassel under the title "Mischle Sindbad, Secundus Syntipas" (Berlin, 1888). A nominal second edition appeared in 1891.

The Hebrew version contains four stories not embodied in any of the others: one told by the stepmother about Absalom; another, "The Death of Absalom," told by the sixth vizier; and two, "The Disguise" and "The Three Hunchbacks," by the seventh vizier; the last-named story appears to be truncated, but is found in the Western versions in full. None of these appears in the western European translation, so that no importance can be attributed to their presence in the Hebrew version. The book was translated into German by H. Sengelmann, and into French by E. Carmoly ("Revue Orientale," 1844; published separately under the title of "Paraboles de Sandabar," 1849). A popular Arabic translation of the Hebrew version was published at Leghorn in 1868.

It is assumed that the title "Sindabar" has arisen from the confusion between ר and ד, but a like confusion might have existed in the Arabic original, in the script of which language the same similarity of letters occurs. The Hebrew version must have been written before 1316, at which date it is quoted in the "Iggeret Ba'ale Ḥayyim" of Kalonymus ben Kalonymus, and also in the Hebrew version of the "Kalilah wa-Dimnah."

J.

SINGAPORE: Capital and seaport of the British dependency of Singapore. Jews commenced to settle in Singapore in 1840. For a number of years their services were held in a rented house near the business quarter, in a street since known as Synagogue street. About 1877 the community purchased ground in a more convenient situation and built on it the synagogue Maghain Aboth, which was consecrated April 4, 1878. It is attended by both Sephardic and Ashkenazic Jews. A second and larger synagogue, known as Chaised-El, was built in 1904, by Manasseh Meyer, one of the heads of the community. The present (the second) burial-ground of the community was purchased in 1902. The Talmud Torah has a roll of about fifty pupils. The most prominent Jewish firms deal largely in opium, rice, and gunny-bags, and the business of most of the Ashkenazim consists chiefly in liquor-dealing, hotel-keeping, and the selling of furniture. The total population of Singapore is 160,000; this includes about 700 Jews, mostly Sephardic and Ashkenazic, the former having come from Bagdad and India, and the latter from Germany.

J. N. E. B. E.

SINGER, EDMUND: Hungarian violinist; born at Totis, Hungary, Oct. 14, 1831; pupil successively of Ellinger, Ridley Kohne, and Joseph Böhm (violin), and of Preyer (composition); from 1844 to 1846 he studied at the Paris Conservatoire. In the latter year he was appointed concert-master and solo violinist at the Stadttheater, Budapest; and from 1851 to 1854 he made most successful tours through Europe.

In 1854, upon the recommendation of Liszt, Singer was appointed concert-master at Weimar, where he remained until 1861. Since then he has been concert-master at Stuttgart, and teacher at the Conservatorium in that city. His compositions include: "Morceaux de Salon," "Airs Variés," fantasias, etc.

S. J. So.

SINGER, ISIDOR: Austrian economist; born in Budapest Jan. 16, 1857; removed to Vienna with his parents in 1861. He studied mathematics and astronomy at the University of Vienna; and after taking a course in jurisprudence at Gratz returned to the Vienna University, where he took up the study of national economy, being graduated as LL.D. on March 14, 1881. He was admitted to the Vienna bar, but soon decided to devote his entire time to the study of political economy, and from 1882 to 1884 he traveled extensively in order to study the social position of the working classes in northeastern Bohemia. The results of his investigations he published in Leipsic in 1885 under the title "Untersuchungen über die Socialen Verhältnisse des Nord-Oestlichen Böhmen: Ein Beitrag zur Methode Social-Statistischer Untersuchungen." In the same year he was appointed privat-docent in statistics by the University of Vienna, and six years later (1891) he received the title of professor. During this period (1885–91) Singer published in Vienna a brochure on the social conditions in eastern Asia, and a book on migration. The trend of his thoughts on these subjects underwent a change after a three years' visit to the United States (1893–96). The impressions collected there and in England, especially regarding the great powers of the public press, caused him, upon his return, to establish, together with Heinrich Kanner, "Die Zeit," an independent, politico-economic, and literary weekly. The growing popularity of this periodical among all classes caused him to change it into a daily (1902), and to enlarge its scope.

S. E. J.

SINGER, ISIDORE: Austrian author and editor, and originator of THE JEWISH ENCYCLOPEDIA; born in Weisskirchen, Moravia, Nov. 10, 1859; educated in the high schools of Ungarisch-Hradisch, Kremsier, and Troppau and at the universities of Vienna (Ph.D. 1884) and Berlin. In 1884 he founded the "Allgemeine Oesterreichische Literaturzeitung," which he edited and published in Vienna, discontinuing it on receiving the appointment of secretary and librarian to Count Alexandre Foucher de Careil, French ambassador at Vienna (1887). He accompanied the ambassador to Paris, and there became attached to the press bureau of the French Foreign Office. Later he founded and became editor-in-chief of "La Vraie Parole" (1893–94), a journal which was launched to counteract Edouard Drumont's anti-Semitic sheet "La Libre Parole." In 1891 Singer went to Italy and sojourned for a time in Rome. He returned to Paris, and in 1895 went to New York for the purpose of publishing "The Encyclopedia of the History and Mental Evolution of the Jewish Race." This title was subsequently changed to "The Jewish Encyclopedia" (see JEW. ENCYC. i., Pref., p. xix.).

Of Singer's writings the following may be mentioned: "Berlin, Wien und der Antisemitismus," 1882; "Presse und Judenthum," 1882; "Sollen die Juden Christen Werden?" (1884), to which Ernest Renan contributed a prefatory letter; "Briefe Berühmter Christlicher Zeitgenossen über die Judenfrage," 1884; "Die Beiden Elektren—Humanistische Bildung und der Klassische Unterricht," 1884; "Auf dem Grabe Meiner Mutter" (1888; translated into Hebrew by Solomon Fuchs); "Le Prestige de la France," 1889; "La Question Juive," 1893; "Anarchie et Antisémitisme," 1894; and "Der Juden Kampf ums Recht," 1902. Singer has also edited "Russia at the Bar of the American People" (New York, 1904), a memorial of the events in Kishinef.

A. F. H. V.

SINGER, JOSEF: Austrian cantor; born in Galicia Oct. 15, 1842. His father, an itinerant ḥazzan, destined him for a theatrical career, but the boy evinced an inclination for study, and after taking a four-year course at the Conservatorium at Prague he accepted a position as cantor in Beuthen, Prussian Silesia. In 1873 he was called to Nuremberg as "Oberkantor," and in 1881, when Salomon Sulzer retired from active service, Singer succeeded him as chief cantor of the Wiener Cultusgemeinde, which position he still (1905) occupies.

Singer, who is an ardent student and investigator in the domain of synagogal music, is the author of "Die Tonarten des Traditionellen Synagogengesanges im Verhältniss zu den Kirchentonarten und den Tonarten der Vorchristlichen Musikperiode" (Vienna, 1886, ed. E. Wetzler), a critical study of the forms of melodious intonation (see ḤAZZANUT). He has published also numerous articles in "Der Jüdische Kantor" (Bromberg) and in the "Oesterreichisch-Ungarische Kantoren-Zeitung" (Vienna); of his contributions to the latter periodical may be mentioned "Biographien Berühmter Fachgenossen Aelterer Periode" (1881-82) and "Ueber Entwickelung des Synagogengesanges" (1883-90).

s. A. Kai.

SINGER, MAXIMILIAN: Austrian botanist, zoologist, and author; born at Leipnik Feb. 6, 1857 (Ph.D. Vienna, 1883). He made a specialty of botany and zoology and published a number of articles on these subjects in the "Wiener Landwirthschaftliche Zeitung" and the "Landwirthschafts-Zeitung."

In addition to his labors in these fields, Singer has written the following works: "Junius Brutus," drama, 1879; "Der Friedensengel," drama, 1891; "Die Schuld der Väter," drama, 1896; and the libretti of: "Esther," 1885; "José Galeano," 1891, music by Julius Stern; "Der Schwur," 1892, music by Wilhelm Reich; and "Der Weise von Cordova," music by Oskar Strauss; "Es War Einmal . . . ," 1899.

Bibliography: *Das Geistige Wien*, i. 526, ii. 449.

s. E. Ms.

SINGER, PAUL: German Social Democrat and deputy; born in Berlin Jan. 16, 1844. After having attended the real-school of his native city he entered upon a commercial career, and in 1869 established a cloak-factory, with his brother as partner. The business was successful; and he amassed a considerable fortune. Interesting himself in politics, and becoming absorbed in the study of the conditions of the laboring classes, he affiliated with the Social-Democratic party, and soon became, beside Bebel and Liebknecht, one of its recognized and respected leaders. In 1884 he was elected a member of the Reichstag from the fourth electoral district of Berlin, which returns usually a larger Social-Democratic vote than any other district in Germany. He at once took a prominent part in the Reichstag deliberations, as well as in the councils of his party, and acquired skill as a debater and parliamentarian. His entrance into political life was almost contemporaneous with the rigorous enforcement of harsh measures against the Socialists, whose organization had acquired great strength during its twenty years of existence. Many Socialists were expelled from the country; and Singer contributed 5,000 marks toward the maintenance of their families. He himself was the subject of an order of expulsion in 1886; but the order was soon rescinded. One of the most notable of his parliamentary addresses is a reply to Eugen Richter, the leader of the "Freisinnige Partei" (Liberal party), who, in the session of 1897, introduced in the Reichstag a measure for the revision of the factory laws.

Singer is distinguished for his public charities. He was one of the chief founders of the Refuge for the Homeless, a large and very important institution in Berlin, which provides shelter for all who seek it. On one occasion the chief of the Berlin police sought to make use of the refuge for detective purposes, officers entering it in search of suspicious characters. On learning this, Singer brought the matter before the board of managers, which gave him full powers to deal with the question. When the chief of police realized that Singer was prepared, as the only alternative, to close the institution, he gave a positive promise to discontinue the surveillance.

SINGER, SAMUEL: Philologist; born in Vienna July 12, 1860; educated at the gymnasium and university of his native city (LL.D. 1884; Ph.D. 1885). In 1891 he became privat-docent at the University of Bern, in 1896 assistant professor, and in 1905 professor of medieval German language and literature.

Singer is the author of: "Deutsche Volksbücher," 1888, in collaboration with Bachmann; "Ulrich von dem Türlin," 1893; "Apollonius von Tyrus," 1895; "Bemerkungen zu Wolfram von Eschenbach," 1898; "Die Mittelhochdeutsche Schrift-Sprache," 1900; and "Die Deutsche Kultur im Spiegel des Bedeutungslehnworts," 1903.

s. F. T. H.

SINGER, SIMEON: English rabbi; born in London 848. He was educated at Jews' College, received his rabbinical diploma in 1890, and has occupied successively the positions of head master of Jews' College School, and minister of the Borough New Synagogue and of the New West End Synagogue. He is a member of the committee of the Jewish Education Board and of the council of Jews' College, president of the Jewish Ministers' Union, and honorary secretary of the Jewish Provincial Ministers' Fund; and he is regarded as the foremost representative of progressive Orthodoxy in the Anglo-Jewish community.

Singer is editor and translator of the "Authorized Daily Prayer-Book," and joint editor, with Prof. S. Schechter, of "Talmudical Fragments in the Bodleian Library" (1896). He has published also sermons in the Jewish press, and has read literary papers before several learned bodies.

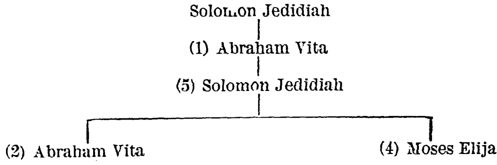
SINGER AND BASS. See Music, Synagogal.

SINIGAGLIA: Italian family from Sinigaglia; later settled in Scandiano, where **Solomon Jedidiah Sinigaglia** ("Bet Talmud," iii. 205) was rabbi and "mohel" in 1639. Later he went to Modena. The principal members of the family and their genealogical tree are as follows:



1. Abraham Vita Sinigaglia: Rabbi of Modena in the first half of the eighteenth century; died at an early age. He was a pupil of Menahem of Cracow and of Ephraim Cohen. He wrote: (1) "Dibre ha-Yamim," a diary, the first volume of which comprised the years 1722-31, and the second 1732-33; (2) novellæ on the Mishnah (Berakot, 1719-

1721; Shabbat and Ḥullin, 1726; Makkot and Baba Ḳamma, 1729; 'Abodah Zarah, 1730; Pesaḥim and Sukkah, 1732).

2. Abraham Vita Sinigaglia: Rabbi; born at Modena in the eighteenth century; died there in the following century; grandson of the preceding. He pursued his studies under his father, Solomon Jedidiah (No. 5), and Ishmael Cohen. He left numerous unpublished novellæ.

3. Jacob Samson Shabbethai Sinigaglia: Rabbinical author; born in Ancona; died in Sinigaglia 1840; son of **Raphael Issachar Sinigaglia.** He was a pupil of Abraham Israel, rabbi of Ancona, and was the author of: preface to the sermons ("Se'uddat Miẓwah") of Daniel Terni, rabbi at Florence (Venice, 1791); "Shabbat shel Mi" (Leghorn, 1807), Talmudic novellæ; "Ya'aḳob Le-Ḥoḳ," commentary on the "Ḥoḳ le-Yisrael" by Jacob Baruk (*ib.* 1807); "Abir Ya'aḳob" (Pisa, 1811), Talmudic novellæ; "Nezir Shimshon" (*ib.* 1813); "Mattat Elohim" (*ib.* 1821); "Mattan ba-Seter" (Leghorn, 1843); "Meged Shamayim" (*ib.* 1844), responsa. He left, besides, the following manuscript works: "Ḳashya Sefa," responsa; "Leshon Limmudim"; "Shomer Shabbat"; and "Midbar Ẓin."

4. Moses Elijah Sinigaglia: Rabbi of Modena; born in that city 1763; died there 1849; a pupil of his father, Solomon Jedidiah Sinigaglia (No. 5), and of Ishmael Cohen. He taught for fifty years in Modena, and toward the end of his life was appointed rabbi of that place. He left in manuscript forty-two sermons and novellæ, besides responsa, some of which were included in the responsa collection of Elishama Meïr Padovani.

5. Solomon Jedidiah Sinigaglia: Rabbi of Modena in the eighteenth century; born and died in that city. He was the teacher of Elishama Meïr Padovani, and was also the author of a number of Hebrew poems, some published and others unpublished, several of which are contained in the "Tiḳkun Ḥaẓot" (Leghorn, 1800). He left in manuscript also a grammatical treatise, sermons, and responsa.

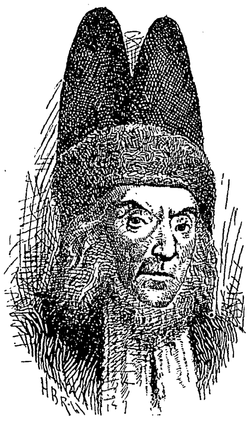
SINZHEIM, JOSEPH DAVID: First rabbi of Strasburg; born in 1745; died at Paris Feb. 11, 1812; son of R. Isaac Sinzheim of Treves and brother-in-law of Herz Cerfbeer. He was the most learned and prominent member of the Assembly of Notables convened by Napoleon I. on May 30, 1806. The task of answering the questions laid before the assembly by the imperial commissioner was entrusted to Sinzheim, who fulfilled his duties (July 30-Aug. 3, 1806) to the satisfaction of the assembly as well as of the commissioner and even of Napoleon himself. The German sermon which he delivered in the synagogue of Paris in honor of the emperor's birthday, on Aug. 15, also strengthened Napoleon's favorable opinion of the Jews, who received the imperial promise that their rights as French citizens should not be withdrawn.



Joseph David Sinzheim.

On Feb. 9, 1807, four days after the Assembly of Notables was dissolved, the Great SANHEDRIN was convened; its chairman ("nasi"), appointed by the minister of the interior, was Sinzheim, who had probably suggested the assembly, having been frequently consulted by the imperial commissioner. The consistorial constitution, provided by the decree of March 17, 1808, opened a new field of activity for Sinzheim, who was elected chairman of the Central Consistory. He was regarded as the foremost French Talmudist of his time, and was the author of the "Yad Dawid," of which only a portion has appeared in print (Offenbach, 1799).

SIPPAI: Philistine giant, one of the sons of Rapha (A. V. "the giant"); slain at Gezer by Sibbechai the Hushathite, one of David's warriors (I Chron. xx. 4). In the parallel passage, II Sam. xxi. 18, he is called "Saph," and the place of his death is given as Gob.

E. G. H. M. SEL.

SIPPURIM (MA'ASIYYOT), ḤASIDIC: Stories, legends, or tales related by, or of, the Ḥasidic "rebbes" (rabbis)—the "ẓaddiḳim," or "ḳedoshim," as they are sometimes called; or, in Judæo-German, the "gute Yiden." These sippurim are to be distinguished from those which relate to heroes, scholars, or saints, and which belong to Jewish biography, history, or fiction (comp. Wolf Pascheles, "Sippurim," 6 vols., Prague, 1864-70). The Ḥasidic sippurim were never intended as mere narratives; as the "siḥat ḥullin" (the secular conversation of the learned) they have rather a deeper object in view. They are divided into two classes. One class consists of fiction, sippurim elaborated in the imagination of their authors, and used as parables to impress upon Israel the Ḥasidic religious conceptions; these were generally related by the rebbes themselves. The second class is composed of sippurim supposed to be based on facts, or of incidents in the lives of the rebbes; these their disciples and followers related in praise of their masters, whom they almost worshiped. Relating these incidents constituted in itself a meritorious act, as much so as studying the Law or reciting the Psalms, or even as offering up "bikkurim" and sacrifices to the Lord.

To make the sippur more mystical and affecting, the rebbe would not explain its moral, but would leave it to his listeners for later discussion and debate, each time making a different comment to suit particular circumstances and conditions. He would discuss the sippur from every side—its merits, meaning, purpose, and its effect upon followers and opponents ("mitnaggedim"). These stories were not told from the pulpit, but at the gathering of the Ḥasidim at the third of the Sabbath meals ("shalosh seʻuddot"), between "Minḥah" and "Maʻarib"; at the meal after "Habdalah," at the closing of Sabbath, and at every gathering of Ḥasidim when the rebbe was not presiding at the table. The stories were related in connection with the "Ḥasidic Torah," a term used to distinguish Ḥasidic from other interpretations of the Bible or the Midrash.

Printed Sippurim.

The Ḥasidic sippurim, of both kinds, made their first appearance in type almost simultaneously, about 1814, with the "Sippure Maʻasiyyot" collected by Nathan b. Naphtali Herz of Lemberg (or Nemirov), and credited to R. Naḥman b. Simḥah, grandson of Israel b. Eliezer Baʻal Shem-Ṭob (BeSHT), and with the "Shibḥe BeSHT" of Dob Baer b. Samuel Shoḥeṭ. The place of publication of the former work is not given; the latter appeared at Kopys in 1814, and at Berdychev in 1815. "Sippure Maʻasiyyot" has, below the Hebrew text, a Judæo-German translation, and contains also an introduction and notes in Hebrew. It was republished many times, the latest edition at Warsaw in 1902. It contains the following stories: "The Lost Princess"; "The King and the Kaiser"; "The Wise Man"; "Miracles"; "The King and the Wise Man"; "The Rabbi and the Only Son"; "The Conquering King"; "The Wise and the Simpleton"; "Berger and the Poor Man"; "The Prince and the Slave's Son Exchanged"; "The Baʻal-Tefillah"; "Seven Schnorrers." In the introduction it is explained that the "Princess" represents the Shekinah, or Judaism, that the "King" is God, etc., and that these "wonderful, fearful, and terrible" stories contain great moral lessons, which should compel the listener or reader to repent in his heart and to mend his ways.

The stories are full of supernormal incidents, and of fancies of "leẓim" (ghosts), witches, and the "Sam" (Samael, Satan); there are grand palaces, immense riches, stores of jewels, a gold mountain, and a great diamond from which, when any one looks at it, human figures creep out. The heroes are generally kings or princes, while the heroines, who are always veiled, are invariably princesses and the most beautiful creatures on earth. The food of even the ordinary mortal is fit for a king, and is cooked by fire issuing from a subterranean channel connected with a fire-mountain; and birds hover over the hearth to make or extinguish with their wings the fire for cooking. A sleep lasting seventy years is frequently described as overtaking one of the characters, who is awakened only by a thrilling story. In "Maggid Siḥot" (date and place of publication not given) the author of the "Sippure Maʻasiyyot" collected the sayings, stories, and incidents connected with the journey to Palestine of the rebbe Naḥman.

Folk-Tale Features.

The stories in "Shibḥe BeSHT" bear the true Ḥasidic traits of the Baʻal-Shem, his successor Baer of Meseritz, and others. The rebbes were all miracle-workers, exorcising bad spirits, healing diseases, removing sterility, and never failing to give good advice, inspired, perhaps, by a "ḳemiaʻ" (amulet); sometimes they gave a "segullah" (remedy), or offered special prayer for "children, life, and maintenance." The prophetic revelation ("hitgallut") of the rebbe is described, also the Biblical character whom he represents through a transfer of personality. The rebbe would sometimes be a "ro'eh we-eno nir'eh" (one who is present but invisible).

There is a strong suspicion that the name given as that of the author of the "Sippure Maʻasiyyot" is a pseudonym, and that it was used by one who, under the pretense of being a Ḥasid, passed off as genuine parables of the rebbes a collection of stories from Oriental sources, which he flavored with characteristic Ḥasidic expressions, and thereby secured as readers large numbers of the Ḥasidim, especially women, for whom the translation was made, and who were easily led to regard the stories as indubitably Ḥasidic. The author of "Shibḥe BeSHT" undoubtedly was actuated by these motives; but he had also another object in view—to conceal an elaborate sarcasm at the expense of the whole Ḥasidic system of theology, which was strenuously opposed by the followers of the Wilna gaon. So well was this latter purpose achieved that a majority of the Ḥasidim implicitly believed the stories, though they are of the most exaggerated kind, and were disavowed by the more learned Ḥasidim as ridiculous. The mingling of Ḥasidic Hebrew with Judæo-German idioms, in which these stories abound, strengthens the suspicion of the author's sincerity.

Joseph Perl, in his "Megalleh Ṭemirin" (Vienna, 1819), 151 Ḥasidic letters containing many connected stories, is not so guarded. His exaggerated style and the anti-Ḥasidic ending of the story betray him, though it is asserted that for a long time, under the pseudonym of "Obadiah ben Pethahiah," it was accepted by many as a genuine Ḥasidic work.

"Shibḥe ha-Rab."

Perhaps the most interesting of these sippurim is "Shibḥe ha-Rab," relating to Rebbe Senior Zalman of Lodi, or Liozna (1747–1812), the author of "Rab Shulḥan ʻAruk" and "Tanya." The "Shibḥe ha-Rab" was edited by Abraham Herschel Drucker (Lemberg, 1845 ?). Rebbe Zalman was a disciple of Baer of Meseritz, and was arrested as a "revolutionary" suspect in St. Petersburg in 1798, the arrest being the result of the machinations of the disciples of the gaon of Wilna, who were combating Ḥasidic Judaism. The arrest caused consternation among the Ḥasidim, who collected a large fund for the "ransom" of their ẓaddiḳ. It is asserted that Czar Paul I. personally examined the prisoner, who managed to rescue from the enemy his correspondence with his followers, and that finally he miraculously triumphed over the mitnaggedim. The day of his triumph has been observed as a holiday ever since among the Ḥasidim.

Another story told of Rebbe Zalman is that, in the Napoleonic invasion of Russia in 1812, fearing the growth of heresies as a result of a French victory, he prayed for the success of the Russian arms, while Rebbe Shelomo of Karlin prayed for the triumph of France. Rosh ha-Shanah approaching, each anticipated miraculous support through the medium of the "teḳi'at shofar." The followers of the opposing rebbes predicted that the prayers of whichever rebbe blew the shofar first on Rosh ha-Shanah would be granted. Rebbe Zalman blew first, and Rebbe Shelomo knew that he had been defeated directly he grasped his shofar. Rebbe Zalman was in constant communication with the Russian commander (who would not move without his advice), and had sworn by his ṭallit and phylacteries that the French would be defeated at Moscow; and so it happened.

The Judæo-German translation of "Shibḥe BeSHT" was published in various editions, including those under the titles "Ḳehal Ḥasidim" (Lemberg) and "Sippure Ma'asiyyot" (Warsaw, 1881); some of these editions contain a few stories of later rebbes. Another series of Ḥasidic stories credited to BeSHT, "'Adat Ẓaddiḳim," in Hebrew and Judæo-German, was composed by Michael Levi Frumkin (Lemberg, 1865). There are also the "Seder ha-Dorot he-Ḥadash," sketches of the disciples of BeSHT (part i. contains a Ḥasidic bibliography of eighty-three works), and "'Iggeret ha-Ḳodesh," relating to the experiences of the rebbe Mendel of Vitebsk in the Holy Land. Separate stories, in pamphlet form, of each rebbe appeared from time to time, as those of the rebbe Löb Sarah's, of the rebbe of Ruzhin, and of the rebbe of Sandigura. These sippurim are most widely distributed in Podolia, Volhynia, Rumania, Galicia, and Russian Poland; the centers of publication are Lemberg and Warsaw. A unique contribution to the Ḥasidic sippurim is "The Rabbi of Liszka," in English, by Anthony P. Slutzker (New York, 1901). See BA'AL SHEM-ṬOB, ISRAEL B. ELIEZER; FOLK-TALES; ḤASIDIM.

J. J. D. E.

SIRACH, THE WISDOM OF JESUS THE SON OF (Hebrew, **Ḥokmat ben Sira**; Latin, **Ecclesiasticus**): Among the books of the Greek Bible is one entitled *Σοφία 'Ιησοῦ Υἱοῦ Σιράχ* (Codices Sinaiticus and Alexandrinus) or simply *Σοφία Σειράχ* (Codex Vaticanus). The Greek Church Fathers called it also "The All-Virtuous Wisdom" (*Πανάρετος Σοφία*; Eusebius, "Chronicon," ed. Schoene, ii. 122; *'Η Πανάρετος*; Jerome, Commentary on Dan. ix.) or "The Mentor" (*Παιδαγωγός*; Clement of Alexandria, "Pædagogus," ii. 10, 99, 101, 109); while the Latin Church Fathers, beginning with Cyprian ("Testimonia," ii. 1; iii. 1, 35, 51, 95, *et passim*), termed it "Ecclesiasticus." All these names testify to the high esteem in which the book was held in Christian circles. The Jews, who never admitted its canonicity, called it during the Talmudic period the "Book of Ben Sira" (Ḥag. 13a; Niddah 16b; Ber. 11b; *et passim*) or the "Books of Ben Sira" (ספרי בן סירא; Yer. Sanh. 28a; Tosef., Yad. ii. 13; possibly a scribal error; comp. the parallel passage of Eccl. R. xii. 11), and a Hebrew copy in the possession of Jerome was entitled "Parabolæ" (= משלים). However, the fact that the verses of this work cited in the Midrash are preceded by the word "Mashal" or "Matla" does not prove that such was the title of the book, but simply that these verses had come to be accepted as proverbs (contrary to the view of Ryssel in Kautzsch, "Apokryphen," p. 232, where he attributes to Lévi the opinion expressed by Blau in "R. E. J." xxxv. 22). Nor is it possible to draw any inference from the fact that Saadia calls the book in Arabic "Kitab al-Adab"; for he certainly did not give this appellation (which he had no reason to translate) as the title, but, contrary to the opinion of Harkavy ("Studien und Mittheilungen," v. 200) and Blau (*l.c.*), merely as a description of the contents of the book. The Syriac name is "Ḥekmata de-Bar Sira" = "The Wisdom of Bar Sira."

Names.

The author, who, alone of all Old Testament and Apocryphal writers, signed his work, is called in the Greek text (l. 27) "Jesus the son of Sirach of Jerusalem." The oldest manuscripts (Vaticanus, Sinaiticus, Alexandrinus, Venetus) add to *Σειράχ* the name *'Ελεάζαρ* or *'Ελεάζαροζ*, an error for *'Ελεαζάρου*, probably the name of his grandfather. The copy owned by Saadia (Harkavy, *l.c.* p. 150) had: שמעון בן ישוע בן אלעזר בן סירא = "Simon, son of Jesus, son of Eleazar ben Sira"; and a similar reading occurs in the Hebrew manuscript B, which will be discussed below. By interchanging the positions of the names "Simon" and "Jesus," the same reading is obtained as in the other manuscripts. The correctness of the name "Simon" is confirmed by the Syriac version, which has ישוע בר שמעון דמתקרא בר אסירא = "Jesus, son of Simon, surnamed Bar Asira." The discrepancy between the two readings "Bar Asira" and "Bar Sira" is a noteworthy one, "Asira" (= "prisoner") being a popular etymology of "Sira." The evidence seems to show that the author's name was Jesus, son of Simon, son of Eleazar ben Sira.

Author.

Every attempt to identify this writer with some member of the high-priestly family has proved a failure, the only basis for the supposition that Ben Sira was a priest being due to a scribal error; for while the Sinaitic manuscript reads *ελεαζαροιερευσοσολυμειτης*, this is, beyond all question, a scribal error, and should be emended to *ελεαζαροιεροσολυμειτης* (see א*). According to the Greek version, though not according to the Syriac, the author traveled extensively (xxxiv. 11) and was frequently in danger of death (*ib.* verse 12). In the hymn of ch. li. he speaks of the perils of all sorts from which God had delivered him, although this is probably only a poetic theme in imitation of the Psalms. The calumnies to which he was exposed in the presence of a certain king, supposed to be one of the Lagi, are mentioned only in the Greek version, being ignored both in the Syriac and in the Hebrew text. The only fact known with certainty is that Ben Sira was a scholar, and a scribe thoroughly versed in the Law, and especially in the "Books of Wisdom." He was not, however, a rabbi, nor was he a physician, as has been conjectured (see especially xxxviii. 24 *et seq.*, xlix. 1-5, and the introduction by his grandson).

The approximate date of the redaction of the book and the period of its author's literary activity are somewhat less doubtful. The Greek translator states in his preface that he was the grandson of the author, and that he came to Egypt in the thirty-eighth year of the reign of Euergetes, an epithet borne by only two of the Lagi, Ptolemy III. (247-222 B.C.) and Ptolemy VII. (sometimes reckoned

Date.

IX.). The former monarch can not be intended in this passage; for his reign lasted only twenty-five years. The latter ascended the throne in the year 170, together with his brother Philometor; but he soon became sole ruler of Cyrene, and from 146 to 117 held sway over all Egypt, although he dated his reign from the year in which he received the crown (*i.e.*, from 170). The translator must, therefore, have gone to Egypt in 132, and if the average length of two generations be reckoned Ben Sira's date must fall in the first third of the second century. The result of this reckoning is confirmed by the fact that the author evidently lived before the persecution of Antiochus in 168, since he does not allude to it. Another argument is commonly relied on. In ch. l. Ben Sira eulogizes a high priest named Simon, son of Johanan (Onias in G), this laudation being apparently an expression of the admiration aroused by actual sight of the object of his praise. There were, however, a number of high priests named Simon b. Onias, one of whom exercised his functions from 300 to 287, and another from 226 to 199. The Simon b. Johanan mentioned here can only be the second of the name; and as the passage seems to have been written after the high priest's death (l. 1-3), the date of its composition coincides approximately with the period mentioned above (190-170). The work is in reality a collection of maxims written at various times—a fact which also explains its frequent repetitions and contradictions.

Attempts have indeed been made to refute these arguments. According to Josephus, Simon I., the Just (300-287), was the only high priest whom Ben Sira could thus have extolled, and the book would accordingly be a century older; as to the number 38, it might refer to the age of the translator when he arrived in Egypt. Indeed, the word πάππος does not necessarily mean "grandfather"; it may mean also "remote ancestor." This, it has been held, would account for the translator's frequent miscomprehension of Ben Sira's words, which would be very strange had he actually been the author's grandson. All these quibbles, however, which it would be idle again to refute, have been definitely abandoned.

Ecclesiasticus closely resembles Proverbs, except that, unlike the latter, it is the work of a single author, not an anthology of maxims drawn from various sources. Some, it is true, have denied Ben Sira the authorship of the apothegms, and have regarded him as a mere compiler, basing their arguments on his own words: "And I myself, the last, I set myself to watch, like him that gleaneth grapes after the vintage" (xxxiii. 16). This, however, is probably a simple expression of modesty. The frequent repetitions and even contradictions only prove that Ben Sira, like all moralists, did not compose the entire work at one time; moreover, the unity of the book, taken as a whole, is remarkable.

Contents.

The Book of Ecclesiasticus is a collection of moral counsels and maxims, often utilitarian in character and for the most part secular, although religious apothegms occasionally occur. They are applicable to all conditions of life: to parents and children, to husbands and wives, to the young, to masters, to friends, to the rich, and to the poor. Many of them are rules of courtesy and politeness; and a still greater number contain advice and instruction as to the duties of man toward himself and others, especially the poor, as well as toward society and the state, and most of all toward God. These precepts are arranged in verses, which are grouped according to their outward form in case their content is not intrinsically coherent. The sections are preceded by eulogies of wisdom which serve as introductions and mark the divisions into which the collection falls.

Wisdom, in Ben Sira's view, is synonymous with the fear of God, and sometimes is confounded in his mind with the Mosaic law. It is essentially practical, being a routine knowledge; and it would be vain to seek to find in it any hypostasis, since mysticism is utterly opposed to the author's thought. The maxims are expressed in exact formulas, and are illustrated by striking images. They show a profound knowledge of the human heart, the disillusionment of experience, a fraternal sympathy with the poor and the oppressed, and an unconquerable distrust of women. Throughout the work are scattered pure and elevated thoughts; and the whole is dominated by a sincere, enlightened piety—what is now called a liberalism of ideas. As in Ecclesiastes, two opposing tendencies war in the author: the faith and the morality of olden times, which are stronger than all argument, and an Epicureanism of modern date. Occasionally Ben Sira digresses to attack theories which he considers dangerous; for example, the doctrines that divine mercy blots out all sin; that man has no freedom of will; and that God is indifferent to the actions of mankind, and does not reward virtue. Some of the refutations of these views are developed at considerable length. Through these moralistic chapters runs the prayer of Israel imploring God to gather together His scattered children, to bring to fulfilment the predictions of the Prophets, and to have mercy upon His Temple and His people. The book concludes with a justification of the Divinity, whose wisdom and greatness are revealed in all His works (hence is inserted a description of the beauties of creation), and also in the history of Israel; this form of sacred history, however, is little more than a panegyric on the priests, terminating in an enthusiastic delineation of the high priest Simon ben Onias. These chapters are completed by the author's signature, and are followed by two hymns, the latter apparently a sort of alphabetical acrostic.

Importance for the History of Thought.

The Wisdom of Jesus marks an epoch in the history of Jewish thought, on account both of what it teaches and of what it silently ignores. While the author advocates the offering of the prescribed sacrifices and the veneration of priests, he condemns all hypocrisy and urges the union of the outward practise of religion with a pure conscience and with the doing of charity. However, he never mentions the dietary laws, which are set forth at great length in Daniel and Tobit, and especially in Judith. In like manner, while he awaits the return of Elijah to reassemble the tribes of the past and to reconcile the fathers with the children, and while he prays for the coming of a time which can be called Messianic, though without a Messiah—when Jerusalem and the Temple shall be restored to the divine favor and Israel delivered forever from the dominion of the stranger—he never alludes to a Messiah who will be the son of David; on the contrary, he asserts that the house of David has rendered itself unworthy of the divine favor, since of all the kings of Judah three alone remained faithful to God. God indeed made a solemn compact with the race of David; but it was one that differed widely from that into which He entered with Aaron, and which alone was to endure for eternity. Ben Sira never speaks of the resurrection of the dead nor of the immortality of the soul, but, on the contrary, declares that in Sheol there will be no joy, wherefore man should taste delight in this world in so far as it is compatible with an upright life.

Possible Traces of Hellenic Influence.

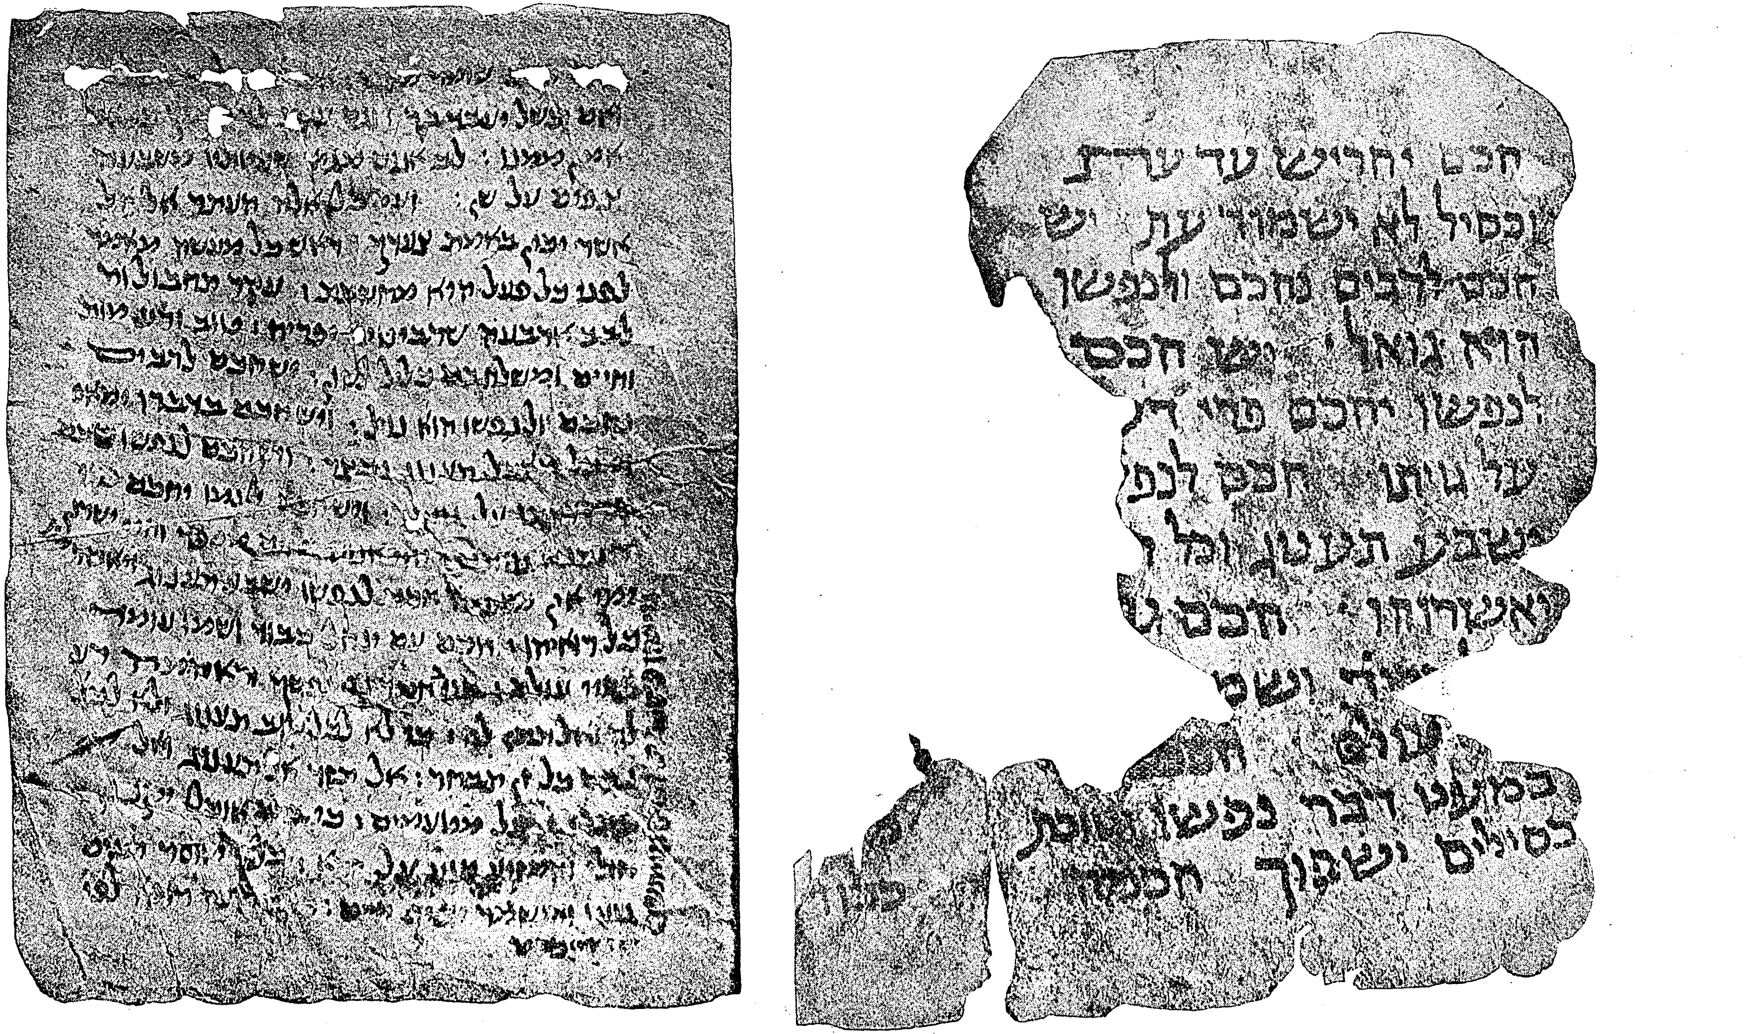
The view has been expressed that this work, early in date as it is, bears traces of Hellenic influence. The author, in his travels, may possibly have come in contact with Greek civilization, since he speaks of foreign poets and moralists whose fame was spread abroad. The customs which he describes are taken from Greek rather than from Hebrew society; thus he mentions banquets accompanied by brilliant conversation, at which musical instruments were heard, and over which presided "the masters [of the feasts]"; and the customs of the Sybarites also aroused his interest. The fatalistic philosophers whose opinions he contests were doubtless the Stoics; and the philosophical discussions instituted by him were innovations and probably borrowed. His criticisms of skeptics and would-be thinkers are further evidences of his knowledge of Hellenism; and some of his views find close analogues in Euripides. Not only does he share characteristic ideas with the Greek tragedians and moralists, but he even has the same taste for certain common topics, such as false friendship, the uncertainty of happiness, and especially the faults of women. The impression of Greek influence is strengthened by the presence of a polish quite foreign to Hebrew literature. The author composes his aphorisms with care; he makes his transitions with skill; and he inserts the titles of chapters, such as "Concerning Shame," "Proper Deportment at Table," and "The Hymn of the Patriarchs"; and the signing of his own name in full is a usage theretofore absolutely unknown.

The exclusion of Ecclesiasticus from the Hebrew canon was due in part to this imitation of the Greeks and these literary affectations. According to R. Akiba (Yer. Sanh. 28a), those who have no part in the world to come include the readers of foreign works, such as the books of Ben Sira; while Tosef., Yad. ii. 13 merely states that the writings of Ben Sira do not defile the hands, or, in other words, that they are uncanonical, so that they are ranked with the works of "minim" (heretics). Eccl. R. xii. 11, which is based on Yer. Sanh. 28a, contains a prohibition against having this work in one's house. R. Joseph, a Babylonian rabbi of the fourth century, in commenting on the view of R. Akiba, adds, "It is also forbidden to read the works of Ben Sira" (Sanh. 100c), although this prohibition, judging from the remainder of the passage, may have been restricted to reading in public. In his questions to R. Joseph (*ib.*), R. Abaye indicated some of the reasons for the exclusion of Ecclesiasticus from the canon.

"Why this prohibition?" he asked. "Is it on account of such and such verses?" With the exception of two verses written in Aramaic and which are not by Ben Sira at all, all of R. Abaye's citations are distinctly frivolous, being those relating to the anxiety caused by a young girl before and after her marriage, the uselessness of repining, and the danger of introducing strangers too freely into one's home. Abaye then condemns the misanthropy, misogyny, and Epicureanism of the author. To Ben Sira's Epicurean tendency must be attributed his denial of a future life, and, perhaps, also his pre-Sadducean spirit of reverence for the priesthood, with which the panegyric on his brethren is animated.

Popularity Among the Jews.

Curiously enough, the book retained its popularity among the Jews despite its exclusion from the canon. It was cited at a very early period: the Book of Tobit reproduces a number of passages word for word; while the Book of Enoch (Charles, "The Book of the Secrets of Enoch," p. 96; Index, p. i.), the Psalms of Solomon (Ryle and James, "The Psalms of Solomon," pp. lxiii. *et seq.*), and even the Talmud, the Midrashim, the Derek Ereẓ, and similar productions show decided traces of its influence. With the last-named work it has many points in common; and it is frequently quoted in the Talmud; passages from it are introduced by the formula reserved for the Biblical writings (Ḥag. 12a; Niddah 16b; Yer. Ber. 11c); and one verse is even referred to as if it belonged to the Hagiographa (B. Ḳ. 92a). It is cited by name in Sanh. 100b (= Yeb. 63c), where also a series of verses from it is given; and single verses appear in the following treatises and other works: Yer. Ber. 11b; Yer. Ḥag. 77c; Yer. Ta'an. 66d; Ḥag. 13a; Niddah 16b; Gen. R. viii., x., lxxiii.; Lev. R. xxxiii.; Tan., Wayishlaḥ, 8; *ib.* Miḳḳeẓ, 10; *ib.* Ḥuḳḳat, 1; a midrashic passage preserved in the "Shibbole ha-Leḳeṭ," ed. Buber, p. 23a; "Pirḳe de-Rabbenu ha-Ḳadosh," ed. Schönblum, 14a; Baraita Kallah (ed. Coronel, 7c, and in the Wilna edition of the Talmud). It is cited also by R. Nissim ("Sefer Ma'asiyyot ha-Ḥakamim wehu Ḥibbur Yafeh meha-Yeshu'ah"), and especially by Saadia in the preface to his "Sefer ha-Galui" (Harkavy, *l.c.*). In his commentary on the "Sefer Yeẓirah" the latter author quotes verbatim two verses of Ben Sira, although he attributes them to one Eleazar b. Irai, of whom nothing is known. In another part of this work (p. 178) he cites the same text, again attributing it to that author. This is the more remarkable since Saadia speaks of Ben Sira in his introduction, and cites no less than seven of his maxims. The "Sefer ben Irai" contained also passages (two of them copied by Saadia) not found in Ecclesiasticus, and which were totally dissimilar to it both in form and in content. As Saadia himself says: "The book of Ben Sira is a work on ethics,



MANUSCRIPT FRAGMENTS FROM BEN SIRA, CONTAINING XXXVII. 22.
(From the Cairo genizah collection in Cambridge University, England.)

similar in form to Proverbs, while that of Ben Irai is a book of Wisdom, bearing an external resemblance to Ecclesiastes." The "Sefer ben Irai" was probably a collection of maxims and sayings taken from various sources.

Quotations from Ben Sira without mention of his name are found also in the "Mibḥar ha-Peninim," attributed to Solomon ibn Gabirol (for citations of this type see Zunz, "G. V." p. 110; Reifmann, in "Ha-Asif," iii. 271; Schechter, in "J. Q. R." iii. 682; Neubauer and Cowley, in their edition of Ecclesiasticus, pp. xix. *et seq.* [certain of their comparisons must be discarded]; the commentaries of Schechter and Lévi, especially on the Derek Ereẓ; Lévi, in "R. E. J." xliv. 291). The popularity of Ecclesiasticus among the Jews of the Talmudic period is shown by the citation of a number of verses in Aramaic, with an allusion to Ben Sira, which proves that it must have been translated into that dialect, this Aramaic collection being subsequently enriched with numerous additional aphorisms in that language (Sanh. 100b = Yeb. 63b). The Baraita Kallah even restricts its citations from Ben Sira to Aramaic verses which are not found in Ecclesiasticus. Another proof of his popularity is found in the two alphabets ascribed to him (see BEN SIRA, ALPHABET OF), especially the second, in which he is the hero of a series of marvelous events.

Popularity Among Christians.

The Book of Ecclesiasticus has been honored still more highly among the Christians, being cited in the Epistle of James (Edersheim, in Wace, "Apocrypha," p. 21), the Didache (iv. 5), and the Epistle of Barnabas (xix. 9), while Clement of Alexandria and Origen quote from it repeatedly, as from a γραφή, or holy book. In the Western Church, Cyprian frequently appeals to it in his "Testimonia," as does Ambrose in the greater number of his writings. In like manner the Catalogue of Cheltenham, Damasus I., the Councils of Hippo (393) and Carthage (397), Pope Innocent I., the second Council of Carthage (419), and Augustine all regard it as a canonical book. This is contrary, however, to the opinions of the Council of Laodicea, of Jerome, and of Rufinus of Aquileia, which authorities rank it among the ecclesiastical books. It was finally declared canonical by the Council of Trent; and the favor with which the Church has always regarded it has preserved it in its entirety.

Discovery of Hebrew Fragments.

Until recent years Ecclesiasticus was known only from the Greek and Syriac versions—the sources of all other translations—and from the Hebrew quotations already mentioned. At present the greater part of the original is known. In 1896 Agnes Smith Lewis and Margaret Dunlop Gibson brought from the East a sheet of parchment covered with comparatively antiquated Hebrew characters. At Cambridge this was shown to S. Schechter, who recognized in it Ecclus. (Sirach) xxxix. 15-xl. 7, and who published the decipherment, which was by no means easy. Almost simultaneously Sayce presented to the Bodleian Library, Oxford, a collection of fragments of Hebrew and Arabic manuscripts, among which Neubauer and Cowley found nine leaves of the same volume to which the Lewis-Gibson leaf had belonged, and following immediately after it. These various fragments having come from the GENIZAH at Cairo, Schechter at once went to that city, and obtained the necessary authority to examine the contents of the collection, with the result that he found not only the final portion of the manuscript, but also xxx. 11, xxxii. 1b-xxxiii. 3, xxxv. 9-xxxvi. 21, and xxxvii. 27-xxxviii. 27. Two additional fragments of the same manuscript, called B by Schechter, and containing xxxi. 12-31 and xxxvi. 24-xxxvii. 26, have been secured by the British Museum. A second manuscript (A) was found by the same scholar in the collection brought by him from Egypt, containing iii. 6-xvi. 26, with a hiatus from vii. 29 to xi. 34, the missing pages of which subsequently came into the possession of Elkan Adler. A fresh discovery was made when the remaining contents of the genizah were offered for sale, and Israel Lévi secured a leaf from a third copy (C), containing xxxvi. 24-xxxviii. 1. This fragment is especially valuable, since it serves as a check on the manuscript B, which likewise includes these verses. The importance of this discovery is shown below. Finally, Schechter, Gaster, and Lévi found in consignments from the same genizah the following fragments of an anthology of the Wisdom of Jesus: iv. 23b, 30-31; v. 4-8, 9-13; vi. 18-19, 28, 35; vii. 1, 4, 6, 17, 20-21, 23-25; xviii. 30-31; xix. 1-2; xx. 4-6, 12 (?); xxv. 7c, 8c, 8a, 12, 16-23; xxvi. 1-2; xxxvi. 16; xxxvii. 19, 22, 24, 26.

There are, therefore, now in existence: (*a*) in one manuscript: iii. 6-16, 26; xviii. 30-31; xix. 1-2; xx. 4-6, 12 (?); xxv. 7c, 8c, 8a, 12, 16-23; xxvi. 1-2; xxvii. 5-6, 16; xxx. 11-xxxiii. 3; xxxv. 9-xxxviii. 27; xxxix. 15-li. 30; (*b*) in two manuscripts: iv. 23b, 30-31; v. 4-8, 9-13; vi. 18-19, 28, 35; vii. 1, 4, 6, 17, 20-21, 23-25; xxxvi. 16, 29-31; xxxvii. complete; xxxviii. 1; (*c*) in three manuscripts: xxxvii. 19, 22, 24, 26.

These manuscripts contain also some passages that are lacking in the translations, including a psalm fifteen lines in length inserted after li. 12.

Manuscripts.

Manuscript A: 18 × 11 cm.; 28 lines per page. The verses are generally marked by a double point; and certain ones are punctuated and accented, thus confirming certain statements of Saadia. "Matres lectionis" abound. The scribe has been guilty of the grossest errors, in addition to abbreviating some verses and omitting others.

Manuscript C: 16 × 12 cm. Certain words and entire verses are vocalized and accented; the script shows cursive tendencies, although of an early type. In the margin is given a variant verse which represents the original text, corrupted even in the days of Ben Sira's grandson.

Manuscript D: 143 × 100 mm.; 12 lines per page. The text is often preferable to that of A, and offers variants agreeing with the Greek version, while the readings of A correspond to the Syriac.

Manuscript B: 19 × 17 cm.; 22 lines per page. This is the most curious and interesting of all, as it contains certain peculiarities which are probably unique among all known Hebrew manuscripts. The lines are written with a stylus, as in the Torah scrolls; and, as in some copies of Proverbs and the Book of Job, a space is left between the hemistichs of each verse, so that the pages are divided into two columns; and the "sof pasuḳ" is placed at the end of the verse. This corroborates Saadia's assertion that the book of Ben Sira resembled Proverbs in its division into chapters and verses. The chapters are sometimes indicated by the initial letter פ̈ (= פיסקא) and sometimes by a blank space. The most remarkable peculiarity consists in the chapter headings or titles, such as מוסר בשת ("Instruction as to Shame"), מוסר לחם ויין יחדו ("Rules for Proper Deportment at Table"), and שבח אבות עולם ("Hymn of the Patriarchs"), although in the Greek version these rubrics were regarded as scribal interpolations. Another noteworthy feature of this manuscript is its marginal Masorah, containing variants, some of which represent differences merely in orthography, while others are in synonyms or even words with totally different meanings. These glosses are the work of a Persian Jew, who in several marginal notes in Persian stated that he had used two manuscripts in addition to his principal one. Such care is indicative of the esteem in which Ben Sira's text was held. The marginal readings present an interesting problem. As a rule, the body of the text corresponds to the Greek version, and the glosses in the margin to the Syriac; but occasionally the reverse is the case.

Originality of the Hebrew Fragments.

Prof. S. Margoliouth, noticing the decadent character of the language, the number of rabbinisms, and the derivatives from the Arabic and Aramaic, regarded the Hebrew text as a reconstruction of the lost original on the basis of the Greek and Syriac versions, the variants representing different attempts at retranslation. The discovery of manuscript C, however, disproved this hypothesis, since this manuscript reproduces with exactness the greater part of the variants of B, even when they are obviously false, while the transcriber of this latter manuscript discharged his task with such scrupulous care that he even recorded variants which were meaningless. If, therefore, the difference between the text and the marginal glosses corresponds to the difference between the two translations, this only shows that there were two recensions of the original. It is clear, moreover, that these fragments are not the work of some medieval scholar, but are more or less perfect copies of the Hebrew text, as a single example will show. In xxxii. 22 the Hebrew version has השמר באחריתך. For the latter word the Syriac text substitutes אורחך (= "thy way"), which the context shows to be faulty, the reading being due to a confusion of אחריתך with ארחתיך. The Greek version reads "thy children," the meaning attributed to אחרית in several passages of the Bible. But had the Jewish scribe used the Greek version, he would never have found beneath *τῶν τέκνων σου* the Hebrew אחריתך, the correctness of which is attested by the Syriac. There are numerous examples of a similar nature.

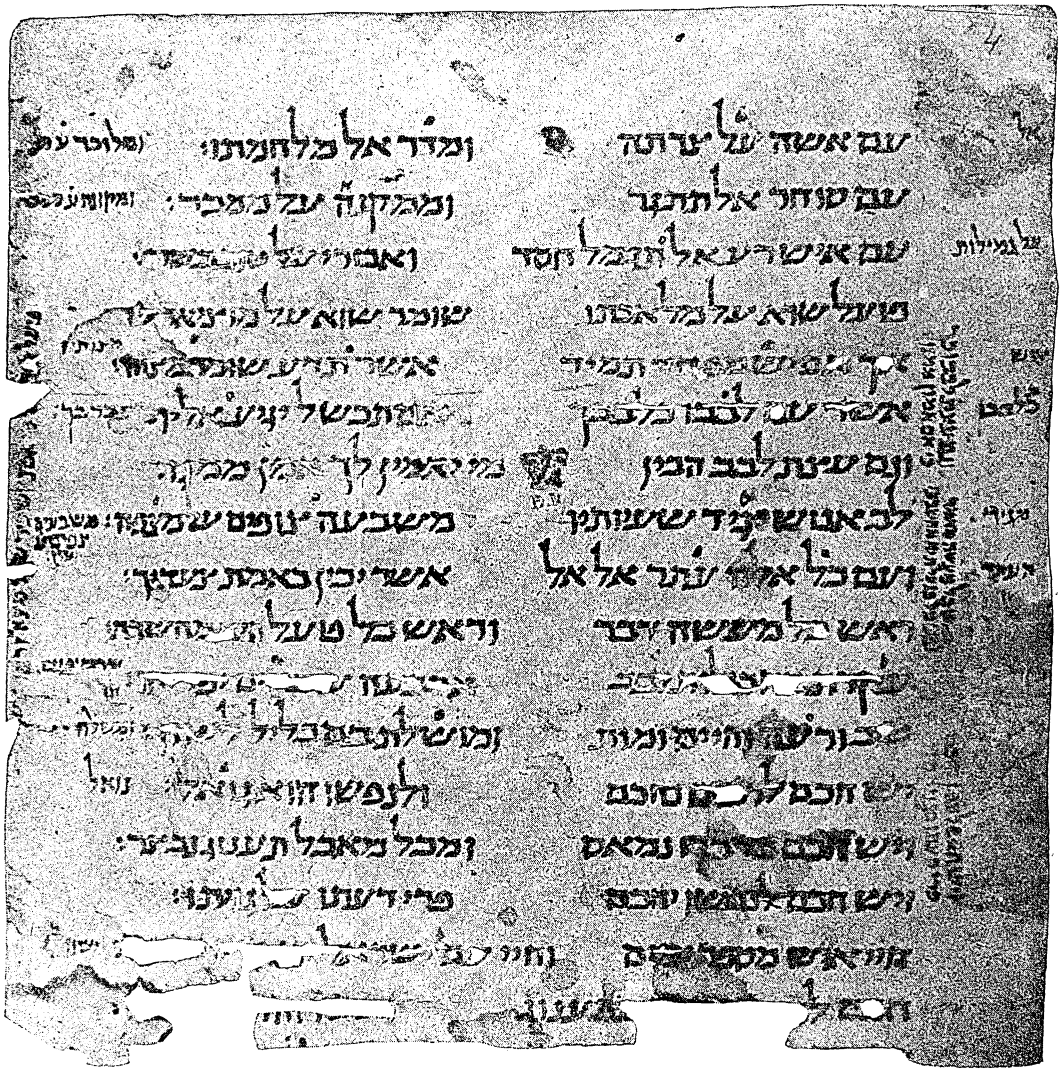
Although Margoliouth's theory must be rejected as a whole, certain details indicate that both A and B are derived from a copy characterized by interpolations due to a retranslation from Syriac into Hebrew. In a number of passages the same verse is given in two distinct renderings, one of which usually corresponds to the Syriac, even when this text represents merely a faulty or biased translation of the original. These verses, moreover, in their conformity to the Syriac, become at times so meaningless that they can be explained only as incorrect translations from that language. Such suspicious passages are characterized by a comparatively modern style and language, by a commonplace phraseology, and by a break in the parallelism which is affected by Ecclesiasticus. It may therefore be safely concluded that these doublets are merely additions made to render the Syriac version more intelligible. The same statement holds true of certain textual emendations made by the glossarist. In this, however, there is nothing strange, since it is a well-known fact that the Jews of certain sections were familiar with Syriac, as is shown by the quotations made by Naḥmanides from the Wisdom of Solomon, from Judith, and from Bel and the Dragon, and also by the introduction of the Peshiṭta of Proverbs into the Targum of the Hagiographa.

The Final Hymn.

But the glossarist did not restrict himself to these slight additions and modifications, for he added to his copy a translation of the final hymn, basing this version also on the Syriac. This canticle, as Bickell has clearly shown, is an alphabetical acrostic, which may still be traced in the Syriac version, on account of the similarity between that language and Hebrew. There are lacunæ, however, in the Syriac text which are supplied in the Greek, even though these passages are lacking in the Hebrew. In the Hebrew some traces of the acrostic remain in cases where the Syriac was translatable only by a Hebrew word beginning with the same letter; but elsewhere all vestiges of it have disappeared. The Syriac version, moreover, shows evidences of corruptions and innovations, which are reproduced by the Hebrew. The Syriac occasionally corresponds to the Greek, but tends toward a confusion of sense which eventually alters the meaning, these modifications being also reproduced in the Hebrew text. The hymn, which follows the Syriac version closely throughout, is evidently a retranslation from the latter. These opinions have been championed especially by Israel Lévi, and are accepted by Ryssel and other scholars, although they are not universally held.

The Hebrew version contains an entire canticle which does not appear in either the Greek or the Syriac text. This, however, is of doubtful authenticity, although one may cite in its favor the sentence "O give thanks unto Him that chose the sons of Zadok to be priests," alluding to the pre-Maccabean high priests who were descended from Zadok; while another possible argument is furnished by the absence of any reference to ideas essentially Pharisaic, such as the resurrection of the body. Against the genuineness of the psalm may be urged: (1) its omission in the versions; (2) the sentence "O give thanks unto Him that maketh the horn of the house of David to bud," which is directly opposed in sentiment to ch. xxxvi. and to the entire "Hymn of the

Patriarchs"; and (3) the remarkable similarity of the hymn to the "Shemoneh 'Esreh" together with the prayers which precede and follow the "Shema'." The question has not yet been definitely settled.



Manuscript Fragment from Ben Sira, Containing xxxvii. 22.
(From the Cairo genizah collection in Cambridge University, England.)

Critical Value of the Hebrew Text.

Despite the corrections and interpolations mentioned, however, the originalty of the text in these fragments of Ben Sira can not be denied. Besides the fact that many scholars deny the existence of any interpolations, there are portions in which it is easy to recognize the author's hand; for he has a characteristic technique, style, vocabulary, and syntax which are evident in all the versions. It may safely be said that in the main the work of Ben Sira has been preserved just as it left his hands, while the chief variant marginal readings recorded in the fragments and confirmed by the translations may be regarded as evidences of the existence of two separate editions written by Ben Sira himself. It is self-evident, moreover, that Ecclesiasticus has undergone some alterations at the hands of scribes, but it would have been strange indeed if this book alone should have wholly escaped the common lot of such writings. No more conclusive proof could be found, were any necessary, of the fidelity of the Hebrew version than its frequent agreement, in citations from the Bible, with the text on which the Septuagint is based rather than with the Masorah, as in the case of I Sam. xii. 3 as compared with Ecclus. (Sirach) xlvi. 19, or Isa. xxxviii. 17 with Ecclus. (Sirach) l. 2.

Even before the discovery of these fragments the Book of Ecclesiasticus was regarded as a unique document of priceless value; but the account which it gives of the status of the Bible in its author's day

Importance for the History of the Bible.

has gained additional importance, now that the greater part of the original itself is known. The "Hymn of the Patriarchs," which has been preserved in its entirety, shows that the canon of the Law and of the Prophets was closed, as the author's grandson expressly states. The Prophets were arranged in the order generally adopted in the Hebrew Bible, as follows: Joshua, Judges, Samuel, Kings ("Nebi'im Rishonim"), Isaiah, Jeremiah, Ezekiel, and the Twelve Minor Prophets ("Nebi'im Aḥaronim"); and the expression "the Twelve Prophets" was sanctioned by usage. The greater portion of the Hagiographa was already considered canonical, including the Psalms attributed nominally to David, Proverbs, Job (the Greek translator has made a gross blunder here), and possibly the Song of Solomon, Nehemiah, and Chronicles. The author's silence regarding some of the other Hagiographa proves nothing; since he intended, as has already been said, to eulogize the priesthood in this section, and all who were not included in his scheme were passed over without notice.

In addition to this statistical information, Ben Sira furnishes other points of interest. The frequency with which he avails himself of Job and Proverbs proves that both these books had been long in circulation, although the divergence between the original and his quotation is very great. Furthermore, the labored attempt to imitate the literary style previously affected in didactic poetry was a failure, and radical changes had been introduced even as early as the time of the author. While he still availed himself of parallelism and employed verses symmetrically divided into two hemistichs, he introduced into this work on wisdom concepts thitherto excluded, such as allusions to sacred history and exhortations to fulfil the duty of religious worship. Mention has already been made of literary innovations which characterize the work. It is no less significant that the diction employed is essentially imitative, being a mixture of Biblical centos and reminiscences, yet marking a stage unattained by any analogous work. Still untouched by Hellenisms, the lexicography is characterized by rabbinisms and derivatives from the Aramaic and the Arabic. The style is decadent, showing a curious mixture of prolixity and conciseness, daring constructions, the repetition of certain figures, imitation, and false elegance, side by side with felicity of phraseology and imagery. These qualities denote a period when spontaneity and originality were replaced by pedantry, conventionality, and artificiality. Henceforth a thorough knowledge of Ecclesiasticus will be indispensable for any who wish to study the analogous portions of the Bible, although it has thus far been impossible to determine the relation of Ecclesiastes and Ecclesiasticus from a mere comparison of the two books, despite their frequent points of contact.

It is self-evident that the Hebrew fragments will aid in the reconstruction of the original of those portions for which no basal text has yet been found. These fragments, moreover, reveal the relative value of the Greek and Syriac texts, the two versions based on the Hebrew original.

The Greek Version.

The Greek text, as noted above, is the work of the author's grandson, who went to Egypt in 132. A prologue to the "Synopsis" of Athanasius gives his name as Jesus; but this passage is spurious. Although the translator may have gone to Egypt in 132, it does not necessarily follow that he entered upon his work in that year; indeed he himself says that he spent some time there before beginning his task. The theory has been advanced that he did not begin it until 116, since ἐπί ("in the time of"), which he uses in connection with Ptolemy Euergetes, is employed only after the death of the monarch whose name it precedes (Deissmann, in "Theologische Literaturzeitung," 1904, p. 558); but the incorrectness of this deduction has been demonstrated by Schürer. The translator, in the introduction, requests the indulgence of his readers, a precaution not without justification, since his rendering leaves much to be desired, sometimes straining the meaning of the text, and again containing crass blunders, so that the text must be freed from the numerous errors of the scribes before it can be fairly judged (see Lévi, "L'Ecclésiastique," p. xl.).

The Hebrew version shows that the Greek manuscript which has best preserved the wording of the original is No. 248 of Holmes and Parsons, which was used in the Complutensian Polyglot. Yet even after a rigid purification of the text, Ben Sira contains many blunders, due to overhasty reading (Lévi, *l.c.* pp. xliii. *et seq.*). While the translator generally adhered closely to the original, he sometimes added comments of his own, but seldom abridged, although he occasionally slurred over a passage in which the imagery was too bold or the anthropomorphism too glaring. Moreover, he frequently substituted for the translation of one verse another already given for a passage of similar content. The version used by him was not always identical with that contained in the Hebrew fragments. Sometimes he has verses which are missing in the Hebrew; but many of those mentioned by Fritzsche in his notes are found in the fragments. A revision of the Greek text is attested by the quotations in the "Pædagogus" of Clement of Alexandria.

An accident has disarranged the pages of the parent manuscript of all the copies thus far known, two sheets, containing respectively xxx. 25–xxxiii. 13a and xxxiii. 13b–xxxvi. 16b, having been interchanged. The Itala and the Armenian versions, however, avoided the error. The conjectural restoration of the order of the chapters should be made, according to Ryssel, on the basis of manuscript No. 248, which also avoided this inversion. On the Greek manuscripts and their individual and general value as regards the history of this version, see Ryssel in Kautzsch, "Apokryphen," i. 244 *et seq.* It may be said that the Greek version offers the most reliable material for the reconstruction of those portions of the original which have not yet been discovered.

As Jerome himself says, the Latin version contained in the Vulgate is not his work, but was the one generally used in the African churches during the first half of the third century (see Thielmann in "Archiv für Lateinische Lexicographie und Gram-

The Vetus Latina.

matik," viii.-ix.); and the truth of this statement is proved beyond question by the quotations of Cyprian. This text is characterized by a number of interpolations of a biased trend, although it is in general a slavish and sometimes awkward translation from the Greek (comp. Herkenne, "De Veteris Latini Ecclesiastici Capitibus i.-xliii." Leipsic, 1899); but it also contains deviations from the Greek which can be explained only on the hypothesis of a Hebrew original. These divergences are corrections made on the basis of a Hebrew manuscript of the same recension as B and C, which were taken from a text that had already become corrupt. Such changes were made, therefore, prior to the third century. The corrections peculiar to the Itala are attested by the quotations of Cyprian, and may have been derived from a Greek manuscript taken to Africa. They may be divided into two groups: cases in which the corresponding passage of the Hebrew is placed beside the ordinary text of the Greek, and passages in which the Hebrew rendering is substituted for the Greek reading (comp. Lévi, *l.c.*, introduction to part ii., and Herkenne, *l.c.*). After ch. xliv. the Vulgate and the Itala coincide. The other versions based upon the Greek are the Syriac Hexaplar, edited by Ceriani ("Codex Syro-Hexaplaris Ambrosianus Photolithographice Editus," Milan, 1874); the Coptic (Sahidic), edited by Lagarde ("Ægyptiaca," Göttingen, 1883; see Peters, "Die Sahidisch-Koptische Uebersetzung des Buchs Ecclesiasticus auf Ihren Wahren Werth für die Textkritik Untersucht," in Bardenhewer, "Biblische Studien," 1898, iii. 3); the Ethiopic, edited by Dillmann ("Biblia Veteris Testamenti Æthiopica," 1894, v.); and the Armenian, sometimes used to verify the reading of the Greek.

Syriac Version.

While the Syriac version does not possess the importance of the Greek, it is equally useful in the reconstruction of the Hebrew on which it was directly based, as has been clearly shown by the discovery of the fragments. As a rule the translator understood his text; but his blunders are innumerable, even making allowance for scribal errors, which are not infrequent. Unfortunately, his copy was incomplete, so that his version contains numerous lacunæ, one of which (xliii. 1-10) was filled by a passage borrowed from the Syriac Hexaplar. This entire translation is a puzzle. In some chapters it follows the original exactly, in others it is little more than a paraphrase, or even a mere epitome. In places the translation shows very few errors, in others it betrays total ignorance of the meaning of the text. It is possible that the Syriac version was the work of several translators. Some of its repetitions and corrections betray a Christian bias; and it even bears traces of a revision based on the Greek. As already noted, it contains many variants which the Hebrew fragments show to represent the original readings. Despite its numerous defects, it is a valuable check upon the Greek text, even where it diverges widely, except in passages where it becomes fantastic. It therefore deserves to be carefully studied with the assistance of the commentaries on it and the citations from it by Syriac authors, as has been done for the glosses of Bar Hebræus by Katz in his "Scholien des Gregorius Abulfaragius Bar Hebræus zum Weisheitsbuche des Josua ben Sira" (Halle, 1892). The Arabic translation included in the London Polyglot and based upon the Syriac version is likewise a valuable adjunct to the "apparatus criticus."

SIRACH, PSEUDO-. See BEN SIRA, ALPHABET OF.

SIRILLO, SOLOMON: Spanish Talmudist of the fifteenth and sixteenth centuries. He was one of the exiles of 1492, and settled at Safed, where he held a discussion with Jacob Berab over a decision concerning meat (Samuel of Modena, Responsa, No. 42). He is mentioned also by Bezaleel Ashkenazi.

Sirillo was the author of a commentary on the order Zera'im and the treatise Sheḳalim of the Jerusalem Talmud. He compiled also a Gemara to the Mishnah of the treatise 'Eduyot, by gathering the passages scattered in the Talmud and adding thereto a commentary of his own; both are quoted in Solomon Adeni's "Meleket Shelomoh." Sirillo's commentary on Berakot was printed in M. Lehmann's edition of this treatise (Berlin, 1874).

W. B. M. SEL.

SIRKES, JOEL B. SAMUEL: Polish rabbi; born at Lublin in 1561; died at Cracow, 1640. At the age of fourteen he was sent to the yeshibah of Solomon ben Judah. After remaining there some time he went to Brest-Litovsk, where he attended the yeshibah of R. Phoebus. While still a youth he was invited to the rabbinate of Pruszany, near Slonim. Later he occupied the rabbinates of Lubkow, Lublin, Miedzyboz, Beldza, Szydlowka, and finally Brest-Litovsk and Cracow, succeeding in each of the two last-mentioned places his teacher R. Phoebus. He was an adherent of the Cabala and an opponent of both pilpul and philosophy.

Sirkes wrote: "Meshib Nefesh," commentary on the Book of Ruth (Lublin, 1616); "Bayit Ḥadash," commentary on the "Arba' ah Ṭurim" of Jacob ben Asher (Cracow, 1631-40); "She'elot u-Teshubot Bayit Ḥadash" (Frankfort, 1697); "She'elot u-Teshubot Bet Ḥadash ha-Ḥadashot" (Koretz, 1785); "Haggahot," on all the tractates of the Babylonian Talmud; and "Rosh," first published, from a manuscript, in the Warsaw (1860) edition of the Talmud, and included in almost every subsequent edition thereof.

In the "Bayit Ḥadash" the evident intention of the author is to present and elucidate the fundamental principles of the Law as recorded in the Mishnah, the Babylonian and Jerusalem Talmuds, and the chief codes.

E. C. B. FR.

SISERA: General of the army of King Jabin of Hazor. According to Judges iv. 9 *et seq.*, he invaded the northern part of Judea in the time of Deborah, the prophetess and judge. Upon Deborah's order Barak took 10,000 men and went out to meet Sisera, going as far as the river of Kishon. Sisera suffered defeat, and while Barak pursued the enemy as far as "Harosheth of the Gentiles," Sisera fled alone and on foot. Arrived at the settlement of the Kenites, who, according to legend, were the descendants of Jethro, he was invited by a Kenite woman named Jael, wife of Heber, into her tent. Sisera accepted the invitation and asked for water, but instead she gave him milk. When Sisera had fallen asleep, Jael took a hammer and drove a "nail," or tent-pin, into his temple.

The position of Sisera's army is not specifically mentioned in Judges v. 19, where the battle is said to have taken place at Taanach by the waters of Megiddo. The identity of Sisera has not yet been established (see M. Müller, "Asien und Europa," p. 332; Budde, "Die Bücher Richter und Samuel").

According to the Midrash (Yalḳuṭ Shim'oni on Judges iv. 3), Sisera hitherto had conquered every country against which he had fought. His voice was so strong that when he called loudly the most solid wall would shake and the wildest animal would fall dead. Deborah was the only one who could withstand his voice and whom it did not cause to stir from her place. Sisera caught fish enough in his beard when bathing in the Kishon to provision his whole army. According to the same source (lii., end), thirty-one kings followed Sisera merely for the opportunity of drinking, or otherwise using, the waters of Israel. The descendants of Sisera, according to Giṭ. 57b, were teachers of the young in Jerusalem. See Deborah; Jael.

SISTERHOODS OF PERSONAL SERVICE: Associations of female charity-workers who devote time to the care of the needy and the distressed. A sermon delivered by Dr. Gustav Gottheil in 1887, in Temple Emanu-El, New York city, was the direct cause of the founding of a benevolent society on principles different from those that had previously prevailed. Its leading features were expressed in the name adopted—Sisterhood of Personal Service. The work contemplated was to be done by the members themselves. Every sister was to devote a certain portion of her time to a definite task, and attend to it personally, the chief object being to overcome the estrangement of one class of the Jewish population from another and to bring together the well-to-do and the poor, in the relation, not of patron and dependent, but of friend and friend.

The example set by the Emanu-El Sisterhood has been followed by congregation after congregation, until almost every organized place of worship in the upper portion of New York city has a part of its communal work in charge of such a sisterhood. These sisterhoods thus endeavor to combine settlement-work with organized relief in the home.

Classes of Work.

The following departments of work are carried on by each sisterhood, the several departments being superintended by a guide and a vice-guide: distinctively charitable work (including outdoor relief) through its staff of volunteer friendly visitors; religious schools; industrial and cooking schools; day-nurseries, and kindergartens for children between three and six years of age whose mothers are obliged to work away from home during the day; employment bureaus for a class of applicants physically unfit for hard labor and without knowledge of a trade or business; and workrooms where various trades are taught to unskilled women. In addition to these, there have been founded social clubs and culture classes for young women employed during the day, and afternoon clubs and classes of all kinds, including school-children's classes for vocal and instrumental music. The women of the sisterhoods have become volunteer agents, and assist the probation officers appointed by the juvenile court in making complete investigations of delinquent children's characters and home surroundings; and, by keeping a close watch during the period of probation, they have been the means of saving many a child from commitment. The aim of all sisterhoods is to educate and elevate those beneficiaries with whom they come in contact, and to improve their physical condition to such an extent that charity will not be needed.

Settlement houses, or "homes," likewise are being established. The Emanu-El Sisterhood, whose home is situated at 318 East 82d street, was the pioneer in this development.

Spread of the Principle.

Inevitably, the many sisterhoods came in touch one with another in their various fields of activity, with the result that a union was suggested, the outcome of which was the **Federation of Sisterhoods**, organized in 1896, and composed of delegates from all the existing sisterhoods, which cooperate, as agents, with the United Hebrew Charities. The monthly meetings of the Federation are the most active and influential of all agencies in the introduction of advanced ideas of philanthropy. At these meetings all cases of distress that have been investigated during the month are reported, and many useful facts are brought to light. With this interchange of information it is almost impossible for fraudulent persons to impose on any of the affiliated societies. A great step in advance was made when, through the Federation, the city of New York was divided into districts, one being assigned to each sisterhood.

By this limitation of area each sisterhood acquired a thorough knowledge of its neighborhood, and it rendered possible the individual treatment of each dependent family.

Outside New York.

Two other cities in the United States have sisterhoods organized along the same lines as those of New York: San Francisco (Emanu-El Sisterhood for Personal Service; organized 1892) and St. Louis (Temple Israel Sisterhood).

The Emanu-El Sisterhood of New York city has closely adhered, from its inception, to the original plan of its founder, Dr. Gustav Gottheil, and has no membership dues, depending entirely upon voluntary contributions for its support. It has not, since its establishment, drawn upon the funds of the United Hebrew Charities for any of its expenditures. Since 1904 the Beth-El Sisterhood likewise has defrayed all its expenses. The average membership of the New York sisterhoods is about 6,000, and the total amount expended for relief during 1903-4 was $75,000.

J. H. B. E.

SIWAN (סיון): Third ecclesiastical and ninth civil month. It has thirty days, and coincides, approximately, with the Roman month of June. On Siwan 3, 4, and 5 (שלשה ימי הגבולה = "the three days of the bounds") are commemorated the three days' preparation preceding the receiving of the Law on Mount Sinai. These days, with Lag be-'Omer and Rosh Ḥodesh, are distinguished from other days of Sefirah in that marriages may be celebrated on them. On Siwan 6 and 7 the Feast of Weeks (Shebu'ot) is celebrated. In the Talmud the 6th is called the New-Year of the Two Loaves (R. H. 7b). The Megillat Ta'anit gives the following fast-days: Siwan 23, in commemoration of the suspension, during the reign of Jeroboam, of the sending of the first-fruits to Jerusalem; Siwan 25, in commemoration of the martyrdom of Simeon ben Gamaliel, Samuel ben Elisha, and Ḥanina Segan ha-Kohanim; Siwan 27, the anniversary of the burning of Hananiah ben Teradion at the stake.

A. I. Br.

SIXTUS SENENSIS: Italian convert to Christianity and anti-Talmudic agitator; born at Sienna (whence his name) in 1520; died in 1569. After his conversion Sixtus entered the Franciscan order, but soon after, being charged with heterodoxy, he was sentenced to death at the stake. Cardinal Michele Ghislieri, later Pope Pius V., recognizing in Sixtus one who might be useful to him, rescued him from death and helped him to enter the Dominican order. At the command of Paul IV., Sixtus and another convert, Philip Moro, traveled about the Papal States preaching in the synagogues and inciting the mob against the Jews wherever the latter resisted the exhortations to embrace Christianity. In April, 1559, Sixtus, with another Dominican monk, went to Cremona to burn the Talmud, declaring that it contained only anti-Christian writings. Yet he spared the Zohar and restrained the Spanish soldiers from destroying it with the Talmud, hoping that the Jews might be induced by means of this cabalistic work to embrace Christianity. Besides homilies and mathematical writings, Sixtus was the author of the "Bibliotheca Sancta" (Venice, 1566), a Latin work in eight books, treating of the divisions and authority of the Bible; it contains an alphabetical index and an alphabetical list of rabbinical interpreters of the Bible.

S. M. SEL.

SIYYUM: The formal ceremonial act of completing the writing of a scroll of the Law, or the formal conclusion of the study of a division ("massekta") of the Mishnah or Talmud. In the former case the ceremony is called **siyyum ha-Sefer**; in the latter, **siyyum massekta**. The siyyum ha-Sefer is celebrated by the one for whom the scroll is written, or by whom the scroll is donated to the synagogue. The last eight verses are generally left unwritten, or are written merely in outline letters, so that the invited guests may complete the scroll. Each guest is called by name to the almemar and given the honor of writing a letter. If possible, he chooses the initial letter of his name. A blessing for the owner of the scroll and for the writer of the letter follows, the latter usually offering a donation to the synagogue, or, in some cases, toward the expenses of the celebration. Psalms appropriate to the occasion are chanted, accompanied by music; after which cake and wine are served to the guests assembled.

The siyyum massekta is celebrated in the bet ha-midrash, or at the yeshibah, by the student or students, who invite guests to participate in their joy. A feast usually follows, which is called "se'uddat miẓwah" (feast of merit).

The origin of the custom is found in the Talmud. Abaye was proud of the fact that whenever a pupil finished a massekta he made it the occasion of a holiday for his students (Shab. 118b); apparently he himself defrayed the expense of the celebration. R. Eleazar said, "One should make a feast on completing the Torah" (Cant. R. i. 9). The fact is specifically mentioned that R. Papa and R. Huna were absent from the siyyum of Raba (B. B. 22a; see Rashi *ad loc.*). Since the feast is considered "a feast of merit," R. Jacob Mölln (d. 1425) allowed meat and wine at the feast of those who celebrated a siyyum massekta during the first nine days of Ab, although feasting is otherwise prohibited on those days, the mourning period for the destruction of Jerusalem ("Sefer Maharil," p. 32b, Warsaw, 1874). R. Moses Minz (15th cent.) advises (Responsa, ed. Prague, 1827), "One should await an opportune time to prepare a feast for the completion of a massekta."

The siyyum is made by mourners a cause for avoiding fasting on a JAHRZEIT. The siyyum exempts also the first-born from fasting on the day preceding Passover (see Shulḥan 'Aruk, Oraḥ Ḥayyim, 551, 10; Yoreh De'ah, 246, 26). The siyyum of the massekta is read by the scholar who has just completed its study, except in a yeshibah, when it is read by the principal. A discourse of a haggadic or pilpulistic character is interwoven with the reading, all students present partaking in the discussion. After this all recite the "Hadran," as follows (the Masseket Berakot being supposed to be the one that has just been completed):

> "Many returns ["hadran"] from us to thee and from thee to us, Masseket Berakot. Our thoughts be with thee, and thy thoughts be with us, Masseket Berakot. May we not be forgotten by thee, nor thou be forgotten by us, Masseket Berakot, neither in this world nor in the world to come."

This is repeated three times. The Aramaic language and the peculiar style indicate that the formula is ancient. It dates probably from the geonic period. Then follows: "May it be Thy will, O Lord, our God, and God of our fathers, that Thy Torah be our art in this world, and so be with us in the world to come." The ten sons of R. Papa are then enumerated—Ḥanina, Rami, Naḥman, Aḥai, Abba Mari, Rafram, Rakish, Surḥab, Adda, Daru (their names, if recited, are supposed to help against forgetfulness). Next follows: "Make pleasant for us, O Lord, our God, the word of Thy Law in our mouth and in the mouth of Thy people Israel, so that we, and our children, and the children of the house of Israel, may all know Thy Name and learn Thy Law. [Ps. cxix. 12, 80, 93, 99 are cited here.] Amen, amen, amen, selah, forever. We thank Thee, O Lord, our God, and God of our fathers, for appointing our lots among the scholars of the bet ha-midrash, and not among idlers," etc. (Ber. 28b). The principal celebrant recites: "May it be Thy will, O Lord, my God, that as Thou hast aided me to complete Masseket Berakot, so mayest Thou aid me to commence and complete other treatises and books. Aid me to learn and to teach, to observe, to do, and to keep all the words of the teaching of Thy Law, in love. May the merit of all the Tannaim, and Amoraim, and the scholars [herein mentioned] be with me and with my children; that the Torah shall never depart from my mouth and the mouths of my children and my posterity," etc. This is followed by "Ḳaddish di-Rabanan."

E. C. J. D. E.

SKEPTIC: In a specific sense, one who remains in a state of doubt, declaring all positive truth, religious or philosophical, to be unattainable to man. This type of skeptic can scarcely be found in Judaism. However bold the Jewish philosophers of the Middle Ages were in their research or critical in their analytic methods, they never so distrusted human reason as to deny it the power, as the Greek skeptics did, to arrive at any positive knowledge or truth. Nor did the Jewish mystics attempt, as did Christian theologians, to build up a system of faith upon skepticism—that is, upon the assumption that reason is incapable of grasping any truth. Seer and sage alike appealed to reason to substantiate and verify the postulates of faith (Isa. xl. 26; Job xii. 7). The passage "The Lord is a God of knowledge" (I Sam. ii. 3) is interpreted by the Rabbis by the remark, "Great is knowledge which leads from God to God" (Ber. 33a).

Inasmuch, however, as doubt is a necessary transition from a lower stage of faith or of knowledge to a higher one, skeptics, in the sense of men wrestling with doubt, have found a certain recognition and a place of honor in Biblical literature. In a work by E. J. Dillon, entitled "The Skeptics of the Old Testament" (London, 1895), it has been well pointed out that the authors of the Book of Job, of Ecclesiastes, and of the Words of Agur, the Son of Jakeh (Prov. xxx.), were skeptics, but the original compositions were so interpolated and remodeled as to make the skeptical points no longer noticeable. All three contain bold arraignments of divine justice and providence. As to the author of Ecclesiastes compare E. H. Plumptre's edition (in "Cambridge Bible for Schools"): "He was almost driven back upon the formula of the skepticism of Pyrrho, 'Who knows?'" (p. 49). Heinrich Heine called the book "Das Hohelied der Skepsis" (see, further, Paul Haupt's "Koheleth oder Weltschmerz in der Bibel," 1905). Friedrich Delitzsch, in "Das Buch Hiob" (p. 17), calls Ecclesiastes "Das Hohelied des Pessimismus," but he might as well have called it "the Song of Skepticism."

Jewish skepticism was always chiefly concerned with the moral government of the world. The great problem of life, with "its righteous ones suffering wo, and its wicked ones enjoying good fortune," which puzzled the mind of Jeremiah (Jer. xii. 1), and Moses also, according to the Rabbis (Ber. 7a), and which finds striking expression in the Psalms (Ps. lxxiii.), created skeptics in Talmudic as well as in earlier times. According to Ḳid. 29b and Yer. Ḥag. ii. 77b, Elisha ben Abuyah became a skeptic as a consequence of seeing a person meet with a fatal accident at the very moment when he was fulfilling the two divine commandments for the observance of which Scripture holds out the promise of a long life (Deut. v. 16, xxii. 7).

The rationalistic era of Mohammedanism produced skeptics among the Jews of the time of Saadia, such as was Ḥiwi al-Balkhi, whose criticism tended to undermine the belief in revelation. The "Emunot we-De'ot" was written by Saadia, as he says in the preface, because of the many doubters who were to be convinced of the truth; and Maimonides, in the introduction to his "Moreh," states that he wrote that work as a guide for those perplexed by doubt. With all these Jewish thinkers doubt is not a sin, but an error that may reveal the pathway to the higher philosophical truth.

A remarkable type of skeptic was produced by the sixteenth century in Uriel Acosta, who, amidst a life of restless searching after truth, denied the immortality of the soul and the divine revelation. His excommunication by the Amsterdam authorities was inspired by fear of the Christian Church rather than by traditional practise. Another such was Leon of Modena, who, complaining that "the thinker is tortured by doubt, whereas the blind believer enjoys peace of mind, and bliss in the world to come" (see Ari Nohem, quoted by Grätz, "Gesch." 3d ed., x. 130), arrived through skepticism at a liberal interpretation of traditional Judaism (see S. Stern, "Der Kampf des Rabbiners Gegen den Talmud im xviii. Jahrhundert," 1902). See Agnosticism.

K.

SKREINKA, LAZAR: Hungarian scholar; lived in the middle of the nineteenth century. He devoted himself to teaching and became the principal of the Jewish school which had been founded at Arad by Aaron Chorin, whom he assisted in arousing in that community a desire for secular knowledge. Skreinka was the author of: "Analytische Elementarlehre der Rabbinisch-Mosaischen Religion, der Biblischen Gesch. und der Sittenlehre" (2d ed., Arad, 1846); "Beiträge zur Entwickelungsgeschichte der Jüdischen Dogmen und des Jüdischen Kultus" (Vienna, 1861). In addition to these works Skreinka contributed various essays to Jewish scientific periodicals, the most important of which were: "Ueber das Gnostische Princip in der Kabbala" (in "Orient, Lit." 1846, pp. 312 *et seq.*); "Versuch einer Erläuterung Mehrerer Dunkeler Stellen im Buche Daniel, mit Besonderer Beziehung auf das 11. Kap." (in "Monatsschrift," 1855, pp. 454 *et seq.*).

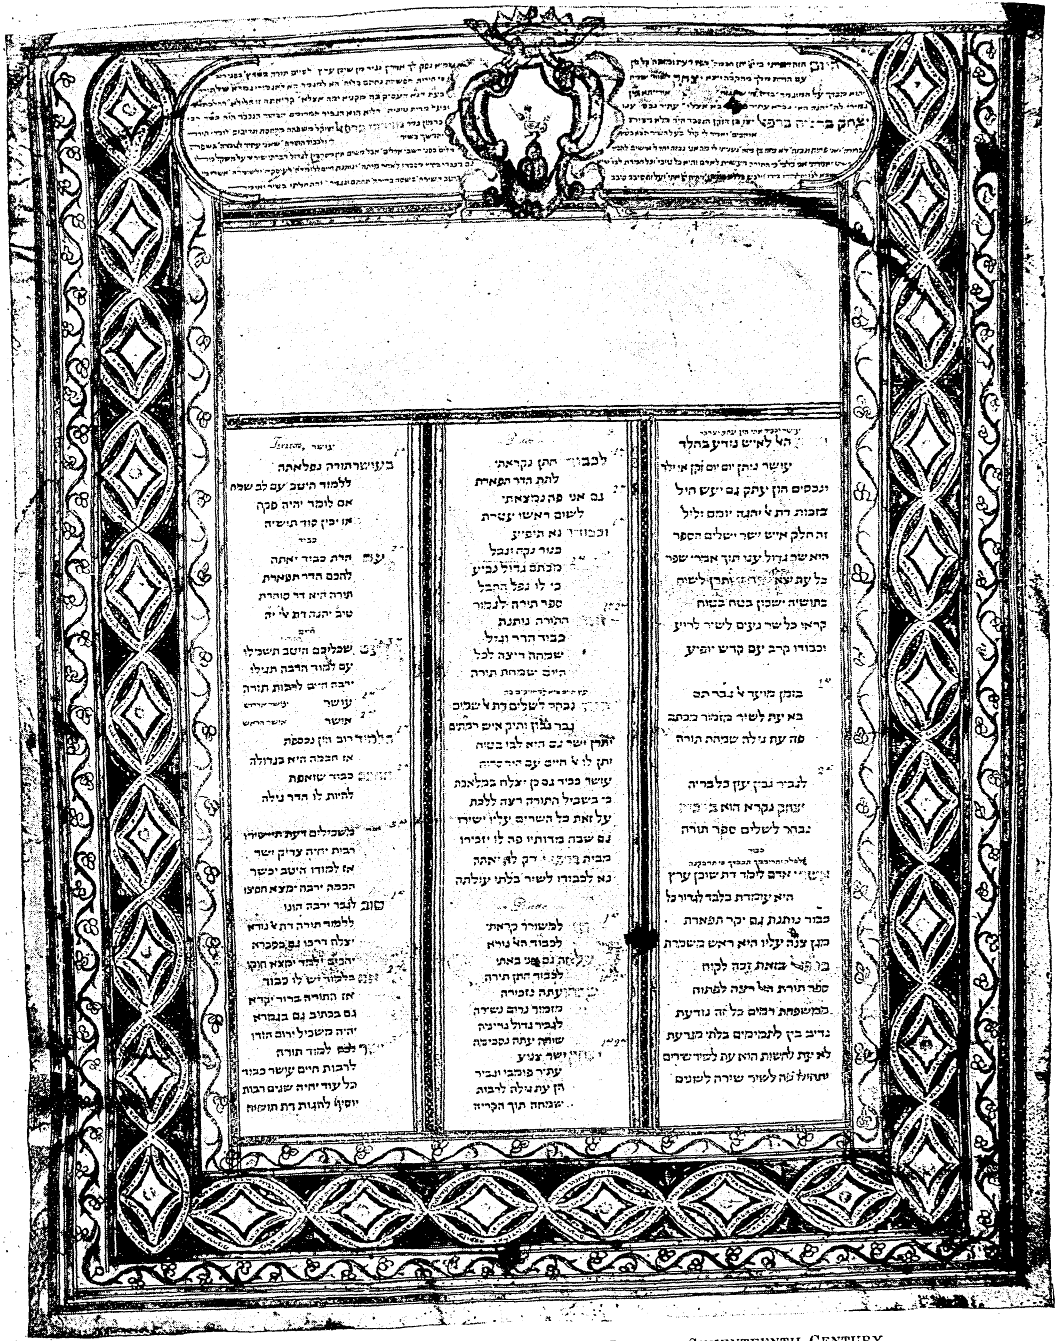
SKUTECZKY, DAMIANUS: Hungarian genre and portrait painter; born at Kis-Györ Feb. 9, 1850. After he had studied at the Kunstakademie under Geiger, a state scholarship enabled him to go to Italy, where he settled at Venice. He had already acquired a reputation through his scenes from Venetian life when he attracted general attention by his "Evil Tongues," exhibited at the Vienna Exposition. In 1885 he returned to Hungary. He lives alternately at Budapest and Neusohl. His best-known paintings are: "Interessante Märchen"; "S. Modernes Paris" (in the collection of the emperor Francis Joseph); "Das Schmelzen des Kupfers"; "Tägliches Brod"; "Andacht" (purchased by the government for the Kunsthistorisches Museum); and "Schadenfreude" (in the National Museum). Skuteczky has devoted himself to the history and theory of art also, studying especially the technique of the Renaissance.

S. L. V.

SLANDER: False and malicious defamation of another's reputation and character, tending to disgrace him in the eyes of the community. The spreading of evil reports in order to injure a reputable name is punishable by a fine and an assessment



הא׳ לאיש נודע בהלך
עושר נותן יום יום וזקן אילד
ונכסים הון יתק גם יעש חיל
בזכות דת ה׳ יהגה יומם וליל
זה חלק איש ישר ישלים הספר
היא שר גדול עני תוך אמרי שפר
כל עת יצא [illegible] יתרון לשיח
בתושיה ישכון בטח בטוח
קראו כל שר נעים לשיר לריע
וכבודו קרב עם קדש יופיע

בוכן מועד ה׳ גבר תם
בא עת לשיר בזכור בכתב
פה עת גילה שמחת תורה

לגביר נבון יען כלבריה
יצחק נקרא הוא ב[illegible]
נבחר לשלים ספר תורה

[illegible] אדם לכל דת שוכן ערץ
היא עטרת כלבד לגדול
כבוד נותנת גם יקר תפארת
בכן צוה עליו היא ראש בשכרת
בו [illegible] בזאת זכה לקוח
ספר תורת הא׳ רצה לפתוח
במשפחת רמים כל זה נודעת
נדיב בין לתבונים בלתי נגרעת
לא עת להשות הוא עת לשיר שירים
ותהלל עה לשיר שירה לשנים

לכבוד חתן נקראתי
לתת הדר תפארת
גם אני פה נמצאתי
לשום ראשו עטרת
וכבודו נא תופיע
כנור נקה ונבל
מכתם גדול נביע
כי לו נפל החבל
ספר תורה לגבור
התורה נותנת
כבוד הדר וגיל
שמחה רינה לכל
היום שמחת תורה

נבחר לשלים דת ה׳ שלים
גבר נאמן ותיק איש רבתים
יתרון ישר גם הוא לבו בשיה
יתן לו ה׳ חיים עם [illegible]
עושר כביר גם כן יצלח במלאכת
כי בשביל התורה רצה ללכת
על זאת כל השרים עליו ישירו
גם שבח מדותיו פה לו יזכירו
מבית [illegible] רק לא יאתה
נא לכבודו לשיר בלתי עולתה

למשורר קראתי
לכבוד הא׳ נורא
עלזה גם אני באתי
לכבוד חתן תורה
[illegible] עתה נזכירה
מזמור נרום נשירה
לגביר גדול נדיבה
שוחה עתה נסביבה
[illegible] ישר צנוע
עתיר כוכבי וגביר
הן עת גילה לרבות
שמחה תוך הקריה

בעושר תורה נפלאתה
ללמוד היטב עם לב שמח
אם לומד יהיה ספק
או יבין סוד תושיה
עם הדת כבוד יאתה
להכם הדר תפארת
תורה היא דר טוהרת
טוב יהגה דת ה׳ יה
גם שבלכם היטב תשכילו
עם למוד הרבה תגילו
ירבה חיים לרבות תורה
עושר
אושר
בלמוד רוב הון נכספת
אז חכמה היא בגדולה
[illegible] כבוד שואפת
להיות לו הדר גילה

למשכילים דעת תושיה
רבות יחיה צדיק ישר
אז למודו היטב יכשר
חכמה ירבה ימצא חפצו
טוב לגבר ירבה הונו
ללמוד תורה דת ה׳ נורא
יצלח דרכו גם בכברא
[illegible] ימצא חוקו
[illegible] בלמוד יש לו כבוד
אז התורה ברור יקרא
גם בכתוב גם בגמרא
יהיה משכיל ירום הודו
[illegible] לכם למוד תורה
לרבות חיים עושר כבוד
כל עוד יחיה שנים רבות
יוסיף להגות דת [illegible]

Poem Written on the Occasion of a Siyyum, Italian, Seventeenth Century.
(In the United States National Museum, Washington, D. C.)

for damages. The "moẓi' shem ra'" (one who invents an evil reputation) is to be distinguished from the "mesapper leshon ha-ra'" (one who speaks with an evil tongue; see Calumny). The latter makes malicious but true statements, with the intention of exposing the subject of them to public hatred, contempt, or ridicule, which offense is prohibited but is not punishable by fine and an award for damages (Maimonides, "Yad," De'ot, vii. 2).

Against a Wife.

The Hebrew terms "'alilot debarim" (occasions of speech) and "moẓi' shem ra'" occur in connection with the Mosaic law which provides that if a husband questions the virginity of his newly married wife and it is found that he has done so without reasonable cause, he shall be punished with stripes and shall be compelled to pay a fine of one hundred silver shekels to her father. The husband also loses the right of divorce (Deut. xxii. 13–21). If the wife has no father living, the fine is payable to her ("Yad," Na'arah Betulah, iii. 1). Both the accusation and the refutation are allowed only when supported by competent evidence. The phrase "They shall spread the cloth before the elders" is interpreted in the Talmud to mean that the matter shall be thoroughly investigated before the bet din (Ket. 46a). The punishment by a fine was considered unique ("ḥiddush") in this case, the offense being by word, and not by deed (Yer. Ket. iii. 1). This law became obsolete after the destruction of the Temple, when the Mosaic laws concerning capital punishment and fines ceased to be operative.

Rabbinical enactments against slander were very stringent. One shall forgive an insult by a fellow man when the latter asks forgiveness in public, except if he is a moẓi' shem ra' (Yer. B. Ḳ. viii. 7). The question of civil liability for slander is discussed by the authorities, some of them citing R. Jose b. Ḥanina, who said, "Abuse in words is exempt from any liability" (B. Ḳ. 91a); but this may not include slander. The geonic "taḳḳanah" excommunicated the slanderer until he had rendered an acceptable apology (Shulḥan 'Aruk, Ḥoshen Mishpaṭ, 1, 1). Israel Isserlein, however, dismissed a civil suit brought by a ḥazzan who alleged he had been discharged through the false report of a slanderer, because it was not shown that he had been discharged immediately as a consequence of the slander. Isserlein nevertheless decided that the bet din might fine the defendant, and even excommunicate him until he had apologized and satisfied the ḥazzan ("Terumat ha-Deshen," No. 307). Asheri quotes the prevailing custom "of checking the tongues of slanderers by a fine, in accordance with the offense and circumstances," and he advises the bet din to act in every case (Asheri, Responsa, rule 101, § 9). R. Benjamin Zeeb rules that persons who slander by word of mouth or in writing are not to be forgiven until after they have made apologies satisfactory to the person or persons slandered (Responsa, No. 240).

The punishment imposed upon one who defames a woman's character is that he shall fast three days—two successive Mondays and the intervening Thursday—sitting barefooted in front of the synagogue, and shall from the almemar and before the congregation implore the forgiveness of the one slandered ("Be'er ha-Golah," on Ḥoshen Mishpaṭ, 420).

To slander the dead is a grievous sin, forbidden in the strongest terms by the Geonim (Shulḥan 'Aruk, Oraḥ Ḥayyim, 606, 3). This sin can be expiated only by a fast of many days' duration, by long repentance, and by payment of a suitable fine imposed by the bet din. In addition, the slanderer must beg the forgiveness of the dead at the grave; should this be at a distance he may send a substitute (Ḥoshen Mishpaṭ, 420, 38; Benjamin Zeeb, Responsa, No. 247).

SLAVE-TRADE: Trading in slaves was permitted by all ancient and medieval legislations; even Christian Europe allowed it down to the thirteenth century. At an early stage traffic in Jewish slaves was forbidden to Jews, but there appears to have been no restrictions in law or sentiment against the purchase and sale of heathen slaves (see Slaves). With the dispersion of the nations in Europe, and the conflicts arising from the divergence of creed between the Arians and the Catholics in Spain, opportunity was given to the Jews, who were equally hated and equally licensed, to supply both with slaves. Pope Gelasius (492) permitted Jews to introduce slaves, if they were heathen, from Gaul into Italy. At the time of Pope Gregory the Great (590–604) Jews had become the chief traders in this class of traffic. He objected to the Jews holding Christian slaves ("Epist." ix. 109) because he feared that they would be converted to Judaism (*ib.* iv. 21); and he wrote to the Bishop of Naples that the Jews dealt in Christian slaves which they bought in the Gallic territories (*ib.* ix. 36). It has been suggested by Jacobs that the British slaves who had been brought to the Roman market, attracting Gregory's attention to the need of Christianizing England, were in the hands of Jewish slave-dealers ("Jews of Angevin England," p. 5).

With the rise of Islam large opportunities were afforded to the Jews to supply Moslem slaves to the Christian world, and Christian slaves to that of Islam; and Ibn Khordadhbeh in the ninth century describes two routes by which Jewish slave-dealers carried such slaves from West to East and from East to West (see Commerce). According to Abraham ibn Ya'ḳub, Byzantine Jews regularly purchased Slavs at Prague to be sold as slaves. Louis the Fair granted charters to Jews visiting his kingdom, permitting them to possess and sell slaves, provided the latter had not been baptized; three of these charters are still extant. Agobard claimed that, notwithstanding this provision, the Jews kept Christians as slaves, citing the instance of a Christian refugee from Cordova who declared that his coreligionists were frequently sold, as he had been, to the Moors. Many, indeed, of the Spanish Jews owed their wealth to the trade in Slavonian slaves brought from Andalusia (Grätz, "Gesch." vii.). Similarly, the Jews of Verdun, about the year 949, purchased slaves in their neighborhood and sold them in Spain (Aronius, "Regesten," No. 127).

The Church repeatedly protested against the sale of Christians to Jews, the first protest occurring

Jewish Slave-Trading Opposed.

as early as 538. At the third council of Orleans a decree was passed that Jews must not possess Christian servants or slaves, a prohibition which was repeated over and over again at different councils—as at Orleans (541), Paris (633), Toledo (fourth council, 633), Szabolcs (1092), Ghent (1112), Narbonne (1227), Béziers (1246). After this time the need of such a prohibition seems to have disappeared. Thus, at Marseilles, in the thirteenth century, there were only two cases of Jewish, as against seven of Christian, slave-traders ("R. E. J." xvi.). It was part of St. Benedict's rule that Christian slaves were not to serve Jews (Aronius, "Regesten," No. 114). Despite the Church rule, many Christians trafficked with the Jews in slaves, and the Church dignitaries of Bavaria even recognized this traffic by insisting on the Jews and other merchants paying toll for slaves (*ib.* No. 122). The Margrave of Meissen sold many of his subjects to Jews, and complaints were raised against him by the emperor Henry on that score (*ib.* No. 141). It became a part of Christian duty to ransom slaves, and St. Adalbert gave up the Prague bishopric because he could not free all the slaves of Jews, while the countess Judith of Ladislaus paid ransom-money for some Jewish slaves the day before her death (1085). Still, the Carlovingian emperors granted permission for Jews to hold slaves without their being baptized, and so ipso facto manumitted. Such permission was given, for instance, to Judah ibn Kalonymus and his associates at Speyer, and, about 1090, to Jews of Worms. In 1100 Jews paid a tax of 4 pence for each slave held by them at Coblenz.

Protests were frequently made against the Jews circumcising their slaves. It seems that they devoted considerable attention to proselytizing them, and it was to the interest of slaves to become Jews, because they could not then be resold. It would appear, however, that Jews were more stringent about the circumcision of slaves in the sixteenth century than they were in the tenth (Abrahams, "Jewish Life in the Middle Ages," p. 99), though this applies only to Mohammedan countries, where Jews were allowed to own only Christian slaves. A slave who was taken to the Holy Land became ipso facto free as soon as he touched the soil ("Responsa of Geonim," section 12).

S. J.

SLAVES AND SLAVERY:

SLAVES AND SLAVERY: The Hebrew word "'ebed" really means "slave"; but the English Bible renders it "servant" (*a*) where the word is used figuratively, pious men being "servants of the Lord" (Isa. xx. 3), and courtiers "servants of the king" (Jer. xxxvii. 2); and (*b*) in passages which refer to Hebrew bondmen, whose condition is far above that of slavery (Ex. xxi. 2–7). Where real slaves are referred to, the English versions generally use "bondman" for "'ebed," and "bondwoman" or "bondmaid" for the corresponding feminines (Lev. xxv. 49).

——**Biblical Data:** The duty of treating the Hebrew servant and handmaid otherwise than as slaves, and above all their retention in service for a limited time only, was deemed by the lawgiver of such importance that the subject was put next to the Decalogue at the very head of civil legislation (Ex. xxi. 2–11). It is treated in its legal bearings also (Lev. xxv. 39–54; Deut. xv. 12–18). The prophet Jeremiah (Jer. xxxiv. 8–24) denounces the permanent enslavement of Hebrew men and women by their masters as the gravest of national sins, for which the kingdom of Judah forfeits all claim to God's mercy, and justly sinks into ruin and exile. While the above-cited passages breathe a common spirit of humanity and brotherhood, they seem to conflict with one another in several points which the sages of the Mishnah contrive to reconcile.

Treatment of Hebrew Bondmen.

The only cause mentioned in the Pentateuch for selling a man into bondage without his consent is his inability to make due restoration for goods stolen (Ex. xxii. 2); but from II Kings iv. 1–7 it is seen that in the kingdom of Israel the sons of an insolvent deceased debtor were sold for the father's debts, and from Isa. iv. 1 that in the kingdom of Judah the debtor was forced to sell his children to appease his creditors. This usage was not supported by the Law, unless the passage in Leviticus which speaks of "thy brother," when he "waxes poor" and "is sold to thee," refers to a sale for debt; or unless the critics are right in ascribing to the laws as now found a later origin than that of Elisha, or even of Deutero-Isaiah.

——**In Rabbinical Literature:** The following account is drawn mainly from Maimonides' Yad ha-Ḥazaḳah:

The Hebrew servant referred to in the Torah is of two classes: (1) he whom the court has sold without his consent; and (2) he who has willingly sold himself. The court may sell a man for theft only, as noted above. A man may sell himself (Lev. xxv. 39) because of extreme poverty, after all his means are exhausted; he should not sell himself as long as any means are left to him. He should not sell himself to a woman, nor to a convert, nor to a Gentile. Should he do so, however, even if he sells himself to a heathen temple, the sale is valid; but it then becomes the duty not only of his kinsmen, but of all Israelites, to redeem him, lest he become "swallowed up" in heathendom. The sale of a Hebrew into bondage should be made privately, not from an auction-block, nor even from the sidewalk, where other slaves are sold.

Amount of Work Required.

The Hebrew servant, Scripture says (Lev. xxv. 43), must not be treated with rigor. This was held to mean that no needless work must be imposed on him for the purpose of keeping him under discipline; nor, as Maimonides thinks, any unlimited task such as might be imposed by the command: "Work on till I come!" Nor must he be put to bondman's work (*ib.* verse 39), *i.e.*, to any humiliating task, such as only slaves perform: and, if practicable, he should be set to the same trade in which he was engaged while a freeman.

Whether sold under judgment of a court or voluntarily, the Hebrew servant, if he runs away and is recaptured, must make good the time of his absence, unless the jubilee supervenes, when under any circumstances he is released. When he becomes sick, and thus unable to work, if the time lost is altogether less than four years, none of the time of sickness is charged against the servant; but, if it is more than four years, he must make it up. If the sickness does not disable him for light work (such as work with the needle), even if he is sick for the whole six years of the term of a sold servant, it counts toward his freedom. However, if the Hebrew servant will not do his duty, as a good hireling would do it, he may, by way of discipline, be put to servile work. The master of a Hebrew bondman (or a bondmaid) must place him on an equality with himself in meat and drink, in lodging and in bedclothes, and must act toward him in a brotherly manner; for Scripture always speaks of him as "thy brother." Hence it was said (Ḳid. 20a): "Whoever buys a Hebrew servant buys a master for himself."

Self-Redemption Possible.

Either kind of servant is entitled to redeem himself by paying his master a portion of the original purchase price proportionate to the number of years still unexpired; thus if he was bought for ninety shekels for a term of six years, the master must allow him to go upon the payment of fifteen shekels for every year still remaining of this term.

In estimating this proportion a reduction is to be made if the servant shall have become sickly or weakened in body so as to be worth less than at first, but no increase if in the meantime he shall have become stronger or more skilful. When the man has sold himself to a Gentile, however, it is his duty to buy himself free in halves, so to speak. If he succeeds in redeeming the first half of himself at a reduction, and then becomes healthy and strong, the redemption price of the second half must be estimated on the basis of the original price (Ḳid. 20b).

Differences Between the Two Kinds.

While the man sold into service is bound for a term of six years, the man who sells himself voluntarily binds himself for a term longer than six years, generally ten or twenty. While the former may not be sold to a non-Israelite (not even to a convert), the latter may sell himself to an Israelite, to a convert, to a denizen ("ger toshab"), or even to the "root of the family of a stranger," that is, to a Gentile (see above). But under all circumstances, if within the power of Israel's laws, he becomes free, like every other Hebrew servant, in the year of jubilee.

The man sold by the court may live with a Canaanite bondwoman whom his master assigns to him (Ex. xxi. 4); but the self-sold servant may not. The former may extend the period of his servitude by having his right ear pierced by his master at the door or door-post, after which he must serve "forever," that is, to the jubilee; the latter may not extend his term of service, and his ear is not pierced. The former, after his ear is pierced, has another possibility of freedom. The text says "he shall serve him" (his master): by taking this literally, he "acquires himself" or becomes free by the death of his master (see Ḳid. i. 2; Baraita, *ib.* 14b).

Within the six years, or within the time for which a man has sold himself, the Hebrew servant is not freed by the death of the master (if an Israelite) if the latter leaves a son, but need not serve a daughter or other surviving heirs. When a man is sold by the court, the master is bound to furnish such a servant's wife with food; he having, it seems, the right to her services, which hitherto belonged to her husband (Ḳid. 22a).

The Hebrew Bondmaid.

According to tradition, a Hebrew female may not be sold by the court for theft, nor may she sell herself; she may be sold for a bondmaid ("amah") only in the one way shown in Ex. xxi. 7: "When a man sells his daughter for a bondmaid" (A. V. "maid servant"). The father has this power over his daughter only while she is a minor, that is, less than twelve years of age, or at least while she does not bear the signs of puberty; and he should use his right only in the extreme of poverty, and then as the last resort before selling himself. The sale becomes complete by the delivery of money or money's worth, or through a deed ("sheṭar") written in the father's name. The girl remains in service at most six years, like a man servant. If the jubilee arrives before the expiration of this term she is discharged by virture of that fact; or if the master dies, though he leaves a son, she goes free. She may also obtain her freedom by redemption at a reduced price, as explained above, or by a deed of emancipation given to her by her master. All this is implied in the words of the text (Deut. xv., Hebr.), "Thou shalt do likewise to thy bondmaid." But over and above all these paths to liberty she has another: as soon as her signs of puberty appear the master must marry her or must betroth her to his son, or must send her free. In case of marriage she stands as a wife on the same footing as any freewoman in Israel. By the very words of the text in Exodus the master is forbidden to sell her to an outsider (lit. "to a foreign people"), either as a worker or as a wife.

In conclusion, it may be said of Hebrew man servants and bondmaids that, unlike Canaanite servants, they do not become free by reason of an assault on the part of the master which results in the loss of an eye or a tooth; but, as shown under Assault and Battery, in such a case the master is liable to them in an action for damages.

The Parting Gift.

According to Deut. xv., whoever dismisses his Hebrew man servant or maid servant must not send either of them away empty-handed, but must provide a parting gift. This law, however, does not apply to the following: a man who has sold himself; a servant sold by the court, who hastens his freedom by redeeming himself at a price reduced by lapse of time; one who has run away from his master, and who while at large has become free through the jubilee. A baraita (Ḳid. 17a) fixes the value of the gift at thirty shekels (this being the average value of three cited in as many opinions); and it should be made "from thy flock, thy thrashing-floor, and thy wine-press," *i.e.*, in products, the visible blessing of God, not in money or in clothing. The literal meaning of the verb used in reference to this parting gift in the text seems to be "to hang round the neck."

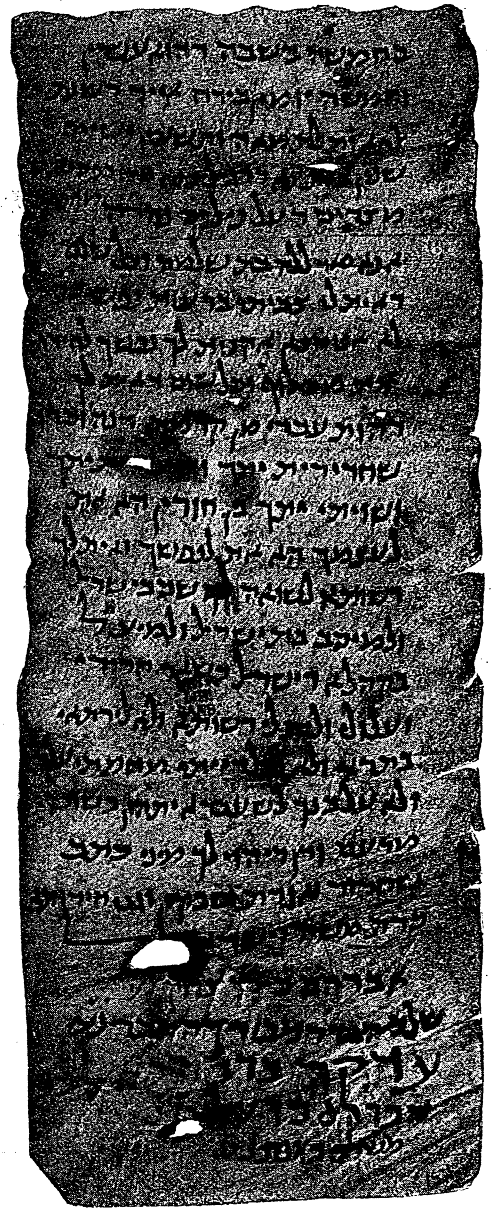
Foreign-Born Bondmen.

The Israelite is permitted by Lev. xxv. 44-46 to buy bondmen and bondwomen (in the true sense of the word) from among the surrounding nations, or from the strangers dwelling in his land, and from the descendants of these born in the land; the "in-dwelling" stranger being distinguished from the stranger who lives under the same law as the Israelite. Such bondmen or bondwomen become a possession, and are inherited by children like other property. But the law limits the absolute power of the master. If he strikes his bondman or bondwoman so as to cause the loss of an eye or a tooth, he or she goes free. If he smites him or her so as to cause death on the same day, the deed is avenged as a murder; but not when death ensues on a subsequent day (Ex. xxi. 20, 21, 26, 27). Another alleviation of bondage is the law (Deut. xxiii. 16, 17) forbidding the return of a fugitive slave to his master by those among whom he seeks shelter. The religious status of bondmen owned by Israelites is well defined by the Scriptures, which make them an integral part of the community. The males, though of foreign blood, whether bought for money, or "born in the house," are to be circumcised (Gen. xvii. 27; Ex. xii. 44), and when circumcised are to be admitted to eat of the Passover meal (*ib.*). Likewise the bondmen or bondwomen of a priest may eat of his holy meats (Lev. xxii. 11). Neither bondmen nor bondwomen are to be required to work on the Sabbath (Ex. xx. 10); indeed, the opportunity for the "son of thy handmaid" to have a "breathing-space" (A. V. "may be refreshed") is mentioned as one of the great motives for the institution of the Sabbath (Ex. xxiii. 12).

Canaanite Bondmen of the Talmud.

In the Mishnah the bondman and bondwoman not of Hebrew blood are called briefly "Canaanites." They are said to be bound, like women, by all the negative commandments, and by affirmative commandments not applying to stated times only. In the marriage laws, of course, they occupy a wholly different position from Israelites proper. Yet they are at least a subordinate part of the Jewish community; and not only are the males circumcised, but both males and females are received into the fold. Hence it is forbidden to sell a bondman or bondwoman to a Gentile (Giṭ. iv. 6), as he or she might thereby be driven into apostasy; but a transfer of the bondman's services for a short time, or with a reservation of Sabbaths and festivals, is perhaps lawful (Giṭ. 46b). If a sale not thus restricted is carried into effect, the master will be compelled to redeem the slave even at tenfold the price received and to manumit him; and if a master borrows from a Gentile and offers his slave as a pledge which is to be forfeited to the lender in the case of non-payment at a specified time, the slave becomes free at once (Giṭ. 42a).

It is unlawful to carry or to sell a Canaanite bondman from the Holy Land to another country (*ib.* iv. 6); and a man who acquires a slave in violation of this prohibition must manumit him. A difficult question once arose as the result of the marriage of a man residing in Babylonia to a Palestinian woman owning bondmen whom they took to his house (*ib.* 44b), there being doubt as to whom the penalty of the manumission of the bondmen should fall. "Syria" and even Acre (Acco) in Philistia were, as regards the prohibition, considered as outside of the Holy Land; and a Samaritan was considered a Gentile. The law in Deuteronomy against delivering up a fugitive slave is construed as applying to one who flees from a place outside of the Holy Land into it (Giṭ. 45a), which construction fits in



Manumission of a Slave, Dated Cairo, 1087.
(From the Cairo genizah.)

very well with the words of the text. But the servant should give to the master a bond for his value. Should the master refuse to manumit the fugitive by deed, the court would simply protect the former bondman in his refusal to serve him.

May Not Own Property.

As under other systems of law in which slavery is recognized, the bondman or bondwoman may not acquire or own any property. What he finds or what is given to him by others (except to serve as price for his manumission) becomes at once the property of his master; and if he is injured in body, the damages must be paid to the master. He may not marry an Israelite woman, nor may a slave woman be married to a free Israelite; hence the rule adopted at the instance of the school of Shammai, that the master of a half-emancipated slave is compelled to manumit him (taking his bond for the other half); otherwise the man might not lawfully enter into any marriage (Giṭ. iv. 5).

The law as to eye and tooth is extended to all "main limbs that do not come back," *e.g.*, ears, fingers, toes, nose, or male genitals; but is limited by some technical exceptions, as where the bondman belongs to part-owners, or to a husband in right of his wife. As the manumission works as a penalty on the master, it may be imposed by a court of ordained judges only, and upon the testimony of witnesses—not upon admission or confession, says Maimonides; but his glossarist (Joseph Caro, in "Kesef Mishneh") points out that if the bondman is able, even for a moment, to justify his freedom, no court will take it from him. The child of a Canaanite bondwoman by an Israelite, even by her master, is a bondman or bondwoman. When manumitted, a Canaanite bondman or bondwoman becomes a "convert of righteousness," and as such undergoes a second "baptism."

Where the master gives a freewoman in marriage to his bondman, or puts phylacteries on him, or causes him to read three verses from the Torah in public, his action is understood as freeing him, and he should give him a deed of manumission. According to the majority opinion, however, if the master goes through a form of betrothal with a bondwoman, the ceremony is of no significance unless he has previously manumitted her (Giṭ. 40a).

Maimonides, at the close of his section on bondmen, declares that the Israelite should treat his slaves humanely, following the rules which Job imposed upon himself (Job xxxi. 12, 14); and he claims that cruelty is found only among idolatrous nations, not among the seed of Abraham.

Formal Manumission.

According to the strict words of the text (Lev. xxv. 46), an Israelite should transmit his foreign bondmen as a heritage to his children. Though recognizing this principle (so thinks Maimonides), the sages approved manumissions made for any religious purpose, even so slight a one as that of completing the number of ten men required for the celebration of public worship ("Yad," 'Abadim, ix. 6); and they decided almost every doubt in favor of freedom.

A Canaanite bondman (or bondwoman) "acquires himself" (Ḳid. i. 3) either by money—which money he may pay himself to the master, but which must be given him by others for the purpose—or through a deed of manumission, even at the instance of others; for, according to the better opinion, freedom is deemed to be a boon, and may be conferred upon him without his consent. When he becomes free by loss of "eye or tooth," the master is compelled to write a deed of manumission. The necessity for a document is drawn from the words "her freedom has not been given to her" (Lev. xix. 20, Hebr.), *i.e.*, given in a tangible form. Still where the master says by word of mouth that he has freed his bondman, he is not allowed to repudiate his own words, but is compelled to execute a deed (Giṭ. 40b).

When the master delivers to a third person a deed of manumission, declaring "hereby N. N. becomes free," it becomes effective at once; but if he hands the deed to another with the request to deliver it to the bondman, it does not take effect unless it is delivered within the master's lifetime.

What is said above of money is true of money's worth which the master accepts from another as the price of the bondman's freedom; but words (except as an admission of a past act) are ineffectual.

The deed of manumission must sever the relation of master and bondman entirely: if it reserves any of the master's rights it is invalid. But where the bondman's freedom is bought with money, he will become half free when only half the price agreed upon has been paid. Words in the future tense, *e.g.*, "I shall manumit," are ineffectual. As far as the deed effects the bondman's freedom, its mere production by him is prima facie proof; but in order to operate upon property given to him by the master, it must be established by the subscribing witnesses. Where the bondman denies the master's assertion that he has given him a deed of manumission (a thing within the bondman's knowledge), he does not go free. But where the master says in general terms "I have manumitted him," the bondman's denial is immaterial; for the manumission might have been executed in his absence (Giṭ. 40b).

A will or gift "mortis causa" does not of itself work a manumission; but the heirs will be compelled to carry out in a formal deed the testator's or donor's wishes. Likewise, if a dying man expresses a desire that his bondwoman shall have "a good time" (lit. "a cool spirit"), the heirs will be held to treat her accordingly. For these regulations Maimonides and his followers give no Talmudic authority.

Decay of the Old Law.

The Shulḥan 'Aruk, being of a later date, and having been written rather for practise than for theory, shows more fully than Maimonides' code how the old law on the subject of bondmen and bondwomen had fallen into decay. There must be no Hebrew servant, except in times when a jubilee is lawfully kept ('Ar. 29a); for he is entitled to its benefit. But where a Gentile government demands a tribute from all Israelites, and subjects those who are delinquent to servitude under those who pay their share, an Israelite may thus acquire the services of a fellow Israelite; and similarly with Jewish prisoners of war, though as to these the duty of ransoming exists. At the first acquisition of an adult Gentile bondman by an Israelite owner, the Talmud teaches that the bondman should be consulted with respect to becoming circumcised, and that, if he persistently refuses during a space of twelve months to undergo the rite, the owner should return him to the Gentile owner. It seems that to circumcise and convert him against his will is of no avail. But later authorities (especially in Christian countries; see ReMA's gloss on Shulḥan 'Aruk, Yoreh De'ah, 267, 4) assert that the Israelite, in purchasing the bondman, may specially contract not to introduce him into Judaism; and that "now and here" such a contract would be presumed in all cases, because Jews are not permitted to make converts. In the same spirit it has been said that where a man owns a bondwoman who is not yet converted into Judaism, nobody must convert her without the owner's consent; for to do so is an injury, first, because he can not thereafter sell her to a Gentile, and, secondly, because she may not do any work for him on the Sabbath.

Ever since the Diaspora wealthy Jews have owned non-Jewish slaves wherever slavery was recognized by law. As soon as it became optional whether bondmen or bondwomen should be circumcised and converted into Jewish bondage, generally they were not thus received. Under older decisions ("Yad," 'Abadim, v. 5) the Biblical rule that the bondman or bondwoman becomes free by the loss of "eye or tooth" is applied only to those received into the Jewish fold; hence though the lack of witnesses and of ordained judges might be overcome, this path to freedom was shut off by the absence of bondmen and bondwomen to whom it applied.

The position is taken by the later authorities that in buying a slave under a Gentile government, the Israelite acquires only the services, but not the body, unless the law of the kingdom permits him to buy the latter also. The Hebrew servant not being an object for trade, nothing can be said about the sale or gift of such a person. How title to a Canaanite bondman passes has been shown under Alienation; that the sale of bondmen does not fall under the rules of "ona'ah" has been indicated under Ona'ah. See also Derelicts for ownerless bondmen.

W. B. L. N. D.

——**Freedmen:** In the Bible instances of the freeing of slaves of both sexes are found; and the word "ḥofshi" with its derivatives is there used (Ex. xxi. 5; Lev. xix. 20). The incident at the close of the period of the First Temple, mentioned by Jeremiah (xxxiv. 9), has some significance (see above).

Egypt.

Not until the Greek and Roman period, however, does the emancipation of slaves attain, as an institution, any importance for the Jews. According to a not wholly reliable authority, most of the Jews captured by Ptolemy I., Lagi (322–307 B.C.), were taken to Egypt, where they were ransomed by his son, Ptolemy II., Philadelphus (285–247), for a considerable sum and set free (Aristeas Letter, ed. Wendland, § 22). Josephus remarks that the slaves' fidelity to their masters was especially appreciated ("Ant." xii. 1, § 1). Indeed, that may always have been a reason for freeing the Jewish slave, since as a freedman he could be the more useful to his former master and to the country he dwelt in. Philo gives another reason: Speaking of the Jews settled in Rome, who came there mostly as prisoners of war, he says they were set free because, owing to their unwillingness to break the laws of their fathers, they were unserviceable ("Legatio ad Caium," § 23 [ed. Mangey, ii. 568]). Most of them were probably freed by Julius Cæsar, who was specially friendly to the Jews (comp. Tacitus, "Annales," ii. 85; Suetonius, "Tiberius," § 36). Cæsar owed money to a freedman (Suetonius, "Cæsar," § 2); and this freedman was in all probability a Jew (Hild, in "R. E. J." viii. 33, note 1). The historian Josephus was also a freedman.

Rome.

In Rome, as may be seen from the tombstone inscriptions, a great many Jews had Gentile names of aristocratic families, from which it may be concluded that they were freedmen of those families. Among them were Claudius Aster, a freedman of the Claudius family (see Jew. Encyc. ix. 475b, *s.v.* Paleography), and Claudius Jose. The names of emperors borne by Jewish freedmen in Rome included Julius Flavius, Ulpius, Ælius, Antoninus, Aurelius, Severus, Constantius, Julianus, Domitianus, Faustinus, and Valerius. The names of noble families used by these freedmen include: Æmilius, Lucretius, Marcellus, Marcius, Quintilius, Sempronius, Tullius (Vogelstein and Rieger, "Gesch. der Juden in Rom," i. 60). Still, many who bore these names may have been born Romans, since Jews, even without being slaves, frequently assumed names of noble families; for instance, the Alabarchs assumed the name of the Julii. The proselyte Clement of Rome is supposed to have been a freedman, or a son of Flavius Clemens, a freedman (Lightfoot, "Clement of Rome," p. 61). Names of Jewish freedmen in Delphi also are known (Schürer, "Gesch." 3d ed., iii. 27).

Synagoga Libertinorum.

The Synagogue of the Libertines in Jerusalem is referred to in Acts vi. 9. Since, however, four synagogues named after cities and countries are mentioned in the same sentence, it has been thought that the fifth also was probably named after a place; and Blass, in consequence, reads *Λιβυστίνων* instead of *Λιβερτίνων*. But even in modern times John Patrick (in Hastings, "Dict. Bible," iii. 110) holds that the Libertines were freedmen in the Roman sense of the term, and that they were mainly descendants of those Jews who had been taken as prisoners to Rome by Pompey in 63 B.C. and there sold as slaves. On the other hand, it was long ago pointed out that had the author of the Acts of the Apostles really intended to speak of freedmen he would have used the Greek instead of the Latin word. Accordingly, "Libertines" would seem to be only the name of a people (Gerdes, "De Synagoga Libertinorum," 1738). The Hellenistic Diaspora numbered among its members the rhetorician Cæcilius of Calacte and the chronographer Thallus, a Samaritan, who were both freedmen. Instances of Jews freeing their slaves are also met with. Rufina, directress of the synagogue in Smyrna, built a tomb for her freedmen ("R. E. J."

vii. 161–166). Several inscriptions on the Bosporus and in Pontus show that the freeing of slaves was a religious duty on the part of the Jews (Levy, in "Jahrbuch für Geschichte der Juden," ii. 223).

In the Talmud.

The Rabbis often speak of freed slaves, meaning heathen, of course. The prayer at the offering of the first-fruits might not be recited by freedmen (Ma'as. Sh. v. 14). Documents concerning the freeing of slaves are often mentioned ("sheṭar shiḥrur"). If such documents were drawn up by heathen magistrates, they were recognized (Tosef., Giṭ. i. 4). A certain Bati b. Tobiah was too proud to accept a patent of freedom (Ḳid. 70b). Halakic questions arose in connection with the freedwoman Karkemit ('Eduy. v. 6) and with Tobi, R. Gamaliel's freedman. In the Talmud, moreover, the freeing of slaves according to the Roman law is discussed ("Masseket 'Abadim," ed. Kirchheim, iii. 30; see Krauss, "Lehnwörter," i. 267).

D. S. Kr.

SLOMAN, CHARLES: English composer, and singer of comic songs; born about 1808; died in London July 21, 1870. He composed "Sacred Strains and Hymns" (London, 1860), and a number of songs, among which may be mentioned "Charming Sue," "Daughter of Israel," "Daughters of Salem," "Maiden of Sunny Cashmere," "Maid of Judah," "Pilgrim of Erin," "Promised Land," and "Social Bricks."

BIBLIOGRAPHY: Brown and Stratton, *Biography of Musicians*.

J. G. L.

SLOMAN, HENRY: English actor; born in Rochester, England, 1793; died there Aug., 1873. He was a favorite comedian during Glossop's management of the Coburg Theatre, and he gained celebrity in the character of *Watty Wagstaff* in "Edward the Black Prince." About 1834 he became, in conjunction with his brother Charles, the proprietor of Rochester Theatre.

J. G. L.

SLONIḲ, BENJAMIN AARON B. ABRAHAM: Polish Talmudist; born about 1550; died after 1619. His signature appears invariably as "Benjamin Aaron ben Abraham סלניק," the last name in which Steinschneider ("Cat. Bodl." col. 786) reads "Salniḳ" or "Sloniḳ," and Wolf ("Bibl. Hebr." i. 245) derives from "Thessalonica." On the title-page of the Italian translation of Sloniḳ's book on the duties of women he is called "Benjamin of הוראדנא," which is the usual Hebrew transliteration for "Grodno," and which Wolf and after him Michael ("Or ha-Ḥayyim," No. 282) falsely interpret as the family name "Meardono," thus making of the one author two, a Benjamin of Salonica and a Benjamin Meardono. It is difficult to say whether the Italian translator chose the name "Grodno" as that of the capital of the principality to which Sloniḳ belonged or whether Benjamin resided there, being called Sloniḳ after his birthplace.

Sloniḳ was a disciple of Solomon Luria, Moses Isserles, and Nathan Spiro. Toward the end of his life, as he himself declares in his responsa, he was almost blind, as well as destitute and in poor health. Two of his sons, **Abraham**, rabbi of Brest-Litovsk, and **Jäkel**, also were famous Talmudists. The former edited his father's responsa, with his notes. Ezekiel Katzenellenbogen proudly claims descent from Benjamin Sloniḳ.

Sloniḳ was the author of the following works: (1) "Mas'at Binyamin" (Cracow, 1632; Metz, 1776), a collection of responsa. (2) "Seder Miẓwot Nashim, Ein Schön Frauenbüchlein," in Yiddish, on the three chief religious duties of women. This book, which became very popular, was printed many times (Cracow, 1577, 1585; Basel, 1602; Hanau, 1627; Amsterdam, 1645; Dessau, 1699; Frankfort-on-the-Main, 1714; Fürth, 1776; n.p. 1795; translated into Italian by Isaac ben Elhanan Heilbronn [erroneously called "Alpron" by Bartolocci], 1614, and repeatedly edited, Padua, 1625; Venice, 1652 and 1710). (3 and 4) Two other books that he mentions, respectively on ḥaliẓah and on the calendar ("'Ibronot"), have not been preserved.

Sloniḳ's principles show few individual features, but exhibit merely the typical religious orthodoxy of his age. Thus he says that one who does not wrap himself in the ṭallit, but merely wears it rolled round his neck, has not fulfilled the Law. He decides also that one who has fasted on the Sabbath in order to avert the consequences of an evil dream (see FAST) may not consider fasting on the next day, if it happens to be the Seventeenth of Tammuz, a sufficient expiation of the desecration of the Sabbath, but must fast on Monday also.

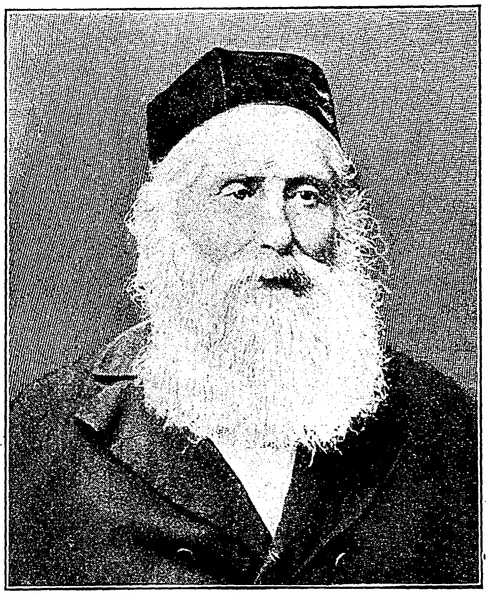
D.

SLONIM: District town in the government of Grodno, Russia; it became part of Lithuania in 1316. Jews probably lived in Slonim under Grand Duke Gedimin and his followers, although the first documentary evidence that a Jewish community existed there dates back only to 1551, when mention is made of a community which was exempted from the special tax called "scherebschisna." In 1556 Abram Mayerovich, a Jew of Slonim, is mentioned as plaintiff in a lawsuit against the estate-owner Martin Petrashkevich, the court deciding in favor of Abram. In 1558 the monopoly of brewing and selling beer in the city of Slonim was acquired by the Jew Abram Palam, who agreed to build the breweries at his own expense, and to pay an annual license of 30 kop groschen. In 1559 David Mayerovich, another Jew of Slonim, won his suit of 35 groschen against the boyar Zhuk Patzevich. Seven years later Aaron Gankevich, a Jew of Grodno, lodged a complaint in the district court of Slonim against the sheriff of the estate-holder Paluski, and his accomplices, who had assaulted and wounded the complainant while he was visiting the Jews of Slonim as representative of his landlord, Khodkevich of Wilna. In the same year (1566) the landlord of Slonim, Pavel Irikovich, bound his heirs to pay his debts of 8 kop groschen to the Jew

Esko, and 2½ kop groschen to the Jew Goshko. A Jew of Brest, Samuel Yuditch, farmed the taxes of Slonim in the following year, and is mentioned as claimant in 1570 against the estate-owner Mikhailo Stoiderev of Slonim for 5 kop and 12 groschen.

Two Jews of Slonim, Mayer Abramovich and Hessel Mordukhovich, were charged in 1583 with having tortured the prisoner Vasili Ivanovich, who was accused of having murdered the Jews Yakub Heimelovich and Hersh Davidovich. In the books of the custom-house of Brest-Litovsk for 1583 Jewish merchants of Slonim are mentioned among the exporters of merchandise to Lublin.

The Jewish community of Slonim began to prosper in the second half of the eighteenth century, when Hetman Michael Oginski became the elder of the town and built there a palace, a theater, and many other buildings, established a printing-office, and laid the foundation of the Oginski Canal, which developed trade and industry by connecting the River Shara with the Dnieper. In 1795 Slonim became the capital of the government of the same name, but in the following year it became a district town, and since 1801 it has been part of the government of Grodno. Slonim has the usual charitable institutions, likewise seven synagogues and many prayer-houses. Among the rabbis who have officiated there may be mentioned Judah Löw ben Moses ha-Levi **Edel** and Joshua Isaac ben Jehiel Schapiro (died there Dec. 3, 1872). The present (1905) rabbi is Judah Viernikowski. Among other prominent Slonim Jews of the nineteenth century may be mentioned Abraham Samuel Tenzer, Hirsch Arkin, Hillel Lipstein, Mordecai Rosenblum, Mordecai Samuel Weinikov, Eleazar Klaczko, Mendel Miller, Ḥayyim Pomeranz, Markel Shershevski, Noah Blostein, Isaac Elikowitz, Joshua Heshel Horodisch, and Asher Edelstein.



Ḥayyim Selig Slonimski.

According to the census of 1897, the city of Slonim had a total population of 15,893, of whom about 10,588 were Jews; the population of the district was 213,611, including about 21,000 Jews.

H. R. J. G. L.

SLONIMSKI, ḤAYYIM SELIG: Russian author, scientist, and inventor; born in Byelostok March 31, 1810; died in Warsaw May 15, 1904. Slonimski was the first to teach the Jews in eastern Europe popular science through the medium of the Hebrew language, into which he introduced a vocabulary of technical terms created partly by himself.

His strict conservatism in religious matters gained for his teachings the implicit confidence of his readers, and enabled him to overcome the prevailing apprehension that religious principles were in danger of being sacrificed in the interests of science.

Popular Scientist.

Slonimski distinguished himself also as an inventor. In 1842 he perfected a calculating-machine, which he exhibited before the St. Petersburg Academy of Sciences and for which he received the Demidoff prize of 2,500 rubles. In 1853 he invented a chemical process for plating iron vessels with lead, and in 1856 an electrochemical device for sending quadruple telegrams. The system of multiple telegraphy perfected by Thomson (now Lord Kelvin) in 1858 was based on Slonimski's discovery.

Slonimski wrote several articles in Russian and German for the scientific magazines, but his main purpose was to reach a class of Jews who knew no other language than Hebrew. Accordingly, he established in 1862 at Warsaw the Hebrew weekly "Ha-Ẓefirah," which was the first Hebrew organ devoted mainly to scientific subjects. After an existence of six months the publication of this paper was discontinued owing to Slonimski's appointment as principal of the rabbinical seminary in Jitomir and as government censor of Hebrew books, positions which he held till the seminary was closed by the Russian government twelve years later. Slonimski resumed the publication of "Ha-Ẓefirah" at Berlin in 1874, the place of publication being changed in Sept., 1875, to Warsaw.

In deciding certain scientific questions connected with Jewish matters, Slonimski at times found himself at variance with other Jewish scholars. Thus, despite his conservatism, he admitted that an error of four days' excess had crept into the Jewish calendar cycle as compared with the true solar cycle; in this view he was opposed especially by Perles, the controversy being carried on for thirty years. Slonimski likewise discussed the question of the so-called "Jewish date-line" for deciding on which days the Sabbath and holy days should be observed by Jews in the Far East and in Australasia. He argued that for them the line must be fixed not from Greenwich, but from Jerusalem, the center of the earth according to the Talmud. This calculation would make the dividing line pass between China and Japan, the former with the Philippines being included in the Far East, and the latter in the West. See Meridian Date.

Slonimski's publications include the following works: "Mosede Ḥokmah," on the fundamental principles of higher algebra (Wilna, Grodno, 1834); "Sefer Kukba di-Shebit," essays on the Halley comet (which appeared in 1835–36) and on astronomy in general (Wilna, 1835); "Toledot ha-Shamayim," on astronomy and optics (Warsaw, 1838); "Yesode ha-'Ibbur," on the Jewish calendar system and its history, with tables (*ib.* 1852); "Meẓi'ut ha-Nefesh we-Ḳiyyumah," a defense, based on science, of the immortality of the soul (*ib.* 1852); "Ot Zikkaron," a biographical sketch of Alexander von Humboldt (Berlin, 1858). All these works appeared in second, third, or fourth editions and were extensively read. Slonimski likewise published many articles in the Hebrew magazines; some of the most important ones from "Ha-Ẓefirah" and "Ha-Karmel" were edited by J. L. Sossnitz and published under the title "Ma'amare Ḥokmah" (Warsaw, 1891).

s. J. D. E.

SLONIMSKI, LEONID ZINOVYEVICH: Russian publicist; born in 1852; son of Ḥayyim Selig Slonimski. At the age of twenty he began contributing sociological and legal articles to various Russian journals, and since 1882 he has been a permanent contributor to the "Vyestnik Yevropy." Some of his articles express his opposition to the fiscal policy which tends by artificial means to further the enrichment of capitalists to the injury of agriculturists and laborers. He is an opponent also of the teachings of Karl Marx and his followers.

Slonimski's writings include: "Umstvennoye Razstroistvo, evo Znacheniye v Pravye Grazhdanskoi i Ugolovnoi" (St. Petersburg, 1879); "Pozemelnaya Sobstvennost s Tochki Zryeniya Budushchavo Grazhdanskavo Ulozheniya" (*ib.* 1885); "Osnovnyye Voprosy Politiki" (*ib.* 1889); "Okhrana Krestyanskavo Zemlevladyeniya i Neobkhodimyya Zakonodatelnyya Reformy" (*ib.* 1892); and "Ekonomicheskoye Ucheniye Karla Marksa" (*ib.* 1898). A collection of some of his articles on Marx has appeared in German translation.

H. R. S. Hu.

SLOUSCHZ, DAVID SOLOMON: Russian rabbi and preacher; born at Odessa Sept. 11, 1852. Having received an elementary education in his native town, Slouschz at the age of fourteen went to Minsk, and studied in the yeshibah there for two years. Then he perfected himself in rabbinics in the well-known yeshibah of Volozhin, and at the age of nineteen was ordained rabbi by Naphtali Hirsch Berlin, head of the yeshibah of Volozhin. After staying for some time at Kherson, where he occupied himself with the study of Hebrew grammar, he was (1879) appointed preacher in one of the synagogues of Odessa, and two years later was made rabbi of the congregation in that part of Odessa known as Moldovanka. Slouschz is also a political Zionist, and for nine years he was a member of the central committee of the Chovevei Zion.

Slouschz is the author of "Reshit Dawid" (Warsaw, 1881), responsa and sermons. Many of his sermons have been published separately, in pamphlet form. He is a contributor to various Hebrew periodicals.

Bibliography: Sokolow, *Sefer Zikkaron*, pp. 79-80.

s. M. Sel.

SLOUSCHZ, NAHUM: Russian Hebrew litterateur; born at Odessa Nov., 1872. He was educated at the common school of his native city, and, in rabbinics, by his father. When only nineteen years of age he was sent to Palestine by the Chovevei Zion Society of Odessa, to found, if possible, a colony in the Holy Land. He was not successful and returned home. In 1896 he traveled through Austria and Lithuania, and then went to Egypt and again to Palestine.

While quite young Slouschz had contributed to Hebrew and Russian journals. Holding Zionistic ideas, he became an ardent follower of Herzl when the latter inaugurated the Zionist movement; and branches were established by Slouschz in Odessa and other parts of southern Russia. He wrote much on the Jewish question and took part in the second congress at Basel both as delegate and as correspondent.

In 1898 he studied belles-lettres and philosophy at the University of Geneva, again showing his interest in Zionism by founding together with others the Swiss Federation of Zionists. In 1900 he went to Paris, where he studied Oriental languages. He earned a livelihood as correspondent of several papers, among which were "Ha-Meliẓ" and "Ha-Ẓefirah." In 1902 he was appointed teacher at the normal school in Auteuil, and in 1903 he graduated as doctor of the University of Paris, his thesis being "La Renaissance de la Littérature Hebraïque" (Paris, 1903). In 1904 he became lecturer on Neo-Hebraic literature at the same university.

Besides his contributions to the journals, he published: "Mah Ya'aseh ha-Adam we-lo Yeḥeṭeh" (Jerusalem, 1890) and "Ha-Osher me-Ayin Yimmaẓe" (*ib.* 1892), both being translations of works by Paolo Montegazza; "Massa' be-Liṭa" (*ib.* 1898); "Ḳobeẓ Sippurim" (Warsaw, 1899), a translation of some of Zola's novels; "Keneset ha-Gedolah" (*ib.* 1899); "Massa' be-Miẓrayim" (*ib.* 1900); "Ha-Ḳongres ha-Ẓiyyoni ha-Rebi'i" (*ib.* 1901), on the congress of Zionists; "Emil Zola Ḥayyaw u-Sefaraw" (*ib.* 1901); "Ketabim Nibḥarim" (7 vols., *ib.* 1904–1905), selections from Guy de Maupassant, translated into Hebrew and including a monograph on that author by Slouschz.

H. R. F. T. H.

SLUCKI, DAVID: Hebrew scholar of Warsaw; died there between 1870 and 1880. Besides his edition of David Franco Mendes' "Gemul 'Atalyah" (Warsaw, 1860) and of Pappenheim's "Agadat Arba' Kosot" (*ib.* 1863), to both of which works he added notes of his own, he edited the "Megillat Antiokus" (*ib.* 1863), using as a basis therefor Filipowski's edition of 1851, and adding to it an introduction and notes.

Slucki's chief production, however, was the "Ḥokmat Yisrael," a collection of Jewish religio-philosophical works in eight parts, provided with his critical notes. Part i. (Warsaw, 1863) contains Bedersi's "Beḥinat 'Olam," Ibn Gabirol's "Mibḥar ha-Peninim," and Maimonides' "Shemonah Peraḳim"; part ii. (Leipsic, 1864), Saadia's "Emunot we De'ot," to which the editor prefixed Saadia's biography, besides writing a commentary on the work; parts iii.-viii. (Warsaw, 1865–71), the "Bi'ur Millot ha-Higgayon" of Maimonides with Comtino's commentary (edited for the first time); the "Ruaḥ Ḥen" of Ibn Tibbon with an index by the editor; Judah ha-Levi's "Cuzari," to which he added a commentary and to which he prefixed a pamphlet entitled "Ḳiryat Sefer" and containing an index of the authors quoted in the work, a history of the Chazars, and a biography of Judah ha-Levi; and finally Baḥya's "Ḥobot ha-Lebabot," together with various additions to the same.

Bibliography: Zeitlin, *Bibl. Post-Mendels.* pp. 367–369.

s. M. Sel.

SMALL AND LARGE LETTERS: There are about 100 abnormal letters in the Masoretic text of the Bible—many of them in the Pentateuch—which were always copied by the scribes, and appear also in the printed editions. Among these letters are: the "waw ḳeṭi'a" (ו; bisected waw) in the word שלום ("peace"; Num. xxv. 12); the final "mem" in the word לםרבה ("increase"; Isa. ix. 6 [A. V. 7]); the inverted "nun" (׆) in nine passages (Num. x. 35, 36; Ps. cvii. 23–28, 40); and the Suspended Letters. The principal division of these abnormal letters is into small ("ze'ira") and large ("rabbati") letters, as indicated in the lists which are given below. The former appear to belong to an older Masorah than that which provides for the large letters, and should be classed with the "ḳere" and "ketib."

The large letters are used mainly to call attention to certain Talmudic and midrashic homilies and citations, or as guards against errors. References to them in Masseket Soferim ix. read substantially as follows.

In Masseket Soferim.

(1) The letters of the first word of Genesis, "Bereshit" (In the beginning), must be spaced ("stretched" = "peshuṭin"; according to the Masorah, only the "bet" is large).

(2) The "waw" in the word "gaḥon" (belly; Lev. xi. 42) must be raised ("erect" = "zaḳuf"), because it is the middle letter of the Pentateuch (comp. Ḳid. 30a).

(3) The word "wa-yishḥaṭ" (And he slew; Lev. viii. 23) must be spaced, as it is the beginning of the middle verse of the Pentateuch (the Masorah designates the dividing verse as *ib.* 8, but does not indicate that any change is to be introduced in the form or spacing of the letters).

(4) "Shema'" (hear; Deut. vi. 4) must be placed at the beginning of the line, and all its letters must be spaced; "eḥad" (one), the last word of the same verse, must be placed at the end of the line (the Masorah has the "'ayin" of "Shema'" and the "dalet" of "eḥad" large).

(5) The "lamed" in the word "wa-yashlikem" (and he cast them; *ib.* xxix. 27) must be large ("long" = "'aruk").

(6) The letter "he" in "ha la-Yhwh" ("the Lord"; *ib.* xxxii. 6) must be spaced more than any other "he," as "ha" is here a separate word (comp. Yer. Meg. i.: "The 'he' must be below the shoulder of the 'lamed'"; also Ex. R. xxiv.: "The 'he' is written below the 'lamed.'" The Masorah has a large "he" as indicating the beginning of a separate word).

(7) The "yod" of the word "teshi" (thou art unmindful; *ib.* 18) must be smaller ("ḳaṭan") than any other "yod" in the Scriptures.

(8) The "yod" of "yigdal" (be great; Num. xiv. 17) must be larger ("gadol") than any other "yod" in the Pentateuch (Yalḳ., Num. 743, 945).

(9) The last word in the Pentateuch, "Yisrael," must be spaced and the "lamed" made higher than in any other place where this letter occurs (the Masorah has no changes).

References in Talmud and Midrash.

The references in Talmud and Midrash which are probably the bases of these abnormalities are as follows: (1) Citing "For in Y H the Lord created the worlds" (Isa. xxvi. 4, Hebr.), R. Judah b. Ila'i said: "By the letters 'yod' [Y] and 'he' [H] this world and the world to come were created—the former by the 'he,' as it is written בהבראם ["when they were created," Gen. ii. 4]" (Men. 29b); hence the letter "he" is small here, indicating this world. (2) Citing "And when she saw him that he was a goodly child" (טוב; Ex. ii. 2), R. Meïr said: "'Ṭob' ["good"] was his name" (Ex. R. i.; Yalḳ., Ex. 166). (3) "And the Lord called unto Moses" (ויקרא; Lev. i. 1); "wa-yiḳra" is written here with a small "alef," to emphasize its contrast with "wa-yiḳḳar" in the verse "God met Balaam" (ויקר; Num. xxiii. 4); the former indicates a familiar call used by loved ones, but the latter refers to an accidental meeting, difference being thus expressed between the call of God to a Jewish prophet (Moses) and His call to a non-Jewish prophet (Balaam; Lev. R. i.). (4) "And Caleb stilled the people" (ויהס; Num. xiii. 30). He used diplomacy in quieting them, as he feared they might not heed his advice (see Soṭah 35a; Yalḳ., Num. 743); and the use of the large ס symbolically denotes the way in which Caleb quieted the people. (5) "Hear, O Israel . . . one God" (Deut. vi. 4). Whosoever prolongs the word "eḥad" [one] in reciting the "Shema'" prayer, his days and years shall be prolonged—especially if he prolongs the letter "dalet" (Ber. 13b). The emphasis on the "dalet" (ד) is intended to distinguish it from the "resh" (ר), which resembles it, and which would change the reading to "aḥer" (another)—in this case a blasphemous expression. (6) Proverbs (משלי) begins with a large "mem"—which has the numerical value of forty—because it is claimed that Solomon, like Moses, fasted forty days before penetrating to the secret of the Torah. According to another explanation, the "mem" is the center of the alphabet, as the heart is the center of the body, the fountain of all wisdom, as revealed in Solomon's Proverbs (Yalḳ., Prov. 929). (7) The large "waw" in "Vajezatha" (ויזתא; Esth.

ix. 9) is accounted for by the fact that all of Haman's ten children were hanged on one large cross resembling the "waw" (ו; Yalk., Prov. 1059). The "zayin" in the same name is small, probably to indicate that Vajezatha was the youngest son.

Other large letters were intended to guard against possible errors; for instance, in the passage "when the cattle were feeble" (ובהעטיף; Gen. xxx. 42) final "pe" (ף) is written large in order that it may not be mistaken for a final "nun" (ן) and the word be read ובהעטין (comp. עטיניו in Job xxi. 24). The Septuagint translation, based on the second version, is "whenever the cattle happened to bring forth."

The large letters in the words "ha-ke-zonah" (Gen. xxxiv. 31), "ha-la-YHWH" (Deut. xxxii. 6), and "ha-le-'olamim" (Ps. lxxvii. 8) are probably meant to divide the root from the two preformatives. Some books begin with large letters, *e.g.*, Genesis, Proverbs, and Chronicles; perhaps originally these were divided into separate compilations, each beginning with a large letter. The large "mem" in "ma ṭobu" (Num. xxiv. 5) is probably meant to mark the beginning of the column as designated by the Masorah.

Asheri, author of the "Ṭurim," gives in his annotations to the Pentateuch hypothetical reasons—some of them far-fetched—for the small letters. He says, for instance: "The small 'kaf' of ולבכתה, in the verse 'Abraham came to mourn for Sarah and to weep for her,' indicates that Abraham really cried but little, since Sarah died in a ripe old age. The small 'ḳof' [=100] in קצתי, in the verse 'Rebekah said to Isaac: I am weary of life' [Gen. xxvii. 46], indicates the height of the Temple, 100 cubits. Rebekah in her prophetic vision saw that the Temple would be destroyed, and therefore she became weary of life."

T. J. D. E.

SMOL VON DERENBURCH (SAMUEL OF DERENBURG): Court banker to the archbishops of Magdeburg in the fourteenth century; died after Oct. 5, 1382. In some of his financial transactions he was assisted by two of his brothers, Marquard and Ephraim. On Nov. 28, 1347, Archbishop Otto acknowledged the receipt from the town council of Brunswick of the sum of 300 marks which it had promised to pay on the following

Easter, and assigned it to the brothers Smol, Marquard, and Ephraim of Dernenburch, and to three citizens of Magdeburg. In a document dated Oct. 24, 1364, Smol, together with Hermann von Werberge (provost of the cathedral) and others, testified that Prince Waldemar I. of Anhalt had failed to attend a meeting at Barby which had been arranged between him and Archbishop Dietrich of Magdeburg. The clever Jewish financier was also a member of the commission appointed to decide the controversy which had arisen between Archbishop Dietrich and the city of Halle on account of the appointment of a superintendent of a salt-mine (document of Feb. 27, 1365). In a record of March 22, 1366, he appears, together with three knights, on the bond of the Archbishop of Magdeburg; and he also aided the counts and nobles who brought about the reconciliation between that prelate and the nobleman Hans von Hadmersleben. Smol enjoyed the favor of Archbishop Peter of Magdeburg as well, and when the latter took the Jews of Magdeburg under his jurisdiction on April 21, 1372, the patent of protection expressly stated that Smol and his children were excepted, since they enjoyed special privileges. This action on the part of the archbishop was reproved by Pope Gregory XI. in a letter dated at Avignon June 15, 1372, especially as the court banker was said to have established a synagogue in a building at Salince (Gross Salze) which had formerly been used as a chapel.

SMOLENSK: Capital of the government of Smolensk, Russia; situated on the Dnieper, 250 miles west-southwest of Moscow. Jews resided there as early as 1489, for a letter of that date from Grand Duke Ivan Vassilivich to King Casimir contains a complaint that the Jewish customs collectors Shemyak, Novar, and David had extorted the sum of 63 rubles from Ignat Verblud, a merchant. In all probability Jews went to Smolensk in the beginning of the fifteenth century, when Prince Vitoft of Lithuania captured the city (1404) and granted it the Madgeburg Rights and other privileges. In 1514 the city was taken by the Russians, but it was recovered by the Poles in 1611; after that time it alternately belonged to the Russians, the Poles, and the Lithuanians, and as a consequence the Jewish inhabitants suffered greatly. In 1654 Smolensk was finally annexed to Russia, and after being deprived of its privileges it gradually lost its importance. Even now (1905) it contains very few industries, and its export trade is insignificant. In 1899 the city had a total population of 56,389, of which number 4,567—or 8.1 per cent—were Jews.

It is worthy of notice that the Jewish population of Smolensk, instead of increasing, has diminished since 1896, when the Jews numbered 4,651. This can be accounted for by the restrictive legislation relating to the residence of the Jews outside the Pale of Settlement. There are at present in Smolensk two synagogues and five ḥadarim.

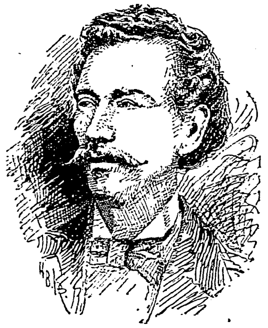
SMOLENSKIN, PETER (PEREZ) BEN MOSES): Russian writer; born at Monastyrshchina, government of Moghilef, Feb. 25, 1842; died at Meran, Austria, Feb. 1, 1885. At the age of ten Smolenskin lost his father, and the support of the small family devolved upon his mother. At eleven Smolenskin began to attend the yeshibah of Shklov, where he studied for five years, and, aided by his brother Leon, managed to acquire, undetected, a knowledge of the Russian language. But being at last discovered reading profane literature, he began to be persecuted by the Mitnaggedim, the representatives of ultra-Conservative Judaism. Finding his further stay at Shklov impossible, he went to Lyubavich, provided with a letter of introduction to R. Mendel, the Ḥasidic rabbi there, with whom he stayed for a few months, until, disgusted with the intrigues of the Ḥasidim, he went to Moghilef; there he earned a livelihood as a synagogal singer and by preaching in a bet ha-midrash. From Moghilef, in 1862, he went to Odessa, and, while teaching Hebrew, took lessons in modern languages and in music. In 1867 he published in "Ha-Meliẓ" an essay on Meïr Letteris' work entitled "Elisha ben Abuyah," reproaching the author with having failed to grasp the meaning of Goethe's "Faust."



Peter Smolenskin.

At Moghilef and Odessa.

Smolenskin's ambition was to become editor of a Hebrew periodical, and with this aim in view he left Russia. After a visit to Germany he went to Prague, where he found Rapoport dying. His elegy on Rapoport's death was published (Prague, 1867) under the title "Ḳinim wa-Hegeh," with a German translation. Smolenskin then (1868) resolved to go to Vienna to study philosophy, and in order to maintain himself while studying he acquired the calling of a shoḥet (slaughterer). Compelled, however, to surrender his intention of entering the university, he found employment as corrector in the Hebrew department of Georg Brög's printing establishment, and through the help of Solomon Rubin was able to begin the publication of "Ha-Shaḥar." His sole purpose now was to fight the tendency toward obscurantism in Judaism, to arouse in the heart of Jewish youth the sense of Jewish nationalism and a love for the Hebrew language. Smolenskin became afterward the manager of Brög's printing-house, and assisted in various ways in the publication of Kohut's "Aruch Completum," which was printed under his supervision. When Isaac Hirsch Weiss criticized the work in "Bet Talmud" (i. 286–288, 317–324), Smolenskin published in its defense a long article entitled "Mishpaṭ ha-Shofeṭ" ("Ha-Shaḥar," x. 257 *et seq.*, reprinted in book form under the title "Mishpaṭ ha-'Ashuḳim"). In 1874, when the persecution of the Jews in Rumania became known in Vienna, he was sent to the scene of trouble by the Alliance Israélite Universelle to ascertain the conditions, and in his report he proposed the establishment of schools in which the Rumanian language, history, and literature should be taught. His school plan, however, failed. In Feb., 1878, he began the issue of a popular Hebrew weekly entitled "Ha-Mabbiṭ," which expired with its twenty-sixth number.

Colonization.

About 1880 Smolenskin began to be interested in the colonization of Palestine. On seeing that the Alliance was opposed to this movement, encouraging instead emigration to America, he published in "Ha-Shaḥar" (x. 511-530) a violent attack upon that society, and even endeavored to effect the establishment of a Palestinian society. Failing in this, he joined Laurence Oliphant, through whom he hoped to secure the intervention of European powers in favor of the Jews.

Works.

Smolenskin's style of writing was unique. While he was a purist, endeavoring to model his Hebrew as nearly as possible after that of the Prophets, he did not heap up purely Biblical expressions, as did writers of the older school. He was, besides, a clever narrator, depicting his characters with the skill of an artist. It is no wonder, therefore, that his writings were read far and wide, and aroused in their readers the Hebrew national sentiment. The following is a list of his works: "Ha-Gemul" (Odessa, 1867), describing the attitude of the Jews in Warsaw during the Polish revolt of 1863 (adapted from Herzberg-Fränkel's "Polnische Juden"); "Ha-To'eh be-Darke ha-Ḥayyim" (Vienna, 1868-70); "Simḥat Ḥanef" (*ib.* 1872); "'Am 'Olam" (*ib.* 1873); "Mishpaṭ u-Ẓedaḳah" (*ib.* 1873), a critical review of Grätz's "Shir ha-Shirim" and Herzberg's "Die Jüdischen Familienpapiere"; "Ga'on we-Sheber" (*ib.* 1874), a novel describing the financial crisis at Vienna in 1873; "Ḳeburat Ḥamor" (*ib.* 1874), a work picturing the social life of the Russian Jews (Russian transl. by Mordecai Kahan, "Oslinnoye Pogrebenie," in "Razsvyet," 1881); "Gemul Yesharim" (3 vols., *ib.* 1876) and "Ha-Yerushshah" (3 vols., *ib.* 1878-84), two novels descriptive of Jewish life; "Neḳam Berit" (*ib.* 1884), a sketch of contemporary Jewish culture.

The "Simḥat Ḥanef," although printed after "Ha-To'eh," was nevertheless written before it. Smolenskin, who was a Biblical enthusiast, argued in this work that "Hamlet" and "Faust" echo respectively Ecclesiastes and the Book of Job. His "Ha-To'eh be-Darke ha-Ḥayyim" consisted originally of only three volumes, but in the second edition (1876) a fourth volume was added. This work is in reality a long series of independent narratives; it shows how its hero, *Joseph the Orphan*, passed through different stages of misery from childhood to maturity. In fact, it is his own biography, modeled after Dickens' "David Copperfield," but more comprehensive. While this work is undoubtedly the most graphic one written by Smolenskin, his "'Am 'Olam," in which he expounded his nationalistic ideas and his Messianic views, is no less important. He contends that the Jews are not only a religious sect, but that they are a nation, and that it is toward nationality they should strive. The "'Am 'Olam" is the first Hebrew book in which the Messianic idea is entirely freed from the religious element. The Messianic era, he argues, will be that in which the Jews will have achieved political and moral emancipation. He declaims against fanaticism, but at the same time he exhorts the Jews to consider themselves a nation. He also refutes the theory of Mendelssohn, who declared that Judaism is nothing more than a religious confession; and against this theory he wrote a series of articles in "Ha-Shaḥar," under the title "'Et la-Ṭa'at."

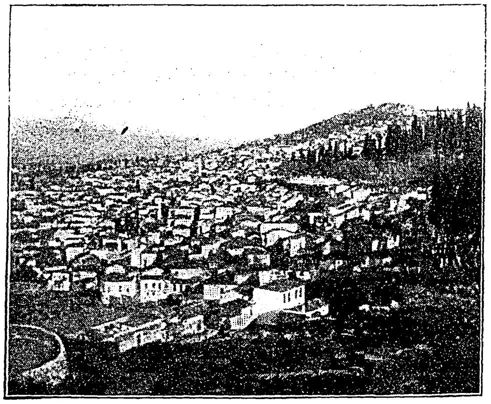
S. M. SEL.

SMYRNA: Seaport of Asia Minor, in the Turkish vilayet of Aidin. The city had a Jewish population as early as the time of the martyrdom of Polycarp in the second century, although there is no further mention of Jews there until 1605, despite the fact that the neighboring towns had communities even before the Spanish expulsion. The refugees from Spain did not go directly to Smyrna in a body, but settled there gradually, their numbers being augmented by their coreligionists from Angora, Janina, Crete, Corfu, and (more recently) Russia. During the Greek revolution, on the other hand, many Jews removed to Turkey in Europe.

The congregation of Smyrna was founded by Joseph Escapa, the first chief rabbi, in 1631; it was the center of all the communities of Asia Minor and preserved almost the entire body of their rabbinical responsa until the city was destroyed by fire in 1841, although even then some responsa and copies of communal laws were saved. In 1772 every synagogue in Smyrna was burned, and for twenty-eight years the Jews of the city had no place of worship. In the course of time, however, other synagogues were built, among them the Talmud Torah Synagogue, destroyed in 1838. Three years later there swept through the Jewish quarter a fire that left in ashes all the synagogues with the exception

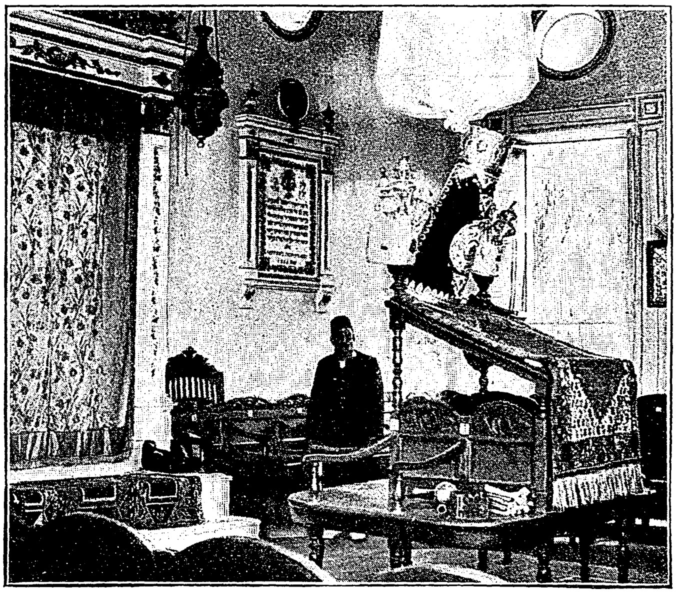


Jewish Quarter of Smyrna.
(From a photograph.)

of the Shalom. Three Jewish quarters and a portion of the Christian quarter were devastated by fire in 1881, 1,500 Jewish houses being destroyed and 5,000 Jews being rendered homeless. About forty houses were burned in 1903. Seismic disturbances are frequent, and the city has been entirely destroyed by earthquakes no less than six times, the most disastrous occurring in 1688, in which, according to the "Welo Od Ela" of Elijah Cohen (Smyrna, 1853), 400 Jews, including the chief rabbi, Aaron ben Hayyim, were killed.

Disasters.

Smyrna had ten epidemics of cholera between 1770 and 1865, and in the latter year the daily Jewish death-rate varied from five to twenty, while on one day it rose to 100. In 1892 the plague broke out in the city, when, as on many other occasions of distress, the community was aided by the government and by the Protestant missions. This scourge has swept the city repeatedly, and various infectious diseases occasionally ravage its unhealthful and overcrowded ghetto.



Interior of the Principal Synagogue at Smyrna.
(From a photograph.)

The charge of ritual murder has been brought against the Jews of Smyrna several times, notably in the latter part of the eighteenth century, and in 1864, 1872, 1874, 1876, 1888, and 1901, all these accusations being refuted. The most important of these charges were made in 1872 and 1901. In the former year the body of a Greek child was found in a small stream in the Armenian quarter, and the Greeks in revenge, after murdering a Jew and a Jewess, attacked the ghetto, which was defended by the inhabitants until the arrival of the police. On March 9, 1901, a young Greek named Anesti Kaliopulos suddenly disappeared, and, all search for him proving fruitless, the Greeks thereupon prepared to attack the Jews. Kiamil Pasha, the governor-general, at once called out the garrison and the police, while many of the Jewish population armed themselves for defense. A conflict ensued during which several Greeks were wounded, and in the confusion Kaliopulos was found in a dazed condition.

Occupations.

The Jews of Smyrna have been important figures in the city's history. In the seventeenth century, as dragomans for European merchants, several of them held the key to the commerce of Smyrna, and in view of their large profit paid a heavier tax to the community than did the Jewish merchants themselves. Many Jews still occupy similar positions with the various consulates and banking-houses. In 1718 Moses Soncino was controller of the custom-house; Moses Arditi was governmental treasurer in 1812. In 1852 Jacob Gabai and later Danon, Samuel Segura, and Isaac Pasha were members of the municipal council, and Johanan Cohen was dragoman for the governor-general. Among the present (1905) municipal officers may be mentioned Jacob Effendi Saul, in the bureau of political affairs; Jacob de Vidas, censor; Nissim Levy, member of the administrative board; Toledano, member of the board of health; and Danon, city physician. The municipal courts always include Jewish members; Nissim Strugo has served repeatedly as a member of official committees, and Hayyim Polaco has held the presidency of the Smyrna chamber of commerce. Several Jews of Smyrna have also won distinction abroad, among them David Leon, a Parisian financier.

Since the seventeenth century there have been many Jewish physicians in the city; these include Behor Strugo, Azariah Strugo, Abraham Castro, and Angelino, plague specialists; as well as Fano Pascha, a military surgeon and president of the Jewish hospital. The Jews of Smyrna entered the European trade in 1744; recently their commerce has declined, although they still export cereals, figs, raisins, scammony, opium, oil, hides, carpets, licorice, ore, and beans. The manufacture of clothing and that of carpets are important industries, several factories being maintained in the city.

Literature on exclusively rabbinical subjects has been extensively fostered, and more than 300 volumes have been issued from the presses of Smyrna. The first printing-press was established there in 1660, and four are still in operation. The earliest Jewish paper was the "Puerta del Oriente," which was founded by Pincherle in 1846; of the five periodicals subsequently founded, three—"La Buena Esperanza," "El Novelista," and "El Messerret"—are still published.

About 1690 Solomon of Ciaves, a rich Dutch merchant, arrived at Smyrna; later he built the synagogue which bears the name of Bikkur Holim, and he also purchased the Jewish quarter called Yebesh.

Moses Soncino, who has already been mentioned, built the synagogue which bears his name, taking as his model the Smyrniot mosque Hissar Jami', other members of his family also rendered important services to the community. In 1839 the two brothers Chelebi and Menahem Hajez rebuilt the Talmud Torah Synagogue, while Johanan Cohen took the initiative in founding a lazaretto containing 156 small houses for the poor.

Synagogues.

The city contains ten synagogues and eight prayer-houses. Of the synagogues the oldest is the Portuguese, which was in existence in 1710, closely followed by the Maḥaziḳe Torah (1722), the Biḳḳur Ḥolim (1724), and the Algazi (1728). The other synagogues are the Shalom (1800), the Talmud Torah (rebuilt in 1838), the 'Eẓ Ḥayyim (repaired in 1851), the Bet Lewi (1898), and the Sengnora and Forasteros, both of unknown date. The sacred scrolls at Smyrna number 150. While numerous yeshibot formerly existed in the city, the great majority of them have disappeared, and those which remain have but a scanty attendance. Smyrna has had three Jewish cemeteries. Of the first all traces have disappeared, while the second is a large field containing no monuments of value for chronological data. The third cemetery, which is situated outside the city, dates from 1886; there is likewise a small burying-ground at Burnabat, near Smyrna, which is five years older.

Jewish Girls of Smyrna.
(From a photograph.)

The intellectual status of the Jewish community, except as regards candidates for the rabbinate, was formerly very low; but in 1847 Abraham Enriquez founded a Talmud Torah, which was enlarged in 1871 and which now (1905) accommodates 500 children. In 1878 the Alliance Israélite Universelle founded a school for boys, followed in the next year by one for girls, while a public school was established in 1898; none of these institutions has, however, proved altogether successful. In 1903 Baron Edmond de Rothschild presented 70,000 francs for the construction of a new Talmud Torah. In addition, many Jewish pupils are educated in the Catholic and Protestant institutions of the city.

The social condition of the Jews, as compared with adherents of other creeds, has been one of much vicissitude in Smyrna. According to the archives found in the Orthodox Greek community, and dated March 17, 1781, the Greeks, Jews, and Armenians were required to pay their taxes to the treasury of the Greek community that it might remit them to the government, while according to the "'Abodat Massa" the Jewish community paid the Greeks 150,000 piasters to discharge its debt. In the course of time the condition of the Jews improved greatly and is now excellent.

A Jewish hospital was maintained by the Rothschilds of Vienna after the year 1840, although one had been established in the city about thirty-five years before. This Rothschild infirmary, which superseded the older institution, was later enlarged; but since the community did not add to the annual subvention of 15,000 piasters, the baron, who for several years had borne the entire expense, abandoned the institution, which then resumed its old name of "The Jewish Hospital." There are in Smyrna numerous benevolent societies, the principal being as follows: the Biḳḳur Ḥolim and the Biḳḳur Ḥolim shel Nashim, which serve as a ḥebra ḳaddisha; the Ḳuppat Reḥiẓah and the Ḥebrat Lewayah, both devoted to rendering honors to the dead; the Ḥebra Ḳedosha shel Ḳebarim, which keeps the cemetery in good order; the Emet wa-Ẓedeḳ, which assists impoverished families in time of mourning; the 'Ozer Dallim (originally called Gabba'e Ẓedaḳah), founded by Behor Danon in 1879 as the first institution of its kind in Turkey, and reestablished in 1883 and 1894, its purpose being the support of 260 pauper families, among which it distributes small sums every Friday; the Haknasat Oreḥim, which provides for needy strangers; the Ḥayyat 'Aniyyeka, which cares for the pauper sick; the Malbish 'Arummim and the Nashim Ẓadḳaniyyot, which clothe the children of the poor; the Midrash Shelomoh, the Magen Dawid, and the Or ha-Ḥayyim, which read the Psalms on Sabbaths, applying their income to the support of the poor; and the Mohar u-Mattan, which dowers indigent girls.

Among the benefactors of the Jewish community of Smyrna may be mentioned: Alexander Sidi, who purchased the cemetery of Burnabat in 1881; Moses b. Ghayyat; Ḥayyim Argi and his wife; Jacob Melamed; Nissim Levy; Abraham Pardo; the Baron and Baroness de Hirsch; and Baron Edmond de Rothschild. Behor Danon has been the radical reformer of Smyrna, and the initiator of the establishment of the Rothschild hospital and of the society called

'Ozer Dallim, and Nissim Crespin has been a prime mover in the foundation of the schools of the Alliance Israélite Universelle at Smyrna. Among the famous Jews who have visited the city may be mentioned Moses Montefiore and his wife, as well as the Baron Edmond de Rothschild. In 1879 the society Gemilut Ḥasadim was authorized to establish a lottery from which the Talmud Torah and the school of the Alliance Israélite Universelle derived much profit. The abuse of its privileges, however, led to the suppression of the lottery, although in 1903 a new one was organized for the benefit of the hospital and the Talmud Torah, and is still in existence.

Disputes of Rabbis.

One of the misfortunes of the Oriental Jewish community is the rabbinical problem arising from personal intrigues on the part of the leading men, and sometimes of the rabbis themselves. Soon after the establishment of the community of Smyrna in 1631, Azariah Joshua Ashkenazi was elected as the colleague of the chief rabbi Joseph Escapa. The next chief rabbi, Ḥayyim Benveniste, became the sole head of the community, but, being opposed by a portion of the congregation, he was imprisoned by the governor; Aaron Lapapa thereupon received a call from Magnesia, thus becoming the head of the opposition. In 1639 a quarrel broke out between the community and the people, which was ended only on the intervention of Chief Rabbi Fresco of Constantinople. In 1886 the chief rabbi Ḥayyim Palacci became involved in various quarrels with the members of the community, and the chief rabbinate of Constantinople sent R. Samuel Danon to arbitrate. He proved incompetent, however, and Palacci finally went to the synagogue, opened the Ark, sat on the floor, fasted, and wept. By a curious coincidence a severe earthquake occurred a few moments later, and the people, interpreting this as a mark of divine judgment, ceased all hostility against their rabbi. After Palacci's death the chief rabbi of Magnesia, Joseph Hakim, was chosen as the head of the Jewish community of Smyrna, but his incompetency finally resulted in his supersession by Abraham Palacci, whose election was ratified by the government in 1870. On his death in 1899 the community was again divided into two hostile camps, one faction desiring the election of Solomon Palacci, and the other wishing to have no more rabbis of his family. All efforts to settle the dispute have proved vain, and Joseph Ben-Señor, the chief rabbi finally chosen, is not recognized by the government. This partizan strife has resulted in the custom of frequently having two chief rabbis simultaneously, the list being as follows: Joseph Escapa and Azariah Joshua Ashkenazi; Ḥayyim Benveniste and Aaron Lapapa; Solomon Levi and Jacob ibn Na'im; Solomon Levi and Israel Benveniste; Elijah Cohen; Abraham Ben-Ezra and Jacob Saul; Ḥayyim Moda'i and Isaac Mayo; Ḥayyim David Abulafia; Jacob Albagli; Joseph Hazan and Isaac Mayo; Solomon Ben-Ezra; Isaac Navarro; David Amado; Joshua Abraham Judah; Yom-Ṭob Danon; Ḥayyim Palacci; Joseph Hakim; Abraham Palacci; and the present non-official chief rabbi Joseph Ben-Señor.

Jewish Hawkers of Smyrna.

Jewish Porter of Smyrna.
(From a photograph.)

The Jews form a considerable part of the population in twelve wards of Smyrna, and are numerous also in the suburbs of Burnabat, Bunar Bashi, Alay Bey, and Cordelio. The community, which now (1905) numbers 25,500 out of a total population of 201,000, is governed by a chief rabbi and two councils, the one clerical and the other lay; the decisions of the councils are binding on the chief rabbi, who forms the bond of union between the government and the community.

D. A. Ga.

SNAIL: Rendering given in the English versions for "shabbelul," which occurs only in Ps. lviii. 9 (A. V. 8). An equivalent rendering is given by the Targum and the Talmud; the Septuagint and Vulgate give "wax." The idea of melting away, expressed in the passage referred to, may have arisen from the trail of slime which this mollusk leaves behind as it crawls, or from its retirement, or "melting away," into cracks and crevices. There are numerous and various mollusks in Syria and Palestine. For "ḥomeṭ" (Lev. xi. 30), which the Authorized Version renders by "snail," see Lizard.

The shabbelul serves as a cure for boils (Shab. 77b). Of the ḥomeṭ it is said that at birth it is of the size of a lentil. Other conchylia are comprised under the name of "ḥalazon" (see Sanh. 91a); 'Ab. Zarah 28b). The "melting away" of the snail on its walk is referred to in M. Ḳ. 6b. In the egg of the snail the white is not separated from the yolk ('Ab. Zarah 40a).

SNEEZING. See Asusa.

SNOWMAN, ISAAC: English artist; born in London 1874; educated at the City of London School. In 1890 he entered the Royal Academy School, where he gained a free medal, and afterward a scholarship in the Institution of British Artists. He joined the Maccabean pilgrimage to Palestine in 1897, and he has shown his interest in Jewish matters by his drawings "A Difficult Passage in the Talmud" and "The Blessing of Sabbath Lights," as well as by his "Early Morning Prayer in the Synagogue." Of his paintings, which have been devoted mainly to portraits and domestic views, "Children's Voices" (1901) attracted a great deal of attention, and "The Bride" (1904) has become very popular. He has exhibited also a study of "Sardanapalus," as well as "The Wailing-Place at Jerusalem" and "The Proclamation of Joseph as Ruler of Egypt."

J.

SOAVE, MOSES: Italian Hebraist; born in Venice March 28, 1820; died there Nov. 27, 1882. He supported himself as a private tutor in Venetian Jewish families, and collected a library containing many rare and valuable works. Two years before his death he gave up teaching, and devoted himself entirely to study. In addition to numerous articles which appeared in Italian Jewish periodicals he wrote biographies of Sara Copia Sullam, Amatus Lusitanus, Abraham de Balmes, Shabbethai Donnolo, and Leon de Modena. He was, besides, the editor of Isacco Israelita's "Guida dei Medici" ("Manhig ha-Rofe'im"), translated from an old Hebrew manuscript (Venice, 1861); and wrote "Dei Soncino, Celebri Tipografi Italiani nel Secoli XV.–XVI." (Venice, 1878).
s. U. C.

SOBERNHEIM, JOSEPH FRIEDRICH: German physician and author of medical works; born at Königsberg in 1803; died at Berlin Jan. 30, 1846. He published at Berlin, where he had settled as a physician, a number of medical treatises, of which the following is a list in the chronological order of their publication: "Behandlung der Krankheiten des Menschen" (1833–36), a German translation of the Latin work of Von Frank; "Allgemeine Gesundheitslehre für Alle Stände" (1834); "Handbuch der Arzeneimittellehre in Tabellarischer Form" (1836), afterward revised and reedited several times; "Deutschlands Heilquellen in Physikalischer, Chemischer und Therapeutischer Beziehung" (1836); "Praktische Diagnostic der Inneren Krankheiten" (1837); "Handbuch der Praktischen Toxicologie" (1838), in collaboration with Fr. Simon; "Specielle Pathologie und Therapie" (1839–40), adapted from the Latin work of Von Frank; "Tabulæ Pharmacologicæ Usui Medico-Practico Dictæ" (1843); and "Elemente der Allgemeinen Physiologie" (1844).

SOBIESKI, JOHN. See John Sobieski.

SOBORTEN: Town in Bohemia, whose community is probably one of the oldest in the province. The community of Soborten includes parts of the Teplitz, Dux, and Karlitz districts. The synagogue has a tower, with a clock, and two lamps respectively bearing the dates 1553 and 1654. For a time the cemetery at Soborten was used as a burial-place by the community of Dresden. Many gravestones bear the inscription "Mi-Geresh Prag," marking the graves of Jews who were driven from Prague, some of whom died as martyrs. Until 1848 the Jews of Soborten were confined to the ghetto—the Judengasse, as it is still called. For some time the community formed a part of the Leitmeritz district rabbinate, but in 1883 it gained independence and elected as its rabbi Ḥayyim (Heinrich) Galandauer (author of "Der Socialismus im Bibel und Talmud"). Soborten has a Jewish population of 150.

SOCIALISM: Theory of civil polity which advocates public collective ownership, production, and distribution. Jews have been prominently identified with the modern Socialist movement from its very inception. The small circle of the first disciples of Saint-Simon in the third decade of the nineteenth century numbered among its members two Jewish young men of Portuguese origin, the brothers Isaac and Emile Péreire. A generation later, when the apostles of Saint-Simonism had distinguished themselves in various fields of science and industry, the Péreire brothers won fame and fortune as the builders of the first French railway, and became the leading bankers and financiers of the second empire.

Relation to Saint-Simonism.

Paris in the thirties and forties was the intellectual capital of Europe. "Young Germany" was, after the Napoleonic wars, under the sway of French democratic ideas. The Socialist theory was regarded as an application of the principles of democracy to the industrial organization of society; and it was but natural that it should soon enlist the sympathies of the numerous German refugees who in those days made Paris their headquarters. Karl Ludwig Börne notes in his "Briefe aus Paris," though in a somewhat light vein, the appearance of the Saint-Simonists in the advanced intellectual circles of Paris.

Karl Marx.

The educated German Jews, who were still suffering under legal disabilities and social discrimination, were active in the Democratic movement of their day. The spread of the socialistic faith among the German colony at Paris was therefore bound to convert Jew and Gentile alike. Two of those early Jewish converts, Karl Marx and Ferdinand Lassalle, were to become commanding figures in the history of socialism: one as the father of scientific socialism, the other as the founder of the German Socialist party. Marx, the son of a Jewish lawyer of Treves, numbered among his ancestors many famous rabbis. The chapters on the theory of value in his principal work, "Das Kapital," suggest by their subtle analysis an inherited Talmudical bent, though his own education was uninfluenced by Jewish studies, the family having been converted to the Lutheran Church during his early childhood. In 1842 he became editor of the "Rheinische Zeitung" at Cologne; but after a short existence the journal was suppressed by the Prussian government. Deprived of his newspaper, Marx joined the German colony at Paris, and undertook the publication of a Democratic magazine, "Deutsch-Französische Jahrbücher," which was to be smuggled into Germany and circulated in defiance of the censor. He was then a young man of twenty-five, with a mind trained in Hegelian philosophy and deeply absorbed in political problems; but he had as yet given little thought to economics. The controversies of the Socialists with the old school of Democrats, as well as the dissensions among the divergent socialistic schools, directed his attention to the study of political economy. The outcome of these studies was his "Manifest der Kommunistischen Partei" ("Manifesto of the Communist Party"), written on the eve of the Paris revolution of 1848 in collaboration with Friedrich Engels; in it Marx laid down the foundation of his theory. He was one of the charter members and leaders of the International Working Men's Association, which was organized in London in 1864, and he framed its declaration of principles. In 1867 he published the first volume of his life-work, "Das Kapital," which has been aptly called "the Bible of modern Socialism." This was to be followed by three other volumes; but his work was cut short by his death (March 14, 1883). Two posthumous volumes were published by Engels, Marx's lifelong friend and literary executor.

The essence of Marx's theory, which won for it the name "scientific socialism," as distinguished from the "Utopian socialism" of his precursors, is the principle of social evolution. While Utopian socialism sets before mankind an ethical ideal of a perfect society, and hopes for its ultimate acceptance by virtue of its inherent beauty, Marx maintains that the industrial evolution of capitalistic society leads toward socialism, regardless of its ethical merits, and that, moreover, this industrial process molds ethical standards in consonance with the industrial tendencies of the time. Industrial evolution thus being held to be independent of current opinions, it follows that no opposition is able to prevent the transformation of modern society on socialistic lines.

It is evident that this adaptation of the theological dogma of predestination to sociology must beget much the same confidence in Socialist believers as was inspired by the teachings of Mohammed in Arab warriors. It is only in recent years that dissenting views have gained currency within the Socialist fold. The movement for revision of the accepted creed is led by another German Jew, Eduard Bernstein, at present a member of the German imperial Parliament.

Ferdinand Lassalle.

Social Democracy as a political movement in Germany began with Ferdinand Lassalle, who in 1844 went to Paris, where he came under the influence of the Socialists. In 1848 he worked on the staff of Karl Marx's "Neue Rheinische Zeitung." He took an active part in the revolutionary agitation of that year; and during the reactionary period which followed he devoted his time to scientific research.

Socialism in Germany in the middle of the nineteenth century was an academic theory which appealed to a college-bred middle-class audience with a sprinkling of self-taught working men. When Lassalle actively identified himself with the movement in 1862, he directed it into the channels of practical politics, conducting his campaign of education upon the issue of manhood suffrage. His brilliancy as a popular orator, coupled with great learning, made his propagandic tour a series of personal triumphs. He organized the Allgemeiner Deutscher Arbeiterverein (General Labor Union of Germany), of which he became the first president. The aims of the association were to secure manhood suffrage and government credit for the establishment of cooperative industries. Lassalle was fatally wounded in a duel and died on Aug. 31, 1864; but the Social Democratic agitation still grew, even in spite of factional dissensions. In 1867, upon the creation of the North German Federation, Prince Bismarck introduced manhood suffrage for the election of the members of the popular branch of the new federal Parliament. Seven years later the two warring Socialist factions, the "Lassalleaner" and the "Eisenacher," united, becoming the Social Democratic party.

Recent Attitude.

The repeal of the legal disabilities of the Jews in Germany has removed the incentive to radicalism among them. On the other hand, the political development of Germany has made a place for its middle class ("Bürgerthum") among the ruling classes. As the majority of the German Jews belong to the middle class, the cause for persistent opposition to the government has disappeared; and the Jews now divide on party lines like all other citizens. Still there are a number of Jews prominent in the councils of the Social Democratic party; the most notable examples being Paul Singer, a retired clothing manufacturer, for many years a Social Democratic leader in the imperial Parliament, and Dr.

Victor Adler, the acknowledged leader of the Austrian Social Democracy.

While in Germany socialism has attracted individual Jews, in Russia it has become a movement of the Jewish masses. During the reign of Alexander II. the high schools and universities were thrown open to Jews. All classes, rich and poor alike, eagerly embraced the educational opportunities thus offered; and in the eighth decade of the nineteenth century Jews contributed a large contingent of the students. As in Germany, education quickened their resentment of legal discrimination against their race. This was the time when the universities became the hotbeds of socialistic agitation: the Socialists preached and practised the doctrine of equal rights, without distinction of race or creed; and the Jewish student, welcomed as a social equal, began to feel like one of the Russian people. As a natural consequence, numbers of Jewish students threw themselves into the Russian socialistic and revolutionary movement. The anti-Jewish riots of the next decade produced a strong reaction against this socialistic sentiment; furthermore the wave of emigration to the United States carried away many Jewish Socialists, while others joined the ranks of the Palestinians (the forerunners of the Zionists). Anti-Semitism made rapid progress among university students; and even the populist faction of the Socialists ("Narodniki") fell under its influence.

The Arbeiter-Bund.

The revival of socialistic agitation in the nineties found a fruitful field among the Jewish working men and women in the Pale of Settlement. In 1897 was organized the Jüdischer Arbeiter-Bund von Littauen und Polen (Jewish Labor Federation of Lithuania and Poland), which grew rapidly in spite of persecution, and soon became the strongest and best-organized body of Socialist working men in Russia. The organization and growth of the Bund have been among the principal causes of the recent revulsion of Russian public sentiment in favor of the Jews. Formerly the individual Jewish Socialists counted as Jews only in so far as they offered another justification for the anti-Semitic policy of the government; while with the revolutionary Socialists they passed as Russians, and as such reflected no credit upon the Jewish race. The Bund made its appearance as a distinctively Jewish organization, and demanded recognition for the Jewish working class. The newspaper-reading Russian public outside the Pale had been convinced by the anti-Semitic press that the Jews were a race of parasites, and that there was no laboring class among them; the existence of the Bund was in itself the most conclusive refutation of this charge.

The Bund marks a new departure in the progressive movement among the Jews. Heretofore assimilation with the dominant race has been the first article of faith with all Liberal and Democratic Jews. The Bund, on the contrary, asserts the claims of the Jewish people as a distinct nationality. It takes for its model Austria with her polyglot population, where the principal Slavonic tribes, the Poles, the Ruthenians, and the Bohemians, are contending, not without success, for linguistic autonomy, as distinguished from territorial autonomy.

The advocacy of this principle by the Bund has brought it into conflict with the cosmopolitan tendency of the Socialist movement. It is contended by the opponents of the Bund that its policy creates division within the Socialist ranks. It must be noted, however, that the Bund addresses itself to those classes of the Jewish people which under the existing social conditions rarely, if ever, come into contact with other races. At the same time all other Russian and Polish Socialist organizations still contain a large and influential Jewish membership.

In the United States.

The Jewish exodus from Russia drafted to the United States large numbers of Socialists, mostly college and university students, who must be reckoned among the pioneers of the Socialist parties in America. Their main field of activity was the ghetto. But the masses of Jewish workmen and tradesmen who were educated by this propaganda scattered throughout the country in pursuit of employment or business opportunities and became "the pedlers of socialism" among their shopmates and neighbors. The city of Haverhill, Mass., which elected the first Socialist mayor in the United States, is a notable example of the proselytizing work of Russo-Jewish Socialists. The Russian Jews themselves have contributed their quota to the rank and file, as well as to the leaders, of the American Socialist parties. One of the prominent national leaders is Morris HILLQUIT, a young Russo-Jewish attorney in New York, author of "The History of Socialism in the United States" (New York, 1903).

The Jewish Socialist movement in America has created a Socialist literature in the Yiddish language. The first attempt to present socialism to the Jews in their own language was made in 1874, when two young Russian Jews, Aaron LIEBERMANN (d. 1880) and M. Winchevsky, published in Vienna a small magazine entitled "Ha-Emet." It addressed itself to the intellectual class of the Russian Jews—the MASKILIM—and was printed in Hebrew, their literary language. This publication, however, was short-lived.

Socialist papers in Yiddish were then established (in the early eighties), first in London, and later in New York; the New York daily "Vorwärts" now has a large circulation and has recently moved into its own building. A monthly magazine, "Die Zukunft," likewise published in New York, is popularizing scientific socialism among advanced Yiddish readers.

J. I. A. H.

SOCIÉTÉ DES ÉTUDES JUIVES: Society for the study of Jewish history and literature, and especially of the history and literature of the Jews of France; its headquarters are in Paris. It was founded in 1880, chiefly through the efforts of Baron James Edouard de Rothschild, Isidore Loeb, Arsène Darmesteter, Charles Netter, and especially Chief Rabbi Zadoc Kahn. In harmony with its purpose, it publishes the quarterly "Revue des Etudes Juives" as well as works bearing on Jewish subjects, grants subventions for books of that character, and organizes public lectures. The society is composed of corporate members, who pay a minimum annual fee of 25 francs; of life-members, who pay a minimum initiation fee of 400 francs; and of charter members, the minimum entrance-fee for whom is 1,000 francs; both the latter classes being exempt from all annual dues. The organization received official recognition in a decree dated Dec. 6, 1896, and is consequently empowered to accept legacies and donations. Its annual revenue is about 13,000 francs. Since its foundation Israel Lévi has been secretary of its editorial board.

The works published by the society are strictly scientific in character. The list of contributors contains the names of Léon Bardinet, Cagnat, Abraham Cahen, Arsène and James Darmesteter, Joseph Derenbourg, Rubens Duval, H. Graetz, H. Gross, S. Halberstam, Joseph Halévy, Zadoc Kahn, David Kaufmann, Meyer Kayserling, Alexander Kohut, François Lenormant, Isidore Loeb, Immanuel Löw, Simeon Luce, Marco Mortara, Adolf Neubauer, Jules Oppert, Ernest Renan, Ulysse Robert, Moritz Steinschneider, and Maurice Vernes. The chief contributors at the present time (1905) are: Elkan N. Adler, Wilhelm Bacher, Ludwig Blau, A. Büchler, Abraham Epstein, Ignaz Goldziher, Baron David Günzburg, A. Harkavy, M. Lambert, Israel Lévi, S. Poznanski, M. Schwab, and Solomon and Théodore Reinach.

In addition to the "Revue," which has reached its fiftieth volume, and the "Annuaires" of the first four years, the society has published: "Tables du Calendrier Juif Depuis l'Ere Chrétienne Jusqu'au Dix-Huitième Siècle avec la Concordance des Dates Juives et des Dates Chrétiennes"; "La Littérature des Pauvres dans le Bible," by Isidore Loeb; "Gallia Judaica," by H. Gross; "Textes d'Auteurs Grecs et Romains Rélatifs au Judaïsme," by Théodore Reinach; and the complete works of Flavius Josephus, translated into French under the supervision of Théodore Reinach (vol. i., "Antiquités Judaïques," i.-v., by Weill; iii., "Antiquités Judaïques," xi.-xv., by Chamonard; vii., part i., "Contre Apion," by Blum).

The society is preparing a French translation of the works of Philo, a corpus of inscriptions, another of laws relating to the Jews, and a register of documents referring to the Jews in France. For the series of public lectures which it has organized, it has secured the cooperation of Anatole Leroy-Beaulieu, Ernest Renan, Gaston Paris, Maspero, Dieulafoy, Cagnat, Baron Carra de Vaux, Albert and Jean Réville, Victor Bérard, Guillaume Guizot, and others.

s. I. L.

SOCIETIES, LEARNED: Nearly every Jewish community possessed, or still possesses, various societies aiming to propagate Jewish learning. There have been societies for the study of the Talmud ("ḥebrah shas"), of the Mishnah ("ḥebrah mishnayot"), and of other works of less importance, such as "'En Ya'aḳob," "Ḥayye Adam," etc. To the ḥebrah shas belonged those Jews who were versed in Talmud; to the ḥebrah mishnayot, those whose Talmudical training was more limited; and to the other ḥebrot, the rest of the people. The members of each society usually devoted a couple of hours daily to the study in common of their respective subjects. In some communities, however, the members of the ḥebrah shas did not study the Talmud in common, but each member had one or more Talmudical treatises allotted to him, the study of which he was required to complete during the ensuing twelvemonth; so that among the members the whole Talmud might be finished within the year. The eve of Passover was usually fixed for the celebration of the completion of this study.

The Verein für Cultur.

All these societies, however, were mainly of a religious character; and their scope of activity was limited to the religious branches of Jewish literature, excluding all subjects not directly related to the ceremonial laws and public worship. Even the study of the Bible, with the exception of the Pentateuch, was neglected. But under Mendelssohn's influence a learned society properly so-called was founded in 1783 at Königsberg by Isaac Euchel and Mendel Bresslau. It was called "Ḥebrat Doreshe Leshon 'Eber," or ME'ASSEFIM, after the name of the Hebrew periodical "Ha-Meassef" published by its members. This periodical contained Hebrew poems, literary compositions, and essays both on rabbinical and on secular subjects. After a period of about twenty years the society ceased to exist. Under the guidance of E. Gans, L. Zunz, and others, a new society was founded in 1823 at Berlin having for its name "Verein für Cultur und Wissenschaft des Judenthums." Its aim was to unite modern culture with ancient Judaism; and for this purpose it published a periodical in German, devoted to scientific essays on various subjects. Among the members of this society were Heinrich Heine, Moses Moser, and many others who subsequently occupied prominent positions in the German literary and scientific world. However, the Verein had a very short existence; it dissolved soon after the publication of the first number of its "Zeitschrift," which, although its German, according to Heinrich Heine, left much to be desired ("Briefe," ed. Karpeles, p. 117), contained many excellent articles, notably that of Zunz on Rashi.

Meḳiẓe Nirdamim.

A much longer existence was enjoyed by a society for the promotion of Jewish literature founded in 1855 by Ludwig Philippson at Leipsic under the name INSTITUT ZUR FÖRDERUNG DER ISRAELITISCHEN LITERATUR. It existed for eighteen years, and during this period published, in German, about eighty works of Jewish history, science, poetry, fiction, and biography. Here may be mentioned, though not strictly a learned society, an international association, founded in Germany in 1864 under the name "Meḳiẓe Nirdamim," for the publication of old Hebrew books and manuscripts. It was established first at Lyck, under the direction of Rabbi Nathan Adler, Sir Moses Montefiore, and Joseph Zedner (London), Albert Cohn (Paris), S. D. Luzzatto (Padua), M. Sachs (Berlin), Eliezer Lipman Silbermann (Lyck), and M. Straschun (Wilna). It was later reorganized at Berlin (1885) under the supervision of Abraham Berliner (Berlin), Moses Ehrenreich (Rome), J. Derenbourg and David Ginsburg (Paris), S. J. Halberstam (Bielitz), A. Harkavy (St. Petersburg), M. Jastrow (Philadelphia), David Kaufmann (Budapest), and M. Straschun (Wilna). Up to the present year (1905) this society has published forty-two ancient works. In 1885 the Deutsch-Israelitischer Gemeindebund founded the Historische Commission for the collection of material relating to the history of the Jews in Germany. This commission, which is still in existence, has published several important works and it likewise established the "Zeitschrift für Geschichte der Juden in Deutschland," which was edited by Ludwig Geiger (5 vols., Berlin, 1886-92). In 1897 Max Grunwald founded at Hamburg the Gesellschaft für Jüdische Volkskunde, the aim of which is to propagate, by periodical publications (entitled "Mittheilungen"), the study of ecclesiastical art and folk-lore. Fifteen issues of these "Mittheilungen" have appeared up to the present.

There are very few Jewish learned societies in Austria. Besides the various academic associations, which are rather of a national than of a learned character, only two are of importance; namely, the Israelitischer Literaturverein Mendelssohn, founded at Vienna in 1894, the aim of which is to promote Jewish learning by means of lectures and the publication of scientific works, and the Gesellschaft für Sammlung und Conservirung von Kunst- und Historischen Denkmälern des Judenthums, founded at Vienna in 1893. The results of the activity of the latter society are given in an annual publication entitled "Jahresbericht."

Austria, Holland, and France.

Amsterdam in the eighteenth century possessed many societies for the promotion of Jewish learning. Among them were: Keter Torah; Torah Or; Yesiba de los Pintos; Meirat 'Enayim, called also Yesiba Amstelodama; and Tif'eret Baḥurim or Yesiba Quinta. A similar society to that of the Me'assefim in Germany was founded in the last years of that century under the name "To'elet." Like its German prototype, the To'elet enriched Jewish literature with many volumes of Hebrew poems and essays. In 1888 the Dutch teachers united and formed the Society Achawa, which publishes under the same title a monthly magazine devoted chiefly to pedagogy.

An important society for the promotion of Jewish learning was founded in France in 1880, the Société des Etudes Juives. Its first president was Baron James Edouard de Rothschild, who, by a large subvention, placed it on a satisfactory financial footing. Besides the quarterly publication of the "Revue des Etudes Juives," which is one of the most valuable of the scientific periodicals in the whole of Jewish journalism, the society has given financial assistance to authors in the publication of their works. It has also published at its own expense many valuable contributions to Jewish science, among which the most important is the "Gallia Judaica" of Heinrich Gross. The international society known as "Alliance Israélite Universelle" may to a certain extent be counted among learned societies, the last item of its program being "the encouragement of publications contributing to the emancipation or elevation of the Jews." Besides a certain number of works devoted principally to Jewish statistics and the defense of Judaism, which the Alliance has published at its own expense, it has lent its support to all learned works of interest to Jews.

England.

In its short existence the Hebrew Literature Society of London rendered great service to Jewish learning. Under the editorship of A. Loewy it published a certain number of Jewish works, among which was the first volume of the English translation of the "Moreh Nebukim," made by M. Friedländer. From the Anglo-Jewish Historical Exhibition held in London in 1887—in connection with which there were published three volumes bearing on Anglo-Jewish history—grew The Historical Society of England, founded in 1893. This society has issued four volumes of transactions and has published a work on Manasseh ben Israel by Lucien Wolf and, conjointly with the Selden Society, a volume of "Select Pleas from the Jewish Exchequer." In 1902 a new society, the Union of Jewish Literary Societies, came into existence. Its objects are: the diffusion of knowledge of Jewish literature, history, and sociology; the coordination of the work of literary societies in general; the formation of new literary societies; the encouragement of the literary activity of Jewish social clubs; the establishment of means by which the literary efforts of societies may be organized and utilized in common; the provision of literary material and guidance for members of the society desirous of preparing lectures; the encouragement of inter-society meetings and debates; the promotion of popular Jewish publications; the organization of summer meetings for Jewish studies; and the establishment of a circulating library containing works on Jewish history and literature.

Russia.

An association which exercises a great civilizing influence is the Society for the Promotion of Culture Among the Jews of Russia, which was founded in 1863. Its objects are: to spread the knowledge of the Russian language among the Jews; to publish and to assist others in publishing useful works and periodicals in Russian as well as in Hebrew; and to support the young who are devoting themselves to the study of the sciences. During the first twenty years of its existence it was regarded by the public with indifference, and the number of its members and consequently its income were very limited; but with the enactment of the restrictive laws which excluded the Jews from educational establishments, its influence began to grow; and its services are now universally recognized.

America.

The first Jewish learned association in the New World was the American Jewish Publication Society, founded at Philadelphia in 1845 by Isaac Leeser. During the six years of its existence it published under the title "Jewish Miscellany" fourteen works on Jewish matters. In 1851 the building in which were stored the slates and books belonging to the society was destroyed by fire, and the society thereupon ceased to exist. It was succeeded by another association, bearing the same name, founded at New York in 1873. Its publication committee consisted of Gustav Gottheil, Moses Mielziner, F. de Sola Mendes, Marcus Jastrow, and Moritz Ellinger. As its first publication the society issued in 1873 the fourth volume of Grätz's "Geschichte der Juden," translated into English by James K. Gutheim of New Orleans. In

1875 two volumes were issued: (1) "Jewish Family Papers; Letters of a Missionary," by "Gustav Meinhardt" (William Herzberg), translated into English by F. de Sola Mendes; and (2) "Hebrew Characteristics," miscellaneous papers from the German, translated by Albert H. Louis. In 1873, owing to the commercial depression which followed the financial panic of that year, the society was dissolved. A new association for the publication and dissemination of literary, scientific, and religious works was founded under the name "Jewish Publication Society of America," at a convention held in Philadelphia in 1888. Its members now (1905) number about 5,000, and as a rule it issues four or five publications yearly. Of these the most noteworthy have been: "History of the Jews" (the English edition of Grätz's "Geschichte der Juden"); "Studies in Judaism," by Solomon Schechter; "Jewish Life in the Middle Ages," by Israel Abrahams; and the "Ethics of Judaism," by Lazarus.

In 1892 was founded the American Jewish Historical Society, the objects of which are the collection and preservation of material bearing upon the history of the Jews in America. The society meets annually for the transaction of business and for the reading of papers which form the subjects of the publications of the association. In 1895 was founded in New York the Ohole Shem Association to promote and foster the study of Hebrew and other Semitic languages and to encourage the study of Jewish history and literature. Since its organization the association has inaugurated a series of lectures in Hebrew, German, and English. In 1895 and 1896 it published a Hebrew monthly entitled "Ner ha-Ma'arabi"; in 1901, "Ha-Modia' le-Ḥodashim"; and for 1904 it issued an annual entitled "Yalḳuṭ Ma'arabi."

J. I. Br.

SOCIETY OF AMERICAN CANTORS: Founded by Alois Kaiser in Baltimore, Md., May 14, 1895. Its object is the elevation of the cantor's profession, the furtherance of cohesion among its members, and the improvement of musical services in the synagogue. While its membership is open to all, it is in fact an association of cantors of both Conservative and Reform congregations. The society selected and arranged the music for the "Union Hymnal," published by the Central Conference of American Rabbis in 1897. On the occasion of the hundredth anniversary of Solomon Sulzer's birthday (1904) the society published a Friday evening service, with music, selected from Sulzer's "Shir Ẓiyyon." On March 22, 1904 it held a memorial service in New York city in honor of the same event, at which addresses were delivered.

SOCIETY FOR THE PROMOTION OF CULTURE AMONG THE JEWS OF RUSSIA (Hebrew title, **Marbe [or Mefiẓe] Haskalah be-Yisrael**): Society founded at St. Petersburg in Dec., 1863, by some of the most prominent Russian Jews, *e.g.*, Joseph Yozel Günzburg, who became president; his son Horace Günzburg, first vice-president; Rabbi A. Neumann, second vice-president; Leon Rosenthal, treasurer; Abraham Brodski; I. Brodski; and others. The aim of the society as set forth in its constitution is as follows:

Objects.

> "To promote culture among the Russian Jews and to infuse into them love therefor. To this end the society will endeavor to spread the knowledge of the Russian language among them; it will publish and assist others in publishing useful works and journals in Russian, as well as in Hebrew, that will aid in carrying out the purposes of the society; and it will, further, assist the young in devoting themselves to the pursuit of knowledge and of the sciences" (Constitution, § 1).

Branch Societies.

The idea of establishing such a society in Russia may have been suggested by the Alliance Israélite Universelle, which was founded in 1860. The time was ripe for such an organization in Russia, inasmuch as the awakening of the Jews of that country to their cultural needs was in progress. There were, however, some drawbacks, on account of which the society was unable to carry out its program in its entirety. Its scope of activity was necessarily limited by the disabilities of the Russian Jews; and there was, moreover, a lack of interest on the part of the intellectual Jews themselves, the greater number of whom strove to shake themselves free from everything Jewish. The society thus had to struggle on for some time and to satisfy its ambition with minor achievements. For several years the number of its members was less than 250, and in 1880 it was not quite 350; the annual income was less than 12,000 rubles. From that year onward, however, the interest in the society increased. The anti-Jewish riots, on the one hand, and the restrictions imposed by the government, on the other, impelled the Russian Jews to trust to self-help and to take thenceforth more interest in their own institutions. In the next year (1880) the society inaugurated a branch, with a special fund, for the promotion of agriculture and industry among the Russian Jews. The number of its members increased to 552, and its yearly income was more than doubled (28,246 rubles). But here, again, the attitude of the Russian government toward the Jews checked the society's operations, the prohibition against Jews engaging in agriculture having become more stringent with the accession of Alexander III., thus defeating the object of the new agricultural section. In the other branches, however, the activity of the society was considerable, the report of its twentieth anniversary (1884) showing an expenditure from the foundation of the society of 78,788 rubles for the support of students at universities, academies, and industrial institutions, and for the maintenance of private and public schools; in addition 35,556 rubles were expended in connection with useful publications issued by the society itself or on its initiative. At the same time, a greater interest in Hebrew literature began to manifest itself among the members, and a special fund for its promotion was voted in 1884.

The operations of the society have since extended far beyond St. Petersburg. As early as 1865 a branch had been founded at Odessa, which issued and maintained the newspaper "Den." Other branches were later established at Moscow, Riga, and several other cities; but the most effective work has

Chief Lines of Activity.

been done by the Odessa branch. The chief lines of the society's activity are the following: (1) assistance of Jewish students at the Russian universities; (2) maintenance of general and industrial schools for Jewish children; (3) aid to Jewish libraries; (4) encouragement of Jewish authors and publication of works (in Hebrew and Russian) pertaining to Judaism, prizes being offered for the same; and (5) promotion of a knowledge of Jewish science by series of lectures, particularly in St. Petersburg.

Unfortunately the society has to struggle for existence. Its educational work is being rendered less important in proportion as education progresses among the Russian Jews generally. Moreover, the society having been founded at a time when the idea of assimilation with the Russians was prevalent among the cultured Jews, and having, more or less, retained this spirit, it has now to face an internal conflict with the Jewish national tendencies that have recently been awakened in Russian Jewry, and with which many of the members of the society are strongly imbued.

SODOM: First city of Pentapolis, the others being Gomorrah, Admah, Zeboiim, and Zoar, all situated in the vale of Siddim (Gen. xiv. 3), either in the present plain of Sabkhah or farther north, in the southern Seccudes between the peninsula of Al-Lisan and the Sabkhah.

——**Biblical Data:** God had announced His determination to destroy these cities because of their wickedness, but promised Abraham to spare Sodom if as few as ten of its inhabitants should be found righteous (*ib.* xviii. 20-32). Abraham, however, failed to find even ten righteous in Sodom, and Yhwh thereupon rained fire and brimstone upon the entire Pentapolis and overthrew it (*ib.* xix. 24-26). This event appears to have occurred in the twenty-second century B.C. According to the hypothesis of Blankenburg ("Entstehung und Gesch. des Todten Meeres," Leipsic, 1896), the catastrophe was in the nature of a sudden sinkage of the valley of the Dead Sea, producing chasms which engulfed the cities. Whenever it happened, the disaster must have been terrible; and it produced such an impression that the Prophets often refer to Pentapolis or to Sodom in describing dire misfortunes (Isa. i. 9, xiii. 19; Jer. xxiii. 14, xlix. 18; Amos iv. 11; Zeph. ii. 9). The destruction of these cities is described in similar terms by Josephus ("B. J." iv. 8, § 4) and in the Koran (sura liv.). In the account of the battle of the kings of the vale of Siddim the names of those rulers are given as follows: "Bera of Sodom, Birsha of Gomorrah, Shinab of Admah, Shemeber of Zeboiim, and the king of Bela or Zoar.

——**In Rabbinical Literature:** The Talmud, like the Bible, ascribes the fate of Sodom and the other cities of Pentapolis to the wickedness of their inhabitants; and when the sins of the people of Jerusalem are enumerated, on the basis of Ezek. xvi. 48-50, the attempt is made to show them less heinous than those of the inhabitants of Sodom (Sanh. 104b). There were four judges in Sodom (*ib.* 109b), named respectively Shaḳḳarai ("liar"), Shaḳrarai ("habitual liar"), Zayyafa ("deceiver"), and Maẓle Dina ("perverter of the Law"). In Sodom every one who gave bread and water to the poor was condemned to death by fire (Yalḳ., Gen. 83). Two girls, one poor and the other rich, went to a well; and the former gave the latter her jug of water, receiving in return a vessel containing bread. When this became known, both were burned alive (*ib.*). In the Midrash (*ib.* 84) the judges are called Ḳaẓ Sheḳer (= "greatest liar"), Rab Sheḳer (= "master of lies"), Rab Nabal (= "master of turpitude"), Rab Masṭeh Din (= "chief perverter of the Law"), and Ḳelapandar (probably = "forger"). Pentapolis existed only fifty-two years; and during the last twenty-two of them God brought earthquakes and other misfortunes upon it that it might repent. It refused to do so, however, and was destroyed (*ib.* 83). The inhabitants of the cities of the plain worshiped the sun and the moon. If destruction had come upon them by day, they would have said that the moon would have helped them; if by night, they would have declared that the sun would have been their aid; wherefore they were destroyed early in the morning, when both the sun and the moon were shining. This happened on the sixteenth of Nisan.

According to the "Sefer ha-Yashar," a man entered Sodom riding on an ass, and as he had no lodging he was received by a resident of the place. On preparing to depart he missed his colored cover and the cord by which it had been tied to the animal's back. When he asked his host about the matter, he received the answer that he had only dreamed of a cover, but that the vision was of good omen, since the cover meant that he would possess large vineyards, and the cord indicated that his life would be prolonged. The stranger protested; but he was dragged before the tribunal and sentenced to pay four silver shekels. The names of the judges, according to this account, were: Sarak in Sodom, Sarkar in Gomorrah, Zabuak in Admah, and Manon in Zeboiim (*ib.* 24-27). For the other stories related in the "Sefer ha-Yashar" see Eliezer and Lot.

SOEIRA, SAMUEL ABRAVANEL (known also as **Samuel ben Israel**): Son of Manasseh ben Israel (Abravanel Soeira being the maiden name of Manasseh's wife); born in Amsterdam 1625; died in London Sept., 1657. In 1654, in behalf of his father, he accompanied his uncle Manuel Martinez Dormido to England for the purpose of presenting a petition to Oliver Cromwell for the readmission of Jews to England. On this occasion he is said to have received from the University of Oxford the degree of doctor of philosophy and medicine in acknowledgment of his scientific attainments. The text of his supposed diploma, signed by Chancellor John Owen and Professor Clayton, has been reproduced by Koenen in his "Geschiedenis der Joden in Nederland" (p. 440), but Dr. Griffith, keeper of the archives of the university, has attempted to prove that the document is spurious, and this opinion is expressed also by Dr. A. Neubauer in an article published in Roest's "Letterbode." In May, 1655, Samuel returned to Amsterdam to persuade his father to go to England and personally lay his case before Cromwell. Manasseh ben Israel arrived in London in October, accompanied by his son, who died during their stay in that city. In accordance with Samuel's dying wish, Manasseh ben Israel conveyed his son's corpse back to Holland for burial, and he himself died on Nov. 20, 1657, before reaching his home at Middelburg, Zealand.

SOEST (Latin, **Susatum**): City in the province of Westphalia, Prussia. As early as the middle of the thirteenth century Jews of Soest are mentioned, *e.g.*, Meyer and his wife, Betzel, who resided in Cologne from 1248 to 1255 (Höniger, "Das Judenschreinsbuch der Laurenzpfarre zu Köln," Nos. 38, 40, 56, 73, Berlin, 1888). The Jews of the city were obliged to pay 8 marks annually to the Archbishop of Cologne (Seibertz, "Urkundenbuch für Westfalen," i. 484, 621), and it may be assumed that their number was large as long as they were under his protection, despite the terrible persecution from which they suffered at the time of the Black Death in 1349 (Salfeld, "Martyrologium," pp. 84 [Hebr.], 286 [German]). At a later time, however, when the control over the Jews became a municipal privilege, the council watched with great vigilance to prevent more than two Jewish families from living in the city.

In 1510 several Jews who were passing through Soest were imprisoned; at the petition of Meister Solomon, a local Jewish physician, they were, however, released after taking an oath to abjure all vengeance, and after the baptism of Saul, one of their number. After this incident the council enacted that the physician, his daughter, and his servant should wear yellow badges. In 1541 the Jews Nathan and Bernd were authorized to remain in Soest for a period of ten years, in consideration of the immediate payment of 100 gulden (gold) and an annual tribute of 10 gulden; and in 1554 the permission was extended for a similar period on the payment of 300 thaler. They were enjoined, however, not to engage in the butcher's trade, and they were forbidden to charge within the city limits a higher weekly interest than 6 verings (1½ pfennigs) per gulden, or 3 verings (¾ pfennig) per mark (= 27½ per cent). In 1566 Nathan was expelled from the city as he had remained after having been notified that his permit had expired, and also because he was suspected of having circulated spurious coin. In the middle of the sixteenth century a Jewish physician named Meister Benedictus entered the service of the city of Soest, being obliged, in consideration of free lodgings, and exemption from all municipal taxes and services to which other Jews were liable, to maintain in his dwelling at the cost of a hundred gulden (gold) an apothecary's store. When he left the city in 1545 he received a notable testimonial from the city council. In 1652 the council of Soest assigned to Abraham Selke, for use as a burying-ground, a place in front of the Grandweger Thor which "from olden times was called the Jewish cemetery."

Thirteen years later (1665) the Elector of Brandenburg forbade the city to exercise any further control over the Jews, claiming that the latter stood under the sovereign's immediate protection. On Oct. 5, 1689, the Jewish physician Solomon Gumpertz, who apparently had remained in Soest after the expiration of his safe-conduct, was ordered by the council to leave the city within twenty-four hours; but when his house was entered by soldiers on the following day, the government at Cleves took his part, and issued a manifesto, dated Nov. 9 of the same year, enacting that he should "remain undisturbed in the practise of medicine." In 1697 Abraham Meyer, a Jew of Soest, attended the fair at Leipsic ("Monatsschrift," 1901, p. 507); and the names of Süsskind and his wife, Zipporah, who were likewise residents of the city, occur in the genealogical table of the Geldern family (Kaufmann, "Aus Heinrich Heine's Ahnensaal," p. 298). As the residence of the president of the high consistory, L. L. Hellwitz, who had gone thither from Werl (Zunz, "G. V." 1st ed., 1852, p. 465), Soest became the chief center of the ritualistic Reform movement during the nineteenth century.

At present (1905) the Jewish community of Soest numbers about 300, and has a social club and a public school.

SOFER, ABRAHAM. See Niederländer, Abraham ben Ephraim.

SOFER, ḤAYYIM BEN MORDECAI EPHRAIM FISCHL: Hungarian rabbi; born at Presburg Sept. 29, 1821; died at Pesth June 28, 1886. He studied at Presburg and at Ungvar, where he attended the celebrated yeshibot of Ḥatam Sofer and Meïr Ash (Meïr Eisenstädter). In 1844 he went to Mattersdorf, where he taught baḥurim; and in 1852 he was chosen rabbi at Gyömöre. Seven years later (1859) he became rabbi at Sajó Szt. Péter, whence he removed in 1868 to Munkacs. In 1879 he was chosen rabbi of the Orthodox congregation in Pesth, where he officiated until his death.

Sofer was the author of the following works: "Peles Ḥayyim" (Presburg, 1854); "Maḥane Ḥayyim" (4 vols., 2 editions), a collection of responsa; "Ḥillul Shabbat" (Sajó Szt. Péter); and "Ḳol Sofer," a commentary on the Mishnah. He left two works in manuscript, "Dibre Sha'are Ḥayyim 'al

Torah" and "Sha'are Ḥayyim 'al Tehillim," which were published by his son. Ḥayyim Sofer was buried in Presburg.

SOFERIM ("Scribes"): Talmudic treatise dealing especially with the rules relating to the preparation of the holy books, as well as with the regulations for the reading of the Law. It belongs to the so-called "smaller treatises," a term applied to about fifteen works in rabbinical literature, each containing all the important material bearing on a single subject. While they are mishnaic in form and are called "treatises," the topics discussed in them are arranged more systematically; for they are eminently practical in purpose, being, in a certain sense, the first manuals in which the data scattered through prolix sources have been collected in a brief and comprehensive form. Ancient authorities mention especially seven such treatises, which are doubtless the earliest ones; and among these the tractate containing the rules on the writing of the "books" occupies a particularly prominent place on account of the importance of its contents. The name as well as the form of the smaller treatises indicates that they originated in the period of oral tradition which was dominated by the Talmud and the Midrash; so that these treatises are doubtless of great antiquity, some of them having been compiled in their main outlines before even the final redaction of the Talmud in the sixth century. This theory holds good with regard to the treatise Sefer Torah also, to which the treatise Soferim bears an especially close relation.

Position Among the "Smaller Treatises."

Soferim consists of twenty-one chapters, containing 225 paragraphs ("halakot") in all. The contents may be summarized as follows:

Contents: Ch. i.-ix.

Ch. i.: On parchment and other writing-material; language and translation of the Scriptures; the Septuagint; persons who are qualified to prepare books; leaves and pages; open and closed paragraphs. Ch. ii.: Spaces between letters, words, lines, pages, and books; space-lines; number of columns to the leaf, and lines to the column; width and height of the scrolls; rollers; sewing; mending; final letters. Ch. iii.: Writing several books on a single scroll; verse-marks in the scroll of the Law; superscriptions; palimpsests; procedure in regard to incorrectly written scrolls; rolling and unrolling; manner of rolling and reading; respectful handling of the scroll of the Law; careful use of food as a gift of God. Ch. iv.: The names of God and the interdiction against erasing them; Masoretic enumeration of such names; the sinfulness of profanely using any of them. Ch. v.: Sacrosanct writing of the names of God; scribal errors in such and in the lines of the sacred scroll; the Divine Name on vessels and utensils; preservation of scrolls and other writings which have become useless; use of loaned writings. Ch. vi.: Points and the ׆ in the Torah; textual variations in the ancient scrolls used in the Temple at Jerusalem; Masoretic textual and orthographical variants. Ch. vii.: Masoretic combination of the "ḳere" and "ketib." Ch. viii.: Textual variants in Ps. xviii. and II Sam. xxii., and in Isa. xxxvi.-xxxix. and II Kings xviii.-xx. Ch. ix.: Capital letters in the Torah; written words for which others must be substituted in reading; passages which are neither read nor translated.

Ch. x.-xxi.

Ch. x.: General regulations for reading; number of readers; number of persons requisite for public religious functions; "ḳaddish" and "bareku." Ch. xi.: Order of reading and of the translations to be read; errors in reading the Torah. Ch. xii.: Method of reading the curses, the songs, and the Decalogue; lesson at the New Moon of Ḥanukkah; mode of writing the songs in Ex. xv., Judges v., and Deut. xxxii., as well as the order of reading the last-named. Ch. xiii.: Method of writing the Hagiographa in general and the scroll of Esther in particular; benedictions in connection with the Mafṭir and the reading of the Torah. Ch. xiv.: Benediction on reading the Hagiographa in general and the scroll of Esther in particular; liturgical observances prefatory to the reading; persons authorized to read and to officiate as ḥazzanim; individuals qualified to read the scroll of Esther; reading the other smaller scrolls; sanctity of the scroll of the Law; phylacteries and mezuzot. Ch. xv.: Sanctity of other religious writings; diversity of the rabbinical sciences; occupations to be taught to children. Ch. xvi.: Value of the study of the Torah; the Haggadah; manifold interpretations; scholarship of the ancient teachers; sections of the Pentateuch; chapters of the Psalms; the Trisagion. Ch. xvii.: General regulations on the sections prescribed for the festivals; assistants at the sacrifice and their prayers; lessons and psalms for New Moon. Ch. xviii.: Daily and festival psalms; order of prayer for the anniversary of the destruction of Jerusalem; observances for the Day of Atonement. Ch. xix.: Further regulations regarding the psalms for festivals; formulas of prayer for the festivals; eulogy on announcing the new moon; benedictions for weddings and funerals. Ch. xx.: Eulogy on first beholding the new moon; lighting the Ḥanukkah lamp; benedictions and lesson for Ḥanukkah; the Trisagion at festivals; "Hallel." Ch. xxi.: Nisan, the month of rejoicing; the Feast of Purim and its observances; the benedictions of the Torah and the Megillah at Purim; Haggadah of the Patriarchs (Müller, "Masseket Soferim," etc., pp. 37 *et seq.*).

According to Zunz ("G. V." 2d ed., p. 100), "the little work is now badly disarranged, as is shown by the confusion of the two principal themes [*i.e.*, the preparation of the scrolls, and the ritual of lessons and prayers], and the position and character of the haggadah," a statement which he defends as follows: "Rules for writing and for the Masorah are found in i. 1-6, 9-14; ii.; iii. 1-9, 10a, 11, 12, 13 (in part), 14-16; iv.-viii.; ix. 1-7; xii. 8b, 9-12; xiii. 1-4, 6a, 7; xv. 1-5; xvii. 1; synagogal ritual in ix. 8-11; x.; xi.; xii. 1-7, 8a; xiii. 5, 8-14; xiv.; xv. 12, end; xvii. 2-11; xviii.-xx.; xxi. 1-8; haggadah in i. 7-8; iii. 10b, 13 (in part); xiii. 6b, 10; xvi. 1-11, 12a; xxi. 9" (*ib.* notes a, b). Zunz likewise shows the relationship existing between this work and later haggadot.

This lack of system, however, is not the result of careless copying or other negligence, but is due to the nature of the treatise's redaction; for it is a composite of at least three works, and the systematic order of the earlier part has evidently been disarranged by interpolations. In its present form the treatise is intended more for the readers and ḥazzanim than for the scribes: it is in great part confined to ritual precepts, although it must be borne in mind that the same person doubtless combined the functions of scribe and reader.

Divisions.

Soferim may be divided into three main divisions: i.–v., vi.–ix., and x.–xxi., the last of which is subdivided into two sections, x.–xv. and xvi. 2–xxi. The treatise derives its name from its first main division (ch. i.–v.), which treats of writing scrolls of the Law, thus conforming to the ancient custom of naming a work according to its initial contents (comp. Blau, "Zur Einleitung in die Heilige Schrift," pp. 31 *et seq.*, Strasburg, 1894). This first part is the earliest component of the work, and is extant also as an independent "smaller treatise," entitled "Masseket Sefer Torah" (edited by Kirchheim); in this form it is a systematic work, but as incorporated in Soferim, although its division into chapters and paragraphs has been retained, its order has been disarranged by interpolations. A comparison of the two texts shows in an instructive way how ancient Jewish works developed in the course of time. The small treatise Sefarim, edited by Schönblum, is not earlier, as he assumes, but is later, than the Masseket Sefer Torah, from which it is an extract. The name "Sefarim" (= "books") is merely the plural of "sefer," designating the Torah as "the book" par excellence.

Chapters vi. to ix. constitute a separate part, containing Masoretic rules for writing, the first four paragraphs of ch. vi. and some passages of ch. ix. being of early date. This portion was undoubtedly added by Masorites of Tiberias; and the main portion of the modern Masorah, which also contains the passages in question, likewise originated in the same school. The first two parts of Soferim are acknowledged to be Palestinian, and were intended for the scribes; the last three halakot are a kind of appendix relating to the reading of certain words and passages.

The third division is chiefly devoted to rules concerning the order of the lessons, together with liturgical regulations. It is not a uniform composition, although the first section (ch. x.–xv.) is concerned almost entirely with the sequence of the lessons, while the remaining part (ch. xvi.–xxi.) contains liturgical regulations. The contents of xvi. 1 apparently form the conclusion of the portion of the work which precedes it. The third part of Soferim is likewise Palestinian in origin, as is shown by its sources; nor is this view contradicted by the phrases "our teacher in Palestine" (מערב, x. 8) and "the men of Palestine and Babylonia" (x., end; xiii. 10), since either a Palestinian or a Babylonian might have used such expressions, although these passages may be interpolations.

The second section of the last portion (xvi. 2–xxi.) was added latest of all. It contains passages from the Babylonian Talmud, mentioning the "teachers of the land of Israel" (no longer מערב, as in xxi. 1) in xvii. 4, and speaking of the Nazarenes (נוצרים = Christians) in xvii. 6, while a passage from Pirḳe R. Eli'ezer (xvii., end) is cited on the authority of R. Eliezer b. Hyrcanus (*ib.* xix. 22). These peculiarities indicate that its date is relatively recent, even though these last passages are in the main also Palestinian in origin, as is shown by the use of the name "Nazarene." The customs of Jerusalem are also mentioned (xviii. 5, xxi. 6) in a way which indicates an acquaintance with them and points to an author who may have been from Tiberias, but was not from Jerusalem. The names of the school, teachers, and countries also confirm this view. Hai Gaon knew nothing of the liturgical observance mentioned in xix. 11 (Müller, *l.c.* p. 277, note 67); and the controversy regarding the mode of reading (xxi. 7) is taken from Yer. Ta'an. iv. 3, end, and Meg. iv. 2, not from Babli, where (Meg. 22a) Rab and Samuel discuss the same question. A long passage is furthermore cited from Yerushalmi; and such an intimate knowledge of this Talmud and so decided a preference for it can be ascribed only to a Palestinian. It is likewise characteristic of a Palestinian origin that the Babylonian amora Joseph is designated as "Rabbi," and not as "Rab" (xiii. 7); and the assumption that there are weekly sections which do not contain twenty-one verses (xi. 4) applies only to the triennial cycle of the Palestinians. The hypothesis that Soferim is based on Palestinian sources (comp. xiii. 3–4 with Yer. Meg. 74b, below) agrees with the ancient tradition (Naḥmanides and others) that all the small treatises are Palestinian in origin ("Orient," 1851, p. 218); and modern scholars, with the exception of Weiss, also accept this view (Rapoport, in "Kerem Ḥemed," vi. 247; Zunz, "G. V." 2d ed., p. 322; Steinschneider, "Jüdische Literatur," pp. 369 *et seq.*, and Malter's Hebrew translation, "Sifrut Yisrael," p. 44, Warsaw, 1897; Kirchheim, preface to his edition of Masseket Soferim; Brüll's "Jahrb." i. 4). There were scholars in Palestine even after the final redaction of Yerushalmi (Zunz, *l.c.* p. 322, note a); and the Bible was still the chief subject of study.

Date of Composition.

The evidence of all these facts makes it very probable that this treatise was finally redacted about the middle of the eighth century, an assumption which is supported by the statement of R. Asher (*c.* 1300, in the "Hilkot Sefer Torah") that Soferim was composed at a late date. At that period written prayer-books were doubtless in existence and were probably produced by the scribes, who combined the offices of communal ḥazzan and reader. It was but natural, therefore, that in treatises intended for the scribes all the regulations should be collected which concerned books, the Masorah, and the liturgy. It is practically certain that few copies of the Talmud were made at that time, and those without special rules; consequently no allusions to them are found in Soferim.

The fact that no sources are given for a number of the regulations in the first part points to an early date of composition (comp. i. 3, 13; ii. 4, 6, 8; iii. 4, 6-9a, 10-12a; iv. 4, 5, 8, 9; v. 1, 2; in i. 7, also, Müller cites no authority; comp., however, Shab. 115a and Meg. 18a, and see Blau, *l.c.* pp. 70 *et seq.*). Similarly, in the third part (x.-xxi.), which is later, no sources are assigned for a number of halakot (xv. 3 may, however, be based on Yer. Shab. 15c, 25); so that care must be taken not to assign the compilation of this longest portion to too recent a date. Both the form and the content of those passages in which authorities are not mentioned point to a Palestinian origin; they may have been derived from the lost portions of Yerushalmi and various midrashic works, which, indeed, they may be regarded as in part replacing. Only certain interpolations, as well as the haggadic passage at the end of the treatise (or, in several manuscripts, at its beginning), may have been added much later. The division of the last part into sections ("peraḳim") seems to have been intended to secure a uniform size for the several sections; for xvi. 1 belongs to the end of xv., and xix. 1 to the end of xviii., their separation being due to external reasons.

Peculiarities of the Treatise.

As the substance of the treatise has been incorporated in later works on orthography, the Masorah, and the liturgy, only a few points peculiar to it need be mentioned here. In i. 13 occurs the maxim "He who can not read is not allowed to write." Custodians seem to be mentioned in ii. 12 (based on Yer. Meg. i. 9; comp. the Vitry Maḥzor, p. 689, note). The first notice in Jewish literature of the codex in contradistinction to the scroll occurs in iii. 6 (comp. the Vitry Maḥzor, p. 691), a passage which is to be translated as follows: "Only in a codex [may the Torah, the Prophets, and the Hagiographa be combined]; in a scroll the Torah and the Prophets must be kept separate"; while the following section describes a scroll of the Law as being divided into verses (doubtless by means of blank spaces), or as having the initial portion of its verses pointed. Among the ancients the beginning ("resh pasuḳ") of a verse rather than the end ("sof pasuḳ") was emphasized, since the former was important mnemonically. There were scribes, therefore, who marked the initial of the verse, although there is no trace of such points in the present Masorah and system of accentuation.

The earliest passage referring to "dyed leather" (parchment) is iii. 13, although it is possible, in view of ii. 10, that originally בעורות צבאים stood in place of בעורות צבועים. Even if that be true, however, this is still the first reference to colored parchment for synagogal scrolls; for nothing else could be implied by these words in the received reading. The skin of game was a favorite writing-material; so that while it was forbidden to use half leather and half parchment, half leather and half skin of game were allowable (ii. 10). It was forbidden, moreover, to cut the edges of books (v. 14). A scribal term which does not occur elsewhere is found in v. 1, 2 (מעבב, variant reading מחמב). There were generally seventy-two lines to the column in a scroll of the Law (xii. 1). The passage xiii. 1 refers to the stichic writing of the Psalms, Job, and Proverbs; and the remark "A good scribe will note" shows that the passage was written at a time when this detail was no longer generally observed (comp. Müller, *ad loc.*, and the Vitry Maḥzor, p. 704).

Soferim is the first work to distinguish between the three grades of inspiration in the Bible (xviii. 3, end), namely, that of Torah (the Law), of Cabala (tradition of the holy prophets), and of Hagiographa (words of holiness).

W. B. L. B.

SOFIA (the **Triaditza** of the Byzantine Greeks, and the **Sredec** of the Slavs): Capital of Bulgaria, 350 miles from Constantinople. The city had Jewish inhabitants before the ninth century; and this community was joined in 811 by coreligionists among the 30,000 prisoners whom the Bulgarian czar Krum brought with him on his return from an expedition against Thessaly, while a number of Jewish emigrants from the Byzantine empire voluntarily settled in Sofia in 967. In 1360 some Jews from the south of Germany established themselves in the city, and their number was augmented seven years later by Jews driven from Hungary. When Murad I. seized Sofia, about 1389, he found four synagogues, belonging respectively to the Byzantines ("ḳahal de los Gregos"), the Ashkenazim, the "Francos," or Italian Jews (especially those of Venice), and the native Jews. According to local statements, a Macedonian and a Maltese synagogue, founded at dates as yet unascertained, existed in Sofia up to the middle of the nineteenth century.

Early in the fifteenth century Joseph Satan was rabbi in Sofia, and some time before the immigration of the Spanish Jews the city had a yeshibah whose instructors included a chief rabbi, Meïr ha-Levi. In 1492 a number of Spanish Jews, chiefly from Castile and Aragon, settled at Sofia, where they founded the Sephardic synagogue. In the second half of the sixteenth century Joseph Albo (1570) was chief rabbi of the city; in the seventeenth century the post was filled by several rabbis, two of whom, Ḥayyim Meborak Galipapa and Abraham Farḥi, are mentioned in letters of approbation. In 1666, during the incumbency of Abraham Farḥi, the false Messiah Shabbethai Ẓebi sent a letter from the prison of Abydos, inviting his "brethren of Sofia" to celebrate the Ninth of Ab, the anniversary of his birth, as a day of festivity and rejoicing. After the conversion of Shabbethai his follower and successor, Nathan de Gaza, took refuge in Sofia, where he died, his body being interred at Uskub.

Issachar Abulafia and Reuben Behar Jacob were chief rabbis of Sofia toward the close of the eighteenth century. Issachar Abulafia (1770) was a son of the famous chief rabbi Ḥayyim Abulafia, the founder of the new community of Tiberias. Reuben Behar Jacob, called from Sofia to Safed, was succeeded by Abraham Ventura (about 1806). At the end of the eighteenth century the director of the yeshibah was Samuel Conforte, the author of the "Ḳol Shemu'el" (Salonica, 1787). The present (1905) occupant of the rabbinate is R. Ehrenpreis, who succeeded Moritz Grünwald.

Many trials befell the Sofia community in the nineteenth century. Had it not been for the intervention of the governor the entire Jewish population would have been massacred in 1863, because three Jews who had been forcibly converted to Christianity had returned to their former religion. During the Turko-Russian war, less than fifteen years later, the city of Sofia was fired by the Turks when they evacuated the city, and was saved only by a volunteer fire-brigade formed by the Jews of both sexes. The Italian consul, Positano, publicly acknowledged the services of the Jews on this occasion.

At the time of the treaty of Berlin, 1878, the Jews of Sofia declared their sympathy with Bulgaria, and a régime of liberty shortly began for them. In 1880 Prince Alexander of Battenberg appointed Gabriel Almosnino chief rabbi of Bulgaria, and in the following year two Jews of Sofia, Abraham Behar David and Mordecai Behar Ḥayyim, were elected members of the municipal council. Notwithstanding this, at Easter in 1884 and again in 1885 accusations of ritual murder were brought against the Jews, although the falsity of the charges was quickly discovered. In 1890 the municipality of Sofia granted to the poor of the city some land in Outch-Bounar, one of the suburbs; three hundred Jewish families were benefited by this concession.

Sofia is the seat of the chief rabbinate of Bulgaria and of the Central Consistory. The Alliance Israélite Universelle supports three schools—two for boys (855 pupils) and one for girls (459 pupils). There are also five small synagogues of recent foundation, and several batte midrashot. One of these synagogues belongs exclusively to the Ashkenazim, of whom there are about fifty families. Except for an old cemetery, in which a few ancient inscriptions are still legible, Sofia has no permanent memorial of its remote Jewish past.

Several Jews of Sofia fill public offices: Albert Caleb is minister of foreign affairs; Albert Behar is translator for the minister of finances; and Boucos Baruk is secretary and interpreter for the French legation. Boris Schatz, a Jew of Russian extraction, has won a high reputation as a sculptor: one of his works, "Mattathias Maccabeus," is in the gallery of Prince Ferdinand of Bulgaria. Two Judæo-Spanish journals are published at Sofia—"La Verdad" and "El Eco Judaico," the latter being a semimonthly bulletin and the organ of the Central Consistory. There are several benevolent and educational societies there, including the Zionist Society, the Women's Society, and the students' society Ha-Shaḥar.

Though there are several wealthy Jewish families in Sofia, the majority of the Jews there are very poor, more so than those of any other part of Bulgaria. Since 1887 a charitable society for the purpose of aiding poor Jewish youths through apprenticeships to various trades has been in operation, under the control of the Alliance Israélite Universelle.

The population of Sofia is 67,920, including 7,000 Jews.

D. M. Fr.

SOKOLOW, NAHUM B. JOSEPH SAMUEL: Russian journalist; born in Wishograd, government of Plock, Russian Poland, Jan. 10, 1859. His father, a descendant of Nathan Shapira, author of "Megalleh 'Amuḳḳot," removed to Plock about 1865, where Nahum received the usual Jewish education. He made rapid progress in his studies, and at the age of ten was known as a prodigy of learning and ability. Destined to become a rabbi, he studied under the supervision of his uncle, rabbi of Lubich, and of several other Talmudists, devoting part of his time to the study of the medieval Jewish philosophers, Neo-Hebrew literature, and modern languages. In 1876 he married, and remained for five years with his wife's parents in Makow, continuing his studies. In 1880 he removed to Warsaw, where he became (1884) assistant editor and (1885) associate editor of Ḥayyim Selig Slonimski's Ha-Ẓefirah. Owing to Slonimski's advanced age, the editing and management of the newspaper, which became a daily in 1886, devolved entirely upon Sokolow, who became its sole editor and proprietor after Slonimski's death.

Sokolow began to write for Hebrew periodicals at an early age, and is probably the most prolific contributor to the Hebrew press of this generation. His earlier productions appeared in "Ha-Maggid," "Ha-Meliẓ," "Ha-Karmel," and other journals, but since about 1885 he has written, in Hebrew, almost exclusively for "Ha-Ẓefirah." He is the author of "Meẓuḳe Ereẓ," on geography (Warsaw, 1878); "Sin'at 'Olam le-'Am 'Olam," on the development of Jew-hatred (*ib.* 1882); "Ẓaddiḳ we-Nishgab," historical novel, in which R. Yom-Ṭob Lipmann Heller is the hero (*ib.* 1882); "Torat Sefat Anglit," a primer for self-instruction in English (*ib.* 1882); "Ereẓ Ḥemdah," geography of Palestine, with a résumé of Oliphant's "Land of Gilead" (*ib.* 1885).

Sokolow was the founder and editor of the year-book Ha-Asif, and of its successor, the "Sefer ha-Shanah," which appeared in Warsaw from 1899 to 1902. He edited the "Sefer Zikkaron" (Warsaw, 1890), a biographical dictionary of contemporary Jewish writers, which appeared as a supplement to "Ha-Asif"; and "Toledot Sifrut Yisrael," a Hebrew translation of Karpeles' "Gesch. der Jüdischen Litteratur" (*ib.* 1888–91). After Peltin's death, in 1896, Sokolow succeeded him as editor of the Polish weekly "Izraelita." Sokolow came to be regarded as the foremost Hebrew journalist in Russia. In 1903, twenty-five years having elapsed since the publication of his first work, a literary celebration was held in his honor, and was made memorable by the publication, in the following year, of a jubilee book, "Sefer ha-Yobel," to which numerous scholars contributed important articles, and of

"Ketabim Nibḥarim," a collection of sketches and articles written by Sokolow for various periodicals.

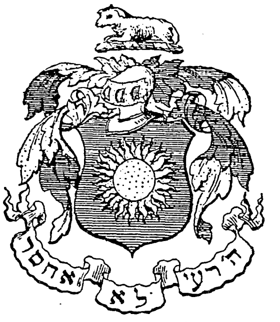
SOLA, DE: Sephardic family. According to family tradition, its earliest known members lived in Toledo and Navarre in the eighth and ninth centuries. After having risen to high distinction in Navarre, largely through the merits of one of its members, Baruch ben Ishac ibn Daud (Don Bartolome), the family gravitated again to Andalusia, and produced a number of eminent men in Cordova in the tenth century, when that city, under the sway of the Ommiad califs, had become the center of wealth and culture. It flourished also in Seville, where a number of its members enjoyed the favor of the Ommiad rulers, and in Lucena, where they intermarried with the Ibn Ghayyats (or Ibn Giats). The irruption of the Almohades caused them to remove to Tudela in 1146, and during the century which followed they were successively in Navarre, Castile, and Aragon. They seem to have adopted the surname of De Sola toward the latter part of the twelfth century, only their Hebrew names appearing before that period. The name is said to have had its origin in an estate they possessed in northern Spain. During the thirteenth and first half of the fourteenth century the De Solas were in Aragon and Castile, and attained to high rank. The persecutions of the second half of the fourteenth century drove them to Granada. Here they remained till the edict of 1492 banished them from Spain. Members of the family were then scattered in many directions. Two brothers, Isaac de Sola and Baruch de Sola, crossed to Portugal, but persecution forced the elder brother, Isaac, almost immediately to seek refuge elsewhere. After suffering many vicissitudes in various countries Isaac's descendants settled in Holland early in the seventeenth century. Here they resided and prospered for several generations. But Baruch, the younger brother, finding the life of his wife endangered by the hardships endured, was forced to remain in Portugal, and avoided further persecution by professing to be a Marano. His family became largely interested in various enterprises then developing in the Portuguese Indies, but ultimately it rejoined relatives in Holland, where the children were trained in their ancestral faith. The connections which they had established with the Portuguese Maranos were, however, long maintained, and led some of the members of the family to occasionally risk visits to Lisbon and the Portuguese colonies in the pursuit of their enterprises, notwithstanding the dangers of the Inquisition. But early in the eighteenth century, when David de Sola, the head of the elder branch, and his family, under assumed names, reached Lisbon, he was seized and tortured by the Inquisition, and later his youngest two sons suffered death at an auto da fé. In 1749 his eldest son, Aaron, effected his escape from Portugal with his wife, five sons (David, Isaac, Jacob, Benjamin, and Abraham), and a daughter, and returned to Holland. Their first act was to openly avow their unshaken adherence to the faith of their forefathers. The descendants of the eldest son, David, have lived successively in Holland, England, and Canada. The second and third sons, Isaac and Jacob, went to Curaçao, and their descendants are yet on that island and in the United States and other parts of America.



Arms of the De Sola Family.

The accompanying pedigree shows the various branches and chief members of the De Sola family, the numbers in parentheses corresponding to those given in the text.

1. **Don Bartolome (Baruch ben Ishac ibn Daud):** Styled a "nasi"; progenitor of the De Sola family; is said to have occupied a high office of state in Navarre in the ninth century.

2. **Shalom ibn Daud:** Descendant of Don Bartolome (No. 1); lived in Cordova in the tenth century. Through the friendship of Ḥasdai ibn Shaprut he enjoyed the favor of the calif Abd al-Raḥman III. He was appointed a dayyan of the community of Cordova.

3. **Aaron ben Shalom ibn Daud:** Son of Shalom (No. 2); born in the second quarter of the tenth century; was a physician in Cordova. He is said to have been lecturer at the college of medicine established in that city by Al-Ḥakam II.

4. **Michael ibn Daud:** Descendant in the male line of Aaron ben Shalom (No. 3); born in Seville about 1025. He was a physician and naturalist, and wrote a work, no longer extant, on the medicinal properties of plants.

5. **Menahem ben Michael:** Eldest son of Michael ibn Daud (No. 4); lived in Seville and attained to a political position of responsibility at the court of King Al-Mu'tamid in the second half of the eleventh century.

6. **Hai ben Michael:** Second son of Michael ibn Daud (No. 4); born in Seville about the middle of the eleventh century; lived in Lucena, where he devoted himself to philosophy and theology. He married Miriam, a daughter of Isaac ben Judah ibn Ghayyat (or ibn Giat), and sister of Judah ibn Ghayyat, who influenced his studies; and he enjoyed the advantage of close association with Alfasi. Into his circle came also the young Judah ha-Levi, then a student at the Lucena college. Hai is said to have been the author of some writings on the Talmud and of a work on philosophy. He wrote also a brief commentary on the Megillot. He had four sons, **Michael, Isaac, Enoch,** and **Joseph,** who lived in Lucena and Cordova until the invasion of the Almohades caused them to go to Tudela in 1146.

7. **Enoch ben Hai:** Third son of Hai (No. 6); born at Lucena at the end of the eleventh century. He was the author of a work on astronomy. He died at Tudela, where he had acted as dayyan.

e Sola Family.

8. Isaac ben Elijah ibn Daud de Sola: Grandson of Enoch ben Hai (No. 7); born in the middle of the twelfth century. Isaac de Sola was a rabbi and one of the heads of the Jewish communities of Navarre. He was also a commentator and poet, and made Hebrew renderings of Arabic poems. He died 1216.

9. David de Sola: Grandson of Isaac ibn Daud de Sola (No. 8); born about the close of the twelfth century; lived in Barcelona. He was a man of learning and wealth, and by his munificence greatly encouraged Hebrew scholarship in his native city. Family traditions mention him as the author of a work on the Mekilta and of several theological writings. He married Judith Benveniste. During the second half of the thirteenth century some of his relatives settled in Narbonne, Montpellier, and other parts of southern France, but his descendants in the main line continued in Spain.

10. Abraham de Sola (usually styled **Abraham of Aragon**): Lived in the thirteenth century; a brother of David de Sola (No. 9). He was a distinguished physician, and was employed by Alphonse, Count of Poitou and Toulouse, brother of Louis IX. of France.

11. Aaron Enrique de Sola: Lived in the thirteenth century, and was a brother of David (No. 9) and of Abraham (No. 10); died at Salamanca 1280. He devoted his life to the study of science, and is said to have written works on astronomy and mathematics. His earlier years were spent at Barcelona and Saragossa, but later he went to Toledo at the invitation of Alfonso X. of Castile, el Sabio.

12. Don Baruch (Bartolome) de Sola: Greatgrandson of David de Sola (No. 9). Don Baruch was born at the close of the thirteenth century, either at Barcelona or at Saragossa. Family tradition records that he won distinction fighting as a knight under the infante Alfonso, afterward Alfonso IV. of Aragon. He took part in the war against the Shepherds, 1320–22, and in the war in Sardinia, 1325–30. He was accorded noble rank by the king. After the death of Alfonso IV. he went to Toledo, where he died. His son, **Jacob Alfonso,** lived in Toledo for a while, but outbreaks of intolerance caused him to remove to Granada with his family.

13. Solomon de Sola: Flourished during the first half of the fourteenth century. He was a son of the Jacob de Sola who was a great-grandson of David (No. 9), and was a brother of Don Baruch (No. 12). He was a physician at Saragossa and also a rabbinical scholar.

14. Elijah de Sola: Born in Granada 1420; was a grandson of Jacob Alfonso de Sola, the son of Don Baruch (Bartolome) (No. 12). He was a rabbi and wrote lectures on Hebrew grammar.

15. Isaac de Sola: Son of Elijah (No. 14); born in Granada in 1459. He took part in the defense of his native city, and left it on its fall. The expulsion of the Jews from Spain in 1492 drove him to Portugal. His descendants took up their abode in Holland a century later. Among his children was a son named Gabriel, referred to below.

16. Baruch de Sola (Bartolomeu): Younger brother of Isaac de Sola (No. 15); born at Granada 1461. On the expulsion of the Jews from Spain in 1492 he went to Portugal. (For his connection with the family history see introduction.)

17. Carlos de Sola (Hebrew prænomen variously stated): Born about 1595; great-grandson of Gabriel de Sola, the son of Isaac de Sola (No. 15). He went to Holland in the first half of the seventeenth century. He was the writer of a family chronicle (in manuscript).

18. David de Sola: Grandson of Carlos de Sola (No. 17); born about 1670. His youth was spent chiefly in Holland, although it is uncertain whether he was born there. Through his cousins, the descendants of Baruch (No. 16), he became associated with some of the Maranos of Portugal in extensive mercantile transactions, being interested with them in ships engaged in Portuguese and Dutch commerce, whereby he attained to a position of considerable affluence. He visited Lisbon apparently more than once, and took up temporary residence there, passing as a Marano, usually under the name of Bartolomeu, in a vain attempt to allay the suspicions of the Inquisition. Arrested on a charge of secret adherence to Judaism, he was subjected to the horrors of the torture chamber. But nothing could be wrung from him, and eventually he was released. Broken in health by the awful sufferings he had undergone, he died soon afterward.

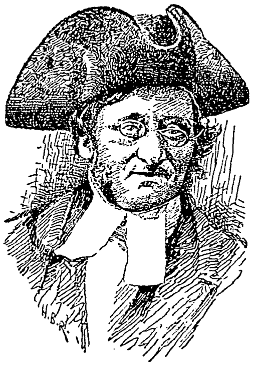
19. Aaron de Sola: Son of David de Sola (No. 18); born about the close of the seventeenth century. He was in Portugal as a Marano under an assumed name when his father was tortured by the Inquisition. His position became yet more perilous when two of his brothers, likewise living under assumed names, were ferreted out by the officers of the Inquisition as relapsed Jews, and after cruel sufferings met death at an auto da fé in Lisbon. After some years of extreme danger Aaron succeeded in escaping from Portugal on a British ship in 1749. Landing in London, he and his family at once openly proclaimed their fidelity to Judaism. From London they went to Holland, and here Aaron de Sola spent his latter days. From his six children are descended the several branches of the De Sola family of to-day. His son **Abraham,** who was born 1737 or 1739, took an active part in administering the affairs of the Jewish educational and charitable institutions of Amsterdam. Aaron's daughter **Rachel,** born 1732, married a Cohen in Holland, and her children assumed the name of Cohen-de Solla. Among her descendants was **Henri Cohen-de Solla,** the musician; born 1837; died in London 1904.

The line of David, the eldest son, is as follows:

20. David de Sola: Son of Aaron de Sola (No. 19); born in Lisbon in 1727; died in 1797; fled from that city with his parents in 1749 and settled in Holland. He wrote a number of addresses and essays on religious subjects, and a volume of poems. He was married to Sarah Jessurun d'Oliveira of Amsterdam, who survived him ten years, and by whom he had four sons: **Aaron** (No. 21), **Moses, Isaac,** and **Samuel.**

21. Aaron de Sola: Son of David de Sola (No. 20); born in Amsterdam in 1770; died in that city in 1821. He was a Talmudist, and his name appears in the family papers as the writer of a work on chronology.

22. David de Aaron de Sola: Minister and author; born at Amsterdam 1796; died at Shadwell, near London, 1860; son of Aaron de Sola (No. 21). When but eleven years of age he entered as a student the bet ha-midrash of his native city, and after a course of nine years received his rabbinical diploma. In 1818 he was elected one of the ministers of the Bevis Marks Congregation, London. De Sola's addresses before the Society for the Cultivation of Hebrew Literature led the Mahamad to appoint him to deliver discourses in the vernacular, and on March 26, 1831, he preached the first sermon in English ever heard within the walls of Bevis Marks Synagogue. His discourses were subsequently published by the Mahamad. In 1829 he issued his first work, "The Blessings"; and in 1836 he published his "Translation of the Forms of Prayer According to the Custom of the Spanish and Portuguese Jews," in six volumes, of which a second edition was issued in 1852. This translation formed the basis for several subsequent ones.



David de Aaron de Sola.

In 1837 De Sola published "The Proper Names in Scripture"; about the same time he wrote "Moses the Prophet, Moses Maimonides, and Moses Mendelssohn"; and in 1838 "Notes on Basnage and Milman's History of the Jews." In 1839, collaborating with M. J. Raphall, he translated eighteen treatises of the Mishnah. The work had a strange fate, for, the manuscript having reached the hands of a member of the Burton Street Synagogue, it was published in 1842, without the permission of the authors, before it had been revised or corrected for the press, and with an anonymous preface expressing views entirely opposed to those of De Sola and Raphall.

In 1840 De Sola, conjointly with M. J. Raphall, began the publication of an English translation of the Scriptures, together with a commentary. Only the first volume, "Genesis," was published, in 1844.

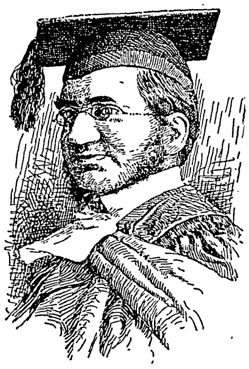
De Sola was instrumental in organizing the Association for the Promotion of Jewish Literature and other societies of a similar character. In 1857 he published "The Ancient Melodies of the Spanish and Portuguese Jews," including a historical account of the poets, poetry, and melodies of the Sephardic liturgy. In the notation of the melodies he was assisted by Emanuel Aguilar, the composer. In 1860 De Sola translated into English, in four volumes, the festival prayers according to the custom of the German and Polish Jews.

Besides his works in English, De Sola wrote in Hebrew, German, and Dutch. He contributed frequently between 1836 and 1845 to the "Allgemeine Zeitung des Judenthums" and to "Der Orient," and published in German "A Biography of Ephraim Luzzato" and a "Biography of Distinguished Israelites in England." His chief work in Dutch was his "Biography of Isaac Samuel Reggio," published in 1855 and afterward translated into English.

David de Sola was married in 1819 to Rica Meldola, the eldest daughter of Haham Raphael Meldola, by whom he had six sons and nine daughters. One daughter, Jael, married Solomon Belais, son of Rabbi Abraham Belais, at one time treasurer to the Bey of Tunis, and another, Eliza, married Rev. Abraham Pereira Mendes, and was the mother of Dr. Frederick de Sola Mendes and of Dr. Henry Pereira Mendes. Of the other daughters five married in London.

J. C. I. de S.

23. Abraham de Sola: Rabbi, author, Orientalist, scientist, and communal leader; born in London, England, Sept. 18, 1825; died in New York June 5, 1882. He was the second son of David de Aaron de Sola (No. 22) and of Rica Meldola. Having received a thorough training in Jewish theology, he early acquired a profound knowledge of Semitic languages and literature. In 1846 he was elected minister of the congregation of Spanish and Portuguese Jews of Montreal, Canada, and he arrived in that city early in 1847.



Abraham de Sola.

In 1848 De Sola was appointed lecturer, and in 1853 professor, of Hebrew and Oriental literature at McGill University, Montreal, and he eventually became the senior professor of its faculty of arts. He was president of the Natural History Society for several years, and addressed its members frequently on those branches of scientific investigation which came within its province. The degree of LL.D. was conferred upon him in 1858 by McGill University. This was probably the first instance of a Jew attaining that honor in an English-speaking country.

In 1872, by invitation of President Grant's administration, De Sola opened the United States Congress with prayer. The event was of significance, as De Sola was a British subject, and this was the first indication of a more friendly feeling between the United States and Great Britain after the dangerously strained relations that had been caused by the recently adjusted "Alabama Claims." Mr. Gladstone, then premier, as well as Sir Edward Thornton, the British ambassador at Washington, extended the thanks of the British government to De Sola.

Abraham de Sola frequently visited the United States, and, through his pulpit addresses and numerous contributions to the press, became recognized there as one of the most powerful leaders of Orthodoxy, at a time when the struggle between the Orthodox and Reform wings of the community was at an acute stage. He was intimately associated with Isaac Leeser, Samuel Myer Isaacs, Bernhard Illowy, J. J. Lyons, and other upholders of Jewish tradition, and on the death of Leeser was invited to become successor to his pulpit; but this and many similar offers he declined. For twenty years he was a constant contributor to Leeser's "Occident," and after the latter's death he purchased the copyrights and stereotype plates of his works and continued their publication.

The following is a list of Abraham de Sola's chief literary works:

1848. Scripture Zoology.
1852. The Mosaic Cosmogony.
1852. The Cosmography of Peritsol.
1852. A Commentary on Samuel Hannagid's Introduction to the Talmud.
1853. Behemoth Hatemeoth.
1854. The Jewish Calendar System (conjointly with Rev. J. J. Lyons).
1857. Philological Studies in Hebrew and Aramaic.
1858. Scripture Botany.
1860. The Employment of Anæsthetics in Connection with Jewish Law.
1861. The Sanatory Institutions of the Hebrews. Part i. (parts ii. and iii. appeared the following year).
1864. Biography of David Aaron de Sola.
1869. Life of Shabbethai Tsevi.
1870. History of the Jews of Poland.
1871. History of the Jews of France.
1874. Hebrew Numismatics.
1878. New Edition of the Forms of Prayer of the Spanish and Portuguese Jews, with English translation, based on the versions of David Aaron de Sola and Isaac Leeser.
1880. Life of Saadia Ha-Gaon.

Abraham de Sola also contributed actively to the Jewish press, a large number of articles by him appearing in "The Voice of Jacob," "The Asmonean," "The British-American Journal," and other contemporary Jewish journals. His articles on Sir William Sawson's "Archaia," "Dawn of Life," and "Origin of the World" are specially noteworthy. He also edited and republished English's "Grounds of Christianity" and a number of educational works. J.

24. Samuel de Sola: Born in London in 1839; died there 1866; the youngest son of David de Aaron de Sola (No. 22). In 1863 he was elected to succeed his father as minister of the Bevis Marks Congregation. He composed a large number of melodies for the synagogue and home, which were widely adopted.

J. C. I. DE S.

25. Aaron David Meldola de Sola: Canadian rabbi; born in Montreal May 22, 1853; eldest son of Abraham de Sola (No. 23). His theological studies were pursued chiefly under the direction of his father, whose assistant he became in 1876. Meldola de Sola's election as his father's successor in 1882 checked the movement for Reform in his own synagogue.

In 1898 he was appointed the first vice-president of the Orthodox Convention in New York, and he was one of the committee of three that drew up its "Declaration of Principles." At the conventions held in 1900 and 1903 he was elected first vice-president of the Union of Orthodox Jewish Congregations of the United States and Canada, and chairman of the Committee on Presentations of Judaism. In the latter capacity he issued in 1902 a protest against the Central Conference of American Rabbis for discussing the transfer of the Sabbath to the first day of the week. De Sola has written voluminously in the Jewish press in defense of Orthodoxy.

26. Clarence Isaac de Sola: Third son of Abraham de Sola (No. 23); born at Montreal, Canada, Aug. 15, 1858. He has taken an active part in the Zionist movement since its inception, and was largely instrumental in establishing it in Canada. He held the presidency of the Federation of Zionist Societies of Canada from 1899 to 1905, was elected member of the Actions Committee at the Fourth Congress, London, 1900, and at subsequent congresses, and is a Canadian trustee of the Jewish Colonial Trust.

Since 1887 he has been managing director of the Comptoir Belgo-Canadien, the steel and construction trust of Belgium, and in that capacity he has constructed a number of Canada's public works, including many railway and highway bridges. His close association with the development of Belgium's industrial relations with Canada led to his appointment as Belgian consul at Montreal in 1905.

J.

The following are the members of the younger branches descended from Aaron de Sola (No. 19):

27. Isaac de Sola: Second son of Aaron de Sola (No. 19); born in Lisbon in 1728, and fled from that city to Holland with his parents in 1749. He settled in Curaçao and became largely engaged in the West-Indian trade. His descendants live mainly in the West Indies and the United States.

28. Benjamin de Sola: Grandson of the eldest son of Isaac de Sola (No. 27). He resided in the Southern States at the time of the Civil war, and, joining the Confederate army, acquitted himself with credit in a number of engagements.

29. General Juan (Isaac) de Sola: Born about 1795 at Curaçao; died 1860; the son of Judah, the second son of Isaac de Sola (No. 27). In 1817 he went to Angostura (Ciudad Bolivar), Venezuela, and, joining the editorial staff of the "Correo de Orinoco," attracted the support of the patriots by his articles. On the outbreak of the revolt of the South-American colonies from Spain he joined the army of the patriots, and his bravery and capacity led General Piuango to promote him to the general staff. He was attached to the army of Apure, under General Paez, and advanced to the rank of lieutenant-colonel in the army of Colombia (formed then of the republics of Venezuela, New Granada, and Ecuador). On June 24, 1821, he took part in the decisive battle of Carabobo, which sealed the independence of Colombia. Valencia surrendered, and the revolutionary forces under Paez marched on Puerto Cabello, De Sola joining in the expedition. On Nov. 7 and 8, 1823, occurred the storming of Puerto Cabello by General Paez. De Sola took part in the assault, in command of cavalry, and drove the Spaniards before him to the sea, receiving himself a saber-cut across the face, the scar of which he carried till his death.

De Sola was a faithful supporter of Paez throughout his career, and from 1826 to 1830 assisted him in his policy of separating Venezuela from Colombia. In 1830 he attained his full colonelship, and was on Paez's staff, seemingly for a while as chief of staff. In 1843 he retired temporarily from the army, and became proprietor and editor of "El Gaceta Carabobo" and "El Patriota" in Valencia. After Paez's fall in 1848 and the accession of General Monagas, De Sola withdrew to private life for several years.

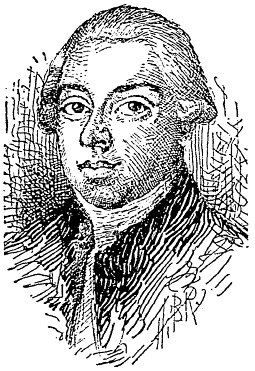
On March 5, 1858, De Sola commanded the second division of the revolutionary army that overthrew General Jose Tadeo Monagas, and in recognition of the important part he had taken he was created a general by the new government in 1859.

30. Jacob de Sola: Third son of Aaron de Sola (No. 19); born at Lisbon in 1730, where he bore the name of Bartolomeu. After escaping from Portugal he went to Curaçao, where he joined his brother Isaac in West-Indian commerce. His descendants are settled in Curaçao and other parts of America. Jacob's eldest son, **Elias de Sola,** who died in London in 1811, was an active communal worker in Amsterdam. He was president (parnas) of the Amsterdam Talmud Torah and of the Ḥebra Biḳḳur Ḥolim, and treasurer of the 'Eẓ Ḥayyim.

Among other noteworthy descendants of Jacob de Sola were his grandsons, **Benjamin de Sola** (born in Curaçao 1818; died in New York 1882) and **Elias de Sola** (born in Curaçao 1826; died in Caracas 1902). Benjamin was a prominent member of the Curaçao community and was one of those who prevented changes in the ritual of the ancient Mikveh Israel Synagogue. Elias settled in Venezuela in 1856 and took a prominent part in the commercial life of Caracas and La Guayra.

31. Benjamin de Sola: Fourth son of Aaron de Sola (No. 19); born in Lisbon 1735; died at Curaçao 1816. He accompanied his parents to Holland in 1749 and became an eminent practitioner at The Hague and court physician to William V. of the Netherlands. He was educated at and received his medical degree from the University of Utrecht.

Benjamin de Sola was the author of "Dissertatio Medica," written in Latin, and published in Amsterdam in 1773, and of other writings. His sight failing him in his old age, he joined his relatives in Curaçao in 1815.



Benjamin de Sola.

32. Isaac de Sola: Brother of David de Sola (No. 18); born in Holland in 1675; died in London Oct., 1734. He was a preacher in London between 1695 and 1700, and preached also before the Congregation Nefutsoth Yehudah of Bayonne. He revisited London in 1704, but returned to Amsterdam the same year.

Isaac de Sola was the author of the following works, in Spanish, published in Amsterdam: "Sermones Hechos Sobre Diferentes Asumptos," 1704; "Preguntas con sus Respuestos," 1704; also a volume of "Expositions of the Psalms," a volume of "Questions and Replies on the Pentateuch," another volume of "Questions and Replies for Pulpit Purposes," and a second volume of "Sermons."

33. Abraham de Sola: Son of Isaac de Sola (No. 32); died in London 1753. He was one of the ministers of the Bevis Marks Synagogue, London, from 1722 till 1749, and was also a preacher and member of the bet din. He married his cousin Abigail. Another cousin, **Laura de Sola,** is said to have written on Jewish history.

34. Raphael Samuel Mendes de Sola: Cousin of Aaron de Sola (No. 19) and of Abraham de Sola (No. 33); born in Amsterdam. He became distinguished as an orator and Talmudist. In 1749 he was elected ḥakam of Curaçao, and held that office until his death in 1761. His brother **Joseph Mendes de Sola** was minister of the Sephardic congregation of London from 1749 to 1770.

SOLDI, EMILE-ARTHUR: French engraver, sculptor, and writer on art; born at Paris May 27, 1846; son of David Soldi, a professor of modern languages and a native of Denmark. In 1869 Emile Soldi was awarded the Grand Prix at Rome for medal-engraving. Four years later he exhibited at the Fine-Arts Exposition a cameo in onyx, "Actéon," and a bronze medal in alto-rilievo, "Gallia," both of which were purchased by the government for the museum of the Luxembourg palace, the seat of the French Senate. He sculptured in marble the bas-reliefs "La Science et l'Art," a "Medaille à la Mémoire des Victimes de l'Invasion," and a "Medaille à la Mémoire des Mobiles de la Seine-Inférieure." In 1880 he executed a model of one of the gates of the citadel of Angkor-Tohm, according to Delaporte's plan of restoration. Of his other works may be mentioned medallion portraits of the Duchess Colonna de Castiglione, Mlle. B. Gismondi, and Mlle. Bergole (1876); "A l'Opéra," a plaster statue (1880); and a bust of Guillaumet (1887).

Soldi is the author of the following works on archeology: "L'Art et Ses Procédés Depuis l'Antiquité," "L'Art Egyptien" (1876), "Recueil et Mémoire pour l'Histoire de l'Art," "Les Arts Méconnus," and "Les Nouveaux Musées du Trocadéro" (1881). Soldi is a chevalier of the Legion of Honor.

SOLIS (sometimes **da Solis** or **de Solis**): Spanish and Portuguese family of crypto-Jews, some of whom were inquisitors, while others were victims of the Inquisition. Those who made good their escape to the Netherlands, France, and England openly professed Judaism. In the eighteenth and early part of the nineteenth century some went to America, settling in various parts of the West Indies and the United States. The American branch of the family traces its descent back to Solomon da Silva Solis, who married Isabel da Fonseca and who emigrated from Spain to Amsterdam in the seventeenth century.

Solis Pedigree.

Abraham Solis: Interpreter; lived in Boston in 1790.

David Hays Solis: Merchant; son of Jacob da Silva Solis; born at Mount Pleasant, N. Y., 1822; died in Philadelphia 1882. He gave valuable aid in the foundation and maintenance of religious, educational, and charitable institutions in both Philadelphia and New York, especially of the B'nai Jeshurun Educational Institute (1854) and the Congregation Shearith Israel, of New York, and of the Hebrew Charitable Fund, the Jewish Publication Society (1845), and the Hebrew Educational Society (1848), of Philadelphia. An earnest supporter of Isaac Leeser, he organized and became first president of the Congregation Beth-El Emeth, Philadelphia (1857). When the plates of the Leeser Bible were destroyed by fire he headed a subscription to replace them. He was an ardent supporter of the anti-slavery movement, and actively promoted the Volunteer Fund and Sanitary Fair.

Eleazar da Solis: Friar, theologian, and preacher; lived in Amsterdam as a professed Jew in 1656. His brother **Simão Pires da Solis** was burned at the stake by the Inquisition at Lisbon (1631).

Francisco de Silva y Solis (Marquis de Montfort): Military commander under Emperor Leopold I.; greatly aided in the defeat of the French Maréchal de Crequi in 1673. He settled in Antwerp as a professed Jew.

Isaac Nathan Solis: Son of David Hays Solis; lawyer and banker of New York and Philadelphia; born 1857.

Jacob da Silva Solis: Son of Solomon da Silva Solis and Benveneda Henriques Valentine; born in London 1780; died in New York 1829. He was a descendant of Solomon da Silva Solis and Donna Isabel da Fonseca (a daughter of the Marquis of Turin and Count of Villa Real and Monterey), both refugees from the Inquisition, who were married as Jews in Amsterdam about 1670. Family tradition reports that in 1760, the Catholic branch of the house of Turin and Villa Real being extinct, the succession was offered to the grandfather of Jacob da Silva Solis (of the same name, and great-grandson of Isabel da Fonseca), on condition of his becoming a Catholic. On his declining, the Portuguese ambassador, himself descended from Maranos, exclaimed, "You fool! It is one of the greatest dignities of Europe." To which Da Silva Solis replied, "Not for the whole of Europe would I forsake my faith, and neither would my son Solomon."

In 1803 Solis went to the United States, and in 1811 married Charity, daughter of David Hays of Westchester county, New York. He was in business with his brother **Daniel** (b. in London 1784; went to America *c.* 1800; died in Philadelphia 1867) in New York city and in Wilmington, Del. In 1826, having business in New Orleans, Jacob went thither about the time of the Passover festival; finding that city without either a maẓẓah bakery or a synagogue, he procured the establishment of both. The Shanarai Chasset congregation was organized through his efforts, and its synagogue dedicated in the following year (1827). For publication with the "Constitution" of the congregation, he compiled "A Calendar of the Festivals and Lunar Months of Every Year Observed by the Israelites Commencing A. M. 5589, and Ending in the Year 5612, Being a Period of 24 Years."

Solomon da Silva Solis: Merchant and litterateur; son of Jacob da Silva Solis; born at Mount Pleasant, N. Y., 1819; died in New York city 1854. He was one of the founders of the first American Jewish Publication Society (1845)—of whose publication committee he was a member—the founder and first president of the Hebrew Education Society of Philadelphia (1848), and a trustee and director of synagogues and charitable institutions in both New York and Philadelphia. He was a friend of and zealous colaborer with Isaac Leeser, and a frequent contributor to the "Occident" and other religious periodicals. As a result of his friendship with Grace Aguilar, whom he met in London, the publication of her works in the United States was brought about.

Ximenes de Solis: Governor of Martos, Spain. His young daughter Isabel was captured by the Moors and taken to the harem of Sultan Muley Ḥasan. Her great beauty won her the name of "Zoraya" (the morning star). The kingdom was divided equally between her and the sultana. Queen Isabella induced her and her sons to receive baptism.

SOLIS COHEN. See Cohen, Jacob da Silva Solis; Cohen, Solomon da Silva Solis.

SOLNIḲ, BENJAMIN AARON. See Sloniḳ, Benjamin Aaron ben Abraham.

SOLOMON (שלמה): Third king of all Israel; reigned from about 971 to 931 B.C.; second son of David and Bath-sheba (II Sam. xii. 23-25). He was called Jedidiah (= "beloved of Yhwh") by Nathan the prophet, the Chronicler (I Chron. xxii. 9) assuming that David was told by Yhwh that his son's name should be Solomon (= "peaceful"). These two names are predictive of the character of his reign, which was both highly favored and peaceful.

——**Biblical Data:** The sources for the history of the reign of Solomon are II Sam. xi.-xx. and the corresponding portions of I Chronicles, also I Kings i.-xi. 43 and I Chron. xxviii. 1-II Chron. ix. 31. Some second- or third-hand material is found in Josephus, Eusebius, and elsewhere, mostly taken from the books of Kings and Chronicles. The circumstances attending Solomon's birth indicate that he was "beloved of Yhwh" (II Sam. xii. 24, 25), and that Nathan stood in close association with David's household. Bath-sheba's relations with Nathan at the attempted accession of Adonijah (I Kings i.) show that she was a woman of no mean talent. Solomon's respect and reverence for her, even after his accession to the throne, point in the same direction. By nature and training Solomon was richly endowed and well equipped for the office of leader.

The question of David's successor had come to the front in Absalom's rebellion. That uprising had been crushed. As David was nearing his death, Adonijah, apparently (I Chron. iii. 1-4) in order of age the next claimant to the throne, prepared to usurp it, but passed over, in the invitation to his coronation, some of the most influential friends and advisers of David, as well as his brother Solomon. This aroused the suspicions of Nathan, who so arranged that simultaneously with Adonijah's coronation the court advisers, by order of David, crown Solomon, son of Bath-sheba, king of Israel. Adonijah fled in terror to the horns of the altar, and left them only on the oath of Solomon that his life should be spared.

Beginning of Solomon's Reign.

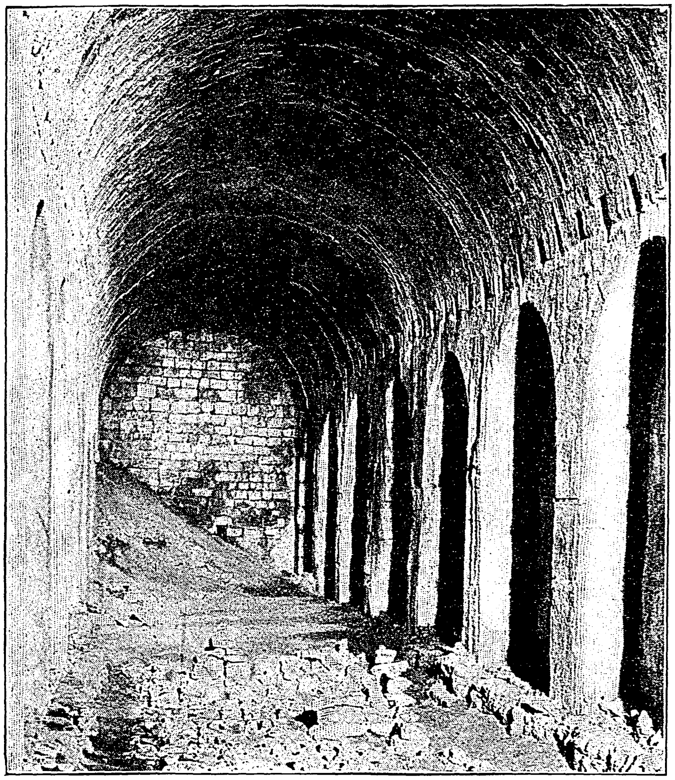
David, before he died, had given Solomon a charge regarding his own actions as a man, and regarding his attitude toward several of the influential personages about the king's court. As soon as Solomon had become established over the kingdom, Adonijah, through Bath-sheba, the queen-mother, asked the king for Abishag the Shunammite as a wife. This request was equivalent to asking for coregency, and Solomon so regarded it, for he quickly sent Benaiah to slay Adonijah. Abiathar, formerly David's trusted priest, who had conspired with Adonijah, was sent to the priest-city Anathoth, to his own fields, and deprived of his priestly office. Joab, learning the fate of Adonijah and Abiathar, fled to the altar for refuge; but Solomon commissioned the same executioner, Benaiah, to slay him there. Shimei, who had cursed David, was also in the list of suspects. He was given explicit orders to remain in Jerusalem, where his movements could be under surveillance. But on the escape of two of his servants to Philistia he left Jerusalem to capture them; and on his return he, too, fell under the sword of the bloody Benaiah. This completed the destruction of the characters whose presence about the court was likely to be a perpetual menace to the life of Solomon.

Solomon's Choice.

Thenceforth Solomon proceeded both safely and wisely in the development of his government. He came into possession of a kingdom organized and prosperous. His part was to increase its efficiency and glory and wealth; but to succeed in this he needed special gifts. When he went to Gibeon to offer sacrifices—a thousand burnt offerings—Yhwh appeared to him in a dream, saying, "Ask what I shall give thee." Solomon, conscious of the heavy responsibility of the ruler of such a realm, chose the wisdom that is needful in a judge. His choice of this rather than long life, wealth, honor, and the destruction of his enemies, greatly pleased Yhwh.

The wisdom of the young king was soon put to the test. Two harlots appeared before him, each carrying a child, one living and the other dead. Their dispute involved a decision as to the maternity of the children. Solomon, knowing the tender affections of a mother, ordered the living child to be cut into halves with a sword. The problem solved itself, and the king's insight and justice received due praise in Israel.

Solomon chose as his advisers the influential men of his kindgom (I Kings iv. 1-20). His standing army consisted of 12,000 cavalry, with 4,000 stalls for his chariots. The commissary department was thoroughly organized, and his court was one of great magnificence. The organization of Solomon's government carried with it a definite policy regarding his non-Israelitish subjects. Following the custom of the day, he secured for himself a wife from each of the neighboring royal houses, thus binding the nations to him by domestic ties. These various alliances introduced to the Israelitish court a princess from Egypt (for whom the king erected a special residence), and others from the Moabite, Ammonite, Edomite, Zidonian, and Hittite courts, who brought with them certain alien customs and religions, and, best of all, a kind of guaranty of peace. A court of such mixed elements involved also certain requirements which were a charge upon the royal treasury, such as homes for these foreigners and the installation of places for their religious observances. Solomon seems to have fulfilled all his obligations of this nature so lavishly as to have aroused his people near the close of his reign to the point of rebellion.



Supposed Stables of Solomon at Jerusalem.
(From a photograph by Bonfils.)

Solomon's Buildings.

No sooner had the king thoroughly organized and set in motion his civil and military machinery than he planned to carry out the desires of David by building a temple to Yhwh. In doing this he utilized his father's friendship with Hiram of Tyre to secure from the latter an agreement to supply cedar from Lebanon for use in the building. He levied also upon his own people and sent, in courses, 150,000 men to Lebanon to cut and hew the timber. Stones were cut for the buildings to be constructed, and the timber was floated in rafts to Joppa and transferred to Jerusalem. Stones and timber were put together noiselessly. Seven years of work completed the Temple, and thirteen years the king's palace. The best and most skilled workmen were Phenicians. Their artistic taste was exercised both on the buildings and on the vessels with which they were furnished (I Kings vii. 13 *et seq.*). In addition to completing these two chief structures, Solomon enhanced in other ways the architectural beauty of the city.

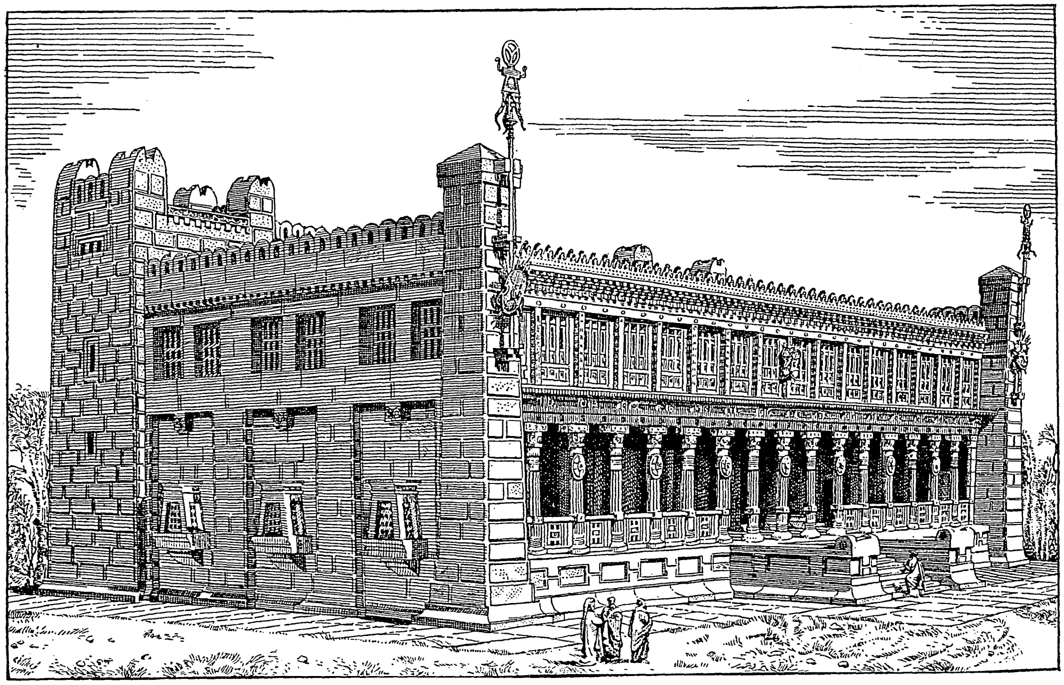
Solomon's foreign alliances formed the basis for foreign commercial relations. From the Egyptians he bought chariots and horses, which he sold to the Hittites and other peoples of the North. With the Phenicians he united in maritime commerce, sending out a fleet once in three years from Ezion-geber, at the head of the Gulf of Akaba, to Ophir, presumably on the eastern coast of the Arabian peninsula. From this distant port, and others on the way, he derived fabulous amounts of gold and tropical products. These revenues gave him almost unlimited means for increasing the glory of his capital city and palace, and for the perfection of his civil and military organizations.

Solomon's Wisdom.

Solomon's wisdom seems to have been as resplendent as his power and glory. His tact in dealing with his subjects and his acquaintance with all that was known in that day regarding trees, fruits, flowers, beasts, fishes, and birds gave him great renown. His genius in composing proverbs and songs was known far beyond the bounds of his own kingdom. His wisdom was said to have surpassed that of the children of the East and all the wisdom of Egypt. He was wiser than Ethan the Ezrahite, and Heman, and Chalcol, and Darda, the sons of Mahol (I Kings iv. 30, 31). People came from all parts to see the wisest man in the world. The Queen of Sheba traveled with a train of attendants, carrying much wealth, from southwestern Arabia, about 1,500 miles distant, to test the wisdom of Israel's ruler.

Solomon's Religion.

Solomon's religious ancestry and training had given him a basis for a strong life. His own request at Gibeon and his zeal in the worship of Yhwh foretold a vigorous religious career. But, though he built the Temple, and in the prayer attributed to him expressed some of the loftiest sentiments of a man thoroughly zealous in his worship of Israel's God, his career did not fulfil his early religious resolves. The polytheistic worship introduced by his foreign wives into Jerusalem and his faint and ineffectual opposition to their request that their gods should be shown respect led to his moral and religious deterioration, until he lost his hold on the people as well as on his own faith. Disaffection in Edom and in Syria, and the utterances of the prophet Abijah to Solomon's overseer, Jeroboam, portended disintegration and dissolution. In the decline of his life his power waned, and his death was the signal for the breaking up of the kingdom.



Solomon's House of the Forest of Lebanon.
(Restored by Chipiez.)

The extent of Solomon's permanent literary work is very uncertain. It is possible that he left several psalms and a portion of the Book of Proverbs. It seems to be probable that his life formed the basis of the Book of Ecclesiastes, and possibly of some elements of the Song of Songs.

E. G. H. I. M. P.

——**In Rabbinical Literature and Legend:** Solomon not only occupies a very important part in rabbinical legend, but is glorified even from a theological point of view. It must be added, however, that the Tannaim, with the exception of Jose b. Ḥalafta, were inclined to treat only of his weaknesses and his downfall. Solomon was one of those men to whom names were given by God before their birth, being thus placed in the category of the just ("ẓaddiḳim"; Yer. Ber. vii., 11b; Gen. R. xlv. 11; Tan., Bereshit, 30). Besides his three principal names, Jedidiah (II Sam. xii. 25), Ḳohelet (Eccl. i. 1 *et passim*, Hebr.), and Solomon, various others are assigned to him by the Rabbis, namely, Agur, Bin, Jakeh, Lemuel, Ithiel, and Ucal (Prov. xxx. 1, xxxi. 1), the interpretations of which, according to the earlier school, are as follows: "He who gathered the words of the Torah, who understood them, who later enunciated them, who said to God in his heart, 'I have the power; consequently, I may transgress the prescriptions of the Torah.'" The later school, on the other hand, adopts the following explanations:

Importance in Jewish Legend.

Agur = "he who girt his loins"; Bin = "he who built the Temple"; Jakeh = "he who reigned over the whole world"; Ithiel = "he who understood the signs of God"; and Ucal = "he who could withstand them" (Cant. R. i. 1; Midr. Mishle xxx. 1; Targ. Sheni to Esth. i. 2). Solomon was also one of those who were styled "baḥurim" (= "chosen"), "yedidim" (= "friends"), and "ahubim" (= "beloved ones"; Ab. R. N., ed. Schechter, p. 121). Solomon's instructor in the Torah was Shimei, whose death marked Solomon's first lapse into sin (Ber. 8a).

His Prayer for Wisdom.

The Rabbis concluded that Solomon was twelve (in Targ. Sheni *l.c.* thirteen) years old when he ascended the throne; he reigned forty years (I Kings xi. 42), and consequently he lived fifty-two years, as did the prophet Samuel (Seder 'Olam R. xiv.; Gen. R. c. 11; but comp. Josephus, "Ant." viii. 7, § 8, where it is stated that Solomon was fourteen years old when he began to reign, and that he ruled eighty years; comp. also Abravanel on I Kings iii. 7). He was considered by the Rabbis, who glorified him, to have been the counterpart of David, his father: each reigned forty years, and over the whole world; both wrote books and composed songs and fables; both built altars and transported the Ark of the Covenant with great ceremony; and in both dwelt the Holy Ghost (Cant. R. *l.c.*). Solomon is particularly extolled by the Rabbis for having asked in his dream nothing besides wisdom, which they declare served him as a shield against sinful thoughts. In this respect Solomon's wisdom was even superior to that of his father. Solomon passed forty days in fasting so that God might bestow upon him the spirit of wisdom (Pesiḳ. R. 14 [ed. Friedmann, p. 59a, b]; Num. R. xix. 3; Eccl. R. vii. 23; Midr. Mishle i. 1, xv. 29).

Solomon and Pharaoh.

Solomon's Judgments.

Solomon was the wise king par excellence, a fact which is expressed in the saying, "He who sees Solomon in a dream may hope for wisdom" (Ber. 57b). He is said to have understood the languages of the beasts and the birds and to have had no need of relying on witnesses in delivering a judgment, inasmuch as by simply looking at the contending parties he knew which was right and which was wrong. The words "Then Solomon sat on the throne of the Lord" (I Chron. xxix. 23) are interpreted to this effect, and an example of such a judgment is that pronounced in the case of the two harlots (comp. I Kings iii. 16 *et seq.*), which judgment was confirmed by a Bat Ḳol (Cant. R. *l.c.*; Targ. Sheni to Esth. i. 2). Indeed, Solomon's bet din was one of those in which the Holy Ghost manifested its presence through a bat ḳol. Independently of this, Solomon is considered as one of the Prophets, in whom the Holy Ghost dwelt. It was under the inspiration of the latter that he composed his three works, Canticles, Proverbs, and Ecclesiastes (Soṭah 48b; Mak. 23b; Cant. R. i. 1: Eccl. R. i. 1, x. 17). His wisdom is stated to have excelled that of the Egyptians (I Kings v. 10), which assertion is the basis of the following legend: "When Solomon was about to build the Temple he applied to Pharaoh, King of Egypt, for builders and architects. Pharaoh ordered his astrologers to choose all the men who would die in the current year; and these he sent to Solomon. The latter, however, by simply looking at them, knew what their fate was to be; consequently he provided them with coffins and shrouds and sent them back to Egypt. Moreover, he gave them a letter for Pharaoh informing him that if he was in want of articles required for the dead, it was not necessary for him to send men, but that he might apply direct for the materials he needed" (Pesiḳ. R. *l.c.*; Pesiḳ. iv. 34a; Num. R. xix. 3; Eccl. R. vii. 23). Owing to his proverbial wisdom, Solomon is the hero of many stories, scattered in the midrashic literature, in which his sagacity is exemplified. Most of them are based upon his judgment regarding the harlot's child; many of them have been collected by Jellinek in "B. H." iv., one of which is mentioned in Tos. to Men. 37a as occurring in the Midrash. It runs as follows: "Asmodeus brought before Solomon from under the earth a man with two heads, who, being unable to return to his native place, married a woman from Jerusalem. She bore him seven sons, six of whom resembled the mother, while one resembled the father in having two heads. After their father's death, the son with two heads claimed two shares of the inheritance, arguing that he was two men; while his brothers contended that he was entitled to one share only. They appealed to Solomon, whose sagacity enabled him to decide that the son with two heads was only one man; and the king consequently rendered judgment in favor of the other six brothers" (comp. "R. E. J." xlv. 305 *et seq.*). The well-known litigation between the serpent and the man who had rescued it is stated in Midrash Tanḥuma (see Buber, "Mebo," p. 157) as having taken place before Solomon, who decreed the serpent's death. Solomon applied his wisdom also to the dissemination of the Law. He built synagogues and houses in which the Torah was studied by himself, by a multitude of scholars, and even by little children. All his wisdom, however, did not make him arrogant; so that when he had to create a leap-year he summoned seven elders, in whose presence he remained silent, considering them more learned than himself (Cant. R. *l.c.*; Ex. R. xv. 20).

On the other hand, the members of the earlier school of Solomon's critics represent him in the contrary light. According to them, he abrogated the commandments of the Torah by transgressing against the three prohibitions that the king should not multiply horses nor wives nor silver and gold (comp. Deut. xvii. 16–17 with I Kings x. 26–xi. 3). He was likewise proud of his wisdom, and, therefore, relied too much on himself in the case of the two harlots, for which he was blamed by a bat ḳol. Judah b. Ila'i even declared that, had he been present when Solomon pronounced the sentence, he would have put a rope round Solomon's neck. His wisdom itself is depreciated. Simeon b. Yoḥai said that Solomon would better have been occupied in cleaning sewers, in which case he would have been free of reproach. His Ecclesiastes has, according to one opinion, no sacred character, because "it is only Solomon's wisdom" (R. H. 21b; Meg. 7a; Ex. R. vi. 1; Eccl. R. x. 17; Midr. Teh. to Ps. lxxii. 1; see Bible Canon).

On account of his modest request for wisdom only, Solomon was rewarded with riches and an unprecedentedly glorious reign (comp. I Kings iii. 13, v. 1 *et seq.*). His realm is described by the Rabbis as having extended, before his fall (see below), over the upper world inhabited by the angels and over the whole of the terrestrial globe with all its inhabit-

His Realm.

ants, including all the beasts, fowls, and reptiles, as well as the demons and spirits. His reign was then so glorious that the moon never decreased, and good prevailed over evil. His control over the demons, spirits, and animals augmented his splendor, the demons bringing him precious stones, besides water from distant countries to irrigate his exotic plants. The beasts and fowls of their own accord entered the kitchen of Solomon's palace, so that they might be used as food for him. Extravagant meals for him (comp. I Kings iv. 22-23) were prepared daily by each of his thousand wives, with the thought that perhaps the king would feast on that day in her house (Meg. 11b; Sanh. 20b; B. M. 86b; Gen. R. xxxiv. 17; Cant. R. *l.c.*; Eccl. R. ii. 5; Targ. Sheni *l.c.*).

Solomon's Eagle.

More frequently it was the eagle that executed Solomon's orders. When David died Solomon ordered the eagles to protect with their wings his father's body until its burial (Ruth R. i. 17). Solomon was accustomed to ride through the air on a large eagle which brought him in a single day to Tadmor in the wilderness (Eccl. R. ii. 25; comp. II Chron. viii. 4). This legend has been greatly developed by the cabalists as follows: "Solomon used to sail through the air on a throne of light placed on an eagle, which brought him near the heavenly yeshibah as well as to the dark mountains behind which the fallen angels 'Uzza and 'Azzael were chained. The eagle would rest on the chains; and Solomon, by means of a ring on which God's name was engraved, would compel the two angels to reveal every mystery he desired to know." According to another cabalistic legend, Solomon ordered a demon to convey down to the seven compartments of hell Hiram, King of Tyre, who on his return revealed to Solomon all that he (Hiram) had seen in the nether world (Zohar ii. 112b-113a, iv. 233a, b; Naphtali b. Jacob Elhanan, "'Emeḳ ha-Melek," pp. 5d, 112c, 147a; Jellinek, *l.c.* ii. 86).

Solomon's Carpet.

With reference to Solomon's dominion over all the creatures of the world, including spirits, several stories are current, the best known of which is that of Solomon and the ant (Jellinek, *l.c.* v. 22 *et seq.*). It is narrated as follows: "When God appointed Solomon king over every created thing, He gave him a large carpet sixty miles long and sixty miles wide, made of green silk interwoven with pure gold, and ornamented with figured decorations. Surrounded by his four princes, Asaph b. Berechiah, prince of men, Ramirat, prince of the demons, a lion, prince of beasts, and an eagle, prince of birds, when Solomon sat upon the carpet he was caught up by the wind, and sailed through the air so quickly that he breakfasted at Damascus and supped in Media. One day Solomon was filled with pride at his own greatness and wisdom; and as a punishment therefor the wind shook the carpet, throwing down 40,000 men. Solomon chided the wind for the mischief it had done; but the latter rejoined that the king would do well to turn toward God and cease to be proud; whereupon Solomon felt greatly ashamed.

"On another day while sailing over a valley where there were many swarms of ants, Solomon heard one ant say to the others, 'Enter your houses; otherwise Solomon's legions will destroy you.' The king asked why she spoke thus, and she answered that she was afraid if the ants looked at Solomon's legions they might be turned from their duty of praising God, which would be disastrous to them. She added that, being the queen of the ants, she had in that capacity given them the order to retire. Solomon desired to ask her a question; but she told him that it was not becoming for the interrogator to be above and the interrogated below. Solomon thereupon brought her up out of the valley; but she then said it was not fitting that he should sit on a throne while she remained on the ground. Solomon now placed her upon his hand, and asked her whether there was any one in the world greater than he. The ant replied that she was much greater; otherwise God would not have sent him there to place her upon his hand. The king, greatly angered, threw her down, saying, 'Dost thou know who I am? I am Solomon, the son of David!' She answered: 'I know that thou art created of a corrupted drop [comp. Ab. iii. 1]; therefore thou oughtest not to be proud.' Solomon was filled with shame, and fell on his face.

"Flying further, Solomon noticed a magnificent palace to which there appeared to be no entrance. He ordered the demons to climb to the roof and see if they could discover any living being within the building. The demons found there only an eagle, which they took before Solomon. Being asked whether it knew of an entrance to the palace, the eagle said that it was 700 years old, but that it had never seen such an entrance. An elder brother of the eagle, 900 years old, was then found, but it also did not know the entrance. The eldest brother of these two birds, which was 1,300 years old, then declared it had been informed by its father that the door was on the west side, but that it had become hidden by sand drifted by the wind. Having discovered the entrance, Solomon found many inscriptions on the doors. In the interior of the palace was an idol having in its mouth a silver tablet which bore the following inscription in Greek: 'I, Shaddad, the son of 'Ad, reigned over a million cities, rode on a million horses, had under me a million vassals, and slew a million warriors, yet I could not resist the angel of death.'"

Solomon's Temple.

The most important of Solomon's acts was his building of the Temple, in which he was assisted by angels and demons. Indeed, the edifice was throughout miraculously constructed, the large, heavy stones rising to and settling in their respective places of themselves (Ex. R. lii. 3; Cant. R. *l.c.*). The general opinion of the Rabbis is that Solomon hewed the stones by means of the Shamir, a worm whose mere touch cleft rocks. According to Midrash Tehillim (in Yalḳ., I Kings, 182), the shamir was brought from paradise by the eagle; but most of the rabbis state that Solomon was informed of the worm's haunts through the chief of the demons, who was captured by Benaiah, Solomon's chief minister (see Asmodeus). The chief of the demons, Ashmedai or Asmodeus, told Solomon that the shamir had been entrusted by the prince of the sea to the mountain cock alone (the Hebrew equivalent in Lev. xi. 19 and Deut. xiv. 18 is rendered by A. V. "lapwing" and by R.V. "hoopoe"), and that the cock had sworn to guard it well. Solomon's men searched for the nest of the bird and, having found it, covered it with glass. The bird returned, and, seeing the entrance to its nest closed by what it supposed to be a glass door, brought the shamir for the purpose of breaking the glass. Just then a shout was raised; and the bird, being frightened, dropped the shamir, which the men carried off to the king (Giṭ. 68b).

Solomon, in his prophetic capacity, realized that the Temple would be destroyed by the Babylonians, and therefore he caused an underground receptacle to be built in which the Ark was afterward hidden (Abravanel on I Kings vi. 19). For each of the ten candlesticks made by Solomon (I Kings vii. 49; II Chron. iv. 7) he used 1,000 talents of gold, which, being passed 1,000 times through the furnace, became reduced to one talent. There is a difference of opinion among the Rabbis as to whether Solomon's candlesticks were lit or only the one made by Moses. A similar difference exists with regard to Solomon's ten tables, five of which were on one side and five on the other side of the table made by Moses (Men. 29a, 99b). Solomon planted in the Temple different kinds of golden trees which bore fruit in their proper seasons. When the wind blew over them the fruit fell to the ground. Later, when the heathen entered the Temple to destroy it, these trees withered; but they will flourish again on the advent of the Messiah (Yoma 21b).

Even with regard to his noble act in building the Temple, however, Solomon did not escape the severe criticisms of the Tannaim. The construction of such a magnificent edifice, they said, filled Solomon with pride; consequently when he wished to introduce the Ark of the Covenant into the Sanctuary, the gates shrank to such an extent that it could not be brought in. Solomon then recited twenty-four hymns, but without avail. He then sang: "Lift up your heads, O ye gates; . . . and the King of glory shall come in" (Ps. xxiv. 7). The gates, thinking that Solomon applied to himself the term "King of glory," were about to fall on his head, when they asked him, "Who is this King of glory?" Solomon answered: "The Lord strong and mighty," etc. (*ib.* verse 8). He then prayed: "O Lord God, turn not away the face of thine anointed, remember the mercies of David thy servant" (II Chron. vi. 42); and the Ark was admitted (Shab. 30a; Num. R. xiv. 10; comp. Ex. R. viii. 1 and Tan., Wa'era, 6, where this haggadah is differently stated in the spirit of the Amoraim).

Solomon's Marriage.

The Tannaim lay particular stress on Solomon's criminal act in marrying the daughter of Pharaoh, which they declare took place on the night when the Temple was completed. This assertion is at variance with Seder 'Olam R. xv., where it is held that Solomon married her when he began to build the Temple, that is, in the fourth year of his reign (comp. I Kings vi. 1). The particular love which he manifested for her (comp. *ib.* xi. 1) was rather a depraved passion; and she, more than all his other foreign wives, caused him to sin. He had drunk no wine during the seven years of the construction of the Temple; but on the night of its completion he celebrated his wedding with so much revelry that its sound mingled before God with that of the Israelites who celebrated the completion of the sacred edifice, and God at that time thought of destroying with the Temple the whole city of Jerusalem. Pharaoh's daughter brought Solomon 1,000 different kinds of musical instruments, explaining to him that each of them was used in the worship of a special idol. She hung over his bed a canopy embroidered with gems which shone like stars; so that every time he intended to rise, he, on looking at the gems, thought it was still night. He continued to sleep, with the keys of the Temple under his pillow; and the priests therefore were unable to offer the morning sacrifice. They informed his mother, Bath-sheba, who roused the king when four hours of the day had flown. She then reprimanded him for his conduct; and verses 1–9 of Prov. xxxi. are considered by the Rabbis as having been pronounced by Bath-sheba on that occasion. The destructive effect on the Temple of Solomon's marriage to Pharaoh's daughter is further expressed in the following allegory: "When Solomon wedded Pharaoh's daughter, Michael [another version has Gabriel] drove a rod into the bed of the sea; and the slime gathering around it formed an island on which, later, Rome [the enemy of Jerusalem] was built." R. Jose, however, declares that Solomon's sole intention in this marriage was to convert the daughter of Pharaoh to Judaism, bringing her thus under the wings of the Shekinah (Sifre, Deut. 52; Yer. 'Ab. Zarah i. 39c; Shab. 56b; Yer. Sanh. ii. 6; Sanh. 21b; Lev. R. xii. 4; Num. R. x. 8).

Solomon's Throne.

Solomon's throne is described at length in Targum Sheni (*l.c.*) and in two later midrashim published by Jellinek ("B. H." ii. 83-85, v. 33-39), the second also by J. Perles (in "Monatsschrift," xxi. 122 *et seq.*). According to Targum Sheni, which is compiled from three different sources, there were on the steps of the throne twelve golden lions (comp. Solomon, Biblical Data) and twelve golden eagles so placed that each lion faced an eagle. Another account says that there were seventy-two lions and the same number of eagles. Further it is stated that there were six steps to the throne (comp. *ib.*), on which animals, all of gold, were arranged in the following order: on the first step a lion opposite an ox; on the second, a wolf opposite a sheep; on the third, a tiger opposite a camel; on the fourth, an eagle opposite a peacock; on the fifth, a cat opposite a cock; on the sixth, a sparrow-hawk opposite a dove. On the top of the throne was a dove holding a sparrow-hawk in its claws, symbolizing the dominion of Israel over the Gentiles. There was also on the top of the throne a golden candlestick, on the seven branches of the one side of which were engraved the names of the seven patriarchs Adam, Noah, Shem, Abraham, Isaac, Jacob, and Job, and on the seven of the other the names of Levi, Kohath, Amram, Moses, Aaron, Eldad, Medad, and, in addition, Hur (another version has Haggai). Above the candlesticks was a golden jar filled with olive-oil and beneath it a golden basin which supplied the jar with oil and on which the names of Nadab, Abihu, and Eli and his two sons were engraved. Over the throne, twenty-four vines were fixed to cast a shadow on the king's head. By a mechanical contrivance the throne followed Solomon wherever he wished to go.

The description given in the two midrashim mentioned above differs somewhat from the foregoing. Referring to the words "Then Solomon sat on the throne of the Lord" (I Chron. xxix. 23), the second midrash remarks that Solomon's throne, like that of God, was furnished with the four figures representing a man, a lion, an ox, and an eagle, with cherubim and wheels (comp. Ezek. i. 5 *et seq.*). While the first midrash agrees to a greater extent with Targum Sheni, the second one substitutes for the order in which the pairs of animals were arranged the following: a sheep and a wolf; a deer and a bear; a roebuck and an elephant; a buffalo and a griffin; a man and a demon; a mountain-cock and an eagle; a dove and a sparrow-hawk—the clean beasts and fowls being to the right and the unclean ones to the left of the throne.

The Mechanism of the Throne.

Solomon's progress to his throne is similarly described in Targum Sheni and in the two midrashim. According to the former work, when the king reached the first step, the ox, by means of some sort of mechanism, stretched forth its leg, on which Solomon leaned, a similar action taking place in the case of the animals on each of the six steps. From the sixth step the eagles raised the king and placed him in his seat, near which a golden serpent lay coiled. When the king was seated the large eagle placed the crown on his head, the serpent uncoiled itself, and the lions and eagles moved upward to form a shade over him. The dove then descended, took the scroll of the Law from the Ark, and placed it on Solomon's knees. When the king sat, surrounded by the Sanhedrin, to judge the people, the wheels began to turn, and the beasts and fowls began to utter their respective cries, which frightened those who had intended to bear false testimony. Moreover, while Solomon was ascending the throne, the lions scattered all kinds of fragrant spices. In the second midrash it is said: "When Solomon wished to sit on his throne, the ox took him gently on its horns and handed him over to the lion, which in turn delivered him to the sheep, and so on until the seat was reached. Then the demon placed him on the seat, which was of gold studded with precious stones, and put under his feet a footstool of sapphire which he had brought from heaven [comp. Ex. xxiv. 10]. The six steps also were studded with precious stones and with crystal; and there were besides arches from which palm-trees arose high over the throne to make a shadow for the king's head." Both midrashim state that when Solomon was seated a silver serpent turned a wheel which caused the eagles to spread their wings over the king's head. Then one lion placed the crown on his head, while another placed the golden scepter in his hand. It is explained in the first midrash that six steps were constructed because Solomon foresaw that six kings would sit on the throne, namely, Solomon, Rehoboam, Ḥezekiah, Manasseh, Amon, and Josiah. After Solomon's death King Shishak, when taking away the treasures of the Temple (comp. I Kings xiv. 26), carried off the throne, which remained in Egypt till Sennacherib conquered that country. After Sennacherib's fall Hezekiah gained possession of it. When Josiah was slain by Pharaoh Necho the latter took it away; but, not knowing the proper use of it, he was struck by one of the lions and became lame. Nebuchadnezzar, into whose possession the throne subsequently came, shared a similar fate. The throne then passed to the Persians, with whom it remained till it came into the possession of Ahasuerus, who, however, could not sit upon it (see also Num. R. xii. 21; Midr. Abba Gorion to Esth. i. 2).

His Hippodrome.

The glory of so great a king as Solomon would have been incomplete, in the eyes of the later rabbis, had he not had, like the Roman emperors, a magnificent circus or hippodrome; and a description of his arena is given in the second of the two midrashim mentioned above. According to R. Ze'era, the circus was in use one day in every month, under the successive superintendence of each of the twelve commissaries who had to provide for the king's household (comp. I Kings iv. 7 *et seq.*). In the thirteenth month of an embolismic year, for which there was a special commissary (see Rashi on I Kings iv. 19), there were no horse-races, but races were run by 10,000 young men of the tribe of Gad (or of Naphtali, according to another opinion), "the calves of whose legs were removed, rendering the runners so swift that no horse could compete with them." The hippodrome was three parasangs long and three parasangs wide, and in the middle of it were two posts surmounted by cages in which all kinds of beasts and fowls were confined. Around these posts the horses had to run eight times. As to the day of the month on which the races took place—whether the last day, the first, the second, or the third—different opinions are expressed. Those favoring the last, first, and second days are supported by the fact that on those days Solomon used to flood the cisterns—on the last day of the month for the scholars and their pupils, for the priests and the Levites; on the first day for the Israelites who lived in Jerusalem; and on the second day of the month for those who lived outside that city; the water which flowed from paradise was poured into the cisterns through the mouths of two golden lions, which, besides, exhaled a very fragrant odor.

There were four companies of charioteers, each containing 4,000 men divided into smaller groups; these were placed on separate platforms arranged one above the other. Facing each company were two doors of olive-wood in which different kinds of precious stones were set, and which were decorated with gold and with all kinds of carved figures. The spectators also were divided into four groups: (1) the king with his household, the scholars, the priests, and the Levites, dressed in blue; (2) the people of Jerusalem, dressed in white; (3) the people who lived outside Jerusalem, dressed in red; and (4) the Gentiles who from distant countries brought presents to Solomon, and who were dressed in green.

These four colors symbolized the four seasons of the year—autumn, winter, spring, and summer (comp. Perles, *l.c.* notes).

Solomon and the Queen of Sheba.

The meeting of Solomon and the Queen of Sheba is narrated in Targum Sheni as follows: "Solomon, when merry from wine, used to assemble before him all the kings, his vassals, and at the same time ordered all the other living creatures of the world to dance before them. One day, the king, observing that the mountain-cock or hoopoe was absent, ordered that the bird be summoned forthwith. When it arrived it declared that it had for three months been flying hither and thither seeking to discover some country not yet subjected to Solomon, and had at length found a land in the East, exceedingly rich in gold, silver, and plants, whose capital was called "Kitor" and whose ruler was a woman, known as 'the Queen of Saba [Sheba].' The bird suggested that it should fly to the queen and bring her to Solomon. The king approved this proposal; and Solomon, accordingly, caused a letter to be tied to the hoopoe's wing, which the bird delivered to the queen toward the evening as she was going out to make her devotions to the sun. Having read the letter, which was couched in somewhat severe terms, she immediately convoked a council of her ministers. Then she freighted several vessels with all kinds of treasures, and selected 6,000 boys and girls, all of the same age, stature, and dress, and sent them with a letter to Solomon, acknowledging her submission to him and promising to appear before him within three years from that date. . . . On being informed of her arrival, Solomon sent his chief minister, Benaiah, to meet her, and then seated himself in a glass pavilion. The queen, thinking that the king was sitting in water, lifted her dress, which caused Solomon to smile."

It is stated in I Kings x. 1 that the queen came to propound riddles to Solomon: the text of these is given by the Rabbis. A Yemenite manuscript entitled "Midrash ha-Ḥefeẓ" (published by S. Schechter in "Folk-Lore," 1890, pp. 353 *et seq.*) gives nineteen riddles, most of which are found scattered through the Talmud and the Midrash and which the author of the "Midrash ha-Ḥefeẓ" attributes to the Queen of Saba (Sheba). The first four riddles are also given in Midrash Mishle i. 1, where their transmission is attributed to R. Ishmael. See Sheba, Queen of.

The Rabbis who denounce Solomon interpret I Kings x. 13 as meaning that Solomon had criminal intercourse with the Queen of Sheba, the offspring of which was Nebuchadnezzar, who destroyed the Temple (comp. Rashi *ad loc.*). Solomon's champions, on the other hand, deny the whole story of the Queen of Sheba and of the riddles, and interpret the words "Malkat Sheba" as meaning "the Kingdom of Sheba"; that is to say, the kingdom of Sheba offered its submission to Solomon (B. B. 15b). According to the same rabbis, the sin ascribed to Solomon in I Kings xi. 7 *et seq.* is only figurative: it is not meant that Solomon fell into idolatry, but that he was guilty of failing to restrain his wives from idolatrous practises (Shab. 56b). Still, the legend prevalent in rabbinical literature is that Solomon lost his royalty, riches, and even his reason on account of his sins. This legend is based on the words "I, Ḳohelet, was king over Israel in Jerusalem" (Eccl. i. 12, Hebr.), which show that when he uttered them he was no longer king. He gradually fell from the highest glory into the deepest misery. At first, Solomon reigned over the inhabitants of the upper world as well as over those of the lower; then only over the inhabitants of the earth; later over Israel only; then he retained only his bed and his stick; and finally his stick alone was left to him (Sanh. 20b).

Solomon Loses His Kingship.

Solomon and Asmodeus.

The Rabbis do not agree, however, as to whether Solomon died in poverty or returned to his throne. He "saw three worlds," which, according to one opinion, means that he was successively a private person, a king, and again a private man. According to a contrary opinion, he was king, private person, and again king (Sanh. *l.c.*; Giṭ. 68b; Eccl. R. i. 12). Solomon's ejection from the throne is stated in Ruth R. ii. 14 as having occurred because of an angel who assumed his likeness and usurped his dignity. Solomon meanwhile went begging from house to house protesting that he was the king. One day a woman put before him a dish of ground beans and beat his head with a stick, saying, "Solomon sits on his throne, and yet thou claimest to be the king." Giṭṭin (*l.c.*) attributes the loss of the throne to Asmodeus, who, after his capture by Benaiah, remained a prisoner with Solomon. One day the king asked Asmodeus wherein consisted the demons' superiority over men; and Asmodeus replied that he would demonstrate it if Solomon would remove his chains and give him the magic ring. Solomon agreed; whereupon Asmodeus swallowed the king (or the ring, according to another version), then stood up with one wing touching heaven and the other extending to the earth, spat Solomon to a distance of 400 miles, and finally seated himself on the throne. Solomon's persistent declaration that he was the king at length attracted the attention of the Sanhedrin. That body, discovering that it was not the real Solomon who occupied the throne, placed Solomon thereon and gave him another ring and chain on which the Holy Name was written. On seeing these Asmodeus flew away (see Asmodeus, and the parallel sources there cited). Nevertheless Solomon remained in constant fear; and he accordingly surrounded his bed with sixty armed warriors (comp. Cant. iii. 7). This legend is narrated in "'Emeḳ ha-Melek" (pp. 14d–15a; republished by Jellinek, *l.c.* ii. 86–87) as follows: "Asmodeus threw the magic ring into the sea, where it was swallowed by a fish. Then he threw the king a distance of 400 miles. Solomon spent three years in exile as a punishment for transgressing the three prohibitive commandments [see above]. He wandered from city to city till he arrived at Mashkemam, the capital of the Ammonites. One day, while standing in a street of that city, he was observed by the king's cook, who took him by force to the royal kitchen and compelled him to do menial work. A few days later Solomon, alleging that he was an expert in cookery, obtained the cook's permission to prepare a new dish.

The king of the Ammonites was so pleased with it that he dismissed his cook and appointed Solomon in his place. A little later, Naamah, the king's daughter, fell in love with Solomon. Her family, supposing him to be simply a cook, expressed strong disapproval of the girl's behavior; but she persisted in her wish to marry Solomon, and when she had done so the king resolved to kill them both. Accordingly at his orders one of his attendants took them to the desert and left them there that they might die of hunger. Solomon and his wife, however, escaped starvation; for they did not remain in the desert. They ultimately reached a maritime city, where they bought a fish for food. In it they found a ring on which was engraved the Holy Name and which was immediately recognized by Solomon as his own ring. He then returned to Jerusalem, drove Asmodeus away, and reoccupied his throne." It may be noticed that this story also is at variance with I Kings xiv. 21, where it appears that Solomon had married Naamah in David's lifetime. According to Midrash al-Yithallel (Jellinek, *l.c.* vi. 106 *et seq.*), God sent Asmodeus to depose Solomon, as a punishment for the king's sin. Agreeing with Giṭ. *l.c.* as to the means by which the fraud of Asmodeus was exposed, the narrative continues as follows (Midr. al-Yithallel, *l.c.*): "Benaiah sent for Solomon, and asked him how his deposition had happened. Solomon replied that when sitting one day in his palace a storm had hurled him to a great distance and that since then he had been deprived of his reason. Benaiah then asked him for a sign, and he said: 'At the time of my coronation my father placed one of my hands in thine and the other in that of Nathan the prophet; then my mother kissed my father's head.' These facts having been ascertained to be true, Benaiah directed the Sanhedrin to write the Holy Name on pieces of parchment and to wear them on their breasts and to appear with them before the king. Benaiah, who accompanied them, took his sword and with it struck Asmodeus. Indeed, he would have killed the latter had not a bat ḳol cried: 'Touch him not: he only executed my commands.' "

His Final Fate.

The disagreement among the Rabbis with regard to the personality of Solomon extends also to his future life ("'olam ha-ba"). According to Rab, the members of the Great Synagogue purposed including Solomon among those denied a share in the future life, when the image of David appeared, imploring them not to do so. The vision, however, was not heeded; nor was a fire from heaven, which licked the seats on which they sat, regarded until a bat ḳol forbade them to do as they had purposed (Sanh. 104b; Yer. Sanh. x. 2; Cant. R. i. 1). On the other hand, Solomon is considered to resemble his father in that all his sins were forgiven by God (Cant. R. *l.c.*). Moreover, David is said to have left a son worthy of him (B. B. 116a). When R. Eliezer was asked for his opinion of Solomon's future life, he gave his pupils an evasive answer, showing that he had formed no opinion concerning it (Tosef., Yeb. iii. 4; Yoma 66b; comp. Tos. *ad loc.*).

The Rabbis attribute to Solomon the following "taḳḳanot": 'erubin (see 'ERUB); washing of hands; the recitation of the passage beginning "We-'al ha-bayit ha-gadol" and, together with David, of that beginning "U-bene Yerushalayim," both of which occur in the benediction recited after a meal (Ber. 48b; Shab. 14b; 'Er. 21b).

W. B. M. SEL.

——In Arabic Literature: Solomon is the subject of a large number of traditions and legends in Arabic literature, in which he completely overshadows in importance his father, David. Solomon is spoken of as the messenger of God ("rasul Allah"), and is in a way a prototype of Mohammed. Hence the importance assigned to his relations with the Queen of Sheba, the submission of whose country is taken to mean the submission of Arabia. The letter addressed to her, summoning her to accept Islam, begins with the same formula ("Bi-ism Allah al-Raḥman al-Raḥim") as that used in the documents issued by Mohammed. The name Solomon is given to all great kings, and it is related that there were a number of Solomons, or universal kings, who lived before the creation of Adam (D'Herbelot, in "Bibliothèque Orientale," v. 369).

Miraculous Power.

Solomon is represented as having authority over spirits, animals, wind, and water, all of which obeyed his orders by virtue of a magic ring set with the four jewels given him by the angels that had power over these four realms. A similar ring is mentioned in stories of the "Arabian Nights." The power inherent in the ring is shown by the following story: It was Solomon's custom to take off the ring when he was about to wash, and to give it to one of his wives, Amina, to hold. On one occasion, when the ring was in Amina's keeping, the rebellious spirit Sakhr took on Solomon's form and obtained the ring. He then seated himself on the throne and ruled for forty days, during which time the real king wandered about the country, poor and forlorn. On the fortieth day Sakhr dropped the ring into the sea; there it was swallowed by a fish, which was caught by a poor fisherman and given to Solomon for his supper. Solomon cut open the fish, found the ring, and returned to power. His forty days' exile had been sent in punishment for the idolatry practised in his house for forty days, although unknown to him, by one of his wives (Koran, sura xxxviii. 33-34; Baiḍawi, ii. 187; Ṭabari, "Annales," ed. De Goeje, i. 592 *et seq.*).

As a Judge.

Solomon's superiority to David is shown in his judgments. While still a child he renders decisions reversing those previously given by his father, as in the famous case, related in the Old Testament, of the two women claiming the one child. In the Arabic tradition a wolf has carried away the child of one of the women, both of whom claim a surviving child. David decides in favor of the elder woman, but Solomon starts to divide the child with a knife, whereupon the younger woman protests and receives the child (Bokhari, "Recueil des Traditions Mahometanes," ii. 364, Leyden, 1864). So in the decision regarding the sheep which has devastated a field (sura xxi. 78, 79; Baiḍawi, i. 621; Ṭabari, *l.c.* i. 573), and in the judgment concerning the treasure discovered in a field after it has been sold, and which is claimed by both buyer and seller (Weil, "Biblical Legends of the Mussulmans," p. 192), Solomon's opinion is held to be superior to David's. When the judges of the realm objected to having one so young interfere in their counsels, David proposed that Solomon be examined publicly before a tribunal of lawyers. This was done, whereupon Solomon not only answered all questions as soon as they were put, but confounded his judges by asking them questions which they could not answer (Weil, *l.c.* pp. 193-196).

As a Warrior.

In Arabic tradition, unlike the Biblical and later Jewish, Solomon is a great warrior. Various warlike expeditions of his are mentioned, and it was the daughter of the conquered King of Sidon who introduced idolatry into his house. His love for horses led him to forget at one time the afternoon prayer (sura xxxviii. 30-31): he had become so much interested in inspecting a thousand horses drawn up before him that the time for prayer passed unnoticed; in repentance therefor he killed the horses. On another occasion he boasted that seventy wives would bear him seventy sons, every one of whom would be a warrior. Unfortunately he forgot to add "if God will," in consequence of which he had only one son, who was misshapen and unfit to be a soldier (Bokhari, *l.c.* ii. 364; Baiḍawi, ii. 187).

Queen of Sheba.

Solomon's interview with the Queen of Sheba and the events leading up to it are narrated in great detail, as befitting their importance in the history of Islam. Solomon in a dream is advised by Abraham (according to some, after the building of the Temple) to undertake a pilgrimage to Mecca. After completing this he proceeds to Yemen, being carried by the winds through the air on a green silk carpet, upon which are assembled men, beasts, and devils, while birds fly overhead in close ranks, so as to form a canopy. On the journey Solomon notices the absence of the hoopoe, or lapwing (Arabic "hudhud"), and threatens it with dire punishment. When the bird returns it appeases the king's anger by reporting the wonderful things it has beheld, telling of Queen Bilkis, her marvelous history and beauty, and of her kingdom. Solomon at once despatches the bird with a letter to Bilkis, bidding her embrace the faith or prepare to be conquered by his hosts. She devises various plans to test his reputed knowledge, but finally, being satisfied that he is all that is claimed for him and more, submits herself with her kingdom to Solomon. An account of the splendor of the reception accorded Bilkis by Solomon and of the puzzles and riddles which she propounded and he solved may be found in sura xxvii. 15-45 and the commentaries on that passage (Baiḍawi and Zamakhshari), in Ṭabari, i. 576-586, and elsewhere. For other stories concerning Solomon, his dealings with the spirit Sakhr, his building of the Temple, the stone which cut stone without noise, and a comparison of Solomon with Jemshid (comp. Grünbaum), see the works mentioned in the bibliography below.

Death of Solomon.

Solomon died at the age of fifty-three, having reigned forty years. As the building of the Temple was not finished at his death and he was afraid that the jinn would not continue to work thereon if he were not there to command them, the angel of death took his soul while he was leaning upon his staff, praying. His body remained in that position a year, until the jinn had finished the Temple, when a worm that had been gnawing at the staff caused it to crumble to pieces; Solomon's body fell, and the jinn discovered that he was dead. It is said that Solomon collected the books of magic that were scattered throughout his realm, and locked them in a box, which he put under his throne to prevent their being used. After his death the jinn, so as to make people believe that Solomon had been a sorcerer, declared that these books had been used by him; many believed the statement to be true, but the accusation was a malicious falsehood.

E. G. H. M. W. M.

——**Critical View:** The Biblical data concerning the character and deeds of Solomon are not of uniform historical value. As authentic beyond question must pass the account of his elevation to the throne (II Sam. xii. 24; I Kings i. 5 *et seq.*); the violent removal of Adonijah, the rightful heir, as well as of his supporters (*ib.* i. 6; ii. 13 *et seq.*, 28); and the murder of Joab and Shimei (*ib.* ii. 36 *et seq.*). That in resorting to these measures Solomon merely executed his father's injunction is an afterthought (*ib.* ii. 5 *et seq.*) interpolated to cleanse Solomon's memory from the stigma. This is apparent through comparison with the more trustworthy accounts of the manner in which Solomon's agents were rewarded (Benaiah, *ib.* ii. 35, iv. 4; Zadok, *ib.* iv. 4; Nathan's sons, *ib.* iv. 5). That Solomon showed political sagacity is authenticated by the narratives, resting on good foundations, concerning his alliances by treaty or marriage with neighboring dynasties, the erection of fortresses, and the organization of his army after Egyptian models (see Eduard Meyer, "Gesch. des Alterthums," i., § 319); and under him the process of absorbing the non-Hebrew aboriginal population was carried to a certain culmination which contributed not a little toward making his reign a peaceful one (I Kings ix. 20). Similarly the story of his extensive building operations (*ib.* vi. 1, ix. 11) and that of the redistricting of the empire for taxing purposes reflect actual conditions.

Murder of Joab and Shimei.

A critical sifting of the sources leaves the picture of a petty Asiatic despot, remarkable, perhaps, only for a love of luxury and for polygamous inclinations. Solomon certainly could not hinder Edom's independence under Hadad (I Kings xi. 14 *et seq.*)—an event which could not have taken place at the beginning of his reign; otherwise the Hebrew king could not have sailed from Ezion-geber. The rise of Damascus (*ib.* xi. 23 *et seq.*) was another fatal check to his foreign policy. His naval excursions were planned not so much with a view to promoting commerce as with an eye to securing the appointments regarded as indispensable for the proper equipment of the court of an Oriental despot (*ib.* x. 22, 28 *et seq.*; II Chron. i. 16 *et seq.*). Nor was the building of the Temple an act of particular devotion to Yhwh, as the facts show that Solomon did not scruple to erect sanctuaries to other deities (I Kings xi. 4 *et seq.*). These edifices contributed to the splendor of the capital, and were a source of revenue to the court; but Solomon's administration of the country, by its disregard of the old tribal units and its unequal assessment of taxes, rearoused the slumbering jealousy and discontent of the northern section, and did more than anything else to disrupt David's empire.

The Building of the Temple.

In the Deuteronomic Historiography.

Later, when the Temple had actually become the religious center of the Judean kingdom, its builder, Solomon, was naturally credited with the religious convictions of the age. The prayer at the dedication (*ib.* viii. 14 *et seq.*) reflects the Deuteronomic prophetic point of view. The young Solomon is represented in this Deuteronomic historiography as one of the wisest of men (*e.g.*, in the narratives of his dream and of his judgment), far famed for his wealth, which was the reward for his craving for wisdom, but still more renowned for his wonderful sagacity, his proverbs and sayings, so that the Queen of Sheba could not resist the desire to pay him a visit. According to this historiography, only after old age had robbed him of his mental powers did Solomon fall a victim to the blandishments of the alien women in his harem, and thus was held accountable for the empire's decline (*ib.* xi. 1 *et seq.*).

Deut. xvii. 14 gives a more accurate account of the conditions under Solomon. Later, the Chronicler removes every reproach from Solomon. He does not mention Adonijah's assassination, the rebellion of Hadad and Rezon, or Solomon's idolatry and polygamy. In keeping with the tendency to connect some great man with certain literary compositions—*e.g.*, Moses with the Law, David with the Psalms—Solomon now passes for the author par excellence of gnomic sayings—of the Proverbs and even of other "Wisdom" books, Ecclesiastes, the Song of Songs, and Psalms (Ps. lxxii., cxxvii.; comp. the Psalms of Solomon). Later rabbinical and Mohammedan lore continues along similar lines to establish Solomon as a veritable wonder of wisdom, learning, power, and splendor (comp. Stade, "Geschichte des Volkes Israel," i. 310 *et seq.*). E. G. H.

——**Apocryphal Works:** Solomon, having been the wise king par excellence, was regarded later as the author of various works treating of all the sciences and particularly of magic. The legend of Solomon and Asmodeus (see Solomon in Rabbinical Literature) was current as early as the time of Josephus, who states ("Ant." viii. 2, § 5) that God enabled Solomon to acquire skill to expel demons and that he left collections of incantations and directions as to the use of exorcisms (comp. Origen, "Epistola ad Mattheam," xxvi. 63; Nicetas Choniates, "Annales," p. 95). Other writings of Solomon are quoted by Eusebius ("Præparatio Evangelica," ix. 31), Suidas (*s.v.* 'Εζεκιας), and Michael Glycas ("Annales," ii. 183), while Maimonides ("Yad," Ḳiddush ha-Ḥodesh, xvii., and elsewhere) ascribes to Solomon works on mathematics, and Shem-Ṭob Falaquera (in "Sefer ha-Ma'alot") attributes to him works on physics and theology.

Arabic Works.

The chief source of the pseudo-Solomonic works is Arabic literature, in which connection the legend that Solomon was the inventor of the Arabic and Syriac scripts is of interest. It is, indeed, supposed by the Arabs that Solomon wrote orginally in Arabic various scientific works. Abraham Jagel in the fourth part of his "Bet Ya'ar ha-Lebanon" (quoted in "Kerem Ḥemed," ii. 41 *et seq.*) says that Solomon wrote his scientific works in another language than Hebrew so that they might be understood by the foreign kings who came to hear his wisdom (comp. I Kings v. 14). Besides two works of Solomon quoted in the Zohar (see below), Johanan Allemanno enumerates in "Sha'ar ha-Ḥesheḳ," the introduction to his "Ḥesheḳ Shelomoh," thirty works of Solomon taken chiefly from the writings of Abu Aflah al-Sarakosti and Apollonius of Tyana. The Arabic work of the former on palm-trees, the title of which was probably "Kitab al-Nakhlah," was translated (in the fourteenth century ?) into Hebrew under the title "Sefer ha-Tamar" or "Sefer ha Temarim." The chief authority in this work is Solomon; and the author, besides, quotes twenty aphorisms ("ma'amarim") of that king, each of which, with the exception of the first, refers to a special work. There is, however, a difference, with regard to the titles of a few works, between the "Sefer ha-Temarim" and the "Sha'ar ha Ḥesheḳ" as well as between the two manuscripts of the latter work. Several other works ascribed to Solomon are enumerated by Fabricius in his "Codex Pseudepigraphus Veteris Testamenti," i. 1014 *et seq.*

The following is a list of the pseudo-Solomonic works, beginning with those which are better known: (1) "Sifra di-Shelomoh Malka," or "The Book of King Solomon," quoted in the Zohar (i. 76b *et passim*, iii. 10b *et passim*). As this work is once (iii. 193b) referred to as "Sifra de-Ḥokmeta di-Shelomoh Malka," *i.e.*, "The Book of Wisdom of King Solomon," it would seem that the Wisdom of Solomon is meant (comp. Wolf, "Bibl. Hebr." iii. 1033). (2) "Sifra de-Ashmedai," a work quoted in the Zohar under various titles signifying respectively "The Book of Asmodeus, Which He Gave to King Solomon" (Zohar iii. 194b), "The Book of Asmodeus the King" (*ib.* 77a), "The Magic Book of Asmodeus" (*ib.* iii. 43a), "The Magic Book Which Asmodeus Taught King Solomon" (*ib.* ii. 128a), and, finally, "The Book Which Asmodeus Left for King Solomon" (*ib.* iii. 19a). This work is supposed to be the book of magic containing formulas for subjugating demons and the authorship of which is so often ascribed to Solomon; it may be identical with the

Hebrew Works.

"Kitâb al-'Uhud," mentioned by D'Herbelot in his "Bibliothèque Orientale" (comp. Wolf, *l.c.* iii. 1035). (3) "Sefer ha-Refu'ot," on medicaments. This work, which is referred to by Abu Aflaḥ in his citation of the fourteenth of Solomon's aphorisms, is known from other sources also; thus Naḥmanides, also, in the introduction to his commentary on the Pentateuch mentions the "Sefer ha-Refu'ot" written by Solomon. Abraham Jagel (*l.c.*) relates that in his time there came to Rome, from the King of Armenia to Pope Clement VIII., an envoy who disparaged the European physicians, declaring that in his own country they used medical works left to them by Solomon which were more nearly complete and more systematic than the European works. Jagel thinks it is quite possible that the Armenians might possess medical works of Solomon inasmuch as they have always remained in their own country, while the Jews, being driven from one country to another, would be likely to lose them. It is very likely that this is the book of medicine which Hezekiah concealed (see Hezekiah in Rabbinical Literature).

The "Claviculæ Salomonis."

Closely connected with the last-mentioned work is (4) "Sefer Raziel," as at the end of the description of the book of medicine transmitted by the angel Raziel to Noah (Jellinek, "B. H." iii. 160; see Noah in Apocryphal and Rabbinical Literature) it is said: "To Solomon was revealed the book of secrets ["Sefer ha-Razim"] by means of which he ruled over demons and everything in the world" (see Raziel, Book of). It seems that the authority who ascribed the "Book of Raziel" to Solomon confounded "Sefer Raziel" and "Sefer ha-Razim." (5) "Mafteaḥ Shelomoh," containing incantations, and mentioned by Gedaliah ibn Yaḥya ("Shalshelet ha-Ḳabbalah," p. 80a, Amsterdam, 1697) as extant in Hebrew. This work exists in various translations (Latin, French, Italian, and German), and consists mainly of two parts: the first containing secrets useful for every kind of divination; the second, different kinds of pentacles. The title in the Latin and German translations is "Claviculæ Salomonis," extended in the German translation of 1626 to "Claviculæ Salomonis et Theosophia Pneumatica." In the Latin translation is a long introduction in the form of a dialogue between Solomon and his son Rehoboam in which the title of the work is cited as "Secretum Secretorum" (Secret of Secrets). "But," Solomon says, "I named it also 'Clavicula,' because, like a key which opens a treasure, so this work introduces thee into the magical arts." The introduction says further that when the Babylonian philosophers decided to renew Solomon's tomb, they found therein this work, enclosed in an ivory case; but that none of them could understand it, they being unworthy to possess it. Then one of them, the Greek Zoe, proposed that they should fast and pray to God for intelligence. Zoe alone, however, carried out this proposal; and an angel revealed to him the mysteries of the book.

Works Indorsed by the Sages.

The following four works are mentioned by Allemanno as quoted by Apollonius: (6) "Beḥirat ha-Middot," on the choice of attributes, perhaps identical with the "Sefer ha-Beḥirot" quoted by Abu Aflaḥ. (7) "Ha-Mar'ot ha-Elyonot" (The Upper Mirrors). (8) "Yemli'ush" (?). (9) "Melakah Elohit," or "The Divine Work." All these four works are supposed to have been written by Solomon at the angels' dictation. Steinschneider thinks that the "Melakah Elohit" was composed by Apollonius himself, and that it may be identical with the work cited by Allemanno in another passage of the "Sha'ar ha-Ḥesheḳ" as "Meleket Muskelet." According to Sylvestre de Sacy (in "Notices et Extraits des Manuscrits Arabes," iv. 119), the full Arabic title of this work is "Sirr al-Khaliḳah wa-Ṣana'at al-Ṭabi'ah" (The Secret of Creation and the Work of Nature). It is therefore identical with a work which is ascribed to Solomon and the Hebrew title of which is "Sod ha-Ṭib'im," mentioned in Jacob Provençal's responsum published in the "Dibre Ḥakamim" (Metz, 1849) of Eliezer Ashkenazi. (10) "Sefer ha-Miẓpon," a work on alchemy. The other works quoted by Abu Aflaḥ are: (11) "Sefer ha-Nisyonot," on experiments; (12) "Sefer ha-Ziḳnah," on old age; (13) "Sefer ha-Meshalim," on parables; (14) "Sefer ha-Shelemut," on perfection; (15) "Sefer ha-Ma'alalim," or "The Book of Works"; (16) "Sefer ha-Yiḥud," on unity; (17) "Sefer ha-Derishah," on research; (18) "Sefer Ḳeri'at ha-Shemirah," on the observance of certain customs; (19) "Sefer ha-Raẓon," on the will; (20) "Sefer Gillui ha-Shaḳrut," on the detection of falsehood; (21) "Sefer ha-Yashar"; (22) "Sefer ha-Baḳḳashah," on supplication, missing in Allemanno's list; (23) "Sefer ha-Emunah," on faith; (24) "Sefer ha-Beḥirot" (comp. No. 6); (25) "Sefer ha-Nebu'ah," on prophecy, not mentioned by Steinschneider; (26) "Sefer Shemirut ha-Zeruz," on promptness; (27) "Sefer Kittot ha-Ḥakamim," on the various sects of wise men; (28) "Sefer ha-Takliyot," on the end of all things. Allemanno calls attention to three works of Solomon particularly recommended by sages, one of which is the "Sefer Raziel" (see No. 4) and the other two are (29) "Meleket Muskelet" (comp. No. 9), and (30) "Sefer ha-Almadil." This title, probably from the Arabic "al-mudhil" (= "the secret revealer"), figures in the Latin manuscript No. 765 of the Leipsic Library ("Catalogo Kühtzii," No. 11) as "Almodal de Duodecim Choris Angelorum in Aquis Supra-Cœlestibus." Wolf (*l.c.* i. 111) calls the work "Almandel," deriving it from the Arabic "al-mandal" (= "a circle"), that is to say, the circle described by magicians on the ground and in the center of which they sit when invoking demons. The Leipsic catalogue enumerates the following works by Solomon: (31) "Speculum Salomonis" (in German), on metallurgy (comp. No. 7); (32) "Preparatio Speculi Salomonis Insignis," also in German; (33) "Semiphoras" (שם המפרש), that is to say, the Tetragrammaton, a treatise in German on the unutterable name of God; (34) "Septem Sigilla Planetarum"; (35) "Anelli Negromantici dal Salomone" (in Italian), on necromancy; (36) "Verum Chaldaicum Vinculum," also with the German title "Wahrhafte Zubereitung des so Genanten Cinguli Salomonis oder Salomons Schlange"; (37) "Beschwerungen der Olympischen Geister"

(38) "Salomonis Trismosini," called in the Leyden catalogue (p. 367) "Criszmosin," and described as a treatise on colors; Wolf (*l.c.* iv. 983), however, describes it as a cabalistic work.

Albertus Magnus in his "Speculum Astrologicum" (quoted by Fabricius, *l.c.* p. 1051) mentions the following four works of Solomon's: (39) "Liber Quatuor Annulorum"; (40) "De Novem Candariis [Candelariis ?]"; (41) "De Tribus Figuris Spirituum"; "De Sigillis ad Dæmoniacos." Trithemius (in Fabricius, *l.c.* p. 1052) mentions: (42) "Lamené" (?), perhaps identical with No. 8; (43) "Liber Pentaculorum," probably identical with No. 5; (44) "De Officiis Spirituum"; (45) "De Umbris Idearum"; (46) "Hygromantia ad Filium Roboam"; (47) Τὼν *Σολομωνιακῶν Εἴδησις*, mentioned by Fabricius (*l.c.* pp. 1046, 1056) from other sources; (48) "Somnia Salomonis" (Venice, 1516); and (49) "Liber de Lapide Philosophico" (Frankfort-on-the-Main, 1625).

T. M. Sel.

SOLOMON, SEAL OF: The legend that Solomon possessed a seal-ring on which the name of God was engraved and by means of which he controlled the demons is related at length in Giṭ. 68a, b. This legend is especially developed by Arabic writers, who declare that the ring, on which was engraved "the Most Great Name of God," and which was given to Solomon from heaven, was partly brass and partly iron. With the brass part of the ring Solomon signed his written commands to the good genii, and with the iron part he signed his commands to the evil genii, or devils. The Arabic writers declare also that Solomon received four jewels from four different angels, and that he set them in one ring, so that he could control the four elements. The legend that Asmodeus once obtained possession of the ring and threw it into the sea, and that Solomon was thus deprived of his power until he discovered the ring inside a fish (Jellinek, "B. H." ii. 86–87), also has an Arabic source (comp. D'Herbelot, "Bibliothèque Orientale," *s.v.* "Soliman ben Daoud"; Fabricius, "Codex Pseudepigraphicus," i. 1054; and see Solomon in Arabic Literature). The legend of a magic ring by means of which the possessor could exorcise demons was current in the first century, as is shown by Josephus' statement ("Ant." viii. 2, § 5) that one Eleazar exorcised demons in the presence of Vespasian by means of a ring, using incantations composed by Solomon. Fabricius (*l.c.*) thinks that the legend of the ring of Solomon thrown into the sea and found afterward inside a fish is derived from the story of the ring of Polycrates, a story which is related by Herodotus (iii. 41 *et seq.*), Strabo (xiv. 638), and others, and which was the basis of Schiller's poem "Der Ring des Polykrates."

The Arabs afterward gave the name of "Solomon's seal" to the six-pointed star-like figure (see Magen Dawid) engraved on the bottom of their drinking-cups. It is related in the "Arabian Nights" (ch. xx.) that Sindbad, in his seventh voyage, presented Harun al-Rashid with a cup on which the "table of Solomon" was represented; and Lane thinks that this was the figure of "Solomon's seal" (note 93 to ch. xx. of his translation of the "Arabian Nights"). In Western legends, however, it is the pentacle, or "druid's foot," that represents the seal. This figure, called by Bishop Kennet the "pentangle" of Solomon, was supposed to have the power of driving away demons. Mephistopheles says to Faust that he is prevented from entering the house by the druid's foot ("Drudenfuss"), or pentagram, which guards the threshold ("Faust," in Otto Devrient's edition, part i., scene 6). The work entitled "Claviculæ Salomonis" contains treatises on all kinds of pentacles. The tradition of Solomon's seal was the basis of Büschenthal's tragedy "Der Siegelring Salomonis," specimens of which are given in "Bikkure ha-'Ittim," v. 3 *et seq.* (German part). A work regarding a magic signet-ring is ascribed to Solomon (see Solomon, Apocryphal Works of). See also Asmodeus; Solomon in Rabbinical Literature.

SOLOMON, TEMPLE OF. See Temple.

SOLOMON, TESTAMENT OF: Pseudepigraphic treatise on the forms and activities of demons and the charms effective against them. Extracts from the work are given by Fabricius ("Codex Pseudepig. Vet. Test." i. 1047) from the notes of Gilbertus Gaulminus on Psellus' tract "De Operatione Dæmonum," but the full text was first published (as far as appears) by F. F. Fleck in his "Wissenschaftl. Reise" (ii. 3); he states (*ib.* i. 2) that he found the Greek manuscript in the Royal Library at Paris, and that, apparently, it had never been published. An annotated German translation is given by Bornemann in Ilgen's "Zeitschrift für Hist. Theologie," 1844, and the Greek text is printed, with Latin translation, in Migne's "Patrologia Græco-Latina," vol. cxxii., as an appendix to the treatise of Psellus. The text seems to have suffered at the hands of scribes.

The Testament professes to be Solomon's own account of certain experiences of his during the building of the Temple. Learning that his chief overseer was plagued by a demon who every evening took the half of his wages and his food, and drew the life out of him by sucking the thumb of his right hand, he appealed for help to God, and received through the angel Michael a seal-ring of magic power. With this he controlled the offending demon, and forced him to bring the chief of the demons, Beelzebub. The latter then was compelled to bring another, and he another, till there had appeared before the king a great number of them, of both sexes, and of such variety and dreadfulness of form as the imagination of the author could conceive. To each Solomon addresses a series of questions: the demon is compelled to give his name and abode (especially to say with what star he is connected), his origin (from what angel), to describe his malefic functions, to say what angel has power over him, and, in some cases, to tell the word (usually a divine name) by which he may be driven away. Some of the names of the angels and demons are familiar; others are strange or unintelligible, perhaps corrupt forms. Probably they were not invented by the author (though this may be true of some of them), but were the product of centuries of magical tradition. At the end of the Testament, Solomon's fall into idolatry and his consequent loss of power over the demons are attributed to his infatuation for a Jebusite woman, who acquired power over him by magic.

The book is a crude formulation of conceptions regarding demonic power that were almost universal in the Jewish and the Christian world for many centuries (see Magic). The belief that Solomon had power over demons is found as early as Josephus ("Ant." viii. 2, § 5); the Book of Enoch shows the disposition to multiply demonic names; and the character of Asmodeus in the Testament is taken from the Book of Tobit. The demonological literature of the first thousand years of the common era is enormous. The author of the Testament was a Greek-speaking Jewish Christian: the demons, it is said, will rule the world till the Son of God, who is spoken of as born of a virgin, shall be hung on the cross. The date of the work can not be fixed precisely. Bornemann discovers a close resemblance between its demonological conceptions and those of the "Institutiones" of Lactantius (about the year 300), and it is probable that it belongs not far from that time. T.

SOLOMON B. AARON TROKI. See Troki.

SOLOMON, ABRAHAM: English artist; born in London May, 1824; died at Biarritz in 1862. At the age of eighteen he was admitted as a student to the school of the Royal Academy, where he gained a medal for drawing from the antique. From 1843 to the year of his death he was a regular contributor to the annual exhibition of the academy, and occasionally to the gallery of the British Institution. His first picture was a scene from Crabbe's poems, "The Courtship of Ditchem"; but the picture which brought him into prominence was "The Breakfast Table," exhibited in 1846. His later pictures gave evidence of a growing originality, and found ready purchasers. Among these were the following: "The Rival Beauties"; "Waiting for the Verdict," 1857, with its sequel, "The Verdict," 1859; "First and Third Class"; and "Found Drowned." Most of these became popular through engravings. One of his pictures, "The Fortune-Teller," was purchased by Alderman Salamons, and another, "Found Drowned," received a prize from the Liverpool Academy of Fine Arts.

SOLOMON B. ABRAHAM ADRET. See Adret.

SOLOMON BEN ABRAHAM IBN DAUD: Physician and translator. According to Kaufmann and Gross, Solomon belonged to the family of the Spanish translator Abraham ben David ha-Levi of Toledo. Solomon translated, under the title of "Miklol," Averroes' medical work "Kulliyyat" (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2212; Paris, Bibliothèque Nationale, No. 1172). Steinschneider supposes that Solomon is identical with the Solomon Daud who is believed to have translated into Hebrew, from the Arabic, the psychological and metaphysical treatise found in manuscript in the Turin Library (Peyron Cat., No. 212, p. 226).

Bibliography: Carmoly, *Histoire des Médecins*, p. 103; Gross, in *Monatsschrift*, 1879, p. 125; Kaufmann, in *Göttinger Gelehrte Anzeigen*, 1883, p. 547; Steinschneider, *Cat. Bodl.* col. 2267; idem, *Hebr. Uebers.* p. 672.

S. I. Br.

SOLOMON BEN ABRAHAM BEN JEHIEL: Italian rabbi; flourished at Rome in the eleventh century; nephew of Nathan b. Jehiel, the author of the "'Aruk." About a quarter of a century after Nathan's death Solomon was a member of the rabbinate of Rome, of which he was for some time president. He was, besides, the chief of Nathan's high school ("Shibbole ha-Leḳeṭ," part ii., No. 56). His authority in rabbinics is seen in the fact that he is quoted in the work just mentioned (part i., No. 128), in a responsum to a question as to why the Eighteen Benedictions (Shemoneh 'Esreh) are not recited on Sabbaths and holy days. He repeatedly answered questions of Menahem b. Solomon b. Isaac (*ib.* part ii., Nos. 56, 57, 75 [No. 75 being in connection with the benediction recited at a marriage ceremony]). Besides these responsa there is extant one which was sent by the rabbinate of Rome to the community of Paris (published by S. D. Luzzatto in "Bet ha-Oẓar," i. 59a *et seq.*), and the first signature to which is that of Solomon, as president.

Bibliography: S. Buber, preface to his edition of the *Shibbole ha-Leḳeṭ*, note 186; Vogelstein and Rieger, *Gesch. der Juden in Rom*, i. 220, 367.

SOLOMON BEN ABRAHAM HA-KOHEN OF SERES (MaHaRShaḲ): Oriental Talmudist; lived at Salonica in the second half of the sixteenth century. His teacher was Joseph Firman. He was the author of "She'elot u-Teshubot," divided into three parts. The first part of the work contains 197 responsa, a commentary on Maimonides' laws concerning divorce, and halakic novellæ (Salonica, 1586); the second part comprises 263 responsa, besides novellæ on the Tosafot (Venice, 1592); the third part contains 122 responsa (Salonica, 1594). Special editions of the work, including Maimonides' laws on divorce, the halakic novellæ, and the novellæ on the Tosafot, were published at Wilmersdorf in 1720 and at Salonica in 1730.

Bibliography: Conforte, *Ḳore ha-Dorot*, p. 38b; Azulai, *Shem ha-Gedolim*, i. 60; Fürst, *Bibl. Jud.* iii. 204; Steinschneider, *Cat. Bodl.* col. 2361.

E. C. I. Br.

SOLOMON BEN ABRAHAM BEN SAMUEL: French Talmudist of the first half of the thirteenth century. He was rabbi at Montpellier, and leader of the movement against Maimonides. When Ibn Tibbon's translation of the "Moreh Nebukim" became known in southern France, it was freely accepted by the liberal Jews; but the strictly orthodox, who adhered firmly to the Talmud, regarded it askance and secretly condemned it. No one, however, dared to express open disapproval of the study of this book until Solomon threw down the gauntlet to the Maimonists. It would be natural to infer from this proceeding, which divided Judaism into two hostile camps, that Solomon had had a philosophical training which enabled him to recognize the import of Maimonides' ideas, and the contradictions existing between the latter's conception of Judaism and that of the Talmud.

Solomon, however, as Luzzatto has definitively proved, while a prominent Talmudic authority and a pious, upright character, who had taken up the quarrel with the best intentions, was unable to comprehend Maimonides' views correctly, and had no idea of a philosophical conception of Judaism. He attacked Maimonides on minor, incidental points, *e.g.*, for his refusal to take the haggadic opinions of the Talmud in their simple, often offensive, literal sense; for his explanation of many miracles by means of natural processes; for his description of paradise and hell in other than haggadic colors; and for his conception of the Godhead on other than anthropomorphic lines. As Graetz happily remarks, Solomon, with his childish views and his clumsy ideas, regarded nearly every word of Maimonides as un-Jewish and heretical. Solomon knew enough, however, to understand that single-handed he would be powerless to make headway against Maimonides' great authority, which prevailed even after his death, and against his numerous adherents. He therefore sought allies; but his demands for the interdiction of scientific studies found little support among the scholars of southern France, only two of his pupils, Jonah ben Abraham Gerondi (Naḥmanides' relative) and David ben Saul, joining him. These three pronounced (in the beginning of the year 1232) a sentence of excommunication on Maimonides' works, on those who studied them, and on those who construed the Scripture otherwise than literally and interpreted the Haggadah at variance with Rashi. Several rabbis of northern France subsequently confirmed this sentence.

This proceeding aroused a storm of indignation among the followers of Maimonides. The communities of Provence, which stood foremost in point of culture, now excommunicated Solomon and his two disciples and hastened to find allies. The controversy became more fierce, the adherents of both parties increasing and growing more bitter; and the discord threatened to spread throughout all Jewry. Many of the rabbis of northern France, frightened at the unexpected consequences, retired from the controversy; but Solomon, whose bigotry knew no bounds, decided upon a shameful and dangerous step. He went to the Dominican monks; and on a certain day in 1233 the citizens of Montpellier saw servants of the Church, filled with hatred of the Jews and incited by an overpious rabbi, publicly burn the works of the greatest rabbi of post-Talmudic times. The news of this event filled all the Jews with horror; and Solomon and his pupils were universally condemned, his follower Al-Fakhkhar trying vainly to excuse him. But the matter did not rest there; Solomon, believing that he had gained nothing by destroying the works of Maimonides so long as his admirers were still in the field, denounced them to the authorities. It seems, however, that the Maimonists, with the help of friends in favor at the court of King James of Aragon, paid Solomon back in his own coin; for several of the calumniators in his party had their tongues cut out. The fate of Solomon himself is not known. Luzzatto infers from the epithet "Ḳadosh" applied to him that he also suffered this shameful mutilation.

SOLOMON COHEN OF LISSA. See Cohen, Solomon ben Eliezer Lipmann of Lissa.

SOLOMON, EDWARD: English musician and composer; born in London 1856; died there Jan. 22, 1895. Solomon, who was largely a self-taught musician, gained considerable reputation as a composer of light opera; he possessed the gift of creating pleasing melody, and evinced great talent for effective orchestration. He conducted many comic operas, and wrote many successful opera bouffes, somewhat after the style of the Gilbert-Sullivan operettas. Of his compositions the following may be mentioned: "Billee Taylor," produced at the Imperial Theatre, London, 1880; "Claude Duval," "Love and Larceny," and "Quite an Adventure," 1881; "The Red Hussar," "The Nautch Girl," "The Vicar of Bray," "Lord Bateman, or Picotee's Pledge," and "Through the Looking-Glass" (farce), 1882; "Paul and Virginia," 1883; "Polly," 1884; and "Pocahontas," 1885.

His brother **Frederick Solomon** sang in "Billee Taylor" in the provinces (1883), and is the composer of the comic opera "Captain Kidd, or The Bold Buccaneer," produced at the Prince of Wales' Theatre, Liverpool, on Sept. 10, 1883.

J. G. L.

SOLOMON, EDWARD S. (known also as **Salomon**): American soldier and jurist; born at Sleswick, Sleswick-Holstein, Dec. 25, 1836. On completing his education at the high school of his native town he emigrated to the United States and settled in Chicago, where he was elected alderman in 1860. At the outbreak of the Civil war he joined the Twenty-fourth Illinois Infantry as second lieutenant, participating in the battles of Frederickton and Mainfordsville, Kentucky, and being promoted step by step to the rank of major (1862). On account of some disagreement among the officers of the regiment Major Solomon—together with some comrades—resigned, and organized the Eighty-second Illinois Infantry, in which regiment he became lieutenant-colonel, and then advanced to colonel. Under General Howe, Solomon took part in the battles of Chancellorsville, Gettysburg, Chattanooga, Lookout Mountain, and Missionary Ridge. In 1865 he was brevetted brigadier-general. When peace was restored he settled in Chicago, and became county clerk of Cook county, Ill. In 1870 President Grant appointed him governor of Washington territory, from which position he resigned in 1874, removing to San Francisco, where he still (1905) resides. He has been twice elected to the legislature of California, and has also held the office of district attorney of San Francisco.

Solomon was one of the department commanders of the Grand Army of the Republic, and for eight years commander-in-chief of the Army and Navy Republican League.

A. F. T. H.

SOLOMON THE EGYPTIAN (המצרי): Physician in ordinary to the Byzantine emperor Emanuel Comnenus; lived at Constantinople in the second half of the twelfth century. According to Benjamin of Tudela, who visited that city in 1176, Solomon was highly esteemed by the emperor, and through his influence the Jews of Constantinople, though in a state of oppression, enjoyed many advantages. It was probably due to Solomon's intervention that Emanuel Comnenus placed the Jews of his capital under the jurisdiction of the municipal authorities.

S. I. BR.

SOLOMON BEN ELIEZER HA-LEVI: Turkish Talmudist of the fifteenth and sixteenth centuries; brother of Abraham b. Eliezer ha-Levi, who quotes him in his "Ma'amar ha-Yiḥud." Solomon was the author of "Moreh Ẓedeḳ," or "'Abodat ha-Lewi" (published perhaps at Constantinople in 1516), a treatise on the 613 commandments, indicating the passages of the Talmud, Sifra, Sifre, Mekilta, Maimonides' "Yad," and later rabbinical literature in which they are treated. According to Shabbethai Bass ("Sifte Yeshenim," *s.v.* "Moreh Ẓedeḳ"), the first part is entitled "Moreh Ẓedeḳ," and the second part "'Abodat ha-Lewi." Solomon states, in the introduction, that he composed this work when he was still very young. Confusing Solomon's brother, mentioned above, with Abraham ha-Levi of Adrianople, Solomon Athias (preface to his commentary on Psalms) credits the latter with the authorship of the "'Abodat ha-Lewi."

BIBLIOGRAPHY: Benjacob, *Oẓar ha-Sefarim*, pp. 310 (No. 814), 428 (No. 26); Fürst, *Bibl. Jud.* iii. 224; Steinschneider, *Cat. Bodl.* cols. 2309 *et seq.*

W. B. M. SEL.

SOLOMON BEN ELIJAH SHARBIṬ HA-ZAHAB: Oriental astronomer, poet, and grammarian; lived at Salonica and later at Ephesus, in the second half of the fourteenth century. Steinschneider supposes that the name "Sharbiṭ ha-Zahab" is the Hebrew equivalent of the Greek name "Chrysakokka," borne by the translator of the Persian "Astronomical Tables," which Solomon rendered into Hebrew, perhaps under the title "Mahalak ha-Kokabim" (Paris, Bibliothèque Nationale, MS. No. 1042; Vatican MS. No. 393). Another of Solomon's translations from the Greek, still extant in manuscript in various libraries, is the treatise of Ptolemy on the astrolabe. In addition to these translations, Solomon wrote "Ḥesheḳ Shelomoh," a grammatical treatise (Bibliothèque Nationale MS. No. 1042); a commentary written at the request of some prominent Jews of Ephesus on the "Sefer ha-Shem" of Ibn Ezra; and a great number of liturgical poems, some of which are found in the Roman Maḥzor. Several of Solomon's poems (among which one on the alphabet, entitled "Otiyyot ha-Ḳodesh Meribot Zu 'im Zu," is a masterpiece of elegance) have been published by David Kohen ("Aḥiasaf," 1893). Solomon wrote also a commentary on the Pentateuch, in which he vehemently attacked Karaite Biblical interpretations. Against these attacks was directed the "Iggeret ha-Ẓom" of Elijah Bashyaẓi.

T. I. BR.

SOLOMON BEN ENOCH AL-ḲUSṬANṬINI: Spanish exegete of the first half of the fourteenth century. Grätz believes that Solomon belonged to the Al-Ḳusṭanṭini family of Saragossa, several members of which took a prominent part in the controversy over Maimonides' "Moreh Nebukim." Solomon was the author of a commentary on the Pentateuch entitled "Megalleh 'Amuḳḳot," which is still extant in manuscript in the Vatican Library (No. 399) and which is quoted by Samuel Ẓarẓa of Valencia in his philosophical commentary on the Pentateuch. A firm believer in astrology, Solomon endeavored to demonstrate from the Bible and the Talmud that the stars exercise a great influence on the destiny of man.

E. C. I. BR.

SOLOMON THE EXILARCH: **1.** Eldest son of the exilarch Ḥasdai; ruled from 730 to 761. In consequence of a dearth of teachers, he found it necessary to install as head of the Academy of Sura a scholar from Pumbedita, though this was contrary to traditional usage. According to Grätz, this scholar was Mar ben Samuel; according to Weiss, Mar Rab Judah ben Rab Naḥman. The fact that Solomon was childless rendered possible the rise to influence of Anan, the founder of the Karaite sect.

2. Another exilarch of the same name, **Solomon b. Ḥasdai**, flourished in the middle of the twelfth century. He was promoted to the exilarchate by Calif Mohammed al-Muktafi. He did not descend in a direct male line from the Davidic house, but from the Palestinian patriarchs, that is, from Hillel, through the female branch. Solomon was a Talmudic scholar, and during his rule R. Ali held the office of head of the newly founded seminary of Bagdad. Solomon left one son, Daniel, who died without issue.

J. S. O.

SOLOMON, HENRY NAPHTALI: English Hebraist and educationist; born in London 1796; died there Nov. 12, 1881. He was a son of R. Moses Eliezer Solomon, who kept a school at Brixton, where Henry Solomon received his education. Solomon was head master of the Jews' Free School from 1817 to 1822; in the latter year he opened a school in Queen's square, London, subsequently removed to Hammersmith, and in 1838 permanently took up his abode at Edmonton. He was one of the founders of the Jews' and General Literary and Scientific Institution, and was among the pioneers in the Anglo-Jewish pulpit, preaching for some years in the St. Albans Synagogue. He translated the Jewish prayer-book, was a voluminous and versatile writer, and contributed (1833) to the "Hebrew Review," which periodical he ineffectually endeavored to place on a firm basis. For more than forty years Solomon taught at Edmonton, where he was highly respected; his pupils were numbered among every class of the community.

SOLOMON B. ISAAC (RASHI). See Rashi.

SOLOMON BEN ISAAC OF ORLEANS: French tosafist of the twelfth century; elder colleague of the tosafist Joseph ben Isaac of Orleans, together with whom he signed responsa ("Sefer ha-Yashar," pp. 70–71, Vienna, 1810). Eliezer ben Joel ha-Levi, who quotes a responsum signed by Solomon and Joseph (MS. Halberstam No. 925), states that he does not know whether or not the R. Solomon in question is Rashi, which proves that these two scholars were sometimes confounded with each other. Solomon carried on a learned correspondence with his contemporary Rabbenu Tam, who addresses him either by his full name or simply as "Rabbi Solomon."

Bibliography: Zunz, *Z. G.* p. 75; Gross, *Gallia Judaica*, p. 34.

W. B. A. Pe.

SOLOMON BEN JEROHAM (Arabic name, **Sulaim ibn Ruḥaim**): Karaite exegete and controversialist; flourished at Jerusalem between 940 and 960. He was considered one of the greatest authorities among the Karaites, by whom he is called "the Wise" ("ha-Hakam"), and who mention him after Benjamin Nahawendi in their prayers for their dead great teachers (Karaite Siddur, i. 137b). Like all the Karaite leaders, Solomon was a zealous propagandist; and in his polemics against the Rabbinites he displayed, more than any of his predecessors, that partizanship and spirit of intolerance which became the characteristic feature of the later Karaitic literature. In a work entitled "Milḥamot Adonai," of which he produced also an Arabic version that is no longer in existence, Solomon violently attacks the Rabbinites, especially Saadia, to whom he applies many derogatory epithets. It is written in verse and is divided into nineteen chapters, each of which contains twenty-two four-lined strophes. After having endeavored in the first two chapters to demonstrate the groundlessness of the oral tradition, he refutes the seven arguments advanced in its behalf by Saadia in the introduction to his commentary on the Pentateuch. Then he criticizes Saadia's views on the Jewish calendar, the laws concerning incest, the celebration of the second days of the feasts, etc., and accuses him in the harshest of terms of having, in his polemics against the Karaites, used arguments which are in direct opposition to the teachings of the Mishnah and the Talmud, and which consequently he must have known to be false. The "Milḥamot Adonai" is extant in manuscript in various European libraries; and parts of it have been published by Pinsker, Geiger, and Kirchheim.

His Polemical Works.

The same spirit of intolerance and partizanship prevails in Solomon's Bible commentaries. He never failed to seize an opportunity of abusing the Rabbinites and their representative, Saadia. His commentary on the Psalms breathes a deep hatred of all foreign nations; and he repeatedly denounces the study of secular subjects. He would not allow the Karaites to study even foreign languages, still less philosophical works. The theories of Euclid and Ptolemy were, in his opinion, contrary to the teachings of the Law. Of his Bible commentaries, which were written in Arabic, only one, that on Lamentations, finished in 955 or 956, has been published (by Solomon Feinstein, Cracow, 1898); most of the others remain in manuscript: on Canticles (Brit. Mus. Hebr. MS. No. 308); on Ruth (St. Petersburg, Firkovich collection, No. 583); on Esther (*ib.* Nos. 583, 584); on Ecclesiastes (*ib.* No. 359; Brit. Mus. Or. No. 2517; the beginning and ch. ii., vii., and ix. were published by Hirschfeld in his "Arabic Chrestomathy," pp. 103–108); on Psalms (St. Petersburg, Firkovich collection, Nos. 555, 556, and 557). Solomon quotes commentaries of his on Daniel, Job, and Proverbs which are no longer in existence, and promises to write one on the Pentateuch. He cites also his "Katab al-Rudd 'ala al-Fayyumi," which is probably the Arabic version of the "Milḥamot Adonai"; "Ḥuruf al-Abdal," on the letters of permutation; and a writing on the advantages of the priests; he furthermore promises to prepare an essay on the resurrection. He also translated into Arabic and commented upon the Karaite prayers (St. Petersburg, Firkovich collection, No. 638), and was the author of a composition entitled "Ḥibbur," which is believed to have been of a liturgical character.

SOLOMON BEN JOSEPH: French liturgist of Avallon; lived apparently in the thirteenth century. He composed the following piyyuṭim: "Abbi'ah Pil'i," a "yoẓer" for Purim; "Abbi'ah miḳreh," a "seliḥah" commemorating the massacre of Anjou in 1236, and giving the names of several martyrs; "Addir yamin ya'aṭof," a seliḥah; "She'erit shibyah," a prayer in which every line consists of four words, each beginning with the same letter (read downward, the initial letters of these four columns of words give, four times, the name of the author followed by the alphabet); "She'erit shelameka," arranged like the preceding; "Nafshi bimah tehemi," a "tokeḥah" arranged in four-line strophes.

Bibliography: Gross, *Gallia Judaica*, p. 18; Zunz, *Literaturgesch.* p. 349.

A. M. Sel.

SOLOMON BEN JOSEPH IBN AYYUB OF GRANADA: Spanish physician; lived at Béziers in the middle of the thirteenth century. He translated into Hebrew from the Arabic, at the request of some notables of Béziers, the following works: the "Sefer ha-Miẓwot" of Maimonides (Neubauer, "Cat. Bodl. Hebr. MSS." No. 859); the middle commentary of Averroes on the treatise "De Cœlo" (*ib.* No. 381, 3); "Sefer ha-Arguzah," a medical treatise of Avicenna's (Vienna MS. No. 146). Solomon wrote also an original medical work on hemorrhoids entitled "Ma'amar ba-Teḥorim" (Paris, Bibliothèque Nationale, MS. No. 1120, 2).

Bibliography: Steinschneider, *Hebr. Uebers.* p. 928; Renan, *Les Rabbins Français*, p. 591; Gross, *Gallia Judaica*, p. 100.
S. I. Br.

SOLOMON B. JOSEPH IBN SHOSHEN. See Ibn Shoshan.

SOLOMON BEN JUDAH HA-BABLI: Liturgist of the tenth century. In spite of the epithet "ha-Babli," given him by Rashi (commentary on Ex. xxvi. 15; "Ha-Pardes," p. 43d) and others, he was not a native of any Mohammedan country. Rapoport ("Teshubot ha-Geonim," p. 12b) held that the ancient rabbis included Rome under the designation "Babylon"; this being so, Solomon may have been a native of Rome. He is even so termed by M. Sachs in his translation of the Maḥzor (vii. 89), though without any further justification.

Solomon was the teacher of Meshullam b. Kalonymus, and, with Simeon the Great of Mayence and Kalonymus, Meshullam's father, was declared to have been of the generation which preceded Gershon Me'or ha-Golah. Solomon was the author of numerous piyyuṭim and seliḥot. Of the former there may be mentioned: an "'abodah," commencing "Adderet tilboshet"; an unrimed piyyuṭ, arranged in alphabetical order, consisting of combinations of אבגד and תשרק, each letter being repeated from eight to twenty times; a "yoẓer" for the first day of the Feast of Passover, beginning "Or yesha'" (mentioned by Rashi [commentary on Ex. xxvi. 15 and Cant. iv. 10], Jacob Tam [Tos. to B. B. 14a], and many others); and a yoẓer beginning "Omeẓ dar ḥazaḳim," a haggadic cosmogony. He wrote, besides, several "ofanim" and "zulatot," which are recited on certain Sabbaths. His seliḥot are of the kind termed "shalmoniyyot," and consist of four-line strophes, without any Biblical verse (see Seliḥah). Many piyyuṭim signed "Solomon" may be Solomon ha-Babli's. It has been noticed that in several instances piyyuṭim, or seliḥot, by Solomon ha-Babli stand side by side with those of Solomon ibn Gabirol. Both bear the signature "Solomon b. Judah," and only upon a close examination can they be assigned to the proper author. Indeed, errors are sometimes made, as in the case of the yoẓer "Or yesha'," mentioned above, which is ascribed by a certain commentator to Ibn Gabirol. It appears that Solomon ha-Babli was the first to add to his signature words, and sometimes sentences, of an invocative nature, such as "Ḥazaḳ," or "Yigdal be-Torah." According to Conforte ("Ḳore ha-Dorot," p. 18b), Solomon was the author of a prayer-book; but Conforte seems to have confused him with Rashi.

J. M. Sel.

SOLOMON BEN JUDAH OF CHÂTEAU-LANDON: French Talmudist of the end of the thirteenth century. He carried on a learned discussion with Samson of Chinon and Eliezer ben Joseph of Chinon regarding a document that had been antedated—a question which was laid before Solomon ben Adret also. He was reputed to be an eminent Talmudist, and numbered among his pupils Eliezer (father of the author of "Minḥat Yehudah") and also the anonymous author of the commentary on the Pentateuch contained in MS. Hamburg No. 40 (comp. "Monatsschrift," 1881, p. 313). Glosses on the Bible by Solomon are often quoted in the "Minḥat Yehudah"; and some of his responsa are contained in the responsa collection of RaSHBA.

Bibliography: Azulai, *Shem ha-Gedolim*, p. 169; Michael, *Or ha-Ḥayyim*, p. 584; Zunz, *Z. G.* p. 98; Renan-Neubauer, *Les Rabbins Français*, p. 447; Gross, *Gallia Judaica*, p. 260.
W. B. A. Pe.

SOLOMON BEN JUDAH OF DREUX (surnamed "the Holy"): French tosafist and Bible commentator of the twelfth and thirteenth centuries. He was a disciple of Isaac ben Samuel the Elder of Dampierre, and presided over the school of Dreux during the first quarter of the thirteenth century. He was one of the rabbis to whom Meïr ben Todros Abulafia addressed his letter of protest against Maimonides. His name is mentioned in the Tosafot, in "Or Zarua'," and in a commentary of Samuel ben Solomon of Falaise on Joseph Ṭob Elem's codex of the laws concerning Passover. His brother **Jacob ben Judah** likewise was a Bible commentator. **Joseph ben Solomon of Dreux,** who corresponded with Isaac ben Abraham of Dampierre, was most probably a son of the subject of this article.

Bibliography: Gross, *Gallia Judaica*, pp. 171-173; Neubauer, in Geiger's *Jüd. Zeit.* ix. 219; Zunz, *Z. G.* p. 55.
D. S. Man.

SOLOMON B. JUDAH LÖB OF DESSAU: German Hebraist and teacher; born about 1662; died after 1734. He was a teacher in Dessau, and is said by Fürst to be the author of a small dictionary, or rather vocabulary, in Hebrew and Judæo-German entitled "Ḥinnuk Ḳaṭan" (Dessau, n.d.). But it seems that this work, now very rare, was printed in other editions as early as 1658 (Amsterdam) and even 1640 (Cracow) and must therefore be ascribed to another author. Solomon was the author of "Iggerot Shelomoh" (Wandsbeck, 1732), Hebrew and Judæo-German letters, of which the Hebrew part bears the additional title "Kitbe Shelomoh." He wrote also "'Oz Mibṭaḥah" (Amsterdam, 1734), a description of an anti-Jewish riot in Hamburg in the year 1730 (described also in "She'erit Yisrael," ch. xxviii.), of which he was an eye-witness.

Bibliography: Steinschneider, *Bibliographisches Handbuch*, Nos. 59 and 2235, Leipsic, 1859; idem, *Cat. Bodl.* cols. 548 and 2358; Fürst, *Bibl. Jud.* i. 207; Roest, *Cat. Rosenthal. Bibl.* (Hebrew appendix), p. 291.
E. C. P. Wi.

SOLOMON BEN JUDAH OF LUNEL: Provençal philosopher; born in 1411. His Provençal name was **Solomon Vives.** When he was only thirteen years of age he composed, under the direction of his master, Frat Maimon, a commentary on the "Cuzari" of Judah ha-Levi. This commentary is extant in manuscript (Neubauer, "Cat. Bodl. Hebr. MSS." No. 2383) under the title "Ḥeshek Shelomoh." The young author displays in this work a considerable knowledge of the philosophical literature of his time. From a quotation made therein, it seems that Solomon wrote another commentary on the "Ruaḥ Ḥen," which he wrongly attributes to Samuel ibn Tibbon.

Bibliography: Steinschneider, *Hebr. Bibl.* xvi. 127; Renan, *Les Ecrivains Juifs Français*, p. 412; Gross, *Gallia Judaica*, p. 290.

SOLOMON LEVI OF BURGOS. See Paul de Burgos.

SOLOMON AND MARCOLF: Medieval tale, or romance, describing the adventures and conversations of Solomon and one Marcolf, or Marolf. The adventures have some connection with those of Ashmedai, while the conversations consist chiefly of riddles similar to those put to Solomon by the Queen of Sheba. The exact extent of its indebtedness to the Haggadah is somewhat doubtful, though it is practically certain that the various versions are derived from an Eastern original. The earliest appear to be two in Anglo-Saxon published under the title "Solomon and Saturnus" by J. N. Kemble in 1848, for the Ælfric Society. The tale was popular in Germany, where Marcolf, or Marolf, became a sort of type of the "wise fool." A block-book on the subject was published at Strasburg in 1499. Latin versions of it were often appended to the "Epistolæ Obscurorum Virorum." Both Hans Folz and Hans Sachs made use of the legend. A French version was made by Pierre Mauclerc, Count of Bretagne, in the thirteenth century. In Italian, Julio Cæsare Croce adopted it in his "Bertholdo," another name for Marcolf. This was developed into a book at Bologna in 1736. Other versions occur in the Bolognese and Venetian dialects, and in Dutch, Grecian, Polish, Icelandic, and Welsh. There are two editions in English, one published by Leeu (Antwerp, 1492), and another, "Sayings or Proverbes of King Solomon, with the Answers of Marcolfus," printed by Pynson in 1530, a version of the French "Dictionnaire de Salomon."

Bibliography: E. C. Maccalun, *Solomon in Europe, in Low German and High German Literature*, London, 1884; E. Gordon Duff, in the introduction to *The Dialogue or Communing Between the Wise King Solomon and Marcolfus*, London, 1892.

J.

SOLOMON BEN MAZZAL ṬOB: Turkish Hebrew poet and corrector for the press or, perhaps, printer; flourished at Constantinople in the first half of the sixteenth century. He was active in Hebrew printing from 1513 to 1549, as appears from the following works which bear his signature: David Ḳimḥi's "Sefer ha-Shorashim" (1513); Jacob b. Asher's "Perush 'al ha-Torah" (1514); Isaac Ḳara's "Toledot Yiẓḥaḳ" (1518); Midrash Tanḥuma (1520); Joshua ibn Shu'aib's "Derashot" (1526); David Ḳimḥi's "Miklol" (1532); the four Ṭurim (1540); "Shirim u-Zemirot" (1545 or 1548), a collection of hymns by various authors, including some of his own; and Solomon ibn Melek's "Miklal Yofi" (1549). Wolf ("Bibl. Hebr" i. and iii., No. 2002) seems to ascribe to Solomon the authorship of the whole collection of hymns mentioned above. Solomon published also a Hebrew introductory poem to the "Perush 'al ha-Torah"; and he left a poem on chess-playing, which was published by Edelmann in "Dibre Ḥefeẓ" (London, 1853).

Bibliography: Fürst, *Bibl. Jud.* iii. 225; Steinschneider, *Cat. Bodl.* cols. 2371, 3033.

J. M. Sel.

SOLOMON BEN MEÏR: French grammarian and Biblical commentator of the twelfth century; grandson of Rashi and brother of the great tosafists Isaac ben Meïr (RIBaM), Samuel ben Meïr (RaSHBaM), and Jacob Tam, though the old and many modern authorities (including Zunz and I. H. Weiss) affirm that Meïr, Rashi's son-in-law, had only three sons, the tosafists just mentioned. There is an allusion to the four sons of Meïr in a responsum which Eliezer ben Nathan addressed to Meïr ("Eben ha-'Ezer," p. 148). Zunz ("Z. G." p. 32) holds that the so-called "fourth" son of Meïr was Joseph Porat, Rashbam's son, and Weiss ("Bet Talmud," iii. 228) explains the disputed expression in the responsum as referring to Meïr and his three sons. But in 1874 A. Berliner discovered in the Vatican Library many fragments of Abraham b. Azriel's commentary on the Bible, in which the latter often quotes a commentary of Solomon, to whom he refers sometimes as Solomon ben Meïr, sometimes as Solomon the brother of R. Tam. Berliner published also in his "Magazin" (ii. 45) an extract from the Parma, De Rossi, manuscript No. 181, in which Solomon is clearly said to have been the brother of Jacob Tam and the son of Meïr ben Samuel, and in which Solomon is termed "father of grammarians" ("abi ha-dayḳanim").

An extract from the Vitry Maḥzor, published by Neubauer ("R. E. J." xvii. 67), also shows that Solomon was the brother of Jacob Tam, and that he was a "sheliaḥ ẓibbur" at Ramerupt. It may be added that Abraham b. Azriel quotes Solomon (שלמה אחי ר"תם) in a fragment of his "'Arugat ha-Bosem," published by J. Perles in "Monatsschrift" (xxvi. 369); Porges (*ib.* xxxii. 168), however, interprets this quotation to mean that the Solomon mentioned was Abraham's own brother. There having been four sons of Meïr, Solomon must have been the third, as Jacob Tam refers to himself as the youngest brother (Weiss, *l.c.*; comp. Eliezer b. Nathan, *l.c.*). That Solomon was a Talmudic authority is indicated by the occurrence of his signature with those of his brothers under the taḳḳanot of Jacob Tam (Goldberg, in "Ha-Lebanon," ii. 91–92; but comp. Halberstam, *ib.* ii. 267). It is likely that it is this Solomon who is quoted as a rabbinical authority in the tosafot to Pes. 105b. It must be said, however, that there was an older Solomon b. Meïr, who is mentioned by Rashi (on Ḥul. 116b; see J. Müller, "Teshubot Ḥakme Ẓarefat," p. xxx.).

Bibliography: Berliner's *Magazin*, i. 3; Gross, *Gallia Judaica*, p. 162; Kaufmann, in Berliner's *Magazin*, xiii. 152 *et seq.*; Sokolow, in *Ha-Asif*, ii. 376.

SOLOMON B. MENAHEM. See Frat Maimon.

SOLOMON, MICHAEL: British merchant and politician; born in England 1818; died in Jamaica May 5, 1892. He emigrated to Jamaica at the age of twelve, and eventually became the head of the firm of Bravo Brothers. He spent over sixty years of his life in the island, during the greater part of that time being actively engaged in its administration as a member of the Legislative Council, in which capacity he rendered distinguished services, and as custos of St. Anne's. He took part also in the organization of the exposition in the island, and in 1887, in recognition of his many eminent services to the colony, Queen Victoria conferred upon him the companionship of the Order of St. Michael and St. George.

Bibliography: *Jew. Chron.* May 13, 1892.
J. G. L.

SOLOMON B. MORDECAI: Polish rabbi; died 1609. He was a pupil of Solomon Luria and was rabbi of Meseritz and Ostrog, holding also some rabbinical position in Lemberg. He is referred to as "R. Shelomtzi, the pupil of Maharshal" in a manuscript work which was in the hands of Solomon Margolioth of Brody. He was the author of "Mizbaḥ ha-Zahab," an explanation of a Talmudical passage on the holy incense (Basel, 1602). A work by him named "Seder Giṭṭin" is referred to in the above-mentioned manuscript.

E. C. P. Wi.

SOLOMON BEN MOSES CHELM: Polish rabbi of the eighteenth century; born at Samoscz, government of Lublin; died at Salonica in 1778. He was successively rabbi of Chelm, Samoscz (a district rabbinate), and Lemberg. To the last place Solomon was called in 1771, to succeed the deceased Ḥayyim ha-Kohen Rapoport. In 1777 Solomon left Lemberg with the intention of going to the Holy Land. After visiting his family in Samoscz, he began his journey toward Palestine. Passing through Lemberg, he gave his approbation there, on Sept. 16, 1778, to Elijah of Belgorai's "Har ha-Karmel." Then he continued to Salonica, intending to superintend the issue of the second edition of his "Merkebet ha-Mishneh"; but he died shortly after his arrival there. Besides being an authority in rabbinics, on which subject he published several works, he was distinguished as a grammarian and mathematician. In 1776 Solomon wrote a defense of Joseph Te'omim, who had been criticized by many rabbis in connection with the issue of a divorce. Solomon gave his approbation for the publication of many current works, especially during the period of his incumbency at Lemberg.

Solomon was the author of the following works: "Merkebet ha-Mishneh" (Frankfort-on-the-Oder, 1751); "Shulḥan 'Aẓe Shiṭṭim," novellæ on Shabbat (Berlin, 1762); "Sha'are Ne'imah," a treatise on the accents of the prophetical books, edited by Solomon Dubno (Frankfort-on-the-Oder, 1775). His "Merkebet ha-Mishneh" comprises novellæ on the four divisions of Maimonides' "Yad"; a pamphlet, entitled "Berakot be-Ḥeshbon," on Talmudic arithmetic and geometry; and "Ẓinẓenet ha-Man," on the Haggadah of the Talmud. A second, revised edition, in three parts, including a defense of Maimonides against the strictures of Abraham ben David, was published at Salonica in 1777–78. Solomon's unpublished works include: "Ḥug ha-Areẓ," on the geography of Palestine; "'Asarah Shulḥanot," novellæ on the four parts of the Shulḥan 'Aruk; and "Leb Shelomoh," a collection of thirty-two responsa. Many of his responsa are to be found in responsa collections of other rabbis.

Bibliography: Azulai, *Shem ha-Gedolim*, ii., s.v. חוג הארץ and מרכבת המשנה; S. Buber, *Anshe Shem*, pp. 207 *et seq.*; Fürst, *Bibl. Jud.* i. 172; Steinschneider, *Cat. Bodl.* col. 2376; Zunz, *G. S.* i. 194.
W. B. M. Sel.

SOLOMON BEN MOSES BEN JEKUTHIEL DE ROSSI: Writer, and composer of synagogal hymns; flourished in Rome during the thirteenth century; died after 1284 in the prime of life. He was the earliest literary member of the Rossi family. His wife was Paola Anaw, the highly gifted daughter of the author Abraham ben Joab Anaw (see Jew. Encyc. i. 567b).

Solomon ben Moses was the author of an apologetic work which has become known under four different titles, namely, "Sefer ha-Wikkuaḥ," "'Edut ha-Shem Ne'emanah," "She'elot u-Teshubot," and "Milḥamot ha-Shem." In the preface the author warns against disputations, which, he says, are harmful to Judaism. If, however, one finds himself forced to enter into a controversy, one should remain calm, and avoid discussing such themes as the Trinity, the holy supper, and other dogmas. One should appear only as a defender, not as an aggressor. The work itself is an apology for Christian attacks upon the Jewish view of the Messiah; and it weakens the attempt of the Christians to prove that the Jews are a people abandoned by God.

Solomon is known also as a liturgical poet. Besides three songs, he wrote a poem on the earthquake in Ancona, beginning with the words אל אשר הראיתנו.

Bibliography: Steinschneider, *Hebr. Bibl.* 1863, p. 93, note 2; Brüll, in Weiss, *Bet ha-Midrash*, pp. 143 *et seq.*; Halberstam, in Berliner's *Magazin*, i. 33 *et seq.*, 43 *et seq.*; Berliner, *ib.* xi. 142; Zunz, *Literaturgesch.* p. 366; Vogelstein and Rieger, *Gesch. der Juden in Rom*, pp. 269, 278, 395, 438, 444, 452.
W. B. S. O.

SOLOMON BEN MOSES BEN JOSEPH: Italian liturgist of the thirteenth century; identified by some with Jehiel b. Jekuthiel Anaw, and by others with Solomon b. Jedidiah; a descendant probably of Zedekiah b. Benjamin Anaw. An exhortation called "Widdui" or "Tokaḥah" by him is contained in a Roman manuscript.

Bibliography: Zunz, *Literaturgesch.* p. 366; *Orient, Lit.* x. 487; Steinschneider, *Cat. Bodl.* cols. 1277, 2767; Vogelstein and Rieger, *Gesch. der Juden in Rom*, i. 395.
W. B. S. O.

SOLOMON BEN MOSES OF MELGUEIL: French philosophical writer and translator of the thirteenth century. The supposition that Solomon was a native of Melgueil, or Melgueir, the present Mauguio, is based on the fact that "Melgueiri"

(מלגוירי, מלגיירי) is always a part of the name. Wolf ("Bibl. Hebr." iii., Nos. 2007–2008) interprets the epithet as either "the Algerian" or "the Algarian," the latter reading being adopted by Renan ("Averroès et l'Averroïsme," p. 192, Paris, 1866). According to Saige ("Les Juifs de Languedoc Antérieurement au XIV^e^ Siècle," p. 126, *ib.* 1881), Solomon ben Moses of Melgueil is the same as the Solomon of Melgueil (a native of Béziers who had settled at Narbonne) who is mentioned in Latin documents of 1284 and 1306—the one of 1284 styling him and his brother Vital "the Jews of the king," and the one of 1306 describing him as one of those whose property had been confiscated. Steinschneider ("R. E. J." v. 278 *et seq.*) declares this identification doubtful.

Isaac Lattes ("Sha'are Ẓiyyon," p. 73) speaks of a Samuel b. Moses Melgueiri (= "of Melgueil") who was a great scholar and who wrote works in all departments of science. This passage is reproduced by Azulai ("Shem ha-Gedolim," i. 176), who adds that among Solomon's works must be especially mentioned his "Ḳeẓ li-Tekunah," "Sefer ha-Melek," and "'Asarah Debarim." Zunz ("Z. G." p. 472) affirms that "Samuel" in this passage is a copyist's mistake for "Solomon," and he consequently ascribes the three works just mentioned to the Solomon of this article. It may be said that Isaac de Lattes himself ascribes these works to Moses ibn Tibbon, and that this opinion is supported by Gedaliah ibn Yaḥya ("Shalshelet ha-Ḳabbalah," p. 54b, Venice, 1587). Wolf, furthermore (*l.c.* Nos. 2001b, 2007), followed by Zunz (*l.c.*) and other scholars, identifies Solomon מאורגול, the translator of Aristotle's "De Republica" and "Meteorologica," with Solomon of Melgueil. But Saige (*l.c.*) holds with Renan that the former Solomon is a different person, the name מאורגול meaning "a native of Urgel, Spain."

Solomon was incontestably the author of "Bet Elohim," a philosophical commentary on the chapter in the Book of Kings which deals with the construction of Solomon's Temple. This work (not yet published) is in three parts, respectively entitled "Sha'are Ẓedeḳ," "Bet Middot," and "Sod ha-Miẓwot," and is written on the same lines as Maimonides' "Hilkot Bet ha-Beḥirah," but in a more Orthodox manner. Solomon translated Avicenna's compendium of Aristotle's "De Cœlo et Mundo," under the title "Sefer ha-Shamayim weha-'Olam." In the introduction Solomon says that he translated this work from the "language of the Christians" (Latin), and asks the student's indulgence for the mistakes which he may have made. Many passages of this translation are quoted by Gershon b. Solomon in his "Sha'ar ha-Shamayim," and therefore a decision as to the exact date of Gershon's composition may help to determine that of Solomon's work.

Solomon translated also: Aristotle's "De Somno et Vigilia," under the title "Ha-Shenah weha-Yeḳiẓah"; Averroes' "Tauṭi'ah," the third treatise of his "Metaphysics," under the title "Hazza'ah la-Ḥokmah"; Platearius' medical work "De Simplici Medicina," or "Circa Instans," accepting the latter title for the translation. It may be added that Hebrew manuscript No. 128, in the Vienna Library, entitled "Sha'ar be-Ḥokmat ha-Parẓuf," a translation of an Arabic treatise on physiognomy, is erroneously ascribed to Solomon of Melgueil.

The name of Melgueiri occurs also in connection with poetry, and Abraham Bedersi mentions it in his "Ḥereb ha-Mithappeket." There are also two piyyuṭim bearing in acrostic the name מלגוירי, one published by Carmoly in "Ha-Karmel" (vi. 402), and the other by Dukes in "Ha-Lebanon" (v. 440). The former is even indicated, in the manuscript from which Carmoly has taken it, as having been composed by Solomon Melgueiri; still it can not be said with certainty that the poet is identical with the subject of this article.

M. Sel.

SOLOMON, MYER: Founder of the St. Alban's Place Synagogue, London; born in the last quarter of the eighteenth century; died Dec. 31, 1840. He was appointed head of the Denmark Court Congregation in 1824, and took a prominent part in founding the new place of worship at St. Alban's place, St. James's (known both as the Western and as the Westminster Synagogue), which was consecrated Sept. 7, 1826. Solomon frequently took part in divine service both as preacher and as ḥazzan; he was also a competent mohel and shoḥeṭ, and he wrote two scrolls of the Law which he bequeathed to his synagogue, together with various other religious appurtenances. Solomon's bric-à-brac store was at 119 Pall Mall, where his sukkah was hospitably open to members of the congregation. The fame he enjoyed brought him visitors from many parts. He delivered a funeral sermon (in English) on the death of George IV. in 1830, and he also composed some Hebrew hymns for various occasions.

SOLOMON NASI BEN ISAAC NASI CAYL: Liturgical poet; lived at Marseilles about 1285. Cayl is a family name, derived from Caylus, a town in the department of Tarn-et-Garonne. Solomon composed the piyyuṭ מי לא ייראך מלך הגוים, found in the Avignon Maḥzor. The name of this poet must not be confounded with that of the rabbi Solomon ben Isaac Cayl, who lived at Marseilles about 1376–86.

SOLOMON BEN NATHAN ASHKENAZI. See Ashkenazi.

SOLOMON, PHILIP S.: Attorney-general of Fiji; born at Lee, Essex, England, Oct. 15, 1830; died in New South Wales March 24, 1895. Early in life he went to Australia, and later to New Zealand, finally settling in Fiji. He arrived there in 1870, and assumed the editorship of the "Fiji Times." Turning his attention to law, he was admitted as a barrister and solicitor of the Supreme Court, and became queen's counsel in 1889. On several occasions, from 1875 to 1895, he served as acting attorney-general, and at various times he performed the functions of legislative councilor, being a member of the council till the time of his death. He was the first warden of Levuka, elected under the ordinance granting municipal privileges to that city.

Solomon wrote a pamphlet which was dedicated to the royal commission appointed to inquire into the feasibility of annexing the Fijian group; the excellent service which this publication rendered to the country was acknowledged by the royal commissioners.

SOLOMON DE SABALDUCCHIO: Physician; flourished in Perugia, Italy, in the fourteenth and fifteenth centuries. Pope Boniface IX., shortly after his accession, appointed Solomon his body-physician (Oct. 13, 1392). The bull which this pope issued on April 15, 1402, and in which he granted the Jews certain rights and privileges, was a result of the activity of this physician and of another named Angelo.

SOLOMON SALMAN B. MOSES. See London, Solomon.

SOLOMON BEN SAMSON: Scholar of Worms in the eleventh century; teacher and relative of Rashi, who refers to him as an authority beside his other teacher, Isaac ha-Levi (responsa of the French rabbis, Nos. 11, 24). Most probably he is identical with the Solomon ben Samson mentioned as a native of Vitry, this name being apparently an error for Lorraine, among whose scholars he is cited ("Or Zarua‘," i. 116a).

SOLOMON, SAMUEL: English quack; born in 1780; died in London 1818. He flourished in Liverpool and was an original and somewhat eccentric character who became widely known as the inventor and patentee of an empiric preparation called "Balm of Gilead," by the sale of which he amassed a considerable fortune. In 1805 he removed to a large house in Kensington road, where his stately residence, "Gilead House," with its gardens and shrubberies, formed one of the sights of the town. Streets named "Gilead," "Balm," and "Solomon" commemorate his connection with the place. He left two children, a son and a daughter.

SOLOMON SHALEM B. ḤAYYIM JEHIEL COHEN: Rabbi in the second half of the eighteenth century; died at Amsterdam 1781. He resided successively at Adrianople, Bologna, Sofia, and Amsterdam, in which last-named city he officiated as rabbi of the Portuguese community. He was the author of the following works: "Dibre Shelomoh" (Amsterdam, 1753), sermons on the Pentateuch, with an index to the allusions in the text; "Shoneh Halakot," a commentary on the "Halakot Gedolot" (*ib.* 1762); and "Leb Shalem" (*ib.* 1773), notes and elucidations of the "Yad ha-Ḥazaḳah" of Maimonides.

S. J. Z. L.

SOLOMON, SIMEON: English painter; born at Bristol 1834; died at London March 15, 1905; brother of Abraham Solomon. He early showed signs of artistic ability, and came under the influence of D. G. Rossetti. His drawings and paintings carry to an extreme the mystical and sensuous tendencies of the pre-Raphaelite school. He published a number of designs for The Song of Songs, and photographs of ten drawings illustrating Jewish ceremonial. Falling into degenerate habits, he was confined for a time in a sanitarium and lived a vagrant life the remainder of his days.

J.

SOLOMON, SOLOMON JOSEPH: English painter; born in London Sept. 16, 1860. He received his artistic training at Heatherly's, at the schools of the Royal Academy, at the Academy of Munich, and at the Ecole des Beaux Arts, Paris, where he studied under Cabanel. His first picture was exhibited in the Royal Academy in 1881; and since that time he has continuously supplied some of the main attractions of that exhibition, his vigorous "Cassandra" (1886) and "Niobe" (1888) having established his reputation as a painter of classical subjects somewhat after the style of Leighton and Poynter. Other paintings of the same character were "Hercules" (1889), "The Judgment of Paris" (1890), "Echo and Narcissus" (1894). Solomon has shown distinction as a portrait-painter also, his portrait of Mrs. Patrick Campbell attracting special attention from its novel arrangement of lights. He was elected an associate of the Royal Academy in 1894.

Solomon has shown marked interest in Jewish affairs. He was one of the founders, and for the first ten years the president, of the Maccabeans, which society owed much of its early success to his genial personality. This interest has been displayed in his art also. The picture that established his reputation was his "Samson and Delilah"; and he has painted several portraits of Jewish friends, *e.g.*, of Dr. Ernest Hart (1888), I. Zangwill (1894), Joseph Jacobs (1900), and Solomon Schechter (1902), besides an impressionist portrait of H. Graetz during that historian's visit to the Anglo-Jewish Historical Exhibition in 1887. The last-named portrait is now in the possession of the Jewish Theological Seminary of America. In this connection should be mentioned his "Allegory" of 1904, which is understood to represent the triumph of Judaism as the final religion of the world.

SOLOMON OF TOURS: French Talmudist; contemporary of Rashi, with whom he carried on a learned correspondence. Rashi addresses him as "My dear friend." This expression, as well as the fact that Rashi points out an error which Solomon had made in regard to the Talmud, proves that the latter can not be identical with Rashi's relative and teacher of the same name, whom Rashi even in his old age regarded as an authority.

SOLOMON URBINO. See Urbino, Solomon de.

SOLOMON, VABIAN L.: Premier of South Australia; born about 1849; son of Judah Moss Solomon. Early in life Solomon went to the Northern Territory, where he engaged in business, was elected mayor of the chief town, and became connected with the "Northern Territory Times." Returning to Adelaide, he became member for the territory in the House of Assembly, and won recognition in Parliament as an authority on finance. On the resignation of Sir John Darna he was appointed leader of the opposition; and on the fall of the cabinet in Dec., 1899, he became for a short time premier of the new ministry which was formed. Solomon was one of the members of the Federal Council which brought about the federation of the Australian colonies.

SOLOMON DE VESOUL: Son of Manessier de Vesoul, who died in 1375 or 1378. By a decree of Charles V., the Wise, he was appointed clerk and tax-gatherer for the Jews of France (Aug. 9, 1378). Like his father and brothers, Solomon was in high favor at court, and received many proofs of the royal esteem; among other privileges conferred upon him was that of immunity from the obligation of wearing the Jews' badge, which privilege was shared by the members of his family.
S. J. Ka.

SOLOMON IBN YA'ISH BEN ABRAHAM: **1.** Spanish scholar, physician, and (probably) Biblical commentator; died at Seville in May, 1345. According to a Spanish tumular inscription of Seville, from which this date is taken, Solomon wrote many works on medical and other sciences, none of which is extant. He is probably identical with the Solomon ibn Ya'ish called "the Elder," a part of whose supercommentary, that relating to the ephod, on Ibn Ezra's commentary on the Pentateuch, is found in Ezra Gatigno's "Sefer ha-Zikronot," p. 139b (Neubauer, "Cat. Bodl. Hebr. MSS." No. 230). A fragment of Solomon's supercommentary which explains a geometrical calculation is in the same collection (No. 232, 2b; comp. Samuel Ẓarẓah, "Meḳor Ḥayyim," pp. 31b-32b, Mantua, 1559). It may be that it is this Solomon ibn Ya'ish who is mentioned by Ibn Verga ("Shebeṭ Yehudah," ed. Wiener, § 7, p. 18) as one of the envoys sent by the Castilian Aljama (assembly of Jewish elders) to King Alfonso.

2. (Solomon b. Ya'ish the Younger ["ha-Baḥur"] of Guadalajara.) Spanish commentator on Ibn Ezra's commentary on the Pentateuch; the whole of his supercommentary is found in the Bodleian Library (Neubauer, *l.c.* No. 232, 1). The copyist Joseph b. Eliezer declares in the colophon that the text from which he made the copy was full of mistakes, many of which he corrected, while many others had rendered the context so unintelligible that he was compelled to retain them. The fact is that Solomon quotes passages from other commentaries, and it may be that he translated those passages from the Arabic without being able to render them throughout into good Hebrew.

According to Steinschneider ("Jewish Literature," p. 103), Solomon wrote his supercommentary in Arabic, and, at the request of Samuel Ẓarẓah, it was translated into Hebrew by Jacob b. Solomon Alfandari. Steinschneider seems to confuse the two Solomons, as he calls the author of this supercommentary Solomon ibn Ya'ish ben Abraham; in fact, it is not known which of the two wrote in Arabic (see Ersch and Gruber, "Encyc." section i., part 54, p. 359, note 15). The authorities quoted in the supercommentary are Rashi, Maimonides, Abraham b. David Ḳimḥi, Moses ibn Tibbon, and Meïr b. David; the last-named is in one place (in the part relating to Ḥayye Sarah) designated as אדני אבי, indicating that he was Solomon's father, but in another place (Balaḳ) as אדני רבי (= "my master"); it is not known which reading is the correct one.

W. B. M. Sel.

SOLOMON IBN ẒAḲBEL (צקבל): Spanish poet of the twelfth century; relative of Abu Omar Joseph ibn Sahl, who died in 1124. Solomon was the author of a satirical romance written in the form of the Arabic "Maḳamat" of Abu al-Ḳasim Mohammed al-Ḥarizi, which later were so ably imitated in Hebrew by Judah al-Ḥarizi in his renowned "Taḥkemoni." The hero of this romance, which, according to Schorr, who published it ("He-Ḥaluẓ," iii. 154), is entitled "Taḥkemoni," is named Asher ben Judah; in rimed prose, interspersed with small poems in absolutely strict rhythm, he relates his love adventures, which were marked by various disappointments and vicissitudes of fortune. This poetical production, from which Al-Ḥarizi may have borrowed both the title and the style, is remarkable for the elegance of its language and for its combination of profound thought and light banter. Solomon's poetical talent was highly praised by Judah al-Ḥarizi in his "Taḥkemoni" (ch. xx.).

SOLOMON ZALMAN BEN ISAAC: Polish rabbi; died at Warsaw in 1838. After having filled the position of rabbi at Mashelsk and Praga, he was called to the rabbinate of Warsaw, which he held until his death. Solomon carried on a scientific correspondence with Akiba Eger and Jacob of Lissa. He was the author of "Ḥemdat Shelomoh" (2 vols., Warsaw, 1816), containing responsa on the Shulḥan 'Aruk and novellæ on several Talmudical treatises; and he left in manuscript numerous Talmudical novellæ, two volumes of which, comprising novellæ on Yebamot, Ketubot, Ḳiddushim, Giṭṭin, and Baba

Batra, were published under the above-mentioned title by his son and son-in-law.

SOLOMON ẒARFATI. See Ẓarfati.

SOLOMONOV, ABRAHAM: Russian author; born in Minsk 1778; died in St. Petersburg. He was a prominent propagandist of the Haskalah movement among the Russian Jews in the first half of the nineteenth century, for which task his intimate knowledge of the Hebrew, Russian, and Polish languages made him especially fit. He took an active part in aiding the Russian government to reform internal affairs which affected the Jews; he was employed for many years by the government as a translator from Hebrew into Russian and Polish, and for six years he officiated as burgomaster (mayor) of his native town. After the dissolution (1825) of the so-called "Deputation of the Jewish Congregations of Russia," which had continued in session in St. Petersburg for seventeen years, Solomonov, who had been connected with that body as a director of chancery, took up the practise of law in St. Petersburg.

In his declining years Solomonov published "Mysl: Izrailityanina" (Thoughts of an Israelite). One part of this book contains a collection of historical material concerning the settlement of the Jews in Europe, particularly in Poland, and a description of their legal status in that country and in Russia under Alexander I. and Nicholas I. The other part of the book consists of citations from the Bible, from the Talmud, and from famous Hebrew theologians and philosophers, to which are added explanatory notes by the author himself. The aim of these citations and of the book in general was to persuade the Jews to abandon religious fanaticism, to adopt European civilization, to be patriotic citizens of their country, and to have confidence in the good intentions of the Russian government.

H. R. S. Hu.

SOLOMONS, ADOLPHUS SIMEON: American communal worker; born in New York city Oct. 26, 1826; son of John Solomons, a native of London who emigrated to the United States in 1810, and of Julia, daughter of Simeon Levy.

Solomons was educated in the University of the City of New York, and entered the employ of a firm of wholesale importers of stationery and fancy goods, becoming within two years its head bookkeeper and confidential man. At the age of fourteen he had enlisted as a color-guide in the Third Regiment Washington Greys (New York State National Guard); he was promoted sergeant five years later, and received a certificate of discharge on May 11, 1847. In 1851 Daniel Webster, then secretary of state, appointed him "Special Bearer of Despatches to Berlin." On his journey he visited for the first time a Jewish ward in a hospital, at Frankfort-on-the-Main, and determined to establish a similar institution in New York. Upon his return home he became a member of a committee of young men who arranged a ball for charity in Niblo's Garden. The sum of $1,034 realized therefrom was, upon Solomons' motion, placed in the hands of Simpson Simson of Yonkers, who, with others, had recently taken out a charter for a Jewish hospital in New York, the present Mt. Sinai Hospital.

In 1859 Solomons established the publishing-house of Philp & Solomons in Washington, D. C., which held for a number of years the government contracts for printing. Solomons was in 1871 elected a member of the House of Representatives for the District of Columbia, serving as chairman of the committee on ways and means.

As a representative of the central committee of the Alliance Israélite Universelle, Solomons at a public meeting held in New York advocated the establishment of the Montefiore Home for Chronic Invalids to mark the one-hundredth anniversary of Sir Moses Montefiore's birth. As trustee and, subsequently, as acting president of the Jewish Theological Seminary Association of New York, he was influential in bringing about a successful reorganization of the society's finances. In 1891 he became general agent of the Baron de Hirsch Fund and director of its many activities in America; and in 1903, when relieved of active work, he was made honorary general agent.

Solomons was an incorporator and for seventeen years an active member of the National Association of the Red Cross, and was also one of its two vice-presidents. President Arthur appointed him and Clara Barton as representatives of the United States government in the International Congress of the Red Cross, held at Geneva, Switzerland, in 1881; and Solomons was elected vice-president of that congress. He was one of the five original members of the New York executive board of the Red Cross Relief Committee, which board was in session during the Spanish-American war and consisted of twenty-five members presided over by Bishop Potter.

Solomons has been a member of the central committee of the Alliance Israélite Universelle, and its treasurer for the United States. He has been for twenty years a director, and for some time treasurer, of the Columbia Hospital and Lying-in Asylum in Washington, D. C.; he is also a charter member of the Garfield Memorial Hospital, acting president of the Provident Aid Society and Associated Charities, founder and president of the Night Lodging-House Association, and trustee of the first training-school for nurses in the District of Columbia; he has been identified also with nearly all the prominent charities in the United States capital.

Solomons has taken active part in all inauguration ceremonies from Lincoln's time to McKinley's.

A. F. T. H.

SOLOMONS, LEVY: One of the founders of the Canadian Jewish community; born early in the eighteenth century; died May 18, 1792. He settled in Montreal almost immediately after the British conquest. Before going to Canada he had lived in Albany, N. Y., where he retained interests, and occasionally resided, almost until the close of his life. He was largely engaged in traffic with the Indians, and his mercantile enterprises extended from Michilimackinac to the Gulf of St. Lawrence, and down the Hudson River. During the American invasion of Canada in 1775 General Montgomery appointed Solomons purveyor to the American hospitals in Canada; and the defeat of Montgomery brought disaster to Solomons, who lost the large quantities of stores carried off by the retreating troops.

The valuable assistance Solomons had given the Revolutionists subjected him to punishment by the Canadian government; General Burgoyne expelled him in July, 1776; his property was confiscated, and he was compelled to take refuge with his family in Lachine. Some time afterward he recovered some of his losses, and was permitted by the British government to return to Montreal. Through his efforts in 1788 a code of laws was drawn up for the government of the Sephardic synagogue of Montreal.

Solomons married (May 31, 1775) Rebekah Franks, daughter of Abraham Franks (one of the earliest Jewish settlers in Canada), and cousin of Col. David Salisbury Franks and Col. Isaac Franks, both of whom figured prominently in the American Revolutionary war. Solomons had two sons and eight daughters. His eldest daughter, Mary, married Jacob Franks, the Hudson Bay trader, who was one of the founders of the town of Green Bay, Mich. His third daughter, Rachel (b. 1780), married (1803) Henry Joseph of Berthier, the founder of Canada's merchant marine. His son **Benjamin Samuel Solomons** (b. 1786) married a daughter of Gershom Mendes Seixas of New York.

SOLOVEICHIK, JOSEPH BAER: Russian Talmudist and rabbi; born at Nieswish, Russia, 1820; died May 1, 1892. At an early age he was sent to Volozhin, where he studied under R. Simon and then entered the yeshibah. When R. Gershon of Minsk was compelled by ill health to surrender the direction of the yeshibah at Minsk, Soloveichik was chosen by Gershon as his successor. While in Volozhin he married into a wealthy family; but soon afterward, failing to give the correct order of the prayers on a certain holy day, he was compelled by his father-in-law to divorce his wife. This so embittered him that he determined to leave Russia and study under R. Kluger at Brody. There, accordingly, he went, in the company of a carrier, to whom he had hired himself as an assistant.

From Brody he went to Lemberg to study under Arenstein; thence he soon removed to Kovno, and then to Volozhin, where he occupied the position of teacher in the yeshibah and later that of rabbi. In 1865 he was called to Slutzk, in 1876 to Warsaw, and two years later to Brisk, Lithuania, where he founded (1890) a society for the Jewish colonization of Palestine. In 1889 he was a member of the committee of prominent Jews convoked in St. Petersburg by the Russian government to discuss the condition of the Jews in Russia and to discover means of improving it.

Soloveichik's writings include: "She'elot u-Teshubot Bet ha-Levi" (part i., Wilna, 1865; part ii., Warsaw, 1874; part iii., *ib.* 1884).

BIBLIOGRAPHY: *Ha-Asif*, vol. vi.

SOLYMOSI, ESTHER. See TISZA-ESZLÁR.

SOMEKH, ABDALLAH ABRAHAM JOSEPH: Rabbi of Bagdad; born in that city 1813; died there 1889. He was educated by Rabbis Jacob Joseph ha-Rofe and Moses Ḥayyim, the latter of whom held the office of ab bet din. Somekh, who was looked upon as the spiritual head of the Bagdad community, was well known also in other parts of Asia, especially India, and his legal decisions were generally accepted as conclusive. About twenty yeshibot were established through his influence with the Sassoon family, E. R. Menashe, and other members of the Calcutta community.

Somekh left in manuscript a work on ritual, parts of which were published after his death (Bagdad, 1900) under the title "Zibḥe Ẓedeḳ." A riot occurred at his funeral, the Mussulmans objecting to his being buried near one of the tombs of their local saints. Of Somekh's pupils, still living, may be mentioned Joseph Ḥayyim Moses; Abraham Hallel, the present ab bet din at Bagdad; Ezekiel Solomon David; and Ezra Cohen.

SOMMO, JUDAH. See JUDAH LEONE B. ISAAC SOMMO.

SON. See CHILD, THE.

SON OF GOD: Term applied to an angel or demigod, one of the mythological beings whose exploits are described in Gen. vi. 2-4, and whose ill conduct was among the causes of the FLOOD; to a judge or ruler (Ps. lxxxii. 6, "children of the Most High"; in many passages "gods" and "judges" seem to be equations; comp. Ex. xxi. 6 [R. V., margin] and xxii. 8, 9); and to the real or ideal king over Israel (II Sam. vii. 14, with reference to David and his dynasty: comp. Ps. lxxxix. 27, 28). "Sons of God" and "children of God" are applied also to Israel as a people (comp. Ex. iv. 22 and Hos. xi. 1) and to all members of the human race.

Yet the term by no means carries the idea of physical descent from, and essential unity with, God the Father. The Hebrew idiom conveys nothing further than a simple expression of godlikeness (see GODLINESS). In fact, the term "son of God" is rarely used in Jewish literature in the sense of

"Messiah." Though in Sukkah 52a the words of Ps. ii. 7, 8 are put into the mouth of Messiah, son of David, he himself is not called "son of God." The more familiar epithet is "King Messiah," based partly on this psalm (Gen. R. xliv.). In the Targum the בן of Ps. lxxx. 16 is rendered מלכא משיחא (= "King Messiah"), while Ps. ii. 7 is paraphrased in a manner that removes the anthropomorphism of the Hebrew: "Thou art beloved unto me, like a son unto a father, pure as on the day when I created thee."

The Apocrypha and Pseudepigrapha contain a few passages in which the title "son of God" is given to the Messiah (see Enoch, cv. 2; IV Esdras vii. 28–29; xiii. 32, 37, 52; xiv. 9); but the title belongs also to any one whose piety has placed him in a filial relation to God (see Wisdom ii. 13, 16, 18; v. 5, where "the sons of God" are identical with "the saints"; comp. Ecclus. [Sirach] iv. 10). It is through such personal relations that the individual becomes conscious of God's fatherhood, and gradually in Hellenistic and rabbinical literature "sonship to God" was ascribed first to every Israelite and then to every member of the human race (Abot iii. 15, v. 20; Ber. v. 1; see Abba). The God-childship of man has been especially accentuated in modern Jewish theology, in sharp contradistinction to the Christian God-sonship of Jesus. The application of the term "son of God" to the Messiah rests chiefly on Ps. ii. 7, and the other Messianic passages quoted above.

The Pious as Sons of God.

The phrase "the only begotten son" (John iii. 16) is merely another rendering for "the beloved son." The Septuagint translates יחידך ("thine only son") of Gen. xxii. 2 by "thy beloved son." But in this translation there is apparent a special use of the root יחד, of frequent occurrence in rabbinical literature, as a synonym of בחר ("choose," "elect"; see Bacher, "Die Aelteste Terminologie der Jüdischen Schriftauslegung," *s.v.*); the "only begotten" thus reverts to the attribute of the "servant" who is the "chosen" one.

It has been noted that the Gospel of John and the First Epistle of John have given the term a metaphysical and dogmatic significance. Undoubtedly the Alexandrian Logos concept has had a formative and dominant influence on the presentation of the doctrine of Jesus' sonship in the Johannean writings. The Logos in Philo is designated as the "son of God"; the Logos is the first-born; God is the father of the Logos ("De Agricultura Noe," § 12 [ed. Mangey, i. 308]; "De Profugis," § 20 [ed. Mangey, i. 562]). In all probability these terms, while implying the distinct personality of the Logos, carry only a figurative meaning. The Torah also is said to be God's "daughter" (Lev. R. xx.). At all events, the data of the Synoptic Gospels show that Jesus never styled himself the son of God in a sense other than that in which the righteous might call themselves "sons" or "children" of God.

The parable of the faithless husbandmen and the vineyard (Mark xii. 1 *et seq.*) certainly does not bear out the assumption that Jesus described himself as the "son of God" in a specific theological sense. The parable recalls the numerous "son" stories in the Midrash, in which "son" is employed just as it is here, and generally in similar contrast to servants. If these considerations create a strong presumption in favor of the view that the original gospel did not contain the title, the other Synoptics do not veil the fact that all men are destined to be God's children (Matt. v. 45; Luke vi. 35). The term is applied in Matt. v. 9 to the peacemakers. God is referred to as the "Father" of the disciples in Matt. x. 29, xxiii. 9, and Luke xii. 32. Several parables illustrate this thought (Luke xv. 11 *et seq.* and Matt. xxi. 28 *et seq.*). Much has been made of the distinction said to appear in the pronouns connected with "Father," "our" and "your" appearing when the disciples are addressed, while "my" is exclusively reserved to express the relation with Jesus, and then, too, without the further qualification "who art [or "is"] in heaven" (see Dalman, "Worte Jesu," pp. 157, 230). But in the Aramaic this distinction is certainly not pronounced enough to warrant the conclusion that a different degree or kind of sonship is conveyed by the singular pronoun from what would be expressed by the plural. In the Aramaic the pronoun would not appear at all, "Abba" indiscriminately serving for the apostrophe both in the prayer of a single individual and in the prayer of several.

The title occurs with a distinct theological significance in Rev. ii. 18 and xxii. 13, as it does in the Pauline documents (Rom. i. 3, 4; viii. 3, 4, 32 [Jesus is God's ἴδιος, *i.e.*, own son]; and in Heb. i. 2, 3, 6; v. 5, 8). These writings indicate that the rise of the dogma was subsequent to the decades marked by the ministry of Jesus and his immediate disciples. See Fall of Angels; God, Children of.

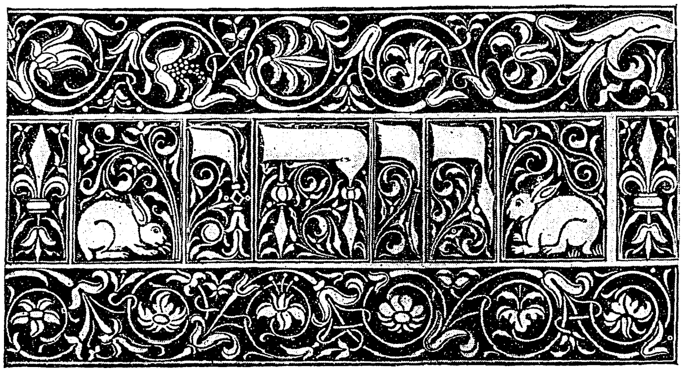
K. E. G. H.

SON OF MAN: The rendering for the Hebrew "ben adam," applied to mankind in general, as opposed to and distinct from non-human relationship; expressing also the larger, unlimited implications of humanity as differentiated from limited (*e.g.*, national) forms and aspects of human life. Thus, contrasted with the "sons of God" ("bene Elohim") are the "daughters of man" ("benot ha-adam"), women taken by the former, non-human or superhuman, beings as wives (Gen. vi. 2 *et seq.*). As expressing difference from God, the term occurs in the blessing of Balaam: "God is not a man, that he should lie; neither the son of man, that he should repent" (Num. xxiii. 19). Similarly, David appealing to Saul puts Yhwh over and against the children of men (I Sam. xxvi. 19). The punishment of God, also, is contrasted with that of the "children of men," the former being much more severe, as appears from the promise solemnly given to David (II Sam. vii. 14). God alone knows the heart of the "children of man" (II Chron. vi. 29 *et seq.*). In the prayer in which this thought is expressed, "man" is used in distinction to the "people of Israel"; indeed, "children of men" appears to mark a contrast to "children of Israel" in the Song of Moses (Deut. xxxii. 8, R. V.).

In Contrast to Deity.

"Son of man" is a common term in the Psalms, used to accentuate the difference between God and human beings. As in Ps. viii. 4 (A. V. 5), the phrase implies "mortality," "impotence," "transientness," as against the omnipotence and eternality of God. Yʜᴡʜ looks down from His throne in heaven upon the "children," or "sons," of "man" (Ps. xi. 4, xxxiii. 13). The faithful fail among them (Ps. xii. 2 [A. V. 1]); the seed of Yʜᴡʜ's enemies will not abide among the "children of men" (Ps. xxi. 10). "Children of men" is thus equivalent to "mankind" (Ps. xxxvi. 8 [A. V. 7], lxvi. 5).

"Sons of men," or "children of men," designates also the slanderers and evil-doers in contrast to the righteous, that is, Israel (Ps. lvii. 5 [A. V. 4], lviii. 2 [A. V. 1]). It occurs most frequently, however, as a synonym for "mankind," "the human race" (Ps. xc. 3, cvii. 8, cxv. 16, cxlv. 12); it has this sense also in the passage in which wisdom is said to delight with the "sons of men" (Prov. viii. 31). Job (xvi. 21) employs the expression in the passionate plea for his rights while he is contending against God and against his neighbors. But Bildad insists that the "son of man," who is a mere worm, can not be justified with God (Job xxv. 4-6). In the same spirit the prophet (Isa. li. 12) censures Israel for being afraid of "the son of man which shall be made as grass" when Yʜᴡʜ is their Comforter; but in Isa. lvi. 2-3 the Sabbath is extolled as making the "son of man" (*i.e.*, any man, regardless of birth) blessed; indeed, God has His eyes "open upon all the ways of the sons of men; to give every one according to his ways" (Jer. xxxii. 19).



Head-Piece Employed by the Soncinos.
(From the Earlier Prophets, printed in 1485.)

The meaning of the term as employed in these passages admits of no doubt; it connotes in most cases the mortality of man, his dependence upon God, while in only a few it serves to differentiate the rest of the human race from Israel.

In Ezekiel, Daniel, and Enoch.

In Ezekiel the term occurs in Yʜᴡʜ's communications as the prevailing form of address to the prophet (ii. 1; iii. 1, 4, 10, 17; iv. 1 *et al.*; in all about 90 times). It has been held that it conveyed the special idea that a wide chasm stood between God, the speaker, and the prophet so addressed, but that it implied at the same time that Ezekiel was considered to be the ideal man. This view must be abandoned as unwarranted. The term "ben adam" is merely a cumbersome but solemn and formal substitute for the personal pronoun, such substitution being due, perhaps, to the influence of Assyro-Babylonian usage (see Delitzsch, "Wörterbuch," *s.v.* "Amelu"; comp. "zir amiluti" in the Babylonian myth concerning Adapa).

Similarly in Aramaic, "son of man" is the usual designation for "man," and occurs in the inscriptions in Syriac, Mandaic, Talmudic, and other dialects (see Nathanael Schmidt in Cheyne and Black, "Encyc. Bibl." iv. 4707-4708). In Dan. vii. 13, the passage in which it occurs in Biblical Aramaic, it certainly connotes a "human being." Many see a Messianic significance in this verse, but in all probability the reference is to an angel with a human appearance, perhaps Michael.

"Son of man" is found in the Book of Eɴᴏᴄʜ, but never in the original discourses. It occurs, however, in the Noachian interpolations (lx. 10, lxxi. 14), in which it has clearly no other meaning than "man," if, indeed, Charles' explanation ("Book of Enoch," p. 16), that the interpolator misused the term, as he does all other technical terms, is untenable. In that part of the Book of Enoch known as the "Similitudes" it is met with in the technical sense of a supernatural Messiah and judge of the world (xlvi. 2, xlviii. 2, lxx. 27); universal dominion and preexistence are predicated of him (xlviii. 2, lxvii. 6). He sits on God's throne (xlv. 3, li. 3), which is His own throne. Though Charles does not admit it, these passages betray Christian redaction and emendation.

Among Jews the term "son of man" was not used as the specific title of the Messiah. The New Testament expression ὁ υἱὸς τοῦ ἀνθρώπου is a translation of the Aramaic "bar nasha," and as such could have been understood only as the substitute for a personal pronoun, or as emphasizing the human qualities of those to whom it is applied. That the term does not appear in any of the epistles ascribed to Paul is significant. Psalm viii. 5-7 is quoted in Heb. ii. 6 as referring to Jesus, but outside the Gospels, Acts vii. 56 is the only verse in the New Testament in which the title is employed; and here it may be a free translation of the Aramaic for "a man," or it may have been adopted from Luke xxii. 69.

In the New Testament.

In the Gospels the title occurs eighty-one times. Most of the recent writers (among them being H. Lietzmann) have come to the conclusion that Jesus, speaking Aramaic, could never have designated himself as the "son of man" in a Messianic, mystic sense, because the Aramaic term never implied this meaning. Greek translators coined the phrase, which then led, under the influence of Dan. vii. 13 and the Logos gospel, to the theological construction of the title which is basic to the Christology of the Church. To this construction reference is made in Abbahu's controversial saying in Ta'an. 65b. Indeed, examination of many of the passages shows that in the mouth of Jesus the term was an equivalent for the personal pronoun "I."

E. G. H.

SONCINO: Italian family of printers, deriving its name from the town of Soncino, in the duchy of Milan. It traces its descent through a Moses of Fürth, who is mentioned in 1455, back to a certain Moses of Speyer, of the middle of the fourteenth century. The first of the family engaged in printing was Israel Nathan b. Samuel, the father of Joshua Moses and the grandfather of Gershon. He set up his Hebrew printing-press in Soncino in the year 1483, and published his first work, the tractate Berakot, Feb. 2, 1484. The press was moved about considerably during its existence. It can be traced at Soncino in 1483-86; Casal Maggiore, 1486; Soncino again, 1488-90; Naples, 1490-92; Brescia, 1491-1494; Barco, 1494-97; Fano, 1503-6; Pesaro, 1507-20 (with intervals at Fano, 1516, and Ortona, 1519); Rimini, 1521-26. Members of the family were at Constantinople between 1530 and 1533, and had a branch establishment at Salonica in 1532-33. Their printers' mark was a tower, probably connected in some way with Casal Maggiore.

The last of the Soncinos was Eleazar b. Gershon, who worked at Constantinople from 1534 to 1547. It is obvious that the mere transfer of their workshop must have had a good deal to do with the development of the printing art among the Jews, both in Italy and in Turkey. While they devoted their main attention to Hebrew books, they published also a considerable number of works in general literature, and even religious works with Christian symbols.

The Soncino prints, though not the earliest, excelled all the others in their perfection of type and their correctness. The Soncino house is distinguished also by the fact that the first Hebrew Bible was printed there. An allusion to the forthcoming publication of this edition was made by the typesetter of the "‘Iḳḳarim" (1485), who, on page 45, parodied Isa. ii. 3 thus: "Out of Zion shall go forth the Law, and the word of the Lord from Soncino" (כי מציון תצא תורה ודבר ה' משונצינו). Abraham b. Ḥayyim's name appears in the Bible edition as typesetter, and the correctors included Solomon b. Perez Bonfoi ("Mibḥar ha-Peninim"), Gabriel Strassburg (Berakot), David b. Elijah Levi and Mordecai b. Reuben Baselea (Ḥullin), and Eliezer b. Samuel ("Yad").

M. Sel.—J.

The following is a list of the Hebrew productions of the Soncinos:

1. Talmud, Berakot. Soncino (published), Feb. 2, 1484; (finished) Dec. 19, 1483.
2. Talmud, Beẓah. Soncino (published), Feb. 2, 1484; (finished Dec. 19, 1483.
3. Ibn Gabirol, "Mibḥar ha-Peninim." Soncino, Jan. 14, 1484.
4. Jedaiah Bedersi, "Beḥinat ‘Olam." Soncino, Dec. 12, 1484.
5. Abot, with Maimonides. Soncino (published), 1484; (finished) 1484-5.
6. Jacob b. Asher, "Oraḥ Ḥayyim." Soncino, 1485 (?).
7. Talmud, Megillah. Soncino, 1485 (?).
8. Joshua and Judges, with Ḳimḥi. Soncino, 1485.
9. Maḥzor, Roman rite, vol. i. Soncino (begun), Oct., 1485; Casal Maggiore (finished), Aug., 1486.
10. Earlier Prophets, with Ḳimḥi. Soncino, Oct. 15, 1485.
11. Joseph Albo, "‘Iḳḳarim." Soncino, Dec. 29, 1485.
12. Later Prophets, with Ḳimḥi. Soncino, 1486 (?).
13. Haggadah (editio princeps). Soncino, 1486.
14. Tefillat Yaḥid. Soncino, April 17, 1486.
15. Maḥzor, Roman (vol. ii.). Casal Maggiore, Aug. 21, 1486.
16. Talmud, Ketubot. Soncino, 1486-87.
17. Seder Taḥanunim. Soncino, April, 1487.
18. Talmud, Giṭṭin. Soncino, 1487.
19. Talmud, Baba Meẓi‘a. Soncino, 1487.
20. Rashi on the Pentateuch. Soncino, June 16, 1487.
21. Bedersi, "Baḳḳashat ha-Memin"; Ezobi, "Ḳa‘arat Kesef." Soncino, 1488.
22. M. Ḳimḥi, "Mahalak Shebile ha-Da‘at." Soncino, 1488.
23. Bible. Soncino, Feb. 23, 1488.
24. Moses de Coucy, "Semag" (2d ed.). Soncino, Dec. 19, 1488.
25. Talmud, Shabbat. Soncino, 1489.
26. Talmud, Baba Ḳamma. Soncino, 1489.
27. Talmud, Ḥullin. Soncino, June 13, 1489.
28. Talmud, Niddah. Soncino, July 22, 1489.
29. "Tefillah Mikol ha-Shanah." Soncino, 1490 (?).
30. J. Landau, "Sefer Agur." Naples, 1490 (?).
31. Jacob ben Asher, "Arba‘ah Turim." Soncino, c. 1490.
32. Maimonides, "Mishneh Torah." Soncino, March 23, 1490.
33. Psalms, Proverbs, Job. Naples, Dec. 12, 1490.
34. Isaac ibn Sahulah, "Mashal ha-Ḳadmoni." Soncino, 1490-91.
35. Bible. Naples, 1491.
36. Pentateuch (with accents). Naples, 1491.
37. Immanuel Romi, "Maḥberot." Brescia, Oct. 30, 1491.
38. Pentateuch, with Megillot, etc. Brescia, Jan. 23, 1492.
39. Mishnah, with Maimonides. Naples, May 8, 1492.
40. Talmud, Beẓah. Soncino, 1493.
41. Pentateuch. Brescia, Nov. 24, 1493.
42. Psalms. Brescia, Dec. 16, 1493.
43. Bible (with accents). Brescia, May, 1494.
44. Maḥzor, German rite (2d ed.). Soncino (or Brescia ?), 1495.
45. Tefillot, German rite. Brescia, 1495.
46. Seliḥot, German rite. Brescia, 1495.
47. Seliḥot. Barco, Sept. 15, 1497.
48. Talmud Babli, Sanhedrin. Barco, Nov. 16, 1497.
49. Hosha‘not. Fano, 1503.
50. Siddur Tefillot. Fano, 1504 (?).
51. Hai Gaon, "Musar haskel." Fano, Oct. 17, 1504.
52. Seliḥot. Fano (or Pesaro ?), 1505.
53. Eleazar of Worms, "Sefer ha-Roḳeaḥ." Fano, 1505.
54. Italian Siddur, in Hebrew characters. Fano, Oct., 1505.
55. Joseph Albo, "Sefer ‘Iḳḳarim." Fano, 1506.
56. Judah ha-Levi, "Cuzari." Fano, 1506.
57. Taḥanunim. Fano, 1506.
58. Haggadah. Fano, 1503-6.
59. Jonah Ghirondi, "Sha‘are ha-Teshubah." Fano, 1504-6.
60. Maḥzor. Fano, 1504-6.
61. Baḥya b. Asher on the Pentateuch. Pesaro, May 26, 1507.
62. "Petah Debarai." Pesaro, 1507-8.
63. Ḳimḥi, "Diḳduḳ." Pesaro, 1508.
64. Tefillah. Pesaro, 1508.
65. Talmud, Yebamot. Pesaro, 1508.
66. Talmud, Beẓah, with Rashi. Pesaro, 1509-10.
67. Talmud, Baba Ḳamma. Pesaro, 1510 (?).
68. "Mabo ‘al Otiyyot ‘Ibriyyot." Pesaro, 1510.
69. Talmud, Berakot, with Rashi, etc. Pesaro, 1510.
70. Bible. Pesaro, April 12, 1511.
71. Earlier Prophets, with Ḳimḥi. Pesaro, April 12, 1511.
72. Talmud, Baba Batra. Pesaro, 1511-12.
73. Talmud, Megillah. Pesaro, 1511-12.
74. Earlier Prophets, with Abravanel. Pesaro, 1512.
75. Naḥmanides on the Pentateuch. Pesaro, 1513-14.
76. Talmud, ‘Abodah Zarah. Pesaro, 1513-14.
77. Baḥya b. Asher, with Pentateuch. Pesaro, 1514.
78. Gersonides on the Pentateuch. Pesaro, 1514.
79. The Later Prophets, with Ḳimḥi. Pesaro, 1515.
80. Talmud, Mo‘ed Ḳaṭan. Pesaro, 1515.
81. Maḥzor, German rite. Pesaro, 1515.
82. Talmud, Sukkah. Pesaro, 1515.
83. Talmud, ‘Erubin. Pesaro, 1515.
84. Jacob b. Asher, Arba‘ah Ṭurim." Fano, 1516.
85. Ḳimḥi, "Diḳduḳ." Pesaro, 1517 (?).
86. Bible, second part. Pesaro, 1517.
87. Baḥya b. Asher on the Pentateuch. Pesaro, 1517.
88. Nathan b. Jehiel, "‘Aruk." Pesaro, Feb., 1517.
89. Ḳimḥi, "Diḳduḳ." Ortona, 1518.
90. Talmud, Ḥullin. Pesaro, 1519.
91. Megillot Rabbah. Pesaro, 1519.
92. Maḥzor. Rimini (?), 1520 (?).
93. Elijah Levita, "Pirḳe Eliyahu." Pesaro, 1520.
94. Albo, "Sefer ‘Iḳḳarim." Salonica, 1520.
95 Later Prophets, with Abravanel. Rimini, 1520.
96 Maḥzor. Rimini, 1521.
97. Yalḳuṭ Shim‘oni. Salonica, 1521.

98. Albo, "Sefer 'Iḳḳarim." Rimini, 1522.
99. Rashi on the Pentateuch. Rimini, 1525.
100. Benveniste, "Meliẓat 'Efer we-Dinah." Rimini, 1525.
101. "Kol Bo." Rimini, 1525.
102. Baḥya on the Pentateuch. Rimini, 1526.
103. Landau, "Sefer Agur." Rimini, 1526.
104. Machir, "Abḳat Rokel." Rimini, 1526.
105. Maḥzor. Salonica, 1526.
106. Yalḳuṭ Shim'oni. Salonica, 1526–27.
107. Maḥzor. Salonica. 1529.
108. Siddur Tefillot. Constantinople, 1530.
109. Bulat, "Kelal Ḳaẓer." Constantinople, 1530–31.
110. Bashyazi, "Adderet Eliyahu." Constantinople, 1530–31.
111. Hai Gaon, "Musar Haskel." Constantinople, 1531.
112. Ḳimḥi, "Miklol," 8vo. Constantinople, 1530–32.
113. Ḳimḥi, "Miklol," fol. Constantinople, 1532–34.
114. Almoli, "Sha'ar ha-Shem he-Ḥadash." Constantinople, 1532.
115. Ḳimḥi, "Shorashim." Salonica, 1532–33.
116. Jabeẓ, "Ḥasde Adonai." Constantinople, 1532–33.
117. Mizraḥi, "Sefer ha-Mispar." Constantinople, 1533–34.
118. Rissim, "Derashot." Constantinople, 1533.
119. Immanuel, "Maḥberot." Constantinople, 1535.
120. Vital, "Keter Torah." Constantinople, 1536.
121. David Kohen, Responsa. Constantinople, 1537.
122. Kalaẓ, "Sefer ha-Musar." Constantinople, 1536–37.
123. Aboab, "Nehar Pishon." Constantinople, 1538.
124. Shalom, "Neweh Shalom." Constantinople, 1538.
125. Illescas, "Imre No'am." Constantinople, 1539.
126. Jacob b. Asher, "Arba' Ṭurim." Constantinople, 1539–1540.
127. Algaba, "Amadis de Gaul." Constantinople, 1540.
128. Ibn Yaḥya, "Leshon Limmunim." Constantinople, 1542.
129. Shabbethai, "Minḥat Yehudah." Constantinople, 1543.
130. Shabbethai, "Milḥemet ha-Ḥokmah weha-'Osher." Constantinople, 1543.
131. Benjamin of Tudela, "Mas'ot shel-R. Binyamin." Constantinople, 1543.
132. Ibn Yaḥya, "Shib'ah 'Enayim." Constantinople, 1543–44.
133. Job. Constantinople, 1543–45.
134. Solomon ibn Gabirol, "Diwan." Constantinople, 1545.
135. Pentateuch: Aramaic, Hebrew, Persian, and Arabic. Constantinople, 1546.
136. Pentateuch: Aramaic, Hebrew, Greek, and Spanish. Constantinople, 1547.
137. Barfat, Responsa. Constantinople, 1546–47.

Eleazar b. Gershon Soncino: Printer between 1534 and 1547. He completed "Miklol" (finished in 1534), the publication of which had been begun by his father, and published "Meleket ha-Mispar," in 1547; and Isaac b. Sheshet's responsa, likewise in 1547.

Gershon b. Moses Soncino (in Italian works, **Jeronimo Girolima Soncino**; in Latin works, **Hieronymus Soncino**): The most important member of the family; born probably at Soncino; died at Constantinople 1533. He claims to have been of great assistance to the exiles from Spain, and especially to those from Portugal; and he made journeys to France in order to collect manuscripts for the works to be printed. He makes a pun upon his name by printing it as two words, "Ger Shon," referring to his many travels. In dedicating his edition of Petrarch (Fano, 1503) to Cæsar Borgia, he mentions that he had had Latin, Greek, and Hebrew types cut out by Francisco da Bologna, who is credited also with having made the cursive types attributed to Aldus Manutius. It is curious that Aldus, for his introduction to a Hebrew grammar (Venice, 1501), used the same types that had been employed by Soncino in 1492.

Israel Nathan b. Samuel b. Moses Soncino: Died at Brescia, probably in 1492. He wrote the Epilogue for the Casal Maggiore Maḥzor of 1486. It was at his suggestion that his son Joshua Soncino took up the work of printing.

Joshua Solomon b. Israel Nathan Soncino: Printer at Soncino from 1483 to 1488, at Naples from 1490 to 1492. He was the uncle of Gershon Soncino. It would appear that he had most to do with starting the printing of the Talmud.

Moses Soncino: Printer at Salonica in 1526 and 1527; assisted in the printing of the Catalonian Maḥzor and of the first part of the Yalḳuṭ.

J.

SONG OF MOSES.—Biblical Data: Poem found in Deut. xxxii. 1–43. It is said that "Moses spake in the ears of all the assembly of Israel the words of this song" (Deut. xxxi. 30, R. V.; comp. *ib.* xxxii. 44). The song exhibits striking originality of form; nowhere else in the Old Testament are prophetic thoughts presented in poetical dress on so large a scale.

The poem opens with an exordium (verses 1–3) in which heaven and earth are summoned to hear what the poet is to utter. In verses 4–6 the theme is defined: it is the rectitude and faithfulness of Yhwh toward His corrupt and faithless people. Verses 7–14 portray the providence which conducted Israel in safety through the wilderness and gave it a rich and fertile land; verses 15–18 are devoted to Israel's unfaithfulness and lapse into idolatry. This lapse had compelled Yhwh to threaten it (verses 19–27) with national disaster and almost with national extinction. Verses 28–43 describe how Yhwh has determined to speak to the Israelites through the extremity of their need, to lead them to a better mind, and to grant them victory over their foes.

The general plan of the poem resembles that of Ps. lxxviii., cv., cvi., and the prose of Ezek. xx., as well as the allegories of Ezek. xvi. and xxiii. In the Song of Moses, however, the theme is treated with greater completeness and with superior poetic power.

——**Critical View:** The poet was also an artist. Conspicuous literary ability and artistic skill are manifested in the development of his theme. His figures are diversified and forcible; the parallelism is unusually regular. One of the best examples of poetic simile in the Bible occurs in verses 11 and 12 of this song:

> "Like a vulture, that stirreth up its nest,
> That hovereth over its young,
> He spread abroad His wings, He took him,
> He bore him upon His pinion:
> Yhwh alone did lead him;
> And no foreign god was with Him." (Driver's transl.)

The conditions presupposed by the poem render the Mosaic authorship of it impossible. The Exodus and the wilderness wanderings lie in the distant past. The writer's contemporaries may learn of them from their fathers (verse 7). The Israelites are settled in Palestine (verses 13–14); sufficient time has passed for them not only to fall into idolatry (verses 15–19), but to be brought to the verge of ruin. They are pressed hard by heathen foes (verse 30); but Yhwh promises to interpose and rescue His people (verses 34–43). The post-Mosaic origin of the poem is therefore clear; and these historical

(In the Columbia University Library, New York.)

arguments are confirmed by the theological ideas and phraseology of the poem, neither of these being characteristic of the age of Moses.

On the other hand, there are many points of contact, both in expression and in theological conception, with the prophets of the eighth to the fifth century B.C. Critics are not agreed, however, on the precise date of the song. Formerly, when all of Deut. xxxi. 14–23 was referred to JE, the poem was believed to be anterior thereto, and was believed to be contemporary with the Syrian wars under Jehoash and Jeroboam II. (*c.* 780). To this period it is referred by Dillmann, Schrader, Oettli, Ewald, Kamphausen, and Reuss. Kuenen and Driver, believing the expression "those which are not a people" of verse 21 to refer to the Assyrians, assign the poem to the age of Jeremiah and Ezekiel (*c.* 630), while Cornill, Steuernagel, and Bertholet refer it to the closing years of the Exile—the period of the second Isaiah. In the present state of modern knowledge the date can not be definitely fixed; but there is much to be said in favor of the exilic date.

E. G. H. G. A. B.

SONG OF SONGS, THE (A. V. **The Song of Solomon**): One of the Five Megillot. The Hebrew title, שיר השירים אשר לשלמה, is commonly understood to mean "the most excellent of songs, composed by Solomon" (not "one of the songs composed by Solomon"); the title, however, is later than the poem, in which the relative pronoun is always ש, never אשר. The ancient versions follow the Hebrew; from the rendering in the Latin Vulgate, "Canticum Canticorum," comes the title "Canticles."

Interpretation: Solomon as Bridegroom.

The oldest known interpretation of the Song (induced by the demand for an ethical and religious element in its content) is allegorical: the Midrash and the Targum represent it as depicting the relations between God and Israel. The allegorical conception of it passed over into the Christian Church, and has been elaborated by a long line of writers from Origen down to the present time, the deeper meaning being assumed to be the relation between God or Jesus and the Church or the individual soul. The literal interpretation of the poem as simply a eulogy of married love had its representatives in early times (Theodore of Mopsuestia, and, to some extent, Abraham ibn Ezra), and, in the renaissance of the sixteenth and seventeenth centuries, was maintained by Grotius, Clericus, and others; but it is only in the last hundred years that this interpretation has practically ousted the allegorical. The Song is now taken, almost universally, to be the celebration of a marriage, there being, in fact, no hint of allegory in the text. Obviously there are two principal personages, a bridegroom and a bride; but opinions differ as to who the bridegroom is. If the title be accepted as genuine, it is a natural conclusion that the poem describes the nuptials of Solomon and a princess (the daughter of Pharaoh) or a country maiden (so Delitzsch and others). But, apart from the question of date, this construction is proved impossible by the fact that the bridegroom is distinguished from Solomon in viii. 11, 12, and probably, by revision, in vi. 8, 9. To meet this difficulty it is assumed (by Ewald, Driver, and many others) that the bridegroom or fiancé is a young shepherd, and that Solomon is his would-be rival; that the king has carried off a beautiful rustic maiden (vi. 10–12) and has brought her to his palace in Jerusalem (i. 4), where he endeavors to win her affections; but that she, resisting the allurements of the court, remains true to her country lover, and is finally united to him (viii. 5–14). This theory, however, rests on unwarranted interpretations of particular passages. The alleged rivalry between a king and a shepherd appears nowhere in the text: there is only one lover, as there is only one maiden; Solomon is introduced as an actor in only one place (iii. 6–11), and here he is represented as the shepherd bridegroom himself. Both the views described above (and the various modifications of them) regard the poem as a drama: it is divided by expositors into acts and scenes. It is, in fact, dramatically conceived (like the Job poem, for instance), since it consists not of narratives, but of lyric utterances put into the mouths of certain characters; but it is not a drama. Not only is there no definite indication of time or place, all being vaguely rhapsodical; but there is no movement, no culmination or catastrophe. The marriage is already consummated in i. 6 (and so in ii. 6, iv. 16–v. 1, vii. 9 [A. V. 8]); and the story is no farther advanced in viii.

Rustic Wedding.

Still another view regards the book as picturing the popular festivities held in Palestine in connection with the wedding-week. Of such festivities there are hints in the Old Testament (Judges xiv. 10–12; Jer. xvi. 9; Ps. xix. 6 [5]; comp. Matt. xxv. 1 *et seq.*); and Wetzstein (in his article "Die Syrische Dreschtafel," in Bastian's "Zeitschrift für Ethnologie," 1873, pp. 270 *et seq.*, and in the appendix to Delitzsch's commentary on the Song) has given the details of the modern Syrian marriage celebration, in which he finds parallels to those of the poem. In the week succeeding the marriage the villagers assemble; the thrashing-board is set up as a throne, on which the newly married pair take their seats as "king" and "queen"; there are songs in praise of the physical charms of the pair, and dances, in which bridegroom and bride take part; especially noteworthy is the "sword-dance," performed by the bride with a naked sword in one hand (see vii. 1 [R. V. vi. 13]). In accordance with this view the "king" of the poem, sometimes called "Solomon" (an imaginative designation of a person of ideal beauty), is the bridegroom; the "daughters of Jerusalem" are the village maidens in attendance on the bride; the royal procession of iii. 6–11 is that of the bridegroom (comp. Ps. xix. 6 [5]); the dialogues, descriptions of bodily charms, and other pieces are folk-songs; according to Budde, the name "Shulamite," given to the bride once (vii. 1 [vi. 13]), is equivalent to "Shunemmite," and is an imaginative reminiscence of the fair Abishag (1 Kings i. 3).

Some explanation such as this is required by the character of the book. It is a collection of pieces in praise of the physical delights of wedded love. The freeness of expression (especially in vii. 2-10 [1-9]), offensive to modern taste, is in accord with ancient custom (comp. Ezek. xvi., xxiii.; Prov. v. 16-20): it may be due in part also to the license of popular festivities. It is not necessary, however, to suppose that the author has merely reproduced the songs of the rustic celebrations of his time; rather, a poet of high ability here sings of married love, following the lines of the festive customs, but giving free play to his imagination: such charm of style as the book shows is not to be looked for in rustic songs. The unity of the poem is one of emotion—all the situations reflect the same circumstances and the same sentiments.

Date.

The date of the Song is indicated by its literary form: the idyl is foreign to the Hebrew genius, and points to the time when the Jews imitated Greek models (Theocritus and Bion). The word אפריון (= "palanquin" [iii. 9]) appears to be the Greek *φορεῖον*; פרדס (iv. 13) was not introduced earlier than the later Persian period (for other late words see Driver, "Introduction"). The date of the book can hardly be determined precisely: it was probably composed in the period 200-100 B.C.; but some of the material may be older.

The discussions at the Synod of Jabneh (Jamnia) show that toward the end of the first Christian century the canonical authority of the Song was disputed in certain quarters (see BIBLE CANON, § 11). Probably the ground of opposition was its non-religious character: it does not contain the Divine Name (except "Yah" in viii. 6, Hebr., as an expression of intensity); its love is sensuous; and its only ethical element is the devotion of one man to one woman in marriage. It is quoted neither by Philo nor in the New Testament. But it appears to have gained popularity; and the probability is that at an early day it was interpreted allegorically by the sages, and that it was on the basis of such an interpretation that its canonicity was finally established. On its ritual use at Passover see MEGILLOT, THE FIVE.

BIBLIOGRAPHY: On the history of the interpretation: S. Salfeld, *Das Hohelied Salomo's bei den Jüdischen Erklärern des Mittelalters*, 1879; W. Riegel, *Die Auslegung des Hohenliedes in der Jüdischen Gemeinde und der Griechischen Kirche*, 1898; E. Reuss, *La Bible* (gives a conspectus of various schemes); C. D. Ginsburg, *Song of Songs*, 1857; Cheyne, in *Encyc. Bibl.* s.v. *Canticles*. The traditional interpretation (Solomon as bridegroom) is given in Delitzsch's commentary, 1875; and the fuller dramatic interpretation (the shepherd lover) in: Ewald, *Dichter*, 1867; W. R. Smith, *Canticles*, in *Encyc. Brit.* 9th ed.; Rothstein, *Das Hohe Lied*, 1893; idem, *Song of Songs*, in Hastings' *Dict. Bible*; Driver, *Introduction* (which gives a full outline of the schemes of Delitzsch and Ewald); Wetzstein, in Budde, *The Song of Solomon*, in *The New World*, 1894, vol. iii.; idem, *Commentary*, in *K. SONG OF SONGS, MIDRASHIM TO. See SHIR HA-SHIRIM.

SONG OF THE THREE HOLY CHILDREN, THE: Greek insertion in the Book of Daniel after iii. 23, the only one of the additions to Daniel that really add to the text of the book. The title given above is inexact: under it are included two distinct pieces, namely, (1) the Prayer of Azarias, and (2) the Song or Hymn of the Three. In the collection of odes or canticles given in Codex Alexandrinus and two other manuscripts (printed in Swete, "The Old Testament in Greek," vol. iii.) the titles of the pieces are respectively: "Prayer of Azariah" and "Hymn of Our Fathers." The two compositions shared in the fortunes of the other Apocryphal writings: attacked and defended by early Christian writers, they have been adopted as canonical (or deuterocanonical) by Catholics and rejected by Protestants. The older Jewish books do not quote them, but show acquaintance with part of their material: in the Midrash (Lev. R. xxxiii. 6) there is a long conversation between Nebuchadnezzar and "the three" which, while it makes no reference to these writings (though the king cites copiously from the Old Testament), illustrates the disposition to expand the narrative of the Book of Daniel (comp. 'Ab. Zarah 3a; Sanh. 93a; Ta'an. 18b; Pes. 118a; see Ball in Wace, "Apocrypha").

In the poetical parts (the prayer and the song) the two recensions, that of the Septuagint and that of Theodotion, are nearly identical: they differ slightly in the order of verses; and Theodotion simplifies by omitting a few lines. In the prose narrative introducing the poems the Septuagint is the fuller and doubtless the older; Theodotion is superior in literary form. The two pieces are here singularly inappropriate. The prayer is a national petition acknowledging past sins, professing present obedience, and imploring mercy. The song is a doxology calling on all God's creatures to praise Him; and its expressions are taken from the canonical Psalter (see especially Ps. cxlviii.). These are not the natural utterances of men in a fiery furnace, nor do they contain any reference to the existing situation, except in verse 88 (Swete; A. V. 66), in which "the three" are called on to join in the praise; but this verse is an addition by the compiler, who has inserted the two poems (composed before his time), and has adapted the second to the situation. In the prose part (verse 49, Swete; A. V. 26) the fourth person of Dan. iii. 25 is accounted for by the statement that the angel of the Lord descended, pushed aside the flame, and cooled the furnace—an inartistic insertion; the Hebrew, with finer feeling, leaves the reader to infer the descent of the angel. There is no sufficient ground for supposing that any part of these pieces belonged to the original text of Daniel. The motive of the addition was the natural desire to expand a popular story. The material was, doubtless, derived from current legends; thus, the cooling of the furnace is mentioned in Pes. 118a. The date of the prayer is suggested in verse 38 (15), where it is said that at that time there was no prophet, leader, or sacrifice—perhaps between 168 and 165 B.C. (profanation of the Temple by Antiochus); in the song the references to priests and Temple servants (verses 84-85 [62-63]) point to the time after the purification of the Temple (about 164

B.C.). The tone of the two pieces is Palestinian, and the original language was probably Hebrew or Aramaic.

J. T.

SONNEMANN, LEOPOLD: German journalist; born at Höchberg, Lower Franconia, Oct. 29, 1831. After having acquired considerable wealth as a merchant, he founded in 1856 the "Frankfurter Zeitung," a newspaper published in Frankfort-on-the-Main; it soon acquired a leading position in southern Germany, especially in the commercial world. Since 1867 Sonnemann has been its sole proprietor and editor.

From 1871 to 1876 and from 1878 to 1884 Sonnemann was a delegate in the German Reichstag, as a member of the People's party (Volkspartei), for which his paper has always been a representative organ. At his first election (1871) he defeated Baron Rothschild, at the second (1874) Lasker. In 1884 he was defeated by the Social Democrat Labor.

Sonnemann is at present (1905) a prominent member of the aldermanic board of Frankfort-on-the-Main.

S. F. T. H.

SONNENFELD, SIGISMUND: Hungarian journalist; born at Vagujhely, Hungary, Oct. 1, 1847. He received his education in his native town, at the gymnasia at Prague and Presburg, and at the University of Budapest (Ph.D. 1870). In the year of his graduation he joined the editorial staff of the "Pester Lloyd," on which he served until 1890. From 1877 till 1890 he was also teacher at the gymnasium of Budapest. In the latter year he removed to Paris and became director of the Baron de Hirsch philanthropic institutions. He is at present (1905) director of the Jewish Colonization Association and a member of the Central Committee of the Alliance Israélite Universelle. He was sent by the former association in 1896 and again in 1902 to the Argentine Republic and to Rumania.

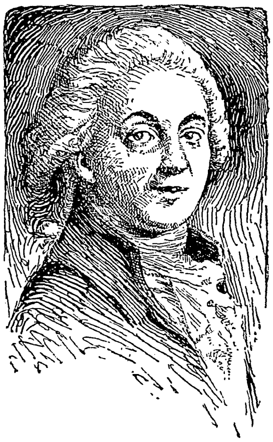
Sonnenfeld has written many articles on science, literature, and politics for Austrian, Hungarian, and French papers, and is the author of "Lenau," 1882, a work on that poet.

S. F. T. H.

SONNENFELS: Austrian family of scholars and writers, descendants of Wurzbach Lipmann, members of which became prominent during the eighteenth century.

Perlin Lipmann Sonnenfels: Austrian scholar; son of Wurzbach Lipmann, chief rabbi of Brandenburg. Perlin Lipmann emigrated to Austria, where he became the agent of the princely house of Dietrichstein at Nikolsburg. He, together with his children, embraced the Catholic faith some time between the years 1735 and 1741. He assumed the name Aloys Wiener, and later removed to Vienna, where he became teacher of Semitic languages at the university, and Hebrew interpreter at the juridical court. In 1746 he was knighted and received a patent of nobility entitling him to use the name Sonnenfels, which his two sons adopted. Perlin's wife remained faithful to Judaism.

Joseph von Sonnenfels: Austrian jurist and novelist; born at Nikolsburg, Moravia, 1732; died at Vienna April 25, 1817; son of Perlin Lipmann, and brother of Franz Anton von SONNENFELS. Joseph, who was baptized in his early youth, received his elementary education at the gymnasium of his native town, and then studied philosophy at the University of Vienna. In 1749 he joined, as a private, the regiment "Deutschmeister," advancing to the rank of corporal; upon his discharge in 1754 he took a course in law at the University of Vienna, whereafter he established himself as a counselor at law in the Austrian capital. From 1761 to 1763 he officiated as secretary of the Austrian "Arcierengarde," and in the latter year was appointed professor of political science at the University of Vienna, twice acting as rector magnificus. In 1779 he received the title of "Wirklicher Hofrath," and was in 1810 elected president of the Academy of Sciences, a position which he held until his death.



Joseph von Sonnenfels.

Among Sonnenfels' many works may be mentioned: "Specimen Juris Germanici de Remediis Juris, Juri Romano Incognitis," Vienna, 1757; "Ankündigung einer Teutschen Gesellschaft in Wien," *ib.* 1761; "Betrachtungen über die Neuen Politischen Handlungsgrundsätze der Engländer," *ib.* 1764; "Grundsätze der Polizei, Handlung und Finanzwissenschaft," *ib.* 1765-67 (8th ed. 1819); "Briefe über die Wienerische Schaubühne," *ib.* 1768 (reedited by Sauer, *ib.* 1884); "Von der Verwandlung der Domänen in Bauerngüter," *ib.* 1773; "Ueber die Abschaffung der Tortur," Zurich, 1775 (2d ed. Nuremberg, 1782); "Abhandlung über die Aufhebung der Wuchergesetze," Vienna, 1791; "Handbuch der Innern Staatsverwaltung," *ib.* 1798; "Ueber die Stimmenmehrheit bei Criminalurtheilen," Vienna, 1801 (2d ed. 1808). His "Gesammelte Werke" appeared in ten volumes (Vienna, 1783-87), and contained most of his belletristic works, poems, and dramas.

From 1765 to 1767 and from 1769 to 1775 Sonnenfels was editor of "Der Mann ohne Vorurtheil," in which paper he defended the liberal tendencies in literature. He improved the Vienna stage especially through his critical work "Briefe über die Wienerische Schaubühne," in which he attacked the harlequin of the Vienna theater, causing this figure to be eliminated from the personnel of the stage.

He was chiefly instrumental in bringing about the abolition of torture in Austria (1776). Sonnenfels' attitude toward Lessing placed the former in a very unfavorable light, as it was due to his intrigues and jealousy that Lessing was not called to Vienna. Sonnenfels was severely condemned for his action in this affair.

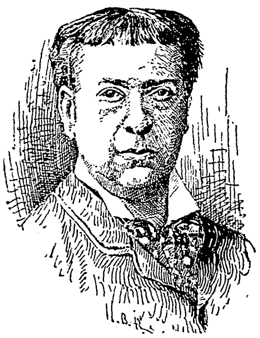
Franz Anton Sonnenfels, Freiherr von: Austrian philanthropist; born at Nikolsburg, Moravia, July 12, 1735; died at Troppau Jan. 11, 1806; son of Perlin Lipmann and brother of Joseph von Sonnenfels, with whom he was baptized. He was educated at the gymnasium of his native town, and entered as agent the service of the princes of Dietrichstein; his extraordinary ability attracted the attention of Emperor Joseph II., who bestowed upon him the title of "Hofrath," and attached him to the office of the secretary of the imperial household. In 1797 he was knighted.

Having no children, he and his wife, Maria Rosalia (née Geyer; died March 18, 1811), left their fortunes to charitable institutions, especially in the city of Nikolsburg. Sonnenfels was buried in the cemetery of that city, and a monument was erected over his grave Oct. 21, 1860.

Bibliography: Wurzbach, *Biographisches Lexikon des Kaiserthums Oesterreich*, xxxv. 315 *et seq.*, 317-343; *Brockhaus Konversations-Lexikon*; Kopetzky, *Joseph und Franz von Sonnenfels*, Vienna, 1882.

s. F. T. H.

SONNENTHAL, ADOLF RITTER VON: Austrian actor; born at Budapest Dec. 21, 1834. He was the son of humble parents, and spent his boyhood as a tailor's apprentice, working at his trade until his sixteenth year, when he went to Vienna to better his condition. On his first evening in the Austrian capital the boy visited the Hofburgtheater and witnessed a performance of "Der Erbförster," which made such an impression upon him that he sought out Dawison, then in the zenith of his fame, and announced his determination to become an actor. Dawison, at first amused by the lad's audacity, soon became interested in him, and finally placed him in the care of Laube, who permitted him to study at the Hofburgtheater.



Adolf Sonnenthal.

Having gleaned a superficial knowledge of acting, Sonnenthal made his début Oct. 30, 1851, at the Stadttheater, Temesvar, as *Phöbus* in "Thürmer von Notre-Dame." The next five years he spent in touring various small towns of Hungary, and after three stays of considerable duration at Hermannstadt (1852), Gratz (1854), and Königsberg (1855) respectively, he made his Vienna début at the Hofburgtheater (May 18, 1856) as *Mortimer* in "Maria Stuart." He failed to please either public or critics, and would have been dismissed if he had not triumphed the next evening as *Herzog* in Hackländer's "Der Geheime Agent." When he repeated his success as *Don Carlos*, Laube engaged him for the next three years; and on the expiration of that time, for a life tenure.

In 1870 Sonnenthal was appointed assistant manager, and in 1884 chief manager, of the Hofburgtheater; and from 1887 to 1888 he acted as its director. His twenty-fifth anniversary at this theater was celebrated by all Vienna, and the emperor conferred an order of nobility upon the former Jewish tailor's apprentice. In 1896 the celebration of his fortieth anniversary was marred by the anti-Semitic feeling of the Vienna city council, which, because of his race, refused to extend the freedom of the city to him.

Sonnenthal's repertoire is most extensive, and in spite of his unattractive features he has succeeded in rôles that demand a pleasing personality, such as *Romeo, Kean,* and *Egmont.* Of other parts played by him may be mentioned: *Hamlet, Macbeth, Wallenstein, Uriel Acosta, Nathan der Weise, Othello, Bolingbroke, Fiesco, Marcel de Prie* in "Wildfeuer," *Rochester* in "Waise von Lowood," *Bolz, Narciss, Graf Waldemar, Fürst Lübbenau* in "Aus der Gesellschaft," *Fox* in "Pitt und Fox," *Ringelstern, Pasa, Raoul Gérard* in "Aus der Komischen Oper," *König* in "Esther," *Faust, Tell, Clavigo, Nero, Fritz Marlow, Kerbriand, Mellefont* in "Miss Sara Sampson," *Marc Antony, Richard II., Henry VI., Fabricius,* and *Graf Trast.*

SONNESCHEIN, SOLOMON H.: American rabbi; born at Szent Marton Turocz, Hungary, June 24, 1839. He received his education at Boskowitz, Moravia, where he obtained his rabbinical diploma in 1863, and later studied at Hamburg and at the University of Jena (Ph.D. 1864). He was successively rabbi at Warasdin, Prague, New York, and St. Louis, Mo., and is now (1905) officiating at the Temple B'nai Yeshurun, Des Moines, Iowa.

Sonneschein has contributed for more than forty years to numerous German and English periodicals.

Bibliography: *The American Jewish Year Book*, 1903-1904, p. 101.

A. F. T. H.

SONNINO, SIDNEY, BARON: Italian politician; born at Alexandria, Egypt, in 1849. His father was a Jewish emigrant from Leghorn, and his mother an English Protestant. He grew up in Florence among a circle of kindred spirits including such men as the historian Pasquale Villari; Karl Hillebrand, the German literary investigator; and Leopoldo Franchetti. In company with the last-named, Sonnino undertook an expedition to southern Italy and to Sicily, the result being a joint publication in which was embodied Sonnino's treatise "I Contadini di Sicilia," on the peasants of the latter place. Another treatise of Sonnino's, entitled "La Mezzadria in Toscana," deals with the leasehold system by which the peasants of Tuscany hold their farms. In both of these treatises Sonnino shows his intimate acquaintance with economic conditions, and his deep interest in the welfare of the poorer classes.

As a member of Parliament, in which he has held a seat since 1882, Sonnino is chiefly occupied with financial and foreign questions. He is an earnest champion of the German-Italian alliance. As leader of the Left Center he was one of the most active and successful opponents of Depretis' cabinet, especially of Magliani, the minister of finance, whom he repeatedly accused of extravagance. During Perazzi's ministry Sonnino filled the office of assistant secretary of state in the department of finance; and from 1893 to 1896 he held the portfolio of finance in Crispi's cabinet. By his wide knowledge of national economy and his shrewd financial operations he has rendered the Italian state valuable services. Since Crispi's fall Sonnino has been one of the most prominent members of the parliamentary Opposition.

S. S. MUN.

SORANI, UGO: Italian jurist and deputy; born at Pitigliano May 4, 1850. He studied law in his native town and in Mondavi, Leghorn, and Pisa, graduating from the university of the last-named city in 1872. He then established himself as a counselor at law in Florence, acting also for several years as secretary of the Jewish community of that city. In 1900 he was elected to the Chamber of Deputies as the representative of Scansano, district of Grosseto, and was reelected in 1904.

Sorani is the author of the following works: "I Partiti Politici," "Maggioranze e Minoranze," and "Sull' Esercizio Provvisorio del Commercio Concesso al Fallito" (Florence, 1891); "Della Ricerca della Paternità" (3d ed. *ib.* 1892); "La Banca d'Italia, Provedimenti Legislativi, Stato Finanziario e Proposte di Assestamento" (*ib.* 1894); "Della Cambiale e dell' Assegno Bancario" and "Il Fallimento" (Rome, 1896); "La Donna" (3d ed. Poggibonsi, 1896); and "Sull Disegno di Legge per il Riordinamento dell' Imposta di Ricchezza Mobile" (Pitigliano, 1897).

S. U. C.

SOSA (SOSSA, SOUSA), DE: Envoy of King John III. of Portugal to the court of Pope Paul III. (1534-50). While he was at Rome the Maranos, seeking relief from the severity of the Inquisition, urged the pope to send a papal nuncio to Portugal in their interest. This measure was opposed by the court, and, at first, likewise by the pope; but the Jewish envoy finally succeeded in gaining the acquiescence of the latter. The envoy's letter to the king informing him of this fact begins with the words, "Rome is a prostituted Babylon, and I feel as if I were in hell." In a letter to the King of France, De Sosa designates Lippomano, the papal nuncio who had been selected to fill the post of papal nuncio in Portugal, as a man "with the hands of an Esau and the voice of a Jacob."

J. S. O.

SOSA, GOMEZ DE. See GOMEZ DE SOSA.

SOSA, MARTIN ALFONSO DE: Portuguese envoy at and governor of Goa, in the middle of the sixteenth century. In Cranganore, sixteen miles from Cochin, which at that time had a large Jewish community, he discovered several bronze tablets with ancient inscriptions. An old Jewish philologist of Calcutta declared that they were written in "Malabaric, Chaldaic, and Arabic" and referred to privileges which had been granted to the Jews of that locality. He translated all the inscriptions into Hebrew, and they were later rendered into Portuguese. The Hebrew translation of one of these privileges was in the possession of a certain Leo, cantor of the Greene Street Synagogue in New York, in the fifties of the nineteenth century. See COCHIN.

BIBLIOGRAPHY: Kayserling, *Gesch. der Juden in Portugal*, pp. 164-165.
J. S. O.

SOSA, SIMON DE: One of the wealthiest Maranos in Portugal in the middle of the seventeenth century. He was one of the conspirators, led by the Archbishop of Braga, who intended to burn the royal palaces, murder King John IV., and abduct the queen and the princes. The conspiracy, however, was detected in time, and Sosa, with the other conspirators, was executed.

To the same family probably belonged **Isaac de Sosa Brito** (who carried on a correspondence with Francis de Oliviera) and **Gabriel de Sosa Brito**. The latter was a famous mathematician and cosmographer, and his works are described in "Mem. de Lit. Port." (iv. 329). These two brothers flourished in the seventeenth century.

J. S. O.

SOSIUS, CAIUS: Roman general. Although Herod had been made king of Judea by the Romans, he was forced to wrest the country from the Hasmonean Antigonus; and as the aid which he had received from Rome was insufficient, he went to Samosata to obtain reenforcements from Antony, who ordered Sosius, the legate of Syria, to give the king his active support. (Josephus, "Ant." xiv. 15, §§ 7-9; *idem*, "B. J." i. 16, §§ 6-7). Sosius reached Jerusalem with a large army in the spring of 37 B.C., and he and Herod, following the tactics of Pompey twenty-seven years before, directed the battering-rams against the city's northern walls. Progress was difficult, however; for the beleaguered garrison made frequent sorties and destroyed the Roman works.

The first wall was carried only after a siege of forty days, and the second wall fell fifteen days later. The defenders of Jerusalem made a desperate stand between the walls of the Temple and in the upper city; but these positions likewise were finally carried "on the solemnity of the fast" (*τῇ ἑορτῇ τῆς νηστείας*), this phrase of Josephus being frequently interpreted as denoting the Day of Atonement, although it more probably refers to some Sabbath ("Ant." xiv. 16, §§ 1-3; "B. J." i. 18, §§ 1-3; Dion Cassius, xlix. 22; Seneca, "Suasoriorum Liber," ii. 21; Tacitus, "Hist." v. 9). It would appear from Dion Cassius that the city was taken in 38 B.C.; but the statements of Josephus, which indicate the year 37, are more trustworthy.

Antigonus surrendered to Sosius, entreating him on his knees for mercy; but the Roman tauntingly called him "Antigone" and put him in chains, while the soldiers were given a free hand to pillage and murder in the city, so that Herod was well pleased when his rich gifts had induced his ally to withdraw with his troops. During the siege Sosius did not prevent those within the city from receiving sacrificial victims for the Temple; and after the capture of the place he showed his reverence for the Sanctuary by rich donations ("Ant." xiv. 16, § 4). It appears from coins and from the triumphal fasti that he received the title of "imperator" and the privilege of celebrating a triumph in honor of his victory over Judea.

G. S. Kr.

SOSSNITZ, JOSEPH JUDAH LÖB: Russian-American Talmudic scholar, mathematician, and scientific author; born at Birzhi, government of Kovno, Sept. 17, 1837. When he was only ten years old he prepared a calendar for the year 5608 (= 1847–48). At the age of nineteen he went to Riga as a teacher of Hebrew, and there made the acquaintance of Professor Novik, who gave him access to the library of the polytechnical school, where he studied German and perfected himself in secular sciences, on which he published articles in Jewish periodicals. In 1875 he was invited to Berlin by H. S. Slonimski to act as coeditor of "Ha-Ẓefirah," but as he refused to write against Lichtenfeld, Slonimski's antagonist, he was dismissed. In 1888 he settled at Warsaw as editor of the scientific and cabalistic departments of "Ha-Eshkol." He went to New York in 1891, and two years later he founded, in 104th street, a Talmud Torah, of which he was principal until 1897. Since 1899 he has been lecturer on Jewish ethics in the Educational Alliance.

Sossnitz has written on different treatises of the Talmud, and on astronomy, geometry, physics, etc. His published works are as follows: "Aken Yesh Adonai" (Wilna, 1875), an attack upon modern materialism and particularly upon Büchner's "Kraft und Stoff"; "Ha-Shemesh" (Warsaw, 1878), an essay upon a scientific demonstration of the sun's substance, based on modern investigation and accompanied by astronomical tables; "Seḥoḳ ha-Shak" (Wilna, 1880), a manual of chess, based upon A. von Breda's method; "Der Ewige Kalender" (Riga, 1884); "'Iddan 'Olamim" (Warsaw, 1888), a perpetual calendar for Jews, Christians, and Mohammedans, with tables for comparison; "Ha-Ma'or" (*ib.* 1889), an essay on Jewish religious philosophy, containing, besides, notes on Biblical and Talmudical exegesis.

E. C. M. Sel.

SOṬAH ("Faithless Wife"; "Woman Suspected of Unfaithfulness"): Treatise in the Mishnah, Tosefta, and Babylonian and Palestinian Talmuds, devoted in the main to an exact definition of the rules of procedure in the case of a wife either actually or supposedly unfaithful (Num. v. 11–31). In most editions this treatise is the sixth in the order Nashim, and is divided into nine chapters containing sixty-seven paragraphs in all. The following is a summary of the contents:

Ch. i.: On the manner in which the husband should manifest his jealousy and restrain his wife from improper relations with another man; the consequences to the wife if she does not heed her husband's warnings (§§ 1–2); how the suspected wife is brought before the Sanhedrin in Jerusalem, how exhorted to confess, if she is guilty, and how admonished (§§ 3–6); with what measure one metes, it is meted unto him also; if a woman adorns herself for sin, God renders her hideous (§ 7); Biblical examples of recompense both of good and of evil: Samson followed whither his eyes led, and they were pierced (Judges xvi. 21), while Miriam stood for an hour on the river-bank because of Moses (Ex. ii. 4), and, as stated in Num. xii. 15, all Israel waited for her seven days (§§ 8–9).

Contents: Ch. i.-v.

Ch. ii.: How the offering of jealousy is prepared (§ 1); how the priest pours the consecrated water into an earthen vessel and whence he takes the earth which he puts in the water (§ 2; comp. Num. v. 17); how he writes the book (comp. Num. v. 23), the verses which are written in it, and the material employed (§§ 3–4); the time and the cases to which the confirmation of the oath on the part of the wife refers (§§ 5–6; comp. Num. v. 22).

Ch. iii.: Way in which the jealousy-offering is brought (§§ 1–2); cases in which the woman has a right to refuse to drink the bitter water (§ 3); commencement of the efficacy of the water of bitterness, and the problem whether a meritorious deed performed by the woman at some previous time may protect her from the action of the water; discussion, in this connection, of the admissibility of instructing women in the Law (§§ 4–5); cases in which the jealousy-offering is burned; distinctions between Israelites and priests and between men and women with regard to certain rights and punishments (§§ 6–8).

Ch. iv.: Women to whom the water of bitterness is not given (§§ 1–4); cases in which the court itself warns the woman against questionable relations with a man (§ 5).

Ch. v.: The water of bitterness affects the adulterer as well as the adulteress (§ 1); list of several textual interpretations that were delivered by R. Akiba and R. Joshua b. Hyrcanus on the day on which Gamaliel II. was deposed and Eleazar b. Azariah was elected "nasi" (§§ 2–5; comp. Ber. 28a).

Ch. vi.: The amount of testimony regarding the unfaithfulness of a woman which prevents her from drinking the bitter water, and testimony which causes her to lose her Ketubah.

Ch. vi.-ix.

Ch. vii.: Prayers which may be said in any language, such as the "Shema'" and the daily prayer (§ 1); what may be said only in the holy tongue (Hebrew), such as most of the sections of the Torah, and the formula spoken at the ḥaliẓah by the woman whom her brother-in-law refuses to marry (§ 2); the method of reciting these formulas, and the time and the mode of reading the portions of the Law (§§ 3-7); the story of King Agrippa II., who wept when he heard the words "Thou mayest not set a stranger over thee, which is not thy brother" (Deut. xvii. 15), since he was himself a descendant of Herod and consequently an Idumean, and to whom the people cried out: "Thou art our brother" (§ 8).

Ch. viii.: The address by the priest anointed for war, delivered to the army before battle (§ 1; comp. Deut. xx. 2 *et seq.*); interpretation of Deut. xx. 5-9; those who are ordinarily exempt from military service, and wars from which they are not exempt (§§ 2-7).

Ch. ix.: The breaking of the neck of a heifer in case the assassin of a man found murdered is unknown (§§ 1-8; comp. Deut. xxi. 1-9); the time of the abolition both of this custom and of the use of the water of bitterness in the trial of women suspected of adultery (§ 9); the discontinuance of other customs, things, and virtues; on many ordinances proclaimed at various times; the gloomy portents of the Messianic time (§§ 10-14); an enumeration of the different grades of holiness and piety, the highest being the gift of the Holy Spirit (§ 15).

The Tosefta.

The Tosefta is divided into fifteen chapters and contains a large number of haggadic and exegetic interpretations, as well as various historical statements and narratives. Particularly noteworthy is the exegesis of several passages, including Deut. xxi. 7-8 (Tosef. ix. 2-9), I Sam. iv. 8-9, Nah. i. 1-2, and Cant. viii. 5-6. Certain sections of interest are devoted to the explanation of contradictions between Biblical statements; for example, Tosef. xi. 11 seeks to harmonize I Sam. x. 2, a passage locating Rachel's grave "in the border of Benjamin," and Gen. xxxv. 19, which describes her burial-place as being near Beth-lehem, in the district of Judah. In like manner xi. 18 and xii. 3 seek to harmonize II Sam. xxi. 8 with iv. 23, and II Chron. xxii. 2 with II Kings viii. 17 respectively. The narratives of special interest are those concerning Simeon the Just—who received, while in the Temple, a premonition of the death of the emperor Caligula (xiii. 6), and who prophesied his own end (xiii. 8)—and the account of the despair which seized the people after the destruction of the Temple, so that many refused to eat meat or to drink wine, until R. Joshua taught them to observe restraint even in their mourning for the loss of their independence (xv. 11).

The Two Gemaras.

Both, Gemaras contain many tales and legends, haggadic interpretations, sayings, and proverbs, in addition to their elucidations of mishnaic passages. The following examples may be cited from the Babylonian Gemara: "Heaven destines a wife for every man according to his merits" (2a); "Whoso is jealous of his wife must be filled with an evil demon" (3a); "The proud man is even as the unbeliever and the idolater" (4b); "Adultery is the most grievous sin, nor can atonement be made for it by any merit or good act" (*ib.*); "Whoso neglecteth his wife and is untrue to her causeth her to become unfaithful and to commit adultery" (10a).

Other points of interest in the Babylonian Gemara are the introductory words on the position of the treatise Soṭah among the other tractates of Nashim (2a), and the stories relating to the coffin of Joseph (13a), the grave of Moses (13b-14a), and the attitude of Joshua b. Peraḥyah toward one of his pupils, who, according to some expositors, was Jesus (47a in the uncensored editions of the Talmud).

With regard to the Palestinian Gemara, special mention may be made of the story of the modesty of R. Meïr, who would disregard his own rank and dignity in his eagerness to restore peace between husband and wife (i. 4, 16d). The very interesting statement is also made that there was indeed a man named Job; but that the calamities described in the book which bears his name never befell him, for he was made its hero simply on account of his sincere and profound piety (v. 5, 20a).

W. B. J. Z. L.

SOUL (נשמה, נפש, from נשם and נפש = "he breathed"; equivalent to the Latin "anima" and "spiritus"): The Mosaic account of the creation of man speaks of a spirit or breath with which he was endowed by his Creator (Gen. ii. 7); but this spirit was conceived of as inseparably connected, if not wholly identified, with the life-blood (*ib.* ix. 4; Lev. xvii. 11). Only through the contact of the Jews with Persian and Greek thought did the idea of a disembodied soul, having its own individuality, take root in Judaism and find its expression in the later Biblical books, as, for instance, in the following passages: "The spirit of man is the candle of the Lord" (Prov. xx. 27); "There is a spirit in man" (Job xxxii. 8); "The spirit shall return unto God who gave it" (Eccl. xii. 7). The soul is called in Biblical literature "ruaḥ," "nefesh," and "neshamah." The first of these terms denotes the spirit in its primitive state; the second, in its association with the body; the third, in its activity while in the body.

Biblical and Apocryphal Views.

An explicit statement of the doctrine of the preexistence of the soul is found in the Apocrypha: "All souls are prepared before the foundation of the world" (Slavonic Book of Enoch, xxiii. 5); and according to II Esd. iv. 35 *et seq.* the number of the righteous who are to come into the world is foreordained from the beginning. All souls are, therefore, preexistent, although the number of those which are to become incorporated is not determined at the very first. As a matter of fact, there are souls of different quality. Solomon says (Wisdom viii. 19 *et seq.*, R. V.): "Now I was a child of parts, and a good soul fell to my lot; nay, rather, being good, I came into a body undefiled." The body returns to earth when its possessor "is required to render back the soul which was lent him" (*ib.* xv. 8, R. V.). The Syriac Apocalypse of Baruch xxx. 2-3 (Kautzsch, "Apokryphen," ii. 423) distinguishes between righteous and common souls in the following passage, which describes the Messianic period and which is characteristic of the concept of preexistence: "The storehouses in which the foreordained number of souls is kept shall be opened, and the souls shall go forth, and the many souls shall appear all at once, as a host with one mind. And the first shall rejoice, and the last shall not be sad."

There are no direct references in the Bible to the

Philo's Views.

origin of the soul, its nature, and its relation to the body; but these questions afforded material for the speculations of the Alexandrian Jewish school, especially of Philo Judæus, who sought in the allegorical interpretation of Biblical texts the confirmation of his psychological system. In the three terms "ruaḥ," "nefesh," and "neshamah" Philo sees the corroboration of the Platonic view that the human soul is tripartite (*τριμερής*), having one part rational, a second more spiritual, and a third the seat of desire. These parts are distinguished from one another both functionally and by the places occupied by them in the body. The seat of the first is the head; of the second, the chest; and of the third, the abdomen ("De Allegoriis Legum," § [ed. Mangey, i. 110]). Both the rational and the irrational sprang like two scions from one root, and yet are so strongly contrasted in their natures that one is divine, while the other is corruptible. The rational part, or the mind (*νοῦς*), which is the leading and sovereign principle of the soul, is a fragment of the Divinity; and as such it is preexistent and immortal. It corresponds to the outermost and indivisible sphere of the fixed stars, and though it introduces unending divisions into the objects of its intelligent apprehensions, is itself without parts. It belongs to the same genus as those incorporeal spirits by which the air is inhabited, and is to the soul what the eyes are to the body, only its vision transcends the sphere of the senses and embraces the intelligible (*idem*, "De Opificiis Mundi," i. 648). As a fountain sends off streams in various directions, so the mind, a spiritual nomad, not only pervades the body, but brings itself in contact with various objects of creation, and makes its way even to God Himself. In this manner the mind transcends space and frees itself from the limitations of time which it anticipates (*idem*, "De Eo Quod Deterius Potiori Insidiatur," i. 208).

However, it is not the mind that acts, but its powers; these, according to Philo, are not mere properties, but independent spiritual essences in which the individual mind has its appointed share. In accordance with his fundamental division of the soul, Philo divides these powers into rational and irrational, or rational and perceptive, because the irrational powers are derived from sensible perception. Even before entering the body, the mind possesses not only rational faculties, but also ascending powers which distinguish the lower orders of creation, the habitual, the organic, the vital, and the perceptive. In order to awaken the sensible perception, the higher energies of the mind must for the time being cease to be active. However, a union between the mind and perception can be effected only through the mediation of a third principle; for the senses can not perceive without the intervention of the mind, nor can the mind discern material objects without the instrumentality of the senses. This third principle is pleasure, which is symbolized in the Bible by the serpent.

Philo recognizes the unity of human consciousness; and he confines knowledge strictly to the mind itself. As a divine being the soul aspires to be freed from its bodily fetters and to return to the heavenly spheres whence it came. Philo does not say why the soul is condemned to be imprisoned for a certain time in the body; but it may be assumed that, as in many other points, he shares also in this one the views of Pythagoras and Plato, who believed that the soul undergoes this ordeal in expiation of some sin committed by it in its former state (see Philo Judæus).

Talmudical Views.

This belief was rejected by the scholars of the Talmud, who taught that the body is in a state of perfect purity (Ber. 10a; Mek. 43b), and is destined to return pure to its heavenly abode. When God confides the soul to man He says, according to the Haggadah, "The soul I have given thee is pure; if thou givest it back to Me in the same state, it is good for thee; if not, I will burn it before thee" (Eccl. R. xii. 7; with some variations in Niddah 30a). Probably it was as a protest against the belief in a sin committed by the soul that the daily morning prayer was instituted: "My God, the soul which Thou didst place in me is pure [comp. Shab. 152b]. Thou hast created it, formed it, and breathed it into me. Thou preservest it in me. Thou wilt take it from me and wilt give it back to me in the world to come" (comp. also Shab. 32b; B. B. 16a).

In rabbinical literature the dualism of body and soul is carried out consistently, as in Ber. 10a, 43b; Shab. 113b, 152b; Yoma 30b; Ned. 32a (the body is a small city); Sanh. 91a, 108 (the body is a scabbard), 110b; and elsewhere. "The soul of man comes from heaven; his body, from earth" (Sifre, Deut. 306 [ed. Friedmann, p. 132, below]).

The Rabbis hold that the body is not the prison of the soul, but, on the contrary, its medium of development and improvement. Nor do they hold the Platonic view regarding the preexistence of the soul. For them "each and every soul which shall be from Adam until the end of the world, was formed during the six days of Creation and was in paradise, being present also at the revelation on Sinai. . . . At the time of conception God commandeth the angel who is the prefect of the spirits, saying: 'Bring Me such a spirit which is in paradise and hath such a name and such a form; for all spirits which are to enter the body exist from the day of the creation of the world until the earth shall pass away.' . . . The spirit answereth: 'Lord of the world! I am content with the earth, where I have lived since Thou didst create me.' . . . God speaketh to the soul, saying: 'The world into which thou enterest is more beautiful than this; and when I made thee I intended thee only for this drop of seed.'" Two angels are assigned to the soul, which is finally shown, among other things, the spirits in heaven which have been perfected on earth (Tan., Peḳude, 3). The entry of the soul into the embryo (see Golem) is similarly described in a conversation between Judah the patriarch and the emperor Antoninus (*c.* 200; Sanh. 91b; comp. *ib.* 16b and Niddah 31a). The spirits which are to descend to earth are kept in 'Arabot, the last of the seven heavens (Ḥag. 12b, below), while the souls of the righteous dead are beneath the throne of God (Shab. 152b). Associated with this belief is the Talmudic saying that the Messiah will not come till all the souls in the "guf" (the superterrestrial abode of the souls) shall have passed through an earthly existence ('Ab. Zarah 5a; comp. Gen. R. viii. and Ruth R., Introduction).

The Platonic theory that study is only recollection, because the soul knew everything before entering the world, is expressed in a hyperbolic fashion in the Talmud, where it is said that a light burns on the head of the embryo by means of which it sees from one end of the world to the other, but that at the moment of its appearance on earth an angel strikes it on the mouth, and everything is forgotten (Niddah 30b). The Rabbis question whether the soul descends to earth at the moment of conception or after the embryo has been formed (Sanh. 90a).

Spirit and Soul.

The tripartite nature of the soul as conceived by Philo is taught in the Talmud also; it divides the non-physical part of man into spirit and soul. Indeed, the "active soul" which God breathed into man and the "vital spirit" with which He inspired him are mentioned as early as Wisdom xv. 11. This differentiation is clearly and plainly expressed by Paul in I Thess. v. 23 and Heb. iv. 12 (comp. Delitzsch, pp. 90 *et seq.*, and Hastings, "Dict. Bible," iii. 166b–167a, where "nefesh" is incorrectly used for "ruaḥ"); and the same idea is found in Ḥag. 12a, where it is said that "spirits and souls" dwell in the seventh heaven, while Niddah 31a, above, prays: "May God give spirit and soul to the embryo" (see Rashi on Ḥag.; Brecher, "Das Transcendentale," etc., p. 64; and Weber, "Jüdische Theologie," p. 228). In the foregoing passage cited from Tanḥuma the same distinction is drawn between soul and spirit, although no very clear theory is advanced concerning the difference between the two. Every Friday God gives the Jew another individual soul, which He takes back again at the end of the Sabbath (Beẓah 16a).

A parallel is established between the soul and God. As the world is filled with God, so is the body filled with the soul; as God sees, but can not be seen, so the soul sees, but is not to be seen; as God is hidden, so also is the soul (Ber. 10a). The Rabbis seem to have considered discernment, reflection, and recollection as faculties of the soul; but they held that the power by which man distinguishes between right and wrong and the inclination to one or to the other are two real essences which God places in the heart of man. These are called "yeẓer ṭob" (good inclinations) and "yeẓer ha-ra'" (evil propensities). The soul has control over these, and, therefore, is responsible for man's moral conduct. The soul's relation to the body is an external one only: when man sleeps the soul ascends to its heavenly abode (Lam. R. iii. 23). There it sometimes receives communications which appear to the sleeper as dreams. Although, like all ancient peoples, the Jews believed in dreams, there were advanced rabbis who explained them psychologically. An example of this is related in the Talmud (Ber. 56a), on the part of Joshua ben Hananiah. A Roman emperor (probably Hadrian) asked the tanna what he (Hadrian) would dream about. Joshua answered: "You will dream that the Persians will vanquish and maltreat you." Reflecting on this the whole day, the emperor dreamed accordingly.

K. I. Br.—L. B.

Among the Jewish Philosophers.

With the transplantation of the Greco-Arabic philosophy to Jewish soil, psychology began to be treated scientifically. Saadia devoted the sixth chapter of his "Emunot we-De'ot" to questions concerning the human soul. After having passed in review the various opinions on the subject current at that time, he gives his own theory, which he endeavors to support by Biblical quotations. According to him, the soul is created by God at the same time as the body. Its substance resembles that of the spheres; but it is of a finer quality. This, Saadia says, is evident from the fact that it is possessed by a thinking power which is lacking in the spheres. This thinking power is not inherent in any way in the body, which becomes lifeless as soon as the soul leaves it. However, like every created thing, the soul needs a medium through which to attain activity; and this medium is the body. Through its union with the body three powers which are latent in it are set in motion: intelligence, passion, and appetite or desire. These powers or faculties are not to be considered as three separate parts of the soul, each having a different seat in the body, but as belonging to the one and indivisible soul, which has its seat in the heart. It is to the advantage of the soul to be united with the body. Without this medium it could not attain paradise and eternal bliss, because these are vouchsafed to it only as a recompense for its obedience to the will of God. This obedience can be performed only through the instrumentality of the body, just as fire needs fuel before it can burn. Saadia is a strong opponent of Plato, who taught the preexistence of the soul and considered its powers of intelligence, passion, and appetite as three distinct parts of it, of which the first was derived from God, and the second and third from matter.

Influence of Platonic Doctrine.

Owing to the influence of the Arabic Neoplatonists, especially the Encyclopedists known as the "Brethren of Sincerity," the Platonic psychology as interpreted and amplified in those schools prevailed among the Jews of the tenth and eleventh centuries. It was propounded in a special work attributed to Baḥya ben Joseph ibn Paḳuda, and entitled "Ma'ani al-Nafs" (translated into Hebrew under the title "Torat ha-Nefesh" by I. Broydé, Paris, 1896). According to him, man possesses three distinct souls, the vegetative, the animal, and the rational: the first two derived from matter, and the last emanating from the active intellect. At the moment of conception a ray of the rational soul penetrates into the embryo, where it supervises the development of the vegetative and animal powers until they become two distinct souls. The principal agent in the formation of the body is the vegetative soul, which derives its forces from the sun and the moon. Supervised by the stars and their spiritual principles, the vegetative soul constructs the body in the shape of the spheres, and exerts on it the same influence as that exerted by the universal soul on the spheres. Each of these three souls has its own attribute: that of the vegetative soul is chastity; of the animal, energy; and of the rational, wisdom. From these is derived another attribute, justice.

These theories respecting the soul seem to have been shared by Ibn Gabirol and Joseph ibn Ẓaddiḳ, who repeatedly asserted in their respective works the existence of three distinct souls in man. A less fanciful psychological system was elaborated by the Jewish Peripatetics, especially by Maimonides. It was substantially that of Aristotle as propounded by his commentators. According to this system the soul is a concrete unit having various activities or faculties. It is the first principle of action in an organized body, possessing life potentially. Its faculties are five: the nutritive, the sensitive, the imaginative, the appetitive, and the rational; the superior comprehending the inferior potentially. The sensitive faculty is that by which one perceives and feels: it does not perceive itself or its organs, but only external objects through the intervention of sight, hearing, smell, taste, and touch. The senses perceive species, or forms, but not matter, as wax receives the impression of a seal without retaining any part of its substance. The imaginative faculty is the power to give quite different forms to the images impressed upon the soul by the senses. Memory is derived from fancy, and has its seat in the same power of the soul. The appetitive faculty consists in the ability to feel either a desire or an aversion. The rational faculty is that which enables man to think, to acquire knowledge, and to discern evil actions from good ones. The action of the intellect is either theoretical or practical: theoretical, when it simply considers what is true or false; and practical, when it judges whether a thing is good or evil, and thereby excites the will to pursue or to avoid it.

Maimonides, except in a few instances, closely followed Aristotle with regard to the ontological aspect of the soul. The life of the soul, which is derived from that of the spheres, is represented on earth in three potencies: in vegetable, in animal, and in human life. In the vegetable it is confined to the nutritive faculty; in the animal it combines, in addition, the sensitive, the appetitive, and, in animals of a higher organism, also the imaginative; while in human life it comprises, in addition to all these faculties, the rational. As each soul, constituting the form of the body, is indissolubly united with it and has no individual existence, so the soul of man and its various faculties constitute with the body a concrete, inseparable unit. With the death of the body, therefore, the soul with all its faculties, including the rational, ceases to exist. There is, however, something in the human soul which is not a mere faculty, but a real substance having an independent life. It is the acquired intellect, the ideas and notions which man obtains through study and speculation.

Levi ben Gershon.

Levi ben Gershon, in "Milḥamot Adonai," followed Maimonides in his psychological system, but differed from him with regard to the knowledge which constitutes the acquired intellect. He divided human knowledge into three classes: (1) that which is acquired directly by the perception of the senses and which relates to the individuals of this world; (2) that which is the product of abstraction and generalities—*i.e.*, of that process of the mind which consists in evolving from knowledge concerning the individual general ideas concerning its species, genus, or family; (3) that which is obtained by reflection and which is relative to God, the angels, etc. There can be no doubt as to the objective reality of the knowledge of the first and third classes; but there is a question as to that of the knowledge of the second class. Levi ben Gershon differs from Maimonides, holding not only that the generic forms of things exist in themselves and outside of these things, "ante rem," in the universal intellect; but that even mathematical theories are real substances and contribute to the formation of the acquired intellect.

Ḥasdai Crescas vehemently attacked, both on theological and on philosophical grounds, the principle of the acquired intellect upon which the psychological system of Maimonides and Levi ben Gershon is based. "How," asked he, "can a thing which came into existence during man's lifetime acquire immortality?" Then, if the soul is to be considered a mere faculty of the body, which ceases with the death of the latter, and only the acquired intellect is a real substance which survives, there can be no question of reward and punishment, since that part of man which committed the sin or performed the good deed no longer exists. "Maimonides," argues Crescas, "asserts that the future reward will consist in the enjoyment derived from objects of which the intellect is cognizant; but since the soul, which is the seat of joy, will no longer be in existence, what is to enjoy?" According to Crescas, the soul, although constituting the form of the body, is a spiritual substance in which the faculty of thinking exists potentially.

Psychology of the Cabala.

The influence exercised by Neoplatonism on the development of the Cabala is particularly noticeable in the psychological doctrines found in the Zohar; these, but for the mystic garb in which they are clothed and the attempt to connect the soul with the all-pervading Sefirot, are the same as those professed by the Neoplatonists. The soul, teaches the Zohar, has its origin in the Supreme Intelligence, in which the forms of the living existences may already be distinguished from one another; and this Supreme Intelligence may be termed "universal soul." "At the time the Holy One, blessed be He! desired to create the world, it came in His will before Him, and He formed all the souls which were prepared to be given afterward to the children of men; and all were formed before Him in the identical forms in which they were destined to appear as the children of the men of this world; and He saw every one of them, and that the ways of some of them in the world would become corrupt" (Zohar i. 96b). The soul is constituted of three elements: the rational ("neshamah"), the moral ("ruaḥ"), and the vital ("nefesh"). They are emanations from the Sefirot; and as such each of them possesses ten potencies, which are subdivided into a trinity of triads. Through the rational element of the soul, which is the highest degree of being, and which both corresponds to and is operated upon by the highest Sefirah, the "Crown," man belongs to the intellectual world (עולם השכל); through the moral element, which is the seat of the ethical qualities, and which both corresponds to and is operated upon by the Sefirah "Beauty," man pertains to the moral world (עולם היצירה); and through the vital element, which is the lowest of the three, being directly connected with the body, and which both corresponds to and is operated upon by the Sefirah "Foundation," man is associated with the material world (עולם העשיה). In addition to these three elements of the soul there are two others of a different nature: one is inherent in the body without mingling with it, serving as an intermediary between the latter and the soul; and the other is the principle which unites them both. "At the moment," says the Zohar, "when the union of the soul and the body is being effected the Holy One sends on earth an image engraved with the Divine Seal. This image presides over the union of man and wife; a clear-sighted eye may see it standing at their heads. It bears a human face; and this face will be borne by the man who is about to appear. It is this image which receives us on entering the world, which grows as we grow, and which quits the earth when we quit it" (*ib.* iii. 104a). The descent of the soul into the body is necessitated by the finite nature of the former: it is bound to unite with the body in order to take its part in the universe, to contemplate creation, to become conscious of itself and its origin, and, finally, to return, after having completed its task in life, to the inexhaustible fountain of light and life—God.

According to the Zohar, there are male souls and female souls, the former proceeding from the masculine Sefirot, which are concentrated in the Sefirah of "Grace," the latter from the feminine Sefirot, which are concentrated in that of "Justice." Before their descent to earth they are paired; but at the moment of their appearance in this world they become separated (*ib.* i. 91b). The relation of the three elements of the soul to one another and to the body is compared by the Zohar to a burning lamp. Two lights are discernible in the flame of the lamp: a white and a dim one. The white light is above and ascends in a straight line; the dim one is below, and seems to be the seat of the other. Both, however, are so indissolubly connected that they form one flame. On the other hand, the dim light proceeds directly from the burning material below. The same phenomenon is presented by the human soul. The vital or animal element resembles the dim light which springs directly from the burning material underneath; and just as that material is gradually consumed by the flame, so the vital element consumes the body, with which it is closely connected. The moral element is comparable to the higher, white light, which is always struggling to disengage itself from the lower one and to rise higher; but so long as the lamp continues to burn it remains united to it. The rational element corresponds to the highest, invisible part of the flame, which actually succeeds in freeing itself from the latter and rises in the air (*ib.* i. 83b). See ESCHATOLOGY; IMMORTALITY; TRANSMIGRATION OF SOULS.

SOULS, TRANSMIGRATION OF. See TRANSMIGRATION OF SOULS.

SOUSA. See SOSA.

SOUTH AFRICA: Jewish concern with South Africa began, indirectly, some time before the discovery of the Cape of Good Hope, by the participation of certain astronomers and cartographers in the Portuguese discovery of the sea-route to India. There were Jews among the directors of the Dutch East India Company, which for 150 years administered the colony at the Cape of Good Hope. During the seventeenth and the greater part of the eighteenth century the state religion alone was allowed to be publicly observed; but on July 25, 1804, the Dutch commissioner-general Jacob Abraham de Mist, by a proclamation whose provisions were annulled at the English occupation of 1806 and were not reestablished till 1820, instituted in the colony religious equality for all persons, irrespective of creed.

Introduce the Mohair Industry.

Jews did not arrive in any numbers at Cape Town previous to the twenties of the nineteenth century. Benjamin Norden, Simeon Markus, together with a score of others arriving in the early thirties, were commercial pioneers, to whom is due the industrial awakening of almost the whole interior of Cape Colony; thus, the development of the wool and hide trades will always be associated with the names of Julius, Adolph, and James Mosenthal. By their enterprise in going to Asia and returning with thirty Angora goats in 1856 they became the originators of the mohair industry; Cape Colony yields now more than one-half of the world's supply of mohair. Aaron and Daniel de Pass were the first to open up Namaqualand, and for many years (1849-86) were the largest shipowners in Cape Town, and leaders of the sealing, whaling, and fishing industries. Jews were among the first to take to ostrich-farming (*e.g.*, Joel Myers, in the Aberdeen district); and the first rough diamond discovered on the Kimberley Diamond Fields was bought by Lilienfeld of Hopetown. Jews are among the directors of the De Beers Consolidated Diamond Mines, which controls a great part of the world's diamond output to-day.

The Solomons.

These pioneers did not, however, confine their activity to trade. Capt. Joshua Norden was shot at the head of his Mounted Burghers in the Kafir war of 1846; Lieut. Elias de Pass fought in the Kafir war of 1849. Julius Mosenthal (1818-80), brother of the poet S. Mosenthal of Vienna, was a member of the Cape Parliament in the fifties. Simeon Jacobs, C.M.G. (1832-83), who was judge in the Supreme Court of the Cape of Good Hope, as the acting attorney-general of Cape Colony introduced and carried in 1872 the Cape Colony Responsible Government Bill and the Voluntary Bill (abolishing state aid to the Anglican Church), for both of which bills Saul Solomon, the member for Cape Town, had fought for decades. Saul Solomon (b. St. Helena May 25, 1817; d. Oct. 16, 1892), the leader of the Liberal party, has been called the "Cape Disraeli." He several times declined the premiership and was invited into the first responsible ministry, formed by Sir John Molteno. Like Disraeli, too, he early left the ranks of Judaism, but always remained a lover of his people. He went to Cape Town when a lad, where, with his brother Henry, he started a printing-office and, later, founded and edited the "Cape Argus." Descendants of these two brothers, Justice Solomon, Sir Richard Solomon (attorney-general of the Transvaal), and E. P. Solomon, are to-day among the most eminent men in South Africa. The few other St. Helena Jews who settled there during Napoleon's banishment, the Gideon, the Moss, and the Isaacs families, were all related to the Solomons, and, like the members of the last-named family, most of them drifted from Judaism.

Synagogues and Congregations.

The first congregation in South Africa was founded in Cape Town in Nov., 1841, and the initial service was held in the house of Benjamin Norden, at the corner of Weltevreden and Hof streets. Later a room was hired at the corner of Bouquet and St. John streets, S. Rudolph, a German merchant, conducting the services. He was succeeded by a minister of the name of Pulver, who soon left for Australia. In 1859 the congregation, consisting then of about fifteen families, extended a call to Joel Rabbinowitz (1829-1902), who for twenty-three years worked indefatigably for his congregation, and for the scattered Jewish families in the coast towns and the interior of Cape Colony and the Orange Free State. Through his efforts the first synagogue in South Africa was erected in "The Gardens," in 1862. His successor was A. P. Ornstein (1836-1896) of Melbourne. In 1895 A. P. Bender (b. 1863; M.A. Cambridge) became the minister of the congregation. Bender, as did Rabbinowitz, takes a leading part in every humanitarian endeavor in Cape Town. There are now (1905) three other synagogues in Cape Town—the Beth Hamidrash, the New Hebrew Synagogue, and the Wynberg Synagogue; there are also a Zionist hall, a Hebrew public school, and various social, philanthropic, and literary societies. The present president of the Old Hebrew Congregation, H. Liberman, is mayor of Cape Town.

There are synagogues in **Worcester Road, Robertson,** and **Steytlersville**; **Graaf Reinet** (with a congregation since 1861) and **Grahamstown** (seventy years ago an important Jewish settlement) have no synagogues. **Oudtshorn,** with a Jewish population of 400, has a congregation (founded 1883), a synagogue (built 1890; M. Woolfson, minister), a bet ha-midrash, and a Jewish public school. **Port Elizabeth** (Jewish population 600) has had a congregation since 1862 and a synagogue since 1870, the rabbinate having been filled by S. Rappaport, D. Wasserzug, and J. Philips. Jewish services were begun in **Kimberley** in 1869, a regular congregation being formed in 1873, with Col. David Harris, C.M.G. (served under General Warren in 1885, and in various native wars; prominent in the defense of Kimberley in 1899-1900), and G. H. Bonas, J.P., for many years alternate presidents. In the new synagogue (1901), to which Cecil Rhodes was a large donor, is a memorial tablet to all Jewish officers and soldiers who fell in the late Anglo-Boer war; its ministers were M. Mendelsohn, A. Ornstein (who died very young and was given a public funeral), M. L. Harris, and E. Joffe; the present incumbent is H. Isaacs. Alfred Mosely, C.M.G., of Koffyfontein and Kimberley, established the Princess Christian Hospital at Pinetown, Natal, in 1900, and equipped and conducted the Mosely Industrial and Educational Commissions which were sent to the United States in 1902 and 1903.

Natal.

In Natal, Nathaniel Isaacs, in 1825, was among the first to venture into the realms of Tchaka, the Attila of South Africa. Dr. Theal, the eminent historian of South Africa, pronounces Isaacs' "Travels in Eastern Africa" indispensable to a student of early events in Natal. Isaacs left Natal in 1831, when Tchaka's successor had prepared to massacre the few whites living there; and he spent the remainder of a long life in Gambia and on an island in the Gulf of Guinea. But seventeen years before the formal annexation of Natal by the British, and ten years before it was reached by the Boers, Nathaniel Isaacs was its "Principal Chief." The importance of the following document warrants its reproduction in full.

> "At Tchaka's Principal Residence,
> Toogooso, near the River Magatee.
> Sept. 17, 1828.
>
> "I, Tchaka, King and Protector of the Zooloos, do hereby create, in presence of my principal chiefs and strangers assembled, my friend, Mr. Nathaniel Isaacs, Induna Incoola, or Principal Chief of Natal, and do grant and make over to him, his heirs or executors, a free and full possession of my territory from the Umlass River westwards of Natal to the Umshloti eastwards of Natal, with 100 miles inland from the sea, including the Bay of Natal, the islands in the bay, the forests and the rivers between the boundaries here enumerated. I also make over to him the people he now has in his service together with the Maluban tribe. I also grant him a free and exclusive right to traffic with my nation and all people tributary to the Zooloos. So does the powerful King Tchaka of the Zooloos recompense Mr. Nathaniel Isaacs for the services rendered to him to subdue 'Batia en Goma,' for presents received from him and for the

great attention to my people in the mission sent with him and Captain King to conclude an alliance with his Britannic Majesty. All this and my former gifts I do confirm, and, wishing peace and friendship, I sign myself,

his
Tchaka × Esenzengercona
mark
his
John × Jacob, interpreter [a Hottentot]."

(From a photograph.)

Later Jewish events in Natal merely reproduce, on a smaller scale, those in Cape Colony. Daniel de Pass was among the first sugar-planters in Natal, and Jonas Bergthal (1820–1902) took his seat in the Natal legislative assembly years before Jews were admitted to Parliament in England. In the nineties A. Fass was member of Parliament and M. G. Levy mayor of Maritzburg. Congregational life began at the time of the Zulu war. Services were held in **Maritzburg,** J. Kram ministering to the religious requirements of the few Jews in the entire colony. Services were held in **Durban** in 1874, a cemetery was laid out in 1878, and a synagogue was dedicated on Jan. 1, 1884. The ministers have been Feinstock, J. Kram, and the present incumbents, A. Levy and S. Pincus. The Durban Jewish population, which before the late Anglo-Boer war was only about 200, now numbers 1,250; a new synagogue was dedicated there in June, 1904. Durban has a Zionist hall and various subsidiary communal organizations. Through the annexation of the **Vryheid** district to Natal in 1902, that colony has at Vryheid a second synagogue, which was dedicated in April, 1904.

Orange River Colony.

Jews settled in what was formerly the Orange River Sovereignty, when its white population did not exceed 4,000. Isaac Baumann, born in 1813, arrived at Graaf Reinet in 1837 and moved to Bloemfontein in 1847. He and Martin Pincus were for a long time the principal merchants in the Orange Free State. For forty years after the establishment of the Orange Free State in 1855, one or two German Jewish families, many of them from Hesse-Cassel, were to be found in nearly every hamlet, together controlling the larger portion of the trade of the Free State. An annual Yom Kippur service was instituted in Isaac Baumann's house in 1871, in which year the first Jewish funeral occurred. The **Bloemfontein** congregation was established in 1887; a beautiful synagogue was consecrated in March, 1904, in the presence of the lieutenant-governor, the executive council, and the justices of the colony.

Despite their small number Jews have from the first occupied an enviable position in the Orange Free State. Isaac Baumann was twice mayor of Bloemfontein and also director of the national bank. M. Leviseur, a veteran of the Basuto war (1864–66), has been connected with the State Museum, the Volkshospital, and nearly all other state institutions since their respective foundations; and W. Ehrlich, the president of the congregation, is also deputy-mayor of Bloemfontein, chairman of the Chamber of Commerce, and member of the Inter-Colonial Railway Conference. The Jewish population of Bloemfontein is nearly 800.

Transvaal.

A few Jews lived in the territory across the Vaal even before the seventies. M. de Vries, a Dutch Jew, was public prosecutor of the Transvaal in 1868 and chairman of the Volksraad in 1872, and participated in the Potchefstroom convention of 1870. Daniel F. Kisch (1840–98) held Yom Kippur services in Pretoria after 1876; he was justice of the peace and auditor-general of the Transvaal from 1877 to 1881. Largely through the influence of Alois Nelmapius, a Magyar Jewish friend of Krüger, Rhodes, and Beit, a Jewish cemetery was consecrated at Pilgrimsrest in 1878, and a congregation established on the Barberton Goldfields in 1883. In the following year Samuel Marks (born in Neustadt-Sugind, Russia) went to the Transvaal, and through his coal-, copper-, gold-, and diamond-mines, model farms, and glass, jam, brick, and spirits factories, accumulated great wealth. An intimate friend of President Krüger, and enjoying the confidence of Generals Botha, De Wett, and Delarey, and the respect of Earl Roberts, Lord Kitchener, and Lord Milner, he played no inconsiderable part in the negotiations for the cessation of Anglo-Boer hostilities at Vereeniging, May 29, 1902. Of the big mining-houses which, since the discovery of gold, control the output in the Transvaal, the Barnatos (see BARNATO, BARNETT ISAACS), Neumann, Albu, and several members of the firm of H. Eckstein & Co., are Jews. For the rise and history of Jewish life on the Witwatersrand Goldfields see JOHANNESBURG.

The **Pretoria** community, numbering over 1,000, has a synagogue (erected 1898) and a Jewish public school (opened 1905), the former largely maintained by, and the latter the gift of, Samuel Marks. M. Rosenberg is minister and head master. There are synagogues in **Heidelberg** and **Volksrust** (since 1901), **Krügersdorp, Klerksdorp,** and **Germiston** (1903), and **Roodepoort** (1905). A dramatic interest attaches to the struggle, continued during a decade, for the removal of the special Jewish disabilities which existed beside those to which the other Uitlanders were subject. Though freedom of worship was granted to all residents in 1870, the revised "Grondwet" of 1894 still debarred Jews and Catholics from military posts, from the positions of president, state secretary, or magistrate, from membership in the First and Second Volksraad, and from superintendencies of natives and mines. All instruction was to be given in a Christian and Protestant spirit, and Jewish and Catholic teachers and children were to be excluded from state-subsidized schools. Though there were servile flatterers and concession-hunters who thought lightly of these restrictions, there were seven Jews among the sixty-four "Reformers" imprisoned at Pretoria in 1896: Lionel Phillips (sentenced to death), Captain Bettelheim, Karri Davies, A. Goldring, S. B. Joel, Max Langerman, and Fritz Mosenthal.

The mass of Jews especially felt the educational disability very grievously. President Krüger and the executive council were frequently petitioned in every possible manner. A blunt non possumus, or at best an admonition to trust to God and the good-will of the president, was the usual reply. During the franchise discussions consequent upon the Bloemfontein conference, a mass-meeting of the Jewish inhabitants was called, June 28, 1899, to protest against the exclusion of Russian and Rumanian Jews from the benefits of the franchise which was about to be extended. For addressing that meeting, as well as the Uitlander meeting of July 26, 1899, the Rev. Dr. J. H. Hertz was expelled from the Transvaal, Dec., 1899. Some weeks before the outbreak of hostilities, in the middle of August, when the "Grondwet" was again being revised, the president urged the substitution of the words "those who believe in the revelation of God through His Word in the Bible" for the word "Protestant" in all the above-mentioned articles of the "Grondwet," which change would have largely modified the illiberal provisions; but the Volksraad, both in secret and in open session, rejected his proposals.

Some of the most heroic deeds of the three years' Boer war—as the Gun Hill incident before Ladysmith—were due to the dash and daring of Jewish soldiers like Major Karri Davies. Nearly 2,800 Jews fought on the British side, and, according to careful enumeration, the London "Spectator" declared that the percentage of Jewish soldiers killed (125) in the war was relatively the largest of all. Within the Boer ranks the story of the Jew is much the same. They were with the "Vierkleur" on every battle-field; Jewish "Irreconcilables" fought to the bitter end, and several Jewish prisoners were to be found at St. Helena, Bermuda, and Ceylon.

Rhodesia and Non-British Territories.

Among the most ardent supporters of Cecil Rhodes' "Cape to Cairo all-British Route" were Jews like Alfred Beit and, later, the Weil family at Mafeking. Jews lived with Lobengula about 1865, and D. F. Kisch, later of Pretoria, was his chief adviser from 1868 to 1873, and immediately after his fall in 1893 Jewish congregations were established in **Buluwayo** and even as far north as **Salisbury.** The former has now a Jewish population of 330, with a synagogue (I. Cohen, B.A., minister), a Zionist society, and charitable organizations. In the Matabele rebellion of 1896 fourteen Jews fought, and their proportion among the defenders of Mafeking was exceptionally large. Annual services are held in a few places in Bechuanaland and the Kalahari Desert. In Portuguese territory, some Sephardic Jews in Lourenço Marques are attempting the formation of a permanent congregation, with synagogue, bet ḥayyim, and ḥazzan.

Jewish congregational life throughout South Africa is growing not only extensively, but intensively. The Zionists have established seventy-four societies, forming the South-African Zionist Federation (S. Goldreich, president, to whom Lord Milner entrusted the gradual readmission, after the war, of nearly the whole alien Jewish population of the Rand). Intermarriage, alarmingly prevalent in former years, is diminishing, and Jewish religious education, at present seriously neglected, is the most insistent topic of discussion in every Jewish center. When it was found that the war had left behind it a spirit of prejudice against the poorer Russian Jew, the Jewish Board of Deputies for the Transvaal and Natal was formed in order successfully to vindicate him from false and imaginary charges (Jews furnish but 5 per cent of the offenders against the illicit liquor laws in such a large Jewish center as Johannesburg). The other objects of the board are to Anglicize and naturalize the poorer alien immigrant and to prove to the coast authorities that Judæo-German is a European language (one of the requisites for immigration). The inaugural public meeting of the board was held July 28, 1903, at which the high commissioner delivered a memorable address. A similar board for Cape Colony was established the following year in Cape Town.

Statistics.

No complete and reliable data as to the exact size of the Jewish population in the various colonies are available, as the answer to the denominational question on the census enumeration paper is not compulsory. Approximately, Cape Colony has 20,000 Jews; Natal, 1,700; Rhodesia, 600; the Orange River Colony, 1,500; Portuguese territory, 200; and the Transvaal, 25,000 (7,988 males over 21): a total for South Africa of 47,000 in a white population of 1,100,000.

J. J. H. H.

SOUTH CAROLINA: One of the thirteen original states of the United States. Most of the events relating to Jews occurring in this state have been connected with the town of Charleston, and will be found treated under that caption. It is only necessary here to deal with matters relating to the state in general, and to give additional information regarding Charleston which has become accessible since that article was written.

Early History.

The very beginnings of the constitution of South Carolina should have encouraged Jewish immigration to that state from England, since the original charter drawn up by John Locke, in 1669, granted liberty of conscience to all, including "Jews, Heathen, and Dissenters." However, advantage does not seem to have been taken of this liberality till the year 1695, when a Jew is referred to as living in Charleston—probably Simon Valentine, who is actually mentioned three years later as holding land in the state. There must have been others, since as early as 1703 protest was raised against "Jew strangers" voting in the election of members to the Common House of Assembly. Most of the early Jewish settlers of South Carolina seem to have come from London or the English colonies, and some of them appear to have been connected with the Barbados trade in rum and sugar. In 1740, owing to the refusal of the trustees of Georgia to allow the introduction of slaves into that state, a number of Jews removed from Georgia to South Carolina, and in 1748 some London Jews connected with the Da Costas and Salvadors, who had sent a number of Jews out to Georgia, proposed a plan for the acquition of a large tract of about 200,000 acres of land in South Carolina. After considerable correspondence with the Colonial Office, through General Hamilton, the project was dropped as a concerted plan; but on Nov. 27, 1755, General Hamilton sold to Joseph Salvador 100,000 acres of land, situated near Fort Ninety-six, for £2,000. Twenty years later Joseph Salvador sold to thirteen London Sephardic Jews 60,000 acres of land for £3,000, and transferred 20,000 acres of the remainder to Rebecca Mendes da Costa, in settlement of a claim which she had upon him. This land was known as the "Jews' lands." Prior to this, Salvador's nephew Francis had arrived at Charleston (Dec., 1773), and purchased a great deal of landed property in the same neighborhood, some of it from his uncle and father-in-law. A Jew from London, Moses Lindo, was one of the chief instruments in increasing the indigo manufacture of the state. He arrived in 1756, and spent in the following year £120,000 in purchasing indigo; and as a consequence of his activity this industry quintupled in the state between 1756 and 1776. Lindo was appointed inspector-general of indigo.

A "Jewish" Company.

During the Revolutionary war Jews of South Carolina were found on both sides. Francis Salvador was a delegate to the Second Provincial Congress, which met in 1775-76 and in which South Carolina was declared an independent state. Most (nearly 40 out of 60) of the members of the Charleston company of militia commanded by Richard Lushington were Jews, for it was drawn chiefly from the district in which they lived. This gave rise to the tradition of an entirely Jewish regiment, or company, fighting in behalf of the Revolution. One of them, Joseph Solomon, was killed at the battle of Beaufort, 1779, and another, David Cardozo, distinguished himself in the attempt to recapture Savannah. Among those who petitioned General Lincoln to surrender Charleston, in May, 1780, were several of the prominent Jews of the town; and during its occupation by Sir Henry Clinton several Jews proved their "loyalty," being reported favorably by a committee appointed by Clinton. The majority, however, were on the "patriot" side, and left Charleston after the surrender. They returned in 1783, several of them becoming auctioneers or brokers. It is recorded that Meyer Moses succored the American wounded, while Mordecai Meyers furnished supplies for the colonial army.

The internal affairs of the Jews centered in the Congregation Beth Elohim Unveh Shalom, founded in 1750 for the Sephardic Jews of Charleston. It would appear that another congregation, formed by the Jews of the German rite, and also called Beth Elohim, came into existence somewhat later. The

Sephardic congregation worshiped in Union street from 1750 to 1757; in King street from 1757 to 1764; in Bedersford street in 1764; and in Hasell street, in the "Old Synagogue," from 1764 to 1781. By 1791 it consisted of more than 400 persons. The "New Synagogue" was built in 1794. In connection with this congregation a Hebrew benevolent society had been founded in 1784.

Largest American Congregation in 1800.

Owing to the liberal constitution of South Carolina and the fortunate position of the Jews at Charleston, that city by 1800 had the largest Jewish population in North America. Beth Elohim had 107 contributing members in that year, and 125 members two years later. The most distinguished member of the community in the early part of the century was Meyer Moses. He was a member of the legislature in 1810, and commissioner of free schools later. The influence of the Jews in South Carolina at this time was shown by the fact that they were intimately connected with the introduction of freemasonry into the state, Emanuel de la Motta, who was educated at Charleston, being one of its leading exponents, while Abraham Alexander, who was honorary reader of the Beth Elohim congregation, was one of those who introduced the Scottish rite into America.

In the War of 1812 a Jewish youth named Jacob Valentine, a descendant probably of the first Jew mentioned in the annals of South Carolina, served in the Palmetto regiment, and in the Mexican war he was wounded in the storming of Cherubusco. Jacob de la Motta served as surgeon in the United States army during the War of 1812.

In 1822 a congregation known as the "Tree of Life" seems to have been established in **Columbia,** which also has a Hebrew benevolent society dating from that year.

South Carolina was the earliest state in the Union to show Reform tendencies. In 1824 twenty-seven members of the Congregation Beth Elohim of Charleston petitioned the vestry for the use of the vernacular in the prayers, and for their shortening, as well as for the preaching of English sermons. On the rejection of the petition a number of the petitioners resigned and organized the Reform Society of Israelites. A second split in the congregation, for a similar reason, took place in 1840, owing to the attempted introduction of the organ into the service, and a new congregation was formed, known as Shearith Israel.

During the Civil war Jews from South Carolina joined the Confederate army to the number of 182, of whom no less than twenty-five were killed. Five brothers of the Moses family joined the Confederate ranks. Benjamin Mordecai, the father of one of the soldiers, is stated to have been the first material contributor to the Southern cause, having donated $10,000 to South Carolina at the beginning of the war. During the reconstruction period many South Carolina Jews removed northward. The total number of Jews in the state at the present day (1905) is estimated at 2,500. Besides Charleston and Columbia, communities exist at **Darlington, Florence, Orangeburg,** and **Sumter.**

Bibliography: B. A. Elzas, *The Jews of South Carolina,* Charleston, 1903 (a collection of pamphlets reprinted from the *Charleston News and Courier,* and giving a number of facts drawn from early records and newspapers); the works given in the bibliography to the article Charleston.

SOUTH AND CENTRAL AMERICA: Certain portions of the American continent which were first colonized by the Spaniards and Portuguese, and which still remain Spanish- and Portuguese-speaking. As regards the period during which these countries were under Spanish dominion their interest for Jewish history is concerned almost entirely with the Maranos, or Neo-Christians, secret Jews who nominally professed the Catholic religion; for settlements there were made only subsequent to the expulsion of the Jews from Spain in 1492, and Spanish law did not permit the existence of professing Jews on the soil of Spanish colonies. The same exclusion was enforced in the Portuguese colony of Brazil after the formal expulsion of the Jews from Portugal in 1508. Both in Spanish and in Portuguese America, therefore, the chief external events referring to Jews are connected with the Inquisition, but as this was never formally established in Brazil, there is a notable difference between the fortunes of the Jews in Portuguese and those of the Jews in Spanish America, which regions will accordingly be treated separately.

Portuguese America: Brazil.

Though the Inquisition was never established in Brazil, it had its "familiars" in that country, who spied upon secret Jews, and, in case of detection, seized them and sent them to Lisbon to be tried by the tribunal there. On the other hand, a favorite method of punishment by the Inquisition of Lisbon was to transport convicted relapsed Jews to the colony of Brazil, it is said, twice every year. The earliest notice of Jews in the country refers to some who had been thus banished in 1548. In the same year, however, several Portuguese Jews transplanted sugar-cane from Madeira to Brazil, and Jews were connected with the sugar industry of the country for the following two centuries. During the twenty years following the arrival of the first Jewish settlers they were joined by many volunteer exiles of the same faith, until their prominence in trade became noticeable; and edicts were issued by Don Henrique, regent of Portugal, on June 20, 1567, and March 15, 1568, forbidding Maranos to settle in Brazil. This edict, however, was repealed for the sum of 1,700,000 crusados ($714,000) given by the Maranos of Lisbon and Brazil, and the privileges of residence and free commerce were granted to Neo-Christians by an edict of May 21, 1577.

When Portugal was seized by Philip II. in 1580, Spanish regulations against the existence of Jews, secret or other, in Spanish dominions applied to Brazil also; but the insecure hold of Spain on the great Portuguese colony prevented a rigid application of the Spanish rule, and in 1610 mention is made of Jewish physicians in Bahia, then the capital of Brazil; it is stated also that the richest persons there were Jews, owning property amounting to from 60,000 to 100,000 crusados. The Dutch West India Company, founded in 1620, was largely recruited from the Maranos of Brazil, and it was undoubtedly due to the troubles in that country that no branch of the Inquisition was established there.

From 1618 to 1654 the Dutch made repeated attempts to take possession of Brazil, and during the whole time the Jewish element in that country remained friendly to the Dutch and inimical to the Spanish and, after 1640, to the Portuguese. Thus, as early as 1618 Francisco Ribiero, a Portuguese Jewish captain who had relatives in Holland, is said to have assisted the Dutch in their attempts upon the Brazilian coast. When Bahia was captured in 1624 the Dutch were welcomed by about 200 Jews, to whom freedom of worship had been promised. The capital, however, was recaptured the following year by the Portuguese. Most of the Jews of Bahia moved to Recife (Pernambuco) when the latter city was captured by the Dutch in 1631. So promising was the position of the Jews in Brazil that Ephraim Sueiro, brother-in-law of Manasseh b. Israel, emigrated to that country in 1638, and was to have been followed by Manasseh himself, who dedicated the second part of his "Conciliador" to the community at Recife (1640). Two years later no less than 600 Jews from Amsterdam, including Isaac Aboab da Fonseca and Moses Raphael Aguilar, embarked for Recife. They spread throughout the country, forming congregations at Tamarico, Itamaraca, Rio de Janeiro, and Parahiba; and in 1646 some of them raised large sums to assist the Dutch in defending the coast.

There were said to be no less than 5,000 Jews in Recife when it capitulated to the Portuguese, special clauses of the capitulation referring to the Jews. They found it, however, impossible to remain in Pernambuco, and scattered throughout North America, though a large number, including Aboab and Aguilar, the Pereyras, the Mezas, Abraham de Castro, and Joshua Ẓarfati, returned to Amsterdam, while Jacob de Velosino, the first Hebrew author born on American soil, settled at The Hague. Others went to Cayenne and Curaçao, and it is generally assumed that the first Jewish settlers in New Amsterdam came directly from Pernambuco (see, however, New York). There still remained a number of Maranos on Brazilian soil, whose existence is known mainly through the actions of Brazilian "familiars." Thus Isaac de Castro Tartas, who lived there, was transported to Lisbon Dec. 15, 1647. The number of Brazilian Maranos was augmented by exiles transported from Portugal between 1682 and 1707 for the crime of Judaizing. These were closely watched, and in case of relapse they were returned to Lisbon. Thus, on Oct. 10, 1723, five Jews who had been returned from Rio de Janeiro were punished at an auto da fé at Lisbon. On Oct. 19, 1739, Antonio José da Silva, poet and dramatist, who was originally from Brazil, was burned at the stake, together with his mother and wife. Nevertheless, the Jews flourished in Brazil throughout the eighteenth century, and it is reported that in 1734, after the discovery of diamonds, they controlled the market for those gems. The action of the Inquisition in returning so many Jews from Brazil to Lisbon had a deleterious effect upon the sugar trade, which the Jews almost monopolized; and many sugar-mills were closed at Rio de Janeiro until Pombal put an end to the transportation of Maranos from Brazil to Lisbon.

Spanish America: Mexico.

As early as Oct., 1511, Queen Joan of Spain issued an edict restricting the Maranos from immigrating into New Spain; and the activity of the Inquisition in the Spanish colonies of America was specifically directed against the Maranos and their descendants. Thus, Charles V., under date of Oct. 15, 1538, directed the Inquisition to attend not to the natives, but to the European immigrants and their offspring; and at an uncertain date before 1604 Philip III. issued a rescript forbidding any newly converted persons, or the offspring of such persons, to settle in the Spanish possessions in the East or West Indies. As a matter of fact, the first auto da fé in the New World took place in Mexico in 1574. Four years later three Jews were dealt with by the Mexican Inquisition. The most distinguished of the Mexican Maranos was Luis de Carabajal, who was for some time governor of one of the provinces of Mexico. He was charged with Judaizing on the accusation of Doña Isabel de Herrera in 1590, certain members of the Caceres family being included in the same charge. Carabajal's nephew of the same name was actually executed at an auto da fé in Mexico, Sept. 8, 1596. On the strength of a confession, still extant, which he wrote while a prisoner of the Inquisition he is said to have been the first Jewish author in America (see Carabajal). In 1607 a relative of his, Jorge de Almeida, was tried by the Inquisition of Mexico on the charge of Judaizing, and during the proceedings no less than thirty-two residents of Mexico were denounced as Judaizers. On March 22, 1609, Almeida was condemned to be executed in effigy. At the trial of Gabriel de Granada, which took place in Mexico between 1642 and 1645, no less than 107 persons were charged with Judaizing, showing a considerable increase in the Jewish population of that city. Among those thus charged were members of the families Rivera, Rodriguez, Perez, Espinosa, Tinoco, Nuñez, Del Bosque, De Castro, Da Costa, Sylva, Oliviera, and Sobremonte. The last person referred to, Thomas Trebiño de Sobremonte, appears to have been kept in prison for many years, and to have suffered a martyr's death on April 11, 1649.

Peru and Chile.

The Inquisition was established in Peru on Jan. 9, 1570, when Don Diego de Espinosa was inquisitor-general. Altogether thirty-four autos da fé were held at Lima from 1573 to July 17, 1806, after which the Inquisition ceased its activity. It appears that 131 Jews were condemned during this period, twenty-four of whom were burned at the stake. The most important auto da fé from a Jewish standpoint was that of Jan. 23, 1639, on which occasion no less than sixty-three Jews were condemned, ten of them to death by fire. Among the latter was Manuel Bautista Perez, reported to have been the richest man in Peru at the time, a sum equivalent to no less than $1,000,000 falling into the coffers of the Inquisition through his death. The most distinguished victim of the Chilean Inquisition was Francisco Maldonado de Silva, surgeon, poet, and philosopher (born in 1592), who was seized at Concepcion, Chile, April 29, 1627, on information which was given by his own sister. He remained in the dungeons of the Inquisition for nearly twelve years, during which time his constancy to his faith was conspicuous; while in prison he even converted two Catholics to Judaism. He was executed at Lima Jan. 23, 1639. After the wholesale slaughter of 1639 a respite, in consideration of the sum of 200,000 ducats paid to the governor, Conde de Chinchon, was given to the 6,000 Jews who are said to have remained in Peru at that time. In the early part of the seventeenth century a number of Peruvian Jews went to Chile, possibly for purposes of trade. Between 1636 and 1641 five of these were punished for Judaizing. In 1680 a certain Leon Gomez de Silva, born in Portugal, was accused of Judaizing at Santiago, and although he cleared himself of the charge he was again accused in 1700. The Jews of Peru and Chile are said to have owned all the dry-goods stores and to have controlled almost the entire commerce of these states. They monopolized the retail trade, and established an extensive merchant marine, their agents being scattered throughout the country.

Only occasional references are found to Jews of Argentine and La Plata, the other chief seat of Jewish activity being Colombia, where an inquisitorial tribunal was established at Cartagena in 1610. At the fifty-four autos da fé held in that state up to Aug. 16, 1819, 767 persons were condemned. The proportion of Jews or Maranos among these can not be estimated.

A. J.

Since the abolition of the Inquisition and the series of revolutions by which the various states of South and Central America effected their independence of Europe, the Maranos have become absorbed in the general population. Jews are to be found throughout the more prosperous cities of the South-American continent, although, with one notable exception, not in large numbers. The Jews of the central states are largely descendants of Sephardim, who once had flourishing communities in the West Indies; but in the south they are mostly traders from Germany, Russia, and Poland, with a few from England. Except in the Argentine Republic there are no synagogues. In Panama there are a few Jews, who have a burial-ground of their own about a mile outside the city; this cemetery is kept in good order, and many of the tombstones bear Hebrew inscriptions of historic value. In Peru, Bolivia, and Chile there are very few Jews; even in the capitals of these states there are hardly enough to form a minyan for public worship. At Lima and Santiago the chief jewelers are German Jews, and one of the prominent Chilean dentists is a Danish Jew. At Valparaiso one of the leading merchants is an English Jew (Jacob Caro). In Dutch Guiana and in Venezuela there are between 200 and 300 Jews, mostly from the Dutch colonies of Surinam and Curaçao. Lately the Jewish Colonization Association has established agricultural colonies in Rio Grande do Sul, Brazil, and has sent thirty-seven Russian and Rumanian families to those settlements. There was an agency of the Alliance Israélite Universelle in Rio de Janeiro, but this was closed in 1902 on the death of the local representative.

In the Argentine Republic the Jewish population may be estimated at about 20,000. That such a comparatively large number of Jews live there is due almost entirely to the Jewish Colonization Association (see AGRICULTURAL COLONIES IN THE ARGENTINE REPUBLIC). For every Jewish colonist who settles on the land at least six find their way to the large cities: Buenos Ayres, Cordova, Santa Fé, Rosario, and Mendoza.

In Buenos Ayres there are two synagogues, both in the Calle Liberdad; and the central office of the Jewish Colonization Association is located in the Calle Callao.

The following is a rough estimate of the Jewish population of the various states of South America:

Argentine Republic	20,000
Brazil	2,000
Guiana, Venezuela, and Colombia	2,000
Ecuador, Bolivia, Peru, Chile, and Uruguay	1,000

A. E. N. A.

SPAETH, JOHANN PETER (MOSES GERMANUS): Convert to Judaism; born at Venice in the first half of the seventeenth century; died at Amsterdam April 27, 1701. On account of rumors of impending war, his father, who was a poor shoemaker, sought refuge, between 1642 and 1645, at Augsburg; and there, as a pious Catholic, he confided Peter to the Jesuits, who took charge of his education. Peter later went to Vienna and earned his living as a private tutor. Becoming dissatisfied with many Catholic dogmas, he embraced Lutheranism (1680). On that occasion he wrote his first work: "*Εκιαγραφια*, Theologico-Philosophico Ænigmatica." The work found much favor with M. Spitzel, head of the board of theological studies at Augsburg, who recommended Spaeth to many influential personages in Strasburg and afterward to others in Frankfort-on-the-Main.

Leaves Catholicism for Lutheranism.

In 1683 Spaeth returned to Catholicism, which he defended and praised in a work entitled "Judicium Amoris de Fundamentalibus Quibusdam, Qui Feruntur Erroribus Ecclesiæ Romanæ." But this reconciliation with the Church of Rome did not last. New doubts assailed his mind; and after having mingled with the members of certain mystic sects, such as the Socinians and Mennonites, and after having taken up the study of Hebrew literature and the cabalistic writings, he renounced Christianity and vehemently attacked it. Even the Sermon on the Mount, as requiring an impossible ideality, did not escape his criticism (Schudt, "Jüdische Merckwürdigkeiten," iv. 194). As for the Christian writings other than the New Testament, he held that until Constantine founded Christianity they were all drawn from Jewish tradition.

It seems that Spaeth did not intend to become a proselyte to Judaism, and that his conversion was brought about, as he himself relates, through the following incident: Once a crucifix dropped from his pocket, and it was picked up by a Jew, who said: "It is Israel, the man of sorrow!" (Schudt, *l.c.* p. 195). Says Spaeth:

Renounces Christianity for Judaism.

> "From those words I understood the 53d chapter of Isaiah: the Jews bore the sins of the heathen, while they were daily persecuted by them. From time immemorial they had been treated in a shameful manner. As the whole history of the Passion tended to render the Jews odious, so the same sort of thing happens nowadays. For instance, the Jews are said to have murdered a child, and to have distributed the blood in quills for the use of their women in childbirth. I have discovered this outrageous fraud in time; and, therefore, I abandon Christianity, which permits such things."

Spaeth became converted at Cleves, taking the name "Moses Germanus."

Besides the above-mentioned works, Moses published the following: a translation of Judah ha-Levi's poem "Mi Kamoka" into Latin, German, and Spanish, with an introduction in Spanish; also "Geistiger Dreieckiger Spiegel der Lehre von dem Weiblichen Geschlechte"); "Epistolæ ad Vindicandum Judaismum" (published by Wachter in his "De Spinosismo in Judaismo"; "A Groote Hosianna der Joden, te Verwellkommenden Messias"; "Maran Ata," a Jewish Christian mystical writing; "Jesus Christi Ehre und Lehre, Gerettet Wider Alle Christen"; "Solus ex Judæis Contra Spinosam"; and "De Ortu et Progressu Medicinæ per Judæos Diatribe."

K. I. Br.

SPAIN (אספמיא. אספניא. אישפניא; also ספרד, the plural of which, ספרדים, was taken as the common name for Jews of Spanish origin): Jews lived in Spain in very early times, although the legend that Solomon's treasurer Adoniram died there, as well as the story that the Jews of Toledo, in a letter addressed to the Sanhedrin at Jerusalem, declared against the crucifixion of Jesus, can not be credited. Yet it is certain that the apostle Paul intended to visit Spain to proclaim his new teaching to the Jews living there, and that Vespasian, and especially Hadrian, who was himself a Spaniard, transported several Jewish prisoners to Spain. Several passages in the Talmud and in the Midrash (Leviticus Rabbah) which treat of אספמיא refer undoubtedly to Spain (Levy, "Neuhebr. Wörterb." i. 128; Kohut, "Aruch Completum," i. 188); and the Jewish coins unearthed in ancient Tarragona give evidence of an early settlement of the Jews in Spain, either voluntary or involuntary.

Early Settlement.

The earliest Jewish tombstone with a Latin inscription and discovered in Spain is that unearthed at Adra; it is of a Jewish girl, and dates back to the third century (Hübner, "Inscriptiones Hispaniæ Latinæ," p. 268, Berlin, 1869; Rios, "Hist." i. 68). The Jews spread rapidly over the Pyrenean peninsula, and were well treated under the sovereignty of the Arian Visigoths; they lived on an equality with the other inhabitants, engaged in trade and agriculture, and were often entrusted with judicial offices. The first attempt to disturb the friendly relations that existed between Jews and Christians originated with the Council of Elvira (303–304), which consisted of nineteen bishops and twenty-four presbyters, the bishops being chosen from Cordova, Seville, Toledo, Saragossa, and other cities inhabited by Jews. This council under pain of excommunication prohibited the Christians from living with Jews or eating in their company; it forbade also the blessing of the produce of Jewish fields "in order that the ecclesiastical benediction might not appear fruitless and vain."

Under Recared.

The position of the Jews became even less favorable when King Recared (586–589), for political reasons, abjured the Arian faith before the third Council of Toledo and entered the Catholic Church. In order to confirm the converted Arians in the Catholic faith and to win the clergy over to his side, he endeavored to prevent the Christians from associating with the Jews, who, as the allies of those opposed to his conversion, might have proved dangerous opponents of his religious plans. At the Council of Toledo in 589 he issued an order to the effect that Jews might not acquire or own Christian slaves, nor fill public offices, nor have intercourse with Christian women; the circumcision of a slave or of a Christian was punished with confiscation of property. Recared did not, however, succeed in enforcing his laws. The Arians, recently converted to the Catholic faith, were true allies of the Jews, who were oppressed like themselves; and the Jews were therefore protected by the Arian bishops and by the independent Visigothic nobility. The successors of Recared were, as a rule, better disposed toward the Jews, King Sisebut being the first who endeavored to enforce fully the laws enacted by Recared. He ordered that the Jews, on pain of the loss of their property, should release all their Christian slaves within a short time, and that in the future they might not hold any slaves.

Sisebut decreed the first persecution of the Jews in Spain. Whether he was influenced by Emperor Heraclius, or whether the clergy brought it about, is unknown, but he ordered that within a year all Jews should either submit to baptism or leave the Visigothic kingdom forever. Many Jews fled; but the greater number, more than 90,000, saved their property and their homes by embracing Christianity, though at heart they remained Jews. On account of this forcible conversion the king was severely criticized by Isidor of Seville, the most learned Spaniard of the time. During the reign of Suintala the fugitives returned to their country and the baptized Jews openly professed Judaism again. Forced to abdicate his throne, Suintala was succeeded by Sisenand. The latter was the tool of the clergy, and at the fourth Toledan Council (633) he ordered that the children of baptized Jews should be taken from their parents and given to Christians or to the cloisters for education. He ordered also that all Jews who had been forcibly baptized and who practised Jewish ceremonies should be given away as slaves.

Under the Visigoths.

The council called at Toledo by Chintila not only confirmed all the previously enacted anti-Jewish laws, but it ordained that no Jew might remain in the country, and that in the future every king at his accession should promise on oath to proceed with the greatest severity against all relapsing baptized Jews. The pseudo-Christians presented to the king a written statement declaring that they would live as good Catholics; but under Chindaswind they openly returned to the fold of Judaism. King Receswind was more severe than any of his predecessors. He ordered that Jews who practised the rites of their faith should be beheaded, burned, or stoned to death. The Jews of Toledo promised (653) to observe the Church regulations, including that ordering them not to abstain from eating pork. Nevertheless, they continued to observe the Jewish festivals and to ignore the Christian, so that the clergy at length insisted upon their celebrating the Christian holy days under the supervision of the Church authorities.

The severe measures taken by the Visigothic civil officers as well as by the councils were mainly directed against the secret Jews, whom the clergy considered more dangerous than the unbaptized ones; the latter were, therefore, left in peace. Erwig, however, attempted to force these to accept baptism, threatening them with the confiscation of their property or with expulsion if they refused; he pronounced the severest punishments for the reading of anti-Christian writings and for practising the rite of circumcision. All the anti-Jewish laws proposed by this king were accepted by the twelfth Toledan Council, presided over by Archbishop Julian of Toledo, who had published several writings against the Jews, although he was himself of Jewish origin and kept a Jewish servant.

Egica, the son-in-law and successor of Erwig, in the beginning of his reign showed himself mild toward the Jews. When, however, they allied themselves with the Arabs, who threatened the kingdom (which already was suffering from internal disturbances), the king confiscated all their property, and, in order to render them harmless for all time, declared all Jews, baptized or not, to be slaves and distributed them as gifts among Christians. Jewish children over seven years of age were taken from their parents and similarly dealt with (end of 694).

The Arrival of the Moors.

Witiza, the son of Egica, is described sometimes as a paragon of virtue and sometimes as a veritable fiend; the latter description of him is the one generally given by ecclesiastical writers. Lucas de Tuy, Archbishop Rodrigo, Ambrosio de Morales, Juan de Mariana, and other Spanish historians hold that this king, to further heretical ends, misused the previous decisions of the councils, that he recalled the exiled Jews, granted them privileges, and even entrusted them with public offices. Whether this be true, or whether, as is more probable, he oppressed them as his predecessors had done, it remains a fact that the Jews, either directly or through their coreligionists in Africa, encouraged the Mohammedans to conquer Spain and that they greeted them as their deliverers. After the battle of Jerez (711), in which African Jews fought bravely under Kaula al-Yahudi, and in which the last Gothic king, Rodrigo, and his nobles were slain, the conquerors Musa and Ṭariḳ were everywhere victorious. The conquered cities Cordova, Malaga, Granada, Seville, and Toledo were placed in charge of the Jewish inhabitants, who had been armed by the Arabs. The victors removed the disabilities which had oppressed the Jews so heavily, and granted them full religious liberty, requiring them to pay only the tribute of one golden dinar per capita (Adolf de Castro, "Historia de los Judios en España," pp. 33 *et seq.*; Rios, "Hist." i. 106 *et seq.*; G. van Vlooten, "Recherches sur la Domination Arabe," Amsterdam, 1894).

A new era now dawned for the Jews of the Pyrenean peninsula, whose number had been considerably augmented by those who had followed the Arab conquerors, as well as by later immigrants from Africa. Hardly a decade after the conquest, however, many Jews left their new home in order to follow a man named Serenus (Zanora, Zonaria) who had appeared in Syria and had proclaimed himself the Messiah (721); the governor, Anbasa (Ambisa), who was collecting enormous sums for the fiscus, confiscated the property of the emigrating Jews for this purpose. Under the Ommiad 'Abd al-Raḥman I., whose greatness is said to have been foretold by a learned Jew who became his adviser, a flourishing kingdom was established, of which Cordova was the center. During 'Abd al-Raḥman's reign the Jews devoted themselves to the service of the califate, to the study of the sciences, and to commerce and industry, especially to trading in silk and slaves, in this way promoting the prosperity of the country. Southern Spain became an asylum for the oppressed Jews of other parts. Bodo-Eleazar, a convert to Judaism, went to Cordova, where he is said to have endeavored to win proselytes for Judaism from among the Spanish Christians; but that the mass of the Spanish Jews of the period in question hated the Christians and aimed at making proselytes is not correct.

Under 'Abd al-Raḥman I. and Al-Ḥakim.

The reigns of 'Abd al-Raḥman I. (called Al-Nasir; 912–961) and his son Al-Ḥakim were the golden era for the Spanish Jews and Jewish science. 'Abd al-Raḥman's court physician and minister was Ḥasdai ben Isaac ibn Shaprut, the patron of Menahem ben Saruḳ, Dunash ben Labraṭ, and other Jewish scholars and poets. During his term of power the scholar Moses ben Enoch was appointed rabbi of Cordova, and as a consequence Spain became the center of Talmudic study, and Cordova the meeting-place of Jewish savants. After the downfall of Al-Ḥakim, who likewise favored the Jews, a struggle for the throne broke out between Sulaiman ibn al-Hakim and Mohammed ibn Hisham. Sulaiman solicited the assistance of Count Sancho of Castile, while Mohammed, through the agency of wealthy Jewish merchants in Cordova, obtained the aid of Count Ramon of Barcelona. For this Sulaiman took fearful revenge upon the Jews, expelling them mercilessly from city and country (1013).

With the overthrow of the Banu Amir the power of the Mohammedan state in Spain came to an end, the mighty califate of Cordova being divided into twelve minor states under different califs. The Abbadites ruled in Seville, the Hammudites in Malaga, the Zayrids in Granada, the Beni-Hud in Saragossa, and others in Almeria, Toledo, Valencia, Niebla, etc. Several Jews left Cordova for Malaga, Granada, Toledo, Murcia, and Saragossa.

Samuel ibn Nagdela.

Among those who fled from Cordova was the Talmudist and linguist Samuel ha-Levi ibn Nagdela (Nagrela), who went to Malaga, which, together with the towns of Jaen, Ronda, etc., belonged to the kingdom of Granada, founded by the Barbary tribe of Sinhagah. Samuel won the favor of the vizier of King Ḥabus of Granada; he appointed him his private secretary and recommended him to the king as counselor, and upon the death of the vizier the king made Samuel his minister and entrusted him with the administration of diplomatic affairs. Samuel, who resided in Granada, officiated as rabbi also, and took an active interest in the sciences and poetry. He retained his court position under King Ḥabus' son Badis, whom he aided against his elder brother Balkin. Samuel remained the protector of his coreligionists, who in Granada enjoyed full civic equality, being eligible for public offices and for service in the army.

A position similar to that of Samuel's was occupied, though only for a short time, by Jekuthiel ibn Ḥasan in Saragossa. Jekuthiel shared the fate of Samuel's son Abu Ḥusain Joseph ibn Nagdela, who succeeded his father as minister upon the latter's death (1055); Abu Ḥusain was accused by his enemies of treason after having held office for eleven years, and was crucified before the gate of Granada on Dec. 30, 1066. On this occasion all the Jews of Granada who had not sought salvation in flight, fifteen hundred families in number, fell victims to the rage of the populace. This was the first persecution of Jews on the Peninsula while under Islamic rule. All Jews were compelled to leave Granada, several finding refuge in Lucena. In the year of the persecution in Granada the talented philosopher Abu al-Faḍl ibn Ḥasdai was appointed vizier in Saragossa; he was the son of the poet Joseph ibn Ḥasdai, who had fled from Cordova in 1013, and he held the office of vizier until Abu Amir Yusuf al-Muʻtamir ascended the throne. The scholar Isaac ibn Albalia, who had escaped the butchery in Granada, was appointed astronomer to Mohammed al-Muʻtamid in Seville, who was a patron of science and poetry; Isaac was appointed also rabbi of all the congregations in that city. At the same time Al-Muʻtamid employed Joseph ibn Migas on diplomatic missions.

Under the Almoravides.

Terrified by the conquests of King Alfonso VI. of Castile, Al-Muʻtamid, heedless of the remonstrances of his son, called to his aid the ambitious Yusuf ibn Tashfin of North Africa. In the terrific battle of Zallaḳa (Oct., 1086), in which Jews fought bravely both in the Christian and in the Moorish army, Yusuf won a victory and the sovereign power. The Almoravides, a warlike, fanatical religious sect, now became the rulers of southern Spain; they did nothing to improve the welfare of the Jews. Yusuf ibn Tashfin endeavored to force the large and wealthy community of Lucena to embrace Islam. Under the reign of his son Ali (1106–43) the position of the Jews was more favorable. Some were appointed "mushawirah" (collectors and custodians of the royal taxes). Others entered the service of the state, holding the title of "vizier" or "nasi"; among these may be mentioned the poet and physician Abu Ayyub Solomon ibn al-Muʻallam of Seville, Abraham ibn Meïr ibn Ḳamnial, Abu Isaac ibn Muhajar, and Solomon ibn Farusal (murdered May 2, 1108). The old communities of Seville, Granada, and Cordova prospered anew.

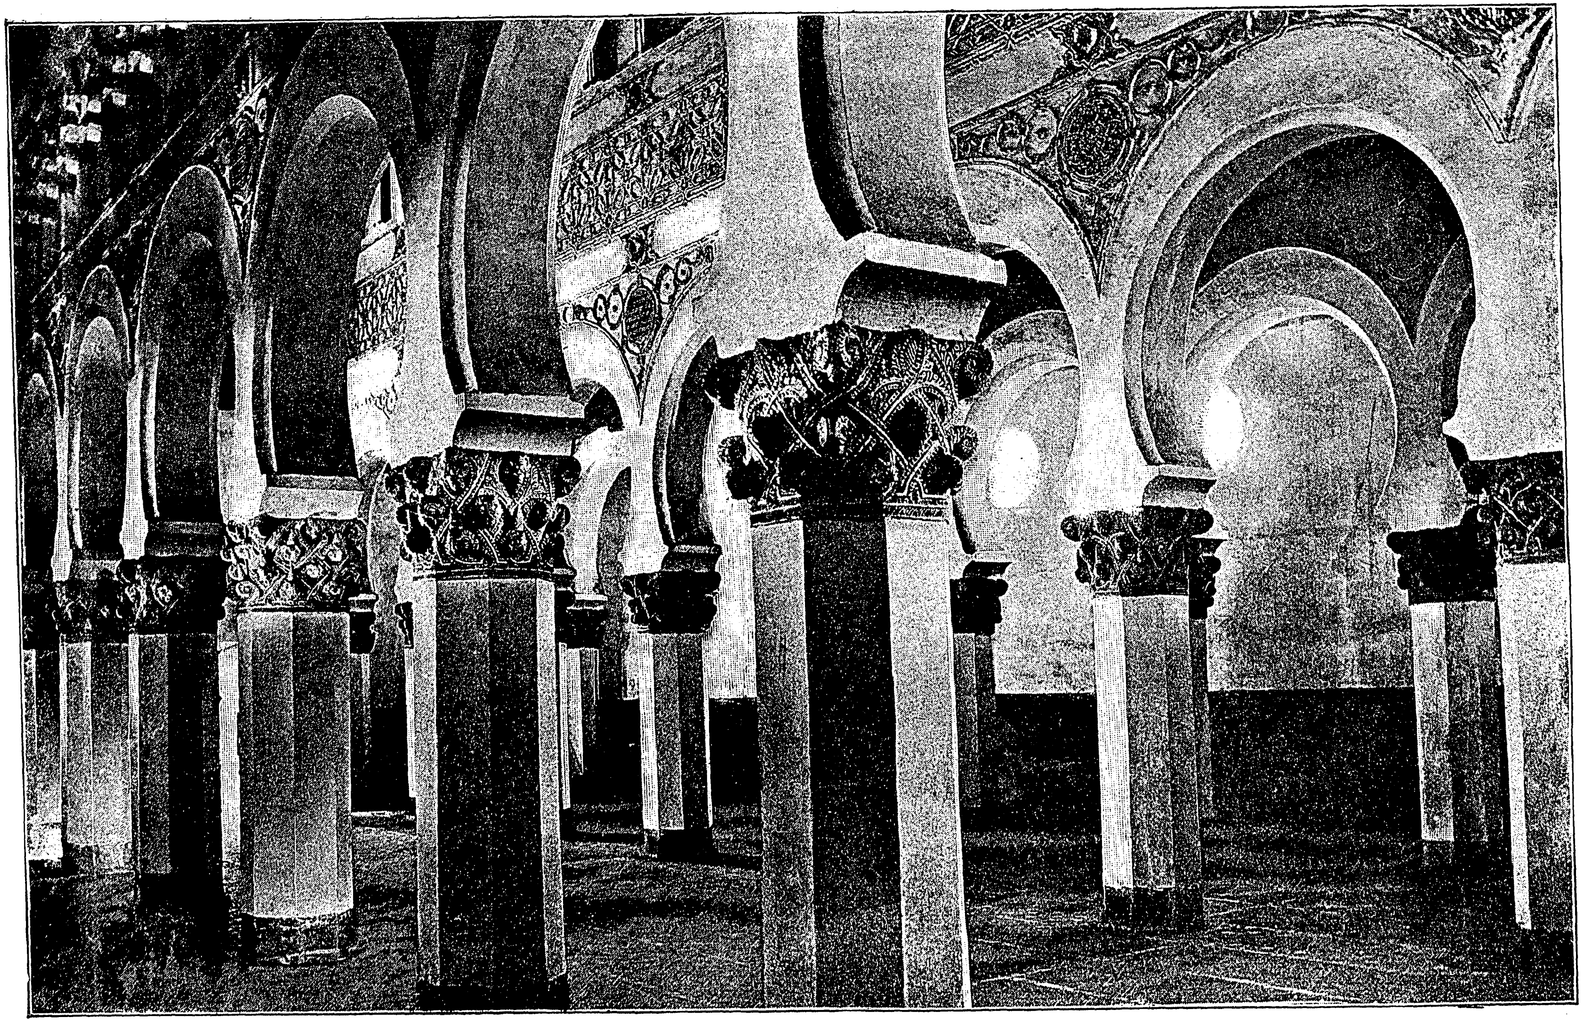
Under the Almohades.

The power of the Almoravides was of short duration. A fanatic of North Africa, Abdallah ibn Tumart, appeared about 1112 as the upholder of Mohammed's original teachings concerning the unity of God, and became the founder of a new party called the Almohades, or Muzmotas ("Shebeṭ Yehudah," p. 3, gives the correct date as 4872 [= 1112]). Upon the death of Abdallah, ʻAbd al-Mu'min took the leadership and endeavored with sword and brand to exterminate the Almoravides as political and religious enemies. In North Africa he won victory after victory. In the same year in which the Second Crusade brought new distress to the German Jews, ʻAbd al-Mu'min passed over to southern Spain in order to wrest that country from the Almoravides. He conquered Cordova (1148), Seville, Lucena, Montilla, Aguilar, and Baena, and within a year the whole of Andalusia was in the possession of the Almohades. As in Africa, so in Spain, the Jews were forced to accept the Islamic faith; the conquerors confiscated their property and took their wives and children, many of whom were sold as slaves. The most famous Jewish educational institutions were closed, and the beautiful synagogues everywhere destroyed.

The terrible persecutions by the Almohades lasted for ten years. On account of these persecutions many Jews made a pretense of embracing Islam, but a great number fled to Castile, whose tolerant ruler, Alfonso VII., received them with hospitality, especially in Toledo. Others fled to northern Spain and to Provence, in which latter country the Ḳimḥis sought refuge. Various attempts on the part of the Jews to defend themselves against the Almohades were unsuccessful; the courageous Abu Ruiz ibn Dahri of Granada especially distinguished himself in such a conflict (1162; see "Al-Maḳḳari," ed. Gayangos, ii. 23). The part taken by the Jews in the struggle against the Almohades must not be underestimated; the latter's power was broken in the battle of Navas de Toledo on July 16, 1212.

In Castile and Leon.

The first Christian princes, the counts of Castile and the first kings of Leon, treated the Jews as mercilessly as did the Almohades. In their operations against the Moors they did not spare the Jews, destroying their synagogues and killing their teachers and scholars. Only gradually did the rulers come to realize that, surrounded as they were by powerful enemies, they could not afford to turn the Jews against them. Garcia Fernandez, Count of Castile, in the fuero of Castrojeriz (974), placed



Interior View of St. Maria la Blanca, Formerly a Synagogue, Toledo, Spain.

the Jews in many respects on an equality with Christians; and similar measures were adopted by the Council of Leon (1020), presided over by Alfonso V. In Leon, the metropolis of Christian Spain until the conquest of Toledo, many Jews owned real estate, and engaged in agriculture and viticulture as well as in the handicrafts; and here, as in other towns, they lived on friendly terms with the Christian population. The Council of Coyanza (1050) therefore found it necessary to revive the old Visigothic law forbidding, under pain of punishment by the Church, Jews and Christians to live together in the same house, or to eat together.

Ferdinand I. of Castile set aside a part of the Jewish taxes for the use of the Church, and even the not very religious-minded Alfonso VI. gave to the church of Leon the taxes paid by the Jews of Castro. Alfonso VI., the conqueror of Toledo (1085), was tolerant and benevolent in his attitude toward the Jews, for which he won the praise of Pope Alexander II. To estrange the wealthy and industrious Jews from the Moors he offered the former various privileges. In the fuero of Najara Sepulveda, issued and confirmed by him (1076), he not only granted the Jews full equality with the Christians, but he even accorded them the rights enjoyed by the nobility; this fuero was applied also in other cities, as Toledo (1085), Leon (1090), Miranda de Ebro (1099), etc. The example set by Alfonso was followed in Aragon and Navarre, as is evidenced by the fueros of Jaca (1100), Tudela (1115), Belforado (1116), Carcastello (1129), Calatayud (1131), and Daroca (1142). To show their gratitude to the king for the rights granted them, the Jews willingly placed themselves at his and the country's service. Alfonso employed Jews for diplomatic errands, as, for example, the scholar Amram ben Isaac ibn Shalbib, whom the king sent with a delegation to Mohammed al-Mu'tamid at Seville (1082; according to some sources, not before 1085). A prominent position at Alfonso's court was held probably by the otherwise unknown Samuel ben Shealtiel ha-Nasi, who died on the 16th of Elul (Aug. 27, 1097), or by his father, whose tombstone has but recently been discovered in Arevalo ("Boletin Acad. Hist." xxv. 489 *et seq.*).

The Battle of Zallaḳa.

Alfonso's army contained 40,000 Jews, who were distinguished from the other combatants by their black-and-yellow turbans; for the sake of this Jewish contingent the battle of Zallaḳa was not begun until after the Sabbath had passed. Before the battle the king sent not only to the bishops, but to the Jewish scholars and astrologers also, to hear their predictions for the future (Fernandez y Gonzalez, "Las Mudejares de Castilla," pp. 41 *et seq.*). The king's body-physician and confidant was the Jew Cidelo (Cidelus), who placed before the king a petition from the counts and grandees of the kingdom which neither of these ventured to address to his majesty. The king's favoritism toward the Jews, which became so pronounced that Pope Gregory VII. warned him not to permit Jews to rule over Christians, roused the hatred and envy of the latter. After the unfortunate battle of Ucles, at which the infante Sancho, together with 30,000 men, were killed, an anti-Jewish riot broke out in Toledo; many Jews were slain, and their houses and synagogues were burned (1108). Alfonso intended to punish the murderers and incendiaries, but died before he could carry out his intention (June, 1109). After his death the inhabitants of Carrion fell upon the Jews; many were slain, others were imprisoned, and their houses were pillaged.

Alfonso VII., who assumed the title of Emperor of Leon, Toledo, and Santiago, curtailed in the beginning of his reign the rights and liberties which his father had granted the Jews. He ordered that neither a Jew nor a convert might exercise legal authority over Christians, and he held the Jews responsible for the collection of the royal taxes. Soon, however, he became more friendly, confirming the Jews in all their former privileges and even granting them additional ones, by which they were placed on an equality with Christians. Considerable influence with the king was enjoyed by Judah ben Joseph ibn Ezra (Nasi). After the conquest of Calatrava (1147) the king placed Judah in command of the fortress, later making him his court chamberlain. Judah ben Joseph stood in such favor with the king that the latter, at his request, not only admitted into Toledo the Jews who had fled from the persecutions of the Almohades, but even assigned many fugitives dwellings in Flascala (near Toledo), Fromista, Carrion, Palencia, and other places, where new congregations were soon established. In recognition of his faithful services Judah received, a year after Alfonso's death (1157), from his son Sancho, five yokes of land in Azaña (Illescas) for himself and his children (Fidel Fita, "La España Hebrea," i. 20 *et seq.*).

Under Alfonso VIII.

After the brief reign of King Sancho III. a war broke out between Fernando II. of Leon (who granted the Jews special privileges) and the united kings of Aragon and Navarre. Jews fought in both armies, and after the declaration of peace they were placed in charge of the fortresses. Alfonso VIII. of Castile (1166-1214), who had succeeded to the throne, entrusted the Jews with guarding Or, Celorigo, and, later, Mayorga, while Sancho the Wise of Navarre placed them in charge of Estella, Funes, and Murañon. During the reign of Alfonso VIII. the Jews gained still greater influence, aided, doubtless, by the king's love of the beautiful Jewess Rachel (Fermosa) of Toledo. When the king was defeated at the battle of Alarcos by the Almohades under Yusuf Abu Ya'ḳub al-Manṣur, the defeat was attributed to the king's love-affair with Fermosa, and she and her relatives were murdered in Toledo by the nobility (Rios, "Hist." i. 336 *et seq.*; Grätz ["Gesch." vi. 228] does not accept the traditional belief concerning the murder of the king's paramour). After the victory at Alarcos the emir Mohammed al-Naṣir ravaged Castile with a powerful army and threatened to overrun the whole of Christian Spain. The Archbishop of Toledo summoned the Crusaders to the aid of Alfonso. In this war against the Moors the king was greatly aided by the wealthy Jews of Toledo, especially by his "almoxarife mayor," the learned and generous Nasi Joseph ben Solomon ibn Shoshan (Al-Ḥajib ibn Amar).

The king's debt to the latter amounted in 1204, shortly before Joseph's death, to 18,000 golden maravedis ("Vida del Santa Rey D. Fernando," iii. 233). Joseph stood high in the king's favor, and his sons Solomon and Isaac benefited thereby after their father's death.

The Crusaders ("Ultrapuertos") were hailed with joy in Toledo, but this joy was soon changed to sorrow, as far as the Jews were concerned. The Crusaders began the "holy war" in Toledo (1212) by robbing and butchering the Jews, and if the knights had not checked them with armed forces all the Jews in Toledo would have been slain. When, after the sanguinary battle of Navas de Tolosa (1212), Alfonso victoriously entered Toledo, the Jews went to meet him in triumphal procession. Shortly before his death (Oct., 1214) the king issued the fuero de Cuenca, settling the legal position of the Jews in a manner favorable to them.

Under Ferdinand III. of Castile and James I. of Aragon.

A turning-point in the history of the Jews of Spain was reached under Ferdinand III. (who united permanently the kingdoms of Leon and Castile), and under James I., the contemporary ruler of Aragon. The clergy's endeavors directed against the Jews became more and more pronounced. The Spanish Jews of both sexes, like the Jews of France, were compelled to distinguish themselves from Christians by wearing a yellow badge on their clothing; this order was issued to keep them from associating with Christians, although the reason given was that it was ordered for their own safety. The Jews did all in their power to secure the repeal of this order. James I. of Aragon and Theobald I. of Navarre, however, compelled them to wear the badge, and Innocent IV. admonished Ferdinand III. to see that no Jew appeared in public without it.

But in spite of papal bulls and royal decrees the Jews were often freed from this degradation. Pedro III. of Aragon granted some Jews in Valencia, Tarragona, Barcelona, and other cities exemption from wearing the badge, this privilege being especially extended to physicians ("R. E. J." vi. 91 *et seq.*). Ferdinand III. of Castile and James I. of Aragon (each called "the Conqueror," the former with reference to Cordova and Seville, the latter with reference to the Balearic Isles, Valencia, and Murcia) were religiously inclined, and did not feel particularly friendly toward the Jews, whose conversion they favored. Nevertheless, they made use of the Jews in time of war, and rewarded them for the important services they rendered as secretaries and dragomans, tax-collectors, and tax-farmers. In the cities conquered by him Ferdinand confirmed the Jews in their existing rights and privileges, and after the conquest of Seville he distributed land among them; moreover, in spite of the objections of the clergy he allowed the Jews of Cordova to erect a new and magnificent synagogue. James acted similarly after his conquest of Valencia.

That Ferdinand's death was mourned by the Jews is evidenced by the Hebrew epitaph which appears on his tombstone, together with inscriptions in Latin, Castilian, and Arabic (the Hebrew epitaph is reprinted in Kayserling's "Ein Feiertag in Madrid," p. 12). The death, also, of James I. (1276), who had arranged a religious disputation between Moses ben Naḥman (the "Rab de España") and the neophyte Pablo Christiano, and who had compelled the Jews to listen to conversionist sermons, was publicly mourned by the Jews. Ferdinand's son, Alfonso X. (the Wise), who was a lover of the sciences, maintained relations with the Jews even before his accession to the throne (1252). He had astronomical and astrological writings translated from Arabic into Spanish by Judah ben Moses (Mosca) Kohen, a physician of Toledo, and by the physicians Abraham and Samuel Levi. Zag (Isaac) ibn Sid, the ḥazzan of Toledo, was the editor of the famous astronomical tables called, after the king, the Alfonsine Tables (regarding the astronomical congress see Steinschneider in "Magazin für die Literatur des Auslandes," 1848, No. 58; *idem*, "Cat. Bodl." cols. 1356 *et seq.*; *idem*, "Hebr. Uebers." pp. 979 *et seq.*; Grätz, "Gesch." vii. 467). According to his nephew Juan Manuel, Alfonso did not have the Talmud translated (Rios, "Hist." i. 450); but, probably, he had a translation made of "Toda la Ley de los Judios," as he had the Koran rendered into Spanish. The version of the Bible in that language, the subsequent "Ferrarian Bible," was made probably in the thirteenth century (see Bible Translations).

Disputations and Translations.

Alfonso, who employed Meïr de Malea and his sons Isaac (Zag) and Joseph as treasurers, and Todros ha-Levi, Solomon ibn Albagal, and other Jews as tax-collectors, granted to the Jews of his domains several privileges and other favors. He permitted the Aljama in Toledo to build a magnificent synagogue, the largest and most beautiful one in Spain; he gave all Jews permission to visit the yearly market in Seville; and in 1264 he assigned houses, vineyards, and lands to the Jews who settled in St. Maria del Puerto (Rios, "Hist." i. 451 *et seq.*). Notwithstanding this he subjected the Jews to the strictest limitations, especially in his Fuero Real or Fuero Juzgo, as well as in other laws, contained in the large collection "Siete Partidas," which was issued in the Castilian language and in which the influence of the Lateran Council is unmistakable.

Bull of Innocent IV., 1250.

The bull issued by Innocent IV. in April, 1250, to the effect that Jews might not build a new synagogue without special permission, was placed on the statute-books by this king (reprinted in Rios, "Hist." i. 557). To make proselytes was forbidden to the Jews under pain of death and confiscation of property. They might not associate with the Christians, live under the same roof with them, eat and drink with them, or use the same bath; neither might a Christian partake of wine which had been prepared by a Jew. The Jews might not employ Christian nurses or servants, and Christians might use only medicinal remedies which had been prepared by competent Christian apothecaries. Every Jew should wear the badge, though the king reserved to himself the right to exempt any one from this obligation; any Jew apprehended without the badge was liable to a fine of ten gold maravedis or to the infliction of ten stripes. The Jews were forbidden to appear in public on Good Friday. Alfonso, called "the Wise," was so deluded that he not only used as a theme for his "Libro de las Cantigas" the false legend that the Jews every year on Good Friday crucified a Christian child, but he ordered that every Jew accused of such a crime should be brought before him and, if convicted, slain. Alfonso requested the Jews to live peacefully in their Juderia and to observe conscientiously their religious laws; he ordered that they should not be disturbed in their religious ceremonies or summoned before courts on Sabbaths or festivals; that their synagogues and their sacred furniture should be in every way respected; and that they should be neither forced nor bribed into embracing Christianity.

The last years of Alfonso's reign were sad ones, as well for himself as for the Jews in his dominion. The king condemned to death his faithful "almoxarife" Zag de Malea, because the latter had given to the infante Sancho, who had quarreled with his father, a large sum of money which the king had intended to use in the subjugation of Algeciras (see Malea). Incensed by the act of Malea, the king, in direct opposition to his previous enactments, ordered that on a certain Sabbath all Castilian Jews should be taken prisoners while in their synagogues; he levied upon them a tribute of 12,000 gold maravedis, imposing an additional fine of the same amount for every day the tribute remained unpaid (Rios, "Hist." i. 494). Four years later (1281) the king was dethroned by his son Sancho, with the sanction of the Cortes. Alfonso died in 1284, forsaken by his children, and even by the clergy to which he had made liberal concessions.

Social Position.

The Jews in Spain were Spaniards, both as regards their customs and their language. They owned real estate, and they cultivated their land with their own hands; they filled public offices, and on account of their industry they became wealthy, while their knowledge and ability won them respect and influence. But this prosperity roused the jealousy of the people and provoked the hatred of the clergy; the Jews had to suffer much through these causes. The kings, especially those of Aragon, regarded the Jews as their property; they spoke of "their" Jews, "their" Juderias, and in their own interest they protected the Jews against violence, making good use of them in every way possible. The aljamas of Catalonia, Aragon, and Valencia, for example, were in 1281 ordered by King Pedro III. to furnish 185,000 sueldos in subsidies, and, three years later, a further sum of 130,000 sueldos (order reprinted in Rios, "Hist." ii. 530). In addition to these extraordinary disbursements, the Jews of Aragon and Castile had to pay very large taxes, the money thus obtained being often expended by the kings in gifts to queens, infantes, knights, and bishops, as well as to churches and cloisters.

Sancho IV., the son and successor of Alfonso X., was the first king who, with the aid of his Jewish tax-collectors, levied and regulated the taxes payable by the aljamas to the crown of Castile, under which belonged the provinces of Old and of New Castile, Leon, Galicia (sparsely inhabited by Jews), Estremadura, Murcia, and Andalusia. All Jews of twenty—according to other sources, sixteen or fourteen was the age limit—were required to pay a tax of thirty dineros to remind them of the "thirty pieces of silver" alleged to have been paid by their ancestors to bring about the death of Jesus. This tax, called the "servicio," was not imposed upon the Jews of the archbishopric of Toledo, the bishoprics of Cuenca and Plasencia, the provinces of Murcia and Leon, and the frontier district of Andalusia. The Jews paid also the "encabezamiento," or poll-tax. The apportionment of the taxes among the various communities was entrusted by the king to a committee consisting of Jacob ben Yaḥya (not Jahjon) of Niebla, Isaac ben Azor of Jerez, and Abraham Abenfar of Cordova (the representative from Jaen did not appear), which met in Huete in 1290. If these failed to agree upon the apportionment, David Abudarham the Elder and the aljama of Toledo were to decide.

Population and Dispersion.

The total yearly taxes paid by the Jews of Castile amounted to 2,801,345 maravedis. To base upon this amount any calculation as to the number of Jews then living in the kingdom is not possible; the total of 854,951 given by Rios, or that of 850,000 by Grätz, is surely too large, while 233,784, the estimate of Loeb, must be considered too small. There were about 120 Jewish communities, of which the following were the most important: Toledo, Hita, Almoguera, Burgos, Carrion, Avila, Medina del Campo, Valladolid, Cuenca, Huete, Atienza, Paredes de Nava, Logroño, Almazan, Soria, Villanueva, Ucles, Pancorbo, Sahagunt, Sepulveda, Olmedo, Murcia, Osma, Najera, Talavera, Villa Real, Guadalajara, Arevalo, Plasencia, Villa Diego, and Sant Estevan. Among the communities of lesser importance were the following: Maqueda, Briviesca, Alcaráz, Calahorra, Aguilar, Ayllon, Belforado, Badajoz, Alcalá, Zurita, Vitoria, Buitrago, Albelda, Peñafiel, Trujillo, Roa, Bejar, Miranda, Cea, Castiello, Lerma, Medina de Pomar, Olmeda, Pedraza, Alfaro, Fuendidueña, and Verlanga (the "Repartimiento de Huete," reprinted from the original in Rios, "Estudios," pp. 40 *et seq.*, and "Hist." ii. 53; the foregoing list, with some deviations, is found in "Hist." ii. 531 *et seq.*; a faulty list is given by Asso y del Rio and Manuel y Rodriguez in "Discorso Sobre el Estado de los Judios en España," p. 150, Madrid, 1771, which work has been followed by Lindo, "History of the Jews of Spain and Portugal," p. 109, where the names of the towns are misspelled; see also "R. E. J." xiv. 161 *et seq.*; Grätz, "Gesch." vii. 168 *et seq.*, where some incorrect statements are made).

Catalonia, Aragon, and Valencia were more sparsely inhabited by Jews. The largest congregations were found in Tortosa, Gerona, Barcelona, and Valencia; then followed Saragossa, Calatayud, Monzon, Lerida, Teruel, Jaca, Fraga, Huesca, and Barbastro. Smaller congregations existed in Exea de los Caballeros, Tauste, Besalu, Cervera, Tarragona, Ruesca, Manresa, and Villafranca.

The Jews were burdened with various other taxes in addition to those already mentioned. Whenever the kings of Aragon or Castile stayed in a city in

Iberian Peninsula, Showing Places Where Jews Resided Before the Expulsion.

which a Jewish community existed, the Jews were required to provide the royal household with beds and other furniture; this duty involved many hardships and led to ill treatment of the Jews by royal servants; it could be escaped, however, by the payment of a specified sum, which was called "yantares" in Castile, "cenas" (= "table expenses") in Aragon. The taxes were so oppressive that in 1354 the representatives of the Jewish communities of Aragon resolved to petition the king to relieve them of this burden ("He-Ḥaluẓ," i. 25). On the occasion of a royal visit to a city inhabited by Jews they paid a tribute to the royal guard, the "Monteros de Espinosa"; for a long time this payment amounted to twelve maravedis for each copy of the Torah; later it was fixed at four silver reals. In addition to all these taxes the Jews paid a coronation-tax ("coronaciones"), pasture-tax, tithes on houses for the bishops and their households, special customs duties and bridge-tolls, etc.

Occupations.

Although the Spanish Jews engaged in many branches of human endeavor—agriculture, viticulture, industry, commerce, and the various handicrafts—it was the money business that procured them their wealth and influence. Kings and prelates, noblemen and farmers, all needed money, and could obtain it only from the Jews, to whom they paid from 20 to 25 per cent interest. This business, which, in a manner, the Jews were forced to pursue in order to pay the many taxes imposed upon them as well as to raise the compulsory loans demanded of them by the kings, led to their being employed in special positions, as "almoxarifes," bailiffs, tax-farmers, or tax-collectors. Jews were employed as "almoxarifes" by Sancho, as well as by the infante Manuel and by the latter's consort Beatriz. Among Jews holding such positions may be mentioned Samuel, Abraham al-Barchilon, and Cag and Abraham ibn Susan. Without the material assistance of the Jews King Sancho, whose secretary was Cag de Toledo, would hardly have succeeded in collecting the taxes.

Opposition of the Cortes.

The "almoxarife mor," or treasurer, of King Ferdinand IV., the son and successor of Sancho, was Samuel, who exercised unlimited authority in diplomatic affairs, thereby incurring the animosity of the queen-mother, Maria de Molina, to such a degree that he narrowly escaped assassination. Queen Maria had full confidence in Todros Abulafia, and her "almoxarife" was Isaac (Samuel?) ibn Ya'ish. Judah Abravanel was for several years financial adviser to Infante Pedro. The jealousy and hatred with which the Christian population regarded the Jews were often openly revealed at the meetings of the Cortes in Aragon, as, for example, in Lerida (1300), and in Saragossa and Alagon (1301). Upon the motion of the Cortes in Valladolid (1293) Sancho IV. decreed that Jews might no longer acquire or own real estate; the Cortes of Burgos (1301) and that of Medina del Campo (1305) demanded that they be no longer employed as tax-farmers or -collectors; and complaints of the usury practised by Jews were frequent. Whenever their own interests were at stake the kings of Aragon protected the Jews, and for extraordinary services rendered by the latter (as, for example, by the aljamas of Tortosa) they often conferred special privileges upon them. On account of the accruing taxes a number of Jewish families that had been expelled from France were admitted into Aragon. Actuated by similar motives, Ferdinand IV. of Castile also protected the Jews of his domains, whom he termed "his own Jews," against arbitrary oppression by the clergy, since he could not dispense with their assistance at the conquest of Gibraltar.

Upon Ferdinand's death (1312) Maria de Molina assumed the reins of government. She employed Jews as tax-collectors, and she even had a Jew, Rabbi Don Mosse (Moussi), as "despensoro" (steward of the household) as late as 1320. At the request of the Cortes of Burgos, the queen, with the infante and the guardians of the young king, and under the direct influence of the Council of Zamora, decreed that Jews might no longer bear Christian names, nor associate in any way with Christians, and that Jewesses might wear no ornaments whatever, whether pearls, gold, or silver. The claims of Jewish creditors were reduced, but no Christian debtor might appeal to a papal bull for the cancelation of his indebtedness to a Jewish creditor. The queen put a fine on usury, and she limited the rate of interest that might be charged. She ordered also that all processes, civil as well as criminal, should be brought before the local magistrate for adjudication. Infante John Manuel, who, like Ferdinand IV., employed the Jew Abraham as his body-physician, restored criminal jurisdiction to the rabbinate; this he did at the request of Judah b. Isaac ibn Waḳar of Cordova, who stood high in the royal favor (Asheri, Responsa, xvii. 8).

Under Alfonso XI.

Complaints against the Jews continued to be made in the Cortes, and in the beginning of the fourteenth century their position was precarious throughout Spain; many Jews emigrated from Castile and from Aragon. It was not until the reigns of Alfonso IV. and Pedro IV. of Aragon, and of the young and active Alfonso XI. of Castile (1325), that an improvement set in. The last-named king protected the Jews against arbitrary enactments and violence, especially in the archbishopric and city of Seville, where Jew-hatred had been nurtured for a long time and where the Jews had been oppressed in every imaginable way by the clergy. The king ordered that in those places every Jew of sixteen or over should pay a tax of thirty dineros, or three maravedis. As his "almoxarife" the king selected Joseph ben Ephraim Benveniste ha-Levi; he was the king's confidant and used his influence with him in favor of his coreligionists in such a manner that the Cortes of Madrid complained bitterly about it. The hatred of the populace grew still deeper, especially against Joseph Benveniste, who, through the intrigues of a lady of the court, came near losing his life (1326).

When, therefore, one of the king's favorites, Garcilaso de la Vega, had been murdered in Soria, and another, Count Alvar Nuñez, had been deposed from office, the grandees of the kingdom endeavored to bring about Joseph's downfall. But instead, he was raised to a higher position; the title of “almoxarife” was abolished, and that of “tesorero” (treasurer) substituted; and it was resolved that thenceforth no Jews should be employed as tax-collectors. Quarrels, which finally led to their ruin, broke out between Joseph Benveniste, who had retained his place in the king's confidence, and Alfonso's body-physician and favorite, Samuel ibn Waḳar, who had obtained permission to mint coins of small denominations. A nobleman and minister of state, Gonzalo Martinez, whom Joseph had helped to obtain high positions, brought against both the accusation that they had enriched themselves while in his Majesty's service, imprisoned them, and confiscated their fortunes. Joseph died in prison, and Samuel suffered torture on the rack. Two other Jews, Moses Abudiel and Ibn Ya'ish, who stood in high favor with the grandees, succeeded in disproving the same accusation by sacrificing large sums of money; Ibn Ya'ish is probably identical with the above-mentioned “almoxarife” of Maria de Molina.

Gonzalo Martinez.

Gonzalo Martinez was contemplating the extermination of all Castilian Jews when Alfonso XI. unexpectedly found himself involved in war. The Emir of Granada, who had declared war against the King of Castile on account of a decree issued upon the advice of Ibn Waḳar, and prohibiting the importation of cereals from Granada, called to his assistance 'Abd al-Malik, the son of Abu al-Ḥasan (Albohacon), King of Morocco, who came to his aid with a large army. Alfonso appointed Gonzalo Martinez commander-in-chief, and as money for carrying on the war was lacking, the latter advised the confiscation of the property of the Jews and their expulsion from the country. The Archbishop of Toledo, however, opposed this proposition, as did, probably, the king himself. In this war, which ended with the victory of Salado and the conquest of the fortress of Algeciras (1339), the Jews rendered very important services, for which the king highly praised them. Gonzalo Martinez, the arch-enemy of the Jews, was sentenced to death as a traitor and burned at the stake. When King Alfonso returned triumphantly from the war the Jews greeted him everywhere with great enthusiasm (“Shebeṭ Yehudah,” ed. Wiener, pp. 30 *et seq.*; Rios, “Hist.” ii. 133 *et seq.*; see MARTINEZ).

Alfonso XI. favored the conversion of the Jews, and upon the appeal of the apostate Abner of Burgos (Alfonso de Valladolid) he forbade the Castilian Jews, on pain of a fine of one hundred maravedis, to continue the reading of a prayer directed against the slanderer; the king did not, however, as Grätz (“Gesch.” vii. 344) writes, declare canceled the promissory notes held by the Jews, but he released the Christians of one-fourth of their indebtedness to the former, and he forbade all Jews of his kingdom to practise usury in any form. On the other hand, the king allowed the Jews to acquire real estate—to the value of 30,000 maravedis beyond the Douro, and to the value of 20,000 maravedis on cisriparian soil (“Ordenamiento de Alcala,” 1348).

Pedro the Cruel.

Pedro I., the son and successor of Alfonso XI. (according to his enemies Pedro Gil, the substituted child of a Jewess), was favorably disposed toward the Jews, who under him reached the zenith of their influence. For this reason the king was called “the heretic”; he was often called “the cruel.” Pedro, by nature passionate and impetuous, spent his youth in seclusion in Seville, together with his mother, the Portuguese infanta Maria, who, humiliated by Leonora de Guzman, Alfonso's paramour, had been put away by the king. In the meantime Pedro's half-brother and Leonora's illegitimate son, Henry de Trastamara, was being brought up under his father's supervision, and gave, while still a boy, evidence of his courage. Pedro, whose education had been neglected, was not quite sixteen years of age when he ascended the throne (1350). From the commencement of his reign he so surrounded himself with Jews that his enemies in derision spoke of his court as “a Jewish court.” The Jews remained ever his true adherents. On the recommendation of his educator and all-powerful minister, the hated John Alfonso de Albuquerque, the king appointed the latter's former agent Samuel Levi as his own “tesorero mayor” (chief treasurer), and Samuel soon became the king's confidant and companion.

It can not be ascertained to what extent Samuel favored Pedro's infatuation for the beautiful Maria de Padilla after the young king had been married against his inclination to the Bourbon princess Blanca, who hated the king's Jewish confidant and would have banished all the Jews from the country. When Pedro, two days after his marriage, left the bride that had been forced upon him, and hastened to his mistress in Toledo, the minister, Albuquerque, prepared to set out with a large retinue and bring back the deserting bridegroom, but he was stopped by Samuel Levi, who brought him a message from the king advising him to desist from his plans. Blanca, who had taken sides with Pedro's half-brother, was kept in confinement, and Albuquerque was deposed from office.

These unhappy family relations, which were primarily brought about by Alfonso XI., resulted in the bloody civil wars that brought disaster to Castile and especially to the Jews. With the alleged intention of freeing Queen Blanca, who was being held prisoner in Alcazar, Henry de Trastamara and his brother, at the head of a rapacious mob, invaded (Sabbath, May 7, 1355) that part of the Juderia of Toledo called the Alcana; they plundered the warehouses and murdered about 12,000 persons, without distinction of age or sex. The mob did not, however, succeed in overrunning the Juderia proper, where the Jews, reenforced by a number of Toledan noblemen, defended themselves bravely.

The more friendly Pedro showed himself toward the Jews, and the more he protected them, the more antagonistic became the attitude of his illegitimate half-brother, who, when he invaded Castile in 1360, murdered all the Jews living in Najera and exposed those of Miranda de Ebro to robbery and butchery.

The days of Samuel Levi were numbered. He was ever active in the interests of the state and the king, and his skilful financial operations placed large sums at the latter's disposal. But he had many

Samuel Levi.

enemies, and the animosity engendered toward him soon extended to all the Jews. A malicious satire, "Rimado del Palacio," by the contemporary poet and historian Pedro Lopez de Ayala, gives evidence of the deep hatred toward Samuel Levi and his family. Together with many other favorites of the king, Samuel was suddenly deposed from his exalted position, but not, as has been asserted, because Maria de Padilla withdrew her favor from him; the king's paramour remained for several years in the cloister in Astudillo, near Castrojeriz, to which she had been sent, and where she maintained communication with Jews ("R. E. J." xxxiii. 147 *et seq.*). Whether envious coreligionists accused him before the king, whether he was involved in the detected "Ricos hombres" conspiracy, or whether Pedro desired to win the favor of the clergy is not known; the fact remains that in 1360 Samuel was seized and taken to Seville, where, in November of that year, he died on the rack. His enormous fortune, consisting of 70,000 doubloons, 4,000 marks in silver, 20 (according to some sources 120) chests filled with jewelry and costly garments, and 80 Moorish slaves, was confiscated by the state. All Samuel's relatives, several of whom were tax-collectors, were arrested with him, and their property, to the value of 300,000 doubloons, seized. Samuel's successor in the office of treasurer, Martin Yañez de Sevilla, claimed to have found vast hoards of silver and gold in the underground cellars of the former's palace, which is still known as the "Palacio del Judio."

Pedro did not lack the means for carrying on warfare, but good fortune had deserted him. In order to win the Castilian throne, Henry called to his aid the dreaded "Grand Company," led by the valiant Bertrand du Guesclin. Wherever his ferocious soldiers went they fell upon the Jews; in Briviesca, near Burgos, not one living soul was left of the 200 Jewish families which had lived there. Having been proclaimed king in Calahorra, Henry entered Burgos triumphantly on March 31, 1366, the city surrendering willingly. The king levied a tax of 30,000 doubloons on the Jews there, who, in order to raise this enormous sum, were compelled to sell all their property, even the ornaments on their Torah scrolls. The Jews of Segovia and Avila also were bereft of their property, while those of Toledo, who had remained loyal to Pedro, were punished by being saddled with the maintenance of the troops in addition to being fined 1,000,000 maravedis. In his distress Pedro solicited aid from the Prince of Wales, the victor of Poitiers. Henry was forced to flee, but soon returned to Castile with fresh troops; and the Jews of Burgos, who for a long time had defended their Juderia against his attacks, were forced to pay 1,000,000 maravedis for permission to remain in the city.

Massacres of 1366.

Everywhere the Jews remained loyal to Pedro, in whose army they fought bravely; the king showed his good-will toward them on all occasions, and when he called the King of Granada to his assistance he especially requested the latter to protect the Jews. Nevertheless they suffered greatly. Villadiego (whose Jewish community numbered many scholars), Aguilar, and many other towns were totally destroyed. The inhabitants of Valladolid, who paid homage to Henry, robbed the Jews, destroyed their houses and synagogues, and tore their Torah scrolls to pieces. Paredes, Palencia, and several other communities met with a like fate, and 300 Jewish families from Jaen were taken prisoners to Granada. The suffering, according to a contemporary writer, Samuel Ẓarẓa of Palencia (see Joseph ha-Kohen, "'Emeḳ ha-Baka," ed. Wiener, Appendix, p. 131), had reached its culminating point, especially in Toledo, which was being besieged by Henry, and in which no less than 8,000 persons died through famine and the hardships of war. This terrible civil conflict did not end until the death of Pedro, to whom the victorious brother said, derisively, "Dó esta el fi de puta Judio, que se llama rey de Castilla?" Pedro was beheaded by Henry and Du Guesclin on March 14, 1369. A few weeks before his death he reproached his physician and astrologer Abraham ibn Ẓarẓal for not having told the truth in prophesying good fortune for him.

When Henry de Trastamara ascended the throne as Henry II. there began for the Castilian Jews an era of suffering and persecution, culminating in their expulsion. Prolonged warfare had devastated the land; the people had become accustomed to lawlessness, and the Jews had been reduced to poverty. The king, who began his reign by having new coins minted, considerably reduced in value (Isaac ben Sheshet, Responsa, No. 197; Rios, "Hist." ii. 307), was unable to meet his obligations to Du Guesclin and his troops. For this reason, on June 6, 1369, two months and a half after his accession, he levied a tribute of 20,000 gold doubloons (about 10,000,000 dineros) on the plundered and poverty-stricken Jews of Toledo, as a punishment for their loyalty to Pedro; he ordered his treasurer Gomez Garcia to sell at public sale all property, movable or immovable, belonging to the Toledan Jews, and to imprison all the latter, women as well as men, and starve and otherwise torture them until they had raised this immense sum (see TOLEDO).

But in spite of his aversion for the Jews Henry could not dispense with their services. He employed wealthy Jews—Samuel Abravanel and others—as financial councilors and tax-collectors. His "contador mayor," or chief tax-collector, was Joseph Pichon of Seville. The clergy, whose power became greater and greater under the reign of the fratricide, stirred the anti-Jewish prejudices of the masses into clamorous assertion at the Cortes of Toro in 1371. It was demanded that the Jews should be kept far from the palaces of the grandees, should not be allowed to hold public office, should live apart from the Christians, should not wear costly garments nor ride on mules, should wear the badge, and should not be allowed to bear Christian names. The king granted the two last-named demands, as well as a request made by the Cortes of Burgos (1379) that the Jews should neither carry arms nor sell weapons; but he did not prevent them from holding religious disputations, nor did he deny them the exercise of criminal jurisprudence. The latter prerogative was not taken from them until the reign of John I., Henry's son and successor; he withdrew it because certain Jews, on the king's coronation-day, by withholding the name of the accused had obtained his permission to inflict the death-penalty on Joseph Pichon, who stood high in the royal favor; the accusation brought against Pichon included "harboring evil designs, informing, and treason."

Anti-Jewish Enactments.

In the Cortes of Soria (1380) it was enacted that rabbis, or heads of aljamas, should be forbidden, under penalty of a fine of 6,000 maravedis, to inflict upon Jews the penalties of death, mutilation, expulsion, or excommunication; but in civil proceedings they were still permitted to choose their own judges. In consequence of a slanderous accusation that the Jewish prayers contained clauses cursing the Christians, the king ordered that within two months, on pain of a fine of 3,000 maravedis, they should remove from their prayer-books the objectionable passages—which did not exist. Whoever caused the conversion to Judaism of a Moor or of any one confessing another faith, or performed the rite of circumcision upon him, became a slave and the property of the treasury. The Jews no longer dared show themselves in public without the badge, and in consequence of the ever-growing hatred toward them they were no longer sure of life or limb; they were attacked and robbed and murdered in the public streets, and at length the king found it necessary to impose a fine of 6,000 maravedis on any town in which a Jew was found murdered. Against his desire, John was obliged (1385) to issue an order prohibiting the employment of Jews as financial agents or tax-farmers to the king, queen, infantes, or grandees. To this was added the resolution adopted by the Council of Palencia ordering the complete separation of Jews and Christians and the prevention of any association between them.

The Massacre of 1391.

The execution of Joseph Pichon and the inflammatory speeches and sermons delivered in Seville by Archdeacon Ferrand Martinez, the pious Queen Leonora's confessor, soon raised the hatred of the populace to the highest pitch. The feeble King John I., in spite of the endeavors of his physician Moses ibn Ẓarẓal to prolong his life, died at Alcalá de Henares on Oct. 9, 1390, and was succeeded by his eleven-year-old son. The council-regent appointed by the king in his testament, consisting of prelates, grandees, and six citizens from Burgos, Toledo, Leon, Seville, Cordova, and Murcia, was powerless; every vestige of respect for law and justice had disappeared. Ferrand Martinez, although deprived of his office, continued, in spite of numerous warnings, to incite the mob against the Jews, and encourage it to acts of violence. As early as Jan., 1391, the prominent Jews who were assembled in Madrid received information that riots were threatening in Seville and Cordova. A revolt broke out in Seville in 1391. Juan Alfonso de Guzman, Count of Niebla and governor of the city, and his relative, the "alguazil mayor" Alvar Perez de Guzman, had ordered, on Ash Wednesday, March 15, the arrest and public whipping of two of the mob-leaders. The fanatical mob, still further exasperated thereby, murdered and robbed several Jews and threatened the Guzmans with death. In vain did the regency issue prompt orders; Ferrand Martinez continued unhindered his inflammatory appeals to the rabble to kill the Jews or baptize them. On June 6 the mob attacked the Juderia in Seville from all sides and killed 4,000 Jews; the rest submitted to baptism as the only means of escaping death.

At this time Seville is said to have contained 7,000 Jewish families. Of the three large synagogues existing in the city two were transformed into churches. In all the towns throughout the archbishopric, as in Alcalá de Guadeira, Ecija, Cazalla, and in Fregenal, the Jews were robbed and slain. In Cordova this butchery was repeated in a horrible manner; the entire Juderia was burned down; factories and warehouses were destroyed by the flames. Before the authorities could come to the aid of the defenseless people, every one of them—children, young women, old men—had been ruthlessly slain; 2,000 corpses lay in heaps in the streets, in the houses, and in the wrecked synagogues.

From Cordova the spirit of murder spread to Jaen. A horrible butchery took place in Toledo on June 20. Among the many martyrs were the descendants of the famous Toledan rabbi Asher ben Jehiel. Most of the Castilian communities suffered from the persecution; nor were the Jews of Aragon, Catalonia, or Majorca spared. On July 9 an outbreak occurred in Valencia. More than 200 persons were killed, and most of the Jews of that city were baptized by the friar Vicente Ferrer, whose presence in the city was probably not accidental. The only community remaining in the former kingdom of Valencia was that of Murviedro. On Aug. 2 the wave of murder visited Palma, in Majorca; 300 Jews were killed, and 800 found refuge in the fort, from which, with the permission of the governor of the island, and under cover of night, they sailed to North Africa; many submitted to baptism. Three days later—Saturday, Aug. 5—a riot began in Barcelona. On the first day 100 Jews were killed, while several hundred found refuge in the new fort; on the following day the mob invaded the Juderia and began pillaging. The authorities did all in their power to protect the Jews, but the mob attacked them and freed those of its leaders who had been imprisoned. On Aug. 8 the citadel was stormed, and more than 300 Jews were murdered, among the slain being the only son of Ḥasdai Crescas. The riot raged in Barcelona until Aug. 10, and many Jews (though not 11,000 as claimed by some authorities) were baptized. On the last-named day began the attack upon the Juderia in Gerona; several Jews were robbed and killed; many sought safety in flight and a few in baptism.

The last town visited was Lerida (Aug. 13). The Jews of this city vainly sought protection in Alcazar; seventy-five were slain, and the rest were baptized; the latter transformed their synagogue into a church, in which they worshiped as Maranos (see bibliography, at end, for sources for the persecutions of 1391).

Thousands of Jews had perished, many of their communities had been annihilated; but the country itself was the main sufferer. The Archdeacon of Ecija, the instigator of this butchery—which even as late as the nineteenth century was described as a "guerra sacra contra los Judios," or as a social eruption—although he was imprisoned four years later, after the accession of Henry III., was soon set free; and from then until his death (1404) he was honored as a saint on account of his piety. In the whole of Castile the agitators remained unpunished. More justice was exercised by John I. of Aragon, who caused twenty-five of the ringleaders—merchants, apothecaries, and tradesmen—to be taken to Barcelona from Palma, Lerida, and other towns, and publicly executed.

The "New Christians."

The year 1391 forms a turning-point in the history of the Spanish Jews. The persecution was the immediate forerunner of the Inquisition, which, ninety years later, was introduced as a means of watching the converted Jews. The number of those who had pretended to embrace Christianity in order to escape death was very large; Jews of Baena, Montoro, Baeza, Ubeda, Andujar, Talavera, Maqueda, Huete, and Molina, and especially of Saragossa, Barbastro, Calatayud, Huesca, and Manresa, had submitted to baptism. Among those baptized were several wealthy men and scholars who scoffed at their former coreligionists; some even, as Solomon ha-Levi, or Paul de Burgos (called also Paul de Santa Maria), and Joshua Lorqui, or Geronimo de Santa Fé, became the bitterest enemies and persecutors of their former brethren.

After the bloody excesses of 1391 the popular hatred of the Jews continued unabated. The Cortes of Madrid and that of Valladolid (1405) mainly busied themselves with complaints against the Jews, so that Henry III. found it necessary to prohibit the latter from practising usury and to limit the commercial intercourse between Jews and Christians; he also reduced by one-half the claims held by Jewish creditors against Christians. Indeed, the feeble and suffering king, the son of Leonora, who hated the Jews so deeply that she even refused to accept their money ("Sumario de los Reyes de España," xlii. 77; "Shebeṭ Yehudah," p. 87), showed no feelings of friendship toward them. Though on account of the taxes of which he was thereby deprived he regretted that many Jews had left the country and settled in Malaga, Almeria, and Granada, where they were well treated by the Moors, and though shortly before his death he inflicted a fine of 24,000 doubloons on the city of Cordova because of a riot that had taken place there (1406), during which the Jews had been plundered and many of them murdered, he prohibited the Jews from attiring themselves in the same manner as other Spaniards, and he insisted strictly on the wearing of the badge by those who had not been baptized. Henry, who employed Moses ben Zarẓal and Meïr Alguades as his body-physicians, died in 1406, twenty-seven years of age. In his testament the king appointed Paul de Burgos executor of his will and guardian of his son John, who was barely two years old. The regency was in the hands of the queen-mother Catalina, a bigoted, light-hearted young matron, and the infante Fernando de Antequera.

Vicente Ferrer.

Renewed sufferings were inflicted upon the Jews when the Dominican friar Vicente Ferrer, a friend and companion of the anti-Jewish Pedro de Luna, set himself up as antipope to Benedict XIII.; Ferrer traveled from one end of Castile to the other, and everywhere zealously urged the Jews to embrace Christianity, appearing with a cross in one hand and the Torah in the other. His impassioned sermons won him great influence, and he accomplished his ends in Murcia, Lorca, Ocaña, Illescas, Valladolid, Tordesillas, Salamanca, and Zamora. He spent the month of July, 1411, in Toledo; he invaded the large synagogue, which he transformed into the Church of Santa Maria la Blanca, and he is said to have baptized more than 4,000 Jews in that city. Toward the end of the same year he went to Ayllon, where Catalina and Fernando received him with great festivities.

At Ferrer's request a law consisting of twenty-four clauses, which had been drawn up by Paul de Burgos, was issued (Jan., 1412) in the name of the child-king John II. The only object of this law was to reduce the Jews to poverty and to further humiliate them. They were ordered to live by themselves, in enclosed Juderias, and they were to repair, within eight days after the publication of the order, to the quarters assigned them under penalty of loss of property. They were prohibited from practising medicine, surgery, or chemistry, and from dealing in bread, wine, flour, meat, etc. They might not engage in handicrafts or trades of any kind, nor might they fill public offices, or act as money-brokers or agents. They were not allowed to hire Christian servants, farm-hands, lamplighters, or grave-diggers; nor might they eat, drink, or bathe with Christians, or hold intimate conversation with them, or visit them, or give them presents. Christian women, married or unmarried, were forbidden to enter the Juderia either by day or by night. The Jews were allowed no self-jurisdiction whatever, nor might they, without royal permission, levy taxes for communal purposes; they might not assume the title of "Don," carry arms, or trim beard or hair. Jewesses were required to wear plain, long mantles of coarse material reaching to the feet; and it was strictly forbidden Jews as well as Jewesses to wear garments made of better material. On pain of loss of property and even of slavery, they were forbidden to leave the country, and any grandee or knight who protected or sheltered a fugitive Jew was punished with a fine of 150,000 maravedis for the first offense (for the "Pragmatica" see Rios, "Hist." ii. 496, 618 *et seq.*; and Lindo, *l.c.* pp. 196 *et seq.*; see also "Shebeṭ Yehudah," p. 88). These laws, which were rigidly enforced, any violation of them being punished with a fine of from 300 to 2,000 maravedis and flagellation, were calculated to compel the Jews to embrace Christianity.

Having accomplished his purpose in Castile, Vicente Ferrer went to Aragon, where the above-mentioned infante Fernando de Antequera, who had been newly elected king, partly through the instrumentality of the Dominican friar, willingly lent himself to the latter's cause. Ferrer's fanatic zeal succeeded also in Aragon in leading many Jews to pre-

Number of Converts.

tended conversion, especially in Saragossa, Daroco, and Calatayud. Besides the places mentioned, he made proselytes in Albacete, Astorga, Avila, Benevent, Burgos, Leon, Mayorga, Majorca, Palencia, Paredes, Toro, Segovia, etc. The total number of Jews converted by him in Spain was, according to Mariana, 35,000; according to Zacuto ("Yuḥasin," p. 225), more than 200,000. The latter statement is greatly exaggerated; according to Usque ("Consolacem," p. 188b), the number of converts in Aragon and Catalonia was only 15,000 ("mais de quinze mil almas Judaicas"); and this figure has been accepted by Joseph ha-Kohen ("'Emeḳ ha-Baka," p. 71) and by Cardoso. The number 16,000 mentioned by Verga ("Shebeṭ Yehudah," p. 87) refers probably to Aragon. Regarding the baptisms see the elegy in the introduction to Duran's "Magen Abot" (ed. Jellinek), which has been reprinted by Grätz ("Gesch." viii. 121).

One of Vicente Ferrer's most zealous assistants in the work of conversion was Joshua ibn Vives Lorqui, or Geronimo de Santa Fé, who aimed at nothing less than baptisms en masse. Lorqui, who was the body-physician of Pope Benedict XIII., influenced the latter to arrange public religious disputations. With the sanction of Fernando of Aragon, the pope issued in Nov., 1412, a request to the larger Jewish communities of Aragon and Catalonia to send two or more of their foremost scholars to Tortosa, there to hold public disputations with Joshua Lorqui regarding certain religious dogmas selected by the pope. The following representatives attended this disputation: Vidal Benveniste, Zerahiah ha-Levi Saladin, and Mattathias ha-Yiẓhari, of Saragossa; the religious philosopher Joseph Albo of Monreal; Astruc ha-Levi of Alcañiz (not of Daroca); Samuel ha-Levi (the nasi) and R. Moses ben Musa, of Calatayud; Joseph ha-Levi and Yom-Ṭob Carcosa, of Monzon; the scholar Bonastruc Desmaëstre (whose presence had been especially requested by the pope, and whose expenses were refunded him), Todros ibn Yaḥya, and Nissim Ferrer, of Gerona; and various representatives from Montalban, Huesca, etc. That the poet Solomon ben Reuben Bonfed, who is not mentioned in any of the sources, accompanied Solomon Maimon as a representative of the community of Tortosa is very unlikely (Steinschneider, "Hebr. Bibl." xiv. 95).

Disputation at Tortosa.

This disputation, the most remarkable ever held, commenced on Feb. 7, 1413, and lasted, with many interruptions, until Nov. 12, 1414. The first meeting, which was opened by the pope, took place before an audience of more than a thousand, among whom were several cardinals, grandees, and members of the city's aristocracy. The disputation mainly concerned the question as to whether the Messiah had already appeared, and whether the Talmud regarded him as such. Geronimo de Santa Fé, who had made false charges against the Talmud, especially opposed Vidal Benveniste (who had thoroughly mastered the Latin language and whom the other Jewish representatives had selected as their leader), Zerahiah ha-Levi, Joseph Albo, Bonastruc Desmaëstre, and Nissim Ferrer; and he was assisted by the learned neophyte Garci Alvarez de Alarcon and the theologian Andreas Beltran of Valencia, who later became Bishop of Barcelona. At the sixty-fifth meeting Joseph Albo and Astruc ha-Levi tendered a memorial in defense of the Talmud, and on Nov. 10, 1414, Astruc, in the name of all the representatives with the exception of Joseph Albo and Nissim Ferrer, declared that the haggadic passages which had been cited as evidence against the Talmud were not considered as authoritative by them. This, however, was in no way equivalent to the acceptance of Jesus as the Messiah and the abandonment of Judaism, as some Spanish historians assert. (Regarding the so-called disputation of Tortosa, which really took place in San Mateo, near Tortosa, see "Shebeṭ Yehudah," ed. Wiener, pp. 67 *et seq.*, and Rios, "Hist." ii. 433 *et seq.* Rios claims to have made use of a Spanish manuscript from the Provincial Library in Segovia, in addition to the Latin protocol which is extant in manuscript in the Escorial. See also Zurita, "Anales de Aragon," iii. 108 *et seq.*, and Grätz, "Gesch." viii. 416 *et seq.*, where several false hypotheses are made.)

According to the not always reliable historian Zurita, more than 3,000 Jews were baptized during the year 1414; this probably was not due so much to the disputation as to the forcible conversions by Vicente Ferrer, who had returned to Aragon. In Guadalajara, as well as in Calatayud, Daroca, Fraga, Barbastro, Caspe, Maella, Tamarite, and Alcolea, many Jewish families submitted to baptism. The persecution of the Jews was now pursued systematically. In the hope of mass-conversions, Benedict issued, on May 11, 1415, a bull consisting of twelve articles, which, in the main, corresponded with the decree ("Pragmatica") issued by Catalina, and which had been placed on the statutes of Aragon by Fernando. By this bull Jews and neophytes were forbidden to study the Talmud, to read anti-Christian writings, in particular the work "Macellum" ("Mar Jesu"), to pronounce the names of Jesus, Maria, or the saints, to manufacture communion-cups or other church vessels or accept such as pledges, or to build new synagogues or ornament old ones. Each community might have only one synagogue. Jews were denied all rights of self-jurisdiction, nor might they proceed against "malsines" (accusers). They might hold no public offices, nor might they follow any handicrafts, or act as brokers, matrimonial agents, physicians, apothecaries, or druggists. They were forbidden to bake or sell maẓẓot, or to give them away; neither might they dispose of meat which they were prohibited from eating. They might have no intercourse with Christians, nor might they disinherit their baptized children. They should wear the badge at all times, and thrice a year all Jews over twelve, of both sexes, were required to listen to a Christian sermon on the Messiah (the bull is reprinted, from a manuscript in the archives of the cathedral in Toledo, by Rios ["Hist." ii. 627–653]).

The persecutions, the laws of exclusion, the humiliation inflicted upon them, and the many conversions among them had greatly injured the Jews, but with them suffered the whole kingdom of

Effects of the Persecutions.

Spain. Commerce and industry were at a standstill; the soil was not cultivated, and the finances were disturbed. In Aragon entire communities—as those of Barcelona, Lerida, and Valencia—had been destroyed, many had been reduced to poverty and had lost more than half of their members. In order to restore commerce and industry Queen Maria, consort of Alfonso V. and temporary regent, endeavored to draw Jews to the country by offering them privileges, while she made emigration difficult by imposing higher taxes. After the persecutions of 1391 there were in Aragon and Castile, in addition to "Judios infides," as Paul de Burgos called them, many converts ("conversos"), or Neo-Christians. On account of their talent and wealth, and through intermarriage with noble families, the converts gained considerable influence and filled important government offices. The highest positions and dignities were held by the following Aragon families: Zaporta, Santangel, Villanova, Almazan, Caballeria, Cabrero, Sanchez, and Torrero.

The position of the Jews of Castile became somewhat more favorable under John II., who ascended the throne at the age of fourteen, upon the death of his mother, Catalina (1418); this improvement was chiefly due to the influence of the king's powerful minister, Alvaro de Luna. In order to bring system into the finances of the state, the king sought the advice of Abraham Benveniste, who enjoyed his full confidence; he appointed the Neo-Christian Diego Gonzales as treasurer; and as chief tax-farmer he installed the scholar Joseph Nasi (identical with Joseph ibn Shem-Ṭob, the philosopher and author; see the document from the archives of Vitoria in Rios, "Hist." iii. 573 *et seq.*; "Shebeṭ Yehudah," pp. 21, 25). Other Jews, as Samuel Alhadar, acted as tax-farmers. The favors thus shown the Jews roused the anger of the old Paul de Santa Maria and his two sons, who, despite the fact that they were greatly indebted to Alvaro de Luna, hated him no less than they hated the Jews. Paul's son Alfonso de Santa Maria, who represented Spain at the Congress of Basel, brought it about that Pope Eugene IV. issued a bull against the Jews (Aug. 10, 1442). This bull, which was published in Toledo during the king's absence, was used by the enemies of the Jews as a pretext for oppressing and ill-treating them and for discontinuing all association with them.

In the interest of the Jews, as well as of the country, Alvaro de Luna induced the king to issue a decree in Aravalo on April 6, 1443, which annulled several clauses in the laws of Queen Catalina as well as in the papal bull. The Jews were allowed to engage in the various trades, as well as in commercial pursuits; and, under certain conditions, they were permitted to practise medicine. They were, however, to continue to live in their Juderias, apart from the Christians, and to wear the badge. The king made it the duty of the authorities to protect the Jews from injustice of any kind; he regarded them as his property and as standing under his immediate protection, and he ordered that any Christian assailing them should be punished with imprisonment and loss of property (this decree is reprinted from manuscript in Rios, "Hist." iii. 583 *et seq.*; less correctly by Lindo, *l.c.* pp. 221 *et seq.*). The intrigues of the sons of Paul de Burgos, however, were finally successful in securing the death of Alvaro de Luna in Valladolid.

Under John II.

During the period of peace under John II. it was the first care of the Jews to reorganize their religious and communal affairs. The statesman and scholar Abraham Benveniste, who had been elected chief rabbi, called a meeting in Valladolid (April, 1432) of rabbis, representatives of communities, and other prominent men; at this meeting taḳḳanot were adopted relating to the study of Jewish law, to divine service, to the system of taxation, etc., and these rules afford an insight into the condition of the communal affairs of that time.

The Jews of Spain formed in themselves a separate political body. They lived almost solely in the Juderias, various enactments being issued from time to time preventing them from living elsewhere. From the time of the Moors they had had their own administration. At the head of the aljamas in Castile stood the "rab de la corte," or "rab mayor" (court, or chief, rabbi), also called "juez mayor" (chief justice), who was the principal mediator between the state and the aljamas. These court rabbis were men who had rendered services to the state, as, for example, David ibn Yaḥya and Abraham Benveniste, or who had been royal physicians, as Meïr Alguadez and Jacob ibn Nuñez, or chief tax-farmers, as the last incumbent of the court rabbi's office, Abraham Senior. They were appointed by the kings, no regard being paid to the rabbinical qualifications or religious inclination of those chosen ("David Messer Leon," in "R. E. J." xxiii. 135).

Organization.

The duties of the court rabbis consisted in levying the public taxes, in adjusting complaints brought by the aljamas or by individual members, or in bringing such complaints to a higher court, and, in cases of dispute, in appointing the dayyanim (magistrates); they were, in short, to represent the aljamas before the kings and to defend their interests. As in Castile, so also in Navarre—the chief rabbis were appointed by the kings. The communal rabbi ("talmid ḥakam"), who at times practised medicine, and who in Aragon was confirmed in his office by the kings, was expected to teach Talmud, Halakah, and Haggadah, deliver Talmudic lectures, instruct the members of his congregation, and sometimes officiate as dayyan. The larger communities had several rabbis, also a bet din (corrupt Spanish, "hedines") consisting of dayyanim, whom the Christians called "rabbis." At times the archbishops appointed or dismissed the rabbis and dayyanim of the aljamas within their archbishoprics. Thus Rabbi Zulema Alfahan was dismissed from his office by Archbishop Pedro of Toledo, and the latter's physician was appointed in his place (1388), the appointment being confirmed by the king (Rios, "Hist." ii. 577 *et seq.*, 590 *et seq.*).

The Jews of Castile had their own judicial system. This fact gave them a certain independence and spared them many expenses and difficulties; nor were they obliged to trouble the Christian justices

Restrictions on Autonomy.

with their quarrels. At various sessions of the Cortes, however, attempts were made to withdraw this privilege; the right to jurisdiction in criminal matters was withdrawn from them in 1380; and in 1412 this was followed by the suspension, though for a short time only, of the right to adjudicate civil cases. In the fifteenth century the Jews of Aragon likewise were deprived of independent jurisdiction; but even then the Christian alcaldes tried cases according to Jewish law. Whoever instituted proceedings before a Christian judge—with the exception of cases referring to customs, etc.—was liable to a heavy fine. The communities paid special attention to the suppression of the system of delation which had become wide-spread among the Spanish Jews (see Moser). The wealthy and influential members of the community often abused their powers by accusing coreligionists before the regents and grandees of the kingdom in order to gain special privileges or avoid taxation.

The taxes imposed were many and heavy. Besides the taxes payable to the kings (the "cabeza," "cena," "yantar," "servicio"), the Jews were required to pay tribute to their local administration, as well as to the archbishops and the Church. These taxes were assessed, according to property and income, by trusted men appointed by the aljama, and they were levied collectively on each community; small communities, or individual Jews, were considered, for the purposes of taxation, as a part of the nearest larger community. In order to escape taxation many Jews procured from the kings, queens, or princes letters of exemption; others left the royal domains and settled elsewhere; while still others endeavored to have their taxes reduced by threatening the tax-commissioners. The taxes on wine and meat ("almahona," "alcabala," "gabela"), which articles were often subjected also to royal taxation, served to maintain the Talmud Torah and to provide for the various needs of the community.

Culture and Education.

The Spanish Jews differed but little from the Christian population with regard to customs and education. They were fond of luxury, and the women wore costly garments with long trains, also valuable jewelry; this tended to increase the hatred of the populace toward them. They were quarrelsome and inclined to robbery, and often attacked and insulted one another even in their synagogues and prayer-houses, frequently inflicting wounds with the rapier or sword which they were accustomed to carry.

In their morals, and especially in regard to married life, the Jews maintained a loftier standard. With royal permission, however, a Jew might have two wives; and the Jews often won their wives in subtle ways, or through the agency of influential Christians, so that it became necessary to order that betrothals might take place only between adults, and with the express permission of the father or the brother of the bride.

Following the custom prevailing within the Church, the Spanish Jews often imposed sentences of excommunication upon members of their congregations. The Karaite sect, which had won numerous adherents in Castile through the instrumentality of Cid ibn Altaras and which had its headquarters in Carrion and Burgos, was persecuted by Judah ben Joseph ibn Ezra of Granada, whom Alfonso VIII. had placed in command of Calatrava after his conquest of that city in 1147; thirty years later Joseph ibn al-Fakhkhar (Farissol ?), who had great influence with Alfonso XI., succeeded in totally suppressing the sect.

Karaites in Spain.

The first Spanish author to undertake a polemic against the Karaites was Judah ibn Balaam ("R. E. J." xix. 206 *et seq.*). In Spain, for centuries an El Dorado for Jewish science, which had found there its most ardent cultivators, an inconceivable degree of ignorance of Jewish matters prevailed after the end of the fourteenth century. The Jews took up other studies; the number of schools was diminished; the children remained without education; and a great many adult Jews could not even read Hebrew. This ignorance did not fail to exert an influence upon the services, which were held according to a peculiar Spanish or Castilian ritual, in most points resembling the Aragonian. This ritual was simple and consistent, and it remained uninfluenced by the poets.

The number of Jewish scholars and rabbis of distinction was comparatively small during the fifteenth century. Talmudic study, once assiduously cultivated in Toledo, Barcelona, Gerona, Monzon, and other places, was then neglected, and the endeavors of Abraham Benveniste to reawaken an interest in Talmudic science were fruitless. The last rabbinical authority of Castile, likewise its last gaon, was Isaac Companton, among whose pupils were Isaac de Leon, Isaac Aboab, and Samuel Alvalensi. The last preachers of renown were the religious philosopher Joseph ibn Shem-Ṭob, his son Shem-Ṭob, Joseph Albo, and Isaac Arama.

In the Second Half of the Fifteenth Century.

The position of the Jews of Spain was fairly favorable in the second half of the fifteenth century, during the reigns of Henry IV. of Castile (1454–74) and John II. of Aragon (1456–79). Wealthy converted Jews occupied prominent positions at both courts. King Henry appointed Diego Arias Davila as "contador mayor" of the kingdom, and he employed as tax-farmers Davila's Neo-Christian relatives, as well as several Jews, among whom were Don Gaon (Chacon) of Vitoria, and Joseph and Moses Calés, Samuel Pachon, and Joseph ibn Ataf, all of Plasencia. The king, as well as the dukes and grandees, disregarded the various enactments of the Cortes which prohibited Jews from holding public offices; even bishoprics employed Jews as tax-collectors, as, for example, R. Abraham Joseph Castellano and Moses of Briviesca. John II. and Henry IV. employed Jews as body-physicians; the famous oculist Abiathar ibn Crescas served the former ruler; and Jacob ibn Nuñez, who, as "rab de la corte," assessed and collected the taxes payable by the aljamas, was employed by the latter.

The principal Jewish communities existed in the smaller places. The community of Toledo, formerly the largest in Spain, had grown unimportant; so

Spread of the Jews in Spain.

had that of Hita. Many Jews lived in the vicinity of Madrid (where no regular community existed), in such small towns as Ocaña, Guadalajara, Almazan, Bentrago, and Alcalá de Henares. The largest communities in Old Castile were those of Avila, Segovia, Soria, Aguilar del Campo, Herrera, Medina del Pomar, Calahorra, Villalon, Aranda, and Cuellar. Burgos had only a few Jews. The province of Estremadura was still thickly populated by them, comparatively large communities existing in Caceres, Badajoz, Truxillo, Xerez, Medelin, and Plasencia. Very few Jews lived in Seville, while Galicia had but one aljama—in the seaport town of Coruña. In the former kingdom of Leon, on the other hand, the Jewish population was much larger, among the most prominent communities being those of Zamora, Valladolid, Mayorga, Medina del Campo, Salamanca, Ponferrado, Bobadilla, Madrigal, and Ciudad Rodrigo. In 1374 the "servicio" taxes paid by all the Jews of Castile amounted to 450,300 maravedis—an amount considerably less than that paid two centuries before. As in Castile so also in Aragon and Catalonia the number of Jews had greatly diminished. In the last-named place only one community, that of Gerona, existed in 1438. Communities of medium size existed in Barbastro, Calatayud, Monzon, Saragossa, and Huesca; and smaller ones in Tausle, Jaca, Fraga, Egea de los Caballeros, Teruel, Almunca, and Alagon. Only a few Jews lived in Daroca (Rios, "Hist." iii. 81, 171, 590 *et seq.*; "R. E. J." xiv. 167 *et seq.*; Grätz, "Gesch." viii. 214).

The Cortes of 1462.

When the various city administrations requested the Cortes held in 1462 to restrict the Jews in their intercourse with Christians the Jews left the cities and settled in places which were under the jurisdiction of the counts. The popular hatred toward the Jews was stirred anew by the fanaticism of the Franciscan friar Alfonso de Spina, the author of "Fortalitium Fidei"; this friar, who held the same views as Paul de Burgos, was a sworn enemy of his former coreligionists. He incited the people against the Jews as well as against the Maranos, whom he called "Judios ocultos" to distinguish them from the "Judios publicos." In order to rouse the anger of the people he declared that the Jews were in the habit of killing Christian children. This accusation was readily believed by the credulous populace, and in Tavara, Toro, and Avila plays illustrating the supposed crime were written and acted. In Sepulvedo R. Solomon Pichon was accused of the murder of a Christian boy, and in Medina del Campo Jews were murdered and burned under similar accusations.

But the popular hatred toward the Neo-Christians exceeded that toward the professed Jews. In Toledo a bloody uprising against the Maranos took place in July, 1467, many being killed. On March 14, 1473, an outbreak occurred at Cordova, the houses of the Neo-Christians being invaded, plundered, and burned, and many of their inmates horribly butchered.*

G. M. K.

Thenceforward the history of the Jews in Spain is connected with the reciprocal relations of the "conversos" and the members of their families who had remained true to the old faith. The nobles of Spain found that they had only increased their difficulties by urging the conversion of the Jews, who remained as much a close corporation in the new faith as they had been in the old, and gradually began to monopolize many of the offices of state, especially those connected with tax-farming. At the Cortes of Fraga (1460) large numbers of "conversos" attended, much to the dismay of the hidalgos. In 1465 a "concordia" was imposed upon Henry IV. of Castile reviving all the former anti-Jewish regulations. So threatening did the prospects of the Jews become that in 1473 they offered to buy Gibraltar from this king: this offer was refused.

As soon as the Catholic monarchs Ferdinand and Isabella ascended their respective thrones steps were taken to segregate the Jews both from the "conversos" and from their fellow countrymen. At the Cortes of Toledo, in 1480, all Jews were ordered to be separated in special "barrios," and at the Cortes of Fraga, two years later, the same law was enforced in Navarre, where they were ordered to be confined to the Jewries at night. The same year saw the establishment of the Inquisition in Spain, the main object of which was to deal with the "conversos" (see INQUISITION). Though both monarchs were surrounded by Neo-Christians, such as Pedro de Caballeria and Luis de Santangel, and though Ferdinand was the grandson of a Jewess, he showed the greatest intolerance to Jews, whether converted or otherwise, commanding all "conversos" to reconcile themselves with the Inquisition by the end of 1484, and obtaining a bull from Innocent VIII. ordering all Christian princes to restore all fugitive "conversos" to the Inquisition of Spain. One of the reasons for the increased rigor of the Catholic monarchs was the disappearance of the fear of any united action by Jews and Moors, the kingdom of Granada being at its last gasp. Yet these rulers had the duplicity to promise to continue to the Jews of the Moorish kingdom all rights that they then possessed there if they would assist the Spaniards in overthrowing the existing rule. This promise was dated Feb. 11, 1490, only two years before it was publicly repudiated by the decree of expulsion. See FERDINAND AND ISABELLA.

Edict of Expulsion.

Several months after the fall of Granada an edict of expulsion was issued against the Jews of Spain by Ferdinand and Isabella (March 31, 1492). It ordered all Jews and Jewesses of whatever age to leave the kingdom by the last day of July, but permitted them to remove their property provided it was not in gold, silver, or money. The reason alleged for this action in the preamble of the edict was the relapse of so many "conversos," owing to the proximity of unconverted Jews who seduced them from Christianity and kept alive in them the knowledge and practises of Judaism. No other motive is assigned, and there is no doubt that the religious motive was the main one. It is claimed that Don Isaac Abravanel, who had previously ransomed 480 Jewish Moriscos of Malaga from the Catholic monarchs by a payment of 20,000 doubloons, now offered them 600,000 crowns for the revocation of the edict. It is said also that Ferdinand hesitated, but was prevented from accepting the offer by Torquemada, the grand inquisitor, who dashed into the royal presence and, throwing a crucifix down before the king and queen, asked whether, like Judas, they would betray their Lord for money. Whatever may be the truth of this story, there were no signs of relaxation shown by the court, and the Jews of Spain made preparations for exile. In some cases, as at Vitoria, they took steps to prevent the desecration of the graves of their kindred by presenting the cemetery to the municipality—a precaution not unjustified, as the Jewish cemetery of Seville was later ravaged by the people. The members of the Jewish community of Segovia passed the last three days of their stay in the city in the Jewish cemetery, fasting and wailing over being parted from their beloved dead.

---

* Owing to the death of Dr. M. Kayserling before he had completed this article, its continuation has been written by Mr. Joseph Jacobs.

Number of the Exiles.

The number of those who were thus driven from Spain has been differently estimated by various observers and historians. Mariana, in his history of Spain, claims as many as 800,000. Isidore Loeb, in a special study of the subject in the "Revue des Etudes Juives" (xiv. 162-183), reduces the actual number of emigrants to 165,000. Bernaldez gives details of about 100,000 who went from Spain to Portugal: 3,000 from Benevente to Braganza; 30,000 from Zamora to Miranda; 35,000 from Ciudad Rodrigo to Villar; 15,000 from Miranda de Alcantara to Marbao; and 10,000 from Badajoz to Yelves. According to the same observer, there were altogether 160,000 Jews in Aragon and Castile. Abraham Zacuto reckons those who went to Portugal at 120,000. Lindo asserts that 1,500 families of Jewish Moriscos from the kingdom of Granada were the first to leave the country. It may be of interest to give the following estimates of Loeb's of the numbers of those who were in Spain before the expulsion and of those who emigrated to different parts of the world:

Algeria	10,000
America	5,000
Egypt	2,000
France and Italy	12,000
Holland	25,000
Morocco	20,000
Turkey in Europe	90,000
Elsewhere	1,000
Total emigrated	165,000
Baptized	50,000
Died on the journey	20,000
Total in Spain in 1492	235,000

These estimates must be regarded as a minimum; it is probable that at least 200,000 fled the country, leaving behind them their dead and a large number of relatives who had been forced by circumstances to conceal their religion and to adopt the dominant creed. About 12,000 appear to have entered Navarre, where they were allowed to remain for a short time only. The ports of Cartagena, Valencia, and Barcelona were provided by Ferdinand with ships to take the fugitives where they would; but the Jews often found difficulty in landing, owing to disease breaking out among them while on board ship. Thus at Fez the Moors refused to receive them, and they were obliged to roam in an open plain, where many of them died from hunger; the rest in despair returned to Spain and were baptized. Nine crowded vessels arrived at Naples and communicated pestilence. At Genoa they were only allowed to land provided they received baptism. Those who were fortunate enough to reach Turkey had a better fate, the sultan Salim expressing his gratitude to Ferdinand for sending him some of his best subjects.

The Maranos.

The history of the Jews henceforth in Spain is that of the Maranos, whose numbers, as has been shown, had been increased by no less than 50,000 during the period of expulsion. As Spain got possession of the New World, the Maranos attempted to find a refuge from the Inquisition in both the East and the West Indies, where they often came in contact with relatives who had remained true to their faith, or had become reconverted in Holland or elsewhere. These formed business alliances with their relatives remaining in Spain, so that a large portion of the shipping and importing industry of that country fell into the hands of the Maranos and their Jewish relatives elsewhere. The wealth thus acquired was often sequestrated into the coffers of the Inquisition; but this treatment led to reprisals on the part of the Maranos abroad, and there can be no doubt that the decline of Spanish commerce in the seventeenth century was due in large measure to the activities of the Maranos of Holland, Italy, and England, who diverted trade from Spain to those countries. When Spain was at war with any of these countries Jewish intermediation was utilized to obtain knowledge of Spanish naval activity (see Intelligencers; Maranos).

In this indirect way the Maranos, who had been the occasion of the expulsion, became a Nemesis to the Spanish kingdom. It is, however, incorrect to suppose, as is usually done, that the immediate results of the expulsion of the Jews from Spain were disastrous either to the commerce or to the power of the Iberian kingdom. So far from this being the case, Spain rose to its greatest height immediately after the expulsion of the Jews, the century succeeding that event culminating in the world-power of Philip II., who in 1580 was ruler of the New World, of the Spanish Netherlands, and of Portugal, as well as of Spain. The intellectual loss was perhaps more direct. A large number of Spanish poets and other Jewish writers and thinkers who traced their origin from the exile were lost to Spain, including men like Spinoza, De Silva, Manasseh b. Israel, the Disraelis, and the Montefiores.

When Spain became a republic in 1858, a repeal of the edict of expulsion was secured from General Prim through the influence of H. Guedalla of London, and Jews were permitted to tread once more upon Spanish soil. Very few of them have availed themselves of this privilege, a small congregation at Madrid being the chief sign of renewed life. Even at the present day in Spain Jews are not allowed to have any public building in which to hold their religious services.

BIBLIOGRAPHY: On the general bibliography of the history of the Jews of Spain see Jacobs, *Sources of Spanish Jewish History*, pp. 213-244. There are three general histories: that of Lindo, *History of the Jews of Spain and Portugal*, London, 1848, founded to some extent on original researches in the archives; Amador de los Rios, *Historia Social, Politica y Religiosa de los Judios de España y Portugal*, Madrid, 1875-1876; and M. Kayserling, *Die Juden in Navarra*, Berlin, 1861, the latter only the beginning of a general treatment which was to have included all the separate states of Spain. It is founded mainly on Yanguas, *Diccionario*, Pamplona, 1842. Amador de los Rios' history is based mainly on the chronicles of Ayala and Balaguer and on local histories like those of Ascolono of Valencia, Zuñiga of Seville, Ximena of Jaen, and Landazuri of Vitoria. Much material is contained in the published transactions of the Cortes, as well as in the fueros. Fidel Fita, in the *Boletin de la Real Academia de la Historia*, Madrid, 1882-97, has published much from manuscript sources, and some of his writings have been republished under the title *Historia Hebrea*, Madrid, 1888. The Jews of Aragon are best described in Balaguer, *Historia de Cataluña*. Much material exists also in the works of Jewish chroniclers like Joseph Cohen and Solomon ibn Verga, as well as in Usque.

The chief sources for the persecutions of 1391 are: Ayala, *Cronica de D. Enrique III.*; Zuñiga, *Anales Ecclesiasticos de Sevilla* (contemporary chronicles); *Shebeṭ Yehudah*, Nos. 27, 48; Crescas letter in Appendix to *ib.*, ed. Wiener; *Estrigo de los Juderias Catalanes en 1391, Relacion Contemporanea*, in F. J.

SPALATO (SPALATRO): Commercial port of Dalmatia, and a city of note since the days of the Roman empire. Its earliest Hebrew inhabitants were immigrants from the Turkish provinces of Servia and Rumania; but many years passed before a Jewish community was established at Spalato. Eventually, however, when Jewish exiles settled there in numbers after the expulsion from Spain, the port contained the most important community in Dalmatia. It maintained relations with the Jews of Africa and Turkey, as well as with those on the eastern coast of the Italian peninsula, particularly with the Jews of Venice, Ancona, and Brindisi. The Spalato Jews were highly favored by the Venetian republic, local trade and finance being almost entirely in their hands. Among the noted Jewish families were those of Pardo and Macchiero.

The community possesses an ancient and beautiful synagogue, and has always had a cemetery of its own. Its benevolent societies have been numerous, and it has been governed by several rabbis of wide reputation. The Jews of Spalato now (1905), however, are scattered throughout Messina and Triest, and in various parts of the kingdom of Italy; and the community is in a state of decline.

S. V. C.

SPANIER, MEYER: German educationist and writer; born at Wunstorf, Hanover, Nov. 1, 1864; studied philosophy and Germanic philology at Heidelberg (Ph.D. 1894). For some years he acted as teacher in various schools in Altona and Hamburg, and in 1900 he was called to Münster, Westphalia, as director of the Jewish teachers' seminary there. Besides many scientific articles in various periodicals Spanier has published the following works: "Thomas Murner's Narrenbeschwörung" (Halle, 1894), with introduction, notes, and glossary; "Vom Alten und Modernen Sturm und Drang" (Berlin, 1896); "Künstlerischer Bilderschmuck für Schulen" (Leipsic, 1897; 3d ed. 1902); and "Gustav Falke als Lyriker" (Hamburg, 1900). S.

SPANISH TOWN. See JAMAICA.

SPARROW: Rendering given in the English versions (Ps. lxxxiv. 4 [A. V. 3], cii. 8 [A. V. 7]) for the word "ẓippor," which denotes birds in general, but is used especially of small passerine birds. Four species of sparrow are very numerous in Palestine. Tristram identifies the sparrow of Ps. cii. 8 with the *Monticola cyanus*, or blue thrush, from its habit of sitting solitary or in pairs on projecting ledges or on some other conspicuous perch. In the Talmud "ẓippor" is a generic name, always designating a clean bird (comp. Ḥul. 139b).

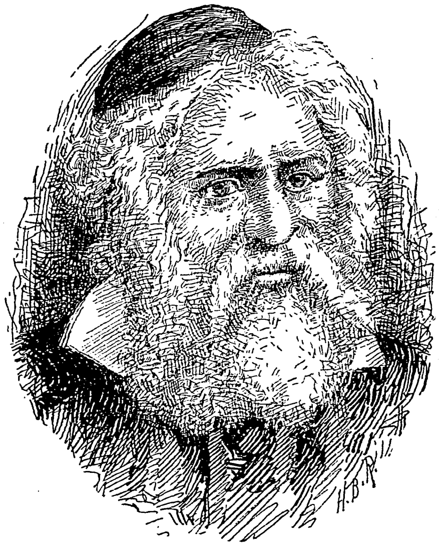
SPECIFIC PERFORMANCE: Proceeding by which a court compels an obligor to carry out his contract rather than make him pay damages in money for the breach of it. In English-American law the phrase is used almost exclusively in reference to a contract to convey land at a future time or upon compliance with given terms. Rabbinical law was well acquainted with methods for compelling a defendant to obey decrees, and the phrase "they compel him" (כופין אותו) is often found in the Mishnah. The compulsion might be by excommunication, by imprisonment, or by flogging; there are, for instance, circumstances under which a man might be compelled to give a bill of divorce to his wife (Ket. vii. 10). But compulsion might not be applied to enforce a contract to convey or to buy land, or to complete a purchase or sale of anything in the future, because all such contracts were held to be void. There might be an action for not building or conveying a house, or for not transferring a garden of given dimensions (see SALE OF LANDS), which action would sound in damages; but there was no remedy, even in damages, for failure to sell or convey a specified house or lot; and the more efficient remedy of specific performance was out of the question. The codes ("Yad," Mekirah, i.; Shulḥan 'Aruk, Ḥoshen Mishpaṭ, 189), at the very opening of the chapters on purchase and sale, declare that, unless title ("ḳinyan") has been conferred in the manner proper to each kind of property (see ALIENATION), either party to a contract may recede therefrom (lit. "turn back"). B. M. iv. 1 and the Gemara commenting thereon are conclusive for this position.

W. B. L. N. D.

SPECTOR, MORDECAI: Russian Judæo-German writer; born at Uman, government of Kiev, May 5, 1859. His earlier education was in the Ḥasidic spirit, and this made it possible for him afterward to write for both Ḥasidim and Mitnaggedim without any prejudice against either. From 1874 to 1877 he studied secular sciences under Colonel Winde, superintendent of government buildings in the district of Uman. In 1878 he made the acquaintance of Eliezer Zweifel, who encouraged him to write novels in the Judæo-German dialect, the first of these, "A Roman Ohn Liebe," appearing in the "Volksblatt" of 1883; and in 1884 he was called to St. Petersburg by Zederbaum as associate editor of the "Volksblatt." Besides numerous feuilletons which he contributed to this paper, he published several novels in book form; one of these, entitled "Der Yüdisher Muzhik," aims at promoting agricultural pursuits among the Jews. The "Volksblatt" changed hands in 1887, whereupon Spector settled in Warsaw, where he founded the "Hausfreund" and the "Familienfreund." To both of these periodicals Spector contributed extensively, writing under his real name, as well as under the pseudonyms "Emes" and "Emeser Lamedvovnik."

Spector has enriched Judæo-German literature with numerous novels which have appeared in various periodicals. One of these, "Der Vetter," was afterward translated into Polish and published in the "Israelita." In the first two volumes of the "Hausfreund," Spector published a collection of 2,056 Jewish proverbs, alphabetically arranged. He also essayed writing in Hebrew, in which language he published "Otot u-Mofetim" (Warsaw, 1887), a reply to attacks made against him by Zederbaum in "Ha-Meliẓ"; and "Ha-Man'alim ha-Rishonim" (in Meisach's "Gan Peraḥim," 1890, ii. 116 *et seq.*), a tale of Jewish life. Some of his sketches depict the life of the middle classes, but more often he occupies himself with the artisans of the small towns who have not received a modern education. Spector is a dispassionate writer, who calmly observes the miseries of the Jewish masses, and endeavors to aid them without attacking their oppressors. His style is simple but graphic, and his writings are very popular.



Isaac Elhanan Spektor.

Spector's wife (the daughter of Abraham Shalom Friedberg), whom he married in 1886, also is a clever Judæo-German writer. Under the pseudonym **Isabella** she has published in the "Hausfreund" and in the "Jüdische Bibliothek" some novels in which she points out the danger of superficialness in education, and ridicules the idea of assimilation.

SPEETH, JOHANN PETER. See Spaeth, Johann Peter.

SPEKTOR, ISAAC ELHANAN: Russian rabbi and author; born at Rosh, government of Grodno, 1817; died at Kovno March 6, 1896. His father, Israel Issar, who was rabbi of Rosh and had a leaning toward Ḥasidism, was his first teacher. Young Isaac Elhanan made remarkable progress in his Talmudical studies, and was soon famous as an "ilui," or prodigy. At the age of thirteen he married, and settled with his wife's parents in Vilkovisk, where he remained for six years. He was for a short time the pupil of R. Elijah Schick; and later he studied under Benjamin Diskin, rabbi of Vilkovisk, who, much impressed by his agreeable manners and great ability, accepted him as a pupil and as the fellow student of his son Joshua Löb Diskin, afterward rabbi of Brisk. Spektor received his "semikah," or ordination, from Benjamin Diskin and from R. Isaac Ḥaber of Tiktin (later of Suwalki). The 300 rubles which his wife had brought him as dowry having been lost through the bankruptcy of his debtor, Spektor, being unable to rely any longer on his father-in-law for support, became in 1837 rabbi of the small adjacent town of Sabelin, with a weekly salary of five Polish gulden. He remained there in great poverty for about two years, when he went to Karlin and introduced himself to R. Jacob of that town (author of "Mishkenot Ya'aḳob"), then considered one of the foremost rabbis of Russia. Jacob was so favorably impressed by the extensive learning and the carefulness of the young man that he recommended him to the first community desiring a rabbi, namely, that of Baresa, where the salary was one ruble a week. Spektor entered upon his new charge in 1839, and made rapid progress. A dispute which he had with Rabbi Isaac of Shavel concerning the formula of a document relating to divorce ended when Isaac, who was much older and better known than Spektor, acknowledged the latter to be in the right.

Early Struggles.

In 1846 Spektor was chosen rabbi of Nishvez, government of Minsk; but the community of Baresa was unwilling to let him go, and he was obliged to leave the town at night. The salary of his new position, four rubles a week, was a munificent one for those days; and at first many of the older members of the community objected to so young a rabbi. After he had become known, however, his popularity was such that when he decided to accept the rabbinate of Novohrodok (government of Kovno), whose community had exonerated him of a false charge made against him by an informer of Nishvez, the people of the latter town wished to restrain him; and he had to leave it, as he had left Baresa, stealthily at night. He went to Novohrodok in May, 1851, and remained there until the same month in 1864, when he accepted the rabbinate of Kovno, which he occupied until his death.

Rabbinical Positions.

Spektor was an indefatigable worker; and in the last forty years of his life, when he was steadily becoming more generally recognized as the foremost rabbinical authority in Russia, he maintained a large correspondence with rabbis, communities, philanthropists, and representative men in many parts of the world, who sought his advice and instruction on all conceivable subjects relating to Jews and Judaism. He early began to take an interest in general

Jewish affairs; and his sound reasoning, his liberal views, and his love of peace combined to establish him as one of the great leaders of Russian Jewry. In 1857 he was the youngest member of a committee of rabbis chosen to regulate the management of the yeshibah of VOLOZHIN. Ten years later he settled a quarrel which threatened to ruin the yeshibah of Mir. In 1868 he stood at the head of a committee to help the poor during a drought which almost produced a famine; and he allowed as a temporary measure the use of peas and beans in the Passover of that year. In 1875 he decided against the use of "etrogim" (citrons) from Corfu, because of the exorbitant price to which they had risen. In 1879 he arranged, through Prof. A. Harkavy, his former pupil, that three rabbis, Reuben of Dünaburg, Lipa Boslansky of Mir, and Elijah Eliezer Grodzenski of Wilna, should be added to the official rabbinical commission, which had thitherto consisted entirely of men of affairs and secular scholars.

Relations with the Russian Government.

Twice Spektor visited St. Petersburg to take part in the conferences held there to consider the situation of the Jews after the riots of 1881. During his second visit, in the summer of 1882, Kovno was partly destroyed by fire; and Spektor collected in the capital a large sum for those who had been ruined by the conflagration. He succeeded in his opposition to the proposed establishment of a new rabbinical school on the plan of those in Wilna and Jitomir; but he failed in his attempt to induce the government to recognize as the real head of the Jewish communities the synagogue rabbi instead of the government rabbi, who was in reality only a civil functionary and a layman.

In 1889 Spektor was elected an honorary member of the Society for the Promotion of Culture Among the Jews of Russia; and in the same year he declared himself emphatically opposed to the proposed celebration of his rabbinical jubilee. His efforts to save the yeshibah of Volozhin from being closed by the government proved unsuccessful, but his sponsorship of the institution known as "Kovnoer Perushim" assisted to provide a substitute. He corresponded with the leading rabbis of western Europe, and was the anonymous friend who induced Samson Raphael Hirsch to write "Ueber die Beziehung des Talmuds zum Judenthum." In his later years he was revered by the Jews of Russia; and his death caused mourning in Orthodox communities throughout the world.

Spektor was the author of the following works, which are considered authoritative by rabbinical scholars: "Be'er Yiẓḥaḳ" (Königsberg, 1858), responsa; "Naḥal Yiẓḥaḳ" (part i., Wilna, 1872; part ii., *ib.* 1884), on parts of the Shulḥan 'Aruk, Ḥoshen Mishpaṭ; "'En Yiẓḥaḳ" (part i., Wilna, 1889; part ii., *ib.* 1895).

R. Isaac Elhanan had three sons: **Ḥayyim,** who was the son-in-law of R. Joseph Böhmer of Slutzk, and died in Kovno in 1874, aged forty; **Benjamin Rabinovich;** and **Hirsch Rabinovich,** who was maggid or preacher of Wilna, and later succeeded his father as rabbi of Kovno, which position he still (1905) holds. An only daughter, named Rachel, died at an early age in 1876.

SPELL. See INCANTATION.

SPERLING, JACOB HIRSCH: Austrian teacher of religion at the Jewish school and the German gymnasium in Lemberg, where he was born in 1837; died Dec., 1899. He supported the Haskalah movement in Galicia and was a gifted Neo-Hebrew poet. He has been associated with the periodicals "Shomer Ẓiyyon," "Kokebe Yiẓḥaḳ," "Ha-'Ibri," "Ha-Shaḥar," and "Oẓar ha-Sifrut," was coeditor of the "Jüdische Presse" and the "Neuzeit," and was the founder of the societies Aḥawah we-Haskalah and Shomer Yisrael in Lemberg. In addition to minor writings he has published the following: "Hazzalat Melek" (Lemberg, 1854), a poem on the occasion of Emperor Francis Joseph's escape from an assassin; "Ḥamishshah Ketarim" (*ib.* 1871), containing five poems; "Ḥokmat Shelomoh" (*ib.* 1878), a biography, in verse, of S. L. Rapoport; and "Horodot," an epic poem in five cantos (published in "Oẓar ha-Sifrut," 1887).

S. S. O.

SPEYER (Hebrew, אשפירא, שפירא, שפיירא): Bishopric of Rhenish Bavaria. The first mention of a Jewish community in Speyer occurs during the episcopate of Bishop Rüdiger, who officiated from 1073 to 1090. He admitted several Jewish refugees, and assigned them, together with the Jews already settled there, a special quarter, which he enclosed with a wall for the sake of protection. This quarter consisted of a hill and a valley outside the city proper. In order further to protect the Jews, he granted them, on Sept. 13, 1084, a special privilege on condition that they should pay $3\frac{1}{2}$ pounds of Speyer money annually to the cloisters. The Jews were also allowed to trade in the harbor in all kinds of goods, and to exchange gold and silver; they received as their special property a burial-ground from the estates of the Church; the chief rabbi was given absolute jurisdiction in all cases arising among them; and they were permitted to hire Christian servants and nurses, and to sell to Christians such meat as they themselves did not use.

The Jewish Quarter.

Henry III. confirmed (Feb. 19, 1090) and even extended grants which had been made to the Jews, in particular to Judah ben Kalonymus, David ben Meshullam, and Moses ben Ghutiel (Jekuthiel). The forcible baptism of any of the children of those specifically mentioned was made punishable by a fine of twelve pounds gold, while the baptism of a heathen slave entailed a fine of three pounds silver and the return of the slave to his owner. The Jews in general were forbidden to purchase Christian slaves. It was enacted that in suits at law a Jewish witness might not be subjected to the ordeal of red-

The Charter.

hot iron or of water or to exceptionally harsh imprisonment. Violation of these decrees was declared punishable by a fine of three pounds silver. For injuries to a Jew not resulting in death a fine of one pound gold was imposed. If the guilty person was unable to pay the fine, his eyes were to be put out and his right hand cut off. In proceedings against Jews the Jew bishop or the bishop of the diocese was to preside. This privilege was signed by the emperor himself. But neither the original charter nor its reenactment proved sufficient to afford the Jews adequate protection.

The Crusades.

In 1096 Speyer was the very first town in which Jews suffered at the hands of the Crusaders, eleven being slain ("Ben Chananja," 1864, No. 5; comp. Salfeld, "Martyrologium," p. 102). Of the Jews who escaped some sought refuge in the king's palace; others were protected by Bishop John (1090–1104) in the cathedral. The instigators of the riot were caught and executed. During the Second Crusade (1146) a fresh butchery occurred in the city, in which not only laymen but also members of the clergy took part. For this affair Bishop Günther received a letter of reproach from Bernard of Clairvaux. Among the martyrs who suffered death on this occasion was a woman named Minna, whose ears and tongue were cut off because she refused to submit to baptism (1146).

Still worse were the excesses which took place fifty years later. During the rule of Bishop Otto (1195), a Christian having been found murdered outside the city walls, the Jews were relentlessly persecuted. The corpse of the recently murdered daughter of Rabbi Isaac bar Asher ha-Levi was disinterred and hanged in the market-place, a mouse being fastened to her hair; and only by paying a large sum of money did the father succeed in redeeming the body. On the following day the rabbi himself and eight other persons were murdered. Many Jews sought refuge on the high balcony of the synagogue, pulling the ladder up after their ascent; in this terrible position they were forced to remain until R. Hezekiah ben Reuben of Boppard and R. Moses ben Joseph ha-Kohen effected their release by paying an enormous ransom. The Jews thereupon fled in the darkness of night; and their houses were plundered and burned. But when Emperor Henry VI. returned from Apulia the murderers were compelled to pay damages to him as well as to the Jews. In 1282 the Jews were accused by Herbord, Ritter von der Ohm, of having murdered his grandson, and such a storm of rage broke out against them that Bishop Werner found himself compelled to lay the matter before the provincial synod of Aschaffenburg (Sept. 8). A direct account of these proceedings is not available, but in the following year (1283) Emperor Rudolph approved the decision reached, and ordered that all the property taken from the Jews should revert to the royal treasury. The persecution continued unabated, however, wherefore the Jews of Speyer decided to emigrate to the Holy Land; a few of them succeeded in carrying out this resolve, whereupon their property was confiscated. On June 24, 1291, Emperor Rudolph issued an order requiring the Jews of Speyer to maintain by extra taxes the newly established Fort Landau and the militia garrisoned there. Bishop Gerhard sold the Jewish taxes of Landau to a citizen of that place (1354). The government taxes payable by the Jews of Speyer were conveyed on June 22, 1298, to the city for such a period as might be necessary to complete payment for the damage done by the imperial troops on their march through the city from Alsace. A document of May 13, 1313, has been preserved which ordered that in case the Jews refused to pay the sum of 1,500 pounds heller, which they had promised the emperor, the city council should have the right to pawn their property and to force them to payment through imprisonment; if any of them should succeed in escaping, the council might admit others as citizens in their places, as also in the places of such as protested against payment.

The Cemetery.

Ludwig the Bavarian utilized the Jewish cemetery at Speyer, which was surrounded by strong walls, as a fortification against Duke Leopold of Austria, who was pursuing him. Only thirteen tombstones from this cemetery have been preserved, the oldest of which dates from 1145; the others were used by the city until quite recent times for building purposes. The use which Bishop Enricho made of the Jewish taxes caused a complaint to be brought against him by the entire diocese, which accused him (1320) of subsisting solely on the usury of the Jews. Bishop Gerhard of Ehrenburg induced Ludwig the Bavarian to issue two decrees: (1) admitting six more Jews to the city and appropriating their taxes for the good of the diocese (June 2, 1337); (2) imposing taxes not only on the Jews of Speyer, but also on those of Landau, Lauterburg, Deidesheim, Bruchsal, Waibstadt, and Udenheim (Nov. 15, 1337). These taxes were collected by Gerhard until 1343, the city of Speyer paying 600 pounds heller for protection and in direct taxes, while the other towns contributed the sum of 700 pounds.

The Black Death.

A great calamity befell the Jews in Easter week, 1343, when the body of a Christian named Ludwig was found. A large number of Jews were captured, tortured, and burned at the stake. On March 11, 1344, the citizens requested the king's permission to confiscate the houses of the Jews for the benefit of the city; and this request was granted. The Black Death (1348–50) was fateful also for the Jews of Speyer. On Jan. 22, 1349, nearly all the Jews, among whom was Rabbi Eliakim, retired to their houses, set fire to them, and perished in the flames. The corpses of those who had been burned or murdered were left in the streets so long that the citizens were obliged to pack them in empty wine-casks and throw them into the Rhine. The whole Jewish quarter was thereupon closed, servants being detailed to collect any treasure that might be found. The houses were torn down and the materials used to repair the city walls; and all money found was turned into the municipal treasury. The few Jewish families which escaped fled to Heidelberg and Sinzheim. When Emperor Charles IV. visited Speyer and inquired into these occurrences, the citizens succeeded in convincing him of their innocence; and on March 29, 1349, the emperor issued a decree exonerating the citizens and declaring all the property of the Jews to belong to the city. If the latter at any time readmitted Jews, the former were to become the absolute property of the municipality.

Expulsion and Return.

Within a short time the Jews were permitted to return to Speyer; and though in 1353 they were again expelled from the city, their houses being distributed among the citizens and their cemetery planted with corn, in the following year they were once more readmitted, and were assigned quarters between the Webergasse and the school-building. On Dec. 24, 1354, they were allowed to use their synagogue and school, as well as part of their cemetery; and their "Dantzhus" or "Brutehus" was given back to them. Ten years later Bishop Adolph borrowed the sum of 800 gulden from the Jews, paying them a weekly interest of one Strasburg pfennig. When Nicolaus succeeded to the bishopric (1390) he granted the Jews permission to settle in any city within the diocese on payment of a yearly tribute of 15 gulden. Of the income thus derived one-half went to the garrison and the remaining half to the diocese. In 1394 King Wenceslaus renewed the decree which declared the Jews to be the property of the city.

From 1405 to 1421 the Jews were entirely excluded from the city. But that they were soon readmitted is evident from the fact that on Feb. 11, 1431, King Sigismund granted them a privilege ordering that any complaint brought against them should be heard only before the municipal court. Four years later, however, the authorities had to yield to the demands of the citizens, and the following decree of expulsion was issued on May 5, 1435:

Final Expulsion.

> "The council is compelled to banish the Jews: but it has no designs upon their lives or their property: it only revokes their rights of citizenship and of settlement. Until Nov. 11 they are at liberty to go whither they please with all their property, and in the meantime they may make final disposition of their business affairs."

For a long time after the Jews left Speyer in compliance with this decree, no organized community existed within the limits of the city, although individual Jews settled there before twenty years had passed.

Formerly it was the custom that upon the entry into the city of a new bishop the Jews should meet him in procession and present him with a gift; and this custom was observed by the Jews of Landau on March 27, 1439, upon the entry of Bishop Reinhard, and in Oct., 1459, on the entry of John II. After the lapse of many years this custom fell into disuse. The taxes levied upon the Jews of the diocese were constantly increased; thus, in the years 1464-78, under Bishop Mathias, the Jews of Landau were required to make an annual payment of 120 pounds heller for the right of retaining their ghetto. The same bishop ordered all the Jews of his diocese to submit to baptism, and upon their refusal to comply he issued (Oct. 21, 1468) a decree containing, among others, the following provisions: All male Jews over five years old were required to wear on their breasts, as a distinctive badge, a piece of yellow cloth in the shape of a wheel; all Jewesses of similar age, two blue stripes on their veils. Jews might take no part in public gatherings or entertainments; they might keep no Christian servants; nor might they have schools or synagogues of their own. They might not occupy dwellings in various portions of the city, but should live close together; on high Christian festivals they were not to appear upon the streets; and they were forbidden to engage in monetary transactions. Any person violating these rules was to be summoned before the bishop at Udenheim. This decree was renewed by that prelate on Dec. 24, 1468, and Dec. 30, 1472. The only modification which the Jews, by gifts of money, succeeded in securing was the permission to have one synagogue in each town, this concession being granted by the bishop in 1469. The number of Jewish families in Speyer at this period, according to the testimony of Schudt ("Jüdische Merckwürdigkeiten," i. 440), did not exceed ten.

Restrictions.

In the Seventeenth Century.

For the following two centuries the internal affairs of the Jews were administered by the rabbi of Worms, who received an annual sum of 10 reichsthaler as compensation, the small community not being able to maintain a rabbi of its own. Official permission was required on the occasion of visits by the rabbi, and documents according such permission have been preserved from 1682, 1685, 1698, 1713, and 1746: in the last-named reference is made to "our rabbi David Strauss of Worms." From the year 1752 the Jews were forbidden, on pain of severe punishment, to solicit the services of any rabbi other than their own. The first rabbi of the diocese was Isaac Weil (1750-63); he was succeeded in the office by Löwin Löb Calvaria, provision for whose salary was made by a bequest in the testament of one Süssle.

Episcopal edicts in 1717, 1719, 1722, 1726, 1727, 1728, 1736, 1741, and 1748 prohibited Gipsies and Jews having no safe-conducts from visiting the estates belonging to the diocese; and those that were provided with safe-conducts were required, for sanitary reasons, to submit their bundles or packages to a rigid examination. The present community of Speyer is young, and its documents are consequently of recent dates.

Scholars and Rabbis.

The most prominent scholars of Speyer have been the following: In the eleventh century: Kalonymus ben Moses, Jekuthiel ben Moses, Moses ben Jekuthiel, Judah ben Kalonymus, and David ben Meshullam.

Twelfth century: Abraham ben Meïr ha-Kohen, Kalonymus ben Isaac, Jacob ben Isaac ha-Levi, Eleazar ha-Ḥazzan, Eliakim ha-Levi, R. Isaac ben Asher ha-Levi, Samuel ben Kalonymus, R. Abraham ben Solomon (רא״בן), R. Isaac of Bohemia, Eliezer ben Isaac, Judah, Meïr ben Kalonymus, David of Speyer, Simḥah ben Samuel, R. Judah ben Kalonymus ha-Baḥur, Shemariah ben Mordecai, Eliezer ben Joel ha-Levi, Simḥah ben Samuel, and Abraham ben Samuel.

SPEYER PEDIGREE.

Thirteenth century: Eleazar ben Jacob, Jacob of Speyer, R. Jedidiah ben Israel, and Solomon of Speyer.

Fourteenth century: Moses Süsslin, later "Judenmeister" in Frankfort-on-the-Main.

Fifteenth century: Samuel Isaac ha-Ḳadosh and Shemariah Salman = ר״ז ha-Levi (Zunz, "Ritus," p. 200).

Of the cities formerly belonging to the diocese of Speyer may be mentioned: **Speyer,** included in the district rabbinate of Durkheim. The present rabbi is Dr. Wolf Salvendi, and the community numbers 874 Jews and supports six benevolent societies. **Deidesheim,** with 50 Jewish inhabitants. **Landau,** having 874 Jews and five benevolent societies. Its present rabbi is Dr. V. Einstein. **Bruchsal,** with 741 Jews and eight societies, under the spiritual guidance of Rabbi Doctor.

J. S. O.

SPEYER: German family doubtless deriving its name from the German city of Speyer. Members of it had settled in Frankfort-on-the-Main in the sixteenth century; from that city their descendants spread to various countries, and are now to be found in Germany, England, and the United States. The following are the more important members (given in chronological order):

Joseph Michael Speyer: Parnas and assistant rabbi at Frankfort; died there Oct. 17, 1729. He bequeathed the fund of 4,000 florins known as the "Josef Speyer Stiftung."

Isaac Michael Speyer: Banker in Frankfort; died at Offenbach, near Frankfort, Dec. 4, 1807. He was a grandson of Joseph Michael Speyer. When the French in 1792 occupied the old German "Reichsstadt," their general, Custine, imposed a heavy contribution upon the city, and took Speyer as one of the hostages for its payment. Speyer at his death left a legacy, the value of which is now (1905) $17,000, and which is known as the "Isaac Michael Speyer Stiftung."

Moses Emanuel Speyer: Banker at Frankfort and Mittelstadt; died 1801 at the latter place, leaving a fund which was known as the "Moses Emanuel Stiftung."

Eduard Gumpertz (Gustav) Speyer: Banker; born at Frankfort Feb. 4, 1825; died there July 23, 1883; brother of Philip Speyer. In 1845 he joined his brother in New York, and remained there till 1863, when he returned to Frankfort.

Philip Speyer: American banker; born at Frankfort; died at New York; brother of Eduard Gumpertz Speyer. He emigrated to the United States and founded (1837) in the city of New York the banking-house of Philip Speyer & Co., which later (1876) adopted the firm name of Speyer & Co.

James Joseph Speyer: American banker; born in the city of New York July 22, 1861; eldest son of Eduard Gumpertz Speyer. He was educated at the public school of Frankfort, entered his father's banking-house there (now the firm of Lazard Speyer-Ellisen), and was employed in the Paris and London branches; in 1885 he returned to New York, in which city he is at present (1905) residing. In 1900 he became the senior member of the New York firm of Speyer & Co. Speyer has been much interested in charitable work in New York.

Edgar Speyer: English banker; born in the city of New York Sept. 7, 1862; younger son of Eduard Gumpertz Speyer. He was educated in the public school of Frankfort, joined his father's banking-house, and in 1886 went to London, where he is now (1905) the senior member of the banking-house of Speyer Brothers.

A. F. T. H.

SPEYER, JACOB SAMUEL: Dutch philologist; born at Amsterdam Dec. 20, 1849. He studied at Amsterdam and at Leyden (Ph.D. 1872); and thereafter officiated as teacher at Hoorn and (1873–1888) at the gymnasium of Amsterdam. On Oct. 15, 1877, he was appointed lecturer in Sanskrit and comparative philology at the University of Amsterdam, and he was about to receive a professorship there when he was called to Gröningen (Dec. 19, 1888) as professor of Latin. He held this chair until March 20, 1903, when he was appointed to succeed his former teacher H. Kern as professor of Sanskrit at the University of Leyden.

Speyer is the author of the following works: "Specimen Inaugurale de Ceremonia apud Indos Quæ Vocatur Jatakarma"; "Lanx Satura," 1886 (Program of the Gymnasium of Amsterdam); "Sanskrit Syntax," Leyden, 1886; "Plautus' Captivi," 1887; "Observationes et Emendationes," 1891; "Vedische- und Sanskritsyntax" (in Bühler's "Grundriss der Indo-Arischen Philologie"), 1896; "Phædri Fabulæ," 1897; and "Latijnsche Spraakkunst" (2d ed. 1878–80; 3d ed. 1900–1). He also made an English translation of the Sanskrit "Jatakamala," which appeared in "Bijdragen van het Instituut voor Taal-, Land- en Volkenkunde van Nederlandsch Indie," 1893–94, and in the "Sacred Books of the Buddhists" (ed. F. Max Müller), vol. i.; as well as an English version of the "Avadanaśataka," which constitutes No. 3 of the "Bibliotheca Buddhica" (St. Petersburg, 1902–5). Speyer is a member of the Royal Academy of Arts and Sciences, and a knight of the Order of the Netherlands Lion. From 1893 to 1904 he was editor of the "Museum."

SPICES: Aromatic vegetable substances used in preparing food or in compounding salves or perfumes. With the exception of salt, no condiments were known to the ancient Jews, and even cinnamon, with which the Hebrews were familiar, was employed only in unguents and similar mixtures, while aromatic herbs and spices found their sole use in the preparation of mulled wine (see Wine). With a single exception, all the ingredients of unguents and perfumes were vegetable. This exception, called "sheḥelet" (A. V. "onycha"), the operculum of a variety of mussel found in the Red Sea, formed one of the four components of the incense burned in the Temple. It is still used in the East, for, though it exhales a disagreeable odor when burned alone, it gives the requisite pungency to a composition of several spices. Such animal substances as ambergris and musk seem to have been entirely unknown to the ancient Hebrews.

Many of the plants from which spices were obtained are described in special articles (see Aloes; Balm; Balsam; Bdellium; Calamus; Cassia; Cinnamon; Frankincense; Spikenard; Stacte; Storax). To these may be added the bitter, odorous gum galbanum ("ḥelbenah"), another component of incense (Ex. xxx. 34), which is described in Ecclus. (Sirach) xxiv. 15 as yielding a pleasant odor, and which was regarded by the ancients as the pith of the narthex, although the common Persian ferulæ of the family of the *Umbelliferæ* contain a pith with an odor of peculiar strength and likewise called galbanum. The odor of this alone is by no means pleasant, but when mixed with other scents, it adds, like sheḥelet, an agreeable pungency. It is used also for the extermination of insects, and in therapeutics it is employed as an aphrodisiac.

There are no details regarding the preparation of these vegetable products; the modern method of extracting the ethereal oils by distillation was unknown to the ancient Jews. The aromatic elements of such gums and woods as could not be used in their natural state were obtained by boiling the substances in oils or fats (comp. Job xli. 23). The fondness of the Orientals, of both ancient and modern times, for incense and perfumed unguents naturally created an extensive traffic in spices; and the fact that there were professional perfumers shows that the art of manufacturing perfumes by various combinations had reached a high stage of development (see I Sam. viii. 13; Neh. iii. 8).

SPICKER, MAX: German musician; born at Königsberg, Prussia, Aug. 16, 1858. Educated at the Conservatorium, Leipsic, he in 1878 traveled with the violinist Miska Hauser through Germany and Russia. He held the position of conductor of the opera successively at Heidelberg, Cologne, Ghent, Aix-la-Chapelle, Potsdam (Royal Theater), and Hamburg. In 1883 he became conductor of the Beethoven Männerchor, New York, and in 1889 (together with Anton Seidl) of the orchestral concerts at Brighton Beach near that city. In 1891 he became musical director of Temple Emanu-El, New York.

Spicker has written several works, of which may be mentioned: "Anthology of Oratorio," New York, 1890; "Anthology of Opera," *ib.* 1895; (with William Sparger) "The Synagogal Service," *ib.* He has, besides, edited "The Masterpieces of Vocalization."

SPIDER. See Insects.

SPIEGEL, FREDERICK S.: American jurist; born at Hovestadt, Westphalia, Prussia, Nov. 20, 1858. He attended the gymnasium at Paderborn, Westphalia, until his fourteenth year, when his parents emigrated to the United States, settling in Gadsden, Ala. Here he attended the Southern Institute, from which he was graduated in 1877, whereupon he took up the study of law at the College of Cincinnati, Ohio. In 1881 he was appointed chief of the bureau of statistics of the state of Ohio, and during his term of office he revised the system of compiling statistics; he also published at Columbus a year-book of the history of Ohio. Upon returning to Cincinnati he practised law and was elected a member of the Cincinnati Board of Education, serving as chairman of its German department, in which capacity he inaugurated a new method of studying the German language. In 1890 he was elected county solicitor, and was reelected in 1893. In 1896, and again in 1901, he was elected a justice of the court of common pleas of the first judicial district of the state. Spiegel has taken active interest in the affairs of the Independent Order B'nai B'rith, having served as president of its district No. 2 and as chairman of its district court, and being at present (1905) a member of the supreme court of the order. He has contributed numerous essays on legal and other topics to various journals.

A. F. T. H

SPIELMANN, SIR ISIDORE: English engineer and communal worker; born in London July 21, 1854. He was trained as an engineer, but developed great interest in matters relating to art, and in 1887 he suggested the idea of the Anglo-Jewish Historical Exhibition, of the executive committee of which he was honorary secretary from inception to close, besides being the leading spirit of the whole movement. He was president of the Jewish Historical Society of England from 1902 to 1904. The experience gained in the Anglo-Jewish Historical Exhibition enabled him to be of great assistance in arranging the historical exhibits relating to the Tudor, Stuart, and Guelph periods at the New Gallery (1890–93). He was appointed honorary secretary and director of the British section of the Brussels Exhibition in 1897, in connection with which he was made an officer of the Order of Leopold. He was also honorary secretary and director of the British fine art section of the Paris Exhibition (1900), the Glasgow Exhibition (1901), and the St. Louis Exposition (1904). In recognition of these services he was knighted in 1905. Asked to take a similar position with regard to the Russian Fine Art Exhibition in 1902, he indignantly refused on the ground that on account of being a Jew he would have to ask permission to enter Russia as a favor.

Spielmann is a member of the Russo-Jewish Committee, in which capacity he edited "Darkest Russia" (1890–92), a journal especially devoted to exposing the ill treatment of Jews by the Russian government. Spielmann is interested also in the more progressive religious movement in Judaism, and is honorary secretary of the Jewish Religious Union.

J.

SPIELMANN, MARION H.: English author and art critic; born in London May 22, 1858; educated at University College School and University College, London. He began his training as art critic on the "Pall Mall Gazette" (1883-90), for which he wrote articles on the works of G. F. Watts, R.A., and Henriette Ronner. In 1890 he was art critic on the "Daily Graphic," and in 1891 art editor and part founder of "Black and White." In 1898 he was appointed editor of the "Magazine of Art," in which post he remained until 1905, when the publication ceased.

Spielmann has written "History of Punch" (London, 1895), "Millais and His Works" (*ib.* 1898), "John Ruskin" (*ib.* 1900), "British Sculpture and Sculptors of To-day" (*ib.* 1901), and "Charles Keene, Etcher" (*ib.* 1903). He was appointed sole juror for England in the Brussels Fine Art Exhibition (1898), and has done much toward altering the conditions under which works were purchased for the Chantrey bequest by the Royal Academy.

SPINA (ESPINA), ALFONSO DE: One of the most inveterate enemies of the Jews and of Judaism—to which he never belonged, despite the assertions of Jost and of Amador de los Rios. He was general of the Order of Franciscans, rector of the University of Salamanca, and confessor of King Henry IV. of Castile; and he accompanied the once-powerful minister ALVARO DE LUNA to the place of execution. The unremitting efforts of Spina were devoted to the utter destruction of the Jewish race, Jews as well as Jewish converts to Christianity, or, as he termed them, "Judios publicos," those who publicly and obstinately clung to their faith, and "Judios ocultos," or secret Jews.

Highly esteemed for his eloquence, Spina continually made the Jews the butt of attacks in his sermons; and in the Latin work entitled "Fortalitium Fidei" (Nuremberg, 1494; Lyons, 1511, 1525), which he wrote in refutation of Judaism and Islam, he collected all the accusations brought against the Jews—those of poisoning the wells, desecrating the host, and murdering of Christian children for ritual purposes: whatever the enemies of the Jews had written or recounted he presented as truth. The entire third book of this work was devoted to them, and served, curiously enough, as a source for Samuel Usque's chronicle ("F. F." = "Fortalitium Fidei"). To inflame the popular hatred Spina accused the Jews of neglecting to cultivate or defend their fields, of appropriating the results of the Christians' labors, and of ingratitude toward Spain, where they fared better than did their coreligionists in any other country. He was especially bitter in his attacks upon the secret Jews, mercilessly demanding that they be burned. "I believe," said he, "that if a real Inquisition were introduced among us, countless numbers of them would be condemned to the stake; for countless numbers combine the adherence to Jewish customs with the observance of the Christian religion."

The idea of the introduction of the Inquisition into Spain originated with Spina. Together with the dignitaries of his order he called upon the chapter of the Order of St. Jerome (Aug 10, 1461) to press this plan for the benefit of the state and the Church, soon gaining the ear of King Henry, who promised to lay the matter before his cabinet.

SPINNHOLZ. See MARRIAGE CEREMONIES.

SPINNING: Spinning and weaving are arts of extreme antiquity, dating back even to prehistoric times. The Egyptians were especially expert in them, their white linen textures being of such fineness as to be diaphanous, while in softness their materials were almost comparable with silk. The threads used in the wrappings of the mummies of the Pharaohs were almost inconceivably delicate, the warp of the bandage around the mummy of Thothmes III. containing 150 threads and the woof 75 threads per inch. It has been calculated that one of these threads 60 miles in length would weigh only one pound. The Egyptian tomb-paintings represent the method of spinning; they show women who turn two spindles simultaneously, twisting each of the two threads from two different kinds of flax. In like manner a certain degree of skill in spinning may be presumed to have existed at a relatively early period among the Hebrews.

Egyptian Spinners.

The raw materials in ancient times were flax, the wool of sheep, and the hair of goats and camels. At a later time COTTON and silk also were used; and the wool of sheep and the hair of camels were made into tentings and mantles, and probably also into garments of mourning ("saḳ"). The most usual materials, however, were wool and flax. The term "wool" ("zemer") by itself is restricted to the wool of sheep. As soon as shorn the fleece was washed in hot water to which alkalis had previously been added. At a later period, in case an especially fine and delicate wool was desired, the young animal was wrapped immediately after birth in a cloth which protected its wool against any stains. The wool after being washed and bleached ("libben") was beaten ("nippeẓ") with sticks to disentangle it, and was then picked with the fingers to rid it of any knots, after which it was carded ("saraḳ"). All of these operations were originally a work of the household; but in later times the carding of wool became a distinct trade.

According to the Mishnah, the wool-carder was universally despised, and wore a woolen cord about his neck as an emblem of his trade. At the present time in Palestine he performs his task with the help of a large bow, whose taut cord is kept in constant vibration by the blows of a hammer and in its oscillations divides the wool with extreme fineness. The same process of carding may have been employed in ancient times. The Mishnah describes another method which was rather a combing of the wool: the carder had an iron comb, apparently consisting of a leather back set with one or two rows of iron pegs. This comb he laid on his knee and drew the wool handful by handful through it. The hair of goats and camels was treated in a similar fashion.

Preparation of Flax.

The preparation of flax is described in the Mishnah: the stalks were torn out of the ground, laid in order, and beaten with sticks to free them from the capsules. In Egypt, as is evident from ancient Egyptian paintings, they were boiled in a large vessel and thus freed from all woody substance. This same purpose is served by the flax-horses described in the Mishnah. The stalks were dried in the sun (Josh. ii. 6), and then laid in a pit of water exposed to the light, being held under the water by stones until their woody substance rotted away. The stalks were then redried in the sun or in an oven, and were beaten with a wooden mallet to free the fibers from their outer covering. Finally the fibers were hackled, so that the longer ones, which were suitable for spinning, might be separated from the shorter ones, which were used only for wicks, cords, and similar objects. Hackling was done both by men and by women (Isa. xix. 9; read שרקות). The raw materials thus prepared were then ready for the spinners, whose task it was to spin long threads from the short filaments.

The tools were very simple, consisting of the spindle and the distaff (comp. Prov. xxxi. 19), the spinning-wheel being unknown in antiquity. The distaff ("ḳiṭor," *ib.*; "imah" in the Mishnah) consisted of a reed about which the carded wool or the hackled flax was wound. This was held by the spinner in his left hand, while with his right he drew out the thread. The spindle was a reed about a foot in length, with a hook at the top to which the thread drawn from the distaff was fastened. At the base of the spindle was a whorl—a perforated ball of clay or a round stone pierced with a hole or a ring of metal, which served to weight the spindle and to keep it upright during the spinning. When the first part of the thread had been spun by hand, it was fastened to the spindle, which was set in motion with the right hand, and while the thread was thus being twisted the raw material was drawn as needed from the supply on the distaff, the spun thread being then wound upon the spindle. The excavations of the English and German Palestine exploration societies have unearthed many of these whorls of clay, stone, and metal at Tell al-Ḥasi and Tell al-Mutasallim.

Spinning is now done in Palestine by men and women alike; and fellahs are frequently seen spinning as they walk. In ancient Hebrew times it seems to have been an occupation restricted to women—at least men are never mentioned as spinners—while in the praise bestowed on virtuous women spinning is mentioned as an occupation essentially feminine (Prov. *l.c.*; comp. Ex xxv. 25 *et seq.*; Tobit ii. 19).

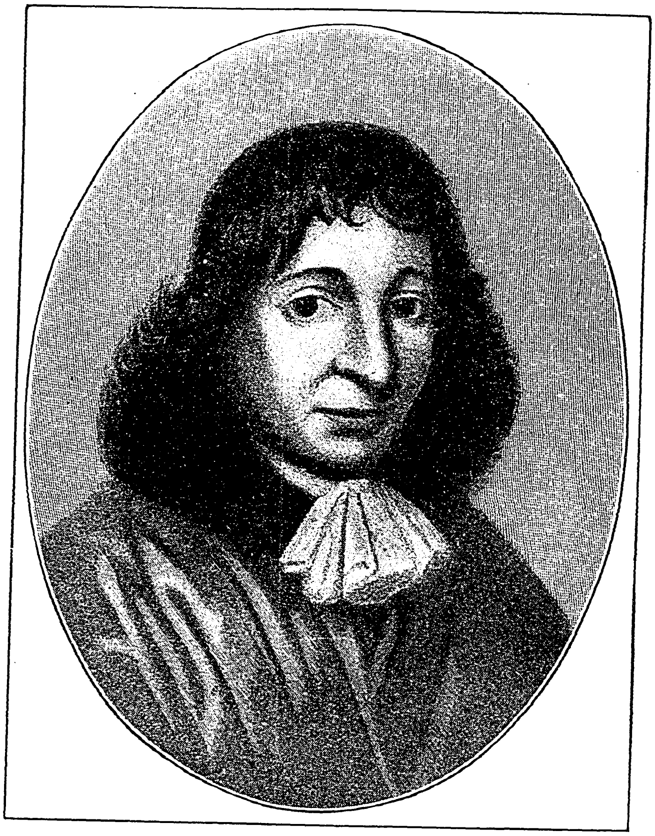
E. G. H. I. Be.

SPINOZA, BARUCH (BENEDICT DE SPINOZA): Dutch philosopher and Biblical critic; born at Amsterdam Nov. 24, 1632; died at The Hague Feb. 21, 1677. The family name is derived from the town of Espinosa, in Leon, not far from the city of Burgos. Baruch's grandfather, Abraham Michael de Spinoza, was one of the leaders of the Sephardic community of Amsterdam, being president thereof in 1639. His father, Michael de Spinoza, was a merchant who married twice, and had three children—two daughters, Miriam and Rebekah, by his first wife, who died in 1627, and a son, the philosopher, by his second wife, Hannah Deborah, who died in 1638. Miriam married a brother of Simon de Caceres.

Spinoza was trained at the communal school, and at the Pereira yeshibah, over which Isaac de Fonseca Aboab, Manasseh ben Israel, and Saul Morteira presided. There he studied, from eight to eleven in the morning and from two to five in the afternoon, Hebrew, Bible, Talmudic literature, and, toward the end of his course, some of the Jewish philosophers, certainly Maimonides, Gersonides, and Ḥasdai Crescas. It was probably during this period that he studied also Abraham ibn Ezra's commentaries. The amount of his cabalistic knowledge is somewhat doubtful, but both Manasseh ben Israel and Morteira were adepts in Cabala. Spinoza was attracted by the atmosphere of free thought characteristic of the Dutch capital. He learned Latin, immediately after leaving school, from Franz van den Ende, an adventurer and polyhistor who had established himself in Amsterdam; under him he studied as well mathematics, physics, mechanics, astronomy, chemistry, and the medicine of the day. Spinoza likewise acquired a knowledge of the scholasticism developed in the school of Thomas Aquinas.

Epoch-making for the development of Spinoza's thought was his acquaintance with the works of Descartes, who led Europe in the attempt to found a philosophy based upon reason, not tradition. But the application of such an idea to Judaism could only be disastrous, and shortly after leaving the Pereira yeshibah rumors became persistent that young Spinoza had given utterance to heretical views, such as had led Uriel Acosta and Orobio de Castro into trouble. It would appear that no action was taken during the life of Spinoza's father, who died March 28, 1654, and there is evidence that Baruch was "called up to the Law" in synagogue on Dec. 5, 1654, offering a small sum as a "mi sheberak." It is recorded that his relatives disputed his claim to any share in his father's estate, and that he found it necessary to resort to legal proceedings, or the threat of them, to secure his rights; but, having obtained them, he took possession only of the best bed as a kind of heirloom.

This was probably after his heretical views had been formally ascertained, according to rabbinical law, by two of his companions, who put questions to him which elicited his opinion that, according to the Scripture, angels were merely fantoms, that the soul is identified in the Bible with life and is regarded as mortal, and that in calling God "great" the Scripture attributes to Him extension, that is, body. This last statement is of considerable interest in view of Spinoza's later philosophic doctrines on this point. He was summoned before the bet din, and seems to have made no concealment of his views; it is claimed that his teacher Morteira offered him, on behalf of the congregation, a pension of 1,000 florins a year provided he would not give public utterance to his heretical views. This Marano expedient was refused, and the congregation proceeded to his formal excommunication on July 27, 1656, which was regularly reported to the Amsterdam magistrates. This latter action shows that the main object of the excommunication was to disavow on the part of the community any participation in Spinoza's pernicious views, and was a natural precaution on the part of a set of men only recently released from persecution on account of their opinions and only half trusting in the toleration of the authorities of the land. At the same time there is no doubt that considerable feeling was aroused by Spinoza's views, and it is reported that a fanatical Jew even raised a dagger against him as he was leaving either the synagogue or the theater. Freudenthal suggests that this happened during an altercation with Spinoza himself.



Baruch Spinoza.

(From a miniature in possession of the Queen of Holland.)

Spinoza was thus cast out at the age of twenty-three from all communion with men of his own faith and race, and there is no evidence of his coming into communication with a single Jewish soul from that time to his death (the "I. O." among his correspondents, formerly assumed to be Isaac Orobio, turned out to be Jacob Oosten). It is clear that Spinoza had already formed a circle of friends and disciples, mainly of the Mennonite sect known as Collegiants, whose doctrines were similar to those of the Quakers; and that he had attended a philosophical club composed mainly of these sectaries, one of whom, Simon de Vries, acted as secretary. After his excommunication Spinoza found it desirable to take up his abode with a Collegiant friend who lived two or three miles outside of Amsterdam on the Ouderkerk road, near the old Jewish cemetery. There he communicated with his friends in Amsterdam by letter, and they seem to have submitted to him their difficulties in the same way, leading to a regular philosophical correspondence. As a means of living Spinoza resorted to the calling of a practical optician, in which his mathematical knowledge was valuable, and he also appears to have taken pupils in philosophy, and even in Latin and Hebrew. He remained in his new abode five years, during which he wrote a defense of his position, afterward extended into the "Tractatus Theologico-Politicus," and a short tractate on "God, Man, and Happiness," afterward developed into his "Ethics."

Friends and Disciples.

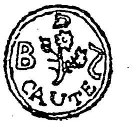
In 1661 Spinoza removed to Rhijnsburg, near Leyden, then the center of the Collegiants' activity. Here he spent the two most fruitful years of his life, during which he prepared for a pupil a résumé of the Cartesian philosophy, presenting it in a geometric form; composed his treatise on philosophical method, "De Intellectus Emendatione," which, however, remained unfinished; and wrote at least the beginning of his "Ethics," adopting the same geometric form. He finished the "Ethics" in Aug., 1665, at Voorburg, a suburb of The Hague, to which he had removed in April, 1663, probably to be near the De Witt brothers, then at the height of their power. John de Witt had become acquainted with Spinoza, and either at this time, or a little later, gave him a small pension. From Voorburg Spinoza used to send portions of his "Ethics," written in Dutch, to his band of disciples in Amsterdam, who translated them into Latin and wrote him letters in the same language dealing with the difficulties of his theories. Before publishing this work, however, so subversive of the ordinary views of theology and philosophy, Spinoza determined to pave the way by an animated plea for liberty of thought and expression in the commonwealth. To this he devoted the next four years, the result being the "Tractatus Theologico-Politicus." This was published in 1670, without the author's name, and it brought such a storm of opprobrium that it was formally proscribed by the Synod of Dort and by the States General of Holland, Zealand, and West Friesland. It was found necessary, in order to evade this censure, to publish the work under false titles, representing it sometimes as a medical, sometimes as a historical, work.

This reception somewhat alarmed Spinoza, who, hearing in the following year (1671) that a Dutch translation was contemplated, urged his friends to prevent its appearance. Spinoza's reputation as a thinker, however, had by this time been fully established by his two published works, and he was consulted both personally and by letter by many important scientific men of the day, including Oldenburg, secretary of the Royal Society, London; Huygens, the optician; Louis Meyer, the physician; and Count von Tschirnhausen, afterward the discoverer of a new method of obtaining phosphorus and the rediscoverer of the method of producing porcelain. Through von Tschirnhausen, Spinoza came into correspondence with Leibnitz, then (1672) in Paris. He appears to have had some suspicions of Leibnitz's trustworthiness, and it was not till four years later, when the brilliant young diplomat visited him at The Hague, that Spinoza exposed his full mind to Leibnitz and produced that epoch-making effect upon the latter which dominated European thought in the eighteenth century.

At The Hague (1670-77).

Spinoza settled at The Hague in 1670, possibly to be near his patron John de Witt, who was soon to fall under the assassin's dagger (1672). Spinoza was so aroused from his ordinary calmness by this act that he was with difficulty prevented from publicly denouncing it. The following year he received and refused an offer of a professorship in philosophy at Heidelberg University from the elector palatine. A somewhat mysterious visit to the French invading army in 1674 is the only remaining incident in Spinoza's life, which was drawing to a close. He had a hereditary tendency to consumption derived from his mother, and this can not have failed to be intensified by the inhalation of particles of crystal incidental to his means of livelihood. He died, while his landlady was at church, in the presence of his physician, Louis Meyer.

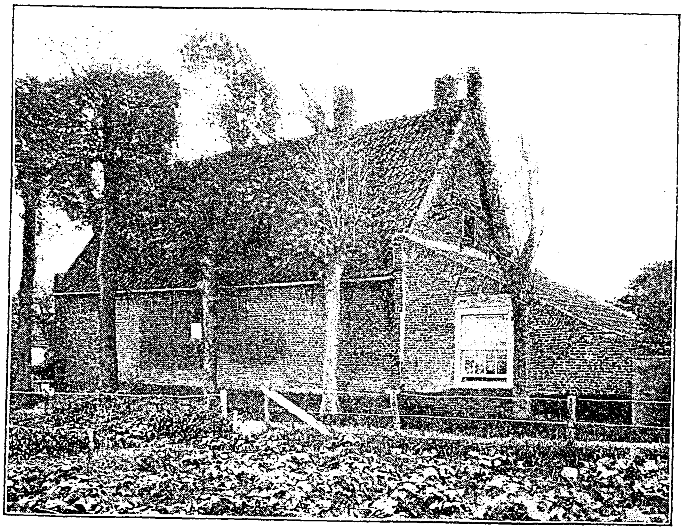
Spinoza left a considerable library, for the purchase of which, in all probability, the pensions he received from his patron John de Witt and from his friend Simon de Vries were spent; a number of finished glasses which, owing to his reputation as an optician, brought high prices; and a few engravings and articles of furniture. The sum realized from the auction of his effects was so small that his sister Rebekah did not find it worth while to make application therefor. His funeral was attended by a number of his disciples and friends, who filled six coaches. He was buried in the cemetery of the new church on the Spuy, in a grave which can no longer be identified. His biographer, Colerus, however, asserts that he was never received into any Christian community, and Spinoza in one of his letters (lxxiii., ed. Land) expressly declared that to him the notion that God took upon Himself the nature of man seemed as self-contradictory as would be the statement that "the circle has taken on the nature of the square." He thus lived and died apart from either Jewish or Christian prepossessions, in the greatest spiritual isolation, which enabled him to regard human affairs with complete detachment; at the same time, however, his calm, prudent, and kindly nature was not estranged from the simple pleasures of the ordinary life of the citizen.



Seal of Spinoza.

Works.

As has been mentioned above, only two of Spinoza's works were published during his lifetime: "Renati Des Cartes Principiorum Philosophiæ Pars i. et ii. More Geometrico Demonstratæ per Benedictum de Spinoza Amstelodamensem. Accesserunt Ejusdem Cogitata Metaphysica," Amsterdam, 1663, and "Tractatus Theologico-Politicus," published without the author's name and printed professedly at Hamburg, though really at Amsterdam, 1670. The latter work was published two years later as the "Opera Chirurgica" of Francisci Villacorta, or as the "Operum Historicorum Collectio" of Daniel Heinsius. The remainder of Spinoza's works appeared in the year of his death (1677) at Amsterdam under the title "B. d. S. Opera Posthuma." They included the "Ethica," the "Tractatus Politicus," the "Tractatus de Intellectus Emendatione," the "Epistolæ," both from and to Spinoza, and the "Compendium Grammatices Linguæ Hebreæ." The same works appeared simultaneously in Dutch under the title "De Nagelate Schriften van B. d. S."; as it seems that Spinoza sent his "Ethics" in the first place in Dutch to his disciples at Amsterdam, it is probable that this edition contains the original draft of the work. About 1852 traces were found of the short tractate ("Korte Verhandeling") which was the basis of the "Ethics," and likewise, in the Collegiant archives at Amsterdam, a number of letters; these were published by Van Vloten as "Ad Benedicti de Spinoza Opera Quæ Supersunt Omnia Supplementum," Amsterdam, 1862, including a tractate on the rainbow which was thought to have been lost, but which appeared at The Hague in 1687. Apart from the "Tractatus Theologico-Politicus," none of his works has been reproduced in the original in a separate edition, but they have always appeared as his "Opera Omnia," of which editions have been prepared by E. G. Paulus (Jena, 1802), A. Gfrörer (Stuttgart, 1830), C. H. Bruder (Leipsic, 1843), H. Ginzberg (*ib.* 1874-78), and Van Vloten and Land (2 vols., The Hague, 1883; 3 vols., *ib.* 1895), the last being at present the standard edition. Translations have been made into German by B. Auerbach (Stuttgart, 1841), into English by R. Willis (1862-70) and R. H. M. Elwes (1883), into French by E. Saisset (Paris, 1842); of the "Ethics" alone there have been published English versions by R. Willis, 1870, and Hale White, 1883, and a Hebrew version by S. Rubin (Vienna, 1887). An edition and translation of the "Korte Verhandeling" were produced by C. Schaarschmidt (Leipsic, 1874), as well as a translation by C. Sigwart (Tübingen, 1870).



Spinoza's Residence at Rhijnsburg.
(From a photograph.)

There are four portraits extant of Spinoza, one an engraving attached to the "Opera Posthuma"; a second one at Wolfenbüttel; a third one at the beginning of Schaarschmidt's edition of the "Korte Verhandeling," from a miniature formerly in the possession of the late Queen of Holland; and, finally, one in the possession of the Hon. Mayer Sulzberger. The last can be traced to the possession of Cardinal de Rohan, to whom it is stated to have been given by Jewish tenants of his. It is signed "W. V., 1672" (or 1673), which would correspond to the initials of the painter W. Vaillant, who was living at Amsterdam in that year; Vaillant painted the portrait of the elector Karl Ludwig, who, in the following year, invited Spinoza to Heidelberg. This portrait has clearly Jewish features, thus agreeing with the Queen of Holland miniature, whereas the Wolfenbüttel portrait is entirely without Jewish traits. Colerus declares that Spinoza was of marked Jewish type, which would confirm the authenticity of the Vaillant picture, though this has, unfortunately, been "restored." It has hitherto remained unpublished, but is given in facsimile as the frontispiece to this volume of The Jewish Encyclopedia.

Philosophy.

It has been both asserted and denied that the thoughts developed in Spinoza's short life of forty-four years, and put forth anonymously after his death with such remarkable influence on the history of European speculation for at least the last one hundred and fifty years, were derived in large measure from his Jewish training and reading. The question is a very difficult one to decide, owing to the close-linked chain of Spinoza's thought, which he designedly made in his "Ethics" a continuous course of reasoning, each proposition being dependent upon the preceding, exactly after the manner of Euclid. In order to determine the extent of his Jewish indebtedness it is necessary, therefore, to attempt some slight sketch of his whole system. Apart from this object it deserves such exposition as the most influential body of doctrine ever produced by a Jew since Philo.

The key to Spinoza's philosophic system is to be found in his method of investigation as indicated in the fragmentary "De Intellectus Emendatione." Finding that none of the ordinary objects of man's desire—wealth, power, and the like—affords permanent satisfaction, Spinoza came to the conclusion that only the attainment of truth gives that increase of power and accompanying joy which can be described as true happiness or salvation. Turning to the search for truth, he found the powers of the mind to be of a treble nature, each particular function yielding knowledge of various degrees of adequacy: (1) imagination, yielding only confused and inadequate ideas; (2) reason, giving the essences of things, and (3) intuition, disclosing the fundamental principles uniting those essences into a system and connecting individual things with those principles. The logical foundation of his whole system lies in the denial of the validity of all relative propositions, leaving the Absolute as the sole reality of the universe. On this see B. Russell, "Principles of Mathematics" (p. 448, Cambridge, 1903), which work is so far a justification of Spinoza's method in that it proves the possibility of deducing all the principles of pure mathematics and physics from a certain number of indefinables and indemonstrables. All turns with Spinoza, as with Descartes and the scholastics, on getting true and adequate knowledge of the essences of things. All the essences, when presented to the mind, carry with them a conviction of their own truth, and, as they can not contradict one another, they form a system of truths deduced from one principle as their primary cause. Such a principle can only be God, from whose qualities all the essences of things must flow as a matter of necessity, or, in other words, be "caused," since Spinoza does not distinguish between logical dependence and dynamic causation. In this way his logic passes over into his metaphysics, and in attempting to determine the cause of things, from the contemplation of which he is to obtain salvation, Spinoza has to determine the essences of things and their relation to the Highest Reality.

Ontology.

This Highest Reality is called by Spinoza, at the beginning of his "Ethics," to which attention may now be directed, either (*a*) substance, that by which all things subsist, (*b*) the self-caused ("causa sui"), that which is not dependent for its existence on that of anotner, or, finally, (*c*) God. The problem of Spinoza's philosophy is to connect this being, or principle, which is rigidly one, or rather unique, since there is none other, with the multiplicity of things and persons constituting the world of imagination. This he does by positing intermediate states of being which present different aspects of the One. God, being self-caused and, therefore, infinite, must have infinite aspects, or attributes. Two only of these are known to man, extension and thought, which sum up the world as humanly known. These attributes are perfectly parallel one to the other, all portions of extension or space, having attached to them, as it were, corresponding ideas or thoughts, though these in Spinoza's curious psychology are not necessarily conscious, and certainly not self-conscious. But these attributes being infinite, like their substance, can not constitute finite beings, which are due to modifications of these attributes, called by Spinoza modes. Some of these modes are immediate, infinite, and eternal, as "motion" in the attribute of extension, and "infinite intellect" in the attribute of thought. Others, again, are mediate, though still infinite and eternal, and these constitute in the sphere of extension the material universe ("facies totius universi"), and in the attribute of thought the infinite idea of God. Finally, it would seem—though Spinoza's thought is by no means clear and consistent on this point—that the modifications of Deity in these modes, being part of a system, conflict and struggle for existence in their claims to reality, and in this conflict give rise to individual things and persons, each of which has a tendency to self-preservation ("conatus sese conservandi"). In addition, God regarded as a substance with infinite attributes and yielding the essences of things is termed "natura naturans," whereas God in His relation to the modes of existence is termed "natura naturata." The whole scheme of things thus sketched out by Spinoza may possibly be indicated in the accompanying diagram.

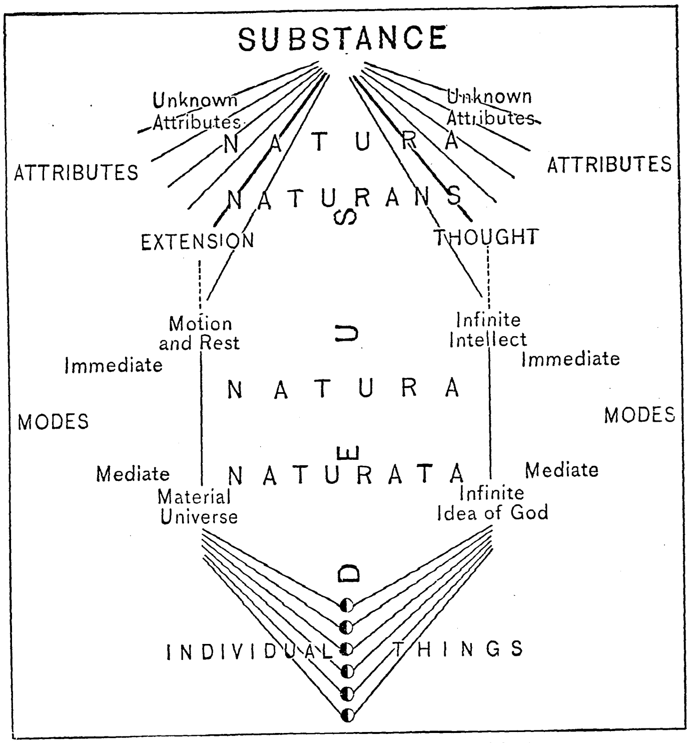


Diagram Illustrating Spinoza's Metaphysical System.

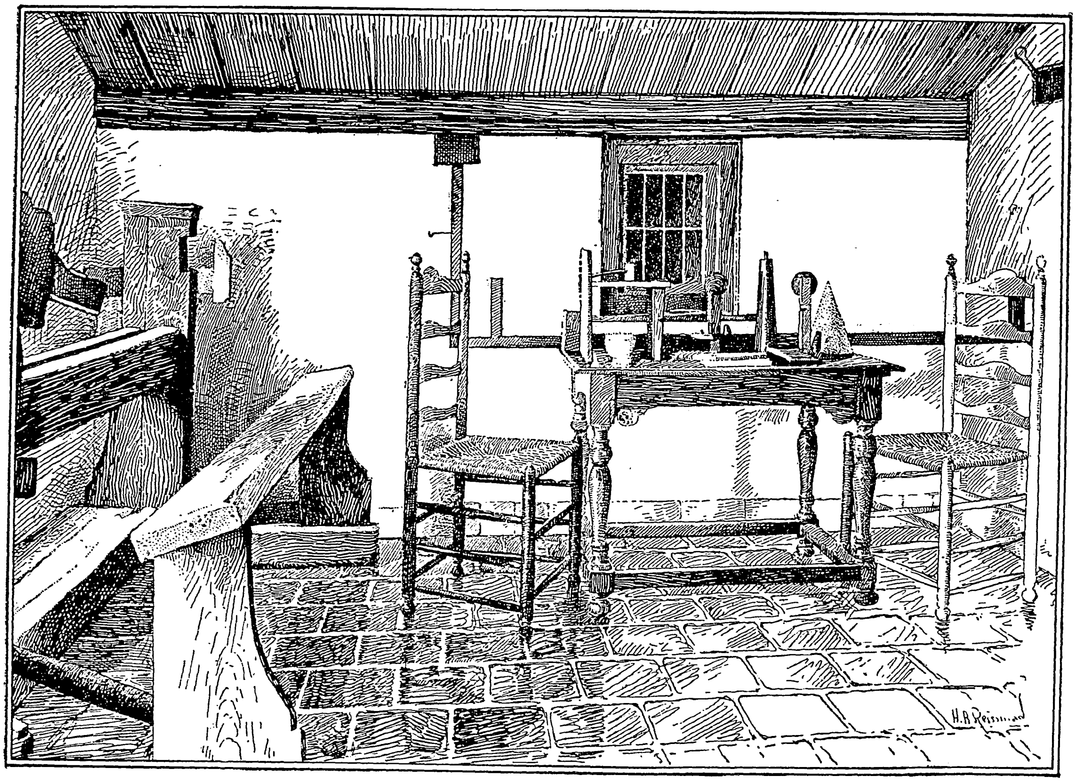
Among the individual things, those constituted by the modifications of the modes, the chief one of interest to the philosopher is man in his dual nature as a mode of extension, in his body, and as a mode of thought, in his mind. Neither of these can directly influence the other, though all changes in each are represented by parallel changes in the other. From this point of view the human mind is regarded by Spinoza as the idea of the body, a conception which is a commonplace in modern psychology, but which immensely shocked Spinoza's contemporaries. The unity of the individual soul is thus made to depend on the unity of the organism, though Spinoza makes a half-hearted attempt to explain the self as the idea of the idea of the body. Spinoza combines this view of mind with his theory of knowledge by supposing that external things, so far as they come in contact with the body, impress their character upon the latter, while their "soul side" makes corresponding changes in the mind. But owing to ignorance as to the mechanism by which these effects are produced by external objects, the changes in the mind are attributed to the external bodies themselves, and thus arise errors of imagination which, so far as they affect the tendency to self-preservation, give rise to passions or emotions that in turn divert the strivings after the true nature of man.

Spinoza's views of the nature and the classification of the emotions are a remarkable instance of scientific simplification. Taking the conatus, or tendency to self-preservation, as the key to human activity, he defines pleasure as everything tending

Emotions.

Reason as Freedom.

to increase the conatus, pain as everything lowering the vitality. There is, therefore, a desire ("cupiditas") to obtain things giving pleasure, and to repel things giving pain. But man is not impelled to act by pleasure or pain alone. The idea with which pleasure or pain is associated produces the desire to act. Hence, Spinoza is enabled to define the various classes of emotions according to the ideas which give rise to them; for example, he defines love as simply pleasure accompanied by the idea of an external cause, and hate as pain accompanied also by the idea of an external cause. Pity, again, is pain felt at another's misfortune, while benevolence is the idea of doing good for another whom we pity, and so on through a list of about fifty emotions, all associated with pain or pleasure through some idea. Spinoza is thus enabled to put aside entirely all free will, since the desire that determines this action is itself determined by the idea giving rise to it, beside which, in the scheme of parallelism, the volition of the mind is simply the soul side of a certain determination of the body derived from the laws of motion and rest (see "Ethics." iii. 2, schol.). Spinoza claims for this rigid determinism a number of advantages—the attainment of happiness through realizing one's intimate union with the nature of things; the distinction between things in one's power and things not in one's power; the avoidance of all disturbing passions; and the performance of social duties from a rational desire for the common good. The only freedom Spinoza recognizes is the freedom of acting in accordance with one's own nature and not being influenced by ideas derived from external things. These, as has been seen, form the emotions, and it is bondage to them which Spinoza calls "man's slavery." Accordingly, the only relief from this bondage lies in acting according to reason, the second of the two forms of knowledge, rather than from imagination, which gives rise to the disturbing emotions. By so doing man acts as himself, and at the same time, since reasoning gives him adequate ideas of the essences of things, or, in other words, of God's real nature, he acts in harmony with the divine character. By acting according to adequate ideas the mind has free play, and its conatus can only result in pleasure; hence the happiness of the sage who in acting from reason has power, virtue, knowledge, and freedom that is also necessity. The ethical side of this quality is fortitude or firmness to stand free of the passive affections, which is accompanied by courage ("animositas") in self-regarding actions, and generosity in action toward others. Not even the idea of death will deter the free man from acting according to these principles. His thoughts will dwell on anything rather than death.



Spinoza's Workroom at Rhijnsburg.
(From a photograph.)

But there still remains the third form of knowledge, the intuitive idea of the whole plan of the

"Intellectual Love of God."

universe; this idea, when kindled into emotion, becomes the mysterious quality known by Spinoza as the "intellectual love of God," which he further qualifies as part of the love with which God loves Himself, though here God is taken as synonymous with natura naturata. This is eternal, or, in other words, not subject to the changeable characteristics of the time and space order, and so far as man has the intuitive knowledge and love of God, his mind is, according to Spinoza, eternal, though he carefully avoids using the term "immortal." It is somewhat difficult to find a definite meaning in this mystical view, but Pollock suggests that Spinoza intends nothing other than that "work done for reason is done for eternity," to use Renan's words. It is somewhat remarkable that the most recent metaphysical views regard personal love as the most adequate expression of the union of insight and interest involved in the knowledge by the Absolute Being of the individual experiences of the universe (A. E. Taylor, "Elements of Metaphysics," pp. 61-62, London, 1903). But there is probably discernible here a direct influence of Spinoza's thought.

Sources: Descartes.

As regards the sources from which the main elements of Spinoza's system were derived, they are mainly two, Descartes and the Jewish philosophers of the Middle Ages. There is some evidence of influence also by Bacon, Hobbes, Giordano Bruno, and, to some extent, the scholastic philosophy, but it is somewhat doubtful, and its extent and importance are not very great, except possibly in the case of Bruno, as will be seen from the following analysis. There is no doubt that Spinoza derived his method from Descartes, who even gives an example of the geometrical method. The conception of God as the Supreme Being and as substance is common to all medieval philosophy, Spinoza's originality consisting in recognizing extension as one of His attributes: this, it will be remembered, was one of the test questions which led to his excommunication. Here he is approached very nearly by the views of Ḥasdai Crescas, who in his "Or Adonai" (I. ii. 1) points to the use of the word "maḳom" (locality) for the Deity, and concludes that "as the dimensions of the vacuum are included in the dimensions of the corporeal and its contents, so is God in all parts of the world. He is their place that supports and holds them." Crescas goes on to disprove the Aristotelian claim that an infinite material magnitude is impossible. Spinoza was without doubt acquainted with Crescas' writings, as he quotes him under the name of "Rab Gasdai" in his twenty-ninth letter (ed. Bruder). On the other hand, the doctrine of the parallelism of thought and extension is original with Spinoza, and is due to his desire to evade the difficulties of the Cartesian doctrine. At first sight the importance given to the attributes in Spinoza's system would seem to affiliate him with the whole line of Jewish thought which was centered around the doctrine of the attributes (see D. Kaufmann, "Gesch. der Attributenlehre," Berlin, 1877; and ATTRIBUTES). In reality Spinoza uses the term "attributes" in a slightly different signification, calling the "attributes" of the Jewish philosophers "properties," and using the distinction first made by Crescas ("Or Adonai," I. iii. 3), who, for example, regarded God's perfection and infinity as His properties rather than His attributes (see Joël, "Don Chisdai Creskas," pp. 19 *et seq.*, Breslau, 1866).

Giordano Bruno.

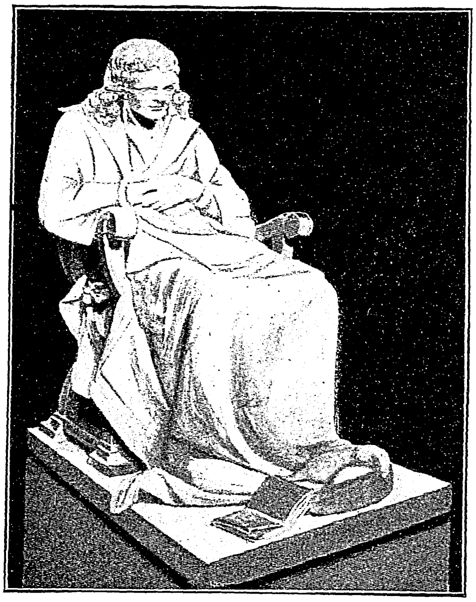
At the same time, the modes as parts of attributes seem to be derived from Bruno, who also makes the distinction between natura naturans and natura naturata. Bruno regards all nature as animated—a close approach to Spinoza's parallelism of the attributes. On the other hand, Bruno may have taken this notion from some of the cabalists, and in arguing that God is the immanent and not the transient cause of the universe, Spinoza himself claims that he agrees with the Hebrew masters, so far as he could conjecture from certain adulterated views ("Epistolæ," lxxiii.). The plan of the universe, as indicated above, though this is not given by Spinoza himself, resembles in large measure that of the Sefirot, and suggests that, much as he derided them, Spinoza obtained much general suggestion from the cabalists. He even appears to quote, in the "Ethics" (II. vii., note), Moses Cordovero on the identity of the thinker, thought, and the object thought of; this, however, is a general Aristotelian principle (see JEW. ENCYC. x. 370, *s.v.* REMAḲ). In Spinoza's view the doctrine of immanence bears a remarkable resemblance to that of emanation.

With regard to Spinoza's psychology and ethics, the idea of the conatus and even the term "conato de conservarsi" itself are derived from or influenced by Bruno. The doctrine of the emotions is partly influenced by Hobbes, but is mainly a development of and improvement on Descartes. On the other hand, the connection of the conatus with the divine activity may have been influenced by Crescas' view that the creation and conservation of the world imply the same activity of God (comp. Spinoza, "Cogitata Metaphysica," II. x. 6). The view of Spinoza with regard to the relativity of good and evil may possibly be derived from Maimonides' conception of them as belonging to the region of probable opinion ("Moreh," i. 11).

Ḥasdai Crescas.

The determinism of Spinoza was certainly derived from that of Crescas, who explains the difficulty of rewards and punishments from the same standpoint ("Or Adonai," II. v. 2) and on the same lines as Spinoza ("Cogitata Metaphysica," II. ix. 4), though it must be observed that Spinoza when he wrote the "Cogitata Metaphysica" was nominally at least a libertarian. So, too, in his denial of final causes Spinoza agrees with Crescas (*l.c.* II. vi. 1); therefore Spinoza may have obtained from Crescas, who identifies the divine will and understanding (*l.c.* III. i. 5), also the doctrine that the will and the understanding are the same faculty of the mind. The insistence of Spinoza upon the love of God as the highest quality of human reason is undoubtedly influenced by Crescas' original view that love rather than knowledge was the divine essence (*ib.*). The view, however, that the terms "wisdom" and "will" as applied to the Divine Being are not identical, but are merely homonymous, with the same terms as applied to man, is derived from Maimonides ("Moreh,"

i. 52 *et seq.*). In speaking of the "intellectual love of God," Joël remarks, Spinoza took the "love" from Crescas, the "intellect" from Maimonides. Finally, the somewhat mystical views as to the eternity of the intellectual love, Sir Frederick Pollock suggests, were derived from the Averroism of Gersonides, who considered that contemplative knowledge was the only proper function of the eternal mind, and, therefore, that the individual soul was immortal as regards the knowledge possessed by it at the time of death, though, being then deprived of an organism, it could not in any way extend it after death (see Pollock, "Spinoza, His Life and Philosophy," 2d ed., pp. 270–271, London, 1899). With regard to his views on eternity, and his remarkable conception that truth must be viewed "sub specie eternitatis," it is worthy of remark that Spinoza in the "Cogitata Metaphysica" (II. x. 5) adopts the view of Maimonides that Creation did not arise in time, but time in Creation ("Moreh," II. ii. 13). It should perhaps be added that besides these specific instances of indebtedness Spinoza is characteristically Jewish in two main aspects of his thought: the stress laid upon knowledge as an ideal (though this is common to all the Aristotelian schools), and his conception of cheerfulness as one of the highest virtues (see Joy).



Baruch Spinoza.
(From a statue by Mark Antokolski.)

It has been suggested by Joël that the development of Spinoza's thought was somewhat as follows: His early training was entirely from Jewish philosophers, but he was withdrawn from them by the attraction of Descartes, who freed his mind from the principle of authority in philosophy, and, as it appears, in religion; but he was never a pure Cartesian, not even when he wrote his account of the philosophy of Descartes, and he came back to the Jewish philosophers to solve the conflicting elements of Descartes' thought, with the important difference, however, that he did not attempt to reconcile the conclusions to which they led him with the statements of Scripture. His thought is thus Jewish, cast in a Cartesian mold, the chief difference being with regard to the authority of Scripture, and it is, accordingly, in his "Tractatus Theologico-Politicus" that his views are found most opposed to Jewish views.

"Tractatus Theologico-Politicus."

Spinoza's arguments in the "Tractatus Theologico-Politicus" are almost throughout connected either by way of agreement or opposition with those of Maimonides on the same topics. One of the main objects of the book is to show the contradictory nature of statements in the Scriptures, and Spinoza speaks with contempt of the efforts of the Rabbis to reconcile them. He is no doubt here referring to the most important work of his teacher Manasseh b. Israel, the "Conciliador." In his chapter on prophecy Spinoza differs from Maimonides in regarding the work of a prophet as being due almost entirely to imagination, which can not, like reason, give rise to truth. Spinoza does an injustice in stating that Maimonides regards angels as existing only in dreams, which was partly due to a misreading in the edition of Maimonides used by him; this again is one of the test questions leading to his excommunication. The criterion of a true revelation selected by Spinoza—the vividness of the prophetic vision—is that used by Crescas ("Or Adonai," II. iv. 3), and both thinkers used the same example, that of Hananiah. Spinoza's view of the selection of the Israelites, that they exceeded other nations neither in learning nor in piety, but in political and social salvation, places him in opposition to both Maimonides and Crescas. He here attributes the preservation of the Jews to their rites ("Tractatus Theologico-Politicus," iii. 53), but sees no reason why they should not once again become an independent nation (*ib.* iii. 55). In his discussion of ceremonies Spinoza declares that they are no longer binding on Jews or others, and were put into force only through the influence of the Rabbis and other ecclesiastical authorities. In opposing belief in miracles, as he does in the sixth chapter of the "Tractatus," Spinoza has in mind the examples and arguments of both Maimonides and Gersonides; in the remaining part Spinoza outlines what was later known as the "higher criticism," and anticipates in a somewhat remarkable manner some of the results of the school of Kuenen and Wellhausen, declaring, for example, that the Law was introduced, if not written, by Ezra. Many of the examples of inconsistency in the Pentateuch here cited were those familiar to Spinoza from Abraham ibn Ezra (see Pentateuch). Spinoza throughout argued against the connection of creed with citizenship, claiming liberty of thought, and to that extent pleading the cause of his own people; but in reality the book is an expansion in Latin of his former apologia written in Spanish for withdrawing from Jewish communion, and is opposed to ecclesiasticism of all kinds. Hence the violence of the opposition which it found in the age of ecclesiasticism.

Influence.

With regard to Spinoza's influence, one must distinguish between the effect of his views and life upon the general progress of free thought in Europe, and that of his special doctrines. The former first drew down upon him the execration of all the ecclesiastics and authoritarians whom he had opposed by his views, and the respect of a few freethinkers like Bayle, Edelmann, Goethe, Shelley, and Byron, who proposed to translate the "Ethics" jointly, and Marian Evans (George Eliot), who actually produced a translation, which, however, was never published. The spread of his special views began with the small circle of disciples which surrounded him at Amsterdam, and to which the world is probably indebted for the Latin translation of his "Ethics." The chief of these were B. Becker and Louis Meyer; but the publication of his works in Dutch had a considerable influence on Dutch theology in the persons of Frederick van Leenhoff (1647–1712), Wilhelm Deurhoff (1650–1717), and especially Pontiaan van Hattem (1641–1706), who created quite a school, of which Jacob Brill (1639–1700) was, after Hattem, the chief representative (see A. van der Linde, "Spinoza, Seine Lehre und Deren Erste Nachwirkungen in Holland," Göttingen, 1862).

Spinoza and Leibnitz.

But the principal person upon whom Spinoza's thought and personality had a decisive effect was Leibnitz (1646–1716), whose system of philosophy, as developed by Wolff, dominated the continent of Europe throughout the whole of the eighteenth century up to Kant, and whose views, developed by Herbart and Lotze, have again come to the fore in recent times. Those of Leibnitz's works that have been published give little evidence of any connection with Spinoza other than in the latter's calling as optician, and his public utterances on Spinozism were in every case hostile and derogatory; but more recent evidence shows that during the critical period of his development, from 1676 to 1686, he took a more favorable attitude toward both Spinoza and Spinozism, and this has been traced to an intimate personal association of the two philosophers during a whole month in 1676, not long before Spinoza's death. It was during this period that Leibnitz developed from a pure Cartesian into an opponent of Descartes, chiefly as regards the definition of body and the principles of motion, both of which subjects it is known that Leibnitz discussed with Spinoza. On reading the "Opera Posthuma," Leibnitz declared that the absence of teleology was the only thing with which he did not agree. When, however, a strong outcry broke out against Spinoza's "atheism," Leibnitz devoted himself to finding an escape from Spinozism, and it took him nearly ten years before he arrived at his theory of the monads, which he declared to be the only solution of the difficulty (see L. Stein, "Leibniz und Spinoza," Berlin, 1890). The most recent investigator of the philosophy of Leibnitz declares that in his views on soul and body, on God and ethics, he "tends with slight alterations of phraseology to adopt (without acknowledgment) the views of the derided Spinoza" (B. Russell, "Philosophy of Leibniz," p. 5, Cambridge, 1900).

Mendelssohn and Jacobi.

This opposition of Leibnitz practically ruined any chance of influence by Spinoza on the Germany of the early part of the eighteenth century, where the philosophy of the former and his follower Wolff was all-powerful. A revival of interest, however, was brought about by Jacobi's declaration that Lessing was a professed Spinozist and had declared that "there is but one philosophy, the philosophy of Spinoza." Mendelssohn, who in philosophy was a Wolffian, devoted some of his "Morgenstunden" to defending the memory of his friend Lessing from what he considered to be an aspersion, and this again tended to discourage any active adherence to Spinoza in Germany. Kant, by making the problem of metaphysics how man knows instead of what he knows, changed the course of metaphysical thought for a time; but renewed attention was drawn to Spinoza by his followers, Fichte, Schelling, and Hegel, the last-named of whom declared that to be a philosopher one must first be a Spinozist. Schleiermacher expressed himself in the highest terms of Spinoza, and Novalis called the so-called "atheist" a "God-intoxicated Jew." This revival of interest in Spinoza was due possibly to the influence of Herder and Goethe, who had both given utterance to great admiration for Spinoza's life and thought. The wide influence of Goethe, whose philosophical views were entirely Spinozistic and were expressed in some of the profoundest of his poems, was perhaps the chief influence which drew to Spinoza the attention of such men as Coleridge, Auerbach, Matthew Arnold, Froude, and Renan.

Science and Spinozism.

It was mainly the spread and influence of science in its more dogmatic aspects that, toward the end of the nineteenth century, caused especial interest to be taken in Spinoza's thought. By a sort of instinct Spinoza seems to have anticipated, by deductions from first principles, many of the most fundamental principles of modern science; *e.g.*, the conservation of energy (in his belief that the total quantity of motion in the universe is constant); the non-existence of a vacuum; and the existence of nothing real in the universe but configurations and motions (expressly stated in the "Ethics" I., Appendix). Even the infinity of attributes, which occupy such an otiose position in Spinoza's system, may be regarded as a premonition of the recognition by modern mathematicians of the infinity of non-Euclidean spaces. Especially as regards the connection of body and mind the Spinozistic view of parallelism has been growing in favor among psychologists, though just at present there is somewhat of a reaction against it. The positing of the conatus as the central force of mind is in full agreement with the most recent insistence upon conation as the key to mental activities, while the tendency of the conatus to maintain things pleasant seems to be an anticipation of Bain's law of conservation. The conatus has been regarded as anticipating even the theory of evolution, but this is due to mistaking the statical nature of Spinoza's thought. Nevertheless, the two great exponents of philosophical evolution Herbert Spencer and Haeckel have adopted many, if not most, of Spinoza's views, which have thus become representative of science as opposed to religion. Meanwhile there has been a recent tendency to resort once more to Leibnitz for a defense of the faith, as shown in the Gifford lectures of Professors Ward and Royce, so that at the present day, at any rate in the English-speaking world, the problem of philosophy is once more resolved into the opposition of Spinoza and Leibnitz. Thus, of the chief contemporary English philosophers, F. H. Bradley, with his follower A. E. Taylor, may be regarded as representing Spinoza, while G. E. Moore and his disciple B. Russell are adherents of the school of Leibnitz.

Position Among Jews.

With his excommunication all communion between Spinoza and his own people ceased, and among Jews little notice was taken of his thought for nearly a century, except by a few philosophical thinkers, who dealt with his views as they would with those of other philosophers. Thus David Nieto was accused before Ḥakam Ẓebi in 1705 of having identified God and nature after the manner of Spinoza, but defended himself satisfactorily by distinguishing between the individual things of nature and nature in general; in other words, between natura naturans and natura naturata. Mendelssohn, as before mentioned, was, owing to his Leibnitzian tendencies, strongly opposed to Spinoza as a philosopher, but made use in his "Jerusalem" of some of the arguments of the "Tractatus." Solomon Maimon, like Wachter before him and A. Krochmal after him, tried to prove the identity of Spinozism and cabalism (see Krochmal's "Eben ha-Roshah," Vienna, 1871). Heine accords the life of Spinoza respectful treatment, but does not appear to have made any particular study of his thought. On the other hand, Berthold Auerbach did much to spread the knowledge of Spinozism in Germany by his excellent translation of the works as well as by his novelistic account of the career of the philosopher ("Spinoza, ein Denkerleben," Leipsic, 1847). M. Joël has contributed more, perhaps, than any other investigator to the study of the sources from which Spinoza derived his main conceptions. L. Stein has elucidated the relations of Spinoza and Leibnitz, while M. Grünwald has traced Spinoza's influence in Germany, and I. Elbogen has made a study of the "De Intellectus Emendatione." One of the best recent monographs on the philosopher is that of L. Brunschvicg, and the best account of the "Ethics" in English is by H. H. Joachim. Jacob Freudenthal's work on his life and his system of thought is the result of a life's work on the subject. Altogether, it may be said that Spinoza has at last come to his own among his own people.

But it would be misleading to regard Spinoza as specifically or characteristically Jewish in his thought. His antagonistic attitude toward the authority of the Scriptures differentiates him from all thinkers recognized to be Jewish, and S. D. Luzzatto was, after all, in the right in protesting violently against regarding the philosophy of Spinoza as especially Jewish while in such opposition to the Judaism of the Rabbis and the mass of the Jews. Whether any reconciliation can be made between Spinozism and Judaism on the higher plane of philosophic thought is another question, to which S. Rubin has devoted his life. In any case, Spinoza's thought is so definitely connected either by derivation or by opposition with that of the Jewish medieval thinkers that it must be regarded either as the consummation or as the evisceration of Jewish philosophy.

Bibliography: A whole literature has collected around the name of Spinoza and is summed up in A. van der Linde, *Benedictus Spinoza*, The Hague, 1871, which contains 441 entries. This may be supplemented by the bibliography given in M. Grünwald, *Spinoza in Deutschland*, pp. 361-370, Berlin, 1897, containing 226 entries of the literature between 1870 and 1897. The chief editions of the works have been referred to above, but it may be added that a portfolio of facsimiles of the recently recovered letters of Spinoza was published in Leyden in 1904. The standard life of Spinoza is that of Jacob Freudenthal, *Spinoza, Sein Leben und Seine Lehre*, Stuttgart, 1904, founded on a collection of sources (including the contemporary life by Colerus) issued by the same author under the title *Lebensgeschichte Spinoza's*, Berlin, 1899. Spinoza's relations to his Dutch contemporaries are best given in Meinsma, *Spinoza en Zijn Kring*, The Hague, 1896. The best accounts of Spinoza's system are those of Camerer, *Die Lehre Spinoza's*, Stuttgart, 1877; James Martineau, *A Study of Spinoza*, 3d ed., London, 1895; and Sir Frederick Pollock, *Spinoza, His Life and Philosophy*, 2d ed., London, 1899. Though written from a hostile standpoint, partly based upon Trendelenburg, *Historische Beiträge zur Philosophie*, Berlin, 1867, Martineau's study is by far the clearest with relation to Spinoza's system. Studies of the "Ethics" have been written by Kirschmann, 2d ed., Berlin, 1871 (with notes on the other works), and by H. H. Joachim, Oxford, 1901. The literature which followed the discovery of the *Korte Verhandeling* is summarized by Van der Linde, Nos. 342-353; noteworthy is the study by Avenarius, *Ueber die Beiden Ersten Phosen des Spinozischen Pantheismus*, Leipsic, 1868. A. Chajes has written *Ueber die Hebräische Grammatik Spinoza's*, Breslau, 1869, and C. Siegfried, *Spinoza als Kritiker und Ausleger des Alten Testaments*, Berlin, 1867. On the relation of Spinoza to his Jewish predecessors see Joël, *Beiträge zur Geschichte der Philosophie*, Breslau, 1876, and J. Jacobs, *Jewish Ideals*, pp. 49-56. Rubin, in his *Teshubah Niẓẓaḥat*, Vienna, 1857, discussed Luzzatto's attacks on Spinoza. The latest histories of Jewish philosophy as a matter of course contain sections on Spinoza; *e.g.*, J. S. Spiegler, *Gesch. der Philosophie des Judenthums*, xli.-xliii. Berlin, 1900; and S. Bernfeld, *Da'at Elohim*, pp. 521-530, Wilna, 1898.

J.

SPIRA (SPIRO): Family of scholars and rabbis of Speyer, Rhenish Bavaria, with numerous branches in other parts of Germany, and in Bohemia, Galicia, and Poland. It originally bore the name "Ashkenazi," to distinguish it from the Kahane or Katz-Spira family. Many prominent families of Bohemia added to their names that of "Spiro" or "Spira"; *e.g.*, **Frankl-Spiro, Wiener-Spiro,** and **Porges-Spiro.**

1. **Aaron Jehiel Michel Spira:** Son of Benjamin Wolf Spira (No. 7) and grandson of Jehiel Spira; rabbi of the Meisel Synagogue, Prague.

Bibliography: Landshuth, *'Ammude ha-'Abodah*, p. 12; Zunz, *Literaturgesch.* p. 438; Podiebrad-Foges, *Alterthümer der Prager Judenstadt*, pp. 76, 149, Prague, 1870.

2. **Aaron Simeon Spira:** Son of Benjamin Wolf Spira (who died in 1630); rabbi at Frankfort, Lemberg, Brez in Lithuania, Lublin, Cracow, Vienna, Prague (1640), and also rabbi of Bohemia; born 1599; died Dec. 3, 1679, at Prague. He led an ascetic life, and collected many pupils about him. He wrote "Moreh Yeḥezḳiel Ḳaṭon" (Prague, 1695), penitential prayers ("seliḥot") on the sufferings of the Jewish community of Prague when that city was besieged by the Swedes in 1648.

3. **Aryeh Löb Spira** (called also **Klein Löb**): Son of Isaac Spira; born 1701; died May 19, 1761, at Wilna, where he was associate rabbi. At the age

toen ik u. E brief v 19. maart ontfing, was op myn vertrek na
Amsterdam, en daerom liet ik die maar half gelesen t'huys liggen
myn wederkomst te beantwoorden, denkende, dat hij niet anders begreep
als dingen nopende de eerste questie, maar die daar na lesende,
bevont hij een heel anders inhielt, en niet alleen het bewys
van die dingen versoekende, die alleen om ieder van myn gevoelen en
meening te waarschouwen, maar niet om hem te bewyse, nog om hem
verklaren, heb in de voorreeden laten setten, maar ook van een
groot deel van de Ethica, die gelyk een ieder weet op de meta-
phisica en phisica gegront moet worden. en derhalve heb niet konnen
resolveren daarop te voldoen, maar gelegentheyt gewenst, om
mondeling op het vriendelykste te mogen versoeken van u verstant
te willen afstaan, en dan sou ik met eenen reden van myn weygering
geven, en eyndelyk tonen, dat die dingen tot de solutie van u eerste
questie niet en doen, maar in tegendeel de meeste van die
questie af te hangen. so dat het waar is, dat men myn meening
aengaande de nootsaakelykheyt der dingen sonder de solutie van dese
nieuwe vraegen niet sou konnen verstaan werden, dewyl de solutie
van dese en wat er toe behoort, niet kan gevat werden sonder dat
men die nootsaakelykheyt der dingen verstaat. want gelyk u. E weet
die nootsaakelykheyt raakt de methaphisica, en de kennis van
die moet altyt voor af gaan. doch eer ik die gewenste
gelegentheyt heb konnen krygen, heb ik dese week weer een brief
onder couvert van myn hospes ontfangen, die eenige misnoeging door
het lang wachten verooorsaakt schynt te tonen, en daarom my
genootsaakt heeft dese weynige regels te schryven, om myn resolutie
en voornemen in 't kort te seggen. gelyk ik nu al gedaan heb. doe ik
hope dat u. E dese saak overwogen hebbende sal van syn versoek
willighlyk afstaan, en niet te min syn goede genegentheyt my waart
behouwe. van myn kant in al wat ik kan of mag sal toonen
dat ik ben

B. de Spinoza

HOLOGRAPH LETTER OF BARUCH SPINOZA, DATED 1665.

(From Van Vloten and Land, "Benedicti De Spinoza Opera.")

of seventeen he corresponded with the rabbi of the Karaites at Troki. Aryeh Löb acquired a knowledge of mathematics and Hebrew grammar. He wrote "Naḥalat Ariel" and "Me'on 'Arayot" (Dyhernfurth, 1732), a double commentary on the treatise Soferim.

BIBLIOGRAPHY: Buber, *Anshe Shem*, p. 118; Fuenn, *Ḳiryah Ne'emanah*, pp. 111 *et seq.* (contains Spira's epitaph).

4. **Asher Anshel Spira**: Son of Aaron Wolf Spira; died in 1661 at Vienna, in which city he had married the daughter of the wealthy and learned Moses Mirels. He was the ancestor of the Frankl-Spira family.

BIBLIOGRAPHY: Podiebrad-Foges, *l.c.* p. 149.

5. **Benjamin Wolf Spira**: Son of Jehiel Spira; died at Prague Oct. 12, 1630. He was for more than thirty years associate rabbi and director of a Talmudic academy in that city. Although universally respected his extraordinary modesty prevented him from accepting the chief rabbinate of Prague; but he took charge of it temporarily from 1629 until his death.

6. **Benjamin Wolf Spira**: Son of Asher Anshel Spira; died at Prague in 1712. He was educated by his grandfather Aaron Simeon Spira in that city. He was the father of the parnas Simon Wolf Frankl.

7. **Benjamin Wolf Spira**: Son of Aaron Simeon Spira; born 1640 at Prague; died there Jan. 11, 1715. He was for twenty years chief rabbi of Bohemia.

BIBLIOGRAPHY: Podiebrad-Foges, *l.c.* pp. 73, 148 *et seq.*

8. **Elijah Spira**: Son of Benjamin Wolf Spira; died at Prague April 14, 1712. He was rabbi at Tiktin, and afterward preacher and director of a large Talmudic academy at Prague. He published "Eliyahu Zuṭa," a commentary on that part of Mordecai Jafe's "Lebush" relating to the Shulḥan 'Aruk, Oraḥ Ḥayyim (Prague, 1689, 1701). His valuable work "Eliyahu Rabbah" (Sulzbach, 1757), containing discussions on the Oraḥ Ḥayyim, was printed posthumously by his son, whose name is not given. "Shishah Shiṭṭot," novellæ on six Talmudic treatises, were published by his grandson Elijah b. Wolf Spira (Fürth, 1768). His manuscript works, including commentaries on the Bible and Talmud, as well as sermons, responsa, etc., were destroyed by fire in 1754.

BIBLIOGRAPHY: *Eliyahu Rabbah*, Preface; Fürst, *Bibl. Jud.* i. 239 (contains many incorrect statements); Zunz, *Monatstage*, p. 19.

9. **Isaac Spira**: Son of Eliezer Spira; died March 16, 1711, at Lemberg. He wrote "Elef ha-Magen" (notes on the four ritual codices), printed by his son Nathan Spira (Zolkiev, 1732).

10. **Isaac Spira**: Son of Jehiel Michael Spira; died at Prague in 1749. He was rabbi at Lissa, then at Jung-Bunzlau, Bohemia (1704-27), and finally at Prague, and was the teacher and father-in-law of Jonathan Eybeschütz. He wrote novellæ on Talmudic treatises, likewise responsa, etc.; but none of his works has been printed.

BIBLIOGRAPHY: Buber, *l.c.* p. 118; Fuenn, *l.c.* p. 111.

11. **Isaac Kohen-Spira**: Son of David Kohen-Spira; died in 1582 at Cracow, where he had officiated as rabbi. He was the father-in-law of Rabbi Meïr Lublin. He had a namesake and contemporary, **Isaac Kohen-Spira**, who was probably rabbi at Kreminiec, and afterward at Cracow.

BIBLIOGRAPHY: Frankel, *Zeitschrift*, iii. 386; *Ha-Karmel*, xii. 658; J. B. R., *Bemerkungen zu I. M. Zunz Ir ha-Zedek*, p. 18, Brody, 1878.
E. C. M. K.

12. **Isaac ben Nathan Spira**: Rabbi and scholar of the sixteenth and seventeenth centuries; born at Grodno; died in Lublin 1623. He was principal of a large yeshibah at Kowlo, whence he went to Cracow and became identified there with the publication of his father's "Imre Shefer." While engaged upon this work he accepted a call as rabbi to Lublin, and the uncompleted work of his father's was taken to Venice, where it was published in 1583 under the title "Bi'urim." On account of the misrepresentations which were circulated in Venice regarding the contents of this work Isaac found himself compelled to forbid its further sale in that city; and in 1586 he issued a new edition in Lublin.

BIBLIOGRAPHY: Fürst, *Bibl. Jud.* iii. 372; Friedberg, *Marganita Shappira*, pp. 4-6.

13. **Isaac ben Nathan Spira**: Polish merchant; born at Cracow 1624; died there 1649; son of Rabbi Nathan. He was a man of means, and when, in May, 1641, the Jewish community of Cracow was financially embarrassed he voluntarily made it a loan of 800 Polish gulden in gold. When, toward the end of the eighteenth century, his tombstone began to decay, the community showed its gratitude by erecting a new one.

BIBLIOGRAPHY: Wolf, *Bibl. Hebr.* iv. 1207; Fürst, *l.c.* iii. 372; Friedberg, *Luḥot Zikkaron*, pp. 61-62, Frankfort-on-the-Main, 1904.

14. **Israel Issachar Spira**: Son of Nathan Nata Spira (No. 23); died at Worms 1630. He was chairman of the rabbinical college at Pinsk, and later rabbi at Worms. He is mentioned in the responsa (No. 88) of MaHaRaM of Lublin, and in the responsa collection "Ḥuṭ ha-Shani," § 22.

BIBLIOGRAPHY: Friedberg, *Luḥot Zikkaron*, p. 59; *Ḳobeẓ 'al Yad*, iii. 5, Berlin, 1887; Friedberg, *l.c.* p. 6.

15. **Israel ben Nathan Spira** (known also as **Israel ha-Darshan**): Scholar, rabbi, and preacher of the seventeenth century; died in 1700. While still young he was called to Kalisz in Poland, where he founded a large school which soon became famous. Among his most prominent pupils were Jehiel Michael Segal and Selig Margolioth. Israel was the author of "Bet Yisrael," a commentary on the "Hilkot Sheḥiṭah," of which 201 paragraphs appeared in Berlin in 1726. Appended thereto was a second work, "Bet Pereẓ," a commentary on the treatise Megillah which he wrote in honor of his son-in-law.

BIBLIOGRAPHY: Benjacob, *Oẓar ha-Sefarim*, p. 74; Friedberg, *l.c.* pp. 7-10.

16. **Jacob ben David ha-Kohen Spira**: Rabbi of Neutitschein, Moravia, in the seventeenth and eighteenth centuries; relative of Isaac ben David Spira. He was the author of "Ohel Ya'aḳob," haggadic novellæ (Frankfort-on-the-Oder, 1719). His sons Moses Moeschel and Isaac severally added to it "Liḳḳuṭim" to difficult passages in the Midrash and Yalḳuṭ and novellæ to Yoreh De'ah.

BIBLIOGRAPHY: Steinschneider, *Cat. Bodl.* col. 1257; Nepi-Ghirondi, *Toledot Gedole Yisrael*, p. 187; Benjacob, *l.c.* p. 19; Fuenn, *Keneset Yisrael*, p. 577; Azulai, *Shem ha-Gedolim*, ii. 3; Fürst, *l.c.* i. 17.

E. C. S. O.

17. Jacob Kohn-Spira: Son of Isaac Spira; lived at Lemberg in the seventeenth century. He was the author of "Be'er Mayim Ḥayyim" (Cracow, 1616), a commentary on the Pentateuch and on Rashi's commentary.

BIBLIOGRAPHY: Buber, *l.c.* p. 112.

E. C. M. K.

18. Judah Löb Spira (nicknamed **Pap**): Rabbi of the seventeenth and eighteenth centuries; officiated probably in Frankfort-on-the-Main. He was the author of "Ha-Reḳasim la-Biḳ'ah" (Altona, 1815), containing brief notes on the Bible.

BIBLIOGRAPHY: Steinschneider, *l.c.* col. 1373; Fürst, *l.c.* iii. 372.

E. C. S. O.

19. Menahem Zion b. Meïr Spira: A native probably of Speyer. He wrote in 1430 "Ẓiyyuni" (Cremona, 1560), a cabalistic commentary on the Pentateuch, prefaced by a song for the Sabbath and enumerating the labors forbidden on that day.

BIBLIOGRAPHY: Steinschneider, *Cat. Munich*, codices 68, 76; Landshuth, *l.c.* p. 193; Zunz, *S. P.* p. 110; idem, *Literaturgesch.* p. 523.

E. C. M. K.

20. Nathan ben Isaac Spira: Cabalist and rabbi of Lublin in the seventeenth century; died in that city 1652; grandson of Nathan Spira of Grodno. He edited and published the Zohar (Lublin, 1623), to which he added a commentary.

BIBLIOGRAPHY: Friedberg, *l.c.* p. 6.

E. C. S. O.

21. Nathan Nata Spira: Son of Selig Spira and grandson of Nathan Nata Spira; died Nov. 13, 1761, at Eibenschütz. He was rabbi in various communities, his last charge being at Eibenschütz, in Moravia, where he officiated only one year, dying in early manhood.

BIBLIOGRAPHY: Dembitzer, *Kelilat Yofe*, i. 118 (contains Spira's epitaph, in which ס"ב must be read instead of ס"ח).

22. Nathan Nata Spira: Son of Reuben David Spira, associate rabbi of Cracow; died at Reggio, Italy, in 1662. He was sent from Jerusalem to Germany and Italy to collect alms. Most of his works are cabalistic in nature, including "Tub ha-Areẓ" (Venice, 1655; Zolkiev, 1781), on the excellencies of the Holy Land, on the holy vessels, etc.; "Yayin ha-Meshummar" (*ib.* 1660), on "Yayin Nesek"; "Maẓẓot Shimmurim" (*ib.* 1665), on the mezuzah, ẓiẓit, etc. Azulai saw the manuscripts of his religious discourses and of several of his cabalistic works.

BIBLIOGRAPHY: Azulai, *l.c.* i. 148; De Rossi-Hamberger, *Hist. Wörterb.* p. 301; Steinschneider, *Cat. Bodl.* col. 2051.

23. Nathan Nata Spira: Son of Samson Spira; rabbi at Grodno; died 1577. He wrote a supercommentary on the commentaries of Rashi and Elijah Mizraḥi under the title "Imre Shefer," and a commentary on the Pentateuch, published by his son Isaac (Lublin, 1586 [1597]), and at the request of his pupils "Mebo She'arim" (Lublin, n.d.; Jessnitz, 1724), a commentary on Isaac Duran's "Sha'are Durah." The Zohar was edited not by him, as Fürst and others think, but by Nathan b. Isaac Spira (Lublin, 1624). Nathan Nata left two sons: Isaac (No. 12) and Israel Issachar (No. 14).

BIBLIOGRAPHY: David Gans, *Ẓemaḥ Dawid*, ed. Offenbach, p. 30a; Jehiel Heilprin, *Seder ha-Dorot*, ed. Warsaw, i. 248; Azulai, *l.c.* i. 148; De Rossi-Hamberger, *l.c.* p. 301; Fuenn, *l.c.* p. 55; Fürst, *l.c.* iii. 373; Zedner, *Cat. Hebr. Books Brit. Mus.* p. 609.

24. Nathan Nata Spira: Son of Solomon Spira and grandson of Nathan Nata Spira (No. 23); born about 1584; died July 20, 1633. In 1617 he was called to the rabbinate of Cracow, where, being well-to-do, he refused to accept a salary. He was gifted with an extraordinary memory, and devoted much time to the study of the Cabala. He wrote a cabalistic commentary on the prayer of Moses in Deut. iii. 24, and two prayers, under the title "Megalleh 'Amuḳḳot" (Cracow, 1637; Fürth, 1691). He published also novellæ to Alfasi's work which were printed with it (Amsterdam, 1720).

BIBLIOGRAPHY: Azulai, *l.c.* i. 148; De Rossi-Hamberger, *l.c.* p. 301; Steinschneider, *l.c.* col. 2049; Zunz, *Monatstage*, p. 41; Zedner, *l.c.* p. 610; I. M. Zunz, *'Ir ha-Ẓedeḳ*, pp. 52, 176 (contains Spira's epitaph).

25. Solomon Spira: Son of Nathan Nata Spira (No. 24); born in 1616; slain by the Cossacks under Chmielnicki in 1648. He was rabbi of Satanow, and edited, together with his brother Moses, the work "Megalleh 'Amuḳḳot," to which he wrote additions and a preface.

BIBLIOGRAPHY: Fuenn, *l.c.* p. 66.

SPIRITS, CONCEPTION OF. See DEMONOLOGY.

SPIRO, JOSEPH MOSES: Austrian rabbi and Talmudic author; born in Trietsch, Moravia, about 1770; died at Kanitz, Moravia, Aug. 3, 1830. He was educated by his father, Abraham, who was rabbi in Trietsch, and, although a sickly child, he became at an early age a Talmudist of distinction. At first officiating as dayyan in his native city, he became successively rabbi in Schafa, Moravia; Habern, Bohemia; and, finally (1824–30), in Kanitz. He was one of the earliest advocates of systematic instruction in religious literature, and condemned the pilpul very severely. He edited the "Sefer ha-Ḥinnuk" (Brünn, 1799), which he, like many others, ascribed to Aaron ha-Levi of Barcelona; and also wrote a book entitled "Mesillah le-Elohenu" (Prague, 1810). This work is divided into three parts: the first, entitled "Ha-Derek ha-Yashar," treating of the evils of the unsystematic training of children; the second, called, in honor of his father, "Berit Abraham," containing halakic discussions; and the third, "Rebid ha-Zahab," containing homilies.

BIBLIOGRAPHY: *Deborah*, 1902, pp. 97 *et seq.*

D.

SPITZ, ABRAHAM (NAPHTALI HIRSCH) BEN MOSES HA-LEVI: Moravian rabbi; born about 1628; died at Worms in 1712. In 1663 he was appointed rabbi of a Moravian congregation, and in 1692 dayyan at Nikolsburg, where he officiated for twelve years. In 1704 he was called to Worms, where he remained until his death. He was the author of the following works: "Male Raẓon"

(Frankfort-on-the-Main, 1710), novellæ to forty-five treatises of the Talmud; "Yerushshat Naftali" (appended to "Male Razon"), explanations of the most difficult Tosafot passages in the Talmud; and many unpublished works that relate to the Talmud. Before he died he instructed his sons to study daily two pages of his commentary during the year of mourning. An approbation by him of the ritualistic work "Maginne Erez" was printed in the edition of that work (Dyhernfurth, 1692)

E. C. S. O.

SPITZ, ISAAC (EIZIG): Ab det din in Bunzlau, Bohemia; born 1764; died in Bunzlau May 6, 1842. He wrote "Mat'amme Yiẓḥaḳ," songs, melodies, and sayings, which was published by his son Yom-Ṭob in Prague in 1843.

BIBLIOGRAPHY: Busch, *Jahrbuch*, i. 176; Benjacob, *Oẓar ha-Sefarim*, p. 323; Steinschneider, *Cat. Bodl.* col. 2651.

E C. S. O.

SPITZ, MEÏR B. JOHANAN: Rabbi of Oronie, Hungary, in the eighteenth century. He wrote "Katit la-Ma'or," halakic novellæ to some Talmudic treatises; and "Shemen ha-Ma'or," novellæ on ritualistic matters. Both these works appeared in Vienna in 1792.

BIBLIOGRAPHY: Fürst, *Bibl. Jud.* iii. 375; Steinschneider, *Cat. Bodl.* col. 1717; Benjacob, *Oẓar ha-Sefarim*, p. 251.

E. C. S. O.

SPITZ, MORITZ: American rabbi; born at Csaba, Hungary, Oct. 14, 1848. He was educated at the University of Prague, and received his rabbinical diploma from Rabbi Judah Tebeles of that city. From 1870 to 1871 he officiated as rabbi of Congregation B'nai Sholom, Chicago, Ill.; from 1871 to 1878, of Congregation Emanu-El, Milwaukee, Wis.; and since 1878 he has been rabbi of Congregation B'nai El of St. Louis, Mo.

Spitz has contributed to the "American Israelite" and to "Die Deborah," signing his articles with the nom de plume "Ben Abi." He was formerly editor of the "Jewish Tribune," and is at present (1905) editor of the "Jewish Voice" of St. Louis.

BIBLIOGRAPHY: *The American Jewish Year Book*, 1903-4, p. 101.

A. F. T. H.

SPITZ, YOM-ṬOB BEN ISAAC: Teacher of Hebrew and German in the Jewish school of Prague during the first half of the nineteenth century. He was the author of "Aïon Bakut" (Prague, 1826), on the death of his grandfather R. Eleazar Fleckeles of Prague; "Zikron Eliezer" (*ib.* 1827), a biography of Fleckeles; and "Toledot Yiẓḥaḳ," a biography of his father, Isaac Spitz. Yom-Ṭob was a collaborator on the "Bikkure ha-'Ittim," to vols. vi. and vii. of which he contributed sixteen scientific essays.

E C. S. O.

SPITZ, ẒEBI HIRSCH: German author and Talmudist of the eighteenth century. He wrote "Dibre Ḥakamim we-Ḥidotam" (Offenbach, 1802), a commentary on those passages of the Talmud in which it is said "the Torah speaks in the language of man" or "the passage is explained according to its literal sense."

BIBLIOGRAPHY: Benjacob, *Oẓar ha-Sefarim*, p. 104.

E. C. S. O.

SPITZER, BENJAMIN SOLOMON: Austrian rabbi and champion of Orthodoxy; died in Vienna, at an advanced age, Dec. 5, 1893. He was the son-in-law of R. Moses Sofer, and was for more than forty years rabbi of the ultra-Orthodox congregation of Vienna, whose synagogue was situated in the "Shiffgasse." He was a strong opponent of Reform, and severely attacked the Vienna "Culturgemeinde" for the Reform measures it introduced in 1872. A collection of his sermons, funeral orations, and novellæ on Talmudical subjects (the latter part bearing the separate title "Shimlat Binyamin") was published by his son-in-law Joseph Baer Kohen, under the title "Tiḳḳun Shelomoh" (Vienna, 1892). Benjamin was buried in Presburg.

BIBLIOGRAPHY: A. Rabbinowitsch, *Eine Interessante Errinerungs-Geschichte von dem Ehrwürdigen Rabbiner Soloman Spitzer* (in Judæo-German), Vienna, 1894; *Der Israelit* (Mayence), 1893, Nos. 97, 99; *Aḥiasaf*, 5655 (1895), pp. 457-458.

E. C. P. Wi.

SPITZER, FRIEDRICH (SAMUEL): French art collector and dealer; born in Presburg 1814; died in Paris 1890. He was the son of the official grave-digger of the community and went penniless to Vienna. In 1848 he accompanied the Austrian army to Italy, and upon his return commenced collecting objects of art. A picture which he bought for five gulden proved to be an Albrecht Dürer and laid the foundation of his fortune. Together with a dealer, König, he went to London, but being unable to sell this picture there, he disposed of it in Paris. His visits to the large collectors in England had, however, revealed to him the value placed upon old weapons, and accordingly, on his return to Austria, he bought up whatever old arms he could find, and sold them in London. Later he established a business at Aix-la-Chapelle, where he sold many antiquities to Baron Adolf von Rothschild. Wishing to increase his business, he went to London, but failing of success in that city, he accepted the invitation of Rothschild to settle permanently in Paris, where his business prospered greatly. In 1870, at the outbreak of the Franco-Prussian war, he sent the greater part of his collection to London, where it was subsequently bought by Sir Richard Wallace. His collection of armor he took to Vienna, where Baron Anselm von Rothschild bought it for 500,000 francs. Spitzer thereupon purchased the celebrated collection of Caran in Lyons. He had gradually amassed a large fortune and a splendid private collection of art objects, for which Gambetta offered him 6,000,000 francs. The collection was to be embodied in a state museum, of which Spitzer was to be director for life. A lottery was even instituted to provide the money, but the offer was finally refused. A Berlin syndicate, headed by the banker Hainauer, offered 25,000,000 francs for the whole gallery; but nothing resulted from this offer. In his will Spitzer arranged that his collection should be sold three years after his death. It then brought

10,000,000 francs, the armor being sold to the present King of England. The illustrated "Catalogue de la Collection Spitzer" (3 vols., Paris, 1887) is a remarkable production; its price was 1,200 francs.

S. G.

SPITZER, SAMUEL: Hungarian rabbi; born in 1839 at Keszthely, where his father was rabbi; died in 1896; a descendant of Yom-Ṭob Lipmann Heller. He studied at Prague, and became rabbi at Esseg in 1856. He was generally recognized as an authority on religious questions, and several humanitarian societies were founded within his congregation as a result of his activity.

Besides several sermons, Spitzer published numerous works on the history of civilization, of which the following may be mentioned: "Das Heer- und Wehrgesetz der Alten Israeliten, Griechen, und Römer," 1869; "Die Jüdische Ehe," Esseg, 1869; "Die Jüdische Gemeindeordnung," *ib.* 1873; "Das Mahl bei den Alten Völkern," Presburg, 1877; "Urheimisch in Slavischen Ländern," 1880; "Das Jubiläum in Wörtlicher und Historischer Bedeutung," Esseg, 1882; "Das Blutgespenst auf Seine Wahre Quelle Zurückgeführt," 1883; "Das Religiöse Bedenken, oder Kann Man den Eid vor einem Andersgläubigen Ablegen?" 1883; "Ueber Baden und Bäder bei den Alten," 1883; "Die Uhr bei den Alten," 1885; "Ueber Sitte und Sitten der Alten Völker," 1886; and "Der Brief bei den Alten Völkern," 1893.

S. G. S.

SPITZER, SIGMUND: Austrian physician; born at Nikolsburg, Moravia, 1813; died at Vienna 1894. Two years after receiving his degree of doctor of medicine from the University of Vienna he accepted a professorship in anatomy at the medical school of Constantinople. There he founded the anatomical museum, for which he prepared many specimens. It was partly his influence which overcame the opposition predominant in Constantinople to dissections. In 1844 he took charge of the medical clinic.

Spitzer was summoned in 1845 to attend the sultan 'Abd al-Majid, whom he cured of a very dangerous chronic disease. This led to his appointment as chief private physician to the sultan. In 1847 he was appointed director of the medical academy at Constantinople. Spitzer's near relations with 'Abd al-Majid aroused the envy of the courtiers; and several futile endeavors were made to get rid of him. Finally an attempt upon his life induced him to resign his position. The sultan then appointed him councilor to the Turkish embassy at Vienna. In 1857 he was appointed representative of the Porte at the court of Naples, where he remained until 1860. 'Abd al-Majid died in the following year, and Spitzer severed his connection with the Turkish governmental service. The remainder of his life he spent in Paris and Italy.

S. F. T. H.

SPITZER, SIMON: Austrian mathematician; born at Vienna Feb. 3, 1826; died there April 2, 1887. He studied mathematics at the University of Vienna, was graduated in 1850, and became in 1851 privat-docent at the Vienna polytechnic institute. In 1857 he was appointed professor of algebra at the Vienna "Handelsschule," which position he held until 1887, at the same time lecturing at the polytechnic, where he became assistant professor of analytic mechanics in 1863, and professor in 1870. When the "Handelsschule" was changed into the "Handelsakademie" Spitzer became its first rector (1872-73).

Of Spitzer's numerous works the following may be mentioned: "Ueber die Aufsuchung der Imaginären Wurzeln Höherer Numerischer Gleichungen"; "Allgemeine Auflösung der Zahlengleichungen mit Einer und Mehreren Unbekannten"; "Anleitung zur Berechnung der Leibrenten und Anwartschaften"; "Tabellen über die Zinseszinsen- und Rentenrechnung"; and "Ueber Münzen und Arbitragen Rechnung."

STACTE. See INCENSE; SPICES.

STADE: City in the province of Hanover, Prussia. Its Jews are first mentioned in a charter granted them in 1349. In 1613 they received a patent of protection from Johann Friedrich, Archbishop of Bremen; and on Sept. 28, 1615, he threatened that if the Hamburg council imposed a special Jewish safe-conduct on his protégé and court Jew "Solomon Herscheider, Jewish physician living at Stade," who had hitherto been permitted to conduct business and to trade in Hamburg without taxation, the Portuguese of the latter city would no longer be allowed free passage through his territory. In 1618 Solomon, the "protected Jew of Stade," who is doubtless identical with this Solomon Herscheider, was purveyor of silver for, or perhaps joint lessee of, the mint; in 1620, however, he was thrown into prison, apparently on a charge of embezzlement.

There was a Jewish cemetery in Stade which in 1632 was turned into a garden. In the years 1628 and 1630 the tax paid by the Jews for their protection amounted to 60 marks per annum, whereas it had been 75 marks in 1624 and 180 marks in 1619. During the Danish siege of Stade, which ended the Swedish dominion over the city, a great fire broke out (Aug. 29, 1712) that destroyed the Jewish street and other quarters of the town. In 1827 in the royal Hanoverian district of Stade three presidents for the communities of Otterndorf, Osterholz, and Rotenburg were appointed from among the Jews themselves.

At present (1905) the Jews of Stade number 26 in a total population of 10,000. They meet for worship in a rented house.

D. A. LEW.

STADE, BERNHARD: German Protestant Hebraist and historian of Israel; born in Arnstadt May 11, 1848. He became privat-docent in the University of Leipsic in 1873, and professor of theology at Giessen in 1875.

Of Stade's works the following may be mentioned: "De Isaiæ Vaticiniis Æthiopicis Diatribe" (Leipsic, 1873); "Ueber die Alttestamentliche Vorstellung vom Zustand nach dem Tod" (*ib.* 1877); "Lehrbuch der Hebräischen Grammatik" (part i., *ib.* 1879), an attempt at harmonizing the philological methods of Olshausen and Ewald; "Geschichte des Volkes Israel" (vol. i., Berlin, 1881–84; 2d ed. 1885; vol. ii., in collaboration with O. Holtzmann, *ib.* 1888), a critical reconstruction of the history of Israel in accord with Graf and Wellhausen; "Hebräisches Wörterbuch zum Alten Testament" (in collaboration with Siegfried, Leipsic, 1893); "Ausgewählte Akademische Reden und Abhandlungen" (Giessen, 1899). In conjunction with F. Schwally, Stade edited a revised Hebrew text of the Book of Kings (Leipsic, 1904), for Haupt's "Sacred Books of the Old Testament." Stade has been the editor since 1881 of the "Zeitschrift für Alttestamentliche Wissenschaft."

STADTHAGEN, JOSEPH: German rabbi, apologist, and author; died at Stadthagen Sept. 5, 1715; son of Samson of Metz, where his grandfather Joseph b. Isaac ha-Levi ASHKENAZI (died at Frankfort-on-the-Main in 1628) officiated as rabbi for many years. Joseph acted for several decades as "Landesrabbiner" for the district of Schaumburg-Lippe, and took the name "Stadthagen" from his place of residence. Well versed both in apologetic literature and in the New Testament, he was peculiarly qualified to become a leader in religious controversies. He was called to Hanover by the Hanoverian financial agent Leffmann BEHRENDS, and there, on July 21, 1704, in the presence of the elector Georg Ludwig and the noted electoress Sophie (the friend of Leibnitz), he took part in a very successful religious disputation with a convert (Edzardus of Hamburg?). In the following year (1705) Stadthagen published in Amsterdam his "Dibre Zikkaron," a work in two parts, containing ethical reflections on the rules for ritual slaughtering.

Of Stadthagen's seven daughters may be mentioned **Rebekka,** wife of Samuel Bonn of Altona (Kaufmann, "Heinrich Heine's Ahnensaal," p. 298), and **Hindele,** who married Uri Lipmann b. Joseph of Elrich (near Nordhausen). Of his sons the most important were **Bernard,** who attended the fair at Leipsic in 1697 and 1698 ("Monatsschrift," 1901, p. 507), and **Gershon,** who died at Altona on the 10th of Aug., 1721 (Grunwald, "Hamburgs Deutsche Juden," 1904, p. 243, No. 836). Among his descendants were "Landesrabbiner" Levi HERZFELD of Brunswick, and Ephraim Rothschild, manufacturer and philanthropist of Stadtoldendorf, Brunswick, who died Jan. 30, 1901.

BIBLIOGRAPHY: Benjacob, *Oẓar ha-Sefarim*, p. 103, No. 63; Wiener, in *Monatsschrift*, 1864, p. 169; Kaufmann, in *R. E. J.* 1891, p. 98; manuscript of Stadthagen's *Minḥat Zikkaron*, and also manuscript notes in a copy of the *Dibre Zikkaron*, both in the possession of Dr. A. Lewinsky.

E. C. A. LEW.

STAFF ("shebeṭ," "maṭṭeh," etc.): Herodotus (i. 195) and Strabo (xvi. 746) assert that among the Babylonians every man carried a ring and a staff, which latter was decorated at the upper end with a carved representation of a flower or something similar. It seems to have been the universal custom among the ancient Hebrews also to carry a staff (comp. Gen. xxxviii. 18)—a custom which perhaps dates from the time when they lived the nomadic life of herdsmen. The staff was indispensable to the herdsman, for by means of it he kept his flock together (Ex. iv. 2; Lev. xxvii. 32; Ps. xxiii. 4; Micah vii. 14; Zech. ii. 7); the upper end of the long staff was bent, as Egyptian illustrations indicate. Nor was the staff to be despised as a weapon (Ps. xxiii. 4). Similarly, a long, perhaps straight, stick, with a goad at the end, was used by the peasants for driving and guiding the oxen before the plow, and also for breaking the clods behind it, as the peasants still use the stick to-day; this also was an effective weapon (Judges iii. 31; I Sam. xiii. 21, xvii. 43). Finally, the staff was indispensable to the wanderer, and a support to the weak and sick (Gen. xxxii. 10; Ex. xxi. 19; Zech. viii. 4). In the hands of the overseers it became an instrument of punishment, and therefore a badge of office (Isa. ix. 4, xxx. 31, *et al.*).

E. G. H. I. BE.

STAHL, FRIEDRICH JULIUS: German jurist and publicist; born at Munich Jan. 16, 1802; died at Brückenau Aug. 10, 1861. In his eighteenth year he took the examination for the position of teacher at the Munich gymnasium, but was confronted by the usual difficulty experienced by Jewish youths seeking government positions, and he adopted Christianity Nov. 6, 1819, in Erlangen. He studied jurisprudence at the universities of Würzburg, Heidelberg, and Erlangen, and in 1827 became privat-docent at the University of Munich. In the same year his treatise "Ueber das Aeltere Römische Klagerecht" was published in that city; and he then devoted himself to his great work on the philosophy of law, "Die Philosophie des Rechts nach Geschichtlicher Ansicht," 2 vols., Heidelberg, 1830–37 (5th ed. 1878). In 1832 he was called to the University of Erlangen, as associate professor, and in November of the same year was appointed professor in the University of Würzburg. He published his "Die Kirchenverfassung nach Lehre und Recht der Protestanten" at Erlangen, in 1840 (2d ed. 1862).

In politics, as in philosophy, jurisprudence, and religion, Stahl was an extreme reactionary, in which spirit he issued a number of pamphlets devoted to a vigorous criticism of the revolutionary tendencies, proposals, and proceedings, of that troublous period. He was rewarded by the king with an appointment in 1849 as life member of the First Chamber, afterward known as the "Herrenhaus"; and from 1852 to 1858 he was a member of the "Evangelischer Oberkirchenrat." The downfall of the Manteuffel ministry led to the loss of his influence in the latter body, and in 1858 he resigned. In both assemblages he remained from beginning to end the recognized leader of his party. According to Lord Acton, he had a more predominant influence and showed more political ability than Lord Beaconsfield (Acton, "Letters to Mary Gladstone," p. 103, London, 1904).

The writings which Stahl produced in Berlin during the revolutionary agitation were: "Ueber die Kirchenzucht," 1845 (2d ed. 1858); "Das Monarchische Prinzip," Heidelberg, 1845; "Der Christliche Staat," *ib.* 1847 (2d ed. 1858); "Die Revolution und die Konstitutionelle Monarchie," 1848 (2d ed. 1849); "Was Ist Revolution?" *ib.* 1852, of which three editions were issued. His subsequent writings were: "Der Protestantismus als Politisches Prinzip," *ib.* 1853 (3d ed. 1854); "Die Katholischen Widerlegungen," *ib.* 1854; "Wider Bunsen," 1856; "Die Lutherische Kirche und die Union," 1859 (2d ed. 1860). After his death there were published "Siebenzehn Parlamentarische Reden," *ib.* 1862, and "Die Gegenwärtigen Parteien in Staat und Kirche," *ib.* 1868.

S. M. Co.

STAHL, WILHELM: German economist; born at Munich June 2, 1812; died at Giessen March 19, 1873. While still very young he lost both parents, and was cared for in the house of a well-known philologist, Döderlein, in Erlangen, after his brother, Friedrich Julius Stahl, had adopted Christianity. After completing his studies at the gymnasium he attended the universities of Munich and Halle, and devoted himself particularly to the study of physics and chemistry, later securing a position as teacher at the industrial school in Fürth. Encouraged by Professor Hermann of Erlangen, he applied himself zealously to the study of political economy, and finally established himself as docent of that science at the University of Erlangen, where he soon received an appointment as associate professor. In 1848 he was elected a representative to the Frankfort Parliament, and three years later received a call as professor at the University of Giessen, where he remained until his death.

Of Stahl's published works the following are the most important: "Die Einführung der Neueren Staatsprincipien im Grossherzogthum Hessen," Giessen, 1862; "Die Bedeutung der Arbeiter-Associationen in Vergangenheit und Gegenwart," *ib.* 1867; and "Das Deutsche Handwerk," *ib.* 1874.

STANDARD. See FLAG.

STANISLAVSKI, SIMON JUDAH: Russian author and journalist; born at Nikopol, Yekaterinoslav, Russia, Dec. 18, 1850; son of Moses Stanislavski, a wealthy Lithuanian merchant. Simon was at first destined for a commercial career, but he finally overcame the opposition of his father, and during 1863-64 he received instruction from Dobsewitch, who went to Nikopol from Pinsk in 1861. During this period young Stanislavski carried on an extensive correspondence with such men as Abraham Lebensohn, Samuel Fuenn, and others; but his new teacher, Ilya ORSHANSKI, turned his ambition into other directions. Under Orshanski's guidance Stanislavski read Buckle, Draper, Darwin, and Mill, and also began a systematic study of Latin, mathematics, and other sciences.

Stanislavski began his journalistic career by writing for the "Peterburgskie Viedomosti," and for the "Den," which was edited by Orenstein. An article on the works of Dr. Erter gained for him the acquaintance of Morgulis and of A. Y. Landau, who in 1871 began publishing the "Yevreiskaya Biblioteka." When the "Voskhod" commenced to appear (1881), Landau invited Stanislavski to fill the position of assistant editor on that periodical. Among the most important articles written by Stanislavski may be mentioned a sketch of B. Stern's Jewish school in Kishinef ("Voskhod," April, 1884), and biographies of Mendel Levin, Israel Samostz ("Voskhod," June, 1886), Hyman HURWITZ, Solomon Posner, and Benjamin Mandelstamm. Stanislavski wrote also many other articles on various topics under the pseudonyms הרואה and "Z."

STANS IBN ABITUR, JOSEPH. See ABITUR, JOSEPH BEN ISAAC BEN STANS IBN.

STAR-WORSHIP: This is perhaps the oldest form of idolatry practised by the ancients. According to Wisdom xiii. 2, the observation of the stars in the East very early led the people to regard the planets and the fixed stars as gods. The religion of the ancient Egyptians is known to have consisted preeminently of sun-worship.

Among the Israelites.

Moses sternly warned the Israelites against worshiping the sun, moon, stars, and all the host of heaven (Deut. iv. 19, xvii. 3); it may be said that the prohibition of making and worshiping any image of that which is in heaven above (Ex. xx. 4; Deut. v. 8) implies also the stars and the other celestial bodies. The Israelites fell into this kind of idolatry, and as early as the time of Amos they had the images of Siccuth and Chiun, "the stars of their god" (Amos v. 26, R. V.); the latter name is generally supposed to denote the planet Saturn. That the kingdom of Israel fell earlier than that of Judah is stated (II Kings xvii. 16) to have been due, among other causes, to its worshiping the host of heaven. But the kingdom of Judah in its later period seems to have outdone the Northern Kingdom in star-worship. Of Manasseh it is related that he built altars to all the host of heaven in the two courts of the house of YHWH, and it seems that it was the practise of even kings before him to appoint priests who offered sacrifices to the sun, the moon, the planets, and all the host of heaven. Altars for star-worship were built on the roofs of the houses, and horses and chariots were dedicated to the worship of the sun (*ib.* xxi. 5; xxiii. 4-5, 11-12). Star-worship continued in Judah until the eighteenth year of Josiah's reign (621 B.C.), when the king took measures to abolish all kinds of idolatry (*ib.*). But although star-worship was then abolished as a public cult, it was practised privately by individuals, who worshiped the heavenly bodies, and poured out libations to them on the roofs of their houses (Zeph. i. 5; Jer. viii. 2, xix. 13). Jeremiah (vii. 18) describes the worship of the queen of heaven to have been more particularly common among the women. Ezekiel, who prophesied in the sixth year of the captivity of Jehoiachin (591 B.C.), describes the worship of the sun as practised in the court of the Temple (Ezek. viii. 16 *et seq.*), and from Jer. xliv. 17 *et seq.* it may be seen that even after the destruction of the Temple the women insisted on continuing to worship the queen of heaven. In Job (xxxi. 26 *et seq.*) there is an allusion to the kissing of the hand in the adoration of the moon (see Moon, Biblical Data). According to Robertson Smith ("The Religion of the Semites," p. 127, note 3, Edinburgh, 1889), star-worship is not of great antiquity among the Semites in general, nor among the Hebrews in particular, for the latter adopted this form of idolatry only under the influence of the Assyrians. But Fritz Hommel ("Der Gestirndienst der Alten Araber," Munich, 1901) expresses the opposite opinion. He points to the fact that the Hebrew root which denotes the verb "to swear" is the same as that which denotes "seven," and claims that this fact establishes a connection between swearing and the seven planets; and he furthermore declares that there are many Biblical evidences of star-worship among the ancient Hebrews. Thus, the fact that Terah, Abraham's father, had lived first at Ur of the Chaldees, and that later he settled at Haran (Gen. xi. 31), two cities known from Assyrian inscriptions as places of moon-worship, shows that Abraham's parents were addicted to that form of idolatry. According to legend, Abraham himself worshiped the sun, moon, and the stars before he recognized the true God in Yhwh (see Abraham in Apocryphal and Rabbinical Literature). The golden calf, Hommel declares, was nothing more than an emblem of the moon-god, which, in the Assyrian inscription, is styled "the youthful and mighty bull" and the lord of the heavenly hosts (comp. "Yhwh Ẓeba'ot," which term is intentionally omitted from the Pentateuch). He assigns the same character to the two calves made by Jeroboam several centuries later (I Kings xii. 28).

The ancient Hebrews, being nomads, like the Arabs favored the moon, while the Babylonians, who were an agricultural nation, preferred the sun. But, as appears from Ezek. xx. 7-8, the moon-worship of the Israelites, even while they were still in Egypt, was combined with sun-worship. The close similarity between the ancient Hebrews and the southern Arabs has led Hommel furthermore to find allusion to moon-worship in such Hebrew names as begin with "ab" (= "father"), as in "Abimelech" and "Absalom," or with "'am" (= "uncle"), as in "Amminadab" and "Jeroboam," because these particles, when they appear in the names of southern Arabs, refer to the moon.

The term "star-worship" ("'abodat kokabim u-mazzalot") in the Talmud and in post-Talmudic literature is chiefly a censor's emendation for "'abodah zarah." In connection with star-worship, it is related in the Mishnah ('Ab. Zarah iv. 7) that the Rabbis ("zeḳenim") were asked if God dislikes idolatry why He did not destroy the idols. The Rabbis answered: "If the heathen worshiped only idols perhaps God would have destroyed the objects of their adoration, but they worship also the sun, the moon, the stars, and all the host of heaven, and God can not destroy the world on account of the heathen."

STAROKONSTANTINOV: City in the government of Volhynia, Russia. Jews seem to have settled in this city soon after it was founded, for during the great uprising of the Cossacks under Chmielnicki (1648–58) it had a considerable Jewish community. In 1648–49 the wild Cossacks and Tatars killed the greater part of the Jewish inhabitants, although the latter were very bravely defended by the Polish general Wishnevetzki. Three years later (1651), according to the testimony of Prince Semen Prozorovski, the murderous hordes, on their way to Sborowo, captured Starokonstantinov anew, murdering the greater part of the inhabitants and applying the torch to the city itself. In 1659 the city was besieged by the hetman Vygovski, but the inhabitants successfully defended themselves. In 1793 Starokonstantinov, together with the rest of the Ukraine, was annexed to Russia. At present (1905) the city has about 17,000 inhabitants, of whom the Jews constitute approximately 60 per cent. The inhabitants carry on a considerable trade with Austria and Prussia, as well as with the surrounding towns and villages. The city has two synagogues, five prayer-houses, a city school for Jewish children, and the usual Jewish benevolent institutions.

H. R. J. Go.

STATISTICS: As referring to Jews, statistics deal mainly with populations, their ages and distribution, Migration, Morbidity, Mortality, Occupations, Criminality, Births, and Marriages. Most of these topics have already been treated in articles in The Jewish Encyclopedia; it remains to deal here only with the Jewish population as a whole and its distribution.

Ancient Times.

The Pentateuch contains a number of statements as to the number of Jews that left Egypt, the descendants of the seventy sons and grandsons of Jacob who took up their residence in that country. Altogether, including Levites, there were 611,730 males over twenty years of age, and therefore capable of bearing arms; this would imply a population of about 3,154,000. The Census of David is said to have recorded 1,300,000 males over twenty years of age, which would imply a population of over 5,000,000. The number of exiles who returned from Babylon is given at 42,360. Tacitus declares that Jerusalem at its fall contained 600,000 persons; Josephus, that there were as many as 1,100,000, of whom 97,000 were sold as slaves. It is from the latter that most European Jews are descended. These appear to be all the figures accessible for ancient times, and their trustworthiness is a matter of dispute. The difficulties of commissariat in the Sinaitic desert for such a number as 3,000,000 have been pointed out by Colenso; and the impossibility of the area of Jerusalem containing much more than 80,000 persons with any comfort has been referred to as proving the exaggeration of the figures of Josephus and Tacitus.

In the Hadrianic war 580,000 Jews were slain, according to Dion Cassius (lxix. 14). According to Mommsen, in the first century C.E. there were no less than 1,000,000 Jews in Egypt, in a total of 8,000,000 inhabitants; of these 200,000 lived in Alexandria, whose total population was 500,000. Harnack ("Ausbreitung des Christentums," Leipsic, 1902) reckons that there were 1,000,000 Jews in Syria at the time of Nero, and 700,000 in Palestine, and he allows for an additional 1,500,000 in other places, thus estimating that there were in the first century 4,200,000 Jews in the world. This estimate is probably excessive.

As regards the number of Jews in the Middle Ages, Benjamin of Tudela, about 1170, enumerates altogether 1,049,565; but of these 100,000 are attributed to Persia and India, 100,000 to Arabia, and 300,000 to Thanaim (?), obviously mere guesses with regard to the Eastern Jews, with whom he did not come in contact. There were at that time probably not many more than 500,000 in the countries he visited, and probably not more than 750,000 altogether. The only real data for the Middle Ages are with regard to special Jewish communities, of which the following is a list, mainly derived from I. Loeb ("R. E. J." vol. xiv.):

JEWISH POPULATIONS OF MEDIEVAL CITIES.

The Middle Ages were mainly a period of expulsions. In 1290, 16,000 Jews were expelled from England; in 1396, 100,000 from France; and in 1492, about 200,000 from Spain. Smaller but more frequent expulsions occurred in Germany, so that at the commencement of the sixteenth century only four great Jewish communities remained: Frankfort-on-the-Main, 2,000; Worms, 1,400; Prague, 10,000; and Vienna, 3,000 (Grätz, "Gesch." x. 29). It has been estimated that during the five centuries from 1000 to 1500, 380,000 Jews were killed during the persecutions, reducing the total number in the world to about 1,000,000. In the sixteenth and seventeenth centuries the main centers of Jewish population were in Poland and the Mediterranean countries, Spain excepted.

According to the estimate of Basnage, at the beginning of the eighteenth century the total number of European Jews was 1,360,000, and the Jews of the kingdom of Poland (including Lithuania), according to a census at the first division in 1772, numbered 308,500. As these formed the larger part of the European Jews, it is doubtful whether the total number was more than 400,000 at the middle of the eighteenth century; and, counting those in the lands of Islam, the entire number in the world at that time could not have been much more than 1,000,000.

But since then the increase has been remarkably rapid. It was checked in Germany by the laws limiting the number of Jews in special towns, and perhaps still more by overcrowding, regarding which a few details may be given:

Place.	Date.	Jews.	Houses.	Average.	Authority.
Prague....	1786	7,951	266	29.3	Ficker, "Bevolk. Böhmen," p. 55.
Frankfort.	1811	2,214	159	13.9	"The Times" (London), Aug. 8, 1884.
Prague....	1843	5,646	279	20.3	Ficker, *l.c.*

Tchubinsky reports that in 1840 the Jews of southern Russia were accustomed to dwell thirteen in a house, whereas among the general population the average was only four to five ("Globus," 1880, p. 340). The rapid increase has undoubtedly been due to the early age of marriage and the small number of deaths of infants in the stable communities (see GENERATION, LENGTH OF). The chief details known for any length of time are for Holland, Hungary, Poland, and Württemberg:

HOLLAND.

Date.	Population.
1829	46,408
1839	52,245
1849	58,626
1859	63,790
1869	68,003
1879	81,693

1900	11,916

*From Reclus, "Nouvelle Géographie," v. 397.
†Of these, 16,580 paid taxes.

There is also a certain amount of evidence as to the Jewish increase in proportion to that of adherents of other creeds. The following table is taken from Haushofer, "Lehrbuch," p. 510, and from Oettingen, "Moralstatistik."

Country.	Years.	Catholic.	Protestant.	Jews.
Austria	1851-57	8.20	5.40	19.60
"	......	0.76	0.76	3.35
" Western	1861-70	2.86	2.86	3.08
Baden	1846-64	1.50	5.00	3.60
"	1857-63	0.85	1.06	1.04
Bavaria	1852-64	4.50	4.50	4.20
France	1861-66	0.36	1.10	2.27
Hanover	1852-64	3.30	5.00	8.60
Netherlands	1849-59	1.20	1.60	0.30
Prussia	1831-49	0.85	0.94	1.26
"	1852-64	11.40	11.10	12.90
Saxony	1854-64	27.10	15.30	68.10
Switzerland	1850-60	5.30	4.20	34.00
Württemberg	1846-64	0.20	0.40	3.40

But the figures of increase are often very deceptive, as they may indicate, not the natural increase by surplus of births over deaths, but accession by immigration. This applies especially to Germany during the early part of the nineteenth century, when Jews from Galicia and Poland seized every opportunity of moving westward. On the other hand, Ruppin has shown that within recent years, when forcible measures have been taken to prevent Russian Jews from settling in Germany, the growth of the Jewish population there has almost entirely ceased, owing to the falling off in the number of births, and, possibly, to emigration. The increase of the Jews of England and the United States during the last quarter of a century has, however, been exceptional, owing to extensive immigration.

There is only one further point to be considered in connection with the increase of Jewish population, and that is the losses by conversion which have occurred during the nineteenth century and which are still occurring in the lands where the Jews are persecuted. Leroy ("Judentaufen im 19. Jahrhundert: Ein Statistischer Versuch," in "Nathanael," iii. and iv., Berlin, 1899) has made the following estimate for the nineteenth century:

	Became Protestant.	Became Roman Catholic.	Became Greek Catholic.	Total Loss.
Bavaria	330	5,000	......	22,520
Prussia	13,128			
Saxony	770			
Württemberg	115			
Others parts of Germany	3,177			
Denmark	100	......	......	100
France	600	1,800	......	2,400
Great Britain	28,830	......	......	28,830
Holland	1,800	......	......	1,800
Norway and Sweden.	500	......	......	500
Switzerland	100	......	......	100
Austria	6,300	28,200	200	44,756
Hungary	2,056	8,000		
Italy	......	300	......	300
Rumania	......	......	1,500	1,500
Russia	3,136	1,000	69,400	84,536
Turkey	......	......	3,300	3,300
Other parts of the Balkan Peninsula.	......	......	100	100
Asia and Africa	100	500	......	600
Australia	200	......	......	200
North America	11,500	1,500	......	13,000
Totals	72,742	57,300	74,500	204,542

This would give an average of only 2,000 per annum throughout the century, but the number has largely increased of recent years. A rough estimate made ten years ago placed the number of conversions at about 3,000 per annum—1,000 in Austria-Hungary, 1,000 in Russia, 500 in Germany, and the remainder in the Anglo-Saxon world. A slight reduction, about 500 a year, must be made in the figures regarding the total losses, because of the converts to Judaism, such conversions resulting mainly through the marriage of Christian women to Jews.

The difficulty of ascertaining to which cause any increase is due—whether to immigration or to natural augmentation—consequent upon the fact that accurate statistics with regard to Jews are available for comparatively few countries, formerly caused the widest diversity to exist as to the total number of Jews in the world, as can be seen from the list of estimates given in the table on page 531.

The approximation of the latest estimates shows that the foundations for enumeration are becoming more sure and the variations possible less wide. The basis of modern estimates is that of I. Loeb, given in 1879, the chief errors of which were the omission of the 1,000,000 Jewish inhabitants of Poland and the estimate of the Falashas at 200,000. Andree gives details founded upon actual censuses, and he has been followed by Jacobs, Harris, and Ruppin. Of the earlier estimates, that of Jost, in the tenth volume of his history, is the most noteworthy, and was founded on a set of careful figures and enumerations derived mainly from censuses taken about 1840. He does not estimate the total, but an addition of his figures results in 3,143,000, a figure probably not far from the truth. Of recent years very much fuller and more accurate details have been obtained as to the number of Jews, especially in Europe, where the majority of countries consider the religious creeds of their inhabitants as part of the census returns.

Methods of Estimating Population.

In the English-speaking world, especially in England and America, where no religious census is taken, recourse must be had to estimates instead of enumerations. These are mainly derived from three sources: (*a*) the death-rate, (*b*) the marriage-rate, (*c*) school statistics. As regards the first source, the burials in Jewish cemeteries are almost always a sure indication of the number of Jewish inhabitants. If the population is a stable one, an estimate based on the ordinary death-rate of the country would give too small a figure (see MORTALITY); where much migration has occurred the error would be still greater, owing to the fact that migrants are chiefly of the most viable ages. The estimate deduced from the marriage-rate is generally much above the true figures, if the ordinary marriage-rate is taken, as, owing to the nubile ages of migrants, a larger proportion of Jews marry in the Western countries. It is usual to assume that the children of school age, whose numbers can be very frequently ascertained, are one-fifth of the population. Here, again, Jewish statistics vary somewhat from general statistics, owing to the eagerness of Jewish parents to send their children to school. In cases where no actual enumeration of the number of Jewish children is possible, an estimate can at times be made by finding the number of children absent from school on the Day of Atonement, which, as a rule, corresponds almost exactly to the number of Jewish children attending the schools. See LONDON.

The following list, taken from various sources, gives the numbers of Jews in each country, together with the ratio to its entire population. The cities having a large Jewish population are given under the head of the country to which they belong, their proportion to the general population being given also. As far as possible, the date at which the census was made is given; and where the city estimate is of later or earlier date, this also is mentioned. When no date is given, the census of 1900–1 is meant. Estimates are indicated by asterisks.

Ecuador, Bolivia, Peru, Chile, and Uruguay	1,000	.01	9,318,033
Guiana, Venezuela, and Colombia	2,000	.03	6,345,539
AUSTRALASIA.			
Australia	15,122	.49	3,036,570
New South Wales	6,447	.56	1,132,234
Sydney	6,000	1.33	451,000
Queensland	733	.18	406,658
South Australia	786	.24	320,431
Victoria	5,897	.51	1,140,405
Melbourne	5,500	1.11	493,956
Western Australia	1,259	2.54	49,782
Perth	500	1.38	36,274
New Zealand	1,611	.20	772,719
Tasmania	107	.07	146,667

From this it will be seen that the total number of Jews in the various continents is 11,273,076, distributed as follows:

Europe	8,977,581	North America	1,527,535
Asia	352,340	South America	26,121
Africa	372,659	Australasia	16,840

The accuracy of these figures is doubtful since, as stated above, England and the United States have no religious statistics. With respect to the lands of Islam, an attempt has recently been made by the Alliance Israélite Universelle to obtain some definite data; the result is given below:

MOHAMMEDAN COUNTRIES.

Algeria	63,000
Bulgaria	31,064
Egypt	30,578
Morocco	109,712
Persia	49,500
Tripoli	18,660
Tunis	62,540
Turkey in Europe	188,896

(Turkey in Asia.)	
Archipelago (Turkish)	4,557
Asia Minor	77,458
Crete	646
Mesopotamia	59,235
Syria and Palestine	79,234
Yemen	35,000
Total	810,080

With some of these results may be compared those of Cuinet ("La Turquie d'Asie," Paris, 1892–95): 121,381 for Turkey in Asia, and 70,382 for Syria and Palestine.

The difficulty in securing trustworthy results from Asiatic and Islamic countries may be illustrated by reproducing the various estimates made of the Jewish population of Jerusalem—a subject which is, of course, interesting in itself:

Estimate.	Authority.	Year.
7,100	Prussian consul	1867
7,120	Zochokke	1868
8,000	Lemisse	1873
9,000	English consul Moore	1887
14,000	Lortel	1881
16,000	Ritter	1895
21,000	Luncz ("Luaḥ")	1898
25,000-30,000	"New International Encyclopedia"	1903
28,000	Meyer's tours	1893
29,000	M. A. Meyer (JEW. ENCYC. vii. 151)	1904
30,000	W. W. Wilson ("Encyc. Brit.")	1902
30,774	Cuinet	1896
41,000	Baedeker and Brockhaus	1902
55,000	Wilson ("Encyc. Brit.")	1902

Probably 95 per cent of the persons included in these estimates of Jewish populations are Ashkenazim. As far as can be ascertained, the numbers of Sephardim are as follows:

Turkey in Europe	90,000
" " Asia	45,000
Egypt, etc.	10,000
Algeria	40,000
Morocco	50,000
France	6,000
Italy	18,000
Holland, etc.	50,000
America	5,000
Total	314,000

But there are others, besides these two groups, who may be included under the heading "Jews"; the following classes may be enumerated:

	Nativity.	Number.	Per cent of Whole.
A. Jews both by religion and by birth		11,000,000	98.9
Ashkenazim	Teutonic and Slavonic	10,475,000	92.8
Sephardim	Romance, Levantine, African.	314,000	5.1
Samaritans (?)	Nablus	150	
B. Jews by religion, but not by birth		75,000	1.1
Falashas	Abyssinian	50,000	
Karaites	Crimean	6,000	
Daggatouns, etc.	Saharic	10,000	
Beni-Israel	Bombay	6,500	
Cochin	Cochin	1,600	
C. Jews by birth, but not by religion		12,000	0.2
Chuetas	Belearic Isles	6,000	
Maiminim	Salonica	4,000	
Gedid al Islam	Khorasan	2,000	

The following list summarizes the proportion of Jews to general population in the several countries:

	Per cent.
Poland	16.25
Palestine	12.00
Rumania	4.99
Austria	4.68
Hungary	4.43
Russian Empire	3.29
Morocco	2.11
Holland	2.00
United States	1.97
Prussia	1.11
Algeria	1.07

Italy	.10
Norway and Sweden	.07
India	.06
Portugal	.02
Spain	.02

Town and Country.

Turning from distribution to social characteristics, the most marked one is the preference for living in towns, though this tendency, of course, is now common. A few figures with regard to this point may be here inserted. Dr. S. Neumann ("Die Fabel von der Jüd. Masseneinwanderung," p. 65) gives the following percentage of Jews living in the open country in Prussia, to which has been added, after Jannasch, the proportion of the general population:

Year.	Older Parts.	New Possessions.	Together.	Proportion.
1849	20.85	......	......	73.48
1858	21.75	......	......	70.39
1867	19.73	39.38	22.88	68.70
1871	18.41	34.89	21.90	67.67

Here the decrease in the rural population is not so very marked, but the small proportion to the general population is noteworthy. In countries in which the Jewish population is smaller the contrast is more striking. Thus, in Saxony, in 1880, while 72 per cent of the general population dwelt in the country, only 3 per cent of Jews lived outside of towns ("Statist. Jahrb. für Sachsen," 1883, p. 5). At the last census of Victoria, in 1881, the percentages of the population were as follows ("Religions of the People," part iii.):

	Towns, etc.	Shires.	Outside Local Jurisdiction.
General	50	49	1
Jews	93	7	0

The following table, taken from Ruppin, "Die Juden der Gegenwart," gives the number of Jews in large cities in the countries named for the year 1900:

Country.	Percentage of Jews in Large Cities.	Percentage of Christians in Large Cities.	Percentage of Inhabitants of Large Cities Who Are Jews.
Austria	23.33	10.60	9.76
Holland	42.72	15.90	2.75
Hungary	26.11	6.39	15.89
Prussia	49.21	16.55	3.30

The same writer gives an equally interesting table of the proportion of Jews in the following important cities:

MAP OF THE EASTERN HEMISPHERE, SHOWING CHIEF CENTERS OF JEWISH POPULATION.

City.	Percentage of Jews in City.	Permillage of Jews of Country.	Permillage of Others.
Amsterdam	13.40	560	80
Berlin	4.88	235	53
Bucharest	13.30	161	50
Budapest	23.08	199	31
Copenhagen	1.04	800	143
London	1.59	585	157
New York	17.46	528	45
Rome	1.18	179	20
St. Petersburg	35.77	193	57
Vienna	8.77	123	61

In this connection it is interesting to give a list of the chief cities having more than 10,000 Jews:

Adrianople	17,000	Jerusalem	41,000
Aleppo	10,000	Jitomir	22,000
Alexandria	12,433	Johannesburg	10.000
Amsterdam	60,000	Kherson	18,967
Bagdad	35,000	Kiev	16,000
Baku	11,650	Kishinef	50,000
Baltimore	30,000	Kovno	28,403
Berdychev	47,000	Lemberg	40,000
Berlin	86,152	Lodz	74,999
Biela Zerkow	16,000	Lomza	10.380
Bobrinsk	19,125	London	150,000
Boston	40.000	Lublin	22,495
Botoshani	16,660	Minsk	49.957
Braila	10,811	Moghilef	25,000
Breslau	18,440	Montreal	10,000
Brest-Litovsk	36,650	Morocco	15.700
Brody	15,050	New York	672.776
Bucharest	43,274	Nikolaief	16.000
Budapest	168,985	Odessa	150,000
Buenos Ayres	10,000	Paris	58,000
Byelostok	42,000	Philadelphia	75,000
Cairo	14,362	Pinsk	22,000
Chicago	60,000	Prague	20,000
Cincinnati	18,000	Riga	18,000
Constantinople	44,361	Rostof	15,000
Cracow	25,430	Rotterdam	12,000
Czenstochow	12,000	St. Louis	45,000
Czernowitz	22,000	St. Petersburg	20,385
Damascus	10,000	Salonica	60,000
Dresden	38,700	San Francisco	20,000
Dvinsk	32,369	Smyrna	25,000
Fez	10,000	Tangier	12,000
Frankfort-on-the-Main	22,000	Tunis	12,000
Galatz	12,970	Vienna	150,000
Grodno	24.611	Warsaw	262,824
Grosswardein	12,294	Wilna	63,986
Hamburg	17,308	Winnipeg	25,000
Homel	23,000	Yekaterinoslav	36,000
Jassy	30,441	Yelisavetgrad	24,340

Owing to the large dispersion of the Jews of Russia, Galicia, and Rumania during the past twenty-five years, amounting probably to 1,000,000, a somewhat peculiar statistical condition occurs in the Jewish population of the English-speaking world, where for the most part the emigrants have been received (see MIGRATION). The latter are largely of the most viable ages—between fifteen and forty-five—and therefore the death-rate is very low and the marriage-rate very high. The absence of the aged from the stream of immigration also tends to reduce the death-rate, though it increases the proportion of deaths under the age of five to an abnormal degree. This, for example, is the reason why in London such deaths are more than 50 per cent of the total number of deaths.

Another example of the result of the Russian emigration is the distribution of males and females in the Jewish as compared with the general population; this can be seen from the following table:

NUMBER OF WOMEN TO 100 MEN.

	Jews.	General.		Jews.	General.
Bavaria	106	105	Ireland	89	105
Denmark	110	103	Italy	101	99
France	99	101	Prussia	108	103
Holland	105	102	Russia	104	102
Hungary	103	103	Sweden	103	109

Notwithstanding the fact that the number of male births among Jews is larger than among other races, the proportion of Jewesses to Jews is greater than that of females to males in the general population. This is due in large measure to the frequent emigration of young men to seek their fortunes in other lands; hence, in America and England there is a much larger proportion of young men to young women, which again leads to a higher marriage-rate.

J.

STATURE: Natural height of man. The stature of the Jews is a racial characteristic which has been thoroughly investigated in various countries. Besides numerous anthropological works, many of the recruiting-offices in eastern Europe have contributed considerable material on the subject. Topinard considers the average stature of man to be 165 cm. Judged by this standard, the Jews are below the mean height. As may be seen from the appended table (No. 1) of measurements of about 14,000 Jews, the average height is found to be 161 to 163 cm. In some places it is considerably higher, reaching 167 cm. in Odessa, and even 171.4 cm. among the richer class of Jews in the West End of London (Jacobs). As will be noticed from the figures in Table 2, showing the average height of Jews as compared with that of the non-Jewish inhabitants in eastern Europe, the stature of the former corresponds to a great extent with that of their Gentile neighbors. Wherever the latter are tall, the Jews also are tall, and vice versa. Thus in Galicia and Poland, where the indigenous Polish population is short of stature, measuring 162 to 163 cm. on the average, the shortest Jews are found. In Little Russia and South Russia, where the Gentiles are characterized by their superior height, measuring 165 to 167 cm. on the average, the Jews also are comparatively tall, averaging 163 to 167 cm. The same is true of the Jews in Rumania, Bukowina, etc.

Jews Compared with Non-Jews.

It is a significant fact that while the stature of the Jews is in a measure correlative to the stature of the Gentile races among which they live, still they rarely reach the same height. With but two exceptions (Rumania and Hungary), the Jews are everywhere from 1 to 3 cm. shorter than the Gentiles. This shortness of stature has been cited by certain writers to prove that the Jews are an inferior race, which of course can not be seriously considered, because it is not known that superior stature necessarily goes hand in hand with superior physical and mental powers. The Japanese, for instance, are among the shortest of races—much shorter on the average than the Jews—yet, as is indicated by their recent and rapid progress, they are by no means an inferior or degenerate race. Particularly in Poland, where the natives are of inferior stature, many Gentile publicists, while discussing the degeneracy of their people, have attempted to show that this deficiency is due to the presence of a large number of Jews in that country whose low stature reduces the average. Measurements of conscripts were used in support of this view. On the other hand, it has been shown that the ages of conscripts are usually twenty and twenty-one, and Jews at these ages have not yet reached their full growth (see GROWTH OF THE BODY), and that even then the Jews measure 161.3 cm., not much less than the Poles, who average 162.7 cm. Measurements taken by Olechnowicz in the provincial government of Radom show that the Polish peasants are only 161.7 cm. in height on the average; and in Lomza, according to Talko-Hryncewicz's measurements, they are no taller.

It is characteristic of the stature of the Jews that the proportion of short individuals among them is larger than among the surrounding races and peoples, as may be seen from the appended table (No. 1) taken from Fishberg's work (see bibliography):

Inferior Stature of Jews.

It appears from this table that the proportion of persons less than 160 cm. in height is everywhere larger among the Jews than among the non-Jews of the same country, with but one exception, that of Rumania, which may possibly be explained by the fact that the figures for these Jews are obtained by measuring immigrants to the United States, who are always taller than the people from whom they spring. The percentage of these short individuals seems to run in almost direct ratio to the percentage found among the Gentiles in the same locality. In Galicia and in Russian Poland, where the proportion of Gentiles under 160 cm. in height exceeds 20 per cent, the Jews have 25 per cent of short men. On the other hand, in Little Russia, where such persons are found to the extent of only 14 per cent, and in Rumania, where it is only 12 per cent among the Gentiles, the Jews also show a lower percentage, namely, 24 and 18 respectively. Persons of tall stature, 170 cm. and over, are met with less frequently among the Jews than among others in the same country. Such persons are found to the extent of 10 per cent among the Galician Jews, but the percentage increases as it increases among the non-Jewish races in a given country, and is found to be 17 per cent among the Little-Russian Jews,

TABLE I.—STATURE OF JEWS COMPARED WITH THAT OF NON-JEWS IN VARIOUS COUNTRIES.

Poles	23.50	38.22	21.99	16.23	61.78	38.22	191	1,640	Elkind.
Lithuania and White Russia:									
Jews	27.05	34.06	25.85	13.04	61.11	38.89	414	1,635	Fishberg, Yakowenko.
White Russians	23.93	28.62	32.15	15.14	52.55	47.29	961	1,636	Talko-Hryncewicz.
Letto-Lithuanians	18.07	31.52	27.94	22.47	49.59	50.41	476	1,644	" "
Little Russia:									
Jews	24.35	30.30	28.31	17.04	54.65	45.35	657	1,639	Fishberg, Talko-Hryncewicz.
Little Russians	14.52	32.88	26.86	25.74	47.40	52.60	1,694	1,670	Ivanovski.
Rumania:									
Jews	18.00	27.33	24.00	30.67	45.33	54.67	150	1,660	Fishberg.
Rumanians	12.58	29.80	31.79	25.83	42.38	57.62	151	1,650	Pittard.

and even 30 per cent among the Rumanian Jews. From the observations of Talko-Hryncewicz, Otto Ammon, and Majer and Kopernicki, it appears also that this condition obtains in other countries.

Measurements of only 946 Jewesses are available, of which 435 are of immigrant Jewesses in New York city, obtained by Fishberg. The following figures give the average height in centimeters according to nativity:

STATURE OF JEWESSES.

Country of Nativity.	Number Measured.	Average Stature.	Observer.
Poland	125	150.6	Elkind.
" (emigrants to the United States)	56	152.0	Fishberg.
Little Russia	206	151.5	Talko-Hryncewicz.
" " (emigrants to the United States)	74	154.6	Fishberg.
South Russia	70	153.6	Weissenberg.
Lithuania	110	150.7	Yakowenko.
" (emigrants to the United States)	100	153.7	Fishberg.
Galicia (emigrants to the United States)	122	152.4	"
Rumania (emigrants to the United States)	44	154.5	"
Hungary (emigrants to the United States)	39	154.4	"

Height of Jewesses.

It appears from the figures in this table that the average stature of Jewesses differs according to their nativity. Like the Jews, the Jewesses are tall in countries where the women of the indigenous races are tall, and vice versa. In Poland they measure only 150.6 cm. on the average, while in South Russia they reach 153.6 cm. As a general rule, they are shorter by 1 to 3 cm. than their non-Jewish sisters.

The difference in the stature of the Jews and Jewesses is about 12 cm. in favor of the Jews, which is about the same as has been observed among other races, the height of the Jewesses being about 92 per cent of that of the Jews. Short women measuring 140 cm. and less in height are very often encountered among the Jewesses, but only rarely among Gentile women in the countries in which Jews live, while the proportion of tall women, measuring 158 cm. and over, is much smaller among Jewesses than among others. Here again is to be noted the phenomenon observed with regard to the men: the proportion of tall individuals is in direct ratio to the proportion of such persons among the Gentile women. Among the Polish women there is only 17.45 per cent exceeding 157 cm. in height (Elkind); among the Jewesses in that country, 12.15 per cent (Fishberg). In Lithuania and White Russia, where the natives include more than 20 per cent of tall women, the Jewesess have 16.5 per cent of tall women among them; and among the Little Russians, the tallest of the Slavonians, the Jewesses include 20 per cent over 158 cm. in height, compared with 37.45 per cent of tall women among the Gentiles in that country.

Causes.

The short stature of the Jews has been attributed to race influence. All the available evidence tends to show that the ancient Hebrews were short of stature, compared with the other races in Palestine, particularly the Amorites (see GIANTS). This characteristic is said to have been hereditarily transmitted to the modern Jews. On the other hand, social factors must not be overlooked. The deplorable hygienic, material, and social conditions of the eastern European ghettos may be considered a factor in reducing the average stature of the Jews. Also as town-dwellers Jews are said to be at a disadvantage as regards their height; and it appears that the population of modern cities is inferior in stature to the rural population. The occupations in which Jews mostly engage are of the indoor or domestic variety; and this also has a great influence in reducing their average stature. From Fishberg's investigations of the Jews in the United States it appears that those working indoors are 4.4 cm. shorter than those working at outdoor occupations, as may be seen from the following figures:

	Average Stature.
Indoor occupations:	
Tailors	161.3 cm.
Cobblers	160.4 "
Factory-workers	162.2 "
Average	161.3 "
Merchants	168.7 "
Professional men	169.6 "

	Average Stature.
Outdoor occupations:	
Carpenters	164.9 cm.
Iron-workers	166.3 "
Masons	167.9 "
Laborers	166.8 "
Average	166.4 "

It appears from these figures that the factor of occupation is not a negligible quantity in considering the average stature of the Jews. While the effect of race can hardly be underestimated in such problems, still adverse social and sanitary conditions have also a great influence in reducing the stature. The foregoing figures are confirmed by the observations of Weissenberg on the Jews in South Russia. He found that those who were in higher material and social circumstances were taller than their poorer coreligionists. Jacobs, as mentioned above, records the same to be the case with the Jews in London, where those of the East End average only 164.1 cm. in height, while their richer brethren in the West End of that city average 171.4 cm. In Poland, Zakrzewski has shown that in Warsaw the stature of the Jews is less in the poorer districts, and considerably greater in the richer ones. The maps of that city prepared by that statistician (reproduced by Ripley in his work "The Races of Europe") show in a striking manner how poverty goes hand in hand with shortness of stature.

Social Conditions.

Others are inclined to attribute the differences in the stature of the Jews in various countries to intermixture with the native races. It is argued that while the influence of environment calls for serious consideration, still it has not been proved that the superior or inferior stature produced by favorable or unfavorable social conditions is perpetuated by hereditary transmission. This view is sustained by the fact that, although the social and economic conditions in Little and South Russia are not by any means better than those in Poland, still the Jews of the former countries are taller than their Polish brethren. In Bukowina, likewise, the average height of the Jews is superior to that of their Galician brethren, although the social and economic environment is in both cases about the same. All this is used as an argument by some anthropologists in support of their advocacy of the intermixture of Jews with Gentiles.

Jewish immigrants to the United States are on the average taller than the coreligionists they have left behind them, as may be seen from the table giving the stature of the Jews. The average stature of 1,528 immigrant Jews in New York city was 164.5 cm. (Fishberg) as against an average of 162.0 cm. for 1,681 Jews in Russia and Galicia. A subdivision into four classes presented the following results:

	New York. Per Cent.	Eastern Europe. Per Cent.
Short (less than 160 cm.)	23.30	35.46
Below the average (160 to 164.9 cm.)	30.10	32.48
Above the average (165 to 169.9 cm.)	27.49	21.41
Tall (170 cm. and above)	19.11	10.65

It appears from these figures that Jews of short stature were found in Europe to reach 35.46 per cent, as compared with 23.3 per cent among those who emigrated to the United States. The percentage of tall individuals (170 cm. and over) in eastern Europe is only 10.65, whereas in New York city it is 19.11, or nearly double. Persons of intermediate stature are found in about equal proportions in both groups.

Stature of Immigrants.

This phenomenon is attributed to a process of selection by emigration. Those who venture on a long journey to a distant land are usually superior physically to the average of the population from which they spring. It is not confined to the Jews. Gould has shown that the German, Irish, French, English, and other immigrants to the United States are as a rule taller than their fellow countrymen at home. Other countries to which immigration is extensive show the same phenomenon.

STATUTES. See Law, Civil.

STAUB, HERMANN: German jurist; born at Nikolai, Upper Silesia, March 21, 1856. After having studied for some time at the gymnasium at Beuthen he attended the universities of Breslau, Berlin, and Leipsic, graduating from the last-named institution in 1880. Having been admitted to the bar, he established himself as counselor at law in Berlin, making civil law his specialty. Staub has published "Kommentar zum Allgemeinen Deutschen Handelsgesetzbuch" and "Kommentar zur Allgemeinen Deutschen Wechselordnung." He is associate editor of the "Deutsche Juristenzeitung."

Bibliography: *Das Geistige Berlin*, 1897, p. 514.

S.

STAUBER, DANIEL. See Widal, A.

STEBLICKI (SEBLITZKY), JOSEPH ABRAHAM: German convert to Judaism; son of a Catholic butcher; born at Nikolai, Upper Silesia, about 1726; died there May 16, 1807. He received a good education in Jesuit colleges, and became teacher and later city treasurer in his native town, and finally a member of the city council. Retiring from active life in 1780, he occupied himself with religious studies, and began to observe the Sabbath and the dietary laws; then he circumcised himself, as he stated later; and on the Day of Atonement in 1785 he attended services in the Jewish synagogue dressed in a white gown, like other worshipers.

When the authorities were informed of Steblicki's conversion, proceedings against him were immediately instituted which, according to the law of Leopold I., of 1709, then still in force, should have led to a sentence of death. But the king, Frederick II., ordered the proceedings to be suspended (Dec. 12), and left to the revenue authorities the questions as to whether Steblicki, as a Jew without right of residence ("unvergleiteter Jude"), should be tolerated, and whether he should be required to pay the special Jewish taxes. On July 28, 1786, the authorities decided that he should not be molested, on the ground that he must be mentally unbalanced. Steblicki lived more than twenty years after his conversion in harmony with his wife and his son, and was highly respected by the small Jewish community of Nikolai. His life was made the subject of legendary exaggerations in David Samoscz's "Ger Ẓedeḳ" (Breslau, 1816) and in M. A. Hertzberg's "Der Neue Jude" (Gleiwitz, 1845).

Jahrhunderts*, in Berliner's *Magazin*, xx. 181–198; Neustadt, *Josef Steblicki, ein Proselyt Unter Friedrich dem Grossen*, Breslau, 1894 (comp. review of this work by Brann in *Monatsschrift*, xxxix. 379–384, Breslau, 1895).

D.

STECKLER, ALFRED: American jurist; born in New York city Dec. 18, 1856. He was educated in the public schools of New York city and at Columbia Law School, graduated in 1877, and was admitted to the bar in the same year. In 1881 he was elected a judge of the Fourth District Court of New York city, and served till 1893. In 1900 he was appointed to fill a vacancy in the Supreme Court of the First Judicial District of New York County.

Steckler has taken an active part in politics, without affiliating himself with any party.

A. F. T. H.

STEIGER. See Music, Synagogal.

STEIN, ABRAHAM: German rabbi; born at Wanfried, Prussia, Jan. 13, 1818; died at Prague Sept. 18, 1884; studied at the Teachers' Seminary of Cassel (1832–34) and at the University of Berlin (Ph.D. 1844). He was principal of the seminary of Cassel 1845–47, rabbi at Filehne 1848–50, and rabbi of the Altschottländische community of Danzig 1850–63. When the old Meisel Synagogue of Prague was changed in 1864 to a modern temple with a choir, organ, and sermon, Stein received a call as preacher to this place of worship, where he officiated until his death. From 1865 to 1868 he acted also as teacher of Talmud at the Talmud Torah founded by Rapaport in this community.

Stein, who was eminent both as preacher and as linguist, published the following works: "Geschichte der Juden in Danzig, nach Handschriftlichen Quellen Dargestellt," Danzig, 1860; "Ueber den Unterricht im Talmud nach Wissenschaftlicher Methode," Prague, 1866; "Talmudische Terminologie, Zusammengestellt und Alphabetisch Geordnet, und die Aufgabe einer Präparandie für die Studierenden der Theologie," *ib.* 1869.

s. A. Ki.

STEIN, LEOPOLD: German rabbi; born in Burgpreppach Nov. 3, 1810; died at Frankfort-on-the-Main Dec. 2, 1882. After finishing his earlier education at Erlangen and Bayreuth, he attended (1830) the University of Würzburg. In 1833 he delivered his first sermon in Frankfort, in which he pleaded for the introduction of reforms; two years later he became rabbi of Burg and Altenkunstadt (Franconia); and from 1844 to 1862, when he withdrew from public life, he was rabbi at Frankfort-on-the-Main. He was especially prominent as one of the leaders of the Reform movement.

With Dr. S. Süsskind, Stein was editor of "Der Israelitische Volkslehrer" (1860–69); he edited also the year-book "Achawa," published by the Lehrerverein. His works include the following: "Stufengesänge," poems, Würzburg, 1834; "Gebete und Gesänge zum Gebrauche bei der Oeffentlichen Andacht," Erlangen, 1840; "Koheleth," Frankfort-on-the-Main, 1846; "Die Rabbiner-Versammlung: ein Wort zur Verständigung," *ib.* 1846; "Der Eid More Judaico," *ib.* 1847; "Lehre und Gebot," *ib.* 1858; "Die Hasmonäer," *ib.* 1859; "Gebetbuch für Israelitische Gemeinden: nach dem Ritus der Haupt-Synagoge zu Frankfurt-am-Main," *ib.* 1860; "Mein Dienstverhältniss zum Israelitischen Gemeindevorstande zu Frankfurt-am-Main, Actenmässig zur Begründung Meiner Amtsniederlegung Dargestellt," *ib.* 1861; "Haus Ehrlich," a drama in five acts, Leipsic, 1863 (performed at Mannheim); "Der Knabenraub von Karpentras," Berlin, 1863; "Sinai, die Worte des Ewigen Bundes," a didactic poem, Frankfort-on-the-Main, 1868; "Die Schrift des Lebens," the contents of the Jewish religion, *ib.* 1868; "Torath-Chajim," the Jewish religious law, Strasburg, 1877; "Der Geklärte Judenspiegel," 1882. He likewise composed for the Reform ritual the song "Tag des Herrn," to be sung to the music of "Kol Nidre" on the eve of the Day of Atonement.

Stein was a friend of Friedrich Rückert, to whose year-book he contributed several essays.

Bibliography: *Allgemeine Zeitung des Judenthums*, Sept. 4 and 11, 1903.

S.

STEIN, LUDWIG: Hungarian philosopher; born at Erdö-Benye, Hungary, Nov. 12, 1859; educated at the gymnasia of Papa, Saros-Potak, and Zwolle, at the universities of Berlin and Halle (Ph.D. 1880), and at the Jewish Theological Seminary of Berlin (Rabbi, 1880). He lived in Berlin as rabbi from 1881 to 1883, and as journalist from 1883 to 1886. In 1886 he became privat-docent at the University of Zurich, and was in 1889 appointed professor at the polytechnic of that city. Since 1891 he has been professor of philosophy at the University of Bern.

Stein is the author of the following works: "Die Falaschas," Berlin, 1880; "Die Willensfreiheit bei den Jüdischen Philosophen des Mittelalters," *ib.*

1882; "Berthold Auerbach," *ib.* 1882; "Eduard Lasker," *ib.* 1883; "Die Psychologie der Stoa," *ib.* 1886; "Die Erkenntnistheorie der Stoa," *ib.* 1888; "Leibniz und Spinoza," *ib.* 1890; "Friedrich Nietzsche's Weltanschauung und Ihre Gefahren," *ib.* 1893; "Das Erste Auftauchen der Sozialen Frage bei den Griechen," *ib.* 1896; "Die Soziale Frage im Lichte der Philosophie," Stuttgart, 1897 (2d ed. 1903; Russian and French transl. 1900); "Die Philosophie des Friedens," *ib.* 1899; "An der Wende des Jahrhunderts," *ib.* 1900; "Der Sinn des Daseins," *ib.* 1904; and "Der Sociale Optimismus," *ib.* 1905.

Stein is now (1905) the editor of "Archiv für Geschichte der Philosophie" (since 1886), "Berner Studien zur Philosophie und Ihrer Geschichte" (since 1896), and "Archiv für Systematische Philosophie" (since 1897).

Bibliography: *Meyers Konversations-Lexikon.*

s. F. T. H.

STEIN, MARC AUREL: Hungarian Orientalist and archeologist; born at Budapest in 1862; educated at Vienna, Tübingen, Oxford, and London. In 1888 he was appointed registrar of the Punjab University at Lahore, and principal of the Oriental College in the same university; eleven years later he became principal of the Calcutta madrasah, where he remained until 1901. He is now (1905) inspector of schools in the Punjab. Stein is chiefly known, however, as an archeologist, the results of his explorations in Kashmir and Chinese Turkestan under a government commission being very important. His works are as follows: "Kalhaṇa's Rajatarañgiṇi, or Chronicle of the Kings of Kashmir" (3 vols., text and translation, Bombay and Westminster, 1892–1900); "Catalogue of the Sanskrit Manuscripts in the Raghunatha Temple Library of His Highness the Maharaja of Jammu and Kashmir" (Bombay, 1894); "Detailed Report of an Archeological Tour with the Buner Field Force" (Lahore, 1898); "Memoir on Maps Illustrating the Ancient Geography of Kaçmir" (Bombay, 1899); and "Sand-Buried Cities of Khotan" (London, 1903). In addition he has written numerous articles in various Oriental journals.

s. L. H. G.

STEIN, PHILIP: American jurist; born at Steele, Rhenish Prussia, March 12, 1844. He emigrated to the United States in 1854, and was educated in the public and the high school of Milwaukee, and at the University of Wisconsin, obtaining the degree of A.M. in 1868, in which year he was also admitted to the bar. After postgraduate courses at the universities of Heidelberg, Bonn, and Berlin he settled in 1870 in Chicago. In 1892, and again in 1898, he was elected judge of the Superior Court of Cook County, Illinois, and in 1903 he was appointed judge of the appellate court of that state, of which court he is now (1905) presiding justice.

Bibliography: *American Jewish Year Book*, 5665 (1904–1905), p. 195.

A. F. T. H.

STEIN, PHILIPP: German author; born Dec. 3, 1853, at Königsberg. In 1864 his parents removed with him to Berlin. The death of his father there prevented him from continuing his studies, and he became a bookseller. After having worked for some time on the editorial staff of the "Deutsches Montagsblatt," Stein in 1881 became one of the editors of the "Dresdener Zeitung." In 1884 he returned to Berlin and became chief editor of the "Litterarische Merkur"; and from this time he developed great activity as contributor to various political, artistic, and literary papers. Stein is now (1905) editor-in-chief of the Berlin "Bazar," and dramatic critic of the "Berliner Zeitung." He has published "Illustrirte Kunstgeschichte," 1886, and "Von Schreibtisch und Werkstatt," 1896, and has edited "Briefe von Goethe's Mutter," 1891; "Reden des Fürsten Bismarck," 1895–98; "Rückert's Ausgewählte Werke," 6 vols., 1897; "Briefwechsel Zwischen Schiller und Goethe," 1901.

Bibliography: *Das Geistige Berlin*, 1897, pp. 514–515.

S.

STEIN-AM-ANGER (Hungarian, **Szombathely**): Town in Hungary. Although now one of the largest and most important in the country, the Jewish community of Stein-am-Anger is of comparatively recent origin. In 1567 Emperor Maximilian II. granted to the town the privilege of allowing none but Catholics to dwell within its walls; and even in the seventeenth and eighteenth centuries, when the municipal authorities rented shops to Jews, the latter were permitted to remain in the town only during the day, and then only without their families. Down to the beginning of the nineteenth century but three or four Jewish families succeeded in taking up a permanent residence there. The members of the little community of Stein-am-Anger, therefore, dwelt not in the town itself, but in the outlying districts (now united into one municipality). They separated in 1830 from the community of Rechnitz, of which they had previously formed a part, and were henceforth known as the community of Szombathely. When the Jews of Hungary were emancipated by the law of 1840, the city was obliged to open its doors to them; but at the beginning of the revolution of 1848 they were not only attacked and plundered, but threatened with expulsion. The authorities interfered, however, and when peace was restored the community quickly developed.

The first elementary school was founded in 1846, and is now (1905) organized as a normal school, with four grades and about 230 pupils. The first synagogue was built by the former lord of the town, Duke Batthyányi, who sold it to the Jews. In 1880 a large temple was built; it is one of the handsomest edifices of its kind in Hungary. The founder of the community and its first rabbi was Ludwig Königsberger (d. 1861); he was succeeded in turn by Leopold Rockenstein, Joseph Stier, and Béla Bernstein (called in 1892). A small Orthodox congregation, numbering about 60 or 70 members, separated from the main body in 1870. It has its own synagogue, an elementary school with two teachers, and an independent organization.

s. B. Be.

STEINBACH, EMIL: Austrian statesman; born at Vienna June 11, 1846. After graduating from the Vienna University (LL.D.) he established himself as a lawyer, becoming soon afterward attached to the Ministry of Commerce. From February, 1891, to November, 1893, he was minister of finance in the cabinet of Taaffe. In 1894 he was appointed president of the Supreme Court of the Austrian Empire, which position he still holds (1905). He has embraced Christianity.

Steinbach is the author of the following works: "Rechtskenntnisse des Publikums" (1878); "Eigenthum an Briefen nach Oesterreichischem Rechte" (1879); "Stellung der Versicherung im Privatrechte" (1883); "Erwerb und Beruf" (1896); "Rechtsgeschäfte der Wirtschaftlichen Organization" (1897); "Moral als Schranke des Rechtserwerbes" (1898); "Zur Friedensbewegung" (1899); "Treue und Glaube im Verkehr" (1900); "Der Staat und die Modernen Privatmonopole" (1903).

STEINBACH, JOSEF: Austrian physician; born at Fünfkirchen, Hungary, Jan. 3, 1850. Educated at the gymnasium of his native town and at the University of Vienna (M.D. 1875), he acted for a short time as assistant physician at the university hospital, and in 1876 was appointed surgeon in the navy, resigning the latter position in 1881. After a postgraduate course at the University of Vienna he established himself as gynecologist in Franzensbad.

Steinbach has published the following belletristic works: "Heimatsklänge," Leipsic, 1882; "Uebersetzung von J. Kiss' Gedichten," Vienna, 1886; and "Eigenes und Fremdes," *ib.* 1888. Since 1886 he has been associate editor with G. A. Egger of the "Oesterreichisch-Ungarische Badezeitung." He has contributed several essays to professional journals, and is the author of "Die Stellung der Militärärzte im Oesterreichisch-Ungarischen Heeresverbande."

S. F. T. H.

STEINBERG, JOSHUA: Russian writer and educator; born in Wilna 1839. He was graduated from the rabbinical school of his native city, and then for a short time occupied the position of rabbi at Byelostok, being called to Wilna in 1861 to fill a similar position. In 1867 he was appointed head teacher of Hebrew and Aramaic at the rabbinical seminary, and in 1872 was promoted to the position of inspector, which post he held until 1904. Steinberg's activities were not, however, limited to the sphere of higher education; for it was due to his tireless devotion and persistent representations that the Russian government in 1863 established in Wilna seven elementary city schools for Jewish children. Following the example of Wilna, other schools of the same pattern were established in nearly all cities containing a large Jewish population.

In 1863 the Russian government appointed Steinberg censor of all Jewish publications, both domestic and foreign—a position which he still holds (1905). In 1887 he was requested by the government to inspect the yeshibah at Volozhin with a view to introducing into the curriculum of that institution the study of the Russian language and literature and other general subjects. Steinberg succeeded in convincing the officials of the institution of the necessity of such reforms, and they promised faithfully to carry out his plans; two years passed, however, without their making the least effort to comply with the request of the government, and the institution was closed in spite of Steinberg's earnest pleadings for another year's delay. Steinberg was the recipient of many honors from the Russian government for his devotion and many-sided activities in both literary and educational fields. A hereditary honorary citizenship was bestowed upon him, and he was decorated many times.

Steinberg's literary productions are many and varied. The following is a list of his more important works:

Russian: "The Organic Life of the Language" (1871), published in the "Viestnik Yevropy"; "Grammar of the Hebrew Language" (Wilna, 1871); "Book of Exercises in the Chaldean Language" (1875); "Complete Russian-Hebrew Dictionary" (1880); "Hebrew and Chaldean Dictionary of the Bible," awarded a prize by the Holy Synod; "The Jewish Question in Russia" (1882); "Complete Russian-Hebrew-German Dictionary" (1888), seventeen editions; "The World and Life," two editions; "Count Muraviev and His Relations to the Jews of the Northwestern Parts of Russia" (1889); "The Five Books of Moses," with commentary.

Hebrew: "Human Anatomy, According to the Most Modern Investigations" (1860); "Or la-Yesharim" (Wilna, 1865), an anthology from the ancient and the modern classics, written in the poetic style of the Bible, and annotated with moral reflections and observations; "Massa Ge Ḥizzayon" (1886), metric translations from the Greek Sibyls; "A Hebrew-Russian-German Encyclopedic Dictionary of the Bible" (1896); "Darwin's Theory in Its Relation to the Organic Life of Languages" (1897); "Ma'arke Leshon 'Eber," a Hebrew grammar.

German: "Knospen," a translation of Hebrew poems by A. B. Lebensohn; "Gesänge Zions," a translation of Hebrew poems by Michael Lebensohn.

H. R. J. Go.

STEINBERG, SAMUEL: Hungarian historian; born at Güssing, Hungary, Dec. 16, 1857. He received his education at Gratz (Ph.D. 1882; LL.D. 1894), and in 1895 became privat-docent at the University of Vienna. In 1901 he was appointed professor of history at the German University of Prague. Steinberg has contributed several essays, especially on the history of the fourteenth and sixteenth centuries, to various historical journals, and is the author of "Nuntiaturberichte aus Deutschland" (Vienna, 1897).

S. F. T. H.

STEINDORFF, GEORG: German Egyptologist; born at Dessau Nov. 12, 1861. He studied Oriental languages at Leipsic and Berlin, was appointed privat-docent at the university of the latter city, and succeeded in 1893 his teacher Georg Ebers as professor of Egyptology at the University of Leipsic. He has embraced Christianity.

Steindorff, who is associate editor of the "Zeitschrift für Aegyptische Sprache und Alterthumskunde," is the author of the following works:

"Koptische Grammatik" (1894, 2d ed. 1904), "Grabfunde des Mittleren Reichs in den Königlichen Museen in Berlin" (1897–1901), "Das Kunstgewerbe im Alten Aegypten" (1898), "Die Apokalypse des Elias" (1898), "Die Blütezeit des Pharaonenreichs" (1900), and "Durch die Libysche zur Amonsoase" (1905). Under the title "Aegyptische Kunstgeschichte" (Leipsic, 1889) he translated into German G. Maspero's "L'Archéologie Egyptienne"; he also edited Baedecker's "Aegypten" (1902) and Ebers' "Aegyptische Studien" (1900), as well as the latter's "Urkunden des Aegyptischen Alterthums" (1904).

S.

STEINER, KILIAN VON: German financier; born at Laupheim in 1835; died at Stuttgart Sept. 24, 1903. At first attorney at law, he rose to the leadership of Württemberg finance as president of the Württemberg'sche Vereinsbank. He was also founder (1871) of the Württemberg'sche Notenbank. Steiner was a patron of science and art and an intimate friend of Berthold Auerbach. In recognition of the part he took in the foundation of the Schwäbische Schillerverein and the Schiller-Museum in Marbach he was made an honorary citizen of Schiller's birthplace.

S.

STEINFELD, EMANUEL: Australian statesman; born at Neisse, Silesia, in 1827; died at Melbourne May 6, 1893. He attended the College of Brieg, and after residing in London (1847–53) went to Ballarat, Australia, where he established (1866) the firm of Steinfeld & Levison. He was the first mayor of Ballarat East, holding that office for three years, and was one of the chief founders of the Ballarat Orphan Asylum, the Water Scheme, and the Freehold Market. He was an enthusiastic advocate of imperial federation. In May, 1885, Steinfeld became a member of the Victoria Chamber of Manufactures, and two years later was elected its president. At his suggestion the chamber held three international conferences on the subject of the establishment of intercolonial free trade. He was also a member of the commission appointed to consider the question of technical education introduced by himself. In Sept., 1892, he was elected to the legislative council of Victoria from the district of Wellington.

J. G. L.

STEINHARDT, JOSEPH B. MENAHEM MENDEL: German rabbi; born about 1720; died at Fürth in 1776; lived in early manhood at Schwabach in Bavaria. His first incumbency was the rabbinate of Rixheim, and shortly afterward he was elected chief rabbi of Upper Alsace. In 1755 he was chosen chief rabbi of Nieder-Ehenheim in Lower Alsace, and eight years later was called as rabbi to Fürth, where he officiated until his death. Steinhardt was one of the foremost Talmudists of his time, and questions were addressed to him from Hungary, Italy (Verona), the Netherlands (Amsterdam), and Switzerland. He was extremely conservative, and induced the lord of the manor of Nieder-Ehenheim to forbid men and women dancing together. His attitude in his controversy with Pick regarding Eleazar Ḳalir is also noteworthy, since he maintained that the word "Be-Rabbi" was not a second name, but merely an honorary title of Ḳalir's, who he claimed was a contemporary of Saadia.

Steinhardt was the author of the following works: "Zikron Yosef" (Fürth, 1773), a work in four parts, containing responsa and decisions modeled on the ritual codices; "Mashbir Bar" (Prague, 1827), comprising notes on the Pentateuch; and "Koaḥ Shor" (*ib.* 1827), containing novellæ on the treatise Baba Batra, with notes by his grandson Akiba.

E. C. S. O.

STEINHARDT, MENDEL: German rabbi and scholar of the eighteenth and nineteenth centuries; held the rabbinate of Minden. When the consistory of Westphalia was convened in 1807 he was elected its counselor. In defense of Israel Jacobson's advocacy of the Reform movement among the Jews of Westphalia, Steinhardt wrote "She'elot u-Teshubot Dibre Menaḥem" (Offenbach, 1804), containing ninety responsa on various rabbinical subjects, and supplied with an index arranged according to the Talmudic treatises; he wrote also "Dibre Iggeret" (ed. W. Heidenheim, Rödelheim, 1812), a work seeking to justify the innovations introduced by the Jewish consistory at Cassel, and essaying to prove that they were undertaken in conformity with Talmudic principles.

S. S. O.

STEINHEIM, SOLOMON LUDWIG (LEVY): German physician, poet, and philosopher; born Aug. 6, 1789, in Altona (according to some authorities, in Bruchhausen, Westphalia); died May 19, 1866, at Zurich, Switzerland. He was educated first at the Christianeum, Altona, and pursued his medical studies at the University of Kiel. He had hardly graduated when he found a wide field for his activity in Altona, whither the inhabitants of the sister city of Hamburg, then occupied by the French troops, had fled to escape the Russian blockade, bringing with them typhus fever, which at that time was raging in the Hanseatic town. In 1845 ill health forced him to abandon a medical career and to betake himself to milder climes. He settled in Rome, returning to his country only twice, in 1845 and 1864.

Steinheim, besides remaining a lifelong student of Aristotle, Hippocrates, and Celsus, took a great interest in natural history. In 1820 he published a pamphlet on the grasshopper, and in 1842 one on animal instinct. His treatise on the pathology of tumors (1846) was his chief contribution to medical literature. His main attention, however, was devoted to philosophy and religion; he was a zealous adherent of Kant. As early as 1818 he had written an essay on ecstasis; and in 1835 he published the first volume of his "Die Offenbarung nach dem

Lehrbegriff der Synagoge." In this work, for which he prepared himself by a careful study of comparative religion, he, though a freethinker, endeavored to raise revelation from a religious belief to a philosophic truth. While, according to him, all important philosophic systems lead to the dualistic struggle between good and evil, the revelation of the Old Testament places in the forefront as axioms "creatio ex nihilo," and, consequently, the unity of God, belief in which is essential to religion and morality.

The second volume of Steinheim's life-work, consisting of twenty-five lectures, appeared under the title "Das Dogma der Synagoge als Exakte Wissenschaft"; the third volume (1863) treats of the struggle between revelation and paganism; while the fourth volume (1865) contains a series of separate essays on various subjects (*e.g.*, the theory of Creation according to the Old Testament), polemics against Döllinger's "Heidenthum und Judenthum" and Baur's "Dogmengeschichte," etc.

Steinheim in his "Meditationen" and in his contributions to the "Kieler Zeitung" earnestly advocated the emancipation of the Jews. Of his poems, "Sinai" and "Obadjah Sohn Amos aus der Verbannung" (Altona, 1829; 2d ed. Frankfort-on-the-Main, 1837) deserve special mention.

STEINITZ, CLARA (née **Klausner**; pseudonym, **Hans Burdach**): German authoress; born at Kobylin April 16, 1852. She was educated at Halle-on-the-Saale, and in 1873 married Siegfried Heinrich Steinitz. She has published the following novels: "Des Volkes Tochter," 1878; "Die Hässliche," 1884; "Ihr Beruf," 1886; "Im Priesterhause," 1890; "Ring der Nibelungen," 1893; and "Irrlicht," 1895. She has also translated several novels from foreign languages; of these may be mentioned: "Joseph und Sein Freund," original by Bayard Taylor; "Die Liebschaften Philipps von Boisvilliers," by Octave Feuillet; "Gunnar" and "Unter dem Gletscher," by Boyesen; and "Fräulein Ludingtons Schwester," by Bellamy.

BIBLIOGRAPHY: *Das Geistige Berlin*, 1897, p. 667.

S.

STEINITZ, WILHELM: Chess champion of the world from 1866 to 1894; born at Prague, Bohemia, May 17, 1836; died, insane, on Wards Island, New York, June 22, 1900. Destined for the rabbinate, he studied Talmud diligently, but his fondness for mathematics overcame his parents' wishes, and he continued his education at the Polytechnic Institute, Vienna. When a student he was troubled with much bodily infirmity, which accompanied him through life. At one time he was on the staff of a Vienna newspaper, but was obliged to relinquish his position owing to defective eyesight.

Steinitz learned the moves of chess when he was twelve years old. Being unable to afford a proper board and set of men, he crudely carved some pieces from kindling-wood; and a painted square of linen did duty for a board. He applied himself to the game with such earnestness that he soon beat his professor and came to be regarded as an expert by the leading players of Prague. In 1858, while in Vienna, he secured an introduction to the Chess Club of that city, and soon became known as a strong and brilliant player. In the club tournament of 1861 he won the first prize, losing only one game out of thirty-four played. Then he devoted himself wholly to chess, his principal patron being Epstein, the banker.

In 1862 Steinitz represented Austria in the International Chess Tournament held in London, at which he secured the sixth prize, and this was the beginning of an unparalleled career as a chess-master. In July, 1866, he played a match with Anderssen which he won with 8 games to 6, thereby becoming champion of the world, a title which he retained for twenty-eight years, ultimately losing it in 1894 to Emanuel LASKER.

Steinitz resided for more than twenty years in England, in which country he became naturalized. For some time he was chess editor of the London "Field," and edited also "The Chess Monthly." A visit to America in 1881 having proved very successful, and his relations with the leading English chess-masters having become somewhat strained, Steinitz in 1893 settled in New York, where he resided until his death. For some time he was engaged in editing the chess terms for the "Standard Dictionary."

Steinitz was the inventor of the gambit which bears his name and which has been described in the JEW. ENCYC. iv. 20, *s.v.* CHESS. He may be said to have founded a new school of chess. In place of the dashing game of the older players, he aimed at speedily securing an advantage—often slight, such as a doubled pawn—and, by careful development, at making his position invincible. His record as a chess-player, extending over a period of forty years, is an extraordinary one, as the subjoined lists of tourney games and matches testify:

TOURNAMENTS.

1859, Vienna: Third prize after Hamppe and Jenay.
1860, " Second prize after Hamppe.
1861, " First prize.
1862, London: Sixth prize (12 players).
1865, Dublin: First prize.
1866, London: Handicap, first prize, 8 to 0.
1867, Paris: Third prize after Kolisch and Winawer.
" Dundee: Second prize after Neumann.
1868, British Chess Association: First prize, handicap; Fraser, second.
1870, Baden-Baden: Second prize after Anderssen.
1871, British Association, London: First prize, 12 to 0.
1872, " " " First prize, 7 to 1.
1873, Vienna: First prize.
1882, " First and second prizes divided with Winawer.
1883, London: Second prize after Zukertort.
1894, New York: First prize; Albin, second.
1895, Hastings: Fifth prize.
1896, St. Petersburg Quadrangular Tourney: Second prize after Lasker; Pillsbury, third; Tchigorin, fourth.
" Nuremberg: Fifth prize.
1898, Vienna: Fourth prize.
" Cologne: Fifth prize.

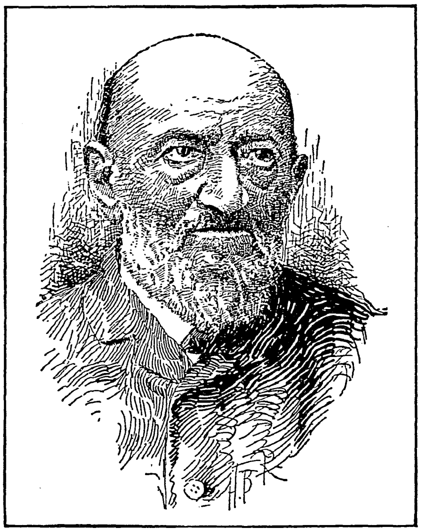
S. A. P.

STEINSCHNEIDER, MORITZ: Austrian bibliographer and Orientalist; born at Prossnitz, Moravia, March 30, 1816. He received his early instruction in Hebrew from his father, Jacob Steinschneider (b. 1782; d. March, 1856), who was not only an expert Talmudist, but was also well versed in secular science. The house of the elder Steinschneider was the rendezvous of a few progressive Hebraists, among whom was his brother-in-law, the physician and writer Gideon Brecher.



Moritz Steinschneider.

Education.

At the age of six Moritz was sent to the public school, an unheard-of proceeding at that time with regard to a Jewish child; and at the age of thirteen he became the pupil of Rabbi Nahum Trebitsch, whom he followed to Nikolsburg in 1832. The following year, in order to continue his Talmudic studies, he went to Prague, where he remained until 1836, attending simultaneously the lectures at the Normal School. His countryman Abraham Benisch, who also was studying in Prague at this time, inaugurated among his intimate friends a kind of Zionistic movement, which Steinschneider joined. Later, however, seeing the impracticability of the scheme, he withdrew from it completely (1842).

In 1836 Steinschneider went to Vienna to continue his studies, and, on the advice of his friend Leopold Dukes, he devoted himself especially to Oriental and Neo-Hebrew literatures, and most particularly to bibliography, which latter was destined to become the principal field of his activity. Being a Jew, Steinschneider was prevented from entering the Oriental Academy; and for the same reason he was unable even to obtain permission to make extracts from the Hebrew books and manuscripts in the Imperial Library, Vienna. In spite of these drawbacks he continued his studies in Arabic, Syriac, and Hebrew with Professor Kaerle at the Catholic Theological Faculty of the university. He had at this juncture the intention of adopting the rabbinical career. In Vienna, as formerly in Prague, he earned a livelihood by giving lessons, teaching Italian among other subjects. For political reasons he was compelled to leave Vienna and decided to go to Berlin; but, being unable to obtain the necessary passport, he remained in Leipsic. At the university there he continued the study of Arabic under Professor Fleischer. At this time he began the translation of the Koran into Hebrew and collaborated with Franz Delitzsch in editing Aaron ben Elijah's “'Eẓ Ḥayyim” (Leipsic, 1841); but the rules of the Austrian censorship did not permit the publication of his name as coeditor. While in Leipsic he contributed a number of articles on Jewish and Arabic literature to Pierer's Universal Encyklopädie.

Having at length secured the necessary passport, Steinschneider in 1839 proceeded to Berlin, where he attended the university lectures of Franz Bopp on comparative philology and the history of Oriental literatures. At the same time he made the acquaintance of Leopold Zunz and Abraham Geiger. In 1842 he returned to Prague, and in 1845 he followed Michael Sachs to Berlin; but the Orthodox tendencies of the latter caused Steinschneider to abandon definitely his intention of becoming a rabbi. At this time he was employed as a reporter of the “National-Zeitung” at the sessions of the National Assembly in Frankfort and as correspondent of the “Prager Zeitung.” In 1844, together with David Cassel, he drafted the “Plan der Real-Encyclopädie des Judenthums,” a prospectus of which work was published in the “Literaturblatt des Orients”; but the project was not carried through (see specimen page reproduced in JEW. ENCYC. i., Preface, p. xviii.).

On March 17, 1848, Steinschneider, after many difficulties, succeeded in becoming a Prussian citizen. The same year he was charged with the preparation of the catalogue of the Hebrew books in the Bodleian Library, Oxford (“Catalogus Librorum Hebræorum in Bibliotheca Bodleiana,” Berlin, 1852–60), a work which was to occupy him thirteen years, in the course of which he spent four summers in Oxford. In 1850 he received from the University of Leipsic the degree of Ph.D. In 1859 he was appointed lecturer at the Veitel-Heine Ephraim'sche Lehranstalt in Berlin, where his lectures were attended by both Jewish and Christian students.

From 1860 to 1869 he served as representative of the Jewish community at the administration, before the tribunals of the city, of the oath More Judaico, never omitting the opportunity to protest against this remnant of medieval prejudice. From 1869 to 1890 he was director of the Jüdische Mädchen-Schule (school for girls of the Jewish community), and in 1869 he was appointed assistant ("Hilfsarbeiter") in the Royal Library, Berlin. From 1859 to 1882 he edited the periodical "Hebräische Bibliographie." In 1872 and 1876 he refused calls to the Berlin Hochschule für die Wissenschaft des Judenthums and the Landesrabbiner-Schule in Budapest, respectively, holding that the proper institutions for the cultivation of Jewish science were not the Jewish theological seminaries, but the universities.

His Field of Activity.

It is a characteristic feature of Steinschneider's vast literary activity that he chose fields far removed from that of theology proper, *e.g.*, mathematics, philology, natural history, and medicine, endeavoring thereby to display the part which the Jews had taken in the general history of civilization ("Kulturgeschichte"). Thus while Zunz had laid the foundations of Jewish science, Steinschneider completed many essential parts of the structure. He was the first to give a systematic survey of Jewish literature down to the end of the eighteenth century, and was the first also to publish catalogues of the Hebrew books and manuscripts which are found in the great public libraries of Europe. The gigantic Bodleian catalogue laid the foundation of his reputation as the greatest Jewish bibliographer. This and the catalogues of the libraries of Leyden, Munich, Hamburg, and Berlin, as well as the twenty-one volumes of his "Hebräische Bibliographie," form an inexhaustible mine of information on all branches of Jewish history and literature. One of his most important original works is "Die Hebräischen Uebersetzungen des Mittelalters und die Juden als Dolmetscher: Ein Beitrag zur Literaturgeschichte des Mittelalters, Meist nach Handschriftlichen Quellen," Berlin, 1893. As the author states in his preface, the first plan of this monumental work goes back as far as 1849. Having become conscious, while writing his article on Jewish literature for Ersch and Gruber's "Allgemeine Encyklopädie der Wissenschaften und Künste" (1844–47), of the lack of sources on the influence of foreign works on Jewish literature, he determined to supplement the monographs of Huet, Jourdain, Wüstenfeld, and Wenrich on the history of translations by one having the Neo-Hebrew literature as its subject. In 1880 the Institut de France offered a prize for a complete bibliography of the Hebrew translations of the Middle Ages; Steinschneider won it with two monographs written in French in 1884 and 1886. His "Uebersetzungen" is an enlarged translation into German of these two French monographs.

Steinschneider writes with equal facility in German, Latin, French, Italian, and Hebrew; his style is not popular, and is intended only "for readers who know something, and who wish to increase their knowledge"; but, curiously enough, he did not hesitate to write, together with Horwitz, a little reader for school-children, "Imre Binah" (1846), and other elementary school-books for the Sassoon School of the Beni-Israel at Bombay. In this same connection the fact deserves mention that in 1839 he wrote "Eine Uebersicht der Wissenschaften und Künste Welche in Stunden der Liebe Nicht Uebersehen Sind" for Saphir's "Pester Tageblatt," and in 1846 "Manna," a volume of poems, adaptations of Hebrew poetry, which he dedicated to his fiancée, Augusta Auerbach, whom he married in 1848.

The following is a list of the more important independent works of Steinschneider, arranged in chronological order:

'Eẓ Ḥayyim, Ahron ben Elias aus Nikomedien des Karäer's System der Religionsphilosophie, etc., edited together with Franz Delitzsch. Leipsic, 1841.

Die Fremdsprachlichen Elemente im Neuhebräischen. Prague, 1845.

Imre Binah: Spruchbuch für Jüdische Schulen, edited together with A. Horwitz. Berlin, 1847.

Manna (adaptations of Hebrew poetry from the eleventh to the thirteenth century). Berlin, 1847.

Jüdische Literatur, in Ersch and Gruber, "Encyc." section ii., part 27, pp. 357–376, Leipsic, 1850 (English version, by William Spottiswoode, "Jewish Literature from the Eighth to the Eighteenth Century," London, 1857; Hebrew version, by H. Malter, "Sifrut Yisrael," Wilna, 1899).

Catalogus Librorum Hebræorum in Bibliotheca Bodleiana. Berlin, 1852–60.

Die Schriften des Dr. Zunz. Berlin, 1857.

Alphabetum Siracidis . . . in Integrum Restitutum et Emendatum, etc. Berlin, 1858.

Catalogus Codicum Hebræorum Bibliothecæ Academiæ Lugduno-Batavæ (with 10 lithograph tables containing specimens from Karaite authors). Leyden, 1858.

Bibliographisches Handbuch über die Theoretische und Praktische Literatur für Hebräische Sprachkunde. Leipsic, 1859 (with corrections and additions, *ib.* 1896).

Reshit ha-Limmud, a systematic Hebrew primer for D. Sassoon's Benevolent Institution at Bombay. Berlin, 1860.

Zur Pseudoepigraphischen Literatur, Insbesondere der Geheimen Wissenschaften des Mittelalters. Aus Hebräischen und Arabischen Quellen. Berlin, 1862.

Alfarabi des Arabischen Philosophen Leben und Schriften, etc. St. Petersburg, 1869.

Die Hebräischen Handschriften der Königlichen Hof- und Staatsbibliothek in München (in the "Sitzungsberichte der Philosophisch-Historischen Klasse der Königlichen Akademie der Wissenschaften in München"). Munich, 1875.

Polemische und Apologetische Literatur in Arabischer Sprache Zwischen Muslimen, Christen und Juden. Leipsic, 1877.

Catalog der Hebräischen Handschriften in der Stadtbibliothek zu Hamburg. Hamburg, 1878.

Die Arabischen Uebersetzungen aus dem Griechischen. Berlin, 1889–96.

Die Hebräischen Uebersetzungen des Mittelalters und die Juden als Dolmetscher, etc. Berlin, 1893.

Verzeichniss der Hebräischen Handschriften der Königlichen Bibliothek zu Berlin. Part i., Berlin, 1897; part ii., *ib.* 1901.

Die Arabische Literatur der Juden. Frankfort-on-the-Main, 1902.

Besides a great number of contributions, in widely differing forms, to the works of others (see "Steinschneider Festschrift," pp. xi.–xiv.), the following independent essays of Steinschneider deserve special mention:

"Ueber die Volksliteratur der Juden," in R. Gosche's "Archiv für Literaturgeschichte," 1871; "Constantinus Africanus und Seine Arabischen Quellen," in Virchow's "Archiv," vol. xxxvii.; "Donnolo: Pharmakologische Fragmente aus dem 10. Jahrhundert," *ib.*; "Die Toxologischen Schriften der Araber bis zum Ende des XII. Jahrhunderts," *ib.* lii. (also printed separately); "Gifte und Ihre Heilung: Eine Abhandlung des Moses Maimonides," *ib.* lvii.; "Gab Es eine Hebräische Kurzschrift?" in "Archiv für Stenographie," 1877 (reprint of the article "Abbreviaturen," prepared by Steinschneider for the proposed "Real-Encyclopädie des Judenthums," see above); "Jüdische Typographie und Jüdischer Buchhandel" (together with D. Cassel), in Ersch and Gruber, "Encyc." section ii., part 28, pp. 21–94;

"Die Metaphysik des Aristoteles in Jüdischer Bearbeitung," in the "Zunz Jubelschrift," 1886; "Jehuda Mosconi," in Berliner's "Magazin," 1876; "Islam und Judenthum," *ib.* 1880; "Ueber Bildung und den Einfluss des Reisens auf Bildung" (two lectures delivered in the Verein Junger Kaufleute; reproduced in the Virchow-Wattenbach "Sammlung Gemeinverständlicher Wissenschaftlicher Vorträge," 1894); "Lapidarien: Ein Culturgeschichtlicher Versuch," in the Kohut Memorial Volume, 1896; "Jüdisch-Deutsche Literatur," in Neuman's "Serapeum," 1848-49; "Jüdisch-Deutsche Literatur und Jüdisch-Deutsch," *ib.* 1864, 1866, 1869; the articles on Arabia, Arabic, Arabic literature, the califs, the Koran, the Mohammedan Religion, and Mohammedan sects in the second ed. (1839-43) of Pierer's "Universallexikon"; "Letteratura Italiana dei Giudei," in "Il Vessillo Israelitico," 1877-80; "Letteratura Antigiudaica in Lingua Italiana," *ib.* 1881-83; "Zur Geschichte der Uebersetzungen aus dem Indischen in's Arabische," in "Z. D. M. G." 1870-71; "Hebräische Drucke in Deutschland," in Ludwig Geiger's "Zeitschrift für die Geschichte der Juden in Deutschland," 1886-92; "Abraham Judaeus-Savasorda und Ibn Esra," in Schlömilch's "Zeitschrift für Mathematik und Physik," 1867; "Abraham ibn Esra," *ib.* 1880.

Very interesting and highly characteristic is Steinschneider's philosophic testament in the preface to his "Arabische Literatur der Juden," in which he who laid the main foundation of the study of Jewish literature and history did not hesitate, at the age of eighty-six, to formulate an agnostic "confession de foi."

Hermann Steinthal.

STEINTHAL, HERMANN (HEYMAN): German philologist and philosopher; born at Gröbzig, Anhalt, May 16, 1823; died at Berlin March 14, 1899. He studied philology and philosophy at the University of Berlin, and was in 1850 appointed privat-docent of philology and mythology at that institution. He was a pupil of Wilhelm von Humboldt, whose "Sprachwissenschaftliche Werke" he edited in 1884. From 1852 to 1855 Steinthal resided in Paris, where he devoted himself to the study of Chinese, and in 1863 he was appointed assistant professor at the Berlin University; from 1872 he was also privat-docent in critical history of the Old Testament and in religious philosophy at the Hochschule für die Wissenschaft des Judenthums. In 1860 he founded, together with his brother-in-law Moritz Lazarus, the "Zeitschrift für Völkerpsychologie und Sprachwissenschaft," in which was established the new science of racial psychology. Steinthal was one of the directors (from 1883) of the Deutsch-Israelitische Gemeindebund, and had charge of the department of religious instruction in various small congregations.

Steinthal's principal works are: "Die Sprachwissenschaft W. von Humboldts und die Hegel'sche Philosophie" (Berlin, 1848); "Klassifikation der Sprachen, Dargestellt als die Entwickelung der Sprachidee" (*ib.* 1850), which appeared in 1860 under the title "Charakteristik der Hauptsächlichsten Typen des Sprachbaues," and later, after being reedited and enlarged by the author and Misteli, as the second volume of the "Abriss der Sprachwissenschaft" (*ib.* 1893); "Der Ursprung der Sprache im Zusammenhang mit den Letzten Fragen Alles Wissens" (*ib.* 1851, 4th enlarged ed. 1888); "Die Entwickelung der Schrift" (*ib.* 1852); "Grammatik, Logik, Psychologie: Ihre Prinzipien und Ihre Verhältniss zu Einander" (*ib.* 1855); "Geschichte der Sprachwissenschaft bei den Griechen und Römern" (*ib.* 1863, 2d ed. 1889-91); "Philologie, Geschichte und Psychologie in Ihren Gegenseitigen Beziehungen" (*ib.* 1864); "Die Mande-Negersprachen, Psychologisch und Phonetisch Betrachtet" (*ib.* 1867); "Abriss der Sprachwissenschaft" (vol. i.: "Einleitung in die Psychologie und Sprachwissenschaft," *ib.* 1871; 2d ed. 1881); "Allgemeine Ethik" (*ib.* 1885); "Zu Bibel und Religionsphilosophie" (*ib.* 1890; new series, 1895), consisting mainly of lectures delivered before the Gesellschaft der Freunde for the benefit of the Lehranstalt für die Wissenschaft des Judenthums. The first volume of his "Gesammelte Kleine Schriften" appeared at Berlin in 1880.

Achelis, *Heyman Steinthal*, Hamburg, 1898 (in Holtzendorff-Virchow's *Sammlung Gemeinverständlich-Wissenschaftlicher Vorträge*). S.

STEINTHAL, MORITZ: German physician; born at Stendal Oct. 22, 1798; died at Berlin May 8, 1892. He studied at the University of Berlin (M.D. 1821), and, after traveling throughout the Continent and England for two years, established himself as a physician in Berlin, where he soon built up a large practise, and where he resided until his death. He was the first Prussian Jew to receive the title of "Sanitätsrath" (1847), later becoming a "Geheimer Sanitätsrath."

Steinthal was the author of the following works: "Ueber Tabes Dorsalis"; "Medizinische Analekten: Eine Auswahl Ausgezeichneter Krankheitsfälle"; "Encephalopathien des Kindlichen Alters"; "Ueber Nervenfiber, Carcinosen und Psychosen"; and "Rückschau auf Meine Fünfzigjährige Wirksamkeit." He was a contributor to many medical journals, and published in 1870 a new edition of Hufeland's "Makrobiotik."

S. F. T. H.

STEPHEN: Hellenist Jewish convert to Christianity who, according to tradition, was martyred at Jerusalem Dec. 26, in the year 29 C.E. Epiphanius ("Hæres." xx. 4) records him as one of the seventy chosen disciples of Jesus. That he was a Hellenist is seen from his Greek name; according to Basil of Seleucia ("Oratio de S. Stephano"), his Jewish name was Kelil (= "crown"), the equivalent of *Στέφανος*. Stephen is said to have been chosen one of the seven deacons charged with the distribution of the common fund entrusted to the Apostles. To him was ascribed the power of miracle-working (Acts vi. 5 *et seq.*); but he was accused of having spoken blasphemous words in declaring that Jesus would destroy the Temple and would change the customs instituted by Moses (verses 11-15 of the same chapter). When the high priest asked him whether such was the case, Stephen is said to have made a long speech in reply, imitating that of Samuel (I Sam. xii. 6 *et seq.*) and passing in review Jewish history from the time of Abraham until that of the building of the Temple of Solomon. Then, imitating the Prophets, he rebuked the people for their stubbornness, insisting that the Temple stood against the desire of God. This enraged the people, who cast him out of the city and stoned him, Saul of Tarsus being present at the execution and consenting thereto (Acts vii. 1-viii. 1).

J. M. SEL.

STERN, ABRAHAM: Polish inventor and educator; born at Hrubieszow, government of Lublin, 1769; died at Warsaw Feb. 3, 1842. He was the son of poor parents, and showed, while still very young, marked fondness for the study of Hebrew books, which inspired him with a love for philosophy and mathematics. Minister Stasitz, the owner of Hrubieszow, discovered the natural aptitude of young Stern and encouraged him to devote himself to the study of mathematics, Latin, and German, later sending him to Warsaw to continue his studies.

Abraham Stern.

The first result of Stern's inventive genius was a computing-machine, which he perfected in 1817, and which included a device for calculating the square roots of numbers. This invention attracted wide attention, and led to his being elected (1817) a member of the Warsaw Society of the Friends of Science. In 1816, and again in 1818, he was presented to Emperor Alexander I., who received him cordially and granted him an annual pension of 350 rubles, promising, in case of his death, to pay half of this sum to his widow. Encouraged by his friends, Stern invented a topographical wagon for the measurement of level surfaces, an invention of great value to both civil and military engineers. The committee appointed by the academy to examine this invention reported very favorably upon it. Stern rendered great services to agriculture by his improvements in the construction of thrashing- and harvesting-machines, as well as by his invention of a new form of sickle. He invented also a device by which the danger of runaways could be eliminated by means of a detachable tongue and a brake.

Stern took an active interest in educational affairs. He accepted the post of inspector of Jewish schools and also that of censor; and the rabbinical school at Warsaw was organized according to the plan suggested by him. His official duties, however, did not prevent him from making contributions to Hebrew literature. He wrote an ode in honor of the coronation of Nicholas I., which appeared in Hebrew under the title "Rinnah u-Tefillah" and was translated into Polish by J. Gluegenberg (Warsaw, 1829). He wrote also "Shirim" (Hebrew poems), which appeared in the "Shire Musar Haskel" collection edited by Alex. Gazon (Warsaw, 1835). Besides his knowledge of Hebrew, Stern was well versed in Aramaic and Polish.

Stern always remained an Orthodox Jew; he wore a skull-cap in the presence of his eminent friends, and when staying in the castle of Adam Czartoriski a Jewish cook prepared his meals. Among his friends were Dibitz, Zabalkanski, Prince Novosilchev, and Prince Radziwill. Stern was the father-in-law of Ḥayyim Selig Slonimski, the editor of "Ha-Ẓefirah."

H. R. J. G. L.

STERN, ADOLF: German poet and historian of literature; born at Leipsic June 14, 1835. He studied philosophy and history at Leipsic and Jena, and resided from 1853 to 1865 in Weimar, Chemnitz, Zittau, and Schandau, finally settling in Dresden, where in 1868 he became assistant professor, and the following year professor, of the history of literature and art at the polytechnic.

Stern's literary activity has been very extensive; of his many works the following may be mentioned:

Poetical: "Gedichte," Leipsic, 1860 (3d ed. 1882); "Am Königssee," *ib.* 1863; "Historische Novellen," *ib.* 1866; "Das Fräulein von Augsburg," *ib.* 1868; "Johannes Guttenberg," *ib.* 1873 (2d ed. 1889); "Neue Novellen," *ib.* 1875; "Die Deutschherrn," a tragedy, Dresden, 1878; "Aus Dunklen Tagen," Leipsic, 1879; "Die Letzten Humanisten," *ib.* 1880 (3d ed. 1889); "Ohne Ideale," *ib.* 1881; "Camoens," *ib.* 1886; "Drei Venezianische Novellen," *ib.* 1886; "Auf der Reise," Dresden, 1890; "Die Wiedergefundene," Stuttgart, 1891.

Historical: "Fünfzig Jahre Deutscher Dichtung," Leipsic, 1871 (2d ed. 1877); "Katechismus der Allgemeinen Litteraturgeschichte," *ib.* 1874 (2d ed. 1892); "Zur Litteratur der Gegenwart," *ib.* 1880; "Lexicon der Deutschen Nationallitteratur," *ib.* 1882; "Geschichte der Neuern Litteratur," *ib.* 1883-85; "Geschichte der Weltlitteratur," Stuttgart, 1887-88; "Beiträge zur Litteraturgeschichte des Siebzehnten und Achtzehnten Jahrhunderts," Leipsic, 1893;

"Studien zur Litteratur der Gegenwart," Dresden, 1895.

Miscellaneous: "Wanderbuch," Leipsic, 1877 (3d ed. 1890); "Herman Hettner," *ib.* 1885; "Die Musik in der Deutschen Dichtung," *ib.* 1888.

Stern has edited the following works: W. Hauff's "Sämmtliche Werke," Berlin, 1879; Herder's "Ausgewählte Schriften," Leipsic, 1881; Chr. Gottfried Körner's "Gesammelte Schriften," *ib.* 1882; Vilmar's "Geschichte der Deutschen Nationallitteratur," Marburg, 1890 (to this work Stern added "Die Deutsche Nationallitteratur vom Tode Goethes bis zur Gegenwart," which appeared also in a separate edition); Peter Cornelius' "Gesammelte Gedichte," Leipsic, 1890. In collaboration with Erich Schmidt, Stern edited also Otto Ludwig's "Gesammelte Schriften," Leipsic, 1891 (with a life of the author, which appeared also separately). He has furthermore translated from the Swedish the poems of Count Snoilsky, Dresden, 1892.

S. F. T. H.

STERN (SZTERÉNYI), ALBERT: Hungarian rabbi; born at Nagy-Kanizsa in 1826; died in the insane asylum at Ofen June 16, 1888; educated at Presburg and Ofen. Stern, who was the son-in-law of Rabbi Hirsch Bär Fassel, officiated as rabbi at Lengyeltoti from 1851 to 1867, when he was called to the rabbinate of Uj-Pest; but on account of his extravagant demands in behalf of Reform he was obliged to resign the latter position in 1884.

Stern was a versatile scholar. He founded the Hebrew periodical "Ha-Meḥaḳḳer" (3 vols., 1877–1879), in which he published his studies on the laws governing proselytes, the history of rabbinical seminaries, exhumation, ritual divorce, the life of Alfasi, and the judicial decisions "Dinah de-Malkutah Dinah." He wrote also on Jewish names (Nagy-Kanizsa, 1864), and on the law and history of burial (Pesth, 1874).

In his desire for assimilation, Stern changed his name to Szterényi. All of his five children accepted baptism. His son **Joseph Sztерényi** is at present (1905) secretary in the Ministry of Commerce.

S. L. V.

STERN, ALFRED: German historian; born Nov. 22, 1846, at Göttingen, where his father, Moriz Abraham Stern (1807–94), was professor of mathematics (see "Vierteljahrschrift der Naturforschenden Gesellschaft in Zürich," 1894). Stern studied in the gymnasium of his native city, in Heidelberg, and in Berlin. From 1869 to 1870 he acted as assistant archivist in Carlsruhe, and two years later established himself in Göttingen as privat-docent in history. In 1873 he was appointed professor at the University of Bern, which position he held until 1887, when he accepted the chair of general history at the Eidgenössische Polytechnikum at Zurich.

Stern is the author of the following works: "Ueber die Zwölf Artikel der Bauern und Einige Andere Aktenstücke aus der Bewegung von 1525" (Leipsic, 1868); "Milton und Seine Zeit" (2 vols., *ib.* 1877–79); "Geschichte der Revolution in England" (1881, 2d ed. Berlin, 1898); "Abhandlungen und Aktenstücke zur Geschichte der Preussischen Reformzeit 1807–15" (Leipsic, 1885); "Das Leben Mirabeaus" (2 vols., Berlin, 1889); "Geschichte Europas seit den Verträgen von 1815 bis zum Frankfurter Frieden von 1871" (*ib.* 1894). He edited "Briefe Englischer Flüchtlinge in der Schweiz" (Göttingen, 1874); and, together with W. Wischer, the first volume of the "Baseler Chroniken" (Leipsic, 1872).

BIBLIOGRAPHY: *Meyers Konversations-Lexikon*.

S.

STERN, BASILIUS: Russian educator; born at Tarnopol, Galicia, in 1798; died at Odessa March 15, 1853. He received a thorough Talmudic education, and later entered the school of Joseph Perl, where, at the age of twenty, he became instructor, holding that position for ten years. During this time he studied assiduously, and acquired a fair knowledge of modern languages. On the death of Ephraim Sittenfeld (1828) Stern was appointed his successor as director of the Jewish school in Odessa. He conducted the institution very successfully and exerted a great and lasting influence on the education of the Jews in South Russia. Under his management the school prospered greatly, and Stern succeeded in winning over the adherents of the old Orthodox party, who were at first bitterly opposed to the Russianizing tendencies of the institution. In 1837 Stern received permission from the governor-general of the New-Russian provinces to open a school for boys and girls in Kishinef, Bessarabia.

Stern was highly esteemed by the government, which often solicited his advice in Jewish matters. Thus, during the reign of Nicholas I., when the government was considering means for the intellectual and religious uplifting of the Russian Jews, Stern was invited to present his suggestions. Among the measures proposed was the reorganization of the rabbinate. In the archives of the governor-general of New Russia there is a document dealing with the establishment in Odessa of a committee for the purpose of devising a plan to regulate the religious administration connected with the offices of the government rabbis. Such a committee was formed in Odessa in 1840, Basilius Stern, Ḥayyim Efrusi, and Moses Lichtenstadt being the delegates appointed. Stern suggested also that a Jewish seminary be founded in Russia for the education of rabbis. In reporting this project to Count M. S. Vorontsov, the military governor of Odessa, Major-General Akhlestyshev praised the work of Stern and suggested that hereditary honorary citizenship be conferred upon him; this honor was later granted him by Czar Nicholas I. To the work of this committee may be attributed the founding of rabbinical schools in Wilna and Jitomir nine years later. In 1843 Stern was called to St. Petersburg by the minister of education in order to attend the sessions of the committee on educational affairs. In his letter to Uvarov, minister of education, Governor-General Vorontsov of New Russia speaks highly of Stern's experience, knowledge, and education; and in his report of March 31, 1843, Akhlestyshev again refers to the services of Stern, stating that he had granted the latter 600 rubles instead of the 300 asked for, in order to cover the expenses of his journey to St. Petersburg. On April 11, 1843, Stern left for the Russian capital. As a member of the committee on Jewish affairs he undoubtedly contributed much toward the framing of the proposed legislation.

Stern was a master of ancient languages, especially of Hebrew, and he devoted himself to the study of history also, especially the early history of the Slavonic peoples.

H. R. J. G. L.

STERN, DAVID, VISCOUNT DE: English banker; born in Frankfort-on-the-Main; died in London Jan. 19, 1877. He was a member of a prominent family descendants of which established banking-houses in different European capitals. The title of viscount was bestowed upon him in 1869 by the King of Portugal in recognition of the part taken by his firm in floating Portuguese loans. He was a member of the Commission of Lieutenancy of the City of London, and was a director of the Imperial Bank. David de Stern married a daughter of Aaron Asher Goldsmid, and was succeeded in the title by his son Sydney de Stern, later created Baron Wandsworth.

Bibliography: *Jew. Chron.* Jan. 26, 1877.
J. G. L.

STERN, HENRY ABRAHAM: Christian missionary; born at Unterreichenbach, Hesse-Cassel, April 11, 1820; died in London May 13, 1885. He obtained his early education in Frankfort-on-the-Main, and at the age of seventeen entered a commercial house in Hamburg. In 1839 he emigrated to London, where he drifted into the Operative Jewish Converts' Institution, and was baptized in 1840, in the Palestine Place Chapel, later being appointed a missionary to Busrah and Bagdad. His duty was to found "a mission to the Jews in Chaldea and Persia," and he set out for his destination early in 1844. He worked as a missionary among the Jews for more than forty years, and traveled in Mesopotamia, Persia, Arabia, Turkey, Abyssinia, and England. While in Abyssinia, where he won over many Falashas to Christianity, he was imprisoned by King Theodore, and remained a captive during the years 1863-67. He was ultimately liberated by an English force under Sir (afterward Lord) Robert Napier.

J. I. Co.

STERN, HERMANN, BARON DE: English financier; born in Frankfort-on-the-Main in 1815; died in London Oct. 20, 1887. Together with his brother David de Stern he settled in London in 1844, where the brothers founded the firm of Stern Brothers, which soon won recognition as one of the most successful and reputable banking-houses in the city; and from time to time several important loans were floated by the firm. Baron de Stern was principally connected with Portuguese finance, but he was prominently concerned also in floating the Danubian 7-per-cent loan of 1864, the Spanish mortgage loan, and the Italian tobacco-monopoly loan. In 1869 patents of nobility were conferred upon both brothers by the government of Portugal, David being created a viscount, and Hermann a baron.

Baron de Stern was a member of the Anglo-Jewish Association and of the Jews' Free School, and a director of the Imperial Bank, the Bank of Rumania, the London and San Francisco Bank, and the East London Waterworks Company.

J. G. L.

STERN, JULIUS: German musician; born at Breslau Aug. 8, 1820; died at Berlin Feb. 27, 1883. He received his elementary education in music from the violinist Peter Lüstner, and at the age of nine played at concerts. In 1832 his parents removed to Berlin, where Stern studied first under Maurer, Ganz, and St.-Lubin, and later under Rungenhagen at the Königliche Akademie der Künste. As a result of several compositions which he had written while a pupil of the academy, King Frederick William IV., who was an ardent lover of art, granted Stern a stipend which enabled him to pursue his studies. He went to Dresden, where he received instruction from Miksch; and thence to Paris, where he subsequently was appointed leader of the Deutscher Gesangverein Society. While in the latter city he composed, among other works, the music to Mendelssohn's "Antigone."

In 1846 Stern returned to Berlin, where, in the following year, he founded the Stern Gesangverein. The first performance of Mendelssohn's oratorio "Elijah" (Oct., 1847) established Stern's reputation as one of the foremost conductors of his day, and his choir constantly increased in size and efficiency, so that the repertoire of the society soon embraced not only the standard works of Handel, Haydn, and Bach, but also those of contemporary composers. In 1872 the Gesangverein celebrated its twenty-fifth anniversary amid great enthusiasm; two years later Stern was compelled to resign his directorship on account of ill health.

Of even greater importance for the development of music was the Stern Conservatorium, founded conjointly in 1850 by Stern, Kullak, and Marx. By the resignation of Theodor Kullak in 1855, and of A. B. Marx in 1857, Stern became sole proprietor of the institution, which he managed until his death. From 1869 to 1871 he conducted the Berlin Symphony Orchestra, and from 1873 to 1874 the concerts in the Reichshalle, where he found an opportunity of carrying out his favorite idea of bringing the works of talented young musicians before the public. In 1849 he received the title of "Royal Musical Director," and in 1860 that of "Professor."

STERN, KAROLINE: German prima donna; born at Mayence April 10, 1800; date of death unknown. She studied first under her father, a violinist of repute, and then under Heidelhof. She made her début (1816) at the Nationaltheater at Treves in Spontini's "Das Unterbrochene Opferfest," and thence went to Düsseldorf, where she became acquainted with the Heine family; she is mentioned in laudatory terms in young Heinrich Heine's verse. After a short engagement at Aix-la-Chapelle, she became in 1819 prima donna at the Hoftheater at Stuttgart, which she left for Mayence in 1825. Soon afterward, however, she was called to Munich, and subsequently filled engagements at Augsburg and Würzburg. She retired from the stage in 1841. Her rich voice, her histrionic ability, and her impressive personality enabled her to sing the most important of rôles. Her greatest triumphs were scored in the operas of Mozart, Weber, Spontini, Rossini, and Meyerbeer. After leaving the stage she was equally successful as a concert-singer as late as 1855.

S. R. N.

STERN, LOUIS: American merchant and politician; born at Ziegenhain, Hesse-Cassel, Germany, Feb. 22, 1847. Together with his parents he emigrated to America in 1853, settling in Albany, N. Y., where he attended the public school and academy. In 1867 he went to New York city, and entered upon a commercial career, establishing, with his elder brother Isaac (born at Ziegenhain May 9, 1843), the dry-goods house of Stern Brothers.

Stern has taken active part in the political life of New York city, affiliating himself with the Republican party. In 1897 he was an unsuccessful candidate for the presidency of the borough of Manhattan. In 1890 he was a United States commissioner to the Paris Exposition, and in 1904 chairman of the executive committee of the New York State Commission to the St. Louis Exposition. In 1905 he became one of the directors of the Equitable Life Assurance Society. He is interested also in Jewish affairs.

A. F. T. H.

STERN, LOUIS WILLIAM: German psychologist; born in Berlin April 29, 1871; educated at the Kölnische Gymnasium and at the university of his native city (Ph.D. 1893). He was appointed privat-docent at the University of Breslau in 1897, and founded in that city a branch of the German society for psychological investigation.

Stern is the author of the following works: "Die Analogie im Volkstümlichen Denken," 1893; "Psychologie der Veränderungsauffassung," 1897; "Ueber Psychologie der Individuellen Differenzen," 1900; "Die Psychologische Arbeit im 19. Jahrhundert," 1900; and "Zur Psychologie der Aussage," 1902. He has published also numerous articles in the "Zeitschrift für Psychologie und Physiologie," and in other periodicals. S.

STERN, MAX EMANUEL (MENDEL BRI STERN): Hungarian Hebraist; born at Presburg Nov. 9, 1811; died at Vienna Feb. 9, 1873. He studied under his father, who was a teacher at the Jewish primary school in Presburg, and when the elder Stern became blind, Max, then only fourteen years of age, took charge of his classes, devoting his nights to further study and to writing his "Dichtungen," his "Maslul," and his "Perlenblumen," the last-named being translations, in rime and meter, of the Proverbs. In 1833 he accepted the position of corrector for Schmid's printing-press at Vienna, and two years later was appointed principal of the Judæo-German school at Eisenstadt, where he wrote his epic "Tif'ereth ha-Tishbi." In 1838, after having taught for half a year at Triesch, he returned to Vienna, where he prepared his epic for the press, publishing it under the pseudonym of "M. I. Ernst" (Leipsic, 1840); at the same time he issued his satire "Thurmbau zu Babel." In 1845 Stern began to publish his periodical "Kokebe Yiẓḥaḳ," which was twice subsidized by the Imperial Academy of Science at Vienna; later he received from the emperor the gold medal "pro litteris et artibus," besides being made an honorary member of the Deutsche Morgenländische Gesellschaft.

Stern published the following works, in addition to those already mentioned: "König Sauls Glück und Ende" (Presburg, 1833); "Sprüche Salomos," with translation and a Hebrew commentary (*ib.* 1833; 2d ed., Vienna, 1854); "Shire ha-Yiḥud" (Vienna, 1840); "Ebel Mosheh" (*ib.* 1840); "Perlen des Orients" (*ib.* 1840); "Zeitstimmen" (Leipsic, 1841); "Klänge aus der Vorzeit" (Vienna, 1841); "Das Buch Ezechiel" (*ib.* 1842); "Bet ha-Sefer" (*ib.* 1842); "Die Fromme Zionstochter" (*ib.* 1842); "Toledot Yisrael" (*ib.* 1844); "Die Weisheitssprüche des Josua b. Sirach" (*ib.* 1844); "Festgebete der Israeliten"; "Bikkure ha-'Ittim" (one number; *ib.* 1844); "Rachel" (*ib.* 1844); "Ha-Shenah ha-Nimkeret" (*ib.* 1847); "Beḥinat ha-'Olam," by Jedaiah ben Abraham Bedersi (*ib.* 1847); "Nazional-Harfenlied" (*ib.* 1848), with music by Solomon Sulzer; "Mosedot Emunah" (*ib.* 1851); "Seliḥot" (*ib.* 1853); "Haggadah" (*ib.* 1854); "Taḥkemoni" of Judah al-Ḥarizi (*ib.* 1854); "Die Rabbinerwahl in Bumesl" (*ib.* 1856); "Lehrbuch der Herzenspflichten nach Bechai" (*ib.* 1856); "Hoḳmat Shelomoh" (*ib.* 1858); "Zur Alexander-Sage" (*ib.* 1861); "Oẓar ha-Millin" (*ib.* 1863); a translation of the "Moreh Nebukim" (*ib.* 1864); "Keter Torah" (*ib.* 1864); and a translation of Mansello's "Tofet we-'Eden" (*ib.* 1865).

S. L. V.

STERN, MORIZ ABRAHAM: German mathematician; born at Frankfort-on-the-Main June 29, 1807; died at Bern, Switzerland, Jan. 30, 1894. He studied philology at the University of Heidelberg, and prepared himself for a rabbinical career. Later, however, he took up the study of mathematics at the University of Göttingen, where in 1829 he became privat-docent. In 1848 he was appointed assistant professor, and in 1859 professor, of mathematics. In 1887 he resigned his professorship and settled in Bern, where his son was professor at the polytechnic.

He took an active part in the Reform movement, and was the author of the following works bearing on that subject: "Brief an Gabriel Riesser vom 29. Dec., 1842," reprinted in Ludwig Geiger's "Zeitschrift für die Geschichte der Juden in Deutschland," 1887, vol. ii.; "Offene Briefe über den Reform-Verein," in "Der Israelit des Neunzehnten Jahrhunderts," 1844, 1845.

The following is a partial list of Stern's works in the fields of philology and mathematics, a complete enumeration of which may be found in the "Vierteljahrschrift der Naturforschenden Gesellschaft in Zürich," 1894.

Philology: "Ueber die Monatsnamen Einiger Alter Völker," Berlin, 1836; "Die Dritte Gattung der Achämenidischen Keilinschriften," Göttingen, 1850; "Die Sternbilder im Buche Hiob, Kapitel 38, Vers 31, 32," in "Jüdische Zeitschrift," 1866.

Mathematics: "Observationum Infractiones Continuas Specimen," Göttingen, 1829; a fourth edition of Winterfeld's "Anfangsgründe der Mathematik," Brunswick, 1833; "Theorie der Kettenbrüche und Ihre Anwendung," in Crelle's "Journal für die Reine und Angewandte Mathematik," Berlin, 1834; "Darstellung der Populären Anatomie," Berlin, 1834; "Himmelskunde," Stuttgart, 1846 (2d ed. 1854); "Lehrbuch der Algebraischen Analyse," Leipsic, 1860.

Stern published also "Lehrbuch der Mechanik" (Berlin, 1835-36), a translation from the French of Poisson.

STERN, SAMUEL: Hungarian physician; born at Halas, Hungary, Sept. 16, 1839; educated at the universities of Prague and Vienna (M.D. 1858). He acted for some time as assistant physician at the communal hospital of Vienna; in 1863 he was appointed privat-docent and in 1870 assistant professor of clinical propædeutics at the university there. He is the author of the following works: "Beiträge zur Kenntniss der Functionen des Nervensystems," Neuwied, 1868; "Die Propädeutische Klinik als Selbstständiges Theoretisch-Medicinisches Forschungs Institut," Vienna, 1870; "Diagnostik der Brustkrankheiten vom Propädeutisch-Klinischen Standpunkte," *ib.* 1877.

s. F. T. H.

STERN, SIMON ADLER: American author, editor, and critic; born in Philadelphia 1838; died May 2, 1904. As a boy he displayed marked talent as a violinist, in spite of which he devoted himself more to literature. Of his works may be mentioned "Scintillations from the Prose Works of Heinrich Heine," containing translations of "Florentinische Nächte" and of numerous aptly chosen autobiographical excerpts from the poet's works; and translations of Auerbach's "Waldfried" (1873) and "Auf der Höhe" (1875). On his return from a trip to the Far East (1887) he published an account of his travels in a book entitled "Jottings of Travel in China and Japan." Stern contributed critical articles on literature and art to numerous periodicals, and was for several years managing editor of the "Penn Monthly," as well as editor of the "Industrial Review." He was one of the first members of the publication committee of the Jewish Publication Society of America. He was also engaged in several business enterprises, serving for a number of years as treasurer of the Finance Company of Pennsylvania.

Bibliography: *American Jewish Year Book*, 5665 (1904-5), pp. 409-418.

A. F. N. G.

STERN, VICTOR: Austrian dramatist; born at Vienna May 5, 1837. After a brief experience in commercial life he turned to literature, receiving in his new vocation the encouragement of Friedrich Hebbel (1861), under whose auspices he did some of his best work. This includes the following tragedies: "Valentin," 1868; "Das Kronenhaus," 1872; "Calas," 1889; and "Schloss Arnheim," 1893.

Bibliography: *Das Geistige Wien*, ii. 545.

s. E. Ms.

STERN, WILHELM: German physician and philosophical writer; born at Sandberg, Posen, Aug. 11, 1844; son of a rabbi. From 1860 to 1865 he attended the Jewish Theological Seminary of Breslau, and thereafter studied philosophy for two semesters, finally deciding upon a medical career (M.D. Berlin, 1869). In 1870 he settled in Bromberg as a practising physician, removing to Berlin in 1873, where he engaged in literary work.

Stern, whose philosophical bent is critical positivism, is the author of the following works: "Ueber die Tiefe Lage der Nieren" (Berlin, 1869); "Grundlegung der Ethik als Positiver Wissenschaft" (*ib.* 1897); "Die Allgemeinen Principien der Ethik auf Naturwissenschaftlicher Basis" (*ib.* 1901); "Das Wesen des Mitleids" (*ib.* 1903); and "Ueber den Begriff der Handlung" (*ib.* 1904), which appeared in the "Philosophische Aufsätze," published by the Philosophical Society of Berlin on the occasion of its sixtieth anniversary.

STERNBERG. See Mecklenburg.

STERNE, SIMON: American lawyer; born in Philadelphia July 23, 1839; died in New York Sept. 22, 1901. He was educated in the public schools of his native city, and studied at the universities of Heidelberg (Germany) and Pennsylvania, being graduated from the latter institution in 1859. In the following year he was admitted to the bar in Philadelphia and New York, and opened a law-office in the latter city. He soon succeeded in building up a large practise, making a specialty of constitutional law and of laws relating to railroads. He was counsel for the Interstate Commerce Commission in many well-known cases, and upon the request of the United States Senate Committee on Railways he drafted the Interstate Commerce Act. He represented the city of New York in a suit with the New York Central Railroad Company concerning certain improvements in Fourth avenue, New York, and at the time of his death he was the legal representative of many large corporations, among which may be mentioned the Missouri, Kansas, and Texas Railroad Company.

Sterne took great interest in public affairs. He was a member of the executive committee of the Free Trade Union, and a lecturer on political economy in Cooper Union (1861-63). As secretary of the "Committee of Seventy" in 1870 and 1871, he helped to overthrow the Tweed ring, and in 1894 he was a member of the committee that succeeded in electing Strong as anti-Tammany candidate for the mayoralty. He was also a member of the commission appointed (1875) by Governor Tilden to devise plans for the government of the cities of New York state; in 1894 he was appointed by President Cleveland a commissioner to report on "the relation of railways and state in western Europe"; and in 1896 he was a member of the commission appointed by Governor Morton to recommend changes in methods of State-administration.

During 1863–64 Sterne was editor of the "Commercial Advertiser" in New York city, and in the following year he published the "Social Science Review." He was a voluminous writer on political and historical subjects, the following being among his principal works: "Representative Government," 1871; "Development of Political and Constitutional History of the United States," 1882; "Introduction to Mongredien's Wealth Creation," 1883. To Lalor's "Cyclopedia of Political Science and United States History" he contributed articles on "Administration of American Cities," "Legislation," "Monopolies," "Railways," and "Representation"; and he wrote also many articles and essays for American and foreign publications.

A. F. T. H.

STERNER, ALBERT EDWARD: English artist; born in London March 8, 1863. He studied at Julien's Académie and the Ecole des Beaux Arts, Paris, and in 1881 emigrated to the United States. From 1881 to 1885 he lived in Chicago, occupying himself with lithographic work and scene-painting. Since 1885 he has lived in the city of New York.

Sterner has contributed many illustrations to the magazines; *e.g.*, to "Harper's," "The Century," and "Scribner's Monthly"; and he has illustrated G. W. Curtis' "Prue and I" (which established his reputation as a black-and-white artist); Coppée's "Tales," 1891; "Works of Edgar Allan Poe," 1894; Mrs. Humphry Ward's "Eleanor," 1900; and the same author's "The Marriage of William Ashe," 1905. His oil-painting "The Bachelor" received the bronze medal at the Paris Exposition of 1900.

STETTENHEIM, JULIUS: German humorist; born at Hamburg Nov. 2, 1831. He at first pursued a commercial career, but went in 1857 to Berlin, where he studied until 1860. Returning to Hamburg in 1861, he founded the humoristic-satiric periodical "Die Wespen." This publication did not attain any considerable success, whereupon Stettenheim transferred its publication to Berlin (1868); there it appeared under the name of "Berliner Wespen," and soon took rank among the best of its kind in Europe. The name of the paper was subsequently changed to "Deutsche Wespen," under which name it still appears (1905) with Stettenheim as editor. From 1885 to 1894 he was the editor also of "Das Humoristische Deutschland," which was published first at Stuttgart, and later at Berlin.

Stettenheim is regarded as the greatest living satirist in Germany, and there have been few public events of importance which he has not commemorated by poems published in his paper. Many of these poems were soon forgotten, but the figure of "Wippchen," which began to appear in 1870 as war reporter, still continues to hold the attention of the German public. Of Stettenheim's works the following may be mentioned: "Letzte Fahrt," Berlin, 1861; "Berliner Blaubuch aus dem Archiv der Komik," *ib.* 1869–70; "Wippchens Sämmtliche Berichte," *ib.* 1878–96; "Muckenichs Reden und Thaten," *ib.* 1885; "Wippchens Gedichte," *ib.* 1889 and 1894; "Humor und Komik," *ib.* 1890; "Wippchen in Chicago," *ib.* 1890; "Ein Lustig Buch," *ib.* 1894; "Heitere Erinnerungen," *ib.* 1895; "Humoresken und Satiren," *ib.* 1896; "Heiteres Allerlei," *ib.* 1898; "Der Moderne Knigge," *ib.* 1899; "Lustige Gesellschaft," *ib.* 1900.

STETTIN: District of Pomerania, with its capital of the same name. On Dec. 2, 1261, Duke Barnim I. of Pomerania ordered that the Jews of Stettin, and those of other parts of his duchy, should enjoy rights similar to those accorded the Jews of Magdeburg. But less than three years later (July 26, 1264) he permitted the town of Greifswald to expel its Jews and to forbid them to return. The reason for this action is said to have been that the Jews had acquired control of the mint. In the seventeenth century Glückel of HAMELN was a resident of the city of Stettin. Since the middle of the nineteenth century there has existed in the city a Hebrew printing-press, from which Buxtorf's "Concordance" was issued in 1856, and the Shulḥan 'Aruk in 1862 (2 vols.).

The entire district of Stettin contains 6,416 Jews in a total population of 1,634,654. The capital, **Stettin**, contains 3,000 Jews. Its present (1905) rabbi is H. Vogelstein. The community maintains a Jewish orphan asylum; a Jewish infirmary, with which is connected an endowment society; and seven other benevolent societies.

Next in importance is **Stargard** with 600 Jews. The present rabbi is Dr. Silberstein; and the leading benevolent institution is a hospital for the poor, founded by Reisemann. The town of **Posewalk** contains 164 Jews; its present rabbi is E. Finkel; and there are four Jewish benevolent societies. To the rabbinate of Posewalk belong the communities of **Demmin, Greifswald, Stralsund, Swinemünde,** and **Uekermünde,** together with the entire district of **Cöslin.**

STIASSNY, WILHELM: Austrian architect; born in Vienna Oct. 15, 1842. He was graduated from the Vienna Polytechnic in 1861, and thereupon studied for five years at the Academy of Fine Arts under Professors Van der Nüll, von Siccardsburg, Rösner, and Dombaumeister Schmid. In 1862 Stiassny, with the assistance of a few of his colleagues from the academy, founded the "Wiener

Bauhütte," which still exists, and of which he was president for a number of years.

In 1867 Stiassny was appointed delegate to the Paris Exposition by the Ministry of Commerce, and in the following year he settled in Vienna as an architect. Up to the present time (1905) he has directed the construction of 180 palaces, schools, residences, factories, hospitals, and synagogues, among which may be mentioned the Rothschild Hospital at Währing (1873), the Hall of Ceremonies in the Jewish section of the Vienna Central Friedhof, the Königswater Institute for the Blind at Hohewarte, the Kindergarten in the second district of Vienna, the Rothschild Hospital at Smyrna, and the synagogues at Malaczka (Hungary), Gablonz, Czaslau, and Weinberge. From 1878 to 1900 Stiassny was a member of the aldermanic board of Vienna and of the Donauregulirungs-Commission. Since 1879 he has been a member of the board of trustees of the Jewish community of Vienna. In 1895 he founded the Gesellschaft für Sammlung und Conservirung von Kunst- und Historischen Denkmälern des Judenthums.

STIEGLITZ, HEINRICH: German writer; born at Arolsen, Waldeck, Feb. 22, 1801; died at Venice Aug. 23, 1849. He was educated at the universities of Göttingen and Leipsic, and in 1828 became teacher at a gymnasium in Berlin and custos of the Royal Library in that city; owing to ill health he had, however, to resign these positions. After the death of his wife he spent much time in traveling. He became a Christian.

Stieglitz was the author of the following works: "Bilder des Orient," Leipsic, 1831-33; "Stimmen der Zeit in Liedern," *ib.* 1834; "Das Dionysosfest," Berlin, 1836; "Bergesgrüsse," Munich, 1839.

STIEGLITZ, JULIUS OSCAR: American chemist; born at Hoboken, N. J., May 26, 1867; educated in the public schools of New York, the real-gymnasium of Carlsruhe, and the universities of Berlin and Göttingen. Shortly after his return to the United States he became connected with the University of Chicago, and has served it in turn as instructor, assistant professor, and associate professor of chemistry. He has been a frequent contributor to the chemical periodicals of the United States and Germany, articles by him having appeared in the "American Chemical Journal," "Journal of the American Chemical Society," and "Berichte der Deutschen Chemischen Gesellschaft," 1892-1903.

STIEGLITZ, LUDWIG VON: Russian banker; born in Arolsen, Waldeck, Germany, in 1778; died at St. Petersburg March 18, 1843. He emigrated to Russia when a young man, was appointed court banker to the czar, and, after adopting Christianity, was raised to the dignity of a Russian hereditary baron (Aug. 22, 1826). He had previously received various important Russian decorations.

Stieglitz took an active part in many financial affairs of his adopted country, and it was due especially to his efforts that steam navigation was introduced between Lübeck and St. Petersburg. He purchased the estate of Gross-Essern in Courland, and his name was inscribed in the register of the nobility of Courland (May 3, 1840). His son **Alexander** (died Oct. 24, 1884) became his successor as head of the banking-house of Stieglitz & Company, and continued as such until that firm went into voluntary liquidation in 1863. The descendants of Ludwig von Stieglitz were confirmed in the dignity of Russian hereditary barons by ukase of the Senate of April 3, 1862.

STIER, JOSEF: German rabbi; born at Neustadt-on-the-Waag, Hungary, April 12, 1844. He was educated at the gymnasium and Talmud Torah at Presburg, at the universities of Vienna (Ph.D. 1869) and Breslau, and at the Jewish Theological Seminary at Breslau (Rabbi, 1872). In 1872 he was appointed chief rabbi at Stein-am-Anger, Hungary, officiating also as teacher of Jewish religion at the local gymnasium. Later he went to Berlin, where since 1890 he has held a rabbinate.

Stier is the author of the following works: "Fr. Deak," 1875; "Festschrift zur Einweihung der Synagoge in Steinamanger," 1880; "Priester und Propheten," 1884; "Zunz," 1893; "Theismus und Naturforschung in Ihrem Verhältniss zur Teleologie," 1896; and "Die Ehre in der Bibel," 1897.
S. F. T. H.

STILLER, BERTALAN: Hungarian physician; born at Miskolcz June 23, 1837; studied at Budapest and Vienna (M.D. 1863). In 1864 he was appointed assistant physician at the Jewish Hospital in Budapest; in 1874, chief of a division; in 1876, privat-docent; and in 1886, assistant professor. The following are his more important works: "Az Ideges Gyomorbántalmak" (Budapest, 1884), translated into German under the title "Die Nervösen Krankheiten des Magens"; "A Lép Betegsegei" (*ib.* 1895), treating of the diseases of the spleen; and "A Hashártya Betegsegei" (*ib.* 1897), treating of the diseases of the peritoneum.

STILLING, BENEDIKT: German anatomist and surgeon; born at Kirchhayn, Hesse, Feb. 22, 1810; died at Cassel Jan. 28, 1879. He studied at the University of Marburg, and, on taking his degree of M.D. in 1832, was appointed assistant at the anatomical institute attached to his alma mater. In 1833 he was appointed district surgeon at Cassel, which position he resigned in 1840 in order to devote himself entirely to his private practise. In 1867 he received the title of "Geheimer Sanitätsrath."

In 1836 and in 1843 Stilling took postgraduate courses in Paris; and in 1858, 1869, and 1873 he was engaged in scientific researches in Italy, Paris, London, Edinburgh, and Vienna. He was the first surgeon to introduce ovariotomy into Germany

(1837); and he was also the first anatomist who used the term "vasomotor nerves" (1840). His works on the central organs of the nervous system, especially the brain, were standard productions for which he received several prizes from the French Institute.

Of Stilling's works the following may be mentioned: "Die Bildung und Metamorphose des Blutpfropfs oder Thrombus in Verletzten Blutgefässen," Eisenach, 1834; "Die Natürlichen Processe bei der Heilung Durchschlungener Blutgefässe, mit Besonderer Rücksicht auf den Thrombus," *ib.* 1834; "Die Gefässverschlingung," Marburg, 1835; "Geschichte einer Exstirpation eines Krankhaft Vergrösserten Ovariums," etc., in Holscher's "Hannöverschen Annalen der Gesammten Heilkunde," 1841 (ten years later Duffin published in London a report of his operations in the same field, claiming the initiative for himself); "Physiologisch-Pathologische und Medicinisch-Praktische Untersuchungen über die Spinal Irritation," Leipsic, 1841; "Untersuchungen über die Funktionen des Rückenmarks und der Nerven," *ib.* 1842; "Ueber Textur und Funktionen der Medulla Oblongata," Erlangen, 1843; "Untersuchungen über Bau und Verrichtungen des Gehirns," Jena, 1846; "Neue Untersuchungen über den Bau des Rückenmarks," Cassel, 1859; "Untersuchungen über den Bau des Kleinen Gehirns," *ib.* 1864-67; "Die Rationelle Behandlung der Harnröhrenstrikturen," *ib.* 1870; "Neue Untersuchungen über den Bau des Kleinen Gehirns," *ib.* 1878.

STILLING, JAKOB: German ophthalmologist; born at Cassel Sept. 22, 1842; son of Benedikt STILLING. He studied at the universities of Marburg (M.D. 1865), Würzburg, Berlin, and Paris, and in 1867 established himself as ophthalmologist in his native city. In 1880 he was admitted as privat-docent of ophthalmology to the medical faculty of the University of Strasburg, where in 1884 he was appointed assistant professor.

In addition to many essays in medical journals, Stilling is the author of the following works: "Ueber die Heilung der Verengrungen der Thränenwege," Cassel, 1868; "Beiträge zur Lehre von den Farbenempfindungen," Stuttgart, 1875; "Ueber Farbensinn und Farbenblindheit," Cassel, 1877; "Ueber das Sehen der Farbenblinden," *ib.* 1878; "Untersuchungen über den Bau der Optischen Centralorgane," *ib.* 1882; "Untersuchungen über die Entstehung der Kurzsichtigkeit," Wiesbaden, 1887; "Schädelbau und Kurzsichtigkeit," Strasburg, 1888; and "Grundzüge der Augenheilkunde," Vienna, 1897.

STOBBE, JOHANN ERNST OTTO: Christian historian of the Jews; born at Königsberg, East Prussia, June 28, 1831; died at Leipsic May 19, 1887. He studied philology and history, and later jurisprudence, at the university of his native town, graduating as LL.D. in 1853. During the following two years he continued his Germanic studies in Leipsic and Göttingen. In 1855 he became privat-docent at the University of Königsberg, where in 1856 he was appointed assistant professor and in the same year professor of German law. In 1859 he was called to Breslau and in 1872 to Leipsic to fill similar positions. In 1880 he received the title of "Geheimer Hofrat."

Among Stobbe's works that of special interest to Jewish readers is "Die Juden in Deutschland Während des Mittelalters," Brunswick, 1866. This work was the first to treat of the Jews in medieval Germany from a strictly constitutional standpoint, and was based on the author's thorough knowledge of the archival literature of that period. He especially traced, practically for the first time, the connection between the position of the Jews in the Byzantine empire and the position of those in the Carlovingian empire. The book, which has been taken as a standard for similar research, became very scarce, and was reprinted by the anastatic process in 1902.

Stobbe, though a Christian, was a member of the committee appointed by the Gemeindebund to collect materials for the history of the Jews of Germany (see HISTORISCHE COMMISSION). His other works are all of purely juristic and historical interest, the chief of them being the "Geschichte der Deutschen Rechtsquellen" (Brunswick, 1860-64), translated into Italian by E. Bollati (Florence, 1868).

STOCK EXCHANGE. See FINANCE.

STÖCKER, ADOLF: German Protestant theologian, politician, and anti-Semitic agitator; born at Halberstadt Dec. 11, 1835. He studied at the universities of Halle and Berlin, and in 1863, after having acted for some years as tutor, was appointed pastor at Seggerda, near Halberstadt. In 1866 he was called to Hamersleben, and in 1871 to the pastorate of a military division at Metz. In 1874 he was appointed court preacher at the Domkirche of Berlin, which position he held until 1890, when he was dismissed on account of his political views. In 1878 he founded the Christian Socialistic party, which gave impetus to an anti-Semitic movement. From the pulpit, as well as in public assemblies, he denounced Judaism and its adherents as a danger to Christianity and the German empire; and upon the strength of this and similar accusations he was in 1879 elected a member of the Prussian Diet. From 1881 to 1893 he was also a member of the Reichstag, which he again entered in 1898.

Not only have many of Stöcker's former partizans, as Förster, Böckel, and Ahlwardt, become his bitter enemies, but also the general press and public have turned against him. Prof. Hermann L. Strack of the University of Berlin wrote a pamphlet entitled "Herr Adolf Stöcker, Christliche Liebe und Wahrhaftigkeit," in which he censured Stöcker very severely. In his work "Christlich-Social" (Bielefeld, 1884; 2d ed. Berlin, 1890) Stöcker published social-political and anti-Jewish speeches, while in his "Wach auf, Evangelisches Volk" (Berlin, 1893) he sets forth his religious-political views. He published also several collections of sermons (*ib.* 1894-1895, 1897, 1901), as well as a retrospect of his career as court preacher entitled "Dreizehn Jahre Hofprediger und Politiker" (*ib.* 1895). His "Gesammelte Schriften" appeared in Berlin in 1896. Since

1887 he has been publisher, and since 1892 also editor, of the "Deutsche Evangelische Kirchenzeitung." See ANTI-SEMITISM; BISMARCK.

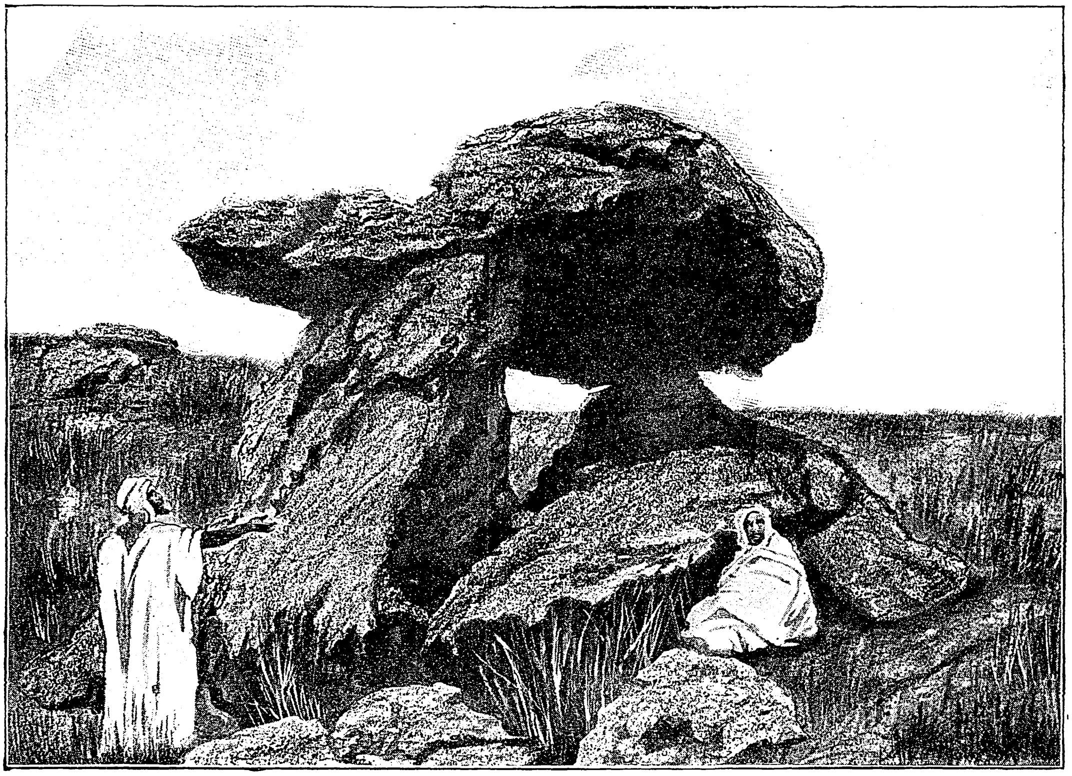
STOKVIS, BAREND JOSEPH: Dutch physician; born at Amsterdam Aug. 16, 1834; died Sept 28, 1902; son of the physician **J. B. Stokvis** (1808–87). He studied at the Latin school in Amsterdam (1843–50) and at the Athenæum (1856), visited Paris and Vienna (1857–59), and finally established himself as a physician in Amsterdam. In 1867 he was awarded a gold medal by the Brussels Academy for his essay "Recherches Expérimentales sur les Conditions Pathogéniques de l'Albuminurie."



CROMLECH NEAR 'AMMAN.

(From a photograph by the Palestine Exploration Fund.)

In 1874 he was appointed professor of pathology and pharmacodynamics at the University of Amsterdam. He was president of the Internationaal Koloniaal Geneeskundig Congres held in Amsterdam in 1883, and also of the first congress of Dutch physicians and surgeons. In 1879 he was elected a member of the Royal Academy of Sciences, and in 1896 its vice-president; and in 1884 the University of Edinburgh conferred upon him the degree of LL.D.

Stokvis was the author of the following works: "De Suikervorming in de Lever in Verband met de Suikerafscheiding bij Diabetes Mellitus," 1856; "Over de Glycose Stof in de Lever," 1869; "Bijdragen tot de Physiologie van het Acidum Uricum," 1869; "Over de Sterfte van Croup bij de Nederlandsche Israelietische Gemeente te Amsterdam," 1869; "Voordrachten over Homoeopathie," 1887; "Voordrachten over Geneesmiddelenleer," 3 vols., 1891–1902 (vols. i. and ii., 2d ed. 1895); and "Invloed der Tropische Gewesten," 1893. Stokvis succeeded his father as president of the Nederlandsche Israelietische Armbestuur at Amsterdam.

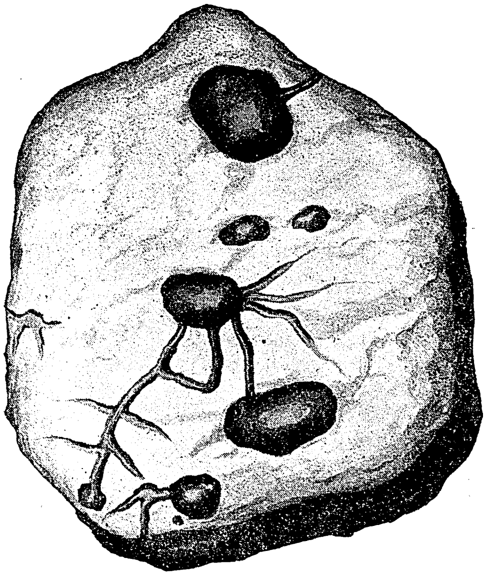
STONE AND STONE-WORSHIP: Sacred stones are mentioned with great frequency in the Old Testament; they were erected by Jacob at Beth-el (Gen. xxviii. 18; comp. xxxi. 13), at Shechem (Gen. xxxiii. 20 [where מצבה should be read instead of מזבח]), at Gilead (Gen. xxxi. 52), and over the grave of Rachel; and by Joshua in the sanctuary of Shechem (Josh. xxiv. 26; comp. Judges ix. 6). The "stone of help" ("Eben-ezer") set up by Samuel (I Sam. vii. 12) was such a "maẓẓebah"; and other sacred stones existed at Gibeon (II Sam. xx. 8), at En-rogel (I Kings i. 9, "the serpent-stone"), and at Michmash (I Sam. xiv. 33). Twelve stones of this charac-

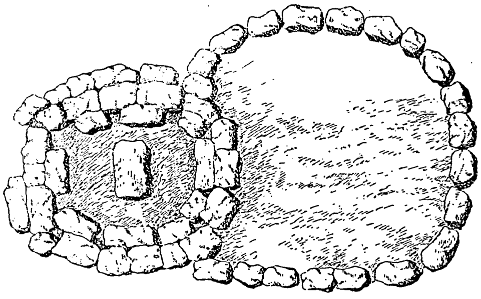
Maẓẓebah.

ter were set up by Moses near his altar at the foot of Mount Sinai (Ex. xxiv. 4), and a circle of twelve at Gilgal was ascribed to Joshua (Josh. iv. 20). Finally, Jachin and Boaz, the two columns of the Temple (I Kings vii. 15 *et seq.*), were such maẓẓebot, not intended as supports for the building, but possessing an independent purpose, as is shown by their names.

The Phenician temples also contained such columns, and maẓẓebot long served as legitimate symbols of Yhwh. Even the prophet Hosea forewarned Israel of the terrible days to come (Hos. iii. 4; comp. x. 12), when they should be "without a sacrifice, and without an image ["maẓẓebah"], and without an ephod, and without teraphim"—that is, without public worship; while Isaiah prefigured the conversion of Egypt to Yhwh with the words, "There shall be . . . a pillar at the border thereof to the Lord" (Isa. xix. 19, Hebr.).



Dolmen.
(After Conder.)

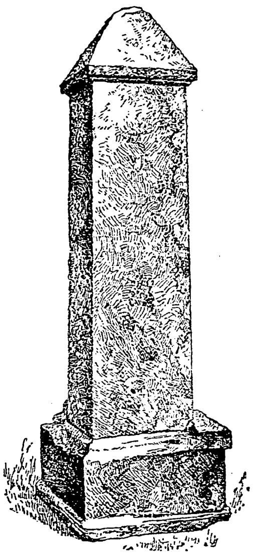


Cromlech.
(From Benzinger, " Hebräische Archäologie.")

The Deuteronomic code, on the other hand, rejected the maẓẓebot, rightly recognizing that they did not originally belong to the cult of Yhwh, but had been adopted from the Canaanites (Deut. xii. 3, xvi. 22; comp. Lev. xxvi. 1, and the commandment to destroy the maẓẓebot, "asherot," and similar objects of Canaanitish worship in Ex. xxiii. 24 and xxxiv. 13). The Deuteronomic historian accordingly regarded the downfall of the people as due to the erection of these maẓẓebot by Judah and Israel (I Kings xiv. 23; II Kings xvii. 10), while the pious kings showed their righteousness by destroying them (II Kings iii. 2, x. 26, xviii. 4, xxiii. 14).

Semitic Stone-Worship.

The worship of sacred stones constituted one of the most general and ancient forms of religion; but among no other people was this worship so important as among the Semites. The religion of the nomads of Syria and Arabia was summarized by Clement of Alexandria in the single statement, "The Arabs worship the stone," and all the data afforded by Arabian authors regarding the pre-Islamitic faith confirm his words. The sacred stone ("nuṣb"; plural, "anṣab") is a characteristic and indispensable feature in an ancient Arabian place of worship. Among the Canaanites, as the Old Testament abundantly proves, the worship of maẓẓebot was common; while with regard to the Phenicians, Herodotus states (ii. 44) that the temple of Melkart at Tyre contained two sacred pillars. In like manner, two columns were erected for the temples at Paphos and Hierapolis, and a conical stone was worshiped as a symbol of Astarte in her temple in the former city. The representation of the temple of Byblos on a coin shows a similar conical pillar. Such examples may readily be multiplied (comp. Ezek. xxvi. 12).

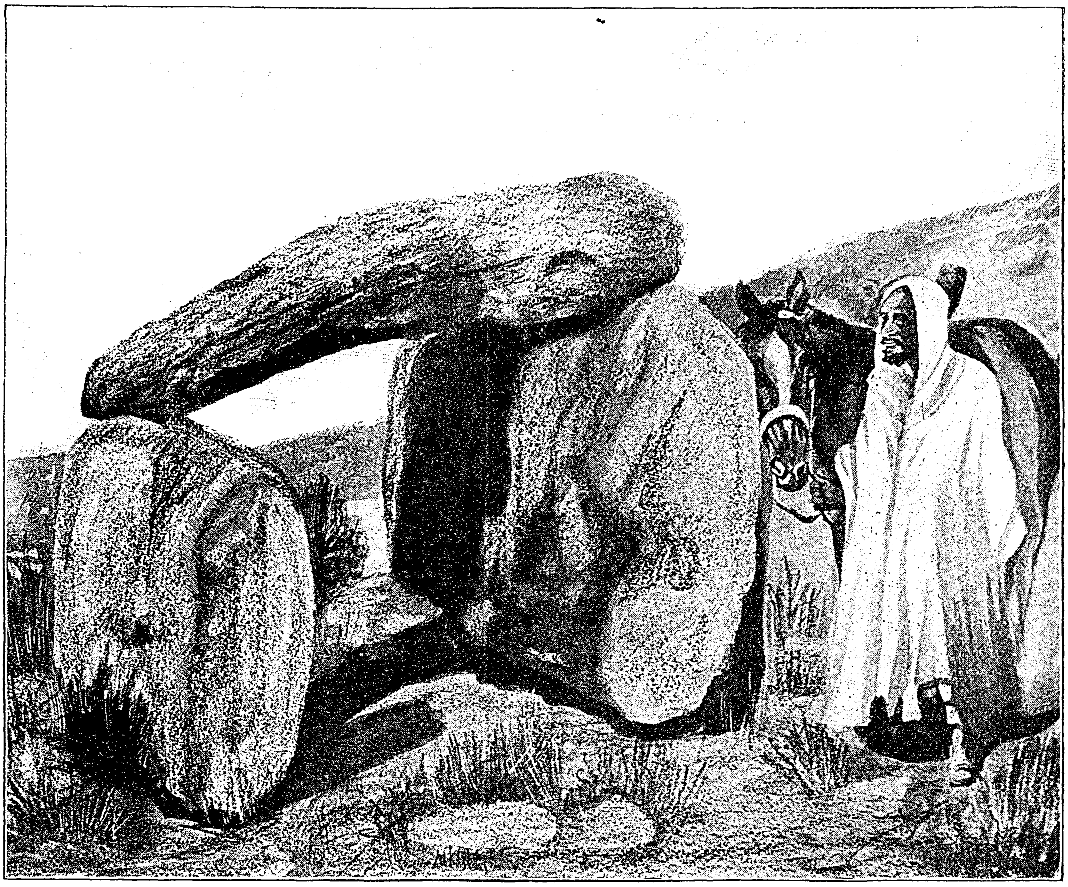


Phenician Maẓẓebah.
(From Benzinger, " Hebräische Archäologie.")

These stones were extremely diverse in form, ranging from rough blocks, over which the blood of the sacrifice, or the anointing-oil, was poured (Gen. xxviii. 18; I Sam. xiv. 33 *et seq.*), to carefully wrought columns, such as those erected in the Temple of Solomon or in the Phenician sanctuaries. A number of simple stone columns have been preserved. Thus there is a Phenician boundary-stone from Cyprus, in the form of an obelisk, and set on a small pedestal; others have been found in the excavations of the Deutscher Palästinaverein at Tell al-Mutasallim, the ancient Megiddo. The sanctuary at the latter place had at its entrance two stone columns, simple quadrilateral monoliths, tapering slightly toward the top, and very similar to the maẓẓebot at the entrance to the place of sacrifice in the ancient Edomite sanctuary at Petra.

The original signification of the sacred stone is well illustrated by the account of the one at Beth-el (Gen. xxviii.). Jacob slept with a stone for a pillow, and dreamed that the Lord addressed him. When he awoke he said, "Surely the Lord is in this place; and I knew it not"; then he anointed the stone, or, in other words, rendered an offering to it.

Belief Involved. This belief in a maẓẓebah, or in a stone, as the habitation of a deity is spread throughout the world, and even the designation "Beth-el" was adopted among the Greeks and Romans, under the forms *βαιτύλιον* and "bætulus," to denote a stone of this character. At a very early period the stone served likewise as an altar of sacrifice, and the offering laid upon it was by implication given to the deity that dwelt therein. It must also be borne in mind that originally, even in the case of a burnt offering, it was the blood and not the act of burning which constituted the essential of the sacrifice, and that the shedding of blood on the sacred stone served the same purpose as anointing it. There was no idea, however, of identifying the deity with the stone, as is shown by the fact that a number of stones, or trees, sacred to a divinity might stand together. Where specially chosen or prepared sacred stones took the place of natural landmarks, they expressed an invitation to the deity to take up his abode in them (comp. Hos. xiii. 2). Among the Greeks the sacred pillars of stone were developed into images of the deity, and received a head and a phallus; but the Israelitish maẓẓebot did not pass through this evolution.



Dolmen near Heshbon.
(After Conder.)

It is clear that the maẓẓebah and the altar originally coincided. When the Arabs offered bloody sacrifices the blood was smeared on the sacred stones, and in the case of offerings of oil the stones were anointed (comp. Gen. xxviii. 18, xxxi. 13). The same statement holds true of the Greco-Roman cult, although the black stone of Mecca, on the other hand, is caressed and kissed by the worshipers.

Relation to Altar. In the course of time, however, the altar and the sacred stone were differentiated, and stones of this character were erected around the altar. Among both Canaanites and Israelites the maẓẓebah was separated from the altar, which thus became the place for the burning of the victim as well as for the shedding of its blood. That the altar was a development from the sacred stone is clearly shown by the fact that, in accordance with ancient custom, hewn stones might not be used in its construction.

It thus becomes evident that originally the maẓẓebot were unknown to the Sinaitic Yhwh cult, although the entire course of history renders their incorporation in the religion of Israel readily intelligible. Such sacred stones were found by the Israelites in the Canaanite sanctuaries and on the "high places," and were thus taken over like so many other features of religious observance. No attempt was made, however, to justify such a usage, or to bring it into relation with the cult of Yhwh, but these sacred stones came to be regarded as memorials of events in the lives of the Patriarchs or in the history of the nation, as in the case of Jacob's stone at Beth-el, Joshua's at Gilgal, and the stone Samuel set up between Mizpeh and Shen.

STONES, PRECIOUS. See Gems.

STONING. See Capital Punishment.

STORK ("ḥasidah"): Unclean bird (Lev. xi. 19; Deut. xiv. 18). The name (comp. Latin, "pia avis") alludes to the filial piety and devotion attributed by the ancients to the stork (comp. Aristotle, "Historia Animalium," ix. 14, 1). Both the white and black storks (*Ciconia alba* and *Ciconia nigra*) occur in Palestine: the former is a migrant, passing through in April (comp. Jer. viii. 7); the latter is especially abundant in the neighborhood of the Dead Sea.

The Talmud considers "dayyah lebanah" to be the proper name of the stork, and "ḥasidah" to be an epithet applied to it because it lovingly shares its food with its fellows (Ḥul. 63a). The gall of the stork cures the bite of the scorpion (Ket. 50a; comp. Pliny, "Historia Naturalis," xxix. 5, 33).

STÖRK, KARL: Austrian laryngologist; born at Ofen, Hungary, Sept. 17, 1832; died at Vienna Sept. 13, 1899. He studied at the universities of Prague and Vienna, graduating as M.D. in 1858, when he was appointed assistant at the communal hospital of Vienna. In 1858, while acting as assistant to Professor Türk, Störk demonstrated the possibility of introducing remedies into the throat and larynx by aid of the laryngoscope; and he also invented various instruments for such treatment. In 1864 he became privat-docent at the University of Vienna; in 1875, assistant professor; and in 1891, professor of laryngology and chief of the laryngological clinic.

Of Störk's many works the following may be mentioned: "Laryngoscopische Mittheilungen," Vienna, 1863; "Laryngoscopische Operationen," *ib.* 1870 (2d ed. 1872); "Beiträge zur Heilung des Parenchym und Cystenkropfes," Erlangen, 1874; "Mittheilungen über Asthma Bronchiale und die Mechanische Lungenbehandlung," Stuttgart, 1875; "Klinik der Krankheiten des Kehlkopfes, der Nase und des Rachens," *ib.* 1876-80; "Sprechen und Singen," Vienna, 1881; "Die Erkrankungen der Nase, des Rachens und des Kehlkopfes," *ib.* 1895-97.

STRACK, HERMANN LEBERECHT: German Protestant theologian and Orientalist; born at Berlin May 6, 1848. Since 1877 he has been assistant professor of Old Testament exegesis and Semitic languages at the University of Berlin. He is the foremost Christian authority in Germany on Talmudic and rabbinic literature, and studied rabbinics under Steinschneider. Since the reappearance of anti-Semitism in Germany Strack has been the champion of the Jews against the attacks of such men as Hofprediger Stöcker, Professor Röhling, and others. In 1885 Strack became the editor of "Nathanael. Zeitschrift für die Arbeit der Evangelischen Kirche an Israel," which is published at Berlin; and in 1883 he founded the Institutum Judaicum, which aims at the conversion of Jews to Christianity. In the beginning of his career the Prussian government sent Strack to St. Petersburg to examine the Bible manuscripts there; on this occasion he examined also the antiquities of the Firkovich collection, which he declared to be forgeries.

Of Strack's numerous works the following may be mentioned: "Prolegomena Critica in Vetus Testamentum Hebraicum" (Leipsic, 1873); "Katalog der Hebräischen Bibelhandschriften der Kaiserlichen Oeffentlichen Bibliothek in St. Petersburg" (St. Petersburg and Leipsic, 1875), in collaboration with A. Harkavy; "Prophetarum Posteriorum Codex Babylonicus Petropolitanus" (*ib.* 1876); "A. Firkowitch und Seine Entdeckungen" (*ib.* 1876); editions of the Mishnah tractates Abot (Carlsruhe, 1882; 2d ed. Berlin, 1888), Yoma (*ib.* 1888), 'Abodah Zarah (*ib.* 1888), and Shabbat (*ib.* 1890); "Hebräische Grammatik" (Carlsruhe, 1883; 3d ed. Munich, 1902); "Lehrbuch der Neuhebräischen Sprache und Litteratur" (*ib.* 1884), in collaboration with Karl Siegfried; "Herr Adolf Stöcker" (*ib.* 1885; 2d ed. 1886); "Einleitung in den Talmud" (Leipsic, 1887; 2d ed. 1894), a revised reprint of his article on the subject in Herzog-Hauck's "Real-Encyklopädie," to which he made a whole series of contributions on rabbinic subjects; "Einleitung in das Alte Testament" (Nördlingen, 1888; 5th ed. Munich, 1898); "Der Blutaberglaube in der Menschheit, Blutmorde und Blutritus" (*ib.* 1891; 5th ed. 1900); "Die Juden. Dürfen Sie 'Verbrecher von Religionswegen' Genannt Werden?" (Berlin, 1893); "Abriss des Biblischen Aramäisch" (Leipsic, 1897). Since 1886 Strack has been associated with Zoeckler in editing the "Kurzgefasster Kommentar zu den Schriften des Alten und Neuen Testaments" (Nördlingen and Munich). Strack is a member of the Foreign Board of Consulting Editors of The Jewish Encyclopedia.

S. F. T. H.

STRAKOSCH, ALEXANDER: Hungarian actor and dramatic teacher; born at Sebes, near Eperies, Hungary, Dec. 3, 1845. After a brief trial of commercial life he went on the stage at Reichenberg (Sept., 1863). Subsequently he danced, sang, and acted at Troppau, and his versatility then obtained for him an engagement at the Hoftheater, Hanover, and later (1864) one in Budapest. In the same year he went to Paris to study under Martel of the Comédie Française. While in the French capital his talent attracted much attention, and he appeared repeatedly as a reader of the plays of Schiller and Goethe.

When Laube visited Paris in 1867 he engaged Strakosch as dramatic teacher for the Stadttheater at Leipsic, and subsequently for the Stadttheater at Vienna. Strakosch remained in this position until 1879, when he toured Europe as dramatic reader. The season of 1887–88 he spent in the United States. In 1891 he went to Munich, but remained there only a short time, settling eventually in Görlitz. He has been a professor at the Vienna Conservatorium for many years.

STRAKOSCH, MORITZ: Austrian pianist, singer, and impresario; born at Brünn, Austria, 1825; died at Paris Oct. 9, 1887. He made his first appearance in public at the age of eleven, when he played a concerto by Hummel at a concert given in his native town. His success was so marked that his father allowed him to enter upon an artistic career, and during the following years he made tours through Germany, afterward going to Italy to complete his education in vocal music. About 1848 he took a trip to Paris, but upon the outbreak of the revolution went to America, where he met Salvator Patti. In 1850 he married Amelia, the sister of Adelina and Carlotta Patti. From her eighth to her eleventh year Adelina Patti traveled with Strakosch, singing in concerts. In 1859 Strakosch became director of the Italian opera in New York, where he arranged for the début of Patti (Nov. 24, 1859). In consequence of the great success which she achieved under his management he received offers from managers in various parts of the world; and in 1870 he made a contract with Christine Nilsson engaging her to sing in concerts in America, and promising her 5,000 francs for every performance at which the receipts exceeded 20,000 francs. This enterprise was attended with pronounced success, and in 1874 Strakosch had another successful season in America with Nilsson and Campanini. It was Strakosch also who first introduced Clara Louise Kellogg to the London public. His opera "Giovanni di Napoli" was produced in New York, and he wrote also salon pieces and other music for pianoforte.

STRANGULATION. See Capital Punishment.

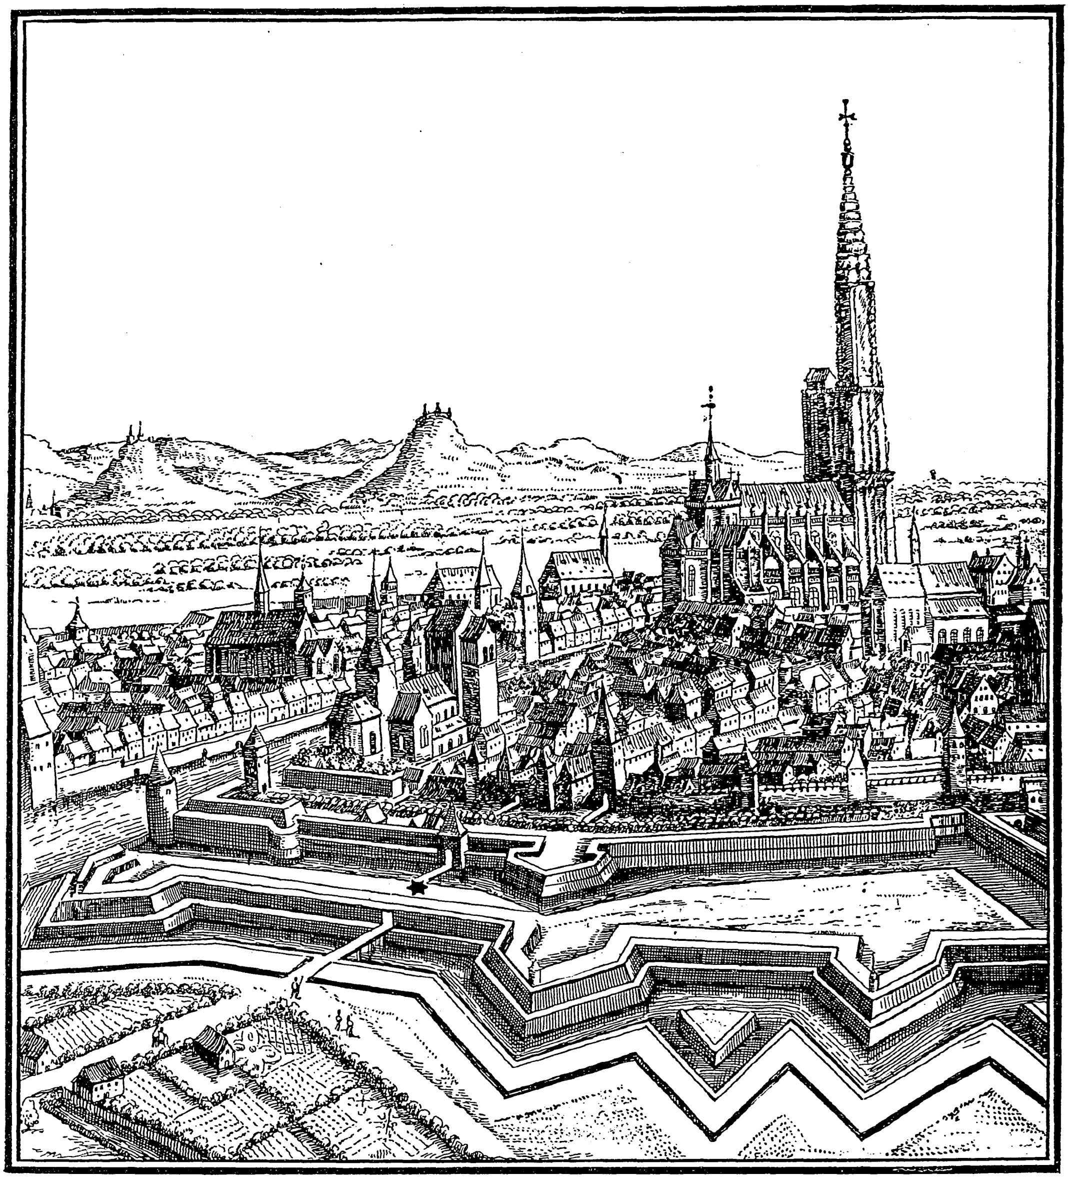
STRASBURG: German commercial and fortified city in the province of Alsace-Lorraine. Legend relates that after the destruction of the Temple a number of fugitive Jews escaped to Europe, some settling in the south of France, while others wandered north along the banks of the Rhine, finally establishing themselves in the town of Worms and throughout the province of Alsace, where they founded Strasburg. Authentic history of this city begins with the Schoepflin "Chronicles," in which Jews are recorded as living there in the days of Charlemagne under relatively favorable conditions. They enjoyed freedom in commercial matters, had their own judicial code, and possessed the right to own property, bear arms, and demand the protection of the authorities. This peaceful time ended with the inception of the Crusades. In 1095, when the First Crusade was preached by Peter the Hermit, 1,500 Jews were burned alive in Strasburg alone. Similar scenes of revolting cruelty attended the preaching of the Second Crusade, in 1156, when a monk named Rudolf of Strasburg declaimed against the Jews as the worst enemies of Christianity; but the emperor and some of the higher dignitaries of the Church protected them from at least the more violent outbreaks of popular fury.

Privileges Granted.

In 1160, the year of the visit of Benjamin of Tudela, Strasburg was one of those cities which possessed Jewish schools conducted by illustrious scholars. On the demolition of the ramparts around the "Jewish Gate" in 1882, a monument to the memory of a certain Jewess named Marone (daughter of R. Mosse), who died in 1223, was discovered. In 1288 the Jews of Alsace, including Strasburg, complained to Emperor Rudolph of the murder of forty of their number by peasants, who had fabricated a story of the ritual murder of a child on Good Friday. Owing to the protection extended by the emperor, the rabbi and some others who were then in prison were released on the payment of 20,000 marks in silver. In 1330 Louis of Bavaria took the persons and property of the Jews of Strasburg under his protection, and conferred upon them certain rights and privileges in consideration of an annual payment of 50 silver marks. In 1338 the civil magistrates, on payment of 1,000 marks in silver, granted similar toleration to sixteen Jewish families for a term of five years. On Nov. 25, 1347, Charles IV., for 60 marks in silver, granted the Jews letters of protection, and confirmed their former rights and privileges. He gave them the formal assurance that they should not be subjected to the jurisdiction of any Jewish authorities outside the city, and ordered the judges and bailiffs concerned to render the Jews assistance in the recovery of their rights.

Persecution recommenced, however, and with increased severity, in 1349. During the period of the Black Death, Strasburg lost 16,000 of its inhabitants. Thereupon the rumor quickly spread that the Jews had poisoned the wells, and that, by the advice of their physicians, they had removed the buckets from their own cisterns and wells and refrained from drinking water. At Bern and Zofingen confessions were wrung from a few Jews by the usual method of torture, whereupon the cities of Basel, Freiburg, and Strasburg were invited to follow this example. The bishop convened an assembly at Benfeld, in Alsace, of the feudal seigniors and certain delegates from the above-mentioned cities, at which the final destruction of the Jews was determined upon, in spite of the protests of the Strasburg envoys, who declared that there was nothing whatever to be said against the Jewish population of their city; that the Jews had received their privileges from the emperor himself, and from the bishop and magistrates, and had paid well for them; that, furthermore, the city owed the Jews large sums, payment of which had been guaranteed on a fixed date; that the city government had also granted the Jews sealed letters of protection and had published an edict against all who should venture to commit excesses against them, imposing heavier penalties than were usual in the case of Christians; and that the magistrates, therefore, were only acting within their rightful authority and according to their duty in making a vigorous opposition to any species of persecution.

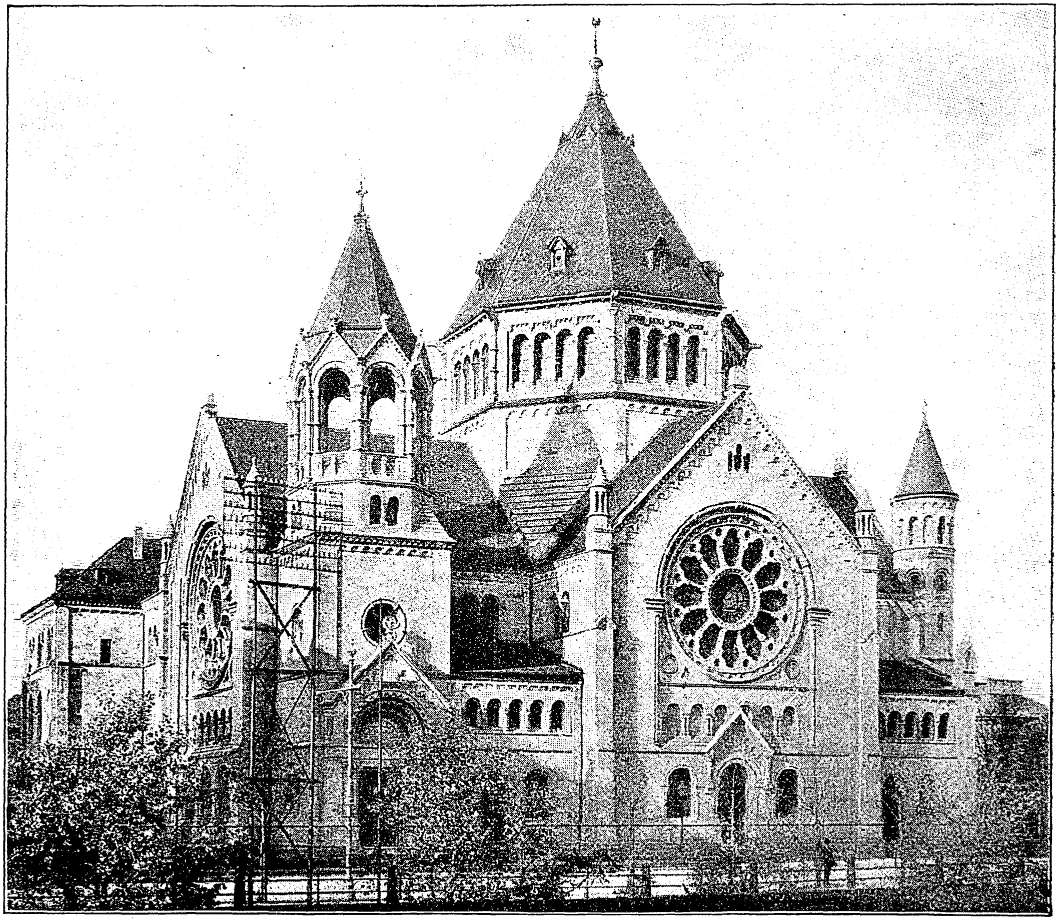
But the populace, enraged by the excessive fluctuations in the prices of grain, and urged on by those who knew their own power, would not be guided by the calmer reasoning of their rulers. For a brief space, it is true, their anger was appeased by the representations of the authorities, but it broke forth anew at the instigation of the butchers' gild. The "Ammeister" Peter Schwarber, and the two "Stettmeister" Goffe Sturm and Conrad Kuntz, were accused of having been bribed to oppose the Jews' extermination, and were removed



Plan of Strasburg. Star Shows the Gate Leading to the Jewry.
(From an early seventeenth-century print.)

from office. Schwarber was banished from the city, and his property, except the share that reverted to his children, was divided, according to the custom of the time, among his fellow magistrates, who entered his dwelling and seized the great seal and standard of the city. To fill the places of the deposed officials, Nicolas Beulach was appointed "Ammeister," and Gozzo Engelbrecht and the butcher Jean Betchold were made "Stettmeister."

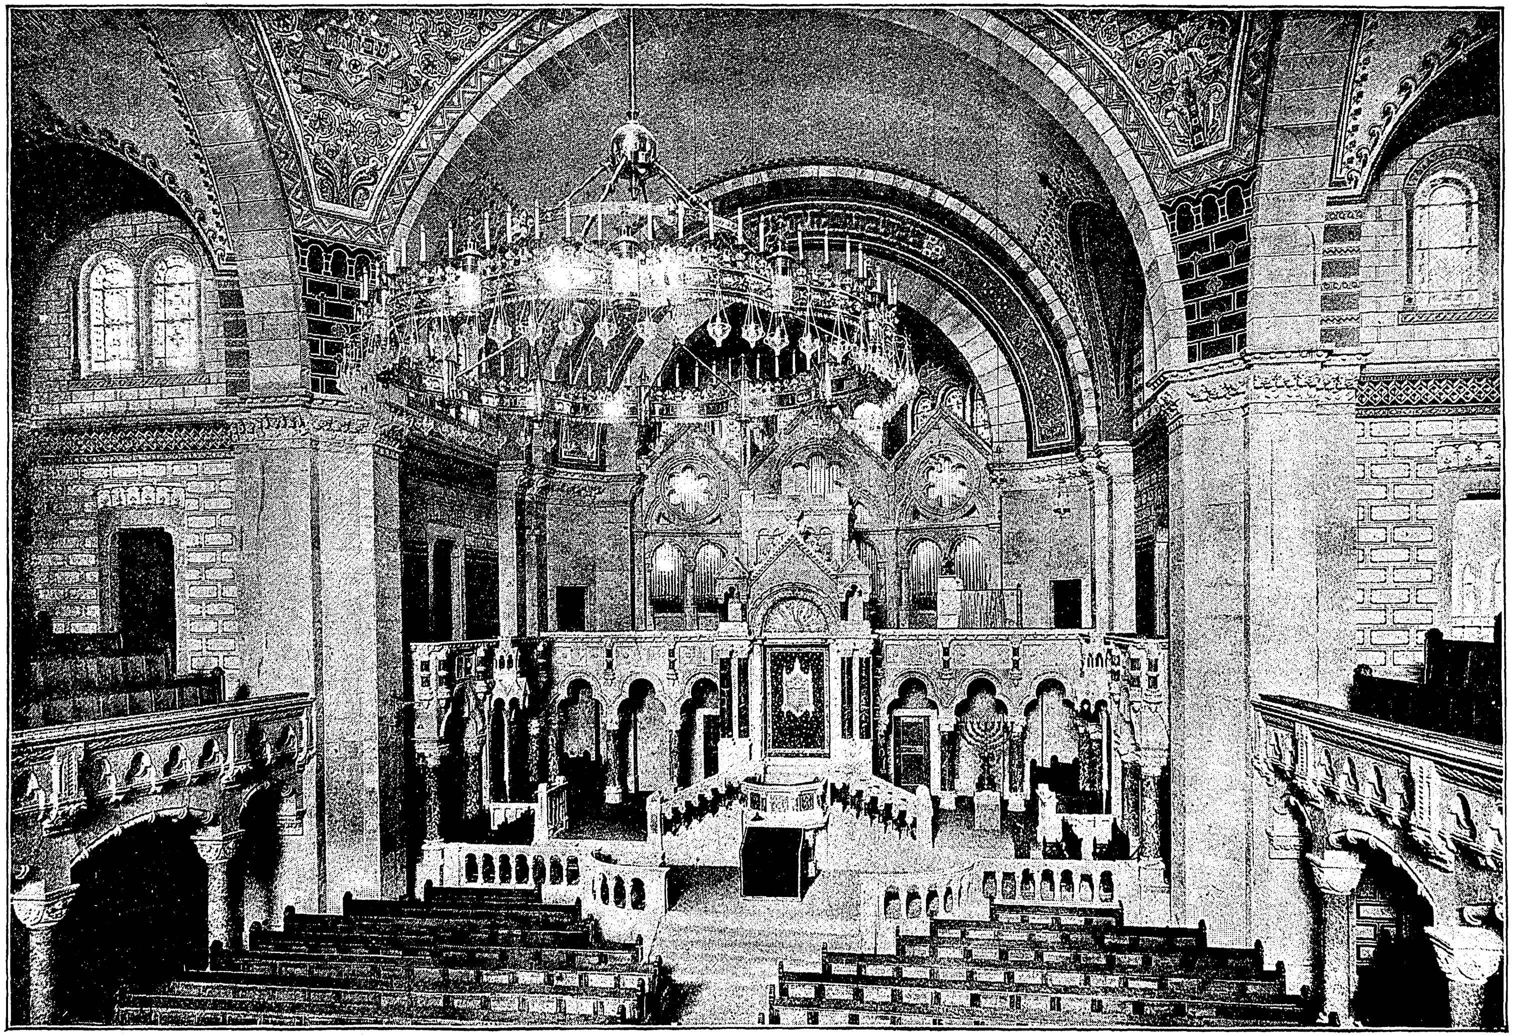
On Saturday, Feb. 14, 1349, the Feast of St. Valentine, the mob barricaded the Judgengasse (now the Domstrasse), and drove the Jews back into the cemetery, where a huge pyre had been made; there more than 2,000 Jews, men, women, and children, suffered death in the flames; some saved their lives by renouncing the faith of their ancestors. The Jews Jekelin and Mannekint (sons of the widow Salomon), to whom Margrave Rudolf of Baden had pledged his crown, perished probably on this occasion. These two bankers had been taxed an amount five times in excess of that paid by any of their coreligionists. In the same year the municipal council returned the crown to the sons of the dead margrave, who gave a receipt for it.



Exterior of the Synagogue at Strasburg.
(From a photograph.)

The "Grusselhorn."

After the massacre of 1349 the council of Strasburg issued a decree prohibiting the admission of the Jews into the city, which decree remained in force for two centuries. From this epoch dates the "Grusselhorn." Among the various objects found during the plunder of the synagogue was the ram's horn used at the autumn festivals. The pillagers were ignorant of the uses of this horn, and one of their number expressed the opinion that the Jews had intended to betray the city by giving a signal at an opportune moment to their allies outside. This opinion was soon universally accepted, and the town council resolved to perpetuate the memory of their deliverance. Two large trumpets, copies of the original, were cast in bronze. One was blown daily at eight in the evening by the vergers of the cathedral, at which signal, known as the "Judenblos," all Jews who happened to be within the city limits were obliged to depart.



INTERIOR OF THE SYNAGOGUE AT STRASBURG.

(From a photograph.)

The second was blown at midnight to recall to the inhabitants the alleged traitorous plot of 1349.

The rigid enforcement of the decree forbidding any Jew to reside in Strasburg was soon relaxed, and in 1368 six families were permitted to return for a term of five years, under certain conditions. This term was later extended to 1375. Nine other families obtained a similar license in 1369, on condition of an annual payment to the town council and the bishop. On Dec. 7, 1384, a Jewish physician, Dr. Gutleben, obtained leave from the council to reside in the city for six years without the payment of any protection money, in order that he might bestow the benefit of his medical knowledge upon the populace. He was even to receive a fixed stipend of 300 florins per annum for his services during this period, and was authorized to lend at interest money belonging to himself, although he did not enjoy this liberty with funds belonging to others.

Somewhat later, in 1388, the Jews of Strasburg ceased to pay their taxes regularly; and, having adopted a somewhat critical and censorious attitude in regard to a dispute between the city and the Duke of Burgundy, they were sentenced to perpetual banishment and to the payment of a fine of 20,000 florins. This second decree of banishment was so strictly enforced, and the time allowed for preparation so inadequate, that the Jews had to abandon their books as well as the scrolls of the Law and other articles used in religious services. The copies of the Talmud and the scrolls of the Law were preserved in the library of the city, and were destroyed, with many other literary treasures, in the bombardment of 1870.

Little mention of the Jews occurs in the monastic chronicles throughout the entire fifteenth century. In 1520 they were allowed to enter the city only during the usual hours for strangers, on condition of wearing a yellow badge or shield in some conspicuous place on their garments. In 1534 Rabbi Joselmann of Rosheim wrote a letter of thanks to the council for certain privileges granted to his fellow worshipers. A decree, issued in 1539 and renewed in 1570, 1628, and 1661, forbade Christians to enter into any contracts with Jews, save such as related to the purchase of horses or of food-supplies.

In the Seventeenth Century.

In 1657 Louis XIV. took the Jews of Alsace under his royal protection, greatly to the dissatisfaction of the smaller communes, which, faithful to old traditions, considered them as interlopers and dangerous parasites. But after the capitulation of 1681 the city of Strasburg succeeded in maintaining in force the old statutes against the Jews. Nevertheless, qualified permits of entry and residence within the city continued to be issued to the Jews.

In 1743 the council relaxed its extreme severity and granted a number of privileges to various Jews, especially to a certain Moses Bliem. Count d'Argenson of Versailles wrote personally to the municipal authorities, stating that the Moses Bliem in question, together with his coreligionists and business associates Jacob Baruch Weill, Aaron Meyer Lehmann, and Lieb Netter, had for two years past been furnishing supplies to the royal armies of Germany, and that they required permission to open an office in Strasburg for their correspondence. The permission was granted, but not for any definite length of time; it was understood that it was to last only as long as the army remained in Germany. A single Jew, of all the dwellers on the Upper and Lower Rhine, won the unanimous respect of the authorities on both sides, owing to his great wealth and still more to his charities during the scarcity of food-supplies in 1770 and 1771; this was Herz Cerfbeer, of Bischofsheim, near Strasburg.

In the Eighteenth Century.

On Aug. 5, 1767, Cerfbeer, whose real name was Herz Medelsheim, proposed to the Jewish communities of Alsace to contract for the furnishing of supplies to the armies of Louis XIV., and for this purpose requested permission from the Strasburg authorities to spend the winter in that city in order to escape the robberies so frequent on the outskirts. At first his petition was rejected; but Cerfbeer applied to the Duke of Choiseul at Paris, and an order dated Versailles, Jan. 22, 1768, was sent to the council and magistracy of Strasburg, directing them to accede to this request. Thus Cerfbeer was the first Jew who had a definite residence in the city after this long period. He was at first obliged to submit to certain restrictions, such as those against opening a synagogue or receiving any foreign Jew into his house. He soon obtained permission to live in the city during the summer as well; and in a document dated Nov. 5, 1771, the Marquis of Monteynard declared to the royal procurator that the presence of Cerfbeer was necessary for the welfare of the city, and that it was the king's will that Cerfbeer should reside in the town throughout the year.

In March, 1775, by letters patent given at Versailles, the king granted naturalization to Cerfbeer and his children in return for the many important services rendered by him to the army and as a testimony to his zeal for the good of the state. Cerfbeer thus was the first Jewish citizen of Strasburg: the household he brought with him comprised sixty persons. A royal decree dated Jan., 1784, abolished the poll-tax levied first upon Moses Bliem and later upon Cerfbeer. In 1781 a deputation from Alsace-Lorraine was sent to present the Jewish grievances at the bar of the National Assembly at Paris, and the subject was debated at several sittings. Rewbel, Maury, and the Duc de Broglie, deputies from Alsace, contended that the Jews were all addicted to usury and had turned Alsace into a Jewish colony. To this Mirabeau, the Abbé Grégoire, and even Robespierre replied that the vices of the Jews were the result of the degradation into which they had been thrust; and that they would behave well as soon as they found any advantage in doing so.

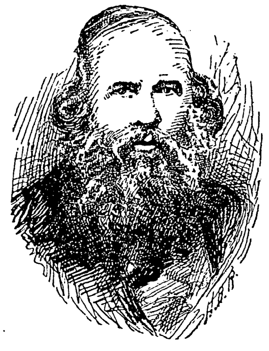
On April 8, 1790, the city of Strasburg submitted to the National Assembly an address requesting that the ancient laws against the Jews should be strictly enforced. But on Sept. 27, 1791, the National Assembly proclaimed the complete social and political emancipation of all Jews residing in France. This decree was followed in 1806 and 1807 by the general reorganization of Jewish religious administration, and the cessation of one of the minor annoyances to which the Jews had been subjected—the blowing of the "Grusselhorn." In 1809 the community of Strasburg opened its first synagogue in the ancient Poële des Drapiers. In 1836 the erection of a new synagogue was begun on the Rue Ste. Hélène; it was in existence until 1898, when it was replaced by a larger one on the Quai Kleber, in the heart of the city. The new synagogue was opened Sept. 8, 1898. There is also a congregation, 'Eẓ Ḥayyim, composed of about forty families, which separated from the main body owing to a difference regarding the question of an organ in the synagogue, but which maintains friendly relations with the larger community.

The first chief rabbi of Strasburg was David Sinzheim, president of the Sanhedrin of 1807 (d. Paris, Feb. 12, 1812, while chief rabbi of France). He was succeeded by Arnold Aron, who filled the office for more than half a century, and died April 4, 1889. Isaac Weill, chief rabbi of Metz, succeeded him, and died in June, 1899, at the age of fifty-eight. Chief Rabbi Adolphe Ury of Metz was appointed in his stead by an imperial decree dated Jan. 23, 1900, and was formally installed in office Feb. 18, 1900. He is the present head of the Strasburg community, as well as of all communities of Lower Alsace. In addition to numerous societies for the aid of the sick and the poor, a large hospital was erected in 1887, on the Hagenau Platz, near the Steinthor. There is also an orphanage for young girls, which entered its own quarters March 26, 1903. In 1853 Louis Ratisbonne, president of the consistory, founded at his own expense an almshouse, the Eliza Hospiz, in memory of one of his cousins. The foundation in 1825 of a Jewish school of arts and trades, the Ecole de Travail, was also due to Ratisbonne.

The total population of Strasburg is 150,258, including about 1,000 Jewish families.

S. A. U.

STRASHUN, MATHIAS: Russian Talmudist and writer; born in Wilna Oct. 1, 1817; died Dec. 13, 1885. He studied under Manasseh of Ilye and Isaac of Volozhin, who were highly impressed with his ability. Besides Talmud and Hebrew, Strashun acquired a knowledge of Russian, German, French, and Latin, and of mathematics, philosophy, and other sciences. He likewise engaged in business: and although his first venture was a complete failure and he lost everything he possessed, his enterprises were afterward very successful. Strashun spent a great part of his considerable fortune in collecting a magnificent library; and his house soon became a rendezvous for scholars and students from all parts of Europe. He corresponded with eminent Jews like Zunz and Rapoport; and even Gentile scholars, such as Professor Wünsche and others, sought his advice with regard to complicated problems.



Mathias Strashun.

His studies and books, however, were not the only matters to claim Strashun's attention. He took an active interest in public affairs also, and was for many years president of the Hebrew charities in Wilna. The government appointed him adviser to the state bank, and bestowed many honors upon him for his faithful services.

Strashun's first literary productions appeared in the "Pirḥe Ẓafon," "Kerem Ḥemed," "Ha-Maggid," and "Ha-Karmel." In book form he published: "Reḥobot Ḳiryah," an introduction and annotations to the "Ḳiryah Ne'emanah," by Fuenn; and "Liḳḳuṭe Shoshanim" (Berlin, 1889), a catalogue of the Strashun library.

Bibliography: Suvalski, *Keneset ha-Gedolah*, 1890; *Ha-Asif*, 1885, vol. ii.; Zeitlin, *Bibl. Post-Mendels.* p. 388; *Ha-Meliẓ*, 1885, p. 93.

E. C. J. Go.

STRASHUN, SAMUEL B. JOSEPH: Russian Talmudist; born in Zaskevich, government of Wilna, 1794; died in Wilna March 21, 1872. He was educated by his father, and became known as a proficient Talmudist. He married at an early age, and settled with his wife's parents in the village of Streszyn, commonly called Strashun (near Wilna), and assumed the latter name. The distillery owned by his father-in-law was wrecked by the invading French army in 1812, and the family removed to Wilna, where Samuel established another distillery and became one of the most prominent members of the community. His wife conducted the business, as was usual in Wilna, and he devoted the greater part of his time to studying the Talmud and to teaching, gratuitously, the disciples who gathered about him. The Talmud lectures which for many years he delivered daily at the synagogue on Poplaves street were well attended, and from the discussions held there resulted his annotations, which are now incorporated in every recent edition of the Babylonian Talmud. His fame as a rabbinical scholar spread throughout Russia, and he conducted a correspondence with several well-known rabbis.

Strashun was offered the rabbinate of Suwalki, but he refused it, preferring to retain his independence. His piety did not prevent him from sympathizing with the progressive element in Russian Jewry, and he was one of the few Orthodox leaders who accepted in good faith the decree of the government that only graduates of the rabbinical schools of Wilna and Jitomir should be elected as rabbis. He wrote good modern Hebrew, spoke the Polish language fluently, was conspicuously kind and benevolent, and was highly esteemed even among the Christian inhabitants of Wilna. Besides the above-mentioned annotations, he wrote others to the Midrash Rabbot, which first appeared in the Wilna editions of 1843-45 and 1855. Some of his novellæ, emendations, etc., were incorporated in the works of other authorities.

E. C. P. Wi.

STRAUS: American family, originally from Otterberg, in the Rhenish Palatinate. The earliest member known was one **Lazarus,** born in the first half of the eighteenth century, whose son **Jacob Lazarus** was known also as Jacques Lazare. Lazarus was elected in the department of Mont Tonnerre for the Assembly of Jewish Notables convened by Napoleon in Paris July 26, 1806, preliminary to the establishment of the French Sanhedrin. His son **Isaac** took the name of Straus in the year 1808, when Napoleon passed the decree ordering all Alsatian Jews to adopt family names. Isaac's son **Lazarus** was possessed of considerable means, made in both agricultural and commercial pursuits. Being of liberal tendencies, he was involved in the revolutionary movement of 1848; he emigrated to the United States in 1854 and settled in Talbotton, Ga. In 1865 he established in New York a successful pottery and glassware business, in conducting which he was joined in 1872 by his sons. It was due to his instigation that Kayserling undertook the researches in Spain resulting in his work on Christopher Columbus. He died in New York in April, 1898.

Isidor Straus: Merchant; eldest son of Lazarus Straus; born at Otterberg Feb. 6, 1845. He accompanied his parents to the United States in 1854, and was educated at Collinsworth Institute. He was elected lieutenant of a Georgia company at the opening of the Civil war, but was not allowed to serve on account of his youth. In 1863 he went to England to secure ships for blockade-running. In 1865 he went with his father to New York, where they organized the firm of L. Straus & Son; in 1888 he entered the firm of R. H. Macy & Company, and in 1892 that of Abraham & Straus, Brooklyn. He was elected a member of the Fifty-third Congress in 1892, and was instrumental in inducing President Cleveland to call the extra session of Congress which repealed the Sherman Act. Straus has been identified with the various movements in behalf of fiscal and tariff reform, and was a delegate to the Sound Money Convention held at Indianapolis. He was one of the founders of the Educational Alliance (of which he is now [1905] president), is a director of several banks and financial institutions, and is a prominent member of the Board of Trade and vice-president of the Chamber of Commerce. The Washington and Lee University conferred upon him the degree of LL.D. in 1905.

Nathan Straus: Merchant; second son of Lazarus Straus; born at Otterberg Jan. 31, 1848. With his family he went to the United States in 1854. It settled at Talbotton, Ga., where he attended school; afterward he was trained at Packard's Business College, New York. He joined his father in the firm of L. Straus & Son in 1872, and his brother Isidor in the firm of R. H. Macy & Company. Straus has shown considerable interest in municipal affairs, becoming a member of the New York Forest Preserve Board and park commissioner of New York in 1893. He was offered the nomination of mayor of New York in 1894, and was appointed president of the Board of Health of New York in 1898. He originated in 1890, and has since maintained at his own expense, a system for the distribution of sterilized milk to the poor of New York city which has been shown by the report of the Health Department of New York to have saved many infant lives. He contributed also to the establishment of the same system in Chicago and Philadelphia. He likewise originated and maintained during the coal strike in the winter of 1903–4 a system of depots for the distribution of coal to the poor of New York. Straus has shown considerable interest in trotting.

Oscar Solomon Straus: Merchant and diplomat; third son of Lazarus Straus; born at Otterberg Dec. 23, 1850. He went with his family to Talbotton, Ga., in 1854, and removed with it to Columbus, Ga., in 1863, and to New York in 1865. He was educated at Columbia Grammar School and Columbia College, graduating in 1871. Afterward he attended the Columbia Law School, graduating from that institution in 1873. He began the practise of law in the firm of Hudson & Straus, which afterward became Sterne, Straus & Thompson, the senior member being Simon Sterne. The strain of a large practise in commercial and railway cases told upon Straus's health, and in Jan., 1881, he retired from law and entered his father's firm. Straus was active in the campaign which resulted in the election of President Cleveland in 1884, and was appointed minister plenipotentiary to Turkey in 1887 at the suggestion of Henry Ward Beecher. Straus did excellent work while at Constantinople, especially in obtaining recognition of the American schools and colleges in the Turkish dominion. He was again appointed minister plenipotentiary to Turkey (1897–1900) by President McKinley, and was enabled by his influence with the sultan to help reconcile the Mohammedan inhabitants of the Sulu Archipelago in the Philippines to the recognition of the suzerainty of the United States.

Copyright by Pierre Mac Donald.
Oscar Solomon Straus.

Straus has performed much valuable public service as member of various commissions, as, for instance, those appointed to investigate New York public schools and to improve institutions for the insane. He was president of the National Primary League in 1895, and of the American Social Science Association from 1899 to 1903, as well as of the National Conference of Capital and Labor held in 1901. He was instrumental in founding the National Civic Federation, of which he has been vice-president since 1891. In 1902, on the death of ex-President Harrison, Straus was appointed by President Roosevelt to succeed him as a member of the Permanent Court of Arbitration at The Hague, this high honor being given him in recognition of his diplomatic service and knowledge of international relations. Straus has written much for the magazines, has delivered lectures at Yale and Harvard universities, and, since 1903, has lectured annually upon international law before the United States Naval War College at Annapolis. He is the author of "The Origin of the Republican Form of Government in the United States" (New York, 1885), and "Roger Williams, the Pioneer of Religious Liberty" (*ib.* 1894). He has been very active in connection with the study of American Jewish history, and he was one of the founders, and the first president, of the American Jewish Historical Society, from which position he retired in 1898. Straus is at present (1905) a trustee of the Baron de Hirsch Fund. The honorary degrees of L.H.D. (Brown University) and LL.D. (Columbia University) have been conferred upon him.

STRAUS, LUDWIG: Hungarian violinist; born at Presburg March 28, 1835; studied under Hellmesberger and Joseph Böhm (violin), and under Preyer and Nottebohm (composition). His first public performance took place at Vienna in June, 1850. He made several successful concert tours, and in 1857 became acquainted with Piatti, the cellist, with whom he toured Germany and Sweden. In 1859 he was appointed leader of the opera orchestra at Frankfort-on-the-Main, and in the following year he conducted the Museum concerts in the same city. He then visited England, in which country he finally settled in 1864, being engaged as solo violinist at the court orchestra, and also as conductor of the Philharmonic concerts at London, and the Halle concerts at Manchester. For several years he played the viola in the string quartet at the Sunday evening and Monday popular concerts in London. Straus was teacher of the violin at the London Academy of Music, from which position he retired in 1894.

STRAUSS, ADOLF: Hungarian geographer and ethnologist; born at Cece, Hungary, May 15, 1853; educated at Fejervar and Budapest; in the latter city he frequented the military academy, subsequently being attached to the staff of Field-Marshal Ghyczy. Strauss began his literary activity in 1878, and on account of his intimate knowledge of the geography of the Balkan Peninsula he was repeatedly sent to the East on missions for the Hungarian government. His works include: "Bosnien, Land und Leute" (Budapest, 1881; Vienna, 1882); "Bosznia és Herczegovina" (2 vols., Budapest, 1883; Vienna, 1884); "Bosnische Industrie" (Vienna, 1885); "Bulgarische Industrie" (*ib.* 1886); "Voyage au Monténégro" (Paris, 1888); "Bolgár Népköltési Gyüjtemény" (on folk-songs of Bulgaria; 2 vols., Budapest, 1892); "Bulgarische Grammatik" (Vienna, 1895); "Bolgár Néphit" (on popular superstitions in Bulgaria; Budapest, 1897); "Románia Gazdasági és Néprajzi Leírása" (on the political economy and ethnography of Rumania; *ib.* 1899). Strauss was the founder and editor of the "Revue de l'Orient" and of the "Gazette de Hongrie." At present (1905) he occupies the position of professor at the Oriental Academy of Commerce at Budapest.

STRAUSS, CHARLES: French jurist and politician; born at Gundershoffen, Lower Alsace, Oct. 14, 1834. He was graduated from the law school of Paris in 1874, and in the same year established himself as an attorney at the Court of Appeals in Paris. After occupying various administrative positions in the office of the Ministry of the Interior, he was appointed prefect of the department of the Drôme in 1888. For some years he was a resident of Algeria, where he filled various important positions. As an officer in the Algerian militia, he organized the victualing department of the Algerian troops during the Franco-Prussian war of 1870–71. He drafted the official proclamation of the French republic and published it in Algiers on Sept. 4, 1870. In 1873 he organized a banquet on the occasion of the departure from Algiers of the first Hebrew conscripts for military service in France. On Dec. 31, 1895, he was created an officer of the Legion of Honor.

Strauss is the author of the following works: "L'Administration et la Reconstitution du Ministère d'Algérie," Paris, 1874; "L'Algérie et la Prusse," *ib.* 1874; "La Maison Nationale de Charenton" (illustrated), *ib.* 1900.

STRAUSS, GUSTAVE LOUIS MAURICE: British author; born at Trois-Rivières, Canada, 1807; died at Teddington, England, Sept. 2, 1887; educated at Linden, Hanover, Berlin (Ph.D.), and at the Montpellier School of Medicine. In 1832 he visited England for the first time, and in the following year went to Algiers as assistant surgeon of the French army. He was at first attached to the Foreign Legion, but in 1834 he severed his connection with that body. He returned to France, but was banished in 1839 for alleged complicity in a revolutionary plot, whereupon he settled in London as author, linguist, tutor, dramatist, and surgeon. Through the intervention of Mr. Gladstone he received some years before his death an annuity from the government, but he nevertheless ended his career in straitened circumstances.

Strauss was the author of the following works: "Men Who Have Made the German Empire" (2 vols., London, 1874); "The Reminiscences of an Old Bohemian" (2 vols., *ib.* 1882); "Stories by an Old Bohemian" (*ib.* 1883); "Philosophy in the Kitchen" (*ib.* 1885); and "The Emperor William" (*ib.* 1887). He was the author also of a French and a German grammar, and of other educational works. He translated into English many books from French and German, and contributed to numerous London periodicals, of which may be mentioned the "Grocer" (of which he was the first editor), the "Punchinello," the "Lancet," and the "Morning Advertiser." He wrote also some pieces for the stage, of which one, a farce, was produced with success at the Drury Lane Theatre in 1868.

STRAUSS, JOSEPH: English rabbi; born in Germany 1848; educated at the Royal Gymnasium at Stuttgart, and at the universities of Würzburg and Tübingen (Ph.D. 1873). He also pursued the study of theology, and, after having passed the state examination, was ordained rabbi in 1870. He at once proceeded to England, and was appointed rabbi of the Rowland Street Synagogue in Bradford, which position he still occupies (1905). He has been lecturer in German and Oriental languages for three years at the Bradford Technical College and Airedale Independent College, and for twenty-one years at Yorkshire College, Victoria University. Strauss is the author of "Religion and Morals," and "Religiöse Philosophie des Abraham ibn Esra," 1875.

Bibliography: *Jewish Year Book*, 5665 (1904-5).

J. V. E.

STRAUSS, PAUL: French senator; born at Rongchamp, Haute-Saône, Sept. 23, 1852. He studied at Paris, and was graduated from the Faculty of Medicine. In 1876 he entered the field of political journalism, becoming a regular contributor to "L'Indépendant," the "Droits de l'Homme," the "Radical," the "Voltaire," and the "Petite République." In 1883 he was elected town councilor of Paris, and a member of the legislative assembly of the department of the Seine. He continued to serve in these capacities until 1897, when he was elected a member of the French Senate, which office he still holds (1905). Strauss has been mainly influential in reorganizing the French system of public charities, and it was chiefly through his efforts that departments were established for the care of deserted children and for pregnant women. He was instrumental also in founding the Asile Michelet and the Asile Ledru-Rollin, the latter of which takes care of women who are convalescing after childbirth.

Strauss is the author of the following works: "Le Suffrage Universel" (Brussels, 1878), with a preface by Alfred Naquet; "Paris Ignoré" (Paris, 1892); "L'Enfance Malheureuse" (1896); "Dépopulation et Puériculture"; "La Croisade Sanitaire" (1902); "Assistance Sociale, Pauvres et Mendiants"; "La Loi sur la Santé Publique"; and "Les Habitations à Bon Marché en Allemagne." In 1897 he founded the "Revue Philanthropique," which he still conducts.

STRELISKER, MORDECAI BEN DAVID: Cantor in the synagogue of Mihăilenĭ in Rumania; born in Brody, Galicia, 1809; died Sept., 1875. He spent his youth in his native town, where he acquired a knowledge of Hebrew literature under the instruction of Erter and Krochmal. His most important contributions in this field are twelve literary essays in vols. viii., ix., x., and xi. of the "Bikkure ha-'Ittim." He carried on a literary correspondence with Judah ben Jonah Jeiteles in "Kerem Ḥemed," ii. 183. The following works of Strelisker's have appeared separately: "Za'ḳat Sheber" (Vienna, 1829), a lamentation on the death of Zalman Margulies; "Ta'anit Yeshurun" (Zolkiev, 1835), an elegy on the death of Emperor Francis I. of Austria, sung during a mourning ceremony held in the old Brody synagogue; "Zeker 'Olam" (Lemberg, 1849), a biography and an elegy of his father; and "Shirat ha-Kohen" (reprinted from "Ha-Maggid," 1860), on the occasion of the seventieth anniversary of the birth of J. S. Rappaport.

STRELITZ. See Mecklenburg.

STRICKER, SALOMON: Austrian pathologist; born at Waag-Neustadt, Hungary, 1834; died at Vienna April 2, 1898. He received his education at the University of Vienna, studying first law, and later medicine (M.D. 1858). In 1859 he joined the staff of the communal hospital at Vienna, where he acted as assistant at several clinics; he resigned this position in 1862, when he became privat-docent in embryology at the University of Vienna. After having acted in the capacity of assistant to Professors Brücke (1863) and Oppolzer (1866), he was in 1868 appointed assistant professor of experimental pathology and director of a new institute built for experimental purposes. In 1872 he was elected professor of general and experimental pathology, which position he held until his death. In 1875 he was appointed a member of the Imperial Academy of Sciences at Vienna.

Stricker made many contributions to the science of pathology. He was an excellent teacher and an indefatigable worker. In his "Studien" (1869) he attacked Cohnheim's theory regarding pus and the white blood-corpuscles, although that theory had been generally accepted. He introduced the method of embedding microscopic subjects in wax or gum arabic and thus making them adaptable for microtomy, but this method was soon superseded by that of freezing.

Stricker's contributions to medical journals number about 140, and treat of his discoveries in the histology of the cornea, the mechanism of lymphatic secretion, cell theories, vasomotor centers, etc. Of his works the following may be mentioned: "Untersuchungen über die Papillen in der Mundhöhle der Froschlarven" (Vienna, 1857), written while Stricker was a pupil of Professor Brücke; "Studien" (*ib.* 1869); "Handbuch der Lehre von den Geweben des Menschen und der Thiere" (*ib.* 1871–73); "Vorlesungen über die Allgemeine und Experimentelle Pathologie" (*ib.* 1877–83); "Studien über das Bewusstsein" (*ib.* 1879); "Studien über die Sprachvorstellungen" (*ib.* 1880); "Ueber die Bewegungsvorstellungen" (*ib.* 1882); "Studien über die Association der Vorstellungen" (*ib.* 1883); "Physiologie des Rechts" (*ib.* 1884); "Allgemeine Pathologie der Infectionskrankheiten" (*ib.* 1886); and "Die Behandlung der Nervenkrankheiten" (*ib.* 1891). His works are enumerated in "Dreiszig Jahre Experimenteller Pathologie," an essay which was published at the celebration of the twenty-fifth anniversary of his professorship.

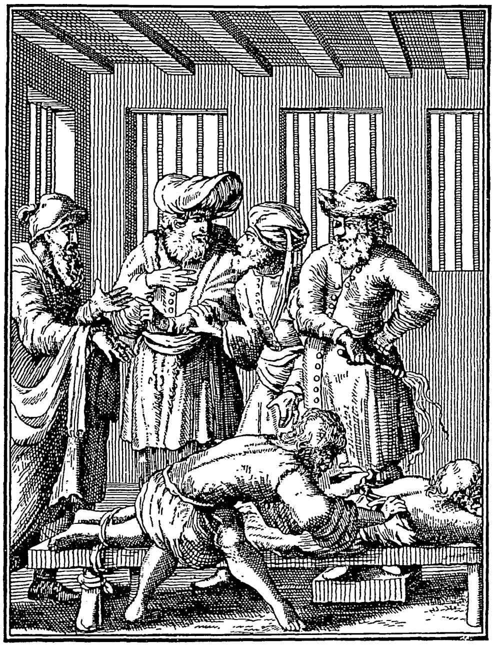
STRIPES: The only corporal punishment named in the Pentateuch is that of stripes; and the limitations put upon the judges are that they must cause the culprit to be beaten in their presence, and that the number of stripes imposed must not exceed forty (Deut. xxv. 2, 3). Wherever the written law merely forbids an act, or, in the language of the sages, wherever it says "Thou shalt not," and does not prescribe any other punishment nor any alternative, a court of three judges may impose stripes as the penalty for wrong-doing. The same punishment may be inflicted in the case of transgressions which the Torah decrees should be punished with excision. He who takes "the dam with the young," says the Mishnah, with reference to the finder of the bird's nest (Deut. xxii. 6), "must let her go, but may not be flogged." R. Judah's opinion to the contrary is overruled with the statement, "This is the general principle: Any command reading 'Thou shalt not,' coupled with 'Arise, do!' is not punishable with stripes" (Mak. iii. 4; Ḥul. xii. 4).

Offenses.



Inflicting Stripes.
(From Leusden, "Philologus Hebræo-Mixtus," Utrecht, 1657.)

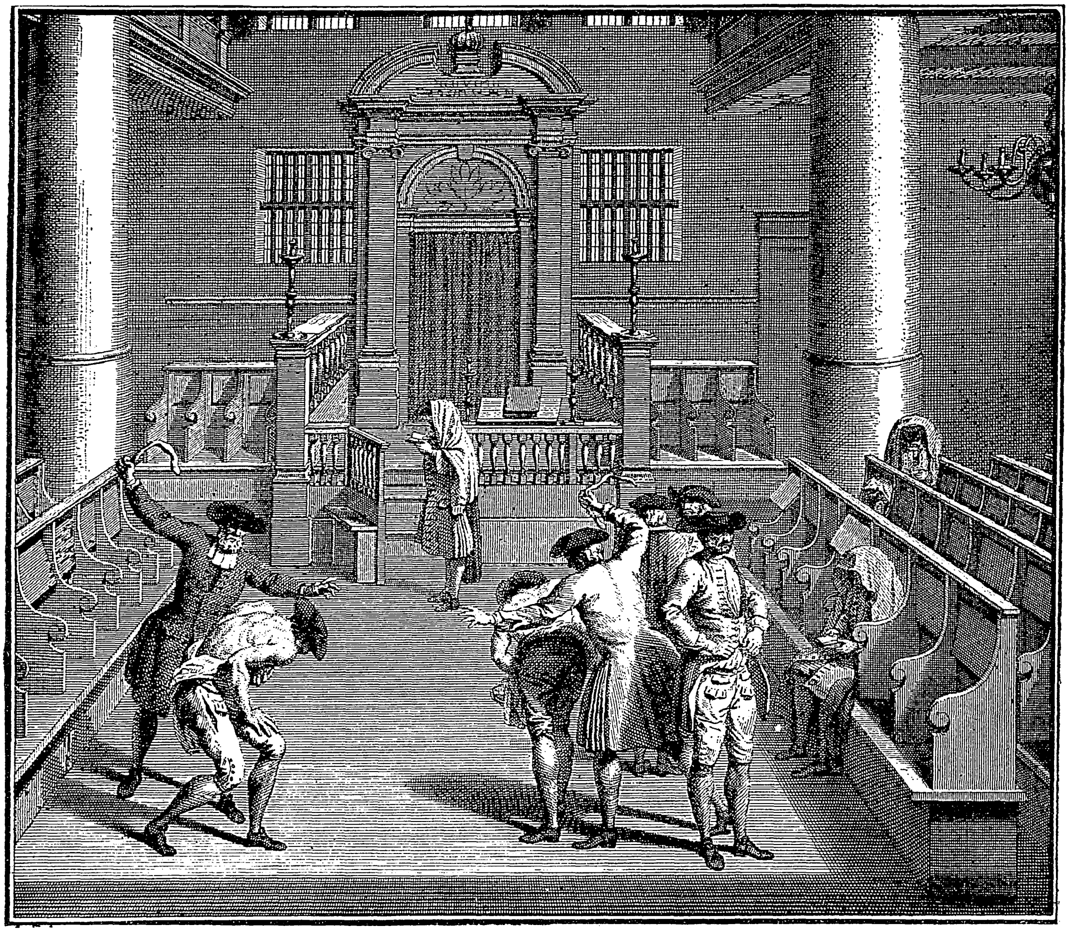
This rule disregards the thief, the robber, the embezzler, the seducer, the ravisher of an unbetrothed damsel; the law imposes some other punishment upon each of these. In one case, that of the man who "utters an evil report" regarding his newly married wife, the text (Deut. xxii. 18, 19) itself imposes the double punishment of both stripes and a money payment. The "plotting witness" (see Alibi) is flogged for violating the command "Thou shalt not bear false witness" only when the party against whom he testifies would have been flogged, or when the identical punishment which he might have brought upon his victim can not be inflicted.

The Mishnah (Makkot) enumerates fifty offenses as deserving stripes, but this enumeration is evidently incomplete. Thus, the two cases expressly mentioned in Scripture, that of the man who "utters an evil report," and that of the bondwoman who is betrothed to one man and cohabits with another (Lev. xix. 20), are not in the list. Maimonides ("Yad," Sanhedrin, xix.) endeavors to give a full enumeration of all the offenses in this class, the number of which he carries up to two hundred and seven, eighteen being offenses of commission which the Scripture punishes with excision. The last three in his list are cases in which the king (1) takes too many wives, (2) accumulates too much silver and gold, or (3) collects too many horses.

The discussion in Mak. iii. as to when one may, for the same act, incur the punishment of stripes for several reasons, and the discussion of the further question as to when a continuous violation of a law subjects to one, and when to several, inflictions, may be here omitted. Usury is not punished with stripes, for the money paid may be recovered by the debtor, which recovery is in the nature of a punishment; and in the absence of express words there can be only one punishment for the same act.

It is well known, both from the Mishnah (Mak. iii. 10) and from the New Testament (II Cor. xi. 24), that no more than thirty-nine stripes were ever administered; this merciful regulation was, of course, derived in some way from the letter of Scripture. Only excess is forbidden, not diminution; hence before determining the number of stripes, the culprit's ability to bear punishment was estimated. The number inflicted was always a multiple of three—two stripes on the back and one on the breast; so that, if the estimate was twenty stripes, only eighteen were inflicted. If, after the infliction of part of the stripes, the judges came to the conclusion that to continue would endanger the culprit's life, the beating came to an end, and he was free from further punishment. If a smaller number than thirty-nine had been determined upon, the judges could not administer more even if they found that the original number caused no suffering to the culprit (Mak. iii. 10 and Gemara *ad loc.*).

The culprit was bound with his hands to a pillar, leaning forward (the text says "shall cause him to lie down"); the "overseer of the community" (the Mishnah uses here a term not found elsewhere) takes hold of his clothes and pulls them down so as to lay bare his breast and back. The strokes are given with a strip of calfskin, doubled twice; the overseer holds it in one hand, but strikes with all his force. A bystander recites, by way of count, three verses, of thirteen words each, the third verse being Ps. lxxviii. 38 ("But he, being full of compassion, forgave their iniquity," etc.). Should the pain force an excretion, the beating must cease, lest "thy brother become vile in thy eyes." Should the culprit die under the lash, the overseer is free from guilt; but if by mistake he has given even one stroke more than the number determined, he is guilty of involuntary manslaughter, and should be exiled to a city of refuge. The culprit who has undergone the punishment of stripes has not only earned thereby forgiveness of the sin for which he has suffered, even when excision has been pronounced against it (Mak. iii. 15), but he is restored also to those civil rights, such as the right to testify as a witness or to clear himself by his oath in a lawsuit, which he may have forfeited by the crime ("Yad," Ṭo'en we-Niṭ'an, ii. 10).



Inflicting Stripes in a Dutch Synagogue of the Early Eighteenth Century.
(From Picart.)

The courts of Israel ceased, long before the destruction of the Temple, to try cases involving the death-punishment; but they continued to condemn to stripes till the fall of the Temple, and, in many places in Palestine, much longer. But as this could be done by ordained judges only, the courts of the Jewish colonies in Babylonia and elsewhere, though exercising much authority, could not sentence a man to stripes "according to the Torah." Hence, as a necessity, the Rabbis undertook to impose a "beating for rebellion" ("makkat mardut"), sometimes for capital, sometimes for other, offenses against the Mosaic law; sometimes for disobedience to "institutions of the scribes"; often in order to compel the performance of a duty; and all this without the judicial formalities which surrounded the infliction of the forty stripes. The custom is fully explained in the responsa of R. Naṭronai, a Babylonian chief rabbi, or gaon, in the eighth century.

"Makkat Mardut."

STRISCHOW, ELIEZER. See Fischel, Eliezer b. Isaac.

STROPHIC FORMS IN THE OLD TESTAMENT: The strophe may be defined as a union of several lines into one rhythmic whole. Certain evidence points to the occurrence of strophic formations in poems of old Hebrew literature; for instance, a number of passages in Psalms contain phrases which are repeated at the end of a regular number of verses: Ps. xxxix. (end of verses 6 and 12 [Hebr. text, as throughout article]): "Every man is but vanity"; Ps. xlii. (verses 6 and 12) and xliii. (5): "Why art thou cast down, O my soul? and why art thou disquieted within me? For I shall continually praise Him who is the health of my countenance, and my God"; Ps. xlvi. (verses 8 and 12): "Yhwh Sebaoth is with us; the God of Jacob is our refuge." In the last example cited two sections of four verses each are terminated by this formula, while the preceding part contains only three verses; accordingly it has been suggested with good reason that, originally, the same confession of faith stood after verse 4 also. Such identical, or similar, phrases, marking the end of the symmetrical parts of a poem, may be called refrains; similar instances are met with in Ps. xlix. 13, 21 (A.V. 12, 20); lvii. 6, 12; lix. 6, 12, 18.

L. Philippson, in his "Kommentar zu den Psalmen" (1856), pp. 370 *et seq.*, cites other poems in which this special kind of epanalepsis occurs, though only sporadically: II Sam. i. 19, 25, 27; Ps. lvi. 5, 11 *et seq.*; lxii. 2 *et seq.*, 6 *et seq.*; lxvii. 4, 6; lxxx. 4, 8, 20; cvii. 6, 8, 13, 15, 19, 21, 28, 31; cxvi. 14, 18. But again, in Ps. cxxxvi., every second line (stichos) is identical, and the same refrain, "For His mercy endureth for ever," is met with fourteen times in the newly discovered Sira text ("The Wisdom of Ben Sira," ed. Schechter and Taylor, 1899; comp. the refrain, "Incipe Mænalios mecum, mea tibia!" in Vergil, "Ecloga," viii. 21, 31, 36, 42, 46, 51, 57). Another sign of the strophic arrangement of the poem is the succession of the initial letters in the following alphabetic poems: Ps. ix. and xxxvii., where each two lines are connected; Lam. iii., where every three lines begin with the same letter; and Ps. cxix., where the same letter introduces every group of eight lines.

Extent of Strophic Characteristics.

However, not the whole of the poetical part of the Old Testament is in this sense strophic. In parts of these poems line may succeed line, just as, for instance, in many poetical works of the Greeks, the hexameters follow each other, in uninterrupted succession. Nevertheless it may be questioned whether a further extension of the strophic formation in Hebrew poetry may be recognized from any other peculiarities. Are the logical divisions of a poem signs of a strophic organization? Without doubt the progressive development of the thought is clearly discernible in Ps. ii. (1–3, 4–6, 7–9, 10–12); and in the following cases the logical divisions may be recognized with almost the same certainty: Ps. iii. 2–3, 4–5, 6–7, 8–9; xii. 2–3, 4–5, 6–7, 8–9; xvii. 1–5, 6–12, 13–15; xxxvi. 2–5, 6–10, 11–13; lxxxv. 2–4, 5–8, 9–14; cxiv. 1–4, 5–8; cxxviii. 1, 2 *et seq.*, 4, 5 *et seq.*; cxxx. 1–2, 3–4, 5–6, 7–8; cxxxix. 1–6, 7–12, 13–18, 19–24; Job iii. 3–10, 11–19, 20–26. In these cases an identical or very similar wording is chosen for the different aspects of the theme which the poet wished to develop, and the relative dissimilarity of the form, which was noticeable in some of the passages cited, may have been due to the fact that the Hebrew poets aimed at only a material symmetry (see Poetry). One may speak, therefore, with good reason of logical strophes in the poems which have been cited as examples.

But such logical divisions are not found in all poems. While Ps. i., for instance, may be divided into three corresponding sections, 1–2, 3–4, 5–6, or into two, 1–3, 4–6, and Ps. iv. is rightly divided into 2, 3 *et seq.*, 5–6, 7–8, and 9 (Delitzsch and others), Psalms like cv. and cvi. do not show even a material symmetry in the nature of a logical division. Nor is the Selah an independent sign of a strophe.

Recent Views.

Recently the so-called "responsion" has been made to count as a characteristic of strophes in the Old Testament. According to D. H. Müller, in his "Die Propheten in Ihrer Ursprünglichen Form" (1895), "that which is parallelism in the verse is the responsion in the strophe and in discourse"; and, "when the responsion is rigidly carried out, each line of one strophe answers to the corresponding line of the second strophe, either literally or metaphorically, parallelly or antithetically" (p. 191). Such an agreement between the parts of a longer section is of itself not wholly natural, because the hearer or the reader would be compelled to keep the preceding verses in mind in order to notice the correspondence. The inventor of this theory has failed in his very first example (Amos i. 3–5, 6–8), since he finds in this section "two strophes of five lines which are separated by a double verse as refrain (4 and 7)." But the correspondence between verses 5 and 8 consists only in the fact that the words "and I will cut off the inhabitant" are used in 5b and 8a, and the words "and him that holdeth the scepter" in 5c and 8b. But, first, the identical expressions do not stand in parallel lines; and, secondly, these expressions lie so near to hand that they would naturally be used twice in warning two cities. Müller has endeavored (p. 200) to find another proof for the strophe in the so-called "concatenation," and he seeks it, for example, in the two phrases "I will tear" (אטרף) and "he tore" (טרף; Hos. v. 14b and vi. 1a). But this is only an anadiplosis, which is met with also in the classical orators (*e.g.*, Cicero, "Oratio Catilinaria," i. 1). He finds "inclusion" to be an evidence of the strophic character of poetry—for instance, in the correspondence between "reviling" and "revile" (Zeph. ii. 8, 10). But this can not possibly be accepted as a proof that Zephaniah endeavored to divide his prophecies into strophes, nor has Müller been able to establish the correctness of his views in his later book "Strophenbau und Responsion" (1898).

J. K. Zenner, in his book "Die Chorgesänge im Buch der Psalmen" (1896), has endeavored to demonstrate the existence of an alternate strophe. He made Ps. cxxxii. the chief object of his research, and as a result placed lines 1a, b after lines 10a, b, because "their responsion had to be made more complete." But this would amount to imposing a mechanical, schematic character on the psalm. He says, further, "First, one chorus sings the first strophe (2–5); then the second chorus answers with a responding strophe (11 *et seq.*): hereupon follows a strophe (6, 13, 7, 14) in which the two choruses alternate verse for verse (alternate strophe); this is concluded with a second strophe by the first chorus (8–10, and 1), and a second strophe in response by the second chorus (11–18)." In the first place, however, no sufficient reason can be brought forward as to why this order of the verses was not preserved in copying the poem, if it had been so intended. In the second place, it would be unnatural for Yhwh's statement, "This is my rest for ever" (14) to be followed by the exhortation, "Arise, O Lord, into thy rest" (8). Nivard Schloegl ("Canticum Canticorum Hebraice," 1902) is no more convincing in his theory that ii. 7 and iii. 5 of the Song of Solomon are "versus intercalares." In the opinion of the present writer, all these modern theories are too artificial to suit the old Hebrew poetry. The poets of the Old Testament placed emphasis on the development of ideas rather than on the construction of form.

STROUSBERG, BETHEL HENRY (BARUCH HIRSCH): German railway contractor; born at Neidenburg, East Prussia, Nov. 20, 1823; died at Berlin June 1, 1884. After an unsuccessful business career in London he emigrated to America, and for some time taught languages at New Orleans. In 1849 he returned to London with money made by trading in damaged goods, and became identified with the publication of "The Chess Player," "Lawson's Merchants' Magazine," and "Sharpe's London Magazine." In 1855 he settled in Berlin as agent for an insurance company, and in 1861 obtained for English capitalists the concession of building East-Prussian railways. After acting for some time as agent for different companies, he established himself as an independent contractor and built several railway lines, chiefly in northern Germany, Hungary, and Rumania. He became the owner of vast establishments for producing all the requisite materials, as well as of various factories and mines. His holdings were enormous; at one time he employed more than 100,000 persons, and was engaged in speculations involving nearly £100,000,000. During the Franco-Prussian war (1870–71) he met with serious reverses, and in 1872, after a ruinous settlement with the Rumanian government on account of unfulfilled railway contracts, he was forced into liquidation. He was declared bankrupt in 1875, and, after standing trial in Russia for alleged fraudulent transactions with a bank, he returned to Berlin, where he lived in partial retirement until his death. He embraced Christianity while young.

STROUSE, MYER (MEYER STRAUSS): American lawyer and politician; born in Germany Dec. 16, 1825. In 1832 his parents emigrated to the United States and settled in Pottsville, Pa. He studied law, and after he had been admitted to the bar founded (1848) the "North American Farmer," which was published in Philadelphia. In 1852 he resigned his position as editor and established himself as a lawyer in Philadelphia. Ten years later he was elected a member of the Thirty-eighth Congress from the tenth congressional district of Pennsylvania; he was elected also to the Thirty-ninth Congress, and served until 1867.

STRUCK, HERMANN: German painter; born at Berlin March 6, 1876. He was originally destined for a rabbinical career, but soon showed marked talent for drawing and painting, whereupon he entered the Berlin Academy of Fine Arts, where he studied for five years, Prof. Max Koner being his chief instructor. He then traveled through southern France, Italy, Belgium, England, and Holland. Three of his drawings, "Polish Rabbi," "The Old Jew," and "Old Man in Profile," were purchased in 1901 by the Prussian government for the copperplate section of the Berlin Museum.

Struck is a devout Jew, and an ardent student of the Talmud in his leisure hours. He signs his pictures "Chaim Aron ben David," his Hebrew name. He furnished the illustrations for Adolf Friedmann's "Reisebilder aus Palästina" (Berlin, 1904).

STUDENZKI, MOSES: Polish physician; born in the early part of the nineteenth century at Zbarasz, Galicia, where his father, Aaron Polak, was rabbi; died at Warsaw about 1876. Until he was fourteen Studenzki studied Hebrew and Talmud under his father, and for the next three years attended the yeshibah of Brody. At the age of seventeen he went to Warsaw, where he graduated from the Lyceum and entered the Alexander University, studying medicine and philosophy. When that university was removed from Warsaw, Studenzki went to Berlin University, and finished there his medical studies (M.D. 1834). He then returned to Warsaw, where he practised as "physician of the first degree," and where he graduated as "doctor accoucheur" in 1846.

Studenzki was the author of "Rofe ha-Yeladim" (Warsaw, 1847), a work written in both Hebrew and German, and treating of children's diseases and of ways to prevent them; it received the approbation of the Rady Lekarski (board of physicians) of Warsaw and of Ḥayyim Davidsohn, then rabbi of Warsaw. The second edition (1876) is in Hebrew only. He wrote also "Orḥot Ḥayyim" (*ib.* 1853), a work on hygiene and a guide for the preservation of health, and prepared an edition of M. Levin's "Refu'ot ha-'Am" (Lemberg, 1851), to which he added a treatise on children's and women's diseases.

STUHLWEISSENBURG (Hungarian, **Szekesfehervar**; Latin, **Alba Regia**): Coronation city of the Hungarian kings from the time of St. Stephen to 1527. As early as the fourteenth century it contained the most influential Jewish community of Hungary; and because of the fact that the royal court frequently visited the city, the leaders of the Stuhlweissenburg community often had occasion to be the spokesmen in behalf of Jewish interests throughout the country. The only known Jewish name of that date, however, is that of a certain Solomon who appeared as advocate of the interests of the Hungarian Jews before King Sigismund. The Jewish community continued to exist in the sixteenth and seventeenth centuries, during the Turkish dominion; but after the expulsion of the Turks (1686) the Jews also had to leave the city; and it was not until the time of Emperor Joseph II. that

Sixteenth and Seventeenth Centuries.

a Jewish family—that of the innkeeper Ḥayyim Stern—was again given permission to dwell there.

Article xxix. of the constitution of 1839-40 permitted Jews to settle in the royal free cities; and after that time, as early as 1842, a small congregation existed there, whose first president was Solomon Hahn and whose first rabbi was Daniel Pillitz. The latter in 1843 accepted a call to Szegedin, Mayer Zipser being chosen his successor at Stuhlweissenburg in the same year. Zipser was the real organizer of the community; but by his attempts at ritual Reform, which, although not at all contrary to Jewish law, were yet in opposition to deeply rooted customs, he brought about a disruption of the community. His bitterest opponent, who led the Conservative party in the struggle, was Gottlieb Fischer, a pupil of Moses Sofer. When Fischer was chosen president in 1851 there were so much agitation and friction in the congregation that the secular authorities had frequently to be appealed to; and in 1858 Zipser decided to accept a call to Rohoucz (Rechnitz). The Conservatives then succeeded in inducing Joseph Guggenheimer of Aussee, son-in-law of Samson Raphael Hirsch, to accept the rabbinate of Stuhlweissenburg. He entered on his position in March, 1859, but the reactionary changes which he introduced failed to meet with success, and he resigned voluntarily in March, 1861. The disagreement, however, had attained such proportions that the Hungarian magistracy finally interfered; and it decreed that the community should be divided into two parts under a common presidency. Thereupon the two factions, worn out by fighting and financially crippled, appeared to be seeking a rapprochement; but this was prevented by the action of Samson Raphael Hirsch.

Nineteenth Century.

The progressive mother congregation now chose the energetic S. L. Wertheim as president (June 2, 1867); previously (April 22, 1867) it had called Alexander Kohut as rabbi; but their attempts to win back the dissenters by sheer force of self-abnegation proved futile. Kohut caused Stuhlweissenburg to be the first city in Hungary in which a separate Orthodox congregation was approved by a ministerial decree (Dec. 4, 1871). Since that time the two congregations have worked quietly side by side. Kohut removed in Sept., 1874, to Pecs (Fünfkirchen), and the Stuhlweissenburg congregation remained without a rabbi until March, 1889, when the present (1905) incumbent, Dr. Jacob Steinherz, was elected. S. L. Wertheim, who had conducted the affairs of the congregation for twenty-four years, died Sept. 2, 1890, and was succeeded in the presidency by Dr. Max Perl, who still occupies the office.

STUTTGART: German city, and capital of the kingdom of Württemberg. The first historical mention of Stuttgart dates from the administration of Eberhard the Illustrious (1265-1325, and to a somewhat later period belongs the earliest mention of a Jewish community there, for in 1348-49, the year of the Black Death, the Jews of Stuttgart, as well as of other places, met the fate of martyrs in the flames (Stälin, "Wirtembergische Gesch." iii. 244, notes 3-4). A ghetto and a "Judenschule" existed in this period, and a Jew named Leo is specifically mentioned (Hartmann, "Chronik der Stadt Stuttgart," Stuttgart, 1886).

Traces of Jews in Stuttgart are again found in 1393, when mention is made of one Baruch Baselless; while under the joint rule of the counts Eberhard the Younger and Ulrich V., the Well-Beloved, Moses, surnamed Jäcklin, lived in the city with his family and servants, and even received citizenship, letters of protection and privilege being granted to him. Whether this Moses Jäcklin is identical with the Moses Jecklin of Esslingen (1404-51) is uncertain. During this same period mention is made of a Solomon who purchased a patent of protection for eight florins (1435-41), of a Lazarus who obtained a similar document for ten florins (1437-1443), and of Kaufman and Bel (1459). The Jew Brein (?) received the permission of Count Ulrich to settle in Cannstatt and to lend money at interest, although he was forbidden to take more than one pfennig per pound, and he had not the right to levy a distress. These scanty allusions justify the assumption that there were Jewish communities, even though they were small, at Stuttgart and Cannstatt in the fifteenth century; but in 1492 Count Eberhard im Bart, despite the earnest remonstrances of their zealous friend Reuchlin, absolutely forbade the Jews to reside there longer. Duke Ulrich (1498-1550) and his successor, Duke Christopher (1550-68), at the urgent petition of Josel of Rosheim, finally granted safe-conducts to Jews, but refused them residence. Nevertheless, a number of Jews lived at Stuttgart for a time, though they had no opportunity of establishing a community. In 1522, moreover, the city passed into the possession of the emperor Charles V., and later of his successor, Ferdinand, while in 1535 the Reformation was effected.

Fifteenth and Sixteenth Centuries.

Conditions changed, however, with the accession of Duke Frederick (1593-1608), who showed special favor to the great artist Abraham Calorno, and even greater favor, in 1598, to Maggino Gabrieli, the consul-general of a company of Jewish merchants. He granted the latter the freedom of trade which they desired, received them gladly, and sold them a house in the market-place, the "Armbrustschutzhaus," in which they held religious services. The magistracy of the city, however, aided by the court chaplain, Lucas Osiander, brought charges against them, while the consistory declared that "next to the devil, the Jews are the worst enemies of the Christians"; to this the duke retorted that "the Jew is no magician, but you and those like you are worthless priests, and adulterers"; and Osiander, who had denounced the Jews from the pulpit, was obliged to leave the city. On May 23, 1598, Frederick made an agreement with the members of Gabrieli's company, assigning them Neidlingen as a residence, but forbidding them all exercise of religion; and three months later they left the country.

Despite all the obstacles which were set up by the authorities and despite the added restrictions upon the granting of safe-conducts imposed by Duke Johann Frederick (1608-28) and the princely administrator Louis Frederick, some Jews seem to have remained in Stuttgart, and Duke Eberhard III. (1628-74) soon ordered their expulsion from the city "because there were too many of them." Their entreaties were unavailing, and only Solomon, Emanuel, and the latter's wife, Feile, were allowed fourteen days to arrange their affairs ("Landesordnung," pp. 93, 100).

Seventeenth and Eighteenth Centuries.

Nevertheless, Jews evidently continued to reside at Stuttgart for some time afterward. In 1661 the complaint was made that travelers on foot between Stuttgart and Ulm, Augsburg, Strasburg, and Frankfort carried out and in large quantities of wares, including goods belonging to Jews, and defrauded the government of all excises. But since such travelers were protected by the citizens of the towns mentioned as well as of the neighboring districts, it was almost impossible to bring one of them to punishment; the merchants of those cities, moreover, allowed themselves to be used as shields for foreign traders, to the disadvantage of their class as a whole. The conditions were exactly the same with the traders as with the Jews, who were restricted to the lending of money and to commerce. Although expelled from Württemberg, the Jews held their own owing to their commercial relations in the neighboring regions, while they were entitled to safe-conducts through the country in that they were "servants of the empire"; and the Christian merchants themselves, disregarding all attacks upon the Jews and all the threats of the government, continued to avail themselves of their services, and frequently used them as a means of carrying out some prohibited negotiation (*ib.* pp. 187-188, 191).

In the year 1679, Jews were again permitted to settle in Stuttgart; in 1706 they were allowed to engage in traffic at public fairs, and in the following year to receive pledges; and in 1712 the Jews Solomon Frankel, Leon Wolff, Marx Nathan, and Baer obtained the privilege, despite the opposition of the district, of trading throughout the country. In 1710, however, Model Löw of Pforzheim, a favorite of the Count of Würben, had received permission to deal in cattle and jewels, and he had become jealous of the new favorites of the duke and had intrigued against them in a most scandalous manner; but finally his slanders were exposed, and he was imprisoned on Jan. 31, 1721, although he was released in 1726 to carry his case to the highest court.

By this time a community had again been formed in Stuttgart, but it frequently suffered under the enforcement of various oppressive laws; for many ordinances were enacted against the Jewish religion, and circumcision, *e.g.*, could be performed only abroad. The reign of Carl Alexander (1733-1737), on the other hand, brought many ameliorations and an increase in the number of communities. His confidential adviser, Joseph Süss Oppenheimer, conferred upon Moses Drach the right of printing playing-cards (Feb. 25, 1734), while Jacob Uhlmann was given the contract of supplying rations for the troops of the district (March 18, 1734), and on Jan. 21, 1737, Oppenheimer himself again received the privilege of granting rights of residence to Jewish families. The fall of Oppenheimer on March 12 of the same year in consequence of the sudden death of the duke brought terror and destruction on all the Jews of Stuttgart. The sons and sons-in-law of Levin were expelled, but Marx Nathan, Noah and his associates, Solomon Meïr, Moses Drach, and Elijah Ḥayyim were permitted to remain, although they were exposed to the fury of the people until the provost was ordered to protect them.

Community Organized.

The Jewish community of Stuttgart was now apparently fully organized, for a miḳweh is mentioned in 1721 (*ib.* p. 171). During the control of the administrators Carl Rudolf and Peter Carl Frederick the laws against the Jews were again enforced, and in 1739 they were expelled, although their recall soon followed. The court bankers Seeligmann (1741) and Ullmann (1743) were permitted to reside in the city. One of the laws issued about this time decreed that circumcision might be performed only in a dwelling-house; this offers sufficient evidence that the community possessed a synagogue (even though it may have been but a small room for prayer), in which circumcisions had taken place; and the prohibition was probably due to the fact that children in being carried through the street aroused the displeasure of the populace. Another law required that notice was to be given immediately of the presence of non-resident Jews (1747), and the court banker Seeligmann was fined ten florins for having sheltered a Jew from another city without the knowledge of the provost. The charge that the Jews celebrated the Sabbath with too much noise is another proof of the existence of a community at that time, and a still stronger confirmation is found in the patent which was conferred on the two bankers Seeligmann and Ullmann and on Seeligmann Baiersdorfer, authorizing them to install such butchers and other officials as were necessary, and to celebrate private worship within proper bounds. Non-resident Jews, however, who might arrive on the day before the Sabbath, were obliged to leave at the close of the latter.

In general it may be said that Carl Eugene (1744-1793) was well disposed toward the Jews. In 1758 he granted Aaron Seidel, the court banker of the Prince of Ansbach, the monopoly for three months of purchasing all silver for the ducal mint, while protected Jews of Hechingen were made subcontractors. In the following year the court bankers Mark and Elias Seeligmann were authorized to import French salt for a period of twenty years, while in 1761 they were empowered to purchase forage for the French army; and four years later the prohibition against dealing in cattle at the annual fairs was repealed. The right to purchase tartar at the ducal cellars was conferred on the merchants Sontheimer and Consorten. The inhabitants resented these proofs of the duke's friendship for the Jews, but he disregarded their restrictions, even after his reconciliation with them (Jan. 27, 1770); and his decree of Feb.

10, 1779, that no Jew should be deprived of the right of residence unless convicted of crime, brought new families to the community of Stuttgart, while the destruction in 1782 of the gallows erected for Oppenheimer likewise evinced a friendly attitude toward the Jews. In the year before his death Duke Frederick Eugene (1793–97) permitted the widow of the court banker KAULLA of Hechingen to establish a mercantile house at Stuttgart (Nov. 2, 1797).

Conditions became worse, however, under Frederick William (duke and elector, 1797–1805), who repealed the protection formerly accorded the Jews; but notwithstanding all commercial and industrial annoyances and obstacles, the life of the community was maintained. In 1799, despite the opposition of the Christian merchants, the contract for provisioning the army was given to members of the Kaulla family; and in 1802 the royal bank of Württemberg was founded with the cooperation of this family. The official religious census of 1803 gives the following heads of houses in the city: Isaac Löw and his wife Friederike; Solomon Aaron and his wife Rebekah; Uhlmann and his sister Henele; Maier and his cousin Jonas Lazarus; Councilor Kaulla and his wife, with their boarders and servants, Amson Heymann, Jacob Joseph, Solomon Bloch, Löw Bernstein, Ḥayyim Mayer, and Ḥayyim Ḥayyim; Kaulla and household, with coachmen, servants, and cooks; Moses Feit; the protected Jew Benedict and his wife Rosina, with their children Seligmann, Isaac, Jacob, Wolf, Fradel, and a grandson, together with their maid servants.

Nineteenth Century.

When Württemberg became a kingdom in 1806 a vast improvement was effected in the condition of the Jews in the country at large, especially in the community of Stuttgart. By a decree of June 27, 1806, King Frederick I. conferred on the imperial and royal councilor Jacob Raphael Kaulla and a number of his relatives the citizenship of Württemberg for themselves and their descendants, in recognition of the services which he had rendered the country on critical occasions, and this family has since exerted an influence for good on the Jews of the entire district, especially on their coreligionists in Stuttgart.

In 1808 the need of a synagogue was felt, and the raising of funds was authorized. At this time only those Jews were permitted to reside in the city who had property amounting to twenty thousand gulden; and they were obliged, by an enactment of July 18, 1819, to pay twelve florins each for protection. Two years later the right of citizenship was denied them. Now began the struggle for the elevation and equality of the Jews, and one of the members of the committee appointed in 1820 to determine ways and means for their civil and moral improvement was Nathan Wolf Kaulla of Stuttgart. At the same time Karl Weil was another active champion of their rights; he proposed a law which was submitted to the government in 1824, and aided in settling other legal matters as well, while Samuel Mayer, who later became professor at Tübingen, also defended the Jews. The result of the work of this committee of 1820 was the law of 1828 regarding Jewish education and emancipation; and the development of the communal life of the Jews of Stuttgart under the new enactments was rapid.

Communal Institutoins.

In 1832 a self-dependent community of 126 members was founded under an ordinance of Aug. 3, and Stuttgart was made the seat of a rabbinate which comprised Stuttgart, Esslingen, Ludwigsburg, Hochberg, and Aldringen. In the following year the estate of Hoppelauer was acquired for a cemetery, and in 1834 a fund was obtained for the salary of a rabbi, whereupon Dr. Eichberg was appointed cantor; Dr. Maier was installed as district rabbi on Jan. 9, 1835. Public worship then began, the first services being held in the houses of members of the community. The parnasim, whose president was Eichberg, were Dr. Dreifuss, Solomon Jacob Kaulla, and Wolf von Kaulla. From the fall of 1835 the place of worship was the apartments of E. Hastig on the Postplatz, and from the summer of 1837 a synagogue in a house on Langestrasse (No. 16). The Jews of Stuttgart numbered 265 in 1846, and 330 in 1852. In 1831 an orphan asylum was established, and in 1848 a society for the relief of the sick, while in 1853 the Ḥebra Gemilut Ḥasadim was founded with ninety-four members under the presidency of Privy Councilor Adolph Levi. The struggle for political equality found earnest advocates in the community of Stuttgart. Commercial Councilor Pfeiffer, Court Banker Solomon Jacob Kaulla, Dr. Karl Weil, Court Banker Aaron Pfeiffer, and Abraham Thalheimer signed a petition to the government in 1833, and they were joined in 1845 by Moses Benedikt, Solomon Maier Kaulla, Counselors Jordan and L. Kaulla, Rudolf and Fr. Kaulla, and P. Holland. Through their efforts the rights conferred upon the Jews by the statutes of the German people were confirmed by the king, while in 1852 the anti-Semitic attacks on these rights were definitely defeated. Following in the footsteps of his ancestors, the counselor at law Max Kaulla, aided by Nördlingen, S. Levi, and Adolf Levi, won the decisive victory in the petitions of 1861, 1863, and 1864. The community of Stuttgart sought to adapt itself to the manners, customs, and modes of thought of its non-Jewish surroundings. In 1862 a synagogue, designed in Moorish style by Wolf, was erected, containing an organ for which Emanuel Feist composed a number of new hymns, while a prayer-book which was free from dogmatic subtleties lent dignity and simplicity to the service, so that the community of Stuttgart became an inspiration for many other Jewish congregations in Germany.

When Maier died, Aug. 8, 1873, he was succeeded by Dr. Wassermann of Mühringen, who held office until Oct. 13, 1892. During this time the number of the officials of the community was increased by the appointment of Cantor E. Gundelfinger and that of D. Stössel of Lathenbach, the latter acting as a teacher of religion and as the rabbi's assistant.

The conservative members of the community of Stuttgart were grouped around the Ḥebra Ḳaddisha, which was founded in 1875, and performed works of charity for the sick, dying, and dead. A new cemetery was purchased in 1876, and religious instruction was given in the first six classes of the public schools. In 1883 the Ḥebra Gemilut

Ḥasadim was reorganized, and the tariff for burial was revised in 1888. Wassermann was the recipient of many honors. On Oct. 2, 1888, he celebrated his jubilee of office, and on July 16, 1891, his eightieth birthday, receiving the greetings of king, government, and community. A small portion of the rigidly Orthodox, however, were not pleased with his administration; and in 1878, when the wardens endeavored with especial severity to prohibit the use of the ṭallit, an independent religious body was organized under the leadership of J. Landauer. After the death of Wassermann the rabbinate was divided (1893), Th. Kroner becoming first rabbi, and D. Stössel second rabbi. The former assumed office on April 14, 1894, and since that time a number of benevolent societies have been formed within the community, including the Talmud Torah Verein, the societies for Jewish young men (1894) and women, the society for feeding the poor (1894), the pauper aid society, the working men's society (1896), the Stuttgart lodge (1899), the endowment society (1901), the loan society (1902), the Shomere Emunim, and the society for the aid of local and transient poor. Stuttgart is also the seat of branches of the Central Union of German Citizens of the Jewish Faith, the Society for Defense Against Anti-Semitism, and the Society for the Relief of German Jews. In the last twelve years, accordingly, much activity has been manifested in philanthropic movements, the latest organization being a Jewish Sisterhood. In religious instruction many changes have been made. The religious school of the community has one rabbi and four teachers, and in the public institutions both rabbis and three teachers give organized instruction. There have been no innovations, however, in the ritual of worship, but, on the contrary, many old customs have received increased observance.

A number of the members of the community of Stuttgart are prominent in public life: the manufacturers Reif and Arnold and the merchant Reis are members of the municipal council; the advocate Erlanger is second vice-president of the board of aldermen; the district judge Stern, N. Levi, an advocate, and Hallmann, a judge of the higher court, are members of the judicial organization of the district, while N. Levi is also the president of the board of directors of the chamber of advocates of the superior court of Stuttgart. The faculty of the Polytechnic High School of the city includes the Jewish teachers Kaufmann, Marx, and Schmidt; and that of the Conservatory for Music, Singing, and Dramatic Art, Professors Singer and Wien; while Gerstmann is a member of the regular company of the Hoftheater.

In 1903 the records of the community of Stuttgart showed 62 births, 16 marriages in the synagogue, and 33 burials. According to the latest census, the community comprised 776 households with 3,015 persons. The community has a library and 224 "Jahrzeit" foundations.

STYRIA: Austrian province. The first documentary mention of Jews in Styria occurs in connection with the village of Judenburg under date of 1075 (Peinlich, "Judenburg und das Heilige Geistspital," p. 7); another place between Graz and Rein is called in the archives "ad Judæos"; and at Marburg was a Jewish cemetery which became, after the expulsion of the Jews from Styria in 1496, the property of the Minorite order (Puff, "Marburg," i. 119). In general it may be stated that numerous towns and villages, bearing such names as "Judendorf," "Judenanger," "Judengraben," etc., are so many indications of the distribution of Jews throughout the province in the early Middle Ages.

Indications of Early Jewish Settlements.

In Graz (where they inhabited a special quarter), in Judenburg (which was one of the commercial centers of Austria), and in Marburg, Radkersburg, and other localities the existence of organized Jewish communities may be taken for granted. In Judenburg the Jew Cham was in 1460 proprietor of six houses; his coreligionist Manl, of three. Besides engaging in commerce, the Jews of Judenburg busied themselves with agriculture and road-building. It is interesting to note that the church of Judenburg is designated in local documents as having been a former synagogue, many of the stones in the building bearing, indeed, Hebrew inscriptions.

In 1238 King Frederick II. forbade the baptism of Jewish children against the wishes of their parents, this prince showing in general a favorable disposition toward his Jewish subjects, who had the right to appeal directly to him. A similar attitude was taken by Duke Frederick the Warlike (1278) and the powerful minister of Albrecht I., Abbot Heinrich von Admont (1296), and by Ottocar II. and his son Rudolph.

Riots at Fürstenfeld and Judenburg.

Christmas of 1312 was marked by a bloody riot against the Jews of Judenburg and Fürstenfeld; but papal bulls and the intervention of Duke Albrecht II., who on this account was nicknamed "Judendulder," arrested the anti-Jewish uprisings. In Wolfsberg, however, seventy Jews were burned at the stake on a charge of having desecrated the host. On the 11th of May, 1421, all the Jews of Styria were, almost at the same hour, thrown into prison. Some died at the stake; others were expelled from the province; while a small number embraced Christianity. Milder treatment was meted out to the Jews during the reign of Frederick the Peaceful (1424-93), who granted his protection even to the Jewish refugees from other Austrian provinces. But in 1496, urged by the estates, Maximilian I. decreed the expulsion of all Jews from Styria, only nine months being allowed them in which to liquidate their affairs. Most of them seem to have emigrated to Italy.

Although in 1753 and 1775 a few individual Jews (see Baumgarten, "Die Juden in Steiermark," p. 38) were allowed to reside temporarily in the province, the first real attempt at a resettlement began under a decree of Joseph II. of 1781, which granted the Jews permission to frequent the markets of Graz; but the old decree of Maximilian was renewed in 1783, 1797, 1819, 1823, and 1828. Even after the revolution of 1848 the status quo was maintained; with few modifications it was renewed by imperial decree of Oct. 2, 1853; and not until 1861 was the prohibition repealed. In Sept., 1865, the first prayer-house in Graz was dedicated by Adolph Jellinek and Solomon Sulzer, who, accompanied by representative Jews and the entire choir personnel, went from Vienna for the purpose. On May 17, 1869, the organization of the new Jewish community was duly confirmed by the governor. It has remained the only congregation in the community, and numbers (1905) about 1,200 souls. Its rabbi is Samuel Mühsam; and it possesses three charitable institutions—a ḥebra ḳaddisha, a ladies' society, and Ḥebra Matnat 'Aniyyim—besides a communal school with about 200 pupils.

Congregation of Graz Officially Recognized.

Judenburg has a Jewish "Korporation," *i.e.*, a congregation lacking official indorsement; the same is the case with the minyan in Leoben. There are Jewish cemeteries in Judenburg and Gleichenberg-Trautmannsdorf. At the latter place, a well-known health resort, a Jewish hospital was erected in 1884, owing partly to the efforts of the poet Leopold Kompert. There are small Jewish settlements at Andritz, Auhmühl, Aussee, Bruck, Brunnsee, Cilly, Dietersdorf, Egenberg, Feldkirchen, Fehring, Fernitz, Friedau, Gratwan, Hausmanstetten, Irdning, Kindberg, Knittelfeld, Köflach, Leoben, and twenty-four other localities (Baumgarten, *l.c.* p. 50).

In 1892 the old synagogue at Graz was replaced by a beautiful building, which was visited in 1895 by the emperor. During the twelve years 1890 to 1902 about 170 Jews in Styria embraced Christianity, while during the same period twenty-one Christians adopted Judaism.

The Jews of Styria are occupied mainly in trade and commerce; but there are also some farmers among them; and, curiously enough, one of the greatest swineries near Graz is maintained by a Jew.

See, also, FÜRSTENFELD and JUDENBURG.

S.

SUASSO: Spanish family, with branches in Holland and England. The following are the more important members (in chronological order):

Antonio (Isaac) Lopez Suasso: Resident of The Hague. For services rendered to King Charles II. of Spain, that monarch in 1676 created Suasso a baron, his estate of Avernas de Gras in Brabant, now called "Cras Avernas," being made a barony. He was one of the most ardent supporters of the house of Orange; and when William III. undertook his expedition to England in 1688, Suasso advanced him 2,000,000 gulden without interest and did not even ask for a receipt, merely saying: "If you are successful you may repay me; if you are not successful, I will be the loser." Frederick II. of Prussia commemorates this instance of self-sacrifice as the act "of a Jew named Schwartzau" ("Œuvres Historiques," i. 152).

BIBLIOGRAPHY: Koenen, *Geschiedenis der Joden in Nederland*, pp. 208 *et seq.*

Abraham Lopez Suasso: Son of Antonio (Isaac) Lopez Suasso; married a daughter of Manuel de Teixeira, chargé d'affaires at Hamburg for Queen Christina of Sweden (1632–54).

Antonio (Isaac) Lopez Suasso: Son of Abraham Lopez Suasso; married in 1714 a daughter of Moses Mendes da Costa, governor of the Bank of England.

Francisco Lopez Suasso: Dedicatee of an epithalamium entitled "Certamen de las Musas" by the poet Immanuel de Leon of The Hague.

BIBLIOGRAPHY: Gaster, *Hist. of Bevis Marks*, p. 98; Kayserling, *Sephardim*, p. 316.

Alvarez Lopez Suasso: Resident of London; one of the wealthiest men of his time. In 1725 he was a member of the board of directors of the Spanish-Portuguese community of London; and seven years later he received permission from the English government to send settlers to the colony of Georgia.

BIBLIOGRAPHY: Gaster, *Hist. of Bevis Marks*, p. 128; *Publ. Am. Jew. Hist. Soc.* ix. 109; x. 67, 69.

Antonio Lopez Suasso: Great-grandson of the baron De Avernas; born in Amsterdam April 1, 1776; died at Mechlin Oct. 12, 1857. In conformity with the will of his maternal grandmother, he assumed his mother's name, Diaz de Fonseca, and renounced Judaism. He entered the English army as an officer, and resigned with the rank of captain in 1829. After residing for two years at Brussels, he settled at The Hague, where he devoted himself to literature, studying mainly political and military subjects. His chief work was "La Politique Dégagée des Illusions Libérales" (2 vols., 1838), in recognition of which the King of Hanover sent him a diamond ring. His last work was "La Haye par un Habitant" (2 vols., 1853).

SUBBOTNIKI ("Sabbatarians"): One of the Russian rationalistic bodies known under the general name of "Judaizing sects" (see JUDAIZING HERESY). On the whole, the Subbotniki differ but little from the other Judaizing societies. They first appeared in the reign of Catherine II., toward the end of the eighteenth century. According to the official reports of the Russian government, most of the followers of this sect practise the rite of circumcision, believe in one God, do not believe in the Trinity, accept only the Old Testament portion of the Bible, and observe the Sabbath on Saturday instead of on Sunday. According to the same source, however, some of them, as, for instance, the Subbotniki of Moscow, do not practise circumcision; moreover, they believe in Jesus, but regard him as a saint and prophet and not as the son of God. Others await the coming of the Messiah as king of the earth. Some of them revere the New Testament; others place it on a lower level than the Old Testament.

Relation to Jews.

However, the Russian official sources can not be trusted implicitly, since the Subbotniki, like other Judaizing sects, carefully conceal from the Christians their religious beliefs and rites. They do not act so guardedly toward the Jews; indeed, they even style themselves "Jews." The Russian government carefully isolates the Subbotniki from the followers of either religion, but whenever the opportunity offers itself the Subbotniki apply to the Jews for Hebrew religious books. Apart from practising the rite of circumcision, they also slaughter cattle according to the law of "sheḥiṭah," wherever they can learn the necessary rules. Moreover, they clandestinely use tefillin, ẓiẓit, and mezuzot, and pray in almost the same manner as the Jews; namely, in private houses of prayer, with covered heads, reciting their prayers from Jewish prayer-books with Russian translation. The cantor reads the prayer aloud and the congregants then pray silently; during prayers a solemn silence is observed throughout the house. On Saturdays readings are made from the Torah also. Of all the Jewish rites and traditions the Subbotniki observe the Sabbath most zealously, whence their name. They are careful on that day to avoid work altogether; and they endeavor not to discuss worldly affairs.

According to the testimony, private and official, of all those who have studied their mode of life, the Subbotniki are remarkably industrious; they read and write; they are very hospitable; and are strangers to drunkenness, poverty, and prostitution. Up to 1820 the Subbotniki lived for the most part in the governments of Voronej, Orel, Moscow, Tula, and Saratof. After that year the government deported those who openly acknowledged their membership in this sect to the foothills of the Caucasus, to Transcaucasia, and to the governments of Irkutsk, Tobolsk, and Yeniseisk, in Siberia.

Under Alexander I. and Nicholas I.

In the reign of Alexander I., owing to that czar's personal tolerance, the Subbotniki enjoyed more freedom. Nevertheless the Russian clergy killed in Moghilef (Mohilev) about 100 Subbotniki and their spiritual leaders, including the ex-archbishop Romantzov, while the latter's young son was tortured with red-hot irons before being burned at the stake. The Subbotniki, however, succeeded in gaining a measure of peace by means of an agreement which they made with the Greek-Orthodox popes. In order that the latter might not be the losers from a material standpoint by the defection of the Subbotniki from their congregations, the members of the sect undertook to pay them the usual fee of two rubles for every birth and three rubles for every marriage. The czar then permitted the Subbotniki to profess their faith openly, but on the condition that they should not engage Jewish preachers and should not themselves proselytize among the Christians. These stipulations were not, however, fully complied with.

In the reign of Nicholas I. a feeling of unrest became apparent among the Subbotniki. Many of them wished to embrace Judaism; and some of their number were sent into the Pale of Settlement in order to become fully acquainted with the Jewish religion. On learning of this the Russian government sent among the Subbotniki a number of priests with the view of effecting their return to the Greek-Orthodox fold. But the religious disputations and the persuasion of the priests did not meet with success. The government then decided to suppress the Subbotniki by violent measures, and many of them were subjected to cruel treatment by the officials. The government then decided (1826) to deport those who had openly professed themselves Subbotniki to the above-mentioned regions in the Caucasus, Transcaucasia, and Siberia, at the same time, but for reasons quite opposite in the two instances, prohibiting the residence in their settlements of Jews and of members of the Greek-Orthodox Church.

Statistics.

It is impossible at present to determine the exact number of Subbotniki in Russia, the discrepancy between the government statistics and the actual numbers of this sect being so very wide. The official data represent the membership of the sect as numbering several thousand, while the traveler and writer Dinard, who has been in personal contact with the Subbotniki, states that there are 2,500,000. It may be that Dinard included in his figures all of the Judaizing sects. As regards dress, and mode of life apart from their religious rites, the Subbotniki do not in any way differ from the Greek-Orthodox Russians.

SUBPŒNA: In English law, a writ which commands witnesses to come into court and to give testimony. Scripture (Lev. v. 1) makes it the duty of any one who has seen or heard things which are material to the right decision of a lawsuit, whether civil or criminal, to come forward and testify; otherwise he will "bear his iniquity." Further, it contemplates that the party interested in the case will proclaim publicly what testimony he needs, and will lay his curse on those who are able to give such testimony but who fail to do so. It might thence be inferred that the rabbinical law supplies means corresponding to the subpœna in English law, to command the attendance of witnesses, and to punish them for non-attendance. But, on the contrary, a baraita (B. Ḳ. 55b) enumerates four kinds of wrongdoers who are liable to punishment only in the heavenly and not in a human tribunal: among them is the witness who refuses to testify. The codes (Maimonides, "Yad," 'Edut, i.; Shulḥan 'Aruk, Ḥoshen Mishpaṭ, 28) follow this baraita, giving to the party who needs the testimony only the right publicly to proclaim his needs, with an imprecation on him who, being able to testify, refuses to do so; but here they stop. ReMA, in his gloss on Ḥoshen Mishpaṭ 28, 2, does, however, point out, that Joseph Caro, in his "Bet Yosef," on the "Arba' Ṭurim," had suggested some means for compelling the attendance of witnesses, nay even of the adversary, making the latter a witness; but he does not venture to specify the process. It is suggested also that to compel one witness to testify where the issue may be established only by the testimony of two, would generally be of little avail.

In the same connection the moral obligation of one who can testify to come into court and do so, is subjected to a somewhat curious exception. A great scholar ("talmid ḥakam"), it is said, need not attend, at least in a civil cause, as a witness before a court composed of judges inferior in learning to himself. He should, however, go promptly and do his duty as a witness when the cause is such that the miscarriage of justice therein through the lack of his testimony might lead to a scandal ("ḥillul ha-shem").

SUBSCRIPTION. See SIGNATURE.

SUCCESSION. See AGNATES; INHERITANCE.

SUCCOTH: **1.** The first stopping-place of the Israelites on their way out of Egypt (Ex. xii. 37, xiii. 20; Num. xxxiii. 5 *et seq.*); probably the Egyptian Thuku, name of the district of PITHOM and also of the fortress itself (see Ebers in "Zeit. für Egyptische Sprache und Altertum," 1885, p. 49).

2. City in Palestine east of the Jordan, in the territory of Gad (Joshua xiii. 27). The name (= "huts") is derived from Jacob's settling there on his return from the country of the Arameans. Jacob came from Penuel; while Gideon, pursuing the Midianites from the west, reached first Succoth and then Penuel (Judges viii. 5 *et seq.*, 14 *et seq.*). Succoth, therefore, was nearer to the Jordan (comp. Judges viii. 4 *et seq.*). It lay in the valley, according to Joshua xiii. 27. The "valley of Succoth" mentioned in Ps. lx. 8 (A. V. 6), cviii. 8 (A. V. 7) is, therefore, the valley of the Jordan at Succoth. Jerome says, in a comment on Gen. xxxiii. 17, that Sukkoy belongs to the territory of Scythopolis (Baisan). Hence it probably lay north, not south, of the Jabbok (= Nahr al-Zarḳa). According to the Talmud, it was subsequently called Tar'ala (comp. Neubauer, "G. T." 1868, p. 248); and S. Merill identifies the place and the Talmudic name with the artificial hill Der Allah, 20 meters high, and somewhat to the north of the place where the Jabbok emerges from the mountains and seeks the plain (Merill, "East of the Jordan," 1881, p. 387). But this does not agree with the statements of Eusebius. This Succoth is identical with that mentioned in I Kings vii. 46 and II Chron. iv. 17. According to these passages, Hiram's foundry, in which he cast the vessels for the Temple, lay between Succoth and Zeredah in the valley of the Jordan.

E. G. H. I. BE.

SUCHOSTAVER, MORDECAI: Galician adherent of the HASKALAH, and teacher of philosophy at the rabbinical seminary of Jitomir, Russia; born near Brody, Galicia, 1790; died at Jitomir July 29, 1880. As a youth he was the pupil of Nachman Krochmal. He left Brody for Odessa, where, in the early thirties of the nineteenth century, he was appointed private secretary and tutor in the household of Baron Joseph Yozel Günzburg, settling in Kamenetz-Podolsk. Upon the opening of the rabbinical seminary at Jitomir, Suchostaver was called to that city; and he remained identified with the institution until it was closed (1873).

Influenced by the school of the Haskalah, Suchostaver wrote a philosophical introduction to Maimonides' "Moreh Nebukim," which was published at Zolkiev in 1829. He was the author also of several Biblical-scientific articles, preserved in manuscript, one of which, entitled "'Edim Zomemim," a treatise on Deut. xix. 15-20, appeared in the monthly "Miẓpah" (1885, part iii.).

SUFISM (Arabic, "Tasawwuf"): The mystic and ascetic doctrines of the Mohammedan sect of the Sufis, whose name is derived from the Arabic noun "ṣuf" (wool), having reference to the woolen cloth worn by its adherents to typify the primitive simplicity enjoined by Islam. Sufism has a special claim upon the attention of Jewish scholars because of its influence on the ethical and mystic writings of the Judæo-Arabian period. According to their own view the Sufis are simply esoteric Mohammedans, setting aside the literal meaning of the words of Mohammed for a mystic or spiritual interpretation.

Doctrines.

The Sufic movement arose in the land of the Magis; and in the first stages of its development it bore a purely ascetic and ethical character. It declared theological knowledge to be far inferior to inward perception, or mystic intuition acquired through religious ecstasies. Later, however, under the influence of Arabian Neoplatonism, and partly also under that of the Vedanta school of the Hindu philosophers, speculative, metaphysical, and pantheistic elements were added; and in this way arose the Sufic theological system. For the Sufis, God alone has a real existence, while the material world or contingent being is merely a reflection of Him, revealing His attributes and perfections without partaking of His substance. In loving wisdom, beauty, or goodness, man in reality loves God; and in realizing that God is the only reality he is able to overleap, as it were, his own limitations and to attain the state of absorption in God. This can only be reached after one has passed through the following three stages: (1) humanity ("nasut"), in which the disciple, or seeker after God, must live according to the Law, observing all the rites, customs, and precepts of religion; (2) angelhood ("malkut"), through which lies the pathway of purity; and (3) the possession of power ("jabrut"), through which man acquires knowledge—the knowledge of God, which is diffused through all things. As the soul of man is an exile from its Maker, and human existence is its period of banishment, death should be the desire of the Sufi; for thereby he returns to the bosom of his Creator. According to the Sufis, all religious beliefs, such as those relating to paradise, hell, etc., are allegories. There does not really exist any difference between good and evil; all is reduced to unity, and God is the real author of the acts of mankind. It is He who determines the will of man: the latter therefore is not free in his actions. No one can obtain spiritual union without God's grace; but this is vouchsafed to those who fervently ask for it.

Influence on Yudghanites.

To the spread of Sufism in the eighth century was probably due the revival of Jewish mysticism in Mohammedan countries at that period. Under the direct influence of the Sufis arose the Jewish sect called YUDGHANITES. Like the Sufis, the Yudghanites set aside the literal meaning of the Torah for a supposed mystic or spiritual interpretation (comp. Saadia, "Emunot we-De'ot," pp. 39b and 68a; Ibn Ezra, Commentary on the Pentateuch, Introduction). There are also many points of similarity between the mysticism of the Sufis and that of the Merkabah-riders of the geonic period (see MERKABAH). To enter the state of ecstasy in which the Merkabah-ride was taken one had to remain motionless, with the head between the knees, absorbed in contemplation, and murmuring prayers and hymns. The Sufis distinguished seven different ecstatic stages, each of which was marked by the vision of a different color. The contemplative successively saw green, blue, red, yellow, white, and black; while in the seventh and last stage he saw nothing, being completely absorbed in God, like a drop of water which, falling into the sea, loses its individual identity and acquires an infinite existence. The same distinction by colors of the ecstatic stages was made by the Merkabah-rider, who at each new stage entered a heavenly hall ("hekal") of a different color, until he reached the seventh, which was colorless, and the appearance of which marked both the end of his contemplation and his lapse into unconsciousness (comp. Zohar, i. 41b).

Influence on Baḥya.

Views of Abraham bar Ḥiyya.

A far greater influence was exercised by Sufism upon the ethical writings of the Judæo-Arabian period than upon the mysticism of the Geonim. In the first writing of this kind, the "Kitab al-Hidayah ila Fara'iḍ al-Ḳulub" of Baḥya ben Joseph ibn Paḳuda (translated by Judah ibn Tibbon into Hebrew under the title "Ḥobot ha-Lebabot"), the author says: "The precepts prescribed by the Law number 613 only; those dictated by the intellect are innumerable." This was precisely the argument used by the Sufis against their adversaries, the 'Ulamas. The very arrangement of the book seems to have been inspired by Sufism. Its ten gates or sections correspond to the ten stages through which the Sufi had to pass in order to attain that true and passionate love of God which is the aim and goal of all ethical self-discipline. It is noteworthy that in the ethical writings of the Sufis Al-Kusajri and Al-Harawi there are sections which treat of the same subjects as those treated in the "Ḥobot ha-Lebabot" and which bear the same titles: *e.g.*, "Bab al-Tawakkul" (שער הבטחון); "Bab al-Taubah" (שער התשובה); "Bab al-Muḥasabah" (שער חשבון הנפש); "Bab al-Tawaḍu'" (שער הכניעה); "Bab al-Zuhd" (שער הפרישות). In the ninth gate Baḥya directly quotes sayings of the Sufis, whom he calls "Perushim." However, the author of the "Ḥobot ha-Lebabot" did not go so far as to approve of the asceticism of the Sufis, although he showed a marked predilection for their ethical principles. On the other hand, Abraham bar Ḥiyya teaches the asceticism of the Sufis. His distinction with regard to the observance of the Law by various classes of men is essentially a Sufic theory. According to it there are four principal degrees of human perfection or sanctity; namely: (1) of "Shari'ah," *i.e.*, of strict obedience to all ritual laws of Mohammedanism, such as prayer, fasting, pilgrimage, almsgiving, ablution, etc., which is the lowest degree of worship, and is attainable by all; (2) of "Ṭariḳah," which is accessible only to a higher class of men who, while strictly adhering to the outward or ceremonial injunctions of religion, rise to an inward perception of mental power and virtue necessary for the nearer approach to the Divinity; (3) of "Ḥaḳikah," the degree attained by those who, through continuous contemplation and inward devotion, have risen to the true perception of the nature of the visible and invisible; who, in fact, have recognized the Godhead, and through this knowledge have succeeded in establishing an ecstatic relation to it; and (4) of the "Ma'arifah," in which state man communicates directly with the Deity.

Influence on the Cabala.

Complete seclusion from the world was highly praised by many cabalists. In his commentary on the Pentateuch entitled "Me'irat 'Enayim" Isaac ben Samuel of Acre expresses himself as follows: "He who reaches the degree of attachment to God [דבקות] will reach that of indifference [השתוות]; and he who reaches the degree of indifference will reach that of seclusion from the world." The degree of seclusion is illustrated by R. Abner in the following story: "A lover of wisdom once addressed himself to an anchoret and asked to be enrolled in his order. The hermit said to him: 'My son, may the blessings of Heaven be upon thee; for thy intention is good. But tell me, hast thou been indifferent or not?' 'Master, what do you mean by that?' 'My son, is the man who respects thee, and the one who offends thee, equal in thy eyes or not?' 'By your life, master, I find pleasure in the man who shows me respect, and feel hurt by him who offends me; but I bear no grudge against the offender, and do not seek vengeance.' 'Depart in peace, my son,' said the anchoret; 'so long as thou art not completely indifferent to praise and blame, thou art not prepared for the life of a hermit'" (Deut. vii.).

Like the Sufis, the cabalists considered love of God to be the final object of the existence of the soul. "In the love of God," says the Zohar, "is found the secret of the divine unity: it is love that unites the higher and the lower stages, and that raises everything to that stage in which all must be one" (Zohar, ii. 216a).

The allegorical and symbolical style of the Sufic poetry found imitators among many liturgical poets of the Middle Ages. Of these the most renowned was Israel Najara, who, in the preface to his "Zemirot Yisrael," acknowledges this influence, saying that in his youth he had composed many religious hymns to Arabic and Turkish tunes, with the intention of turning the Jewish young men from profane songs. The characteristic feature of these hymns is the same as that of the Sufic poetry; namely, the representation of the highest things by human emblems and human passions, and the use of erotic terminology to illustrate the relations of man and God, religion being identical with love. Thus in the language of the Sufis, as well as in that of many Jewish poets, the beloved one's curls indicate the mysteries of the Deity; sensuous pleasures, and chiefly intoxication, the highest degree of divine love as ecstatic contemplation; while the wine-room merely represents the state in consequence of which the human qualities merge or are exalted into those of the Deity.

Although Ḥasidism is opposed to asceticism, it has many points in common with Sufism. Like the latter, it aims to create by means of psychological suggestion a new type of religious man—a type that places emotion above reason and rites, and religious exaltation above knowledge. As the Sufis, too, the Ḥasidim believe that by means of constant spiritual communion with God it is possible to secure clear mental vision and the gift of prophecy, and to work miracles. A striking analogy between Ḥasidism and Sufism is the prominence, in both sects, of the spiritual guide. As Sufism inculcates the absolute necessity of blind submission to the "murshid," or inspired guide, so Ḥasidism teaches that the ẓaddiḳ is the mediator between God and ordinary persons, and that through him the salvation of the soul is achieved and earthly blessings are obtained.

SUICIDE: Self-murder. The influence of race on the frequency of suicide is evident from statistics giving the rates of mortality from this cause in various countries. Of the European peoples, the Germans, Scandinavians, English, etc., *i.e.*, those who are mostly of the Teutonic race, are more given to self-destruction than the peoples of Celtic or Mediterranean origin. Wherever the Celtic race is in the majority the rates of suicide fall perceptibly. In the United States, where nearly all the European races live under approximately the same environment, each nationality retains its own rate of suicide.

Influence of Social Environment.

Morselli declares that religion has a great influence on the suicide rate, and that Catholics and Jews are the least liable to commit suicide. He maintains that those who are fervently devoted to religion, especially women (nuns and lay sisters), furnish very few suicides. That religion is not the only factor in such cases, however, is shown by the fact that "a great difference generally exists between Catholic and Protestant countries only, not between Catholic and Protestant inhabitants of the same country. Where the tendency to suicide is great among the latter, it will be found to be also high among the former" (Morselli). "When it is found that people living under the same social, economic, and physical environments soon come to have the same suicide rate, whatever their faith, we have proof that the difference between Protestantism and Roman Catholicism as preventives of suicide can not be great" (Strahan).

Among the ancient Hebrews suicide appears not to have been very common, only four cases being definitely mentioned in the Old Testament: those of Samson, Saul and his armor-bearer, and Ahithophel; to these may perhaps be added the cases of Abimelech, Razis (II Macc. xiv. 46), and a few others. Later it appears to have become more frequent. Josephus records the suicide of several thousand Jewish soldiers who were besieged by the Romans in the stronghold of Masada in the year 72 or 73 C.E. Under medieval persecution the Jews often chose self-destruction as a means of relief. In 1190 in York, England, 500 Jews committed suicide to escape persecution; and many similar instances are to be found in the history of the Jews in England, France, and Germany. In modern times (during the first half of the nineteenth century) Jews were less liable to self-destruction. Suicide is said to be very infrequent among the Orthodox Jews in Europe, particularly those living in small towns in Russia, Poland, and Galicia.

Table Showing the Average of Suicides Among Catholics, Protestants, and Jews per 1,000,000 of Population (After Morselli).

Country.	Period.	Total Average of Suicides.	Catholics.	Protestants.	Jews.
Austria	1852-54 1858-59	72.0	51.3	79.5	20.7
Austria	1864-65	.....	73.7	100.0	33.3
Baden	1864-69	139.0	121.1	161.9	141.0
Baden	1870-74	156.6	136.7	171.0	124.0
Bavaria	1844-56	72.0	49.1	135.4	105.9
Bavaria	1857-66	80.0	55.2	136.1	100.3
Bavaria	1866-67	91.0	56.7	152.7	140.4
Bavaria, Upper	1844-56	44.6	56.0	237.0	123.0
Bohemia	1858-59	81.0	69.0	132.0	81.0
Franconia, Central	1844-56	126.0	59.0	134.0	86.0
Franconia, Lower	1844-56	61.0	49.0	164.0	141.0
Franconia, Upper	1844-56	107.0	75.0	146.0	114.0
Galicia	1858-59	47.9	45.0	16.0	10.0
Hungary	1852-54 1858-59	30.0	32.8	54.4	17.6
Moravia	1858-59	69.4	67.0	67.0	12.0
Palatinate of the Rhine	1844-56	50.3	52.0	62.0	35.0
Posen	1849-55	68.7	41.5	124.1	38.0
Prussia	1849-55	122.0	49.6	159.9	46.4
Prussia	1869-72	133.0	69.0	187.0	96.0
Prussia Province	1849-55	99.7	31.0	96.6	33.3
Rhine Province	1849-55	52.6	27.7	108.0	34.5
Silesia	1849-55	152.0	58.5	153.0	31.2
Transylvania	1852-54 1858-59	36.0	113.2	73.6	35.6
Westphalia	1849-55	63.5	24.4	80.2	66.2
Württemberg	1846-60	96.7	77.9	113.5	65.6
Württemberg	1873-74	163.0	120.0	180.0	80.0

Comparative Infrequency.

From the figures in the foregoing table it is found that in most countries the order of frequency of suicide, according to religions, is: Protestants, Catholics, Jews. It is, however, a striking fact that the Jews vary more among themselves in different countries than do Catholics from Protestants, who maintain a certain relative proportion with little variation. Morselli is inclined to attribute these differences to the anthropological and social diversities observed among the Jews in various countries. This is substantiated by the fact that in Austria, where they are economically poor and socially isolated, the number of suicides per 1,000,000 Jews is only 20.7, and in Galicia only 10. On the other hand, in Baden and Bavaria, where socially and economically they are on a higher plane, the rate is as high as 140, about seven times more frequent than in Austria; while in Posen, where their condition at the time these statistics were taken was an intermediate one, the suicide rate was 38 per 1,000,000 Jews.

Another important point observable from these figures is that the rate of suicide among Jews is greatly influenced by that among Gentiles in the same country; and this is particularly true when comparison is made with the Protestants, and can best be seen by comparing the rates in Austria with those in Prussia, Bavaria, and Baden. In Austria the rates are low both among the general population and among the Jews. In Baden and Prussia, where it is higher among the Christians, it is higher among the Jews also. The same is evidently true of the various provinces of Austria and Prussia.

Increase in Modern Times.

It is a known fact that suicide is increasing in most of the European countries and in America. From the time when statistics were first collected to the present the increase has been very great, even in respect to countries differing in race, religion, and number of inhabitants. Morselli explains this increase as due to the effects of that "universal and complex influence to which we give the name 'civilization.'" In western Europe this increase is more pronounced among the Jews than among the Christian populations of the same countries. In Prussia the suicide rate from 1849 to 1901 was as follows:

1849-55		46.4	per 1,000,000	Jews.
1869-72		96.0	" "	"
1892-1901	Jews	370.4	" "	"
	Jewesses	124.1	" "	"

This shows that in fifty years the rate increased more than sevenfold. When compared with the Christians in Prussia, it is found that Jews are decidedly more liable to self-destruction than non-Jews, as may be seen from the following figures per 100,000 population:

Year.	Suicide Rate.		Year.	Suicide Rate.	
	Non-Jews.	Jews.		Non-Jews.	Jews.
1890	19	18	1896	20	21
1891	21	29	1897	20	27
1892	21	25	1898	19	23
1893	21	26	1899	19	20
1894	21	26	1900	20	23
1895	19	21	1901	20	32

While during the twelve years mentioned in the table the suicide rate has remained almost stationary among the non-Jewish population in Prussia, among the Jews it has increased from 18 to 32 per 100,000 population. This increase applies to Jewesses also, and in a much higher degree than among the non-Jewish women. From 1892 to 1901 the annual average of suicides per 100,000 women was: Jewesses, 12.41; Christian women, 8.11. This shows that while among the general population men commit suicide twice as often as women, Jews commit suicide nearly three times as often as Jewesses. Hoppe has called attention to the fact that the absence of alcoholism among the Jews reduces the rate of suicide when compared with that of non-Jews, while early puberty increases the rate among Jewesses.

The increase of suicide among the Jews is not confined to Prussia. In Bavaria, where, according to Morselli, the rate per 1,000,000 Jews was 105.9 in the period 1844-56, falling to 100.3 in 1857-66, and rising to 140.4 in 1866-67, it further increased to 185.6 (among the Christians 128.3 only) in 1883-92. In Württemberg the rate was 142 during 1881-90 (P. Hanvillier, "Du Suicide," 1899, p. 65) as against 65 in 1846-60. In Baden the rate, which was 87 in 1852-60, increased to 210 in 1878-88. In Hungary, only 17.6 per 1,000,000 Jews committed suicide during 1852-59, while in the period 1891-95 the rate increased to 54.7 (among the Christians it was much higher, 136.9). In Vienna, according to Bratessevic ("Die Selbstmorde in Wien Während der Jahre 1854-1894," in "Statistische Monatsschrift" [1895], xxi. 263), the rate was as follows: 230 in 1869; 234 in 1880; 246 in 1890.

In general it may be stated that suicide among the Jews increased in western Europe during the second half of the nineteenth century to a much greater extent than among the Christian population. Suicide due to drunkenness is very rare among the Jews, while among non-Jews about one-third of all suicides are directly or indirectly traceable to the abuse of alcoholic beverages. This indicates that self-destruction not due to alcoholism is nowadays even more frequent among Jews than among Christians, and that these statistics do not represent the exact conditions.

SUKKAH ("Tabernacle"): Treatise in the Mishnah, the Tosefta, and both Talmudim, dealing chiefly with the regulations regarding the Feast of Tabernacles (Lev. xxiii. 34-36; Num. xxix. 12 *et seq.*; Deut. xvi. 13-16). In most of the editions it is the sixth treatise in the mishnaic order Mo'ed. It is divided into five chapters, containing fifty-three paragraphs in all. The contents may be summarized as follows:

Ch. i.: Prescribed height of the Tabernacle; its walls; nature of the covering; and time of making the tent or booth (§ 1); circumstances rendering the booth unfit for use at the festival; material to be used for the covering and the walls; nature of the walls; distance between the walls and the covering (§§ 2-11).

Contents.

Ch. ii.: How the obligation of sleeping in the tent during the festival may be fulfilled (§ 1); further details as to the nature of the tent (§§ 2-3); cases in which a person is released from the obligation of sleeping and eating in the booth (§ 4); how the obligation of eating in the tent may be met, and how many meals must be eaten in the booth during the festival (§§ 5-7); women, slaves, and small children are released from all obligation regarding the tent; age at which children are subjected to the laws regarding the booth (§ 8); cases in which persons are released from the obligation of remaining in the booth during rain (§ 9).

Ch. iii.: The Lulab (comp. Lev. xxiii. 40; Neh. viii. 15), made of the palm-, myrtle-, and willow-branches, and the etrog (citron); the kinds of branches that are unfit ("pasul"; §§ 1-3); the number of myrtle- and willow-branches necessary for the lulab (§ 4); the kind of etrog that is unfit (§§ 5-7);

material for binding the lulab (§ 8); passages of the Psalms during which the lulab must be waved on reciting "Hallel" (§ 9); recitation of the "Hallel" (§§ 10–11); while the Temple was standing the lulab was carried within its walls on all the seven days of the feast, but outside on one day only: after the destruction of the Temple R. Johanan b. Zakkai decreed that in commemoration of the former custom the lulab should be carried in the provinces on all the seven days (§ 12); what must be done if the first day of the Feast of Tabernacles falls on a Sabbath (§§ 13–15).

The Ceremony of Drawing the Water.

Ch. iv.: Number of days on which the several ceremonies of Sukkot are observed (§§ 1–3, 8); manner of observing the regulation regarding the lulab (§ 4); manner of placing the willow-branches around the altar, and the processions around it; the recitations during these processions, and the sentences at their close; how this ceremony is observed on the Sabbath (§§ 5–7); the custom of pouring out water, and attendant ceremonies, and how observed on the Sabbath (§§ 9–10).

Ch. v.: Further details regarding the ceremonies of drawing and pouring water; manifestations of joy during the act, and the recitations with musical accompaniment (§§ 1–4); how many times during the day the shofar was sounded in the Temple, and how many times on the Friday of the feast (§ 5); sacrifices offered at the Feast of Tabernacles; the divisions of priests taking part in them, and the distribution among them of the sacrificial portions and the showbread (§§ 6–8).

The Tosefta.

The Tosefta to this treatise, which is divided into four chapters, contains many haggadic sentences, of which the following may be quoted here: "Every tribe of the people of Israel has produced a judge of the people and a prophet; Judah and Benjamin also anointed kings through their prophets" (i. 9). "If certain signs indicate the approach of troublous times or a crisis for men, the Jews have the greatest cause for anxiety, since they generally suffer most under them" (ii. 6). Noteworthy in the Tosefta are the descriptions of the miraculous well which traveled with the Israelites in the desert (iii. 11), and of the splendid synagogue (basilica) in Alexandria (iv. 6), and the story of Miriam bat Bilga (the daughter of a priest), who became a pagan and married a general of the Greek kings. When the pagans entered the Temple, Miriam stepped to the altar and cried: "Lykos! Lykos! [= "Wolf! Wolf!"], you have devoured Israel's possessions, and you have not helped them in time of need" (iv. 28).

The Gemaras.

Both Gemaras contain, aside from explanations of the various laws of the Mishnah, numerous stories and many interesting sentences. The following may be quoted from the Babylonian Gemara: "The practise of philanthropy is better than many sacrifices" (49b). "Israel could not justify itself for its sins, if the sentences in Jer. xviii. 6 and Ezek. xxxvi. 26, which in a certain sense deny the freedom of the will, had not in a way relieved it from responsibility for its acts" (52b). Noteworthy in the Palestinian Gemara is the story of the cause of Trajan's persecution of the Jews. A son was born to him on the Jewish fast of the Ninth of Ab, and his daughter died on Ḥanukkah, on which feast the Jews lighted candles. Hence, the Jews being suspected of having mourned over the birth of the prince and of having rejoiced over the death of the princess, Trajan persecuted them (55b). There is also a curious account of the enlargement of the well of Siloah, in the hope that the flow of water would increase. After the well was enlarged, however, the water flowed less freely; and it was only after the aperture had been restored to its original size that the flow became as formerly (55d).

SUKKOT, FEAST OF. See Tabernacles, Feast of.

SULAMITH: First Jewish monthly magazine in the German language, its subtitle being "Eine Zeitschrift für Beförderung der Kultur und Humanität Unter der Jüdischen Nation." The first volume appeared in Leipsic, July, 1806, and was edited by David Frankel (d. in Dessau May 18, 1865) and Joseph Wolf. Subsequent volumes were edited by Frankel alone and published at Dessau, where he was director of the Jewish schools, or, as he signs himself, "Herzogl. Furstl. Anhalt. Direktor der Jüd. Schulen." Six monthly numbers constituted a volume, and the dates of issue were as follows: vol. ii. 1807; second year, vol. i. 1808, vol. ii. 1809; third year, vol. i. (Cassel), 1810, vol. ii. (again Dessau), 1811; fourth year, vol. i. 1812, vol. ii. 1815–16; fifth year, vol. i. 1817–18, vol. ii. 1818–19; sixth year, vol. i. 1819–21, vol. ii. 1822–24; seventh year, 1824–33; eighth year, 1833–40. Vol. ix. of the new series appeared in 1846.

The object of the "Sulamith" was to promote progress and Reform according to the views of Mendelssohn's German followers. It contained biographies, historical sketches, sermons (by G. Salomon and others), poems, educational news, and belletristic, educational, and miscellaneous articles, all imbued with the spirit of progress. It contained several Hebrew contributions also. David Friedländer, Ignatz Jeiteles, Johlson, Lowisohn, and Richter were among its contributors. While much of its contents is now obsolete, the remainder furnishes a considerable amount of material for contemporary Jewish biography and history.

S. P. Wi.

SULLAM, SARA COPIA (COPPIO): Italian poetess; born in Venice 1592; died there Adar 5 (Feb. 14), 1641; eldest daughter of Simon and Rebecca Coppio. Her father was a man of culture, who enjoyed the respect of the community in which he dwelt. At his death, when Sara was not quite fifteen years old, she could read the Latin and the Greek classics, the Holy Scriptures, and Spanish literature, each in its original tongue, and she had already won local fame for her poems in Italian. To these attainments were added charm of person, a voice of unusual sweetness, musical ability, the gift of improvisation, and such exquisite social graces that she became the leader of a salon.

Leon of Modena dedicated to Sara his translation of Solomon Usque's Spanish drama "Esther." An epic poem bearing the same title, and written by the Genoese monk Ansaldo Cebà, was the cause of much trouble for her. The work aroused not only her admiration for but also her gratitude toward a non-Jewish author who glorified a Jewish heroine. This sentiment she communicated in writing to Cebà, who was filled with ambition to win his correspondent for the Church. An exchange of letters ensued (1618–22); but though Sara was persuaded to read the New Testament, she remained firm in her allegiance to Judaism. Cebà's letters to Sara were published in 1623; but her answers were suppressed, probably at the bidding of the Inquisition.

In 1621 a frequenter of her salon, the priest Baldassar Bonifaccio, accused her, in a pamphlet, of having denied the dogma of the immortality of the soul, a crime for which the Church decreed extreme penalties. Sara hastened to defend herself in a "manifesto," dedicated to her father's memory, the only one of her works published separately by her. This reply displays powers of sarcastic refutation, and the clear, logical thinking for which Sara was noted. Several Italian poems of hers have been printed.

Sara was married in 1614 to Jacob Sullam, a wealthy and well-educated Venetian. The epitaph upon her tomb is supposed to have been written by Leon of Modena.

J. H. S.

SULTANSKY, MORDECAI: Karaite ḥakam; born at Lutzk in 1785; died at Eupatoria, in the Crimea, before 1878. He was one of the most prominent scholars of the Karaite sect during the nineteenth century. He officiated as ḥakam of Lutzk (in succession to his father), and later at Eupatoria. He wrote a Hebrew grammar entitled "Petaḥ Tiḳwah" (Eupatoria, 1857), and "Sefer Tetib Da'at" (*ib.* 1858), directed against rabbinical philosophy and Ḥasidic mysticism, and endeavoring to explain Biblical angelology.

SULZBACHER, LOUIS: American jurist; born in the Rhenish Palatinate, Germany, May 10, 1842. He was educated in Germany, but later emigrated to the United States, and in 1900 was appointed judge of the Supreme Court of Porto Rico, which position he resigned in 1904. In the same year he was appointed judge of the Federal Court of the Western District of Indian Territory.

SULZBERGER: American family which derived its name from the town of its origin, Sulzbürg, near Ratisbon, in the Bavarian Palatinate. The first known member of the family is **Eliezer Sussmann Sulzberger,** born about the beginning of the seventeenth century. His great-grandson **Ezra Judah Jacob Sulzberger** was rabbi and shetadlan at Sulzbürg in the early part of the eighteenth century, and established there a charitable institution which still exists. He wrote an ethical will which is published in Dinard's "Or Me'ir" (pp. 45–52); he died in 1762. Of his descendants, some have taken the name of Bayersdorfer and others of Löwenmaier; one of the latter was cantor of Sulzbürg, and died in 1868. From a female member of this family is descended Dr. Kaufmann Kohler, president of the Hebrew Union College, Cincinnati, Ohio. Most of the descendants are established in various towns of Baden (Eppingen, Grunbach, Bruchsal), and four of the branches have emigrated to the United States. The eldest of these is represented by **Ferdinand Sulzberger,** head of the packing establishment of Schwarzschild & Sulzberger, New York. Of the descendants of **Mayer Sulzberger** who settled in New York may be mentioned **Solomon Sulzberger,** president of Temple Beth-El, New York, and treasurer of the I. O. B. B., and his son **Myron Sulzberger,** for a time member of the assembly of New York. **Leopold Sulzberger** (d. 1881) emigrated to the United States in 1838 and was known in the Philadelphia community for his piety. From him descended **David Sulzberger** of Philadelphia, communal worker, for a time secretary and a trustee of Gratz College, trustee of the Jewish Theological Seminary of America, a visitor to the state penitentiaries for the eastern districts of Pennsylvania, but principally known for his work in behalf of the Hebrew Educational Society of Philadelphia, whose honorary secretary he has been since 1876; **Solomon Lindauer Sulzberger** of Chicago, chairman of the United Hebrew Charities of that city; and Cyrus L. Sulzberger. From **Sarah,** a daughter of Leopold Sulzberger, is descended Dr. Cyrus Adler.

Cyrus L. Sulzberger: Born in Philadelphia July 11, 1858. He went to New York in 1877 as bookkeeper for the firm of Erlanger, Blumgart & Co., of which he later became the head. He has taken part in various movements looking to the reform of New York municipal politics, and was in 1904 a candidate on the Fusion ticket for president of the borough of Manhattan, New York. He was for many years treasurer of the United Hebrew Charities of that city, and is (1905) president of the Jewish Agricultural and Industrial Aid Society, Industrial Removal officer, and vice-president of the American Federation of Zionists.

Abraham Sulzberger, who had been ḥazzan and teacher in Heidelsheim, emigrated to America as a result of the uprisings of 1848; he was well known in the community of Philadelphia; and the establishment of the Jewish Hospital of that city, of which he became vice-president, was due to his suggestion. The most prominent member of the family is his son Mayer Sulzberger.

Mayer Sulzberger: American judge and communal leader; born at Heidelsheim, Baden, June 22, 1843. He went to Philadelphia with his parents in

1848, and was educated at the Central High School of Philadelphia, and after graduating he studied law in the office of Moses A. Dropsie. In 1864 he was admitted to the bar, and attained eminence in the practise of his profession. He was elected judge of the Court of Common Pleas on the Republican ticket in 1895, and was reelected as a nominee of both parties in 1904, becoming the presiding judge of the Court of Common Pleas No. 2.

Sulzberger Pedigree.

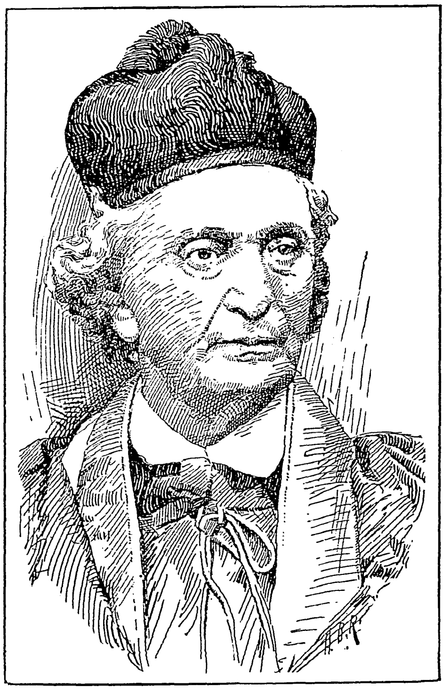
Sulzberger has throughout his career shown great interest in Jewish affairs. While studying for the bar he taught at the Hebrew Education Society's school. For a time he was interested in the affairs of Maimonides College and was secretary of its board. He was closely associated with Isaac Leeser, and assisted that scholar in editing "The Occident," contributing to it a partial translation of Maimonides' "Moreh Nebukim." After Leeser's death Sulzberger edited vol. xxvi. of "The Occident." He was one of the founders of the Young Men's Hebrew Association, which he served as president; and he has taken great interest in the Jewish Hospital of Philadelphia, of which he has been vice-president since 1880. He has been from the beginning (in 1888) chairman of the publication committee of the Jewish Publication Society of America; was one of the original trustees of the Baron de Hirsch fund; and has interested himself in the establishment of agricultural colonies at Woodbine, N. J., and in Connecticut.

Sulzberger has one of the best private libraries in America; it contained a very large number of Hebraica and Judaica, together with many other early Hebrew printed books (including no less than forty-five Incunabula), and many manuscripts, and these he presented to the Jewish Theological Seminary of America, at whose reorganization he assisted and of which he is a life director. Sulzberger is a finished orator, and has been chosen as the orator of the Jewish community upon several notable occasions. The honorary degree of doctor of laws has been conferred upon him by the Jefferson Medical College, of which he is now a trustee.

Mayer Sulzberger.

A younger brother, **Jacob Sulzberger,** was known in Philadelphia literary circles for his verse and for his unusual knowledge of English literature.
J.

SULZER, SALOMON: Austrian cantor and composer; born at Hohenems, Tyrol, March 30, 1804; died at Vienna Jan. 17, 1890. His family, which prior to 1813 bore the name of Loewy, removed to Hohenems from Sulz in 1748. He was educated for the cantorate, studying first under the cantors of Endingen (Switzerland) and Carlsruhe, with whom he traveled extensively, and later under Salomon Eichberg, cantor at Hohenems and Düsseldorf. In 1820 Sulzer was appointed cantor at Hohenems, where he modernized the ritual, and introduced a choir. At the instance of Rabbi Mannheimer of Vienna he was called to the Austrian capital as chief cantor in 1826. There he reorganized the song service of the synagogue, retaining the traditional chants and melodies, but harmonizing them in accordance with modern views.



Salomon Sulzer.

Sulzer's "Shir Ẓiyyon" (2 vols., Vienna, 1840-65) established models for the various sections of the musical service—the recitative of the cantor, the choral of the choir, and the responses of the congregation—and it contained music for Sabbaths, festivals, weddings, and funerals which has been introduced into nearly all the synagogues of the world. In the compilation of this work he was assisted by some of the best musical composers of Vienna. Sulzer published also a small volume of songs for the Sabbath-school, entitled "Duda'im"; and a number of separate compositions, both secular and sacred. His responses are tuneful, and though more melodious than the choral chant of the Catholic Church, show a strong resemblance to it. In all his compositions strict attention is paid to the Hebrew text; and a scrupulous adherence to syntactic construction is observed throughout. The collection "Zwanzig Gesänge für den Israelitischen Gottesdienst" (Vienna, 1892) was printed posthumously. In his "Denkschrift an die Wiener Cultusgemeinde" he sums up his ideas on the profession of cantor. Sulzer, who was widely famed as a singer and as an interpreter of Schubert, was a professor at the imperial conservatorium of Vienna, a knight of the Order of Francis Joseph I., and a maestro of the Reale Accademia di St. Cecilia in Rome. Universally recognized as the regenerator of synagogal music, he has been called the "father of the modern cantorate."

SUMMONS (דיסקא דזימנותא, זימון): Writ, process, or order sent by the court messenger ("sheluḥa di-rabbanan," or "sheluaḥ bet din"), and commanding a defendant to appear before the bet din. Raba, as dayyan, frequently indorsed such a document (Giṭ. 88a, and Rashi *ad loc.*). Disobedience of a summons is treated as contempt of court. In villages, where the people are often absent from their homes, the process-server must try at least three times to find the defendant and personally hand him the summons for the trial to be held on the first or second Monday or the intervening Thursday, these being the regular court days (B. Ḳ. 113a). Should the messenger fail to find him, he may leave the notice with the defendant's wife or with one of his neighbors. If the defendant does not put in an appearance after three court days have passed, the bet din will declare him in contempt ("niddui"), and he must apologize to the court within thirty days, when the niddui will be quashed; otherwise he is excommunicated, and the bet din will issue a "petiḥah," or preliminary order, of which the following is an example:

> "Before us, a tribunal of three sitting as a unit, there came N. N. and produced a promissory document of N. N. for the

> sum of . . . And we have duly summoned him and appointed a day for him to come and defend the action; and we have waited for him Monday, Thursday, and Monday, but he has failed to put in an appearance. We have therefore declared him in contempt for thirty days. And now we issue this petiḥah and will allow him another thirty days and in addition thirty days more, at the expiration of which time if he still fails to come, we will issue an 'adrakta' [final judgment] to sell his property for the benefit of the creditor. Done in our presence, on [date] . . . at [place] . . . [Signed by three dayyanim]."

This form, probably of the ninth century, in the Aramaic language, is copied by Isaac b. Abba Mari of Marseilles in his "Sefer ha-'Iṭṭur." Judah b. Barzillai of Barcelona (11th cent.) had in his collection a long document in Hebrew as a substitute for the Aramaic form ("Sefer ha-Sheṭarot," ed. Meḳiẓe Nirdamim, p. 3, Berlin, 1898).

The three terms of thirty days each are respectively granted for the following reasons: (1) to allow the defendant time to borrow money; (2) if he is unable to borrow, to enable him to dispose of his property; and (3) to allow the purchaser time to pay for the property (B. Ḳ. 112b).

A change of venue does not affect the summons. A woman who was cited to appear before the court of Amemar in Nehardea was compelled to follow the court to Maḥuza (R. H. 31b). The defendant may plead that he wishes to be tried before a higher tribunal ("bet din ha-gadol"), but not after the petiḥah has been issued by the lower court (B. Ḳ. 112b).

The summons may not be served on a Friday, when people are busy preparing for Sabbath, nor may it call for an appearance during the month of Nisan or of Tishri, when the people are celebrating the holy days. If the defendant appears and offers ample excuse for not being able to attend the trial on the days appointed, the bet din may adjourn the case.

When the defendant is a distinguished woman who would regard her attendance in court as a disgrace to her, or when a learned man is sued by one of the common people ("'am ha-areẓ"), the bet din is empowered to send notaries to interrogate the defendant at home, and to waive personal appearance in court.

SUMPTUARY LAWS: Laws that restrict individual expenditures as to food, clothing, etc. In the Mishnah several expensive customs are abolished by reason of evil times which had come over Israel (Soṭah ix. 9): "During the war of Vespasian the use of crowns by bridegrooms and the beating of the drum [at weddings] were forbidden; during the war of Titus the crowns of brides, etc., were forbidden; during the last war [the revolt of Bar Kokba] it was ordered that the bride should not be carried through the city in a palanquin [hung with curtains]; but our masters [supposed to mean R. Judah, the patriarch, and his school] permitted her to do so." In the Gemara (*ib.* 49b) one teacher claims that the bridegroom's crown is forbidden only when made in the old fashion of rock salt and brimstone; but he permits a wreath of myrtles and roses. Another forbids even such a wreath, but allows one made of canes and reeds. A third teacher forbids even this. The bride's crown is explained as having been a golden image of a city wall. The use of the palanquin in which the bride was conveyed to and from the wedding is said to have been reintroduced from motives of modesty, to guard against the gaze of the crowd.

The preceding section of the Mishnah has a wider bearing: "R. Simeon ben Gamaliel on the authority of R. Joshua says: 'Since the day when the Temple fell into ruins there has not been a day without its calamity. The dew no longer comes down for a blessing; the taste of the fruits is gone.'" Not here only, but in many other passages of the Mishnah and the Gemara, the view is expressed that, with the Temple in ruins, there should be to the Israelite no unmixed enjoyment; hence no display in raiment, in food, or in drink. Although this is not a sumptuary law, it represents a tendency stronger than law.

The change in burial customs in Mishnaic and Talmudic times—from the elaborate processions and costly scaffoldings and hangings, cerements, and coffins which had been the custom since early Biblical times—is treated in Jew. Encyc. iii. 436a, *s.v.* Burial, where the most important reference is that to Yer. M. Ḳ. 32b. Here may be added what is said in a baraita (M. Ḳ. 27a): "Formerly they brought the [bodies of the] rich to the house of mourning in nettings of silver and gold, but those of the poor in baskets of wickerwork; thus the poor were put to shame. Accordingly the rule ["taḳḳanah"] was made that every one should bring [his corpse?] in a basket of wickerwork." Again: "Formerly [at funerals], in serving drink white glass was used in the houses of the rich, and colored [dark] glass in the houses of the poor, which shamed the poor. The rule was therefore made that drink should be served everywhere in dark glass. Formerly they were accustomed to lay bare the faces of the rich, but cover the faces of the poor, because the latter looked blackish from scanty nourishment; so the rule was made to cover the faces of all corpses." In other words, the customs were changed in all cases to those which of necessity prevailed among the poor.

In the later Middle Ages sumptuary laws were often made by the Rabbis or by the communal authorities of cities or districts; and sometimes they were imposed on the Jews of this or that country by the king or other ruler, who begrudged them the pleasure of seeing their wives and daughters in rich attire. Israel Abrahams, in his "Jewish Life in the Middle Ages," gives examples of sumptuary laws proceeding from the latter as well as from the former source; *e.g.*, on p. 144, a decree by the Jewish community of Forli limiting the number of guests at a wedding or a "berit milah"; p. 145, a limitation of the weight of silver goblets; p. 181, a limitation in Italy on the number of finger-rings; p. 277, a reproof by the King of Castile concerning the rich dresses of the Jewesses; p. 291, reproofs by Italian rabbis relating to the rich attire of the men, even on the Sabbath; pp. 2-4 and 295, regulations, also in Italy, against jewelry and pearls, worn both by men and by women. Regulations like those of the baraita were sometimes made to lessen the gulf between the rich and the poor, but oftener to disarm the ill-will of the Gentile oppressor.

SUN (Hebrew, "shemesh," and, poetically, "ḥammah" [= "heat"] and "ḥeres").—**Biblical Data:** The conceptions of the Hebrews with regard to physical phenomena were those that obtained among their neighbors, the sun being considered as a torch or light ("ma'or") suspended in the firmament (Gen. i. 16). It was created on the fourth day together with the moon, the two constituting the great lights; and as the larger of them, the sun was given dominion over the day (*ib.*; Ps. cxxxvi. 2). The sun had a habitation (Hab. iii. [A. V. ii.] 11), a tent (Ps. xix. 5), a bridal chamber, as it were (Ps. xix. 6), from which it came forth ("yaẓa," "zaraḥ," Gen. xix. 23; Nah. iii. 17; Ex. xxii. 2; Eccl. i. 5) and to which it returned ("bo," Gen. xv. 12, 17; xxviii. 11; Ex. xxii. 25; Josh. x. 27; comp. Eccl. i. 5); hence the East is known as "Mizraḥ" (Josh. xiii. 5; Judges xxi. 19; I Kings x. 33), and the West as "Mabo" (Josh. i. 4, xxiii. 4), while the phrase "from the rising [going forth] of the sun unto the going down [coming back] of the same," designates the whole extent of the earth (Ps. cxiii. 3; Mal. i., xi.; Isa. xlv. 6, where the term "ma'arab," which etymologically means "going back," is used to denote the "setting." "Under the sun" is another idiomatic phrase to connote the earth: it is a favorite expression of the author of Ecclesiastes (Eccl. i. 3, 9, 14; ii. 11, 17 *et seq.*).

Early Conceptions of It.

As in the latitudes in which the Hebrews lived the variations in the daily course of the sun are insignificant for practical purposes, the phrase "the time the sun is hot" (1 Sam. xi. 9; Neh. vii. 3) denotes a definite portion of the day, from noon to four in the afternoon, after which, the heat decreasing, the sun draws nearer the hour of its "coming back" (A. V. "going down"), which it was supposed to know (Ps. civ. 19). The sun is subject to God's will: were He to so order, it would cease to shine (Job ix. 7). God orders its course (Ps. lxxiv. 16). The sun is benevolent (II Sam. xxiii. 4): it brings forth the fruits of the earth (Deut. xxxiii. 14). The light is sweet; and it is delightful for the eyes to behold the sun (Eccl. xi. 7). But at times the great luminary produces evil: it scorches and consumes (Ps. cxxi. 6; Isa. xlix. 10; Jonah iv. 8; Ecclus. [Sirach] xliii. 3, 4); for from its heat "there is nothing hid" (Ps. xix. 7). It has power (Judges v. 31), which explains why the lovers of Yhwh are likened to the sun rising in its might. Sunstroke was dreaded (comp. Ps. cxxi. 6).

Used as a Simile.

The sun is used as a simile of lasting fame (*ib.* lxxii. 17). The enduring nature of David's dynasty is expressed by the statement that his throne shall be before Yhwh as the sun (*ib.* lxxxix. 38 [A. V. 36]). The sun is used also as a symbol of victory and might (Yhwh is "a sun and a shield"; *ib.* lxxxiv. 12 [11]). Like the dawn, which has wings (*ib.* cxxxix. 9) and eyelids (Job iii. 9, xli. 10), the sun is credited with wings on which it, as the sun of righteousness, shall carry healing (Mal. iii. 20 [A. V. iv. 2]). The sun is an emblem of beauty also (Cant. vi. 11); it typifies the progress of a good man toward perfection (Prov. iv. 18); and as the great luminary (Ecclus. [Sirach] xvii. 31) it is the adornment of the heavens (*ib.* xxvi. 16).

In the apocalyptic descriptions of the end of time, the sun's darkening at rising is accentuated as one of the tokens of impending judgment (Isa. xiii. 10). At noonday the sun will set (*ib.* lx. 2; Jer. xv. 9; Amos viii. 9; Mic. iii. 6). On the other hand, in the Day of the Lord the sun will shine seven times more brightly than usual (Isa. xxx. 26); indeed, Israel's sun will no more go down, as God Himself will be an everlasting light (*ib.* lx. 19–20).

Sun-Miracles.

The Bible records two occurrences in which the regularity of the sun's daily progress was apparently suspended. (1) It is reported that at Joshua's command the sun stood still (Josh. x. 12–14; Ecclus. [Sirach] xlvi. 5). This episode is based on an old lay from the "Sefer ha-Yashar," the poetic fragment quoted being, as in all similar cases, older than the prose narrative. Some obscure mythological reference underlies the incident, in which poetic-mythological conceptions and descriptions are represented as actual happenings. The attempt to read into the Hebrew some natural phenomenon—an eclipse or an extraordinary degree and intensity of solar refraction—is preposterous.

(2) In connection with the illness of Hezekiah (II Kings xx. 8–11; Isa. xxxviii. 7; II Chron. xxxii. 24, 31) the sign of assured convalescence is the retrogression of the shadow (the sun) ten steps on the Dial. It has been suggested either that this incident is based on a solar eclipse or that the movement of the shadow was purely an optical illusion. However, the whole episode may be one of the many "miracles" serving to embellish the life of the prophet Isaiah, in imitation of the method applied in the biographies of Elijah and Elisha.

That the Hebrews worshiped the sun, in adaptation of non-Hebrew, Canaanitish, or Babylonian custom, may be admitted on the evidence of such ancient names of localities as Beth-shemesh, En-shemesh, Mount Heres, and Kir-heres (but see Cheyne, "Encyc. Bibl." *s.v.* "Sun"). A common act of Adoration was throwing a kiss with the hand (Job xxxi. 26–28). Idolatrous solar-worship was prohibited (Deut. iv. 19), the penalty therefor being lapidation at the city gates (*ib.* xvii. 2–5). Disregard of this law (which, however, probably was as yet non-existent; see Deuteronomy) is reported more especially of Manasseh, who had erected in the Temple altars in honor of the heavenly hosts (II Kings xxi. 3–5, xxiii. 12). Other altars, on roofs, were removed by Josiah (*ib.* xxiii. 12; comp. Jer. xix. 13; Zeph. i. 5), as were horses dedicated to the sun by the kings of Judah, and sun-chariots stationed at the western entrance to the Temple. These horses and chariots point to Assyro-Babylonian prototypes (Schrader, "K. A. T." 3d ed., p. 370), as the act of sun-worship described in Ezek. viii. 16, 17 (Gunkel, "Schöpfung und Chaos in Urzeit und Endzeit," p. 141), is generally held to be in imitation of a Persian custom. In Enoch, lxxii. 5, 37; lxxv. 4, and in the Greek Apocalypse of Baruch, vi. (see Gunkel, *l.c.* p. 141), mention is made of the solar chariot. With great plausibility Isa. xxiv. 27, where judgment is pronounced against the sun, which will be "ashamed" (*ib.* xxiv. 23), is explained as referring to idolatrous worship of the sun (but see end of verse). E. G. H.

Sun and Moon.

——**In Rabbinical Literature:** The more usual word for "sun" in rabbinical literature is "ḥammah," though "shemesh" occurs also. The sun and the moon were created on the 28th of Elul (Pirḳe R. El. viii.; Midr. ha-Gadol, ed. Schechter, p. 37). Originally the sun and the moon were of equal magnitude; but jealousy induced dissensions between them, each claiming to be greater than the other. This necessitated the reduction in size of one of them; and the moon was assigned the inferior rank (*ib.* vi.). The moon was thus degraded because it had unlawfully intruded into the sun's domain. This account is based on the phenomenon that the moon is sometimes visible while the sun is still above the horizon (Gen. R. vi. 3, 7). God subsequently regretted having degraded the moon, whose fault was virtually His, He having ordered the world. He therefore pleaded that an expiatory sacrifice be offered in His behalf to atone for His injustice to the moon (*ib.*). By way of compensation the moon was given the splendid retinue of the stars. Sun and moon are, as it were, the king's two prefects, one choosing the administration of the restricted city, the other that of the larger province. To reward the modest choice of the former, the king appoints for it an official suite (*ib.* vi. 4).

Originally the sun was designated Jacob's tutelary luminary; but later God assigned it to Esau, the moon being set over Jacob. This did not please the latter (see "Yalḳuṭ Ḥadash," ed. Warsaw, 1879, p. 181), he failing to understand that the sun, though the larger light, ruled over the day only, while the moon, though the smaller, exercised control over both day and night. Esau's luminary indicated that he had a share in this world alone, while that set over Jacob assured him of a part both in this world and in the world to come. For this reason Jacob reckons by the lunar calendar (Gen. R. vi. 3).

It was the intention in the beginning that the sun alone should furnish light to the earth; but God, foreseeing the idolatrous worship which would be paid to the heavenly bodies, decided that it would be better to have two large celestial lights, reasoning that if there was only one the danger of that one being deified would be greatly increased (*ib.* vi. 1; see also the "yoẓer" for Sabbath, "He called the sun, and it gave forth light," etc.).

Cover of the Sun.

God placed the sun in the second firmament because if He had placed it in the one nearest the earth which is visible to terrestrial eyes, all would have been consumed by its heat (Midr. Teh. xix. 13; Pesiḳ. xxix. 186a). Indeed, the sun was in a sort of cover or bag (*ib.* 186b [see note by Buber]; Tan., Teẓawweh [ed. Buber, p. 98 and note]; Midr. Teh. *l.c.* [ed. Buber, p. 168 and note]). In the "future time" God will bring forth the sun from this cover, and the wicked will be consumed by its terrible heat; hence in that time there will be no Gehenna (Ned. 8b; Midr. Teh. xix. 13). But while utterly annihilating the evil-doers, the sun will heal the righteous of all ills, and be for them a glorious ornament (*ib.*). According to R. Jonathan, the sun moves like the sail of a ship, or like a ship with 365 ropes (equivalent to the number of days in the solar year), or like a ship hailing from Alexandria, which has 354 ropes (corresponding to the number of days in the lunar year). The moon covers in two and one-half days the distance made by the sun in thirty days (Midr. Teh. *l.c.*). The sun and the moon are loath to set out on their journeys. They are compelled to cover their eyes before the upper light. God, therefore, has to light up their paths before them (see Ps. lxxxix. 16). The same thing happens at their setting, when God has to show them the way by means of torches, arrows, and lightning (*ib.*). They are ashamed to come forth on account of the worship paid them by idolaters.

But the sun sings in honor of God while pursuing its course. This appears from the verse Mal. i. 11 in connection with Josh. x. 12 (Midr. Teh. to Ps. xix. 11; Tan., Aḥare Mot, ed. Buber, p. 14). Contrary to the opinion that the sun hesitates to rise in the morning and to run its course, the conclusion is drawn from Ps. xix. 5-6 that the day-star performs its joyous task voluntarily.

The Days of the Sun.

The sun ascends by means of 366 steps, and descends by 183 in the east and 183 in the west. There are 366 windows in the firmament, through which the sun successively emerges and retires. These windows are arranged so as to regulate the sun's movements with a view to their concordance with the "teḳufot," Nisan, Tammuz, and Ṭebet. The sun bows down before God and declares its obedience to His commands (Pirḳe R. El. vi.). Three letters of God's name are written on the sun's heart; and angels lead it—one set by day, and another by night (*ib.*). The sun rides in a chariot (*ib.*). When looking downward its face and horns are of fire; when turned upward, of hail. If the sun did not periodically change its face, so that heat and cold alternate, the earth would perish (*ib.*).

According to rabbinical interpretation, Joshua did not really command the sun to "stand still" but to "be still" (Josh. x. 12). At first the sun refused to obey Joshua, urging that as it had been created on the fourth day, while man had not been fashioned till the sixth, it was the superior, and was not called upon to take orders from an inferior. Thereupon Joshua reminded the sun that it had acknowledged its position as a slave by its obeisance paid to Joseph, while even earlier Abraham had been hailed as the owner of all that is in heaven (Gen. xiv. 19, the word "possessor" being applied to Abraham, not to God). Still the sun desired to be assured that even after its silence God's praise would be sung; and it was only when Joshua had promised that he himself would sing His praise that the sun acquiesced (Gen. R. vi., end, lxxxiv. 11). According to the cabalists, the sun stood still also at the command of Moses and of Nicodemus the son of Gorion (see "Yalḳuṭ Ḥadash," p. 102, § 16).

The sun and the moon would not rise when Korah was disputing with Moses. They would not consent to give light to the earth until they were assured that justice would be done to the son of Amram (comp. Hab. iii. 11; Ned. 39b; Sanh. 110a).

The Solar Cycle.

The solar cycle ("maḥzor") comprehended twenty-eight years (as against the lunar cycle of nineteen years). He who beheld the sun at the beginning of the cycle pronounced the blessing commemorating God's creative power (Ber. 59b; but it seems more likely that the reference is to the sight of the sun after cloudy days; see Yer. Ber. ix. 13d). The sun is used in illustrations of the impossibility of beholding God (Ḥul. 60a). The expression "seeing the sun" is equivalent to "being seen by the sun"; *i.e.*, "to exist" (Ned. 30b; B. B. 82a).

"Shemesh" or "shimsha" is used in a particular sense in such phrases as "shimsho shel ẓaddiḳ" (the sun of the righteous), meaning "life." "The Almighty never permits the sun of one righteous man to set without causing that of another equally righteous to arise and shine forth" (Gen. R. lviii. 1, in reference to the birth of Rabbi on the day on which R. Akiba died). "Shimsha" is used also to denote the "righteous" (Gen. R. lxviii.).

E. G. H.

Color and Efficacy.

The rotation of the sun causes the emission of beams and rays, as dust is produced by sawing wood. Save for the noise of the multitudes in the towns, the sound which the sun makes in its rotation might be heard (Yoma 20b). The saying "A cloudy day is all sun" is based on the fact that the sun's rays pierce through the thickest cloud. The humidity of the sun is worse than its heat; and the dazzling sunlight breaking through openings in the clouds is harder to bear than the uncovered sun (Yoma 28b). There is a difference of opinion in the Talmud as to the color of the sun. One authority says its natural color is red, as is seen at sunrise and sunset, yet it appears white during the day on account of the dazzle of its rays. Another says the sun is actually white, but that it appears red in the morning, when it passes through and reflects the red roses in the Garden of Eden, and also toward evening, when it passes through and reflects the fire of Gehinnom (B. B. 84a).

The Talmud adduces the healing efficacy of the sunlight from the verse "But unto you . . . shall the sun of righteousness arise with healing in his wings" (Mal. iii. 20 [A. V. iv. 2]; Ned. 8b). Abraham possessed a precious stone which healed the sick; and when he died God set it in the sphere of the sun (B. B. 16b; Yalḳ., Mal. 593). Sunshine on Sabbath is comfortable and welcome to the poor (Ta'an. 8b). Sunshine helps the growth of plants. A plant called "'adane" or "'arane," growing in the marshes, turns its leaves toward the sun and closes them at nightfall (Shab. 35b, and Rashi *ad loc.*).

Adam when he first beheld the approach of evening thought the world was being destroyed for his sin; and he sat up all night bewailing his misfortune. Eve sat opposite him, crying, till the dawn appeared. When he realized that the night was a law of nature he offered a sacrifice to God ('Ab. Zarah 8a).

Each of the seven planets successively predominates during one hour of the day and one of the night, and exercises an important influence upon the person born in that hour. The one born during the hour of the sun's ascendency will be of fair complexion, independent, and frank; and if he attempts to steal he will not succeed. Mercury is the secretary of the sun; consequently, one who is born during its hour will be bright and wise (Shab. 156a).

Eclipses.

An eclipse of the sun is an evil sign for the Gentiles, and one of the moon augurs evil for the Jews; for the Gentiles reckon by the cycle of the former and the Jews by that of the latter. When the eclipse occurs in the eastern horizon, it forecasts the coming of evil to the inhabitants of the East; if in the western, it betokens ill to those of the West; while if it occurs in the zenith it threatens the entire world. When the color of the eclipse is red it betokens war; when gray, famine; when changing from red to gray, both war and famine. When the eclipse occurs in the beginning of the day or of the night it signifies that the evil will come soon; if late in the day or night, that it will arrive tardily. In either case the Jews who are true to their faith need not worry about these premonitions, inasmuch as the prophet has said: "Be not dismayed at the signs of heaven; for the heathen are dismayed at them" (Jer. x. 2; Suk. 29a).

Symbols.

The sun and the moon are employed as symbols in the Cabala. Generally, the sun is masculine and represents the principal or independent—technically it is the "giver" ("mashpia'"); Abraham is the sun; so is Samuel, because he was independent, accepting no gift or fee from any one (I Sam. xii. 3). The moon is feminine, and represents the secondary or dependent—technically the "receiver" ("meḳabbel"). Thus the sun means the father; the moon, the mother. Moses and Aaron; the rich man and the poor man; the Torah and the Talmud; Rabbi and Rabina (or R. Ashi), are respectively the sun and the moon (Heilprin, "'Erke ha-Kinnuyim," *s.v.* חמה). Samson's name denotes "sun," as he, likewise, was independent. The initial letters of the names Samuel, Moses, and Samson spell "shemesh" (= "sun"). The Messiah is the sun: "And his throne as the sun before me" (Ps. lxxxix. 36).

J. J. D. E.

SUN, BLESSING OF THE: Formula of benediction recited on the day when the sun enters upon a new cycle, which occurs on the first Wednesday of Nisan every twenty-eight years. The present cycle commenced on the 5th of Nisan, 5657 = April 7, 1897. According to Abaye, the cycle commences with the vernal equinox at the expiration of Tuesday (sunset) and the beginning of Wednesday eve when the planet Saturn is in the ascendency (Ber. 59b). This is calculated by the calendar of Samuel Yarḥina'ah, which allots to the solar year 365¼ days, and asserts that each of the seven planets rules over one hour of the day in the following sequence: Saturn, Jupiter, Mars, the sun, Venus, Mercury, and the moon. Consequently the first planet, Saturn, is 7¼ hours advanced at the beginning of the summer solstice, and 30 hours (1¼ days) at the turn of the year, or 5 days in 4 years, at the end of which this planet again takes its place at the beginning of the eve of the vernal (Nisan) equinox. This period is called "maḥzor ḳaṭan" (short cycle). A space of five days follows every such cycle, so that the second cycle begins on Monday, the third on Saturday, the fourth on Thursday, the fifth on Tuesday, the sixth on Sunday, and the seventh on Friday. Seven short cycles complete a "maḥzor gadol," or long cycle, of twenty-eight years; then Saturn returns to its original position at the first hour of Wednesday eve, and a new cycle begins (*ib.*; Rashi *ad loc.*).

The ceremony of blessing the sun is held to commemorate the birth of that luminary on Wednesday eve of the Creation, which it is claimed was the exact time when the planets, including the sun and the moon and beginning with Saturn, were for the first time set in motion in the firmament by the Almighty. This calculation became obsolete after the adoption of R. Adda's calendar, which makes the solar year about five minutes less (see CALENDAR), thus upsetting the theory of the coincidence of the Nisan equinox with Saturn at the beginning of Wednesday eve every twenty-eight years. Nevertheless the ritual was still maintained, the celebration being fixed for the first Wednesday in Nisan, which necessarily rendered the date irregular, sometimes as many as sixteen days past the equinox. The ceremony originally began after sunrise, although most of the congregations in modern times commence it after the morning prayer, when the sun is about 90° above the eastern horizon.

The blessing begins with a few appropriate verses: Ps. lxxxiv. 12, lxxii. 5, lxxv. 2; Mal. iii. 20; Ps. xcvii. 6; and Ps. cxlviii. in full. Then the benediction of the Talmud, "Praised be the Lord our God, Maker of the genesis of Creation," is recited, being followed by Ps. xix. and cxxi. Then are inserted the reference of Abaye in Berakot and the baraita of R. Hananiah b. 'Aḳashyah (end of Makkot), "Ḳaddish di-Rabbanan." The blessing ends with the following prayer:

> "May it please Thee, O Lord our God and God of our fathers, as Thou hast given us life and sustenance and hast permitted us to reach and celebrate this event, so mayest Thou prolong our life and sustenance and make us worthy again to render the blessing on the return of this cycle, which may reach us in gladness in the sight of Thy city rebuilt and in the enjoyment of Thy service; that we may be privileged to see the face of Thy Messiah; and that the prophecy may be fulfilled [citing Isa. xxx. 26]."

The blessing is concluded with "'Alenu" and "Ḳaddish Yatom." An account of the celebration of 1869, in which was included dancing by the children, is given in "Or ha-Ḥammah" (p. 5). The blessing of the sun was celebrated by the Jews in New York city in 1897 in Tompkins square. The completion of the cycle will occur during the twentieth century on April 1, 1925; March 18, 1953; and April 8, 1981. Compare NEW MOON, BLESSING OF THE.

SUN, RISING AND SETTING OF THE:

In order to fix the beginning and ending of the Sabbath-day and festivals and to determine the precise hour for certain religious observances it becomes necessary to know the exact times of the rising and the setting of the sun. According to the strict interpretation of the Mosaic law, every day begins with sunrise and ends with sunset (Ibn Ezra, commentary on Ex. xviii. 14). This confirms the opinion of R. Jose that twilight is like the twinkling of the eye, that is to say, with sunset day immediately changes to night (Shab. 35a). The Hebrew term "'alot ha-shaḥar" (the rising of the morning) denotes the period immediately before sunrise (comp. Gen. xix. 15, 23). "'Af'appe shaḥar" (the brows of the morning) is the poetic expression for the "dawning of the day" (Job iii. 9). The morning star is called "barkai" (Yoma iii. 1) and "ayyelet ha-shaḥar" (Yer. Ber. i. 1). "Neshef" (Isa. xxi. 4) denotes either dawn or twilight (Ber. 3b). "Boḳer" is the beginning of the day; and "'ereb" is the beginning of the night. "Ben ha-'arbayim" (Ex. xii. 6) is interpreted by the Rabbis as meaning the late afternoon, when the sun declines to its setting, while "ben ha-shemashot" (between the suns; *i.e.*, between the setting of the sun and the rising of the moon or the appearance of the stars) denotes the evening twilight. The Rabbis consider it doubtful whether twilight belongs to the day or to the night (Shab. 34b); consequently they treat it as a safeguard against encroachment upon either—for example, the twilight of Friday is reckoned as Sabbath eve, and that of Saturday as Sabbath day; and the same rule applies to festival days. This practise is termed "adding from the secular to the holy."

Dawn and Twilight.

The Rabbis differ as to the duration of twilight. They all agree that dawn ends when the upper limb of the sun appears ("henez ha-ḥammah"), and that twilight begins when the same limb sinks below the horizon ("sheḳi'at ha-ḥammah"). A baraita says: "Twilight begins with sunset and lasts as long as there remains a glowing reflection in the east: when the lower part of the heavens becomes pale and the upper part is still aglow it is twilight; and when the upper part likewise becomes pale it is night."

Twilight is indicated also by the appearance of stars: If only one star is seen, it is day; if two are visible, the time is doubtful; when three stars appear, it is night. The stars observed are to be of a medium size, neither too large, as those seen by day, nor too small, as those seen late at night (*ib.*). It is conceded by all authorities that the appearance of the stars is a sign of night; and they cite Neh. iv. 15, 16 (A. V. 21, 22) to prove that the regular day's labor ceased therewith (Rabbenu Tam, in Tos. to Men. 20b, *s.v.* נפסל).

R. Nehemiah says twilight lasts a journey of $\frac{1}{2}$ mil (1 mil = 2,000 ells, or $\frac{1}{40}$ part of a day's journey of 12 hours = 18 minutes) = 9 minutes. Samuel gives the time as $\frac{3}{4}$ mil = 13$\frac{1}{2}$ minutes; another version places it at $\frac{2}{3}$ mil = 12 minutes (*ib.* 35a).

The limit of twilight is important since it separates one day from another; that of dawn is of less consequence, hence there are fewer opinions and less controversy with regard to it. The full period of the dawn, according to R. Johanan, is 5 mils, or 90 minutes; that of twilight is the same (Pes. 84a). R. Judah fixes the time at 4 mils, or 72 minutes. Ibn Ezra estimates the extent of dawn or of twilight at 1$\frac{1}{3}$ hours (commentary on Eccl. xii. 2); Rabbenu

Tam, at 3¼ mils, or 58½ minutes. Maimonides says dawn lasts 1⅕ periodical hours (see Table IV.) as the reflection of the sun strikes the atmosphere, which is 51½ mils above the earth (= 103,000 ells, or 68,667 yds.).

Astronomical Twilight.

The divergent calculations of the length of dawn and twilight are accounted for by the difference in the latitude in which the Rabbis made their observations and by the difference in regard to the use of terms. The period of ¾ of a mil, or 13½ minutes, is calculated for Jerusalem (lat. 32° N.), and is evidently that of the first part of twilight, which is considered as being part of the day. At the end of 13½ minutes after sunset the sun would be about 3½° below the horizon, when the afterglow illuminates the eastern regions of the sky; the glow in the zenith lasts till the sun reaches 6½° below the horizon (= 26 minutes), when the stars become visible and night sets in. The stars appear in the latitude of Jerusalem about 22 minutes after sunset in winter, and about 28 minutes in summer, while there still is seen the reflection of the sun's rays traversing the earth's atmosphere above the spectator's horizon, which lasts till the sun has disappeared 18° below the horizon (= 72 minutes). This is known as the astronomical twilight, which increases with the inclination of the sun's obliquity toward the poles (comp. Table III.).

The full duration of the astronomical twilight is not considered in Jewish law, especially in the northern regions, where, beyond lat. 50°, between June 9 and July 9, and beyond 60°, between April 20 and Aug. 18, dawn and twilight overlap each other.

The highest Jewish authorities, including Maimonides, estimate the full extent of dawn and twilight at 1⅕ "sha'ot zemanniyyot," or periodical hours, whose length is equal to one-twelfth of either the day or the night, whichever is the longer. Thus if the day and the night each equal 12 hours of 60 minutes each, the 1⅕ periodical hours would contain 72 minutes; but when the day is 13 hours long every periodical hour contains 65 minutes, and the 1⅕ hours are increased proportionately (see Table IV.).

This calculation corresponds almost exactly with that of the astronomical twilight in latitudes near the equator; but with every degree northward the duration of the twilight increases till it is double in latitude 60°. Even Maimonides' shorter twilight of 1⅕ periodical hours has to be divided at that latitude, one part belonging to the day, and the other part to the night. Or, as a precaution against possible error, the 1⅕ periodical hours may be divided into three parts: (1) day, (2) doubtful, and (3) night. R. Moses Alashkar in his responsa (No. 96) gives a rough estimate of 40 minutes as the time which elapses "from the setting of the upper limb of the sun to the appearance of stars," which corresponds with the average twilight of Maimonides at latitude 36°.

Standard and Jerusalem Time.

Calculations of the rising and the setting of the sun are based on the appearance and disappearance respectively of its upper limb, and are made according to the European solar time. Standard or railroad time gives an arbitrary division by single hours drawn on irregular lines for the convenience of business; hence it becomes necessary either to add to or to subtract from that time to obtain a correspondence with solar time. Jerusalem time is reckoned according to the Turkish system, beginning always at sunset, and counting 12 hours for the night and 12 hours for the day throughout the year (see page 594, Table I., last column). Jerusalem time was calculated by Ḥiyya David Spitzer from observations made on Ṭur, the highest point of Mount Olivet.

Fixed Times for Various Occasions.

The time for the morning "Shema'" prayer, according to the "wetiḳin" (pious and punctual observers of the precepts), is just before sunset, and is calculated so that the "Shemoneh 'Esreh" begins exactly at sunrise (see Prayer). The wetiḳin in Jerusalem commence the morning prayer on weekdays 36 minutes, and on Sabbaths and holy days 51 minutes, before sunrise. The Psalms, the "Shema'," and the benedictions are timed by the clock to end punctually at full sunrise, when the "'Amidah" is recited. The elapsed time between the appearance of the sun's upper and that of its lower limb amounts to 1/10 of an hour, or 6 minutes (Maimonides, "Yad," Ḳeri'at Shema', i. 11). The time-limit of the morning "Shema'" ends after three hours, or ¼ of the day (see also Minḥah Prayer).

The Sabbath candles are lighted on Friday late in the afternoon, when the sun's rays touch only the tops of the trees. The earliest time is 1¼ hours before sunset; the latest, 15 minutes before sunset ("Lebush ha-Tekelet," 261, 2; 267, 2; comp. Shulḥan 'Aruk, Oraḥ Ḥayyim, 261, 2; "Be'er Ḥeṭeb," *ad loc.*).

("ḥameẓ") on the day before Passover is fixed at the end of the fourth hour of the day; that for burning ḥameẓ, at the end of the fifth. Mordecai Jaffe holds that in each case the hour equals $\frac{1}{12}$ of the length of the day from sunrise to sunset ("Lebush ha-Tekelet," 233, 1), while Moses Isserles and later authorities claim that the dawn and the twilight of the same day form part of that day. The table on page 592 for the 14th of Nisan in the years 1905–7 (the first being an intercalated year) gives the time-limit for eating and for burning ḥameẓ according to Jaffe and Isserles respectively, in the latitude of New York city (40° N.). See HOROLOGY.

KEY TO THE TABLES.

Table I. is for latitudes 44° to 28° N., including the United States from Maine to Florida, and records, for intervals of five days in every month during the year, the time of sunrise and sunset, also the beginning of dawn and the ending of twilight. South of latitude 28° to the equator there is little variation in the time of twilight; and there are few, if any, Jewish settlements requiring a special table. In the right-hand column of the table similar information for Jerusalem is given.

Table II., for latitudes 60° to 46°, covering the northern countries of Europe together with Canada, gives the time of sunrise and sunset at intervals of ten days. The times of dawn and twilight are omitted for the reason that the duration of the astronomical dawn and twilight in these regions is much longer than that as fixed by Maimonides.

Table III. gives the duration of dawn and twilight for northern and southern latitudes, according to astronomical calculations.

According to strict rabbinical law, the astronomical dawn and twilight ought to be divided equally between night and day. To avoid possible error, however, they are actually divided into three equal parts: (1) actual day; (2) actual night; and (3) the middle part, doubtful. The doubtful part, as noted above, is always calculated "on the safe side"; *e.g.*, on Friday evening as "night" and on Sabbath evening as "day"; also on Yom Kippur as "day," to complete the fast. For example, Yom Kippur of 1904 fell on Sept. 19, which date was near the autumnal equinox, when sunset was about 6 P.M. The astronomical twilight for latitudes 44° to 28° N. varied from 98 to 82 minutes, two-thirds of which (66 to 54 minutes), added to 6 P.M., would make the fast expire between 7.06 and 6.54 P.M. In case Yom Kippur is far removed from the autumnal equinox the variations increase. For example, the figures for Yom Kippur of 1905, falling on Oct. 9, give the following results (comp. Table I. under Oct. 10):

Latitudes.	Length of Day.	Sunset.	Astronomical Twilight Ends.	Two-thirds of Astronomical Twilight Ends.	Two-thirds of Maimonides' Twilight Ends.
	h. m.				
44° N..............	11 16	5.25	6.59	6.27	6.17
42°..................	11 22	5.29	7.00	6.29	6.20
40°..................	11 26	5.31	6.58	6.29	6.21
38°-36°	11 25	5.31	6.58	6.29	6.21
34°-32°	11 34	5.35	6.57	6.29	6.24
30°-28°	11 37	5.36	6.55	6.29	6.24

Up to this point there are few variations between the astronomical twilight and that according to Maimonides' calculations; but they increase with every degree northward, especially during the longest and shortest days. Here, it appears, the general custom was to discard the astronomical figures and to accept Maimonides' calculation of 10 per cent of the day for the total twilight. Thus for the fast of the Ninth of Ab, 1904, which fell on July 21, the following data are presented for latitudes 60° to 46°:

Latitudes.	Length of Day.	Sunset.	Two-thirds of Maimonides' Twilight Ends.	Latitudes.	Length of Day.	Sunset.	Two-thirds of Maimonides' Twilight Ends.
	h. m.				h. m.		
60° N.....	17 34	8.53	10.03	52° N ..	15 58	8.05	9.09
58°.......	17 6	8.39	9.47	50°.....	15 42	7.57	9.00
56°.......	16 40	8.26	9.33	48°.....	15 24	7.48	8.50
54°.......	16 18	8.15	9.21	46°.....	15 10	7.41	8.42

Table IV. gives the duration of dawn and twilight according to Jewish law, as based on the calculations of Maimonides and other eminent authorities.

Table V. and chart show the times of sunset for the whole year in various latitudes. The time of sunset for each degree of latitude between 30° and 60° is indicated by curves marked at the side for the latitude, the date being given at the bottom of the chart. The point on the curve where it intersects the vertical line passing through the point marking the date indicates the time of sunset for that date at that latitude.

To ascertain sunset and twilight for any particular place, at any definite date, one must first find its latitude and compare it with the latitude in these tables. For convenience, a list of some of the principal cities in America and Europe, with their latitudes, is marked on the chart.

SUPERCOMMENTARIES. See BIBLE EXEGESIS.

SUPERSTITION.—Biblical Data: That views and practises borrowed from paganism and not in accord with the monotheistic belief of Israel —as, for instance, witchcraft and sorcery—existed in Bible times is proved by the fact that they are prohibited. They are referred to as "the abominations of those nations," and the Israelite is warned against all of them in the words "Thou shalt be perfect with the Lord thy God" (Deut. xviii. 9 *et seq.*; Sifre, 171, 172; Tosef., Sanh. x. 6, 7 [ed. Zuckermandel, p. 430]; Sifra, 90b, 91a, 93d [ed. Weiss]; Sanh. 65a, b). Although the penalty of death attached to the practise of sorcery (Ex. xxii. 18), such superstitions did not relinquish their hold upon the Israelites, as is shown by the invocation of Samuel's spirit by Saul (I Sam. xxviii. 8 *et seq.*), the witchcrafts of Queen Jezebel (II Kings ix. 22), and the doings of King Manasseh (*ib.* xxi. 6; II Chron. xxxv. 5 *et seq.*). All the Prophets preached against these and the immoral practises connected with them (comp. Micah v. 12; Nahum iii. 4; Jer. xxvii. 9; Isa. xlvii. 9, 12; Mal. iii. 5). All the practises which were prohibited, such as "cutting the flesh," probably savored of superstition, and Judaism in this way was the first religion to attempt to cast off its shackles.

In Talmudic Times.

With the absolute establishment of monotheism, superstition lost its idolatrous character and no longer led to immoralities, as in ancient times; but it still remained, underlying public consciousness. Prohibitory laws were published against the superstitious practises connected with sheḥiṭah (Ḥul. 40a), against incantations for wounds (Sanh. 90a), and the like. On the other hand, the Rabbis permitted some cures the pagan character of which was less manifest (Shab. vi. 3), while they forbade others as savoring of the "ways of the Amorites" (Tosef., Shab. vi.-vii.; see AMORITES). The custom of invoking the gods Dan and Gad is thus characterized, affording an interesting parallel to Amos viii. 14 and Isa. lxv. 11 (Shab. 67a). Many superstitions of Egyptian, Babylonian, and

Persian origin found a place in the Talmud; many by a process of syncretism came also through the channel of Greek and Roman custom: though on principle the Talmud may be said to have opposed superstition as connected with idolatry (see Demonology). R. Ḥanina, for instance, answered a woman who desired to bewitch him, "It is written, 'There is none else beside Him'" (Deut. iv. 35; Sanh. 67b; Ḥul. 7b).

As instances of superstitions mentioned, if not countenanced, by the Talmud, the following may be referred to: "It is unlucky to be between two dogs, two palms, or two women; and it is equally unlucky for two men to be separated by one of these" (Pes. 111b). "Drink not froth, for it gives cold in the head; nor blow it away, for that gives headache; nor get rid of it otherwise, for that brings poverty; but wait until it subsides" (Ḥul. 105b). "If one of several brothers die, the others must beware of death. Some say death begins with the eldest, some with the youngest" (Shab. 106a). "It is dangerous to borrow a drink of water, or to step over water poured out" (Pes. 111a).

In the Middle Ages superstition was greatly strengthened, owing in large measure to Christian surroundings, trials for witchcraft being carried on under the protection of the Church, and particularly by the Inquisition. The ideas found their way into Jewish literature and even in a high degree influenced religious ceremonies. Jews and Christians borrowed from each other. Hebrew words, whose meanings were not known to Christians, especially the names of God, frequently occur in the great mass of Latin and Greek charms, magical blessings, and amulets, and in the same way Greek and Latin words, whose meanings were not understood by Jews, appear in Hebrew magical formulas and Hebrew prayers. A phenomenon frequent in the history of mankind is here repeated. Stupidity and superstition unite mankind more readily than knowledge and enlightenment. It was of little avail that influential rabbis sought to hinder the spread of such ideas and practises; only in modern times has it become possible to weed out the growths of superstition from the pure monotheism of Judaism.

J. M. G.

——**Modern:** Whatever be the fact with regard to Jews of ancient and medieval times, there can be no doubt that they share with their neighbors of the same stage of culture in that worship of luck which is at the root of superstition. There are found among uneducated Jews just the same class and amount of superstitious beliefs and practises as among their neighbors of Christian creed and of similar want of culture. Important collections have been made in recent years of such beliefs and practises among the Jews, chiefly of eastern Europe. How far these customs and ideas can be classified as specifically Jewish is another and more difficult question. In many cases they can be traced to the habits of their neighbors; in others, while they are common to most sections of the country, it is just possible that the Jews were the originators and the peasantry the recipients; but there has not been sufficient investigation to determine the degree and kind of indebtedness.

Many of these customs have been transplanted from the east of Europe to England and America, and a large number of them have been collected in the east side of New York city. In that city there is found a fully developed belief in the efficacy of the Evil Eye and the significance of Dreams. One antidote for the former is to take a handful of salt and pass it around the head of the child who has been bewitched, to throw a little of it in each corner of the room, and the remainder over the threshold.

Expectoration.

Another remedy against the evil eye, or any other evil, is for the mother to kiss her child three times, spitting after each kiss. At Brody, if a child has been "overlooked" with the evil eye the mother counteracts the effects by licking the forehead of the child twice, spitting, and repeating, "Ny hory ny hory ny buri ny kory," which is simply Polish for "Neither mountains nor forest nor barley nor oats." This must have been borrowed from the neighboring peasants ("Urquell," v. 20). Indeed, the efficacy of expectoration is fully recognized in Jewish folklore. When children are at odds, and one of them resorts to spitting tactics, the victim will often purposely allow himself to be spat upon because in so doing it is believed that the spitter takes upon his own shoulders the sins of the former. In order to stop a youth from spitting he need only be reminded that "Du nemst fun mir arop die sind" (You rid me of my sins). If one has a bad dream which it is desired to forget on waking in the morning, the advice is given to spit three times in order that the desired effect may be produced ("Mitteilungen der Gesellschaft für Jüdische Volkskunde," x. 114).

In Minsk traces of more subtle methods of removing sin are found in the process known as "sin-searching." When an epidemic occurs in a small Russo-Jewish community, search is instantly made for some guilty individual, whose sin, it is assumed, is the cause of the epidemic, and the rabbi issues an excommunication against any one refusing to give what information he may have on the subject. When the sinner takes upon himself due punishment, the epidemic, it is believed, will cease. It is considered by Russian Jews unlucky to dream of money, and it is a curious coincidence that Shylock, in "The Merchant of Venice" (Act ii., Scene v.), says:

> "I am right loath to go.
> There is some ill a-brewing towards my rest,
> For I did dream of money-bags to-night."

That some of the superstitions held by Russian Jews have been derived from their neighbors is clear from the following example: Russo-Jewish farmers have full belief that there are certain "maziḳim" who braid the manes of animals beautifully, and even the hair of men who sleep in stables. These are clearly the "domovickes," or brownies, of the Russian peasants. On the other hand, Jews sometimes derive their customs from the impulse to oppose Christian ones. Thus barley may not be eaten on Christmas eve, when Christians eat it. One can even watch the

Some of Modern Origin.

growth of superstitions among modern Russian emigrants. In Brest-Litovsk it is believed that the great frosts of 1903-4 in America were taken there by the Russian Jews; and that, on the other hand, the more moderate climatic conditions in southern Russia in that year were due to the large return of Russian Jews to Odessa, bearing with them the milder climate of the United States. Superstitions are found not alone among the more ignorant members of the congregation; even the rabbis, though perhaps not the better educated, encourage them. Thus it is stated that during the cholera epidemic of 1887 the rabbis told fathers of children under thirteen to bind red ribbon around their necks ("Ha-Meliẓ," 1887, col. 1730).

In the country places of Lithuania, when a fire breaks out, it is customary for the rabbi to go out and stand in front of a building that is not burning, and to extinguish the fire by speaking to it ("varreden dem feier"). Sometimes a Jewish turn is given to a general superstition, as in the case of the belief that it is unlucky to have the clothes mended on the person, as this will "sew up" (lose) the memory. If, however, it is absolutely necessary to do so, the side-locks ("pe'ot"), ẓiẓit, or some other article must be held in the mouth while the repairs are being made. It is curious to notice the mythopeic tendency at work even at the present day. Thus in Galicia it is recommended not to leave a tank of water uncovered during the Passover, even while pouring water into the tank, which should be done through a cloth. The object of this practise is supposed to be the prevention of the angel of leaven from spitting into the tank. The personality of Satan seems to be kept alive in the folk-lore of Russia and Galicia, for it is thought to be lucky if the shofar fails to emit a sound on New-Year's Day, the implication being that Satan is imprisoned therein (this is especially current among the Ḥasidim). The means adopted by peasants in Russia to evade drawing a number for conscription has certainly a Jewish tinge, as it consists in taking with them four pieces of maẓẓah, one in each corner of the ARBA' KANFOT. In order to secure the full efficacy of the unleavened bread they claim the right to wear the arba' kanfot even when stripped for medical examination. It is still considered lucky to begin an undertaking or journey on Tuesday, because in describing the third day of Creation it is said, "God saw that it was good." For the contrary reason it is unlucky to commence anything on Monday, when this was not said at all. Steinschneider found that this belief was entertained by an eighteenth-century printer (Ersch and Gruber, "Encyc." section ii., part 28, p. 27), and it is mentioned as far back as the Talmud (Pes. 2a).

Some Derived from Neighbors.

The rule of the Turkish Jews not to mention the "shedim," or demons, by name (Garnett, "Turkish Life," p. 283, London, 1904) is analogous to the practise of the Scotch in speaking of the fairies as the "good folk." The local turn given to different superstitions is instanced by that current among the Jews of Salonica, who believe that the Messiah will appear first in Jerusalem and will then sail to Salonica; on the Day of Atonement, therefore, they collect near the water (*ib.* p. 286). This is possibly mistaken for the practise of TASHLIK; yet Ezra Stiles reports that the Jews of Newport, R. I., in his day used to open their windows during a storm for the Messiah to enter (G. A. Kohut, "Ezra Stiles," p. 24).

Superstitions may have quite a Jewish air without being specifically Jewish. Thus it is said that Adar is a lucky month because Moses was born in that month, but the inherent idea of one time being more unlucky than another is not specifically Jewish. It is said that a piece of AFIḲOMEN placed between two coins brings luck (Schiffer, "Galician Superstitions," No. 72), but the local superstitions must be examined before it can be proved that this was confined to Jews. The practise, mentioned in the "Sefer Refu'ot" (14b), of curing bleeding by baking the blood in bread and giving it to a pig can scarcely have arisen among Jews.

Such a specifically Jewish custom as that of plucking some blades of grass and throwing them behind one on leaving a cemetery (Landshuth, "Biḳḳur Ḥolim," lxix.) can not be traced earlier than the twelfth century. Abraham ben Nathan, in his Responsa (No. 11), can not give any reason for it, yet it is almost certainly German, being mentioned by Wuttke ("Deutsche Aberglaube," pp. 93-145), and in Scheffel's notes to Ekkehard (No. 135).

Death Superstitions.

The idea of kindling lights—in order to make the demons flee—before the death-rattle is heard (comp. Job xviii. 5; see "Ma'abar Yabok," 105b) has many folk-lore analogies (comp. J. G. Frazer in "Journal of the Anthropological Society," xv. 90 *et seq.*). Even at the present day curious customs arise or are revived when epidemics make their appearance. During the cholera, marriages often take place in the cemetery, as that in Kovno of a lame young man to a deaf-mute or hunchback woman. At Pinsk, and in other communities, two orphans are married, under a black ḤUPPAH, on the graves of the parents of one of them, the idea being that the cholera is thus conducted to the graves. There is even a tradition in some remote communities that a woman may be married to the dead. Several curious customs are mentioned in the remarkable will of Judah Ḥasid. Thus, at the dedication of a cemetery, it was usual to kill a rooster and bury it as the first victim of death. If a man meets a ghost and it asks him to go with it, he should say, "It is God's will that I go not with thee." The next day he should go to the cemetery three times, fasting, and say: "As God wills life, do not come forth, thou or any messenger of thine, to carry away me or my children, or any Israelite, for I desire this, not the future world." Peculiar objection seems to be taken to being the first person buried in a cemetery. Small communities sometimes hire an old man to join them so that he may be the first to be buried in their cemetery. It is reported that an aged man was maintained by the community of Passaic, N. J., for ten years, being taken there in 1893, but not dying till 1903 ("The Sun" [New York], Jan. 14, 1903).

One of the most startling of the superstitions observed among modern Jews at Lemberg is the following: If a woman dies pregnant, it is supposed to be undesirable for her sake and for that of the congregation that the fetus should remain within the body. The corpse is therefore bathed at midnight, and after half an hour the name of the dead is called seven times, and a shofar is blown seven times in her ear. The corpse, with many groans, will then give birth to a dead, undeveloped child ("Urquell," ii. 192; comp. new series, ii. 270).

The essence of superstition being that it obeys no rule, and, therefore, scarcely admits of classification, renders it desirable, perhaps, to give a certain number of examples culled from various sources. Most of the following instances have been collected in New York among Jewish immigrants from various districts of Russia. Where superstitions have been taken from printed sources, these are indicated either in full or with the following abbreviations: Sch. (= collected by Schiffer, in "Urquell," ii.); Grimm (= Grimm, "Deutsche Mythologie," iii., appendix on superstitions). Territorial sources also are indicated. In every case it must be understood that while the superstition has been observed among Jews, further and very difficult research is required before it can be determined whether it has been borrowed from neighbors or has arisen from peculiarly Jewish conceptions.

'Aliyah. Never refuse a visitor to the synagogue an 'aliyah; he may be Elijah (German). Elijah once visited Hebron, but, not being called to the Law, he returned to heaven (Palestine).

Alone. If you go alone to look for or call a midwife, your course will be lengthened and made troublesome to you by shedim. You will imagine, for instance, that you are within a few feet of the place you are going to, whereas in reality you are several minutes away from it (Minsk).

Animal. If you see an animal of any kind, even a man, where you would not expect it to be, it is a sign that such an animal is a treasure transformed. Throw your shoe at such an animal, and the latter will become a heap of treasures, which you will be at liberty to take away with you (Minsk).

Bachelor. At a funeral of a bachelor cast sand before the coffin to blind the eyes of the unbegotten children of the deceased (Kurdistan).

Barrenness. To get children, drink water in which has been cooked moss that has grown on the Temple walls (Palestine; Sch. v. 235).

Bat. Kill a bat with a "randel" (gold coin) and put the bat under the threshold, and your house will be lucky (Rumania).

Bathtub. A child's bathtub must not be used for any other purpose, or the child will not prosper (Galicia; Sch. v. 141).

Bear's heart. If a person eats the heart of a bear he will become a tyrant (Minsk).

Bed. Girls sit upon the bridal bed for luck (Morocco; Meakin, "The Moors," p. 441).

Beggar. The curse of a beggar is effective (Byelostok; Kiev).

Birthday. At a child's birthday light as many candles as the number of years the child has lived (Breslau).

Blood. To cure sickness Algerian Jews go with an Arab sorceress to a spring, kill a black cock, and smear with the blood the chest, forehead, etc., of the patient. Then they light a fire and sprinkle fire and patient with blood (Benjamin II., "Eight Years in Asia and Africa," p. 313).

Bone in the throat. If you are choking with a fish-bone, put another fish-bone on your head, and you will either swallow the one in your throat or get it out. If the bone is a meat-bone, put another meat-bone on your head, and the result will be the same (Minsk).

Book. It is dangerous to leave a book open and go away, for a "shed" (demon) will take your seat and create havoc.

Bread. Never eat from a piece of bread over which you have recited a "berakah" (blessing), unless you cut it in two (general superstition).

Bride. If, on returning from the ḥuppah, the bride takes the groom's hand first, she will dominate in family matters. If he takes her hand first, then he will direct affairs (Minsk).

Broom. Do not dust the table with a broom lest one of the household die (Galicia; Sch. v. 46).

Brothers. Three married brothers should not dwell in one town (comp. Deut. xxv. 5; Judah he-Ḥasid, "Sefer Ḥasidim," p. 33).

Buckets. It is unlucky to come across an empty bucket on first going out, but lucky to pass a full one (general superstition).

Cat. When a cat licks her paws it is a sign that visitors will come (general superstition). To keep a cat in the house and prevent her injuring the memory, cut off part of her tail; then she will never go away, even if you drive her. (This is called "Gepasled die Katz"; Wilna; Little Russia.)

Childbirth. In the case of hard labor ensuing during confinement, the unmarried girls in the house should unbraid their hair and let it loose on their shoulders (Kovno; Rumania).

Cohen. Aleppo Ḥasidim thought it unlucky for an ordinary Israelite to marry the daughter of a kohen, referring to Lev. xxii. 23 (Benjamin II., "Eight Years," etc., p. 72).

Convulsions. Break a pot or dish in front of the child to drive away the demon of convulsions (Galicia; "Urquell," ii. 33). Prick the finger of the child with a needle, suck blood therefrom, spit thrice, and then put some of the mother's blood in the child's mouth (*ib.*).

Curse. An undeserved curse has no effect, but may fall back upon the head of him who utters it (comp. Gen. xii. 3). (Sometimes Jews who feel that they are being cursed unjustly express the hope that "zol es ois gehm of sein kopf, wos er wünscht mir" [may all the evil he wishes me turn upon him] [Russia].)

Dead. The deceased is thought to hear and know everything that is said and done about him until the last spade of earth is thrown over him (Gamaliel ben Pedahzur, p. 16).

Dead, Calling the. On visiting the grave of a relative, you should take with you a pious man to call him and communicate with him by putting his ear to the grave (Russian, in America).

Discovering treasure. To discover hidden treasure, go on Johannistag and find on a hazel-tree four twigs of the same year, and bind them into one; then take them in your left hand, and gold and riches in your right hand, and pass the twigs round them three times, saying, "Be these twigs lucky to me as were once the rods to our ancestor Jacob, so that I may discover gold and silver treasures," etc. Next morning, before sunrise, go to the tree, cut off the twigs, cast them east, west, north, and south, and say, "Dear God, I beg Thee," etc., and let two boys follow them (Perles, in "Grätz Jubelschrift," p. 33).

Eggs. If you steal an egg you will have seven years of poverty (Pinsk; Byelostok).

Epidemics. During epidemics open the door only when the person outside has knocked thrice (Galicia; Sch. 202).

Evil eye. To throw off the evil eye, spit three times on your finger-tips, and each time make a quick movement with your hand in the air (Galicia; Sch. 179).

Fingers. The reason for holding the fingers downward and extended while washing them in the morning is that the evil spirits which hover about man in the night-time may be washed away (Gamaliel ben Pedahzur).

"*Feldmesten.*" If one is sick his female relatives should go to the graves of some pious men and measure the graves and the distances between them with wicks; candles should then be made of the length of these wicks and be presented to the synagogue or bet ha-midrash (general in Russia).

Feet. Itching of the feet implies that you will come to some unknown place ("Sefer Ḥasidim," p. 162; comp. Wuttke, *l.c.* p. 41).

If the bridegroom steps on the bride's foot when both are under the ḥuppah it is a sign that he will rule her. If she steps on his foot then she will rule him (Lithuania).

Hair, Cutting a child's. If a child's hair is cut an elf-lock will grow (JEW. ENCYC. iv. 31, *s.v.* CHILDBIRTH).

Hanging-rope. If you put into a barrel of whisky, or of other liquor, a piece of a rope used in a hanging, or with which some one has hanged himself, the liquor will last longer than otherwise (Minsk).

Ḥol ha-Mo'ed. As Ḥol ha-Mo'ed is only a half-holiday, you should write on that day obliquely or sidewise (Riga).

House-building. Do not build a house where no one has built before; if you do, get some one to inhabit it for a year, for the first tenant in a newly constructed house is likely to become poor. Neither door nor window should be entirely closed; leave a small opening for the demons (Lithuania; Kiev; Dvinsk; "Sefer Ḥasidim," pp. 17, 20).

Invisibility. To be a "ro'eh welo nir'eh" (one who can see without being seen) go into a stall or any similar place, eat a roll half a pound in weight, baked hard and crisp, and see that not a crum of it is lost. After you have successfully accomplished this task a "taichel" (devil) will show himself before you and endeavor by different pranks to make you laugh; if you are successful in not laughing, another taichel will bring you a "yarmulka" (hat); then a third will perform other funny pranks. If you still refrain from laughing, a fourth will present you with a bone. If you carry this bone you will become a ro'eh welo nir'eh.

Languages. Some Russian Jews believe that some time before a child is born the angel Raphael teaches it all the (70) languages of the world; but that as the child leaves the mother's womb the same angel gives the child a fillip on the upper lip, causing it to forget them all (Pinsk).

Looking back. In running from danger never turn to look back, as you may be transformed, like Lot's wife, into a bag of salt (Kiev).

Minyan. It is lucky to be the tenth of a minyan (general superstition).

Mirrors. If you break a mirror you will have seven years of poverty (Pinsk).

If you place a mirror in front of a sleeping man with a candle between them, and then call him by name, he will follow you wherever you will; but if he gives you a "backhander" you will not live the year out (Galicia; Sch. 53).

Money. In taking money out of a money-bag or safe never take out all of it, but leave a coin or two "for luck," for money attracts money (Grodno).

It is lucky to save the first money made at market (Kiev; comp. Grimm, p. 85: "He who lends the first money he makes at market gives away his luck").

Mourning. Weep not too much for the dead, or you may have some one else to weep for: weep three days, mourn seven, and put aside ornaments thirty. If you do more, God will say, "Are you more pitiful than I?" ("Sefer Ḥasidim," p. 15).

Ovens. Never leave an oven or stove empty; if you have nothing to cook or bake in it put a piece of wood in it; if you leave it empty you may not have anything to bake or cook when you want it (Minsk).

Plagues. If there is an epidemic write on the door of the house, "Here has Typhus [or Cholera, etc.] already been," and the house will remain untouched. Or hang on the door a locked "Schloss" and throw the key away. Or draw a black mark with coal on the outer wall (Galicia; Sch. 80-82).

Rats. If rats run from one house to another, the house into which they have run will have luck (Byelostok).

Right and left eye. If the right eye itches, you will rejoice; if the left, you will cry (Galicia; Sch. 19).

Sale of children. In a family in which several children have died, the mother, before she gives birth to another child, goes to an old man whose children, and even grandchildren, are all alive, and sells him her unborn child for a certain sum, which the old man agrees to pay. The old man is then considered the "grandfather" of the boy. One of the conditions in this transaction is that the old man reserves the right to name the child, which name is not told to the boy nor to his parents, but will be disclosed in the "grandfather's" will if he dies, or to the bride of the "grandchild" under the ḥuppah, when the sum which the old man has paid will be refunded. The boy is called "Alter" (see Names). The old man is said to have "haẓlakah" (Russia and America).

Shoes. Never walk in one shoe, or one slipper, etc., otherwise one of your parents will die (Minsk).

Shroud. In making a shroud, avoid knots (South Russia; "Roḳeaḥ," p. 316; comp. Wuttke, "Deutsche Aberglaube," p. 210).

Sin-buying. If a boy has committed some slight sin (*e.g.*, torn a paper on the Sabbath) another says to him, "What will you give if I buy your sin from you?" "An apple," "a marble," may be the reply. The bargain is made; the conscience of the one is quieted, but the other is called the "sin-buyer" and despised ("Urquell," ii. 165-166). This sometimes occurs among adults, and the buyer often has trouble to induce the sinner to "take back his sin" (see "Sin-Eater," in "Folk-Lore," ii.).

Sisters. Sisters should not marry on the same day lest the evil eye fall on the parents; and two brothers should not marry two sisters ("Sefer Ḥasidim," pp. 23-26). Do not marry two sisters one after the other (*ib.* p. 27). Father and son should not marry two sisters (*ib.* p. 28).

Stepping across a child. If you step over a child it will stop growing (Kiev). To make it resume growing, recross it (Galicia; Sch. iv. 93; this superstition is wide-spread; see a large collection of references in "Urquell," vi. 111).

Sweeping. You should not throw sweepings out of the room at night; if you do you may die (Galicia; Sch. 7).

Throwing out dirt. You must not throw dirt after a man as he is leaving a room (Galicia; Sch. 4).

You must not sweep a chamber at night; if you do, you will either not be able to sleep, or you will lose something (Galicia; Sch. 5, 6)

Widowhood. The third (fourth, etc.) husband of a widow, or wife of a widower, will die soon after the marriage (Wilna).

It is to be observed that Jews themselves recognize their tendency to superstition. A proverbial expression among the Russian Jews runs, "Last year's snow for headache"—a sarcastic reference to the impractical nature of folk-medicine. See 'Alenu; Bibliomancy; Childbirth; Death, Views and Customs Concerning; Dibbuḳim; Folk-Lore; Folk-Medicine; Golem; Holle Kreish; Numbers and Numerals; Salt; Teḳufah; Ten; Transmigration of Souls.

SURETYSHIP: The liability, contract, or undertaking of one who becomes a surety. Reference to a surety occurs only once in the Pentateuch; namely, in Gen. xliii. 9, where Judah tells Jacob that he will be surety for Benjamin's safe return. But in Proverbs the commercial surety, the man bound for the debt of another, is mentioned again and again, both in warnings against undertaking a suretyship and in admonitions to fulfil the obligation when it has been undertaken. The Hebrew word ערב, and the derivative ערבון, "pledge or earnest-money," were also Phenician words, and came, through them, into Latin in the form "arrabo."

"Arrabo."

The Talmud distinguishes between the surety in the usual form and one who, though he has not received the benefit of a loan or sale, makes himself in form the principal debtor; and it calls such a person "ḳabbelan" (undertaker). This relation is known in modern law as that of an accommodation maker or acceptor; and it may arise in many other ways than that referred to in the Talmud.

For the necessity of a consideration for the suretyship, see Deed; for the means at the disposal of the surety to protect or to recoup himself, see Indemnity.

I. Where the loan is made or credit is given on the faith of the surety, and he joins in the bond or contract, no question of his liability arises. But if the loan or sale has been made the money or goods are handed over to the borrower, and if afterward a third person offers to become surety in order to obtain forbearance for the debtor ("let him alone and I become his surety"), opinions differ as to the requirements for a binding contract. Maimonides, basing his views on the discussions in the Talmud (Ket. 101b, 102a, and B. B. 176a, b), takes the ground that the surety's promise must, even when he joins in the bond, rest on a "ḳinyan" (acquisition), some article being delivered to him pro forma as a consideration for his promise; while others require such a formality only when the surety comes in after the ensealing of the debtor's several bond.

Suretyships may be contracted in open court. A judgment having been rendered against A, proceedings in execution against him may be stayed if B, a solvent and well-to-do man, makes himself answerable for the judgment, as is the case in many states of the United States ("replevin bonds" or "stay bonds"). Maimonides admits that in such a case no formal ḳinyan is necessary; and he is of opinion that a recognizance made in open court operates like a bond ("sheṭar") upon sold or encumbered land.

Surety After Debtor.

II. Though the surety be fully bound, the creditor must demand payment from the principal debtor before demanding it from the surety; and if the former has any property, this should be exhausted before that of the surety. But when the principal debtor has property only in another country, or when he is a man of violence, who will not submit to the judges, or will not appear in court, the creditor may satisfy his claim out of the surety first, and leave him to contest the matter with the debtor. Under an institution of the Geonim the creditor, unless he is excused as above, before proceeding against the surety has to make oath (the lesser oath) that he has exhausted the debtor's estate and that the debt is still unpaid. But if the parties have agreed that the surety may be sued first, the creditor may sue him; and the "ḳabbelan" who contracts in form as principal is always sued in the first instance. The language which constitutes one a ḳabbelan must be very precise: thus the words "lend money to him" indicate a borrower; and he who is mentioned after those introductory words as promising to pay is necessarily a surety (B. B. 174a).

The Talmud (*ib.* 174b) takes it for granted that among the Gentiles the creditor has always the right to sue the surety first; certainly in the Roman law two or more joint obligors may be sued together, regardless of the question which of them enjoyed the consideration and which was only bound as surety. Where two sureties have bound themselves for a debt the creditor may levy on the estate of either. On the other hand, following an opinion of the Palestinian Talmud in Shebu. v., it was held that where two men borrow on the same bond, or partners incur a joint debt, each one is a principal for his own share, but only a surety for his companion as to the remainder, which he should not be compelled to pay while the true debtor has property open to levy.

As Regards Dowry.

III. It seems (*ib.*) that one who declares himself liable for the jointure ("ketubah") as fixed by law is not held liable unless he be the groom's father, and then only by means of ḳinyan; but a suretyship on the clause to refund the dowry is binding. In decisions of later date than the Talmud, but fully recognized by Maimonides, a suretyship on a conditional contract—for instance, on a warranty of title in a deed of conveyance—is not binding at all, even though the forms of ḳinyan be observed. It is admitted, however, that where A says to B, "Be thou surety for C, and I will be surety to thee against loss," the agreement is binding.

The question as to the validity of indefinite guaranties is not discussed in the Talmud; and the later authorities differ concerning it. Maimonides says: "Where one has not defined the amount of suretyship, but says, 'Whatever thou shalt lend him, or whatever thou shalt sell him, I am good for,' some of the Geonim taught that even if 20,000 dinars' worth of goods or 100,000 in money had been advanced, the surety [guarantor] is bound for it all; but in my opinion he is bound for nothing, because his mind had never conceived what he was bound for. But let whoever understands these things reason the matter out." The Shulḥan 'Aruk does not touch the point.

SUSANNA, THE HISTORY OF: One of the books of the Protestant Apocrypha; entitled in some manuscripts "The Judgment of Daniel." The Greek text is extant in two recensions: that of the Septuagint (given only in the Codex Chisianus) and that of Theodotion. The latter is the one adopted by the early Christian writers and followed in the present common English translations. That it was in early times regarded as a part of the Book of Daniel appears from the fact that in most Greek manuscripts it stands at the beginning of that book; Jerome places it at the end of Daniel, with a notice that it is not found in the Hebrew Bible. It was accepted as canonical by the Christians generally up to the third century (its canonicity was disputed by Julius Africanus); and it is still so regarded by Catholics. Origen observes (in the "Epistola ad Africanum") that it was "hidden" by the Jews; but the precise significance of this remark is not clear, as there are no early Jewish references to the book (the comparison of a woman to a red rose, made in the Midrash on Lev. R. xv. at end, has no discernible connection with Susanna).

Contents.

The texts of the Septuagint and Theodotion differ from each other in a number of details; and other variations are found in the Syriac versions (ed. by Walton and Lagarde). The main story is as follows: Susanna (ששנה = "lily"; comp. Cant. ii. 1), the beautiful and pious wife of the rich Joacim (Joakim) of Babylon, walking in her garden, is seen by two elders, recently appointed judges, who, inflamed with lust, approach her with an infamous proposal, and, when repulsed, accuse her publicly of adultery. Brought before the tribunal, she is found guilty, and is led forth to execution; but at this moment Daniel, then a young lad, interposes and by a clever device shows the falsity of the accusers. These are put to death; Susanna is justified; and Daniel's reputation among the people is thenceforth very high. The Septuagint version appears to be the older: it is cruder than the other, and introduces an angel (verse 45) who inspires Daniel with wisdom for the emergency. The Theodotion text is fuller, and has more literary finish.

The origin of the story is uncertain: possibly it rests on some tradition, but more probably is a pure invention suggested by facts of not infrequent occurrence (see Jer. xxix. 23, and comp. Koran ii. 96). The author's purpose is variously conceived: as insistence on carefulness in judging or as admonition to young men to be wise like Daniel (see verse 62 in the Septuagint). But it is unnecessary to suppose a definite moral. The story is a folk-tale in laudation of the famous prophet Daniel; and the moral, such as it is, develops naturally from the incidents.

The booklet probably dates from the second or first century B.C. It appears to have been written originally in Greek: the style is flowing; and the Hebraisms are such as are found in the Septuagint. There are two plays upon words in the Greek (verses 54, 55, and 58, 59); and these are commonly supposed to point to a Greek original; but Marshall (in Hastings, "Dict. Bible," *s.v.*) maintains that they may be explained from an Aramaic text. T.

SUSLIN HA-KOHEN, ALEXANDER. See Alexander Suslin.

SUSPENDED LETTERS: There are four suspended or elevated ("teluyah") letters in the Hebrew Bible: (1) the "nun" in מנשה, in Judges xviii. 30; (2) the "'ayin" in מיער, in Ps. lxxx. 13; (3) the "'ayin" in רשעים, in Job xxxviii. 13; and (4) the "'ayin" in מרשעים, *ib.* verse 15. This masorah is mentioned in the Talmud, and appears to be earlier than that of the Small and Large Letters.

The object in suspending the letters in question is not quite clear. The Rabbis proposed to eliminate the suspended "nun" and to read "Mosheh" (Moses) in place of "Manasseh," as Gershom was the son of Moses (I Chron. xxiii. 15); it is only, they said, for the reason that Jonathan (the son of Gershom) adopted the wickedness of Manasseh that he is called "the grandson of Manasseh" (B. B. 109b; comp. Yer. Ber. ix. 3). But the difficulty is that there is no record that Moses' son Gershom had a son named Jonathan, his only known son being Shebuel (I Chron. xxvi. 24). On the other hand, Jonathan, the priest of the Danites, was evidently a young Levite (Judges xviii. 3), and not the son of Manasseh.

Commenting on the suspended "'ayin" in the word מיער, the Midrash says that the word may also read (without the "'ayin") מיור = מיאור = "from the river or the sea." The boar or swine coming from the sea is less (another version "more") dangerous than that from the forest (Lev. R. xiii.). This refers to the Roman government, which is compared to the swine (Gen. R. lxviii.; see also Krochmal, "Moreh Nebuke ha-Zeman," xiii.).

Regarding the suspended "'ayin" in the word רשעים, occurring twice in Job, the Talmud eliminates the letter and reads רשים, which word has a double meaning—"rulers" and "poor"—the tyrants below who are poor and powerless above. But, it is explained, out of respect to King David the rulers in this case were not identified with the wicked; hence the spelling רשעים (Sanh. 23b; see Rashi *ad loc.*, and Geiger, "Urschrift," p. 258).

A more plausible explanation is that the suspended letters are similar in origin to the "ḳere" and "ketib." In this case the authorities, who could not decide between two readings, whether the letter in question preceded or followed the next letter, placed it above, so that it might be read either way. Thus the original reading in Judges was probably "Jonathan, the son of Gershom in Manasseh" = במנשה (comp. Judges vi. 15), *i.e.*, in the land of Manasseh, whither the Danites emigrated. Another reading was "the son of Moses" (בן משה); and the suspended "nun" makes it possible to read the word either way ("Moses" or "Manasseh"). Another possible explanation is that the original reading was "Mosheh," the "nun" being introduced to suggest "Manasseh," so as to avoid the scandal of having a grandson of Moses figure as the priest of an idolatrous shrine. The suspended "'ayin" of מיער makes the second reading מעיר, "of the city," referring to the capital Rome as alluded to in the Midrash. The word רשעים in Job, if the "shin" and "'ayin" be transposed, reads רעשים, "storms" (the plural of רעש); this change brings the verses into entire harmony with the context and in accord with the previous chapter (comp. Job xxxvii. 3, 4, 6, 11 with *ib.* xxxviii. 1, 9, 22, 28, 34, 35). On further constructions of the words in question see the critical commentaries.

J. S. O.

SÜSSKIND (SUEZKINT) OF TRIMBERG: German minnesinger; flourished in the second half of the thirteenth century, or, according to Graetz, about 1200. He is called after his birthplace Trimberg, a town with a castle of the same name, in Franconia, near Würzburg. Little is known of his life; but it is supposed that he was a physician. The six poems of his which have been preserved in the Manesse collection (now at Paris, formerly in Heidelberg) show that he took high rank among the poets of his time. He sang of the worth of the virtuous woman, and portrayed for the knights the ideal nobleman: "Who acts nobly, him will I account noble."

Sharing the suffering of his oppressed brethren, he bitterly complains that the wealthy grant him scanty support, for which reason he is determined to abandon poetry and to live henceforth as a Jew. The most characteristic of his poems is the Fable of the Wolf:

"Ein Wolf viel jaemerlichen sprach:
Wâ [where] sol ich nû belîben [remain],
Sît [since] ich dur mînes lîbes nâr [for my support]
Muoz wesen in der âhte [must live in ban]?
Darzuo sô bin ich geborn, diu schult, diun ist nicht mîn [it is not my fault];
Vil manic man hât guot gemach [many a one is in pleasant circumstances],
den man siht valscheit trîben [whom one sees deal falsely]
unt guot gewinnen offenbâr [and evidently acquire wealth]
mit sündeclîber trâhte [with sinful aspirations];
der tuot wirser vil, dan ob ich naem ein genslein.
Jân [not at all] hab ich nicht, des goldes rôt
Zegebene umb mîne spîse [to give for my food],
des muoz ich rouben ûf den lip durch hungers nôt [therefore I must deprive myself and suffer hunger],
der valsch in sîner wîse ist schedelîcher, dan ich,
unt wil unschuldic sîn [the false man acts much worse than I, and yet wishes to appear innocent]."

Evidently this fable refers to the author's own circumstances or at least to those of his coreligionists.

Bodmer (1759) and Von der Hagen (1838) reprinted the poems from Manesse's collection.

SUSSMANN, ABRAHAM BEN JOSEPH: Shoḥeṭ in London in the first half of the nineteenth century. He wrote a commentary on Yoreh De'ah in four parts, which were entitled respectively "Sifte Zahab," "Adne Zahab," "Lebushe Tebu'ah," and "Lebushe Serad." He also compiled an index to the last-named work which was entitled "Be'er Yosef," and two supplements, "Ḥezkat ha-Bayit," and, later, "Maẓẓebet Me'ir Yosef" (Königsberg, 1853).

SUSSMANN, LÖB BEN MOSES: Printer of the eighteenth century. In 1750 he established a Hebrew press in the printing-office of Johann Jansen in Amsterdam, and Baruch ben Eliezer Lippmann Wiener and his sons Jacob and Ḥayyim worked for him. A few years later Sussmann established an independent office, and engaged, besides the abovementioned assistants, the proselytes Simeon and Jacob ben Gedaliah.

From Sussmann's press were issued the following works: Judah ben Benjamin Stadthagen's "Minḥat Yehudah," 1763; Solomon Hanau's prayer-book and grammatical commentary, 1766; the Book of Job, with Baḥya's commentary on same, 1766; the Pentateuch, with Isaac Prenzlau's "Tiḳḳun Soferim," 1767; and the opinions of Meḳor Baruk, 1771. Shortly after the publication of the last-named work Sussmann emigrated to Leyden; he remained there but a short time, however, and in 1779 he became associated with J. H. Munnikhuisen in The Hague, where he published the "Mebbaḳesh" by Falaquera. His son **Sussmann ben Löb** worked, toward the end of the eighteenth century, with the printer Johann Levi Rofe of The Hague on the publication of "Yoreh De'ah."

E. C. S. O.

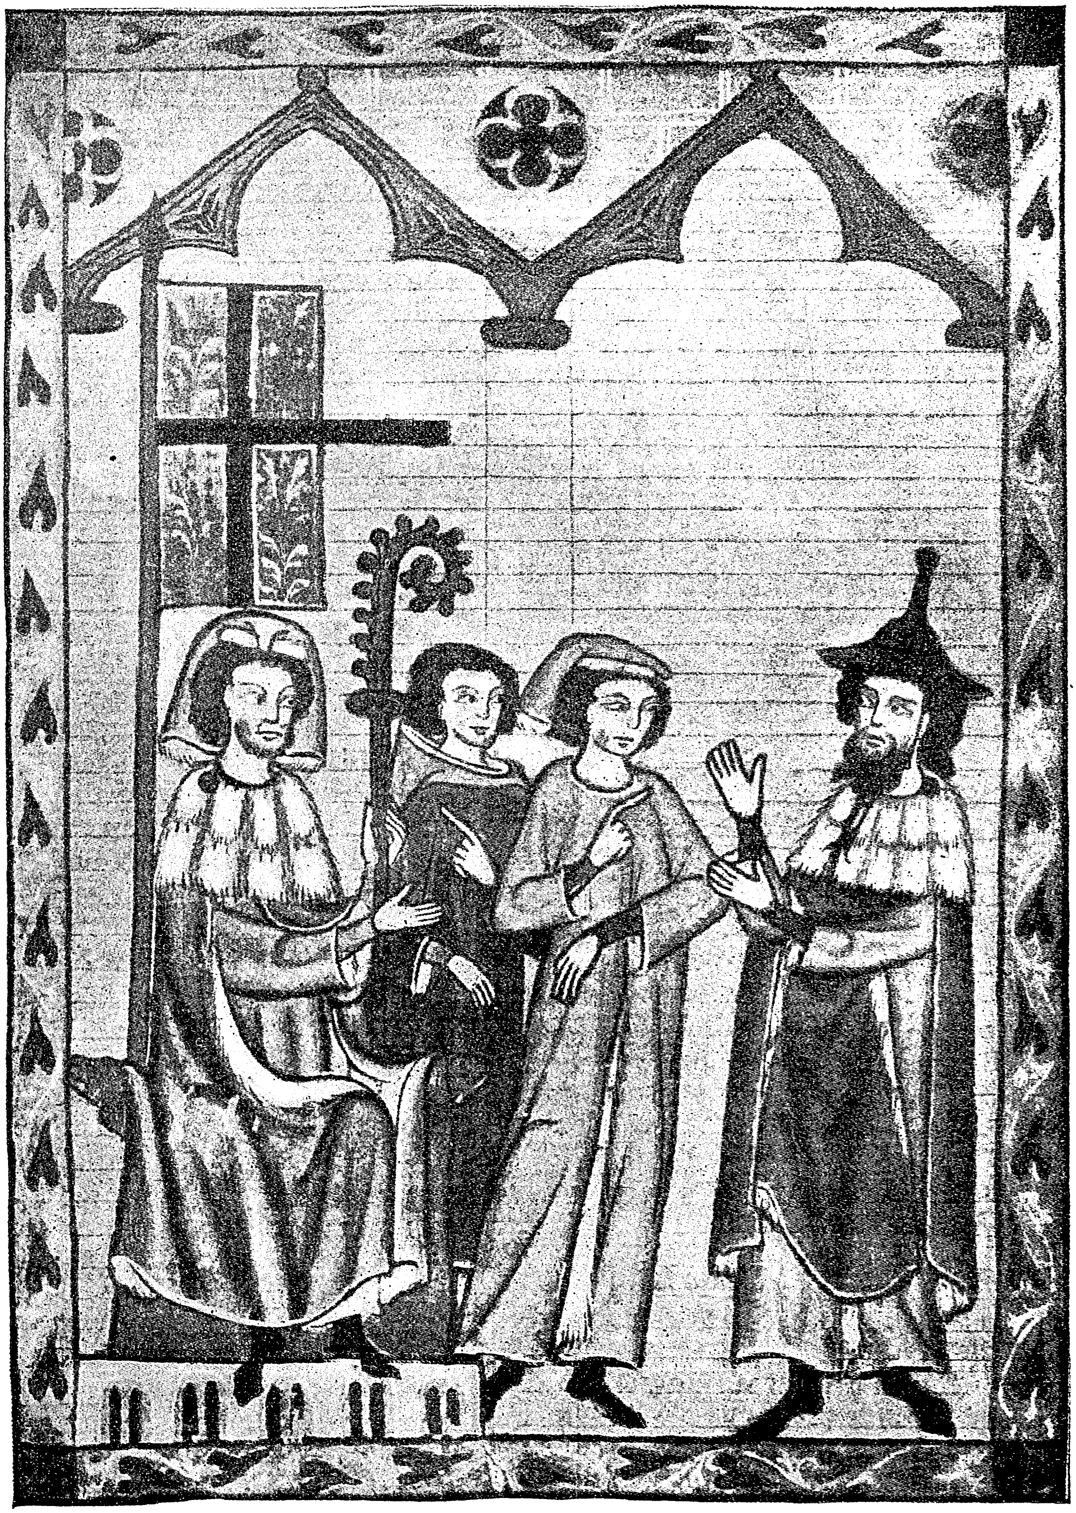
SUTRO, ABRAHAM: German rabbi; born at Brück, near Erlangen, July 5, 1784; died at Münster Oct. 10, 1869. He studied in the yeshibot of Fürth and Prague, and was in 1814 appointed teacher in Reichensachsen by the then existing consistory of Westphalia; later in the same year he was transferred as teacher to Beverungen, where he officiated also as rabbi of the district of Warburg. After the redistricting of Westphalia he was appointed "Landesrabbiner" for the districts of Münster and Dortmund in 1815, and in 1828 chief rabbi of the district of Paderborn, holding the latter position until his death. He wrote: "Widerlegung der Schrift des Herrn H. B. H. Cleve 'Der Geist des Rabbinismus' aus Bibel und dem Talmud" (Münster, 1823); and "Milḥamot Adonai" (Hanover, 1836; 2d ed., Frankfort-on-the-Main, 1836), a protest against religious reforms, especially the use of the organ in the synagogue. He published also sermons and articles in the "Zionswächter" of Altona.

Sutro was an active advocate of the emancipation of the Jews, and during the era of reaction he repeatedly petitioned the Prussian Diet to repeal the ordinances declaring the Jews ineligible for public office. A few months before his death he had the satisfaction of seeing passed the law of July 3, 1869, which removed all the disabilities of the Jews. Some of Sutro's grandchildren have become converts to Christianity ("Allg. Zeit. des Jud." 1902, p. 488; 1903, p. 325).

Bibliography: *Der Israelit*, pp. 829-831, Mayence, 1869.

S. D.

SUTRO, ADOLPH HEINRICH JOSEPH: American mechanical engineer; born at Aix-la-Chapelle, Rhenish Prussia, April 29, 1830; died at San Francisco Aug. 8, 1898; educated in his native town, and at several of the best polytechnic schools of Germany. At an early age he was placed in charge of his father's extensive woolen mills, but the revolution of 1848 impoverished the family and it was compelled to emigrate to America, settling in Baltimore in 1850. In the same year, however, the discovery of gold induced Sutro to go to San



SÜSSKIND OF TRIMBERG BEFORE CHURCH DIGNITARIES.

(From a thirteenth-century manuscript.)

Francisco, where he engaged in business until, several years later, the discovery of mines in Nevada attracted him thither. He inspected the fields there, and soon established at Dayton, Nev., a stamping-mill for the reduction of silver ore, which proved a technical and financial success. The scheme of constructing a tunnel to serve as a drain through the Comstock lode, in which the heat resulting from the great depth of the shafts had made work impossible, originated with Sutro. In 1864 he matured his plans, and after many efforts to interest American and European capitalists in his venture, he chartered The Sutro Tunnel Company on Feb. 4, 1865, receiving the approval of Congress in the following year. The construction of the shaft of the tunnel, which is situated at Sutro, a village in the Carson River valley, was begun Oct. 19, 1869, and finished July 8, 1879. The main shaft is 12 feet wide, 10 feet deep, 20,500 feet long, and is 1,600 feet below the surface.

In 1879 Sutro sold his interest in the company and returned to San Francisco, where, during the Kearny riots and sand-lot agitation, he invested heavily in real estate, not sharing in the general despair of the city's future. As a result he became one of the richest men on the Pacific slope, owning about one-tenth of the area of San Francisco, including Sutro Heights, which he turned into a beautiful public park and which became the property of the municipality after his death. He gave the city, also, many statues and fountains, built an aquarium and baths, and in 1887 presented it with a duplicate of Bartholdi's monument, "Liberty Enlightening the World."

In 1894 Sutro was elected mayor of San Francisco on the Populist ticket. He was an active collector of books and manuscripts, and left a library of over 200,000 volumes, including 135 rare Hebrew manuscripts and a large collection of early Americana.

SUTRO, ALFRED: English author and dramatist; born in London about 1870; educated at the City of London School and in Brussels. He began his career with a series of translations of Maeterlinck's works, all of which except the dramas he has translated from the French. Afterward turning his attention to the drama, he at first collaborated with Arthur Bourchier in producing "The Chili Widow" (1896), then wrote in rapid succession "The Cave of Illusion" (1900), "Arethusa" (1903), "A Marriage Has Been Arranged" (1904), and finally made a great success with "The Walls of Jericho," produced at the Garrick Theatre, London, Oct. 21, 1904.

Bibliography: *Who's Who*, 1904.

J.

SUTRO, THEODORE: American lawyer; born at Aix-la-Chapelle, Prussia, March 14, 1845. When only five years of age he emigrated with his parents to the United States, and was educated at Harvard University, from which he graduated in 1871, and in the law school of Columbia College, at which he took his degree in 1874. In the latter year he was admitted to the New York bar, where he has practised ever since. When, in 1887, the Sutro Tunnel Company of Nevada was financially embarrassed Sutro organized the Comstock Tunnel Company, which took over the stock of the Sutro Company, and thus saved the latter from absolute ruin.

Sutro is well known as an authority in cases referring to the laws of taxation. He has taken an active interest in politics, and was commissioner of taxes in New York city from 1885 to 1898. He has contributed to various periodicals articles treating of the laws of taxation, of corporations, of medical jurisprudence, and of mining.

A. F. T. H.

SVÁB, KARL: Hungarian landed proprietor, and member of the Hungarian Upper House; born at Csongrad in 1829; educated at the real-school of Budapest. In 1846 he began to devote himself to agriculture, but two years later he took part, as lieutenant and adjutant under Colonel Bene, in the Hungarian struggle for liberty. On the restoration of peace Sváb resumed his agricultural pursuits, and was active in the founding of agricultural societies in the counties of Bekes and Torontal. From 1875 to 1885 he sat in the Hungarian Parliament as a member for the district of Török-Kanizsa, and in 1885 King Francis Joseph I. made him a life member of the Hungarian Upper House. Sváb is president of the Ungarisch-Israelitischer Landes-Stipendien-Verein.

SWALLOW: Rendering in the English versions for "deror" (Ps. lxxxiv. 4 [A. V. 3]; Prov. xxvi. 2) and for "sus" or "sis" (Isa. xxxviii. 14; Jer. viii. 7 [A. V. "crane"]). There are about ten species of swallow (*Hirundinidæ*) and the closely allied martin and swift (*Cypselidæ*) in Palestine. In the Talmud "senunit" is the usual name for the swallow, and the Biblical "deror" is also used. A distinction is made between the white, the green (or yellow), and the house swallow (Ḥul. 62a). The senunit, which, according to Shab. 77b, inspires the eagle with dread, may perhaps be intended for another bird of the species *Tyrannus intrepidus*, which seats itself on the back of the eagle and which resembles the swallow.

E. G. H. I. M. C.

SWAN: The rendering of the Authorized Version for "tinshemet" (Lev. xi. 18; Deut. xiv. 16). The Revised Version, more correctly, gives "horned owl" (see Lizard; Mole; Owl).

Two species of swan have been found in Palestine, the whooper, or wild swan (*Cygnus musicus*, or *ferus*), and the *Cygnus olor*, or *mansuetus*; they are, however, comparatively rare.

Some take the "barburim abusim" of the Talmud (B. M. 86b) to mean "swans," though the usual rendering is "fattened hens."

Bibliography: Tristram, *Nat. Hist.* p. 249; Lewysohn, *Zoologie des Talmuds*, p. 194.

E. G. H. I. M. C.

SWAYING THE BODY: The habit of swaying the body during study and prayer has been peculiar to the Jews from very early times, and it is one still practised by them in the Orient and eastern Europe. In the Zohar, R. Jose asks R. Abba: "Why is it that among all nations the Jews alone have the habit of swaying the body when they study the Law?" R. Abba answers: "It illustrates the excellence of their souls. The spirit of man is the candle of the Lord' [Prov. xx. 27] refers to them. The light of that candle flickers and wavers in unison with the light of the Torah. The Gentiles have not the light of the Torah, and burn up like straw" (Zohar, Pineḥas, pp. 118b, 119a).

Judah ha-Levi (12th cent.), in his "Cuzari" (ii. 80), assigns two reasons for the habit: (1) it causes animation and activity; (2) the scarcity of books compelled many scholars to use the same volume, and the necessity of alternately leaning forward to read developed a habit of swaying which persisted in later years, when books were more plentiful. The second explanation is rather ingenious; the custom of many scholars studying together from one volume is still in vogue among the Yemen Jews. The first explanation, however, is in harmony with the idea of the verse, "All my bones shall say, Lord, who is like unto thee?" (Ps. xxxv. 10). Jacob ben Asher, the "Ba'al ha-Ṭurim" (14th cent.), in his comment upon the passage "When the people saw it, they removed" ("wa-yanu'u" = "swayed in unison"; Ex. xx. 18), says: "This accounts for the swaying of the body during the study of the Torah, which was received with awe, trembling, and shaking."

Nathan of Lunel (flourished in 1176) quotes from a midrash the custom of swaying at prayer, and adds, "This is the custom of the rabbis and pious laymen in France" ("Ha-Manhig," p. 15b, ed. Goldberg, Berlin, 1855). The custom is mentioned also in Abudarham and in Isserles' notes on Shulḥan 'Aruk (Oraḥ Ḥayyim, 48, 1). R. Jacob Mölln was accustomed at the "'Amidah" prayer "to hold a 'siddur' in the right hand (his left hand, concealed under his mantle, resting against his heart), and to sway his body forward and backward" ("Sefer ha-Maharil," p. 61a, ed. Warsaw, 1874). The author of "Shibbole ha-Leḳeṭ" (p. 10a, ed. Buber) quotes Rashi to explain the custom of raising oneself on tiptoe three times when saying "Holy, holy, holy," at the "Ḳedushshah": it is to symbolize the verse, "And the posts of the door moved [shook] at the voice of him that cried" (Isa. vi. 4); *i.e.*, they shook in awe of YHWH.

Perhaps the most plausible explanation of the swaying of the body is that of Dr. Simon Brainin. It was intended, he thinks, to afford the body exercise during study and prayer, which took up a large portion of the time of a great number of Jews (Brainin, "Oraḥ la-Ḥayyim," p. 126, Wilna, 1883).

Some authorities are opposed to the swaying of the body, especially at prayer. Samuel ha-Nagid (1027-55), the author of "Mebo ha-Talmud," in one of his poems describes the principal and the students of the yeshibah he visited as "swaying trees in the desert" (quoted in "Ha-Miẓpah"; see bibliography). Menahem Azariah di Fano (1548-1620) forbids any motion of the body at the "'Amidah" ("'Asarah Ma'amarot," article "Em Kol Ḥai," § 33, Amsterdam, 1649; *idem*, Responsa, No. 113, Venice, 1600). Another opponent of the custom was Isaiah Horowitz (1555-1630), who said that the swaying of the body may be allowed at the singing of hymns, but not at the "'Amidah," for one should bear in mind that such violent motion would not be tolerated in the presence of even a temporal king (comp. Isa. vii. 2; "Shelah," ed. Amsterdam, 1698, p. 250a).

J. J. D. E.

SWEDEN: Kingdom of northern Europe. The existence of Jews in Sweden in the seventeenth century is vouched for by church records at Stockholm, from which it appears that several Jews had joined the Lutheran Church, a condition at that time imposed upon any Jew who desired to settle in Sweden. In 1681, for example, two Jews of Stockholm, Israel Mandel and Moses Jacob, together with their families, twenty-eight persons in all, were baptized in the German church of that city in the presence of King Charles XI., the dowager queen Ulrika Eleonora, and several high state officials.

Baptism a Condition of Residence.

In 1680 the Jews of Stockholm petitioned the king that members of their race be permitted to reside there without abandoning their creed, but the application was denied because the local consistory had refused to indorse it. On Dec. 3, 1685, Charles XI. ordered the governor-general of the capital to see that no Jews were permitted to settle in Stockholm, or in any other part of the country, "on account of the danger of the eventual influence of the Jewish religion on the pure evangelical faith." In case Jews were found in any Swedish community, they were to be notified to leave within fourteen days.

Permission to Settle.

In the seventeenth century, however, the Jewish question had merely a religious aspect in Sweden, and had not yet assumed the character of a race problem. Through court patronage Jewish merchants were occasionally appointed royal purveyors; and during the warlike reign of Charles XII. (1697-1718) the king usually had one or more wealthy Jews with him in the field, to take care of the paymaster's department of his army. Through their influence permission was obtained (1718) for Jews to settle in the kingdom without the necessity of abjuring their religion. After the death of Charles XII. (1718) the Swedish government was financially embarrassed for a long time, and the royal household was often relieved from pecuniary difficulties by the Jewish merchants of Stockholm, who, as a reward for their accommodations, insisted on the granting of additional privileges to themselves and their coreligionists. As a consequence the concession of 1718 was renewed, and supplemented by royal edicts of 1727, 1746, and 1748, but the permission had reference only to settlement in the smaller cities and rural communities.

In 1782 an ordinance was issued by which the Jews were permitted, on certain conditions, to settle anywhere in the kingdom, and to practise freely the tenets of their religion. It was, however, specified that Jews were ineligible for government positions and for election to the legislative assembly; they were, moreover, forbidden to establish schools for the propagation of their creed, and to combine with their religious services such ceremonies as might possibly cause disquietude in the minds of the general population.

Restricted to Three Cities.

The government was desirous of attracting wealthy Jews to the country, but it was equally careful to keep out itinerant usurers, quite a number of whom had in previous years entered Sweden from Germany. Any foreign Jew who landed in Sweden was accordingly required to report, within eight days of his arrival, to the local authorities, and to produce his passport and a certificate of character, as well as a statement of his purpose in coming to the country. These certificates were issued by the elders of the congregation to which the immigrant belonged in his native country, and had to be verified by the municipal authorities of the place in which the immigrant had last resided. If the certificates were unsatisfactory, the authorities were at liberty to expel the holder; but in case he was admitted he was directed to Stockholm, Gothenburg, or Norrköping. Jews who were residents of the country prior to the promulgation of this ordinance were called upon to present their certificates of character to the proper authorities, together with a statement setting forth in which city they desired to settle and make their living. The ordinance enumerated the different trades the Jews were permitted to follow, and it stipulated also that they should apprentice their sons to Swedish tradesmen in one of the three cities mentioned above. In order to prevent the overcrowding of the mercantile field it was prescribed that no foreign-born Jew should be allowed to start in business unless he possessed at least 2,000 riksdaler (about $800) in cash or negotiable securities; a native-born Jew need have only 1,000 riksdaler.

As to the retail business, the Jews were prohibited from selling victuals, liquor, and drugs, and they were permitted to retail their special articles of food, wine, kasher meat, mazzot, etc., among themselves only. Furthermore, the Jewish retail dealer was not permitted to offer his goods for sale in markets outside the city in which he was located, and he was compelled to conduct his business in open shops and was forbidden to peddle from house to house or in the streets.

The Jews were allowed to establish synagogues in the above-mentioned three cities, and to keep rabbis and other clerical officials. Intermarriages between Jews and Christians were forbidden. For every Jewish marriage celebrated a fee of six riksdaler was to be paid to the orphanage of the royal guards, this stipulation being intended as a compensation to the army for the exemption of the Jews from military service. In order to protect the interests of descendants of immigrant Jews the state ordered that, on the death of a Jew, the elders of the congregation should make an inventory of his estate and submit an account thereof, either to the orphans' court or to the municipal authorities. The Jews, however, had the right to appoint guardians of minors; and a rabbinical court had jurisdiction in inheritance cases. In litigations between Jews and Christians where the facts could not be established except under oath, the Jew might be ordered to take the customary Jewish oath in the synagogue in the presence of the judge. A Jew convicted of perjury became liable to expulsion from the country.

The ordinance of 1782 contained a separate clause referring to "particularly wealthy Jews, or such as are proficient in some trade almost, or quite, unknown in the country." Such persons could, through the Department of Commerce, petition the king for privileges and concessions other than those granted in the general ordinance.

Reactionary Decree of 1838.

After 1782 the Jews gradually secured concession after concession from the government, but those living in Stockholm grew overconfident, and carried their ambitious designs so far that a feeling of indignation arose among the general population against the ambitious Jewish financiers. This aversion to the Jews grew more pronounced as their privileges were more widely extended; and it reached the limit in 1838, when a new ordinance was promulgated which abolished nearly all the former restrictions upon their civic rights (in this ordinance the Jews were, for the first time, designated "Mosaiter," *i.e.*, adherents of the Mosaic faith). As a result a serious uprising took place in the capital; and numerous complaints were presented to the government, denouncing the alleged undue preference shown the Jews at the expense of other citizens. On Sept. 21 of the same year the government was compelled to revoke the new ordinance.

During the following years the book-market was deluged by brochures for and against the "Mosaiter." This controversy between sympathizers and antagonists of the Jews continued until 1840, when the Commons in the Riksdag petitioned the government to reestablish the ordinance of 1782 in its original form. The friends of the Jews tried to show that the petitioners were actuated by religious intolerance, but their adversaries openly declared the question to be one not of religion, but of race. The anti-Semites in the Riksdag endeavored to prove that the Jews had greatly abused the rights and privileges granted them in 1782, and that they had done so at the expense and to the detriment of the native merchants and tradesmen. The efforts to create anti-Jewish sentiment in the Riksdag were, however, unavailing, and at a later session of that body (1853), when public opinion had turned more in favor of the Jews, they were accorded additional privileges.

During the latter half of the nineteenth century the few remaining disabilities of the Jews were removed. By the law of Oct. 26, 1860, they were granted the right to acquire real estate in the rural communities, whereas they had previously been permitted to hold real property in the cities only. On Jan. 20, 1863, another ordinance removed the prohibition against intermarriages between Jews and Christians, which were declared to be legal provided they had been attended by due ceremonies. A later ordinance (Oct. 31, 1873) stipulated that the issue of marriages between members of the Swedish state church and Jews should be brought up in the Lutheran faith. If, however, a pact concerning the religion of their future children had been made in writing by the parents before their marriage, and submitted to the clergyman or other authority who performed the marriage ceremony, such agreement should remain valid.

There are, of course, various privileges which the Jews, like any other non-Lutherans, can not obtain as long as the present constitution of the Swedish kingdom is in force. Thus, they can not become members of the council of state; nor can they, as judges or as members of committees, take part in discussions concerning religious questions. Otherwise they enjoy the same rights and are subject to the same duties as the Swedish citizens of the Lutheran faith.

During the reign of Gustavus III. (1771-92) the Jews of Stockholm invited Levi Hirsch from Alt-Strelitz, Mecklenburg, to officiate as their rabbi. The first Swedish synagogue was located at Köpmantorget (Merchants' Square), Stockholm, in the Sjöberg house. After a few years this place was found to be too small, and the Jews in the capital selected the old auction chamber at Tyska Brunn (German Well), where they worshiped until some years ago, when a synagogue was erected at Vahrendorfsgatan (Vahrendorf street). At present (1905) there are synagogues in all of the larger Swedish cities in which Jews have settled in any considerable number.

According to the statistics of 1890 there were in the entire kingdom of Sweden 3,402 Jews. Since then, however, their number has been considerably augmented, and a conservative estimate places the Jewish population at 4,000.

SWINE: Rendering in the English versions of the Hebrew "ḥazir." The swine is enumerated among the unclean animals (Lev. xi. 7; Deut. xiv. 8); the use of its flesh as food is branded as apostasy (Isa. lxv. 4; lxvi. 3, 17); and the contempt in which the animal was held is expressed in the proverbial use of its name (Prov. xi. 22). The boar is referred to in Ps. lxxx. 13 as the "swine of the woods," *i.e.*, of the thickets along the banks of the Jordan from Jericho to the Sea of Galilee, where it still swarms, being comparatively rare elsewhere in Palestine.

The abhorrence to the swine in later times is illustrated by the endeavor in the Talmud to avoid even mentioning it by name, the expression "another thing" ("dabar aḥar") being used instead. Hence tyrants and heathen mobs used to enjoy the diversion of forcing Jews to eat swine (Philo, ii. 531; II Macc. vi. 18, vii. 1; comp. Josephus, "Ant." xiii. 8, § 2). Not only was the breeding of the swine forbidden (Men. 64b); but to keep it among flocks was prohibited also (B. Ḳ. vii. 7; Yer. Sheḳ. 47c).

The swine is the emblem of filthiness (Ber. 43b). It is the richest of all animals because it can find its food everywhere (Shab. 155b). Breeders of swine are compared to usurers because both grow rich easily and rapidly; for the swine fattens quickly (Ber. 55a).

Among the parts of the swine mentioned as being used are its haunches, which were considered a delicacy; its fat, with which cheeses were embellished; the bristles of its back, which were used as needles; and its excrement, which was employed by tanners (Ḥul. 17a; 'Ab. Zarah 35b; Shab. 90b [Rashi]; Ber. 25a). The swine is one of the three animals which grow stronger with age (Shab. 77b; see Serpent); it is, of all animals, most subject to disease (Ḳid. 49b); and as its intestines most resemble those of man, an epidemic among swine was cause for the ordinance of public prayers and fasting (Ta'an. 21b). Its period of gestation is sixty days (Bek. 8a). The boar is mentioned under the name of "ḥazir ha-bar": it roams in swamps and marshy places (Ḥul. 122a). It crushes its prey, eating its fill, and trampling the rest (Pes. 118b). The Egyptian swine is referred to in Sanh. 33a, 93a. See, also, Leopard.

E. G. H. I. M. C.

SWITZERLAND: Republic of central Europe. Jews were living at Basel as early as 1213, and ten years later the church chattels were pawned with them. There were Jews at Bern in 1259, at St. Gall in 1268, at Zurich in 1273, and at Schaffhausen, Diessenhofen, and Luzerne in 1299. In the last-named year a Jew of Schaffhausen named Solomon owned three houses termed the "Haselstaude"; in 1333 these houses were in the possession of his son Jacob ben Solomon, the "circumciser," who seven years later sold them to the Bishop of Constance (Ulrich, "Sammlung Jüdischer Geschichten in der Schweiz," p. 433). About this time Jews from Alsace, Ulm, Nuremberg, and various cities of southern Germany, and even from France, settled at Neuchâtel, Biel, Vevay, Pruntrut (where many Jewish merchants were living in 1346), Solothurn, Winterthur, Zofingen, and various places in Aargau and Thurgau.

Early Settlers.

The Jews of Switzerland, like those of Germany, were regarded as "Kammerknechte" of the Holy Roman Empire, and were under the immediate protection of the emperor, to whom they paid an annual tribute called the "goldener Opferpfennig"; secondarily, they stood under the protection of the several cities which had acquired the "Judenregal," or right of protecting the Jews and of levying taxes on them. A number of towns admitted the Jews as citizens, Biel being the first to do so (1305). They did not, however, participate in all the rights and duties of the Christian population, their citizenship merely implying that they were under municipal protection during a term of residence limited to a definite period. In several places, including Basel, Bern, Biel, Zurich, Schaffhausen, and Freiburg, they were thus admitted on payment of a certain sum for periods varying from one to ten years. At Basel this settlement tax amounted to between two and twenty gulden a year, at Schaffhausen between eight and ten, and at Zurich between seven and eighty, the amount being fixed according to the value of the property owned by the taxpayer; in case the Jew's privilege of sojourn was prolonged he was obliged to pay between 300 and 400 gulden annually. Foreign Jews were allowed to remain only for a limited time in each city: at Zurich, one day and one night, on payment of one gulden; at Freiburg, four days. Despite the nominal protection involved in the rights of citizenship the Jews were in reality entirely defenseless, and were at the mercy of the city authorities or of the ruling bishops, and the promises made them were kept only so long as self-interest dictated.

Jews' Social Position.

During the Middle Ages the Jews were almost exclusively engaged in money-lending, and they advanced funds to counts and nobles, citizens and peasants, clergymen and magistrates. The customary rate of interest permitted by the authorities was two pfennig weekly per pound (1 pound = 240 pfennig), although the rate was occasionally higher. At Basel the Jews were obliged, at the request of the board of aldermen, to loan the city five pounds for half a year without interest. Money was generally loaned on security, and the Jews were forbidden to take church treasures in pledge, or to advance funds on weapons, armor, ecclesiastical vestments, chalices, or on bloody or wet garments; at Zurich silk in quantities of one pound or more might not be pawned with a Jew.

The Jews of Switzerland were hated and despised, and socially ostracized. They were compelled to wear the so-called Judenhut as a badge, only Jewish physicians, of whom there were several in the country, being occasionally exempt from this restriction. At Freiburg Master Joseph practised from 1356 to 1370, settling in the latter year at Basel, where he was appointed municipal physician at a yearly salary of 25 pounds. He was succeeded in this office by Master Gutleben, who received a salary of 50 pounds. Master Simon, a French Jew, was living at Freiburg in 1402, and Ackin of Vesoul, who was famous for his skill as a physician and surgeon, resided there from 1412 to 1423, when he was called to Bern, where Jewish physicians had been living at even an earlier date. In 1425 Master Joseph, who had been a resident of Zurich in 1423, was called to Luzerne, where the physician Lazarus, who practised at Winterthur also, lived as late as 1518. The majority of the Jewish physicians in Switzerland came from Italy. Even in the seventeenth century the physician Joseph Jacobson, a native of Prague, was practising at Basel and Zurich, and was especially successful in treating cases of calculus (Ad. Steinberg, "Studien zur Gesch. der Juden in der Schweiz," pp. 87 *et seq.*; "Monatsschrift," xi. 351 *et seq.*).

Persecutions.

In the cities of Switzerland, as elsewhere, the Jews were confined to certain streets which were set apart for them, and which they were not permitted to leave during Holy Week. The Jews' street in Bern, in the vicinity of the present Casino, is mentioned as early as the thirteenth century. At Zurich most of the Jews lived in the Brunnengasse (called also Judengasse), which was located outside the city proper. The Jewish quarter at Basel, previous to 1349, was in the Rindermarkt, the houses of the Jews being built on land belonging to the convent of St. Leonard. Their slaughter-house and their synagogue were located there, the latter in a wing of a house called "Zum Alten Safrön"; subsequently this was transferred to a building which even in the nineteenth century retained the name of "Die Judenschul." At Zurich the synagogue was situated opposite the Rindermarkt in the Brunnengasse already mentioned; with the permission of the Bishop of Constance a new synagogue was built in 1383, probably on the site of the old one. The small synagogues previously existing, in which disturbances had been frequent, were closed by the municipal council. The Jews did not have cemeteries for all their communities. The burial-ground at Bern was situated at the end of the Judengasse, and that at Basel, below St. Alban; the latter, however, was taken from the Jews after the persecution of 1294. In 1394 the council of Basel granted the Jews a plot for a new cemetery in the suburb Ze Spitalschüren, near the Spahlenthurm, and permitted them to inter corpses from other places on payment of one gulden for each burial. At Zurich the Jewish cemetery was situated at the Lindenthor, and there also the Jews were permitted to inter bodies from elsewhere, although this privilege was subsequently restricted to certain places. A burial-tax was levied in many cities; at Basel, for example, half a gulden had to be paid for the burial of every resident Jew, and at Zurich one gulden. After the expulsion the tombstones of the Jewish cemeteries at Basel and Zurich were used for repairing the city walls. Ulrich gives several Jewish epitaphs (*l.c.* pp. 38 *et seq.*, 458).

Cemeteries.

There were very few Jewish scholars in Switzerland. Rabbi Moses, who was the author of the so-called "Zürcher Semak" (Zunz, "Ritus," p. 211), lived at Zurich in 1347; and about 1410 the pious Moses Cohen, the father-in-law of R. Jacob Mölln ha-Levi (MaHaRIL, Responsa, Nos. 8, 33), resided at Bern.

The Jews of Switzerland, being almost exclusively engaged in money-lending, were tolerated because of their wealth and were persecuted for the same reason. Whenever the Christian inhabitants were heavily indebted to the Jews a pretext was sought to get rid of the latter, and all kinds of crimes were ascribed to them, including ritual murder, the poisoning of wells, and the desecration of the host. The first Swiss persecution of the Jews took place at Bern in 1294, when they were accused of having cruelly murdered a boy named Rudolf (Ruff). They were accordingly expelled from the city, although they were soon readmitted. Then came the plague of the year 1349, when the Black Death raged throughout Switzerland. At Vevay, Geneva, and neighboring places Jews were broken on the wheel, hanged, and subjected to other persecutions (Hottinger, "Kirchengesch." ii. 168; Ulrich, *l.c.* p. 228).

Further Persecutions.

At Zofingen, where poison was said to have been found in the wells, some Jews were put to the test of "Dümeln" (thumbscrews), whereupon they declared themselves guilty of the charges brought against them. This discovery was then communicated to the people of Basel, Zurich, Freiburg-im-Breisgau, and even of Cologne. The Jews of Basel were burned on an island in the Rhine on Jan. 9, 1349 (not Christmas day, 1348), and their children, who were spared, were baptized. At Zurich, as at Basel, the municipal council endeavored to protect the Jews, but as the latter were accused at the same time of the murder of a boy whose body had been found in the Wolfsbach, the authorities could not restrain the mob, and the Jews were tortured and burned on the eve of St. Matthias, Sept. 21, 1349 (not 1348, as Grätz asserts, "Gesch." vii. 387; see Ulrich, *l.c.* p. 98; Vögelin, "Aus dem Alten Zürich," pp. 62 *et seq.*, Zurich, 1829). The impecunious Eberhard of Kyburg expelled the Jews of Burgdorf, in the territory of Bern, on the night of Feb. 16, 1349, and confiscated their property. At St. Gall, where many Jews lived in the street behind the so-called Brotlaube, some were burned and the others expelled, while at Diessenhofen their houses were forcibly entered and robbed, and they themselves dragged to the stake and burned. Some of them, however, together with coreligionists from Winterthur and probably from other places as well, escaped to the castle of Kyburg, where they were protected by the governor. The cities from which the Jews had fled demanded that their defender, Duke Albrecht of Austria, should have them burned alive by his judges, and threatened that otherwise they themselves would take the necessary steps; a large number of Jews, 330 it is said, were accordingly sent to the stake on Sept. 18, 1349, although some saved their lives by accepting baptism (Ulrich, *l.c.* p. 126; "Monatsschrift," xii. 405). Schaffhausen alone was guiltless of such indiscriminate slaughter, although even there some Jews are said to have been burned alive (Ulrich, *l.c.* p. 209; but comp. Löwenstein, "Gesch. der Juden am Bodensee," p. 141).

Readmission of the Jews.

The object of these persecutions was attained: the promissory notes of the citizens were destroyed, their pledges recovered, and their debts canceled. In view of the high taxes the Jews paid, however, they were soon readmitted to all the places from which they had been expelled. By 1352 they had returned to Zurich, and by 1361 to Basel, which had determined to keep them excluded for a period of 200 years; in 1375 they loaned the municipal council of the latter city the sum of 5,000 gulden. Five years later (1380) they were once more in Bern. In 1401, however, a new accusation of ritual murder led to a repetition of the persecutions. A postilion of the governor had killed the four-year-old son of a councilor, and the charge was lodged against a Jew named Michael Vinelmann, a former resident of Basel, that he had promised the murderer three gulden for the blood of the child. The murderer was broken on the wheel, and the Jew burned alive without trial. The news of the crime was quickly brought to Schaffhausen, where shortly before a similar accusation had been successfully refuted. Several of the Jews of the city fled, but were captured and taken back to Schaffhausen, where they were thrown into a dungeon and terribly tortured. Hot pitch was poured into incisions made in their loins, and the soles of their feet were burned "until the bare flesh could be seen." Thus tortured, they answered every question in the affirmative, whereupon all the Jews living at Schaffhausen were condemned to death. Thirty were burned alive on June 25, 1401, and four weeks later eighteen men and women died at the stake in Winterthur. The Jews of Zurich, however, were protected (Ulrich, *l.c.* pp. 24, 126 *et seq.*, 248; Joseph ha-Kohen, "'Emek ha-Baka," p. 72; "Monatsschrift," xii. 406, xiv. 49 *et seq.*; Löwenstein, *l.c.* pp. 64 *et seq.*, 82 *et seq.*).

Expulsions.

During the Middle Ages the Jews were more oppressed and persecuted in Switzerland than in any other country, but on account of their being indispensable during financial difficulties they were more frequently readmitted into Swiss cities than elsewhere. With marvelous persistence they returned again and again to the cities and villages which they had been ordered to leave. They were banished from the city and canton of Bern in 1427, from Freiburg in 1428, from Zurich in 1436, from Schaffhausen in 1472, from Rheinau (where they were plundered) in 1490, from Thurgau in 1494, and from Basel in 1543. But despite the edict of exile, individual Jews succeeded in gaining readmission to various cities, even in the territories of Zurich and Bern, until the diet of the thirteen cantons in 1622 expelled the Jews forever from the Swiss Confederation. Nevertheless, twenty-four Jewish families were living in the village of Mammern as late as 1643, but after that date they were admitted only by Aargau (which did not join the confederation until 1803), and here they settled especially in the villages of Klingnau, Lengnau, and Endingen.

The emancipation and civil enfranchisement of the Jews of Switzerland were accomplished only after a bitter struggle. The French Revolution, however, ameliorated their condition. In the Great Council of Helvetia (1798–99) the most liberal-minded men of Switzerland, including Escher, Suter, Zimmermann, Herzog, and Secretan, advocated civic equality for the Jews, and attacked the ancient prejudices of intolerance. The first concessions granted them were, however, the result of treaties relating to settlement and commerce negotiated by the Swiss government with foreign powers. The ambassadors of France, England, and the United States insisted that the right of settlement should be granted to all citizens of their respective countries, without distinction of creed. During several decades before 1860, Jews, mostly from France, resided at Geneva and Bern, where they could acquire citizenship, and also at Basel, Neuchâtel, and Waadt. In 1860 the canton of Graubünden repealed all class legislation restricting the settlement of Swiss and foreign Jews; and in 1861 the canton of Zurich, which contained 175 Jews, granted them all civic and political rights, with the exception of naturali-

Emancipation.

zation. Similar measures were adopted by Solothurn and by Schaffhausen, all laws restricting the free settlement of Swiss Jews being repealed by the Great Council in May, 1865; while Thurgau, by a popular vote taken in Jan., 1866, granted the right of free settlement without distinction of creed. All the intercantonal restrictions affecting the Jews were finally removed by the revision of the confederal constitution in 1874, when articles 41 and 48 were stricken out, and religious liberty proclaimed.

Agitation Against Sheḥiṭah.

Notwithstanding the granting of civic equality to the Jews, certain religious customs peculiar to them were still restricted, especially ritual slaughtering, which had been forbidden in Aargau and St. Gall as late as 1867. Under the revised constitution of 1874 the question arose whether this prohibition was not contrary to the spirit of the law granting religious liberty. In 1886 the Aargau Society for the Prevention of Cruelty to Animals demanded that the government prohibit ritual slaughtering; while, a year later, the Jews of Baden petitioned the government to grant permission to all Jewish communities in Switzerland to slaughter according to Mosaic law. The confederal government decided that while such a prohibition might contravene liberty of worship, the regulations issued by the several cantons to prevent cruelty in slaughtering should be upheld. The question was thereupon submitted to a referendum; and by popular vote of Aug., 1893, an article was inserted in the constitution declaring ritual slaughtering illegal throughout Switzerland.

During the last four decades of the nineteenth century the Jewish population of Switzerland became doubled, and now (1905) numbers more than 10,000. In addition to the older communities at Endingen, Lengnau, Baden, Basel, Bern, and Geneva, there is a community at Zurich, the largest in the country, and one at St. Gall, established in 1865. The two last-named communities have new synagogues, their own cemeteries, and, for the last forty years, their own rabbis. Of rabbis at Zurich may be mentioned M. Levin (until 1877), A. Kisch (1877–1892), and M. Littmann (the present incumbent). St. Gall has had two rabbis, H. Engelbert (appointed in 1865) and E. Schlesinger (since 1900). Lucerne, Biel, Burgdorf, Langenthal, Pruntrut, St. Imier, Neuchâtel, Chaux de Fond, Avenches, and Lausanne are smaller congregations with but one official each. A Swiss Jewish home for the aged has been built at Lengnau by voluntary contributions from the Guggenheim brothers of New York. See AARGAU; BASEL; BERN; BIEL.

J. M. K.

SWORD ("ḥereb"; "baraḳ" [poetic form] in Job xx. 25; Greek, *μάχαιρα, ῥομφαία, ξίφος*): The sword hung at the hip from a sword-belt (I Sam. xvii. 39; xxv. 13; II Sam. xx. 8), probably on the left side, Judges iii. 16, 21, notwithstanding. It was kept in a sheath ("ta'ar," I Sam. xvii. 51; "nadan," I Chron. xxi. 27; *θήκη*, John xviii. 11), whence the phrases "heriḳ," "shalaf," or "pataḥ ḥereb" (= "to draw the sword"). Some swords were double-edged (comp. "ḥereb shene piyot," Judges iii. 16; Prov. v. 4), and were used for both cutting (I Sam. xxxi. 4; II Sam. ii. 16; I Chron. x. 4) and thrusting (comp. "hikkah ba-ḥereb" and I Kings iii. 24). There are no detailed descriptions of the various kinds of swords used by the Israelites, but they probably resembled those of Assyria and Egypt, being sometimes straight and sometimes curved, and either long or dagger-shaped and short. The existence of the straight variety is proved by the fact that swords were used for thrusting; and is also implied in the phrase "nafal ba-ḥereb," used of those who commit suicide by this weapon (I Sam. xxxi. 4 *et seq.*). The story of Ehud, who thrust his sword, haft ("niẓẓab"), and all into Eglon's belly (Judges iii. 16–22), shows that short, dagger-like swords were used.

The blade ("lahab") of the double-edged sword was probably straight, and this portion of the weapon seems generally to have been made of iron, sometimes (but rarely) of bronze (comp. I Sam. xiii. 19; Joel iii. 10; Micah iv. 3; Isa. ii. 4); this was also the custom among the Egyptians, as the blue blades in the paintings indicate. The hilt of the sword was made probably of a different material, in accordance with Egyptian and Assyrian usage; probably the hilt afforded, sometimes, an opportunity for artistic workmanship. The word "mekerah" in Gen. xlix. 5 has frequently been compared with *μάχαιρα* and rendered "sword," but this explanation is very doubtful. Originally *μάχαιρα* denoted the Lacedemonian, slightly curved sword used for cutting, having a knife-like blade, a blunt back, and a point turning up toward the latter. The same name was given to any curved saber, in contradistinction to *ξίφος* (the dagger-like sword).

In the Roman period the Jews adopted the short dirk ("sica") used by the Romans, and especially by the gladiators. This weapon, which was concealed in the garments, and which was especially affected by the SICARII, who derived their name from it (Josephus, "Ant." xx. 8, § 10; "B. J." ii. 13, § 3), was only a foot in length, and somewhat curved.

E. G. H. W. N.

SYCAMORE (SYCOMORE [שקמה; *Ficus Sycomorus*]): A medium-sized bushy tree of Syria and Egypt, allied to the common fig. It is often mentioned in the Bible (Amos vii. 14; I Kings x. 27; Isa. ix. 9, 11; Ps. lxxviii. 47; I Chron. xxvii. 28; II Chron. i. 15, ix. 27), and still grows plentifully in the plain along the coast, the Shefelah (comp. the ancient name of the place Haifa, Sykaminon, after the Greek designation of the tree [*συκάμινος*] in the Septuagint and elsewhere). The trees grew freely also in the valley of the Jordan, in the vicinity of Jerusalem, and in Lower Galilee. It was one of the most widely scattered trees of ancient Egypt (comp. Ps. lxxviii. 47; Wilkinson, "Manners and Customs of the Ancient Egyptians," iii. 419); it was more valued there than in Palestine, where its fruit, a small fig not particularly palatable, seems to have been chiefly the food of the common people. Even to-day it is eaten by the poor only (Anderlind, in "Z. D. P. V." xi. 100; Henslow, "The Plants of the Bible," p. 91). In order to make it palatable the fruit must be slit when it is maturing, to let the tart juice flow out (Amos vii. 14). The Hebrews valued the tree chiefly on account of its wood, which is light and very durable. In Palestine it was the common timber (I Kings x. 27; II Chron. i. 15, ix. 27; Isa. ix. 10). In Egypt most of the domestic utensils that have been preserved, as well as the sarcophagi, were carved from this wood.

Beginnings of the Community.

SYDNEY: Capital of New South Wales, Australia. Its congregation dates from 1817, when about a score of Jews formed a ḥebra ḳaddisha, and they obtained permission to bury their dead in a special corner of the general cemetery. Eleven years later prayer-meetings were held in the house of P. J. Cohen. About 1830 the chief rabbi of London, Solomon Herschell, sent Aaron Levi, member of the bet din, to assist in consolidating the congregation; and in 1832 a synagogue was established in a rented room. J. B. Montefiore, who had previously obtained a grant of land from the government for a Jewish burial-place, became the congregation's first president. The first Jewish marriage in Australia, that of Moses Joseph, took place in 1830; and in the following year a certain Rose was engaged as the first minister. He was followed by Jacob Isaacs. The Jews of Sydney then acquired a synagogue of their own in York street, which was opened for divine worship on April 2, 1844. In 1862 A. B. Davis, born in London in 1828, who had been minister at Portsmouth and Kingston (Jamaica), became senior minister of the congregation, serving for no less than forty-one years, during which period he helped to create several of the communal institutions, *e.g.*, the Sabbath-school and the education board. During his incumbency, also, the present synagogue, the handsomest building of its kind on the Australian continent, was built in Elizabeth and Castlereagh streets and dedicated Jan. 26, 1875. In 1905, on his retirement as rabbi emeritus, F. L. Cohen was selected to succeed him.

Charitable Institutions.

Almost a plethora of charitable institutions has arisen in Sydney. The oldest is the Hebrew Philanthropic Society, which was founded in 1833. In 1882 it was converted into a home and styled the "Sir Moses Montefiore Home." Accommodations are provided for about fifteen inmates; meals are furnished to casuals; aid is granted monthly to old men; and general relief is afforded to the poor and needy. The Dorcas Society, whose usefulness is confined entirely to women, was founded in 1840. On similar lines the Help in Need Society was formed in 1898; its operations are more limited. A society that is doing a great amount of good is the Jewish Mutual Aid, founded in 1896 by A. Blashki, Jr. It is purely a loan society, lending at interest sums of not less than £25. The Baron de Hirsch Memorial Aid Society, an institution for the general relief of the poor, was founded in 1896. In 1894, with a view to enlisting the sympathy and help of the young, a society, known as the Jewish Girls' Gild, was formed by S. A. Joseph; and in 1897, through the instrumentality of Henry Harris, another ḥebra ḳaddisha was formed. A year later a ladies' section of the society came into existence under the direction of a Mrs. Samuels. As in most Australian congregations, Sydney possesses a branch of the Anglo-Jewish Association. Since its foundation (1872) this branch has been presided over by A. B. Davis.

Many leading Jews of Sydney have displayed an interest in communal matters, including S. A. Joseph, L. W. Levy, and Charles Collins, M.L.H. The first-named reached New Zealand on the first ship to arrive at that colony from England in the year 1842. Subsequently he settled in Sydney, where he joined Jacob Montefiore and formed the firm of Montefiore, Joseph & Co. For nearly a quarter of a century he was a member of the synagogue board of management. Charles Collins was for many years the leading citizen of the district of Narrabri. He was its first mayor, and he held that position for three successive years. In Parliament he sat as the representative of Namoi from 1885 to 1887 and again from 1890 till his death in 1898. L. W. Levy occupied various official positions, including that of member of the legislative council in 1882. Of the other leading Jews the name of J. G. Raphael must be recorded. Several streets in Sydney perpetuate his memory. From 1872 to 1878 he represented West Sydney in the legislative assembly. In the same body J. J. Cohen was elected a member for Petersham in 1898.

Jews in Public Life.

In no city have the Jews borne a more praiseworthy part in the development of commerce and trade, in the growth of institutions, and in the administration of public affairs than in Sydney. The example set by the Montefiores was followed by other early settlers, including Louis Phillips, P. J. Cohen, and Samuel Cohen, the last of whom was the first Jewish member of the Parliament of New South Wales. The election of George J. Cohen, Richard Gotthelf, and other Jews to the position of president of the chamber of commerce bears testimony to services rendered in the sphere of commerce, while Sigismund Hoffnung and David Cohen were prominent as merchants and philanthropists.

Three Jews of Sydney have attained distinction in the government service; namely, Sir Saul Samuel, Bart., for several years agent-general of the colony in England; Sir Julian Salomons, K.C., who was for a short time chief justice of the colony, and who also held the post of agent-general in London; and H. E. Cohen, one of the judges of the Supreme Court of New South Wales. At the present time (1905) three Sydney Jews are members of the legislative assembly; namely, J. J. Cohen, Daniel Levi, and A. E. Collins. The number of Jews living in Sydney and its suburbs, according to the census of 1901, was 5,137 (2,665 males and 2,472 females), in a total population of 488,382. Intermarriages with members of other religions have been very frequent among the Sydney Jews, about one-fifth of the men having taken wives not of the Jewish faith.

The "Hebrew Standard" has been published for several years in Sydney.

SYENE: Ancient city of Egypt on the Ethiopian frontier in the Thebaid; situated on the eastern bank of the Nile, equidistant from Alexandria and Meroe. In the Bible it is called "Sweneh" (סונה: Egyptian, "Sun"; Coptic, "Suan," whence it may be assumed that the Hebrew name was originally סונ, the ה being a locative suffix). Syene is mentioned as a frontier city of Egypt (Ezek. xxix. 10, xxx. 6); but the combination "migdol Sweneh" (A. V. "tower of Syene") is due to a corruption of the text, as was seen by Jerome (*ad loc.*). The Septuagint accordingly has a place-name, "Magdolon"; so that the passage should read "from Magdolon [the northern frontier of Egypt] to Syene [the southern boundary]." While Jerome refers to a tower still standing there in his time, this was merely a Roman fort. Josephus also alludes to Syene as a frontier city ("B. J." iv. 10, § 5). Neubauer is wrong in asserting ("G. T." p. 419) that coins from Syene are mentioned in the Talmud (Ket. 67b). The entire district is rich in deposits of pink granite called syenite (Pliny, "Historia Naturalis," xxxvi. 8, § 13). The Syrians termed the place "Aswan," the name by which it is known to-day (Assouan). The modern city, however, lies northeast of the ancient Syene.

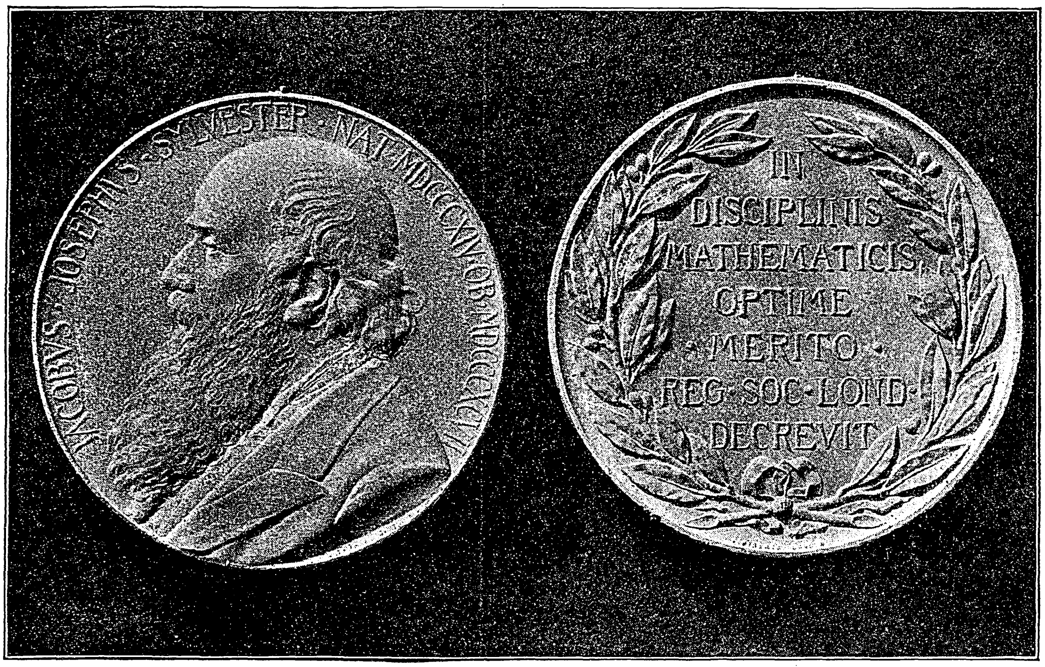
G. S. KR.

SYLVESTER, JAMES JOSEPH: English mathematician and Savilian professor of geometry in the University of Oxford; born in London Sept. 3, 1814; died there March 15, 1897. He was educated at Neumegen's school, at the Royal Institution, Liverpool, and at St. John's College, Cambridge. In 1837 he passed the examination for the mathematical tripos as second wrangler, but was precluded by his Jewish origin from taking his degree and from competing for either of the Smiths' prizes. In 1872, after the passing of the Tests Act, the complete degree of M.A. "propter merita" was conferred upon him. He became professor of mathematics at University College, London (1837); University of Virginia, Charlottesville (1841); Military Academy, Woolwich (1855-70); Johns Hopkins University, Baltimore (1877-83); and at Oxford (1883), where he founded a mathematical society.



THE ROYAL SOCIETY MEDAL ESTABLISHED IN HONOR OF JAMES JOSEPH SYLVESTER.

Sylvester was the founder and first editor of the "American Journal of Mathematics." He received the Royal Medal of the Royal Society in 1860, the Copley Medal in 1880, and the triennial De Morgan Commemoration Medal from the London Mathematical Society in 1887. He was made an honorary D.C.L. of Oxford and LL.D. of Dublin and Edinburgh; was a member of many scientific societies in Europe and the United States; and in May, 1890, was created an officer of the Legion of Honor by the President of the French Republic.

Sylvester was chiefly known as an algebraist, and as the fellow worker of Professor Cayley in the foundation of the doctrine of "invariants." His first printed paper was "On Fresnel's Optical Theory of Wave Surfaces" (in "Philosophical Magazine," 1837). He discovered the proof and extension of Newton's theorem on the imaginary roots of equations, this proof, which was published in the Proceedings of the London Mathematical Society, having been a desideratum since the days of Newton. He also contributed a paper on the reversion of series, solving in its complete form a problem which had been but imperfectly solved by Jacobi. His first paper to attract attention abroad was that in which he gave a new form to Sturm's celebrated theorem on equations. His work on canonical forms is described by Cayley as containing crowds of ideas embodied in the new words "cogredient," "contragredient," "concomitant," "covariant," "contravariant," "invariant," etc., most of which have been adopted into mathematical terminology.

In addition to the foregoing, Sylvester published a theory of versification in a volume entitled the "Laws of Verse" (1870), as well as poetical translations from the German and Latin, and various sonnets and other original pieces in verse.

After his death there was established through the Royal Society a triennial prize and medal in Sylvester's honor. His position as leader in pure mathematics in England in the nineteenth century is challenged only by his colaborer Cayley.

J. G. L.

SYMBOL: A visible representation of an object or an idea. In Hebrew the word denoting symbol is "ot," which in early Judaism denoted not only a sign, but also a visible religious token of the mystic relation between God and man. In the latter sense ancient Israel had two fundamental symbols, each regarded as representing the pledge of the covenant made by God with His people. These were (1) the Sabbath, "a sign for ever" (Ex. xxxi. 17), and (2) circumcision, the token of the covenant made by God with Abraham and his descendants (Gen. xvii. 11; comp. Ex. xiii. 9 and Deut. vi. 8). All other instances of symbolism in the Jewish ritual and in Hebrew poetry may be divided into the following groups: (1) the Temple and its accessories; (2) the sacrifices; (3) the officiating priests; (4) numbers; (5) metals and colors; (6) the Cherubim; (7) festivals and holy days; (8) the visions of the Prophets.

(1) **The Temple** ("ohel mo'ed," "miḳdash," "mishkan"). The state of Israel became a theocratic one as a result of the establishment in its midst of the Temple, the dwelling-place and throne of God and the place of mediation between God and man. On the other hand, the "mishkan" was also interpreted anthropomorphically, as a symbol of man or of human nature, while Philo explained the Tabernacle cosmically ("Vita Mosis," ed. Schwickert, iii. 201–219, Leipsic, 1828; similarly, "Cuzari," ii., §§ 26–28). The two cherubim, the only images in the Temple, were intended to symbolize the concentration of all natural life, and as adjuncts to the throne of God they were the immediate witnesses and representatives of His glory. Philo regarded them as symbolizing the two hemispheres, in contrast to the other cherubim mentioned in the Bible, which represented divine omnipotence ("Vita Mosis," iii. 206). Philippson drew a sharp distinction between the cherubim in the vision of Ezekiel and all others, holding that the former were mere inventions of the imagination, while the latter were known under a definite form and shape ("Israelitischer Bibel," i. 453).

As the Decalogue represented the heart and soul of all the people, so the Ark of the Covenant was set in the Holy of Holies, while the mercy-seat ("kapporet") and the two cherubim, the center of the dwelling of Yhwh, formed the place where the people were cleansed once a year from all their sins; and as the Ark was kept in its particular place simply as a token of God's covenant with Israel, so the Ark, mercy-seat, and the cherubim together symbolized both the place where the holiness of God was revealed, and the place where the people's sins were removed and where they renewed their fellowship with God (Yalḳuṭ Re'ubeni, vi. 2; Maimonides, "Moreh," i. 54, iii. 45; Abravanel on Ex. xl. 34).

The table with the showbread served as a symbol of the acknowledgment of all the people that they owed to God their bread, or, in other words, all that they needed for their sustenance, and that they must extol Him and glorify Him accordingly (Yarḥi and Abravanel *ad loc.*). The candlestick, according to Philo (*l.c.* iii. 207), typified the seven planets, while later exegetes interpreted it as the symbol of the congregation of the people of God (Hengstenberg, "Beiträge," iii. 645). The altar of incense was a symbol of prayer, since the perfume and fragrance which it spread typified the outward manifestation of the inward excellence of some person or thing. In like manner, the altar of sacrifice represented the place where the Godhead was revealed, and accordingly its four horns were symbols of power and dominion; so that he who grasped them signified that he placed himself under the protection of God (I Kings i. 50, ii. 28).

(2) **The Sacrifices:** The burnt offering ("'olah"; Lev. xiv. 20) symbolized perfection and entirety, typifying the general as distinguished from the particular, and the complete as contrasted with the incomplete. It therefore denoted the all-inclusive, and was regarded by Philo as the emblem of absolute dedication to God ("De Victimas Offerentibus," pp. 324–326, Leipsic, 1828). Ibn Ezra, in his introduction to Leviticus, considered it the atonement of the heart for sinful thoughts. The thank-offering ("todah," "zebah," "shelamim"), together with the meal-offering and the wave-offering, typified the relation of fellowship and friendship between God and Israel; and since Yhwh was also the Creator of the universe, the act of turning toward every side symbolized the conviction that God held all the world and the ends thereof. The sin-offering ("ḥaṭṭat") denoted complete atonement (*i.e.*, covering and concealment), and the mercy-seat was accordingly sprinkled seven times. The guilt-offering ("asham") was brought to arouse and maintain a sense of sin; it was divided by Maimonides ("Hilkot Zebaḥim," ix.) into sacrifices for doubtful and for certain guilt,

while Philo (*l.c.*) asserted that the guilt-offering could be brought only by one whose awakened conscience and conviction of guilt had obliged him to accuse himself. The sacrifice for purification from leprosy consisted of two sparrows (Lev. xiv. 3-7); one of them was killed and its blood drained into running water, into which the other bird was dipped, being then liberated, while the leper was sprinkled with the blood by means of a piece of hyssop bound to a stick of cedar-wood by a scarlet cord. This ceremony typified the sinful and unclean past and the sinless future, while the purification by means of cedar-wood and hyssop was intended to indicate that high and low alike must bow to God in their sinfulness (Ḥul. 134b; Lev. R. xvi. 6). The breaking of the calf's neck ("'eglah arufah") was a judicial act symbolizing the punishment of death justly meted out to the murderer, and the washing of the hands typified the purification from crime, while the requirement that the blood from the carcass must be entirely washed away by the brook flowing beneath indicated that guilt was altogether removed. The laying on of hands ("samak") signified, according to Philo (*l.c.*), that the hands performing this act had done no evil, but in the view of Bähr ("Christliche Symbolik des Mosaischen Cultus," ii. 341) it symbolized the devotion of one's self to YHWH even unto death, and hence dedication to death for His sake, the burning of the sacrifice representing the place and the goal of the sacrificial gift.

(3) **The Officiating Priests:** The priests mediated between God and man by offering sacrifices and by other services in the Temple. The chief representative among them was the high priest, who wore eight vestments, twice as many as the others, these garments being symbols of holiness and sanctification from sin. Why, asks the Talmud, is the high priest clothed in white on the Day of Atonement? and it answers: Because the service in the terrestrial Temple must equal that in the heavenly Temple (Yoma 44b). The coat was woven in one piece, in contrast to the idea of "ḳara'" (to rend), the latter being the symbol of mourning; the miter was a blossom, and the priest might not uncover his head ("para'"; Lev. x. 6) lest thereby he should suggest the dropping of blossoms. The breeches symbolized the abolition of the distinction between the heavenly and the mortal part of man, as contrasted with the divine nature, which is absolutely holy and living. The girdle was the emblem of the priest as the servant of the Lord, and it was made in the same four colors as the curtains of the Holy of Holies; it is said to have been 32 ells long, to indicate the windings of the heart (Yer. Yoma 44b; Lev. R. x.). The priests went barefoot to express their sense of the sanctity of the Temple.

The vestments of the high priest were interpreted in three ways. The explanation of Philo is as follows ("Vita Mosis," iii. 209): His upper garment was the symbol of the ether, while the blossoms represented the earth, the pomegranates typified running water, and the bells denoted the music of the water. The ephod corresponded to heaven, and the stones on both shoulders to the two hemispheres, one above and the other below the earth. The six names on each of the stones were the six signs of the zodiac, which were denoted also by the twelve names on the breastplate. The miter was the sign of the crown which exalted the high priest above all earthly kings.

Josephus' explanation is this ("Ant." iii. 7, § 7): The coat was the symbol of the earth, the upper garment emblemized heaven, while the bells and pomegranates represented thunder and lightning. The ephod typified the four elements, and the interwoven gold denoted the glory of God. The breastplate was in the center of the ephod, as the earth formed the center of the universe; the girdle symbolized the ocean, the stones on the shoulders the sun and moon, and the jewels in the breastplate the twelve signs of the zodiac, while the miter was a token of heaven.

Yerushalmi (Men. vii. 1) and Leviticus Rabbah (x.) give the following interpretation: The coat symbolized atonement for murder or for the sin of wearing mixed garments, and the undergarment typified atonement for unchastity. The miter denoted atonement for pride, and the belt for theft or trickery. The breastplate represented atonement for any perversion of the Law, the ephod for idolatry, and the robe for slander.

(4) **Numbers:** The rules governing calculations of dimension and number were not merely external, but represented the divinity as the supreme intelligence. The arrangement of the Tabernacle especially was determined according to numbers. The number three was the symbol of holiness, so that the Holy of Holies occupied one-third and the Holy Place two-thirds of the entire Temple; the tapestries were ten times three ells in length, and there were three vessels each for the altar of burnt offering, the altar of incense, and the Ark. The candlestick had twice three arms (besides the shaft, which also held a lamp), and each arm had three knobs. The blessing of the priest consisted of three sections (Num. vi. 24, 25), and in the invocation of God the word "holy" ("ḳadosh") was repeated thrice (comp. Isa. vi. 3).

The symbolism of the number four was based on the most simple contemplation of the quaternity as found in the universe, which included both heaven and earth (comp. Job xxxvii. 3; Isa. xi. 12; Ezek. vii. 2; I Chron. ix. 24; Dan. viii. 8), and it therefore connoted heaven as the throne of God in contradistinction to earth, thus revealing the glory of God and bearing witness to Him. The Holy of Holies was in the form of a cube, and the Holy Place was a double cube in length. All the vessels of the Temple except the candlestick were square. According to Ezek. i. 26-28, four symbolized the divine revelation, while in the view of Philo it was the number of complete harmony ("De Opificio Mundi," pp. 13-15).

The number five typified semicompletion. The dimensions of the curtain of the Holy of Holies were four ells by five; the altar in the court covered a surface of five square ells; and there were five pillars at the entrance to the Tabernacle.

The number seven was the general symbol for all association with God, and was the favorite religious number of Judaism, typifying the covenant of holiness and sanctification, and also all that was holy and sanctifying in purpose. The candlestick had seven lamps, and the acts of atonement and purification were accompanied by a sevenfold sprinkling. The establishment of the Sabbath, the Sabbatical year, and the year of jubilee was based on the number seven, as were the periods of purification and of mourning (Lev. iv. 6, 17; xxiii. 15; xxvi. 21; Deut. xv. 1; II Kings v. 14; Ps. cxix. 164).

The number ten symbolized absolute completeness. The court to the Tabernacle was ten times ten ells long, and five times ten ells wide, and in the Holy of Holies the Ten Commandments were preserved.

The number twelve, being the product of three and four, typified the union of the people with God. On the table were twelve loaves of showbread, and the breastplate of the priest contained twelve precious stones as emblems of the twelve tribes of Israel, which camped round about the Sanctuary. Twelve victims were sacrificed during the dedication of the Tabernacle (Num. vii. 87). Four times twelve cities were assigned as the dwelling-places of the Levites, and David divided the priests into twice twelve orders (I Chron. xxiv. 7 *et seq.*). See Numbers and Numerals.

(5) **Metals and Colors:** Gold was the symbol of the divine or celestial light, the glory of God (Zech. vi. 11 *et seq.*; Dan. xi. 21), and silver the emblem of moral innocence and of holiness (Isa. i. 22; Jer. vi. 30), while brass typified hardness, strength, and firmness (Lev. xxvi. 19; Jer. xv. 12; Job xl. 18). Brass was a substitute for gold, and iron for silver (Isa. lx. 17). The metals were in general symbols of splendor, and in the Temple a certain classification of them was observed, so that the majority of the vessels in the Holy of Holies were of gold, while those used in the other parts of the Temple were of silver or brass. In mystic passages paradise was similarly pictured: its apartments were made of gold, silver, and crystal, and contained beds, chairs, and candlesticks of gold and precious stones (comp. Eisenmenger, "Entdecktes Judentum," ii. 302, 309).

Salt was expressly declared to be necessary for the completion of the covenant between God and Israel, since it must be included in every meal-offering, in which it takes the place of the blood in the animal sacrifices (Lev. ii. 13; but comp. Ezek. xliii. 24). The heave-offering incumbent on every Israelite was called "berit millat 'olam" (Num. xviii. 19). In the Talmud salt symbolizes the Torah, for as the world can not exist without salt, so it can not endure without the Torah (Soferim xv. 8).

"Tekelet" represented heaven, according to the view of Maimonides ("Yad," Ẓiẓit, ii.); while Abravanel and Ḳimḥi on Ex. xxv. 4 regarded it as the greenish color of the sea, most of the other commentators agree with Maimonides in interpreting it as the symbol of the dwelling-place of Yhwh, and thus as corresponding to the color of the divine revelation (Num. R. xv.). "Argaman" was the symbol of sublimity, of power, and of glory (Isa. lx. 6; Judges viii. 26), so that Alexander Balas robed Jonathan in purple (I Macc. x. 20), which was especially used to designate royal dignity (I Macc. x. 20, xi. 58). "Tola'at" and "shani" ("scarlet," "crimson") symbolized blood, and thus frequently typified life, although this color often designated sin, as well as joy and happiness (Gen. xxxviii. 28; Josh. ii. 18, 21; Jer. iv. 30). Purification from sin was also symbolized by purple (Lev. xvi. 10; Nahum ii. 4 [A. V. 3]). "Shesh" (white), like "buẓ" (byssus), was the symbol of physical and intellectual purity, being the true color of light, without any modification (Cant. v. 10; Dan. iv. 10, 14, 20; Zech. xiv. 5).

(6) See Cherubim.

(7) **Festivals and Holy Days:** The system of the Jewish festivals was ternary, since the year, like the day and the night, was divided into three parts. The first of these festivals was the Passover, which celebrated the rebirth of nature, and thus symbolized the origin of the Jewish people. The yearling lamb typified innocent youth. It was regarded as especially holy, and might neither be boiled nor its bones broken, but had to remain entire. Since anything sour was regarded as unclean, and as the people were obliged to refrain from touching anything unclean during Passover, leavened food was forbidden. Even in the Bible the eating of the bitter herbs typified the miseries of the Egyptian bondage. In the evenings four cups were drained, to symbolize the four world-kingdoms (Yer. Pes. 37c; Gen. R. lxxx.), and those who partook of the Passover meal reclined in token of their liberation from slavery. The Passover was likewise the Feast of the First-Born, since it was regarded as typifying also the death of the first-born in Egypt.

The second festival was that of Shebu'ot, the Feast of Weeks, and as the Passover marked the beginning of a definite period, so Shebu'ot marked its close, the former denoting the day of ripening, and the latter marking the last day of using the scythe, whence it received the alternative names of "'aẓarta" or "'aẓeret shel Pesaḥ" (Pes. 42b). The third of the festivals was the Feast of Sukkot, or the Feast of Tabernacles, originally observed as an autumnal festival, but subsequently as a feast of joy (Lev. R. v. 30), being regarded at a still later time as commemorating the huts occupied by the children of Israel in the desert (Suk. 55b; Men. xiii. 5). The stem of the palm-branch corresponded to the human spine, the leaf of the myrtle to the eye, the willow-leaf to the mouth, and the etrog to the heart, these being the most important members of the body (Lev. R. xxx.). The palm-branches borne by the Jews on the Feast of Tabernacles typified their victories over the heathen (Pesiḳ. 180a; Lev. R. *l.c.*).

There were two other special festivals, the New-Year and the Day of Atonement. The distinguishing feature of the former was the blowing of the shofar, to signify that Israel was remembered in the presence of Yhwh, while the Talmud emphasized the fact that only a straight shofar was blown, to symbolize the straightening of the heart, as distinguished from the usage on fast-days, when a curved shofar was blown, to symbolize the heart writhing in repentance (Yer. R. H. 58d). Abravanel on Lev. xxiii. 24 represented New-Year's Day as the symbol of complete freedom, while Philo regarded the blowing of the shofar on New-Year as a commemoration of the giving of the Law, and as a proclamation of the benefits which the world would derive from the dissemination of righteous laws, as well as the end, set by God, to the strife among the forces of nature ("De Septenario," pp. 43-44). The Day of Atonement was considered the most holy day of the entire year, and was regarded as the symbol of the complete atonement of the people and of their absolution from their sins (comp. the various articles on the festivals).

(8) **The Visions of the Prophets:** Jeremiah beheld an almond-tree as a token of the speedy fulfilment of the word of God (play on "shaḳed" in Jer. i. 11), and Amos saw a basket of summer fruit as a symbol of the approaching end of Israel (play on "ḳayiẓ" in Amos viii. 1). Ahijah the Shilonite tore Jeroboam's mantle into twelve pieces, to typify the division of the kingdom of Israel (I Kings xi. 30), and Zedekiah made horns of iron to encourage Ahab to engage in war with Ramoth-gilead (I Kings xxii. 11). King Joash, at the command of the prophet Elisha, shot arrows from the open window into the air, to symbolize the destruction of his enemies (II Kings xiii. 15-19). Isaiah walked naked and barefoot to show how the Egyptians and Ethiopians would be treated when taken captive by the Assyrians (Isa. xx. 2), while Jeremiah wore a yoke upon his neck to induce the nations to submit to the King of Assyria (Jer. xxvii. 2-4, 10-12). Ezekiel was commanded to inscribe the names of certain tribes upon separate pieces of wood, to show that God would reunite those tribes (Ezek. xxxvii. 15 *et seq.*; comp. Isa. vi.; Ezek. i.; Dan. vii.).

Miscellaneous Symbols.

The following symbolic acts may also be mentioned: the dedication of the priest by sprinkling his ears, hands, and feet with blood, since they were the members which performed the most important functions; the wearing of fringes on the garment, since they typified the word of the Law, the liberation from Egypt, the fulfilment of all the commands of God, and the warning against idolatry and other sins; and the prohibition of a garment of divers materials, as a symbol of the commandment not to trespass against the divine order of nature. The presentation of the shoe was taken to symbolize the transferring of one's rights to another (Ruth iv. 7); at weddings the bride was sprinkled with grains of wheat as a symbol of fruitfulness (Ket. ii. 1).

Seals and gems of the sixth and seventh centuries B.C. likewise contain symbolic figures, although their meaning is no longer clear. Thus, a steer facing to the right appears on the seal of Shemariah, son of Azariah, and the seal of Nathan, son of Abadiah, has ibexes and deer above and below the name, either as a symbol of some Syrian goddess or to show that the owner of the gem was fond of hunting. The seal of Shebaniah, son of Uzziah, bears a man with a large stick in his right hand, while the reverse shows butterflies above and below the legend.

The coins of the time of Simon Maccabeus have an almond-blossom to symbolize the priesthood of Aaron, and other coins of the same period bear a lulab and an etrog, which are difficult to explain. Most of the coins of the time of John Hyrcanus show two interlaced horns as a symbol of power, while the rulers of the house of Herod had ships, helmets, Syrian shields, and grapes engraved upon their coins. A coin of Agrippa I. bears two clasped hands as a token of his friendship with Claudius. The coins struck during the first revolution present grapes, the lyre, and the palm.

The symbolism on Jewish tombstones is very simple, the same emblems appearing on most of them. Two hands with outspread fingers indicated that the dead man was descended from priestly stock, and a jug was carved on the tombstones of the Levites as an emblem of the priest who washed his hands before he pronounced the blessing. Other gravestones show a tree with branches either outspread or broken off, symbolizing the death of a young man or an old man respectively; or they have a cluster of grapes as an emblem of Israel. The Magen Dawid occurs frequently, and an erect female figure was carved on the tombstone of a virgin, to typify the life which rises upward. Most frequently, however, the figures symbolized the name of the deceased, as the figure of a lion for Loeb, a wolf for Benjamin, and a rose for the name Blume.

Influence on Christian Symbols.

The influence of Judaism upon Christian symbolism as early as the second and third centuries C.E., is apparent both in painting and in sculpture, the most frequent motives being those which occur in the Mishnah as formulas for prayer on fast-days. The prayer beginning with the words "Mi she-'anah," which was included in the seliḥah at an early date, was adopted in the Christian ritual as the litany "Libera domine," and this litany was figuratively used in a certain sequence as a symbol, for the sacrifice of Isaac was regarded as a symbol of the crucifixion of Jesus, since the primitive Church considered Isaac the prototype of Jesus, and the act of sacrifice emblemized the death on the cross; Abraham was represented as the symbol of the power of faith and Isaac as the sacrificed redeemer. The ascension of Elijah was believed to typify the ascension of Jesus, who was regarded by Christian symbolism as an analogue to Elijah, although this ascension was also taken as a type of the general resurrection from the dead. Job sitting among the ashes was the symbol of patience and of the power of resistance of the flesh; and Hananiah, Mishael, and Azariah in the fiery furnace typified steadfastness in persecution and faith in the aid of God. The sarcophagi, moreover, contained representations of the fall of man, Noah and the ark, scenes from the life of Moses in three variations, Joshua, David, and Daniel.

In later times pictorial symbolism gradually gave place to verbal. Originally there were three kinds of such verbal symbolism: "peshaṭ," referring to the past or the changeable; "derash," to the present, with the interests and emotions expressed by it; "sod," to the future, or to the investigation of the eternal. Subsequently, and up to the eleventh century, a fourth form of symbolism was used, namely, "remez," or the symbolizing of the supernatural. These four kinds were designated either as "the four legs of the table of the Lord" or as the four rivers issuing from paradise. The literal interpretation was said to express the facts, the allegorical interpretation to teach the doctrine, the moral interpretation to teach right living, and the mystical interpretation to indicate the order of the supernatural world of spirit.

In recent times Zionism has encouraged pictorial symbolism by adopting an erect lion for its escutcheon, in symbolic interpretation of Gen. xlix. 9. Other examples are the famous window in the B'nai B'rith Lodge of Hamburg, where Theodor Herzl is represented as Moses "the liberator," and the symbolic illustrations and cover-designs of the painter Lilien. J. S. O.

SYMMACHUS: Translator of the Bible into Greek; flourished at the end of the second or the beginning of the third century of the common era. According to Eusebius and Jerome, he was an Ebionite and consequently a Christian; according to Epiphanius, a Samaritan who embraced Judaism. Geiger has tried to identify him with the tanna Symmachus ben Joseph; but this view has been generally regarded as unfounded. Symmachus' translation of the Bible won such quick recognition and was adopted so rapidly that Origen incorporated it in his Hexapla. Field has made the most complete collection of the fragments which have been preserved in the Hexaplar manuscripts. New material has been furnished of late years by the Hexaplar discovery of Mercati, a complete publication of which has yet to be made, and by the small Hexaplar fragment discovered and published by Taylor. In contrast to the Septuagint, to Aquila, and to Theodotion, Symmachus writes good Greek, comparatively free from Hebraisms; and he strives above all to reproduce clearly the sense of the original (comp. Field, "Origenis Hexaplorum," etc., xxx. *et seq.*). He has, therefore, only seldom transcribed in Greek letters Hebrew words which were difficult to translate, as his predecessors often did.

Some uncertainty still prevails as to Symmachus' relationship to Aquila and Theodotion. Swete holds it probable that when Symmachus made his translation he had before him the work of both of these translators. In Symmachus' variations from the Septuagint, Geiger finds unmistakable traces of Jewish tradition in that he takes into account the dogmatic convictions of Judaism at the time (avoiding anthropomorphisms, referring to resurrection and everlasting life, softening harsh expressions), follows rabbinic interpretations in other ways also, and adopts for many words in the Bible a meaning which occurs only in the later Hebrew. This does not contradict the fact that he was an Ebionite—a fact of which Harnack has furnished important proofs, even tracing back to him the name of the Ebionite sect of the Symmachians. Jerome often made use of the translation of Symmachus, for which compare Field, *l.c.* xxxiv.–xxxv., in which work also (xxxvi.–xxxvii.) an alleged second recension of his translation is mentioned.

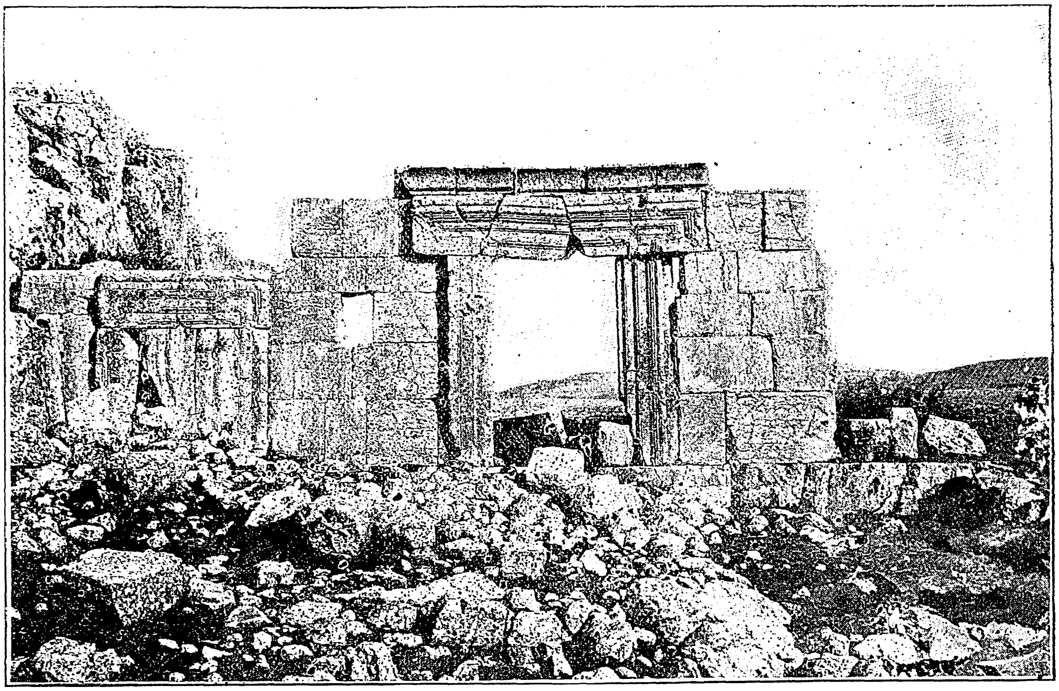
SYNAGOGUE: The origin of the synagogue, in which the congregation gathered to worship and to receive the religious instruction connected therewith, is wrapped in obscurity. By the time it had become the central institution of Judaism (no period of the history of Israel is conceivable without it), it was already regarded as of ancient origin, dating back to the time of Moses (see Yer. Targ., Ex. xviii. 20 and I Chron. xvi. 39; Pesiḳ. 129b; Philo, "De Vita Mosis," iii. 27; Josephus, "Contra Ap." ii., § 17; Acts xv. 21). The "house of the people" (Jer. xxxix. 8 [Hebr.]) is interpreted, in a midrash cited by Rashi and Ḳimḥi (*ad loc.*), as referring to the synagogue, and "bet 'amma," the Aramaic form of this phrase, was the popular designation in the second century for the synagogue (Simeon b. Eleazar, in Shab. 32a). The synagogue as a permanent institution originated probably in the period of the Babylonian captivity, when a place for common worship and instruction had become necessary. The great prophet, in the second part of the Book of Isaiah, in applying the phrase "house of prayer" to the Temple to be built at Jerusalem (Isa. lvi. 7 and, according to the very defensible reading of the LXX., also lx. 7), may have used a phrase which, in the time of the Exile, designated the place of united worship; this interpretation is possible, furthermore, in such passages as Isa. lviii. 4. The term was preserved by the Hellenistic Jews as the name for the synagogue (προσευχή = οἶκος προσευχῆς; comp. also the allusion to the "proseucha" in Juvenal, "Satires," iii. 296).

Established During the Exile.

After the return from the Captivity, when the religious life was reorganized, especially under Ezra and his successors, congregational worship, consisting in prayer and the reading of sections from the Bible, developed side by side with the revival of the cult of the Temple at Jerusalem, and thus led to the building of synagogues. The place of meeting was called "bet ha-keneset," since an assembly of the people for worship was termed a "keneset"; the assembly described in Neh. ix.–x. was known in tradition as the "great assembly" ("keneset ha-gedolah"; see SYNAGOGUE, THE GREAT). The synagogue continued to be known by this name, although it was called also, briefly, "keneset" (Aramaic, "kanishta"), and, in Greek, συναγωγή.

The synagogues of Palestine are first mentioned in Ps. lxxiv., in which the words "mo'ade el" (verse 8) were interpreted as meaning "synagogue" as early as Aquila, although strictly it connotes merely a place of assembly (comp. "bet mo'ed," Job xxx. 23; "bet wa'ad," Ab. i. 4). Neither of the first two books of the Maccabees, however, mentions the burning of the synagogues of the country during the persecutions by Antiochus. The synagogue in the Temple at Jerusalem is mentioned in halakic tradition (see Yoma vii. 1; Soṭah vii. 7, 8; Tosef., Suk. iv.). According to one legend, there were 394 synagogues at Jerusalem when the city was destroyed by Titus (Ket. 105), while a second tradition gives the number as 480 (Yer. Meg. 73d *et al.*). Other passages give the additional information that the foreign Jews at Jerusalem had their own synagogues. Thus there was a synagogue of the Alexandrian Jews (Tosef., Meg. ii.; Yer. Meg. 73d); this synagogue is mentioned in Acts vi. 9 (comp. ix. 29), which refers also to the synagogues of the Cyrenians, Cilicians, and Asiatics. Josephus mentions both the synagogue built by Agrippa I. at Dora ("Ant." xix. 6, § 3) and the great synagogue at Tiberias, in which, during the war against Rome, political meetings were once held on the Sabbath and the following days ("Vita," § 54). The synagogue of Cæsarea rose to importance during the inception of this uprising (Josephus, "B. J." ii. 14, §§ 4-5); it was called the "revolutionary synagogue" ("kenishta di-meradta") as late as the fourth century (see Grätz, "Gesch." 2d ed., iv. 313).

Spread of Synagogues.

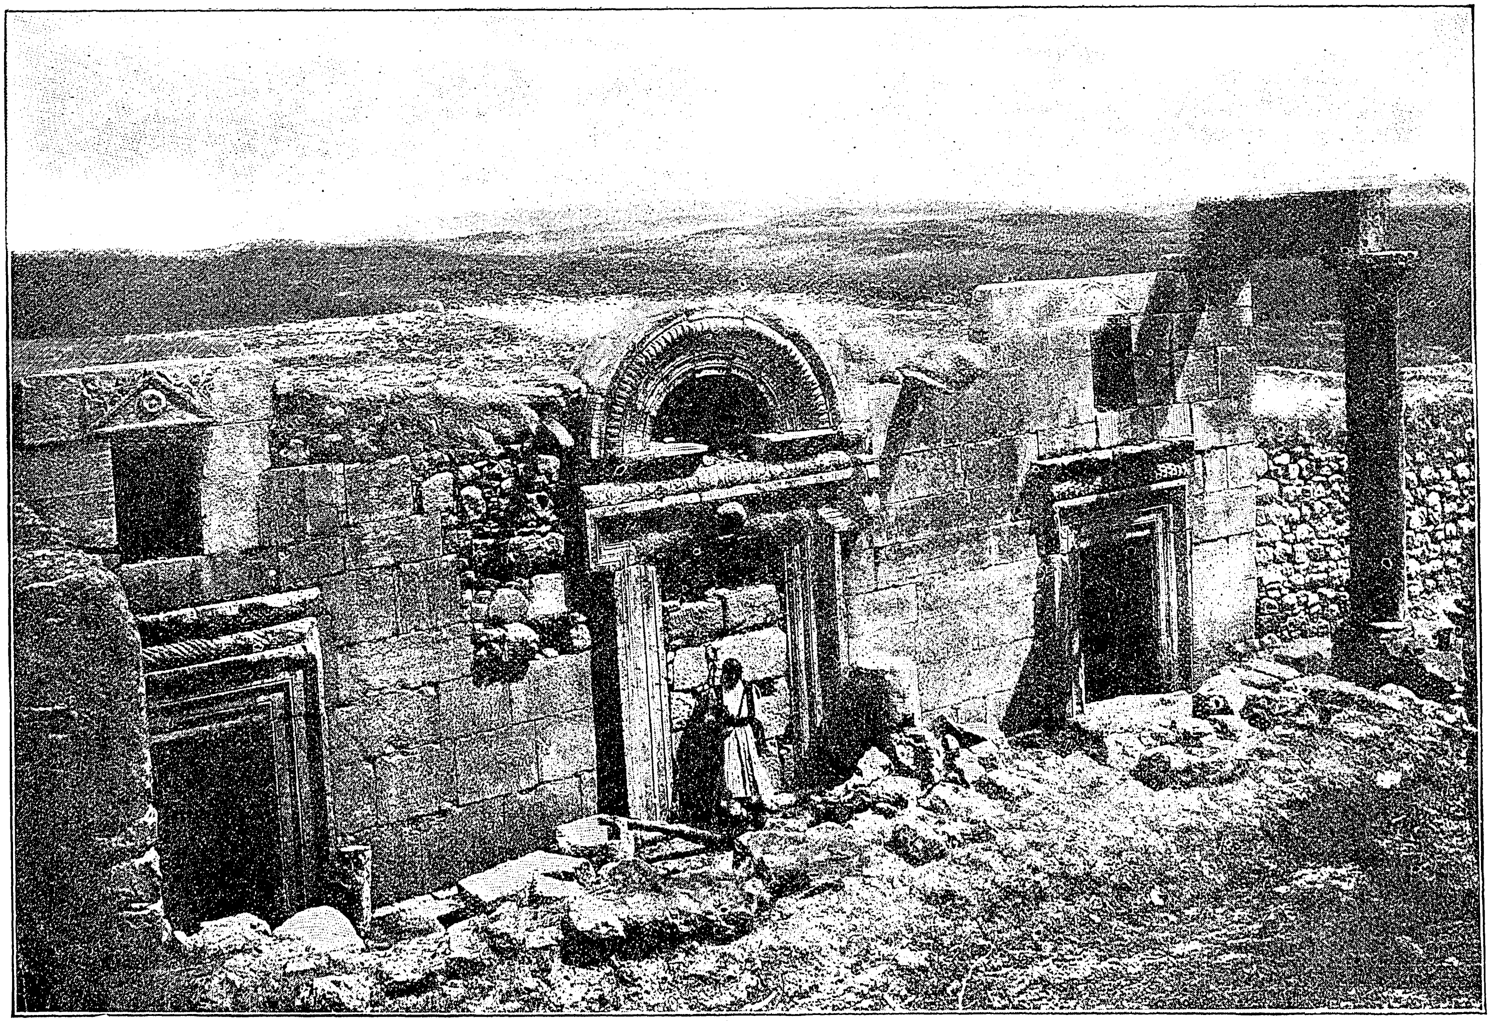


RUINS OF AN ANCIENT SYNAGOGUE AT MERON.

(From a photograph by the Palestine Exploration Fund.)

The evangelists refer to the synagogues of Nazareth (Matt. xiii. 54; Mark vi. 2; Luke iv. 16) and Capernaum (Mark i. 21; Luke vii. 5; John vi. 59) as places where Jesus taught. There are but few details given in traditional literature concerning the other synagogues of Palestine, although mention is made of those in Beth-shean (Scythopolis; Yer. Meg. 74a), Cæsarea (Yer. Bik. 65d; see above), Kefar Tiberias (Pesiḳ. R. 196b), Kifra, or Kufra (Yer. Ta'an. 68b; Meg. 70a), Lydda (Yer. Sheḳ. v., end), Maon (Shab. 139a; Zab. 118b), Sepphoris (Pesiḳ. 136b [the great synagogue]; Yer. Ber. 9a; Yer. Shab. 8a [the Synagogue of the Babylonians]; Yer. Ber. 6a [the Synagogue of the Vine]), Tiberias (Ber. 8a, 30b [thirteen synagogues]; Yer. Ta'an. 64a [the Synagogue of the βουλή]; 'Er. x. 10), and Ṭibe'in (Tosef., Meg. ii.).

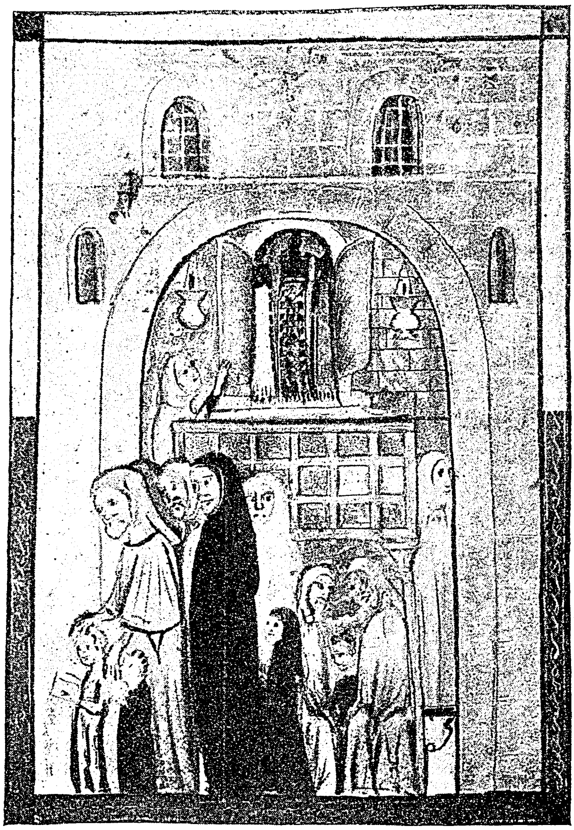
The earliest document relating to the settlement of the Jews in Egypt and their adoption of Hellenic customs was discovered in 1902. This is a marble slab with the following inscription in Greek: "In honor of King Ptolemy and Queen Berenice, his sister and wife, and their children, the Jews [dedicate] this synagogue" (προσευχή). The stone was found in the ancient Shedia, 20 kilometers from Alexandria; the king mentioned on it is Ptolemy, according to Th. Reinach (in "R. E. J." xlv. 164). Similar dedicatory inscriptions have been discovered in Lower Egypt, one of them declaring that the king had bestowed the rights of asylum (ἄσυλον) on the synagogue (*ib.*



Ruins of an Ancient Synagogue at Kafr Bir‘im, the Most Perfect Remains of a Synagogue in Palestine.

(From a photograph by the Palestine Exploration Fund.)

xlv. 163). In III Macc. vii. 20 there is an account of the founding of a synagogue at Ptolemais (on the right bank of the Baḥr Yusuf) during the reign of King Ptolemy IV. Philo expressly states ("De Legatione ad Caium," § 20) that the large population of Alexandria had many synagogues in various quarters of the city, and he says also (*ib.*) that when the Alexandrian synagogues were destroyed the same fate was shared by the shields, golden wreaths, stelæ, and inscriptions which in honor of the emperors had been set up in the open halls (*περιβολαί*) of the courts of the synagogues (Philo, "In Flaccum," § 7). The great synagogue of Alexandria, which was destroyed during the reign of Trajan, was especially famous, its size and splendor being made the subject of glowing descriptions in the schools of Palestine and Babylon (Suk. 51a; Tosef., *ib.* iv.; Yer. Suk. 55a).



Illuminated Representation of a Synagogue.

(From the Sarajevo Haggadah of the fourteenth century.)

In Syria the great synagogue of Antioch was famous; to it, according to Josephus ("B. J." vii. 3, § 3), the successors of Antiochus Epiphanes presented the bronze votive offerings which had been taken from Jerusalem. Its site was occupied in the fourth century by a Christian basilica dedicated to the Maccabean martyrs (the seven brothers mentioned in II and IV Maccabees [see Cardinal Rampolla in "Rev. de l'Art Chrétien," 1899, p. 390]). The apostle Paul preached in various synagogues in Damascus (Acts ix. 20). In the account of his journeys through Asia Minor, Macedonia, and Greece he mentions synagogues at Antioch in Pisidia, Iconium, Ephesus, Philippi, Thessalonica, Berea, Athens, Corinth, and Salamis (several synagogues; Acts xiii. 5, 14; xiv. 1; xvi. 13; xvii. 1, 10, 17; xviii. 4, 7).

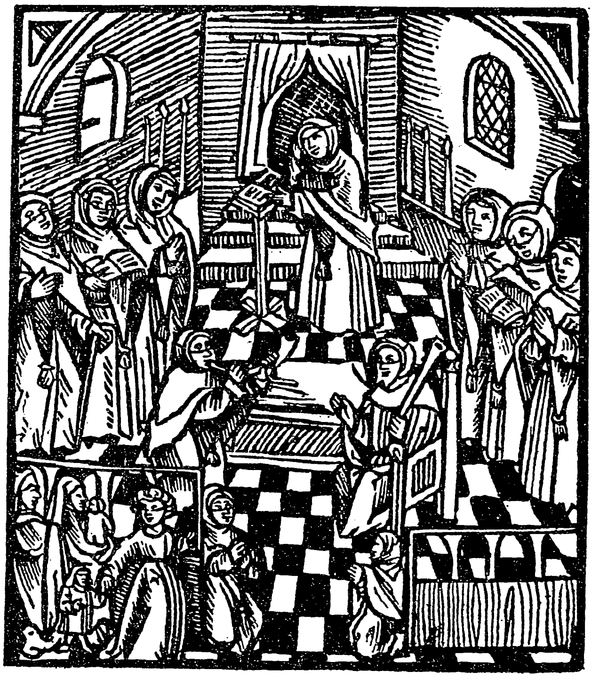
Philo speaks of the synagogues of the capital of the Roman empire at the time of Augustus ("De Legatione ad Caium," § 23); and the inscriptions show that Rome contained a synagogue named in honor of the emperor Augustus, another called after Agrippa, and a third after a certain Volumnus. One synagogue received its name from the Campus Martius, and one from the Subura, a populous quarter of Rome; while another was termed "the Synagogue of the Olive-Tree." The inscriptions refer even to a synagogue of "the Hebrews," which belonged probably to a community of Jews who spoke Hebrew or Aramaic. The synagogue of Severus at Rome is mentioned in an ancient literary document dealing with the variant readings in a copy of the Pentateuch (see Schürer, "Gesch." 3d ed., iii. 44 *et seq.*; Berliner, "Gesch. der Juden in Rom," i. 62 *et seq.*).

The ruins of a synagogue were discovered in 1883 at Hammam-Lif, near Carthage. A Latin inscription was found in the outer court, while a mosaic with an inscription, and picturing various animals and the seven-branched candlestick, was set in the floor of the synagogue itself ("R. E. J." xiii. 45-61, 217-223). Remains of ancient synagogues, some of which date from the second or, perhaps, even from the first century of the common era, have been found in various localities of northern Galilee, in the vicinity of Lake Merom, and on the shores of Lake Gennesaret (see Renan, "Mission de Phénicie," pp. 761-783). The best preserved of these ruins are those of Kafr Bir'im; while those of Ḳasyun contain a Greek inscription from the reign of the emperor Septimius Severus. These Galilean ruins are especially important as showing the architecture of the ancient Palestinian synagogues, which bears general traces of Greco-Roman influence, although it has not surrendered its individuality (see Schürer, *l.c.* ii. 462). It may be noted here that the great synagogue of Alexandria is designated as *διπλῆ στοά* in the description of it mentioned above, and that a haggadist of the fourth century applies the same term to the chief synagogue of Tiberias (see Midr. Teh. on Ps. xciii.; Bacher, "Ag. Pal. Amor." iii. 672).

Only a few synagogues of the Babylonian diaspora are mentioned by name in the Talmud. Those situated in Shaf we-Yatib, near Nehardea, and in Huẓal (Meg. 29b) were believed to be the oldest on Babylonian soil and were said to have been founded at the time of the Captivity. In the third century there was a synagogue named in honor of

Daniel ('Er. 21a), and in the following century there was a synagogue of "the Romans" at Maḥoza, which belonged probably to Jews from the Roman empire (Meg. 26b). In Babylonia the synagogues were frequently situated outside the cities, in many cases at a considerable distance from them (see Ḳid. 73b; Shab. 24b; comp. Tan., ed. Buber, "Ḥayye Sarah," p. 7), this custom, apparently, being due to the fact that after the destruction of the synagogues by the Persians during the Sassanian period the Jews were forbidden to rebuild within the city limits (see Hastings, "Dict. Bible," iii. 638).

The synagogue and the academy were the two institutions which preserved the essence of the Judaism of the Diaspora and saved it from annihilation. As the place of public worship, the synagogue became the pivot of each community, just as the Sanctuary at Jerusalem had been the center for the entire people. Ezek. xi. 16, "Yet will I be to them as a little sanctuary," was rightly interpreted, therefore, to mean that in its dispersion Israel would retain the synagogue as a sanctuary in miniature in compensation for the loss of the Temple (Targ. *ad loc.*), and the community crystallized around the synagogue, the only possible organization for the Jews of the Diaspora. Synagogal worship, therefore, however much it might vary in detail in different countries, was the most important visible expression of Judaism, and the chief means of uniting the Jews scattered throughout the world; while the academy, in like manner, guaranteed the unity of the religious spirit which animated the synagogue. The synagogue, consequently, is the most important feature of the Jewish community, which is inconceivable without it.



Interior of a Sixteenth-Century Synagogue.
(From a woodcut of 1530.)

Importance of the Institution.

A history of the synagogue is possible only in so far as Jewish history is considered from the point of view of this important institution. A distinction may be drawn, however, between its internal and its external history, the former dealing with the changes in the cult connected with the synagogue and with its different institutions, and the latter treating of the fortunes of the followers of Judaism and of their social and cultural status in so far as these influenced the synagogue.

In sketching briefly the external history of the synagogue, it is, in a sense, ominous that the first allusion to it (in Ps. lxxiv.) should be to its destruction. For nearly fifteen hundred years razed synagogues typified the fortunes of the Jewish communities, especially in Christian countries. In the Roman empire, during the fourth century, Theodosius the Great was frequently obliged to check the excessive zeal of the Christians, who burned and plundered synagogues or transformed them into churches (Grätz, "Gesch." 2d ed., iv. 385). His son Arcadius likewise was compelled to take stringent measures against the proposed destruction of synagogues in Illyria in 397. Theodosius II. (408–450), however, expressly forbade the Jews to build new synagogues; and when the Christians of Antiochia seized certain Jewish places of worship, the emperor, although he at first commanded their restoration, was later persuaded by St. Simeon Stylites to revoke the edict.

In Medieval Times.

Eight years before (415), the Christians of Alexandria, instigated by Bishop Cyril, had confiscated the synagogue there and forced the Jews to emigrate, while at Constantinople the great synagogue was dedicated as the Church of the Mother of God, probably during the reign of Theodosius II. When the victories of Belisarius subjugated northern Africa to the Byzantine empire, Justinian commanded (535) that the synagogues should be transformed into churches. During the reign of Theodoric the Great the Christian populace of Rome burned the synagogue; but although he commanded the Senate to punish those who had done so, and though he permitted the Jews of Genoa to repair theirs, he allowed neither the building nor the decoration of synagogues elsewhere. Pope Gregory the Great was noted for his justice toward the Jews; yet he was unable to restore the synagogues that had been taken from them at Palermo by Bishop Victor and dedicated as churches, although he obliged the bishop to pay for them. During the Merovingian period a synagogue at Orleans was destroyed by the mob, and the Jews were unable to induce King Guntram to permit it to be rebuilt (584). The epoch of the Crusades was initiated by "the liberation of Jerusalem," when the victorious crusaders drove the Jews into a synagogue and cremated them there (1099). In France, Philip Augustus commanded in his edict of expulsion, dated 1181, that the synagogues should be transformed into churches, and at the coronation of King Richard I. eight years later the synagogues of London were destroyed by the crusaders. When Philip the Fair expelled the Jews from France, in 1307, the synagogues were either sold or given away, one of those in Paris being presented by the king to his coachman; Louis X. restored them when the Jews were recalled in 1315. At the time of the Black Death (1349) the entire community of Vienna sought death in the synagogue in order to escape persecution. In 1473 the Jews were expelled from Mayence and their synagogue dedicated to Christian worship. Two decades later all the Jews were expelled from Spain, their synagogues were turned into churches and convents, and the magnificent synagogue at Toledo, built in the fourteenth century by the statesman Samuel Abulafia, became the Church de Nuestra Señora de San Benita (or del Transito), still existing as a monument to the former splendor of the Jewish culture of Spain.

(From an old print.)

Synagogues in Spain.

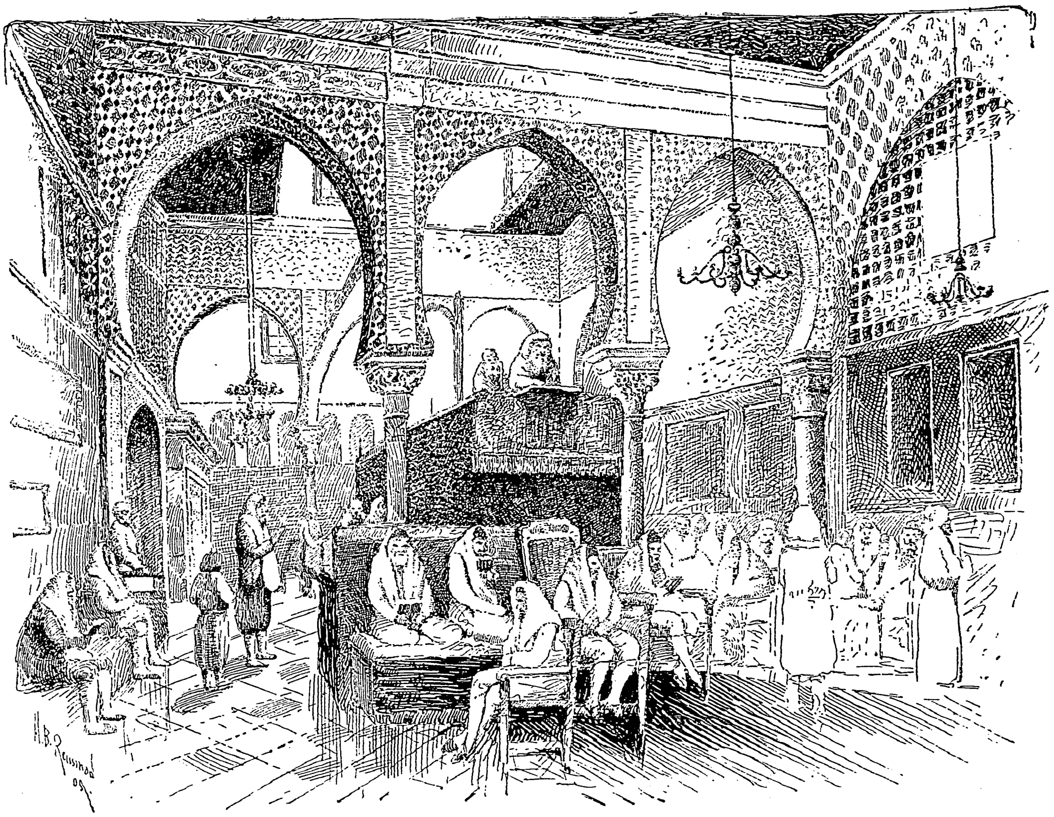
The following information regarding transformed synagogues still existing in Spain is given by Kayserling: In the Calle de la Sinagoga in Toledo there is, in addition to the former synagogue of Samuel Abulafia, the great synagogue built in the reign of Alfonso X., now the Church of Santa Maria la Blanca, a name given it by Vicente Ferrer in the early part of the fifteenth century, when it was dedicated. Both these buildings were restored in the last decade of the nineteenth century, after being closed as churches and declared to be national monuments. One of the large synagogues of Seville was transformed into the Church of S. Bartolomé in 1482, and is now one of the finest in the city; its Hebrew inscriptions were seen by Rodrigo Caro, the author of "Antiguedada de Sevilla," in 1630. The old synagogue at Segovia, burned in 1899, was dedicated as the Church of Corpus Christi (see "R. E. J." xxxix. 209–216). A church at the entrance to the ghetto of Saragossa is said to have been a synagogue; but there are no documents to verify this statement, although the style of architecture supports it. On the synagogue discovered by Fidel Fita under the name of the Church of Santa Quiteria, at Cordova, see "R. E. J." ix. 157, x. 245.

When the Jews of Ratisbon were expelled in 1519, their synagogue, which was built of freestone, was demolished by the citizens (even the nobles and the bishop taking part in the work of destruction), and a church was erected on the site. The intention of Ferdinand I. of Austria to transform the synagogues of Prague into churches (1557) was not executed, and it was reserved for Leopold I., another member of the house of Hapsburg, to issue the last general order to this effect recorded in history. When the Jews were expelled from Vienna, in 1670, a church was built on the site of their demolished synagogue.

In Islam.

These episodes in the history of the synagogue in Christian countries have had very few parallels in Mohammedan lands, although the rule of Islam also began with an edict against the synagogue. It was decreed in the "pact of Omar" (see Jew. Encyc. vi. 655, *s.v.* Islam) that in those countries which should be conquered no new synagogues might be built, nor old ones repaired. The calif Al-Mutawakkil confirmed this decree in the ninth century, and commanded all synagogues to be transformed into mosques. The Egyptian calif Al-Ḥakim (d. 1020) also destroyed synagogues, and many were razed in

Africa and Spain by the fury of the Almohades (after 1140). The great synagogue of Jerusalem was destroyed in 1473, although the Jews were soon permitted to rebuild it. In eastern Mohammedan countries the names of Biblical personages or of representatives of tradition (*e.g.*, a tanna or amora) were given to many synagogues. The following examples are taken from Benjamin of Tudela ("Itinerary"), from the list of tombs compiled for R. Jehiel of Paris (1240), and from a similar list entitled "Eleh ha-Massa'ot"; the two last-named sources are appended to Grünhut's edition of Benjamin of Tudela (pp. 140-160). Some examples are found also in Pethahiah's itinerary, and in Sambari's chronicle of the year 1682, printed in Neubauer, "M. J. C." i. In the following list the name "Sambari" precedes the page numbers of citations from this latter source; all other references are to the pages of Grünhut's edition of Benjamin of Tudela's "Itinerary."

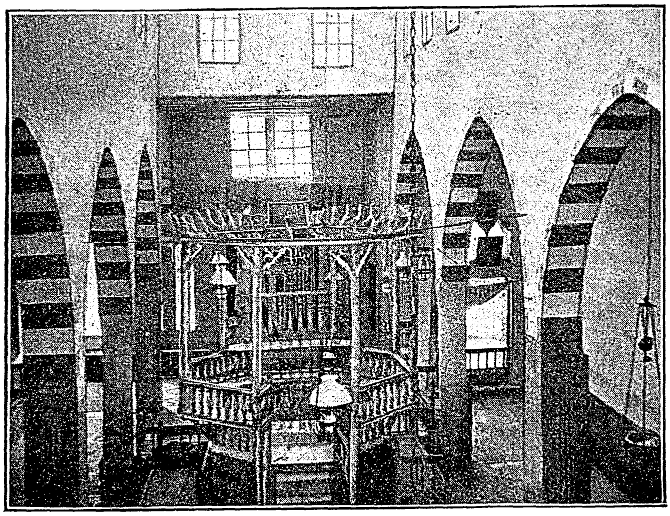


Interior of the Synagogue at Algiers.
(From an old print.)

Legendary Foundations.

In the village of Janjar, in Egypt, there was a synagogue named in honor of the prophet Elijah, since Phinehas b. Eleazar was born there (Sambari, p. 121; Phinehas = Elijah; see Jew. Encyc. v. 122). The synagogue of the Palestinians at Fostat was also called after Elijah; the prophet Jeremiah was said to have prayed there (Sambari, p. 118; p. 137); and there were other synagogues of Elijah at Damascus (p. 157, "between the gardens—a very splendid edifice"), Byblus (p. 158, "an extraordinarily splendid edifice"), Laodicea (p. 158), and Ḥama (p. 159), while Grätz believed ("Gesch." 1st ed., v. 53) that there was a synagogue of Elijah also in Sicily, at the time of Pope Gregory I. Benjamin found a "Keneset Mosheh" outside the city of Fostat (p. 94). According to Sambari (p. 119; comp. p. 137), the name of "Kanisat Musa" was given to the synagogue of Damwah (see Jew. Encyc. v. 64, *s.v.* Egypt), in which Moses himself was said to have prayed (comp. Ex. ix. 29), and in which, on the 7th of Adar, the Jews of all Egypt assembled, during the period of the Nagids, for fasting and prayer. One of the three synagogues of Aleppo was called after Moses (p. 158). Benjamin mentions synagogues named in honor of Ezra at Laodicea (= Kalneh; comp. Sambari, p. 158), Haran, and Jazirat ibn Omar, on the upper Tigris, the first one having been built, he was told, by Ezra himself (pp. 47 *et seq.*). Pethahiah mentions two synagogues built by Ezra at Nisibis. There was a synagogue at Ezra's tomb, and one near the grave of the prophet Ezekiel; the latter was said to have been built by King Jehoiachim ("Itinerary," ed. Benisch, pp. 61, 68). In the province of Mosul (Asshur), Benjamin (p. 48) saw the synagogues of the three prophets Obadiah, Jonah, and Nahum. The tomb of Daniel at Susa and the graves of Mordecai and Esther (pp. 68, 75, Pethahiah) were placed in front of synagogues, and Benjamin (p. 41) mentions a synagogue near Tiberias named in honor of Caleb, the son of Jephunneh—apparently the synagogue built, according to Pethahiah's itinerary, by Joshua, the son of Nun.

At Ramlah (Rama) the Christians found the tomb of Samuel beside the synagogue (p. 39, Benjamin), while at Kafr Jubar, near Damascus, there was a synagogue built, according to legend, by Elisha (Sambari, p. 152). Among the Tannaim the name of Simeon b. Yoḥai was given to two synagogues, one at Meron (pp. 141, 154) and the other at Kafr Bir‘im (p. 154, "a very splendid edifice, built of large stones with great pillars"; see above). At Damascus, according to Benjamin, there was a synagogue of Eleazar b. ‘Arak (Pethahiah says Eleazar b. Azariah), and at Nisibis one of Judah b. Bathyra. Several Babylonian synagogues mentioned by Benjamin were named in honor of amoraim: the synagogues of Rab, Samuel, Isaac, Nappaḥa, Rabba, Mar Ḳashisha, Ze‘era b. Ḥama, Mari, Meïr (at Hillah), Papa, Huna, Joseph, and Joseph b. Ḥama (pp. 60, 61, 63, 65). All these synagogues stood at the graves of the amoraim whose names they bore.



Interior of an Old Synagogue at Jerusalem

(From a photograph by E. N. Adler.)

These examples show that the synagogues bearing the names of Biblical or Talmudic celebrities were often similar in character to the "ḳubbah" (vault; Hebr. כיפה) regularly built over the grave of a Mohammedan saint, and serving as an oratory for the pilgrims to the tomb. Similar ḳubbahs were erected, according to Benjamin (p. 63), over the graves of Hananiah, Mishael, and Azariah, the three friends of Daniel, near the tomb of Ezekiel. In his commentary on Job xxi. 32 Ibn Ezra states that Hai Gaon explained the word "gadish" as the "ḳubbah over the grave, according to the custom in Mohammedan countries."

Special Synagogues.

Some of the synagogues mentioned in the sources quoted above are described as buildings of exceptional beauty, although statements to that effect are rarely found elsewhere. It is also quite noteworthy that Benjamin of Tudela does not praise the architecture of any synagogue in the European countries through which he traveled; but it must be borne in mind that the cities of Spain were not included in his descriptions. According to Judah al-Ḥarizi, there were several magnificent synagogues at Toledo, second to none, among them being the splendid edifice built by Joseph b. Solomon ibn Shoshan (Grätz, "Gesch." 3d ed., vi. 189). The synagogue of Samuel Abulafia at Toledo and other Spanish synagogues still standing have been mentioned above. Bagdad contained twenty-eight, according to Benjamin of Tudela (Pethahiah says thirty), in addition to the synagogue of the exilarch, which is described by Benjamin as a "building resting on marble columns of various colors and inlaid with gold and silver, with verses from the Psalms inscribed in golden letters upon the pillars. The approach to the Ark was formed by ten steps, and on the upper one sat the exilarch together with the princes of the house of David." The anonymous itinerary mentioned above, in referring to the synagogue which the author saw at Tyre, describes it as "a large and very fine building" (Benjamin of Tudela, ed. Grünhut, p. 158).

The synagogue of Worms, built in the eleventh century (see A. Epstein, "Jüdische Alterthümer in Worms und Speier," Breslau, 1896), and the Altneue Synagogue of Prague are the two oldest structures of their kind which still exist in Europe, and are of interest both historically and architecturally. The five Roman synagogues built under one roof formed until recently a venerable architectural curiosity. The great synagogue of Amsterdam, dedicated in 1675, is a monument both to the faith of the Hispano-Portuguese Maranos and to the religious freedom which Holland was the first to grant to the modern Jews; a similar monument is the Bevis Marks Synagogue, London, which was dedicated in 1701 (see Gaster, "History of the Ancient Synagogue," London, 1901).

Wooden Synagogues.

Special reference must be made to the wooden synagogues built in the sixteenth and seventeenth centuries in some Polish cities, many of them being markedly original in style. They also attest the wealth and culture of the Polish Jews before the year 1548 (see M. Bersohn, "Einiges über die Alten Holzsynagogen in Polen," in "Mitteilungen der Gesellschaft für Jüdische Volkskunde," 1901, viii. 159-183; 1904, xiv. 1-20). Bodenschatz, in the middle of the eighteenth century, stated that "rather handsome and large synagogues are

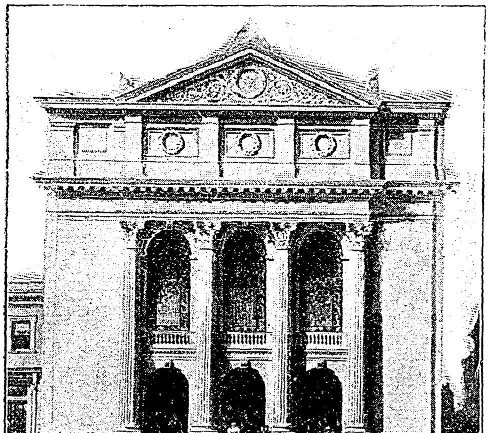
found in Germany, especially in Hamburg, and also among the Portuguese, as well as in Prague, particularly in the Polish quarter, besides Fürth and Bayersdorf; but the Dutch synagogues are more splendid than all the rest" ("Die Kirchliche Verfassung der Juden," ii. 35).

In the nineteenth century the great changes which ushered in a new epoch in the history of the civic and intellectual status of the European Jews affected also the style and the internal life of the synagogue, especially as religious reform proceeds primarily from that institution, and is chiefly concerned with synagogal worship. A private synagogue at Berlin (1817) became the first "seminary for young Jewish preachers" (Grätz, "Gesch." xi. 415); while the synagogue of the Reform-Tempel-Verein at Hamburg (1818) was the first to introduce radical innovations in the ritual of public worship, thereby causing a permanent schism in Judaism, both in Germany and elsewhere. These reforms likewise influenced the arrangement of the synagogue itself. The introduction of the organ, the shifting of the almemar from the center of the building to a position just in front of the Ark, the substitution of stationary benches for movable desks, and the abolition of the high lattices for women, were important from an architectural point of view. The chief factors which promoted and determined the construction of new synagogues were the emancipation of the Jews from the seclusion of the ghetto, their increasing refinement of taste, and their participation in all the necessities and luxuries of culture.



Main Entrance to Shearith Israel Synagogue, New York.
(From the drawing in the possession of the architect Arnold W. Brunner.)

Object of Splendid Buildings.

Internal causes, however, which were not always unmixed blessings, were the prime agents in the increased importance of the synagogue. As the external observances of religion and the sanctity of tradition lost in meaning and often disappeared entirely within the family and in the life of the individual, the synagogue grew in importance as a center for the preservation of Judaism. It thus becomes explicable why the religious attitude of both large and small communities in Europe and America appears most of all in the arrangement and the care of the synagogues; and it is not mere vanity and ostentation, which lead communities on both sides of the Atlantic to make sacrifices in order to build splendid edifices for religious purposes, such as are found in many cities.

The increasing importance which the synagogue has thus acquired in modern Jewish life is, consequently, justified from a historical point of view, both because it is a development of the earliest institution of the Diaspora—one which it has preserved for two thousand years—and because it is the function of the synagogue to maintain the religious life and stimulate the concept of Judaism within the congregation. The synagogue has in the future, as it has had in the past, a distinct mission to fulfil for the Jews.

W. B.

——**Legal Aspect:** No mention is made in the Talmud of any tax for the building of synagogues; but the Tosefta to B. B. i. 6, as reported by Alfasi, says: "The men of a city urge one another to build a synagogue [בית הכנסת] and to buy a book of the Law, the Prophets, and the Hagiographa" (see

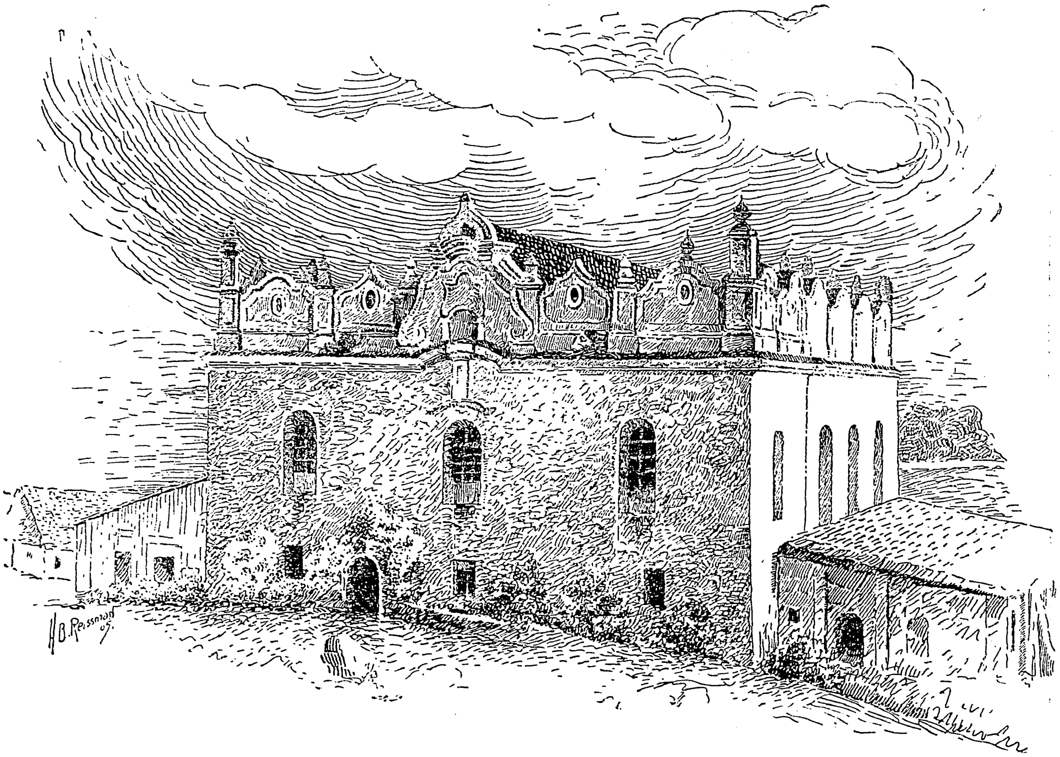
"Yad," Tefillah, xi.; Shulḥan 'Aruk, Oraḥ Ḥayyim, 150, 151). The codes teach, further, on the strength of a saying ascribed to Rab (Shab. 11a), that the building should stand in the highest part of the town (comp. Prov. i. 21) and rise above all surrounding edifices. Of course, this rule can not always be carried out where the Jews live as a small minority in a town of Gentiles; but a synagogue should never occupy the lower part of a house which contains bedrooms in an upper story. According to a tosefta, the doors of the synagogue should be in the east; but the opinion has prevailed that they should be opposite the Ark and in that part of the room toward which the worshipers face in prayer.

Position of Synagogue Building.



Synagogue at Zaragorod, Russia.
(From a woodcut.)

The Ark is built to receive the scrolls of the Law. "They put a platform in the middle of the house," says Maimonides, "so that he who reads from the Law, or he who speaks words of exhortation to the people, may stand upon it, and all may hear him" (see Almemar). According to the same author, the elders sit facing the people, who are seated in rows one behind the other, all with their eyes turned toward the elders and toward the Holy Place (neither code speaks in this connection of the women's gallery). When the "messenger of the congregation" arises in prayer he stands on the floor before the Ark (this, however, is not the custom among the Sephardim of the present time). In the Holy Land, in Syria, Babylonia, and North Africa, etc., the floor is spread with matting, on which the worshipers sit; but in the countries of Christendom they occupy chairs or benches.

Honor Must Be Paid to Synagogue.

Honor should be paid to synagogues and houses of study. People must not conduct themselves lightly nor laugh, mock, discuss trifles, or walk about therein; in summer they must not resort to it for shelter from the heat, nor in winter should they make it serve as a retreat from the rain. Neither should they eat or drink therein, although the learned and their disciples may do so in case of an emergency. Every one before entering should wipe the mud from his shoes; and no one should come in with soiled body or garments. Accounts must not be cast in the synagogue or house of study, except those pertaining to public charity or to religious matters. Nor should funeral speeches be delivered therein, except at a public mourning for one of the great men of the time. A synagogue or house of study which has two entrances should not be used as a thoroughfare; this rule was made in analogy with that in the Mishnah (Ber. ix. 5) forbidding the use of the Temple mount as a thoroughfare.

Some honor is to be paid even to the ruins of a synagogue or house of study. It is not proper to demolish a synagogue and then to build a new one either on the same spot or elsewhere; but the new one should be built first (B. B. 3b), unless the walls of the old one show signs of falling. A synagogue may be turned into a house of study, but not vice versa; for the holiness of the latter is higher than that of the former, and the rule is (Meg. iii. 1): "They raise up in holiness, but do not lower in holiness."

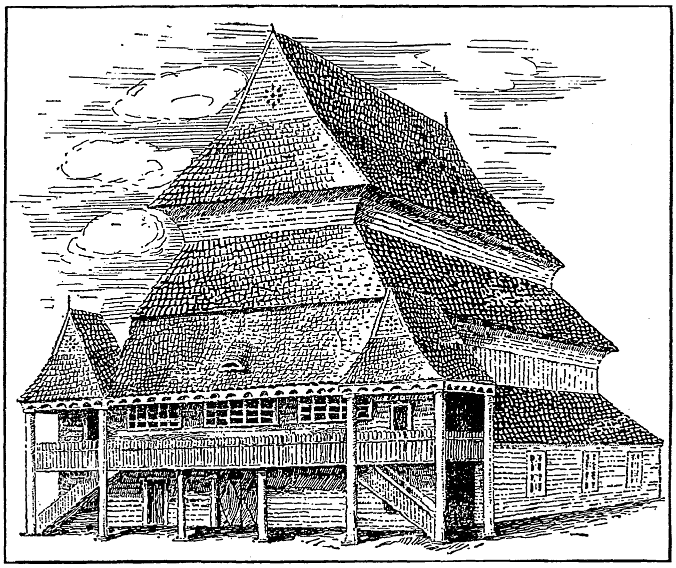
The synagogue of a village, being built only for the people around it, may be sold on a proper occasion; but a synagogue in a great city, which is really built for all Israelites who may come and worship in it, ought not to be sold at all. When a small community sells its synagogue, it ought to impose on the purchaser the condition that the place must not be turned into a bath-house, laundry, cleansing-house (for vessels), or tannery, though a council of seven of the leading men in the community may waive even this condition (*ib.* 27b).

W. B. L. N. D.

SYNAGOGUE ARCHITECTURE: Ancient Jewish art is mainly represented by the Temple and its fittings, of which all that is left to contemplate is the lower portion of a fortified wall. Even if this overstates the fact, it is most probable that very little distinctively Jewish art ever flourished for an extended period. The position of Judea and its history naturally discouraged the development of art, however vigorous its beginning may have been. The remains of the ancient synagogues that are now extant present very meager data, and the best preserved of the ancient ones, such as the great synagogue in Kafr Bir'im, while containing much of interest and many characteristic forms, give but little inspiration to the synagogue-builder.

Kafr Bir'im Synagogue.

On the main façade of the Kafr Bir'im synagogue there were evidently three doorways with ornamented architraves, the central one being surmounted by an enriched semicircular arch. Of the plan there is practically no indication, except that the building was rectangular, with a portico in front supported by columns. Other remains, while offering suggestions of moldings and ornament, add but little information. The door of the synagogue faced to the west, the Ark was at the eastern end, and the almemar was placed approximately in the center of the building; the space on either side was devoted to the men, while the women occupied a gallery reserved for their exclusive use.



Wooden Synagogue at Pogrebishche, Russia.
(From Bersohn, "Kilka Slow.")

The regulations governing the position and number of doors and windows, and other details, seem to have been confusing and more or less neglected in the Hellenic synagogues. But by degrees a certain type of building was evolved—that of the basilica—a rectangular structure, with or without columns, and without what is known in church architecture as transepts, the cruciform plan of the church and cathedral being naturally avoided by Jews. The synagogue was unquestionably fashioned, up to quite recent times, in the style of architecture that prevailed in the country in which it was built. This statement, perhaps, is best exemplified in Russia, where the synagogue-builders were less influenced by foreign architectural modes than in other countries, and where they built quite naturally in the accustomed manner; there, accordingly, local conditions dictated the form of building; the types thus produced are well shown in illustrations, pages 630, 631, 633, which are interesting in themselves and confirm the general point of view. In each of these cases the composition is different; the roof-lines and the arrangement of doors and windows follow no style, but are apparently the result of the attempt of the builder to solve his problem in the simplest and most familiar way, using the forms to which he was accustomed. The buildings are certainly Russian, and no attempt has been made to secure a Jewish type of architecture.

Built in Local Style.

Of larger and more important examples of synagogue architecture, there are many instances, as at Odessa and Riga, of dignified, well-considered buildings, Russian in style, and worthy examples of straightforward treatment.

As the style of the country in which the synagogue was built was followed, naturally the style of the neighboring churches had a great influence on its architecture, only that part of the plan being Jewish which was dictated by the necessities of the form of worship. Accordingly in Strasburg, Cassel, Budweis, Munich, and Hanover well-designed and extremely interesting synagogues are found quite in the style of the neighboring churches. The conditions generally compelled the building to be inconspicuous, however, and the fulfilment of the Talmudical regulation that the synagogue should tower above the other buildings of the city was forbidden by papal authority. Sometimes the papal restriction was evaded by the erection of tall rods on the roof, so that the Talmudical regulation was complied with in letter if not in spirit.

In Italy there are many synagogues in the style of the Italian Renaissance (see Leghorn; Padua; and Venice). Those in Padua and Venice possess interiors of great beauty, and are excellent examples of Renaissance work. So, too, in England; the interiors of Great St. Helens and Duke's Place in London are well designed, and strongly suggest some of the work of Sir Christopher Wren and Inigo Jones. Similarly, in Paris pure types of French architecture are found, and throughout Europe there are synagogues in Romanesque, Gothic, and the many variations of the style of the Renaissance. Even in Japan this law is followed, as can be seen in the illustration under Nagasaki. In America the little synagogue in Newport, R. I., was built in 1763 by the prosperous colony of Spanish Jews. It was designed by a noted architect of the day in the Colonial or Georgian style, even to the minutest detail, though it was well adapted in its plan and interior disposition to the purpose of Jewish worship.

(From a photograph.)

Influence of Pseudo-Moorish.

After the expulsion from Spain there was a general feeling among wealthy Sephardim that Moorish architecture was appropriate in synagogues, and many of the most famous ones in the world have been constructed in this style, although Moorish architecture is by no means Jewish, either in fact or in feeling. The two most familiar Spanish synagogues are in Toledo, one known as El Transito, the other as Santa Maria la Blanca, and both, undoubtedly very beautiful, are now preserved as national monuments. The former is a small building containing very rich decorations; the latter is especially noteworthy, and contains long rows of octagonal columns with curiously carved capitals, from which spring Moorish arches supporting the roof (see Spain; Toledo). The Alhambra has furnished inspiration for innumerable synagogues, but seldom have its graceful proportions or its delicate modeling and elaborate ornamentation been successfully copied; the fact is, the style is not flexible, and can not readily be adapted to different climates and conditions. The general results of the Moorish movement have been unfortunate; the greatest delicacy of feeling for both form and color is needed to preserve the beauty of Moorish architecture, and curiously shaped domes and towers and misapplied horseshoe arches, turrets, and pinnacles have often resulted, presenting in many cases a grotesque appearance rather than the dignity and simplicity that should have been attained.

The unpleasant results may be seen in St. Petersburg, London, Philadelphia, and in many parts of Germany. Emphasizing the towers that contain the stairs to the galleries, which are invariably on either side of the main entrance, is a common device, and the Temple Emanu-El in New York is so treated. In this case the minarets are graceful and skilfully placed; but the usual result is a loss of dignity; a single central motive is more pleasing.

The most successful buildings in all great architectural periods are simple in design; whether large or small, richly decorated or not, simplicity is their main characteristic, and the desire to produce the picturesque and unusual is fatal to the dignity which should characterize the synagogue. The synagogue in Milan has a well-balanced, unpretentious façade, and in Reichenberg (illustration, page 628) the central feature is enlarged and crowned by an octagonal dome, producing excellent results.

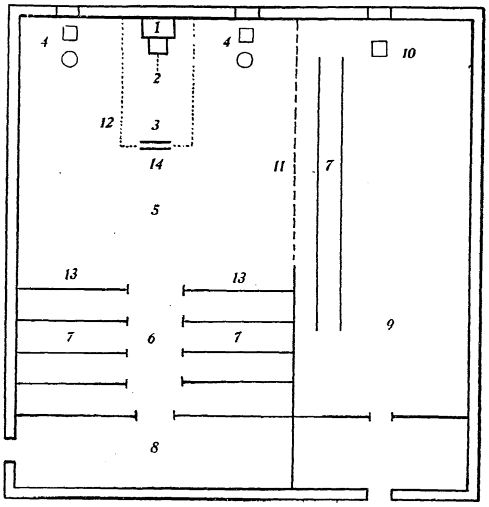
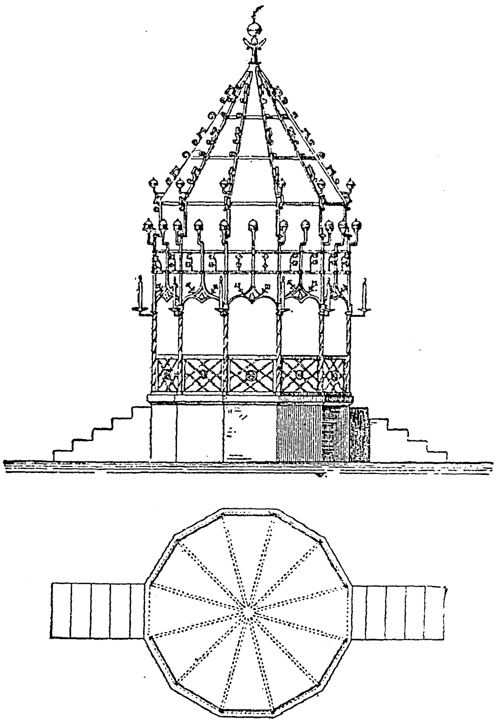
Special Examples. Many synagogues are designed in the Classic style, and the Shearith Israel Synagogue in New York (illustration, page 628) and the synagogue in WARSAW have four great Corinthian columns supporting pediments on their main fronts. The use of the Classic orders seems especially adapted to the synagogue, and many variations in design are possible. The Warsaw synagogue, while very ornate, is impressive, and presents many suggestions worthy of emulation. In the synagogue in Rome (illustration, page 639) the division into two stories is clearly indicated on the exterior, and each story is ornamented with columns. The whole is surmounted by a square dome, which is a favorite form with synagogue-builders. The synagogue in Florence (illustration, page 637) is Moorish in detail. The central dome, supported on pendentives, is well expressed on the exterior, and the general composition is pleasing, especially from the point of view of the illustration, which is taken from the rear. Sometimes four smaller domes are used, as in the synagogue at SARAJEVO, where this idea is admirably executed. This building is a most successful example, combining the Eastern expression so much desired with an aspect of grandeur and repose. Some of the old synagogues are often irregular in shape, and are hidden away in odd angles and courtyards, where they have been compelled to take unusual forms. **Plans.** The Altneue Synagogue in Prague is divided into three portions, and adjoining it is a smaller synagogue for special services. In the synagogues in Nikolsburg and Worms (illustrations E and F, page 634) there are curious, vaulted ceilings, some of the arches resting on columns that must have seriously interfered with the service. The latter synagogue is probably the oldest extant in Europe. In all these cases the Ark is in a recess in a thick wall, and the almemar is in the center of the building, with no special provision for the accommodation of the worshipers.



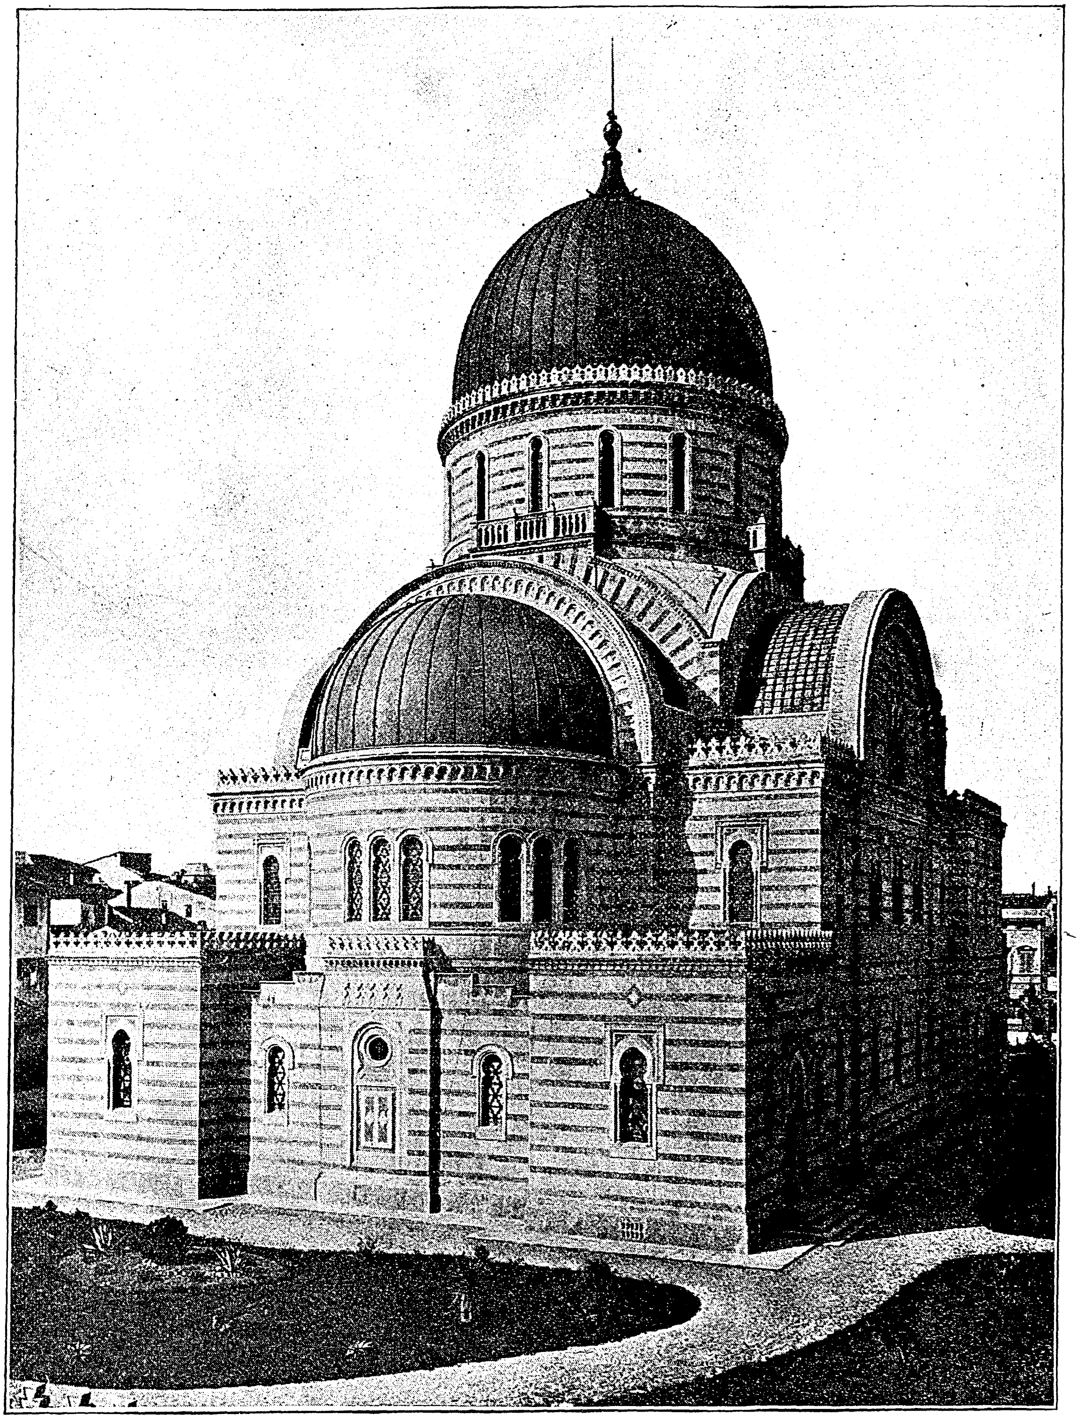
GROUND-PLAN OF A KARAITE SYNAGOGUE.

1. Hekal. 2. Dukan. 3. Meḳom 'asarah. 4. Shulḥan with chair. 5. Meḳom 'esrim. 6. Moshab zeḳenim. 7. Benches. 8. 'Azarah. 9. Women's section. 10. Shulḥan. 11. Latticed partition. 12. Balustrade. 13. Breast-high partition. 14. Steps.

By degrees a plan was evolved that met the requirements: a rectangular building, with the Ark at the eastern end opposite the entrance, and with an almemar, benches for the men on either side, and a women's gallery reached by staircases from the outer vestibule. Variations of this simple plan followed: the vestibule became larger, and the staircases to the women's gallery were separated from the vestibule and given more importance. As the buildings became larger, rows of columns were required to support the roof, but in every case the basilican form was retained. The Ark, formerly allowed a mere niche in the wall, was developed into the main architectural feature of the interior, and was flanked with columns, covered with a canopy and richly decorated. The almemar in many cases was joined to the platform in front of the Ark, and elaborate arrangements of steps were provided. This process of development may be noted in illustrations, pages 634–635. **The Almemar.** In the synagogues in Reichenberg (page 628) and Munich (I and J of illustrations, page 635), where this plan has been developed to the greatest extent, it will be seen that its characteristics are preserved notwithstanding the size of the buildings, the rows of columns, and the elaborately vaulted roofs. In



Almemar of the Old Synagogue at Casimir, near Cracow.
(From a drawing.)

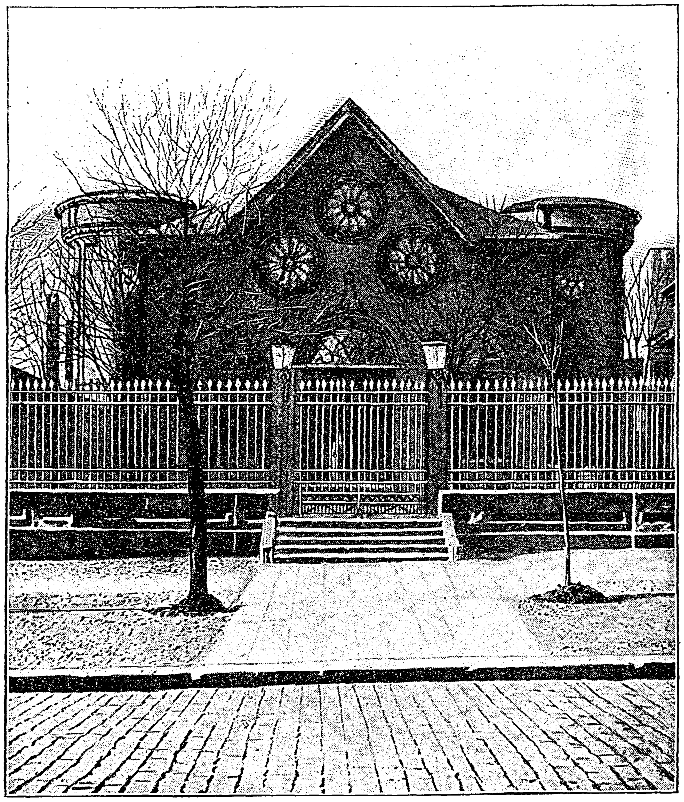


SYNAGOGUE AT FLORENCE, ITALY.

(From a photograph.)

the Munich synagogue there are staircases at both ends of the building, the vestibules and halls are greatly multiplied, and the women's gallery is enlarged; while there is a side entrance, as well as an aisle dividing the seats, the cruciform plan is avoided.

The combination of almemar with the platform upon which the Ark rests, while seldom used in England, is becoming general with Reform congregations on the Continent and in America. It provides no opportunity for the processional and similar portions of the Orthodox service, as the carrying of the scrolls of the Law to the reading-desk, which ceremonies are necessarily eliminated as the central space surrounding the almemar disappears; but, on the other hand, much greater seating capacity is secured, and the worshipers are so grouped that all have approximately an equal view of the Ark, the pulpit, and the almemar.



Karaite Synagogue at Odessa, Russia.

(From a photograph.)

Arrangement of Seats.

The desire to obtain the greatest seating capacity possible in the given space has led to many variations in the arrangement of the benches. In the Temple Beth-El, built in New York city in 1891, the seats are curved, so that those at the side of the building still face the Ark (illustration L, page 635), while the aisles are parallel. In the temple in Indianapolis (illustration K, page 635), built in 1900, the same arrangement is used, but the aisles converge. In the former example the dignity of the Ark is maintained by placing it in a deep semicircular niche, so that a large space on the platform is secured without encroaching upon the floor-space proper.

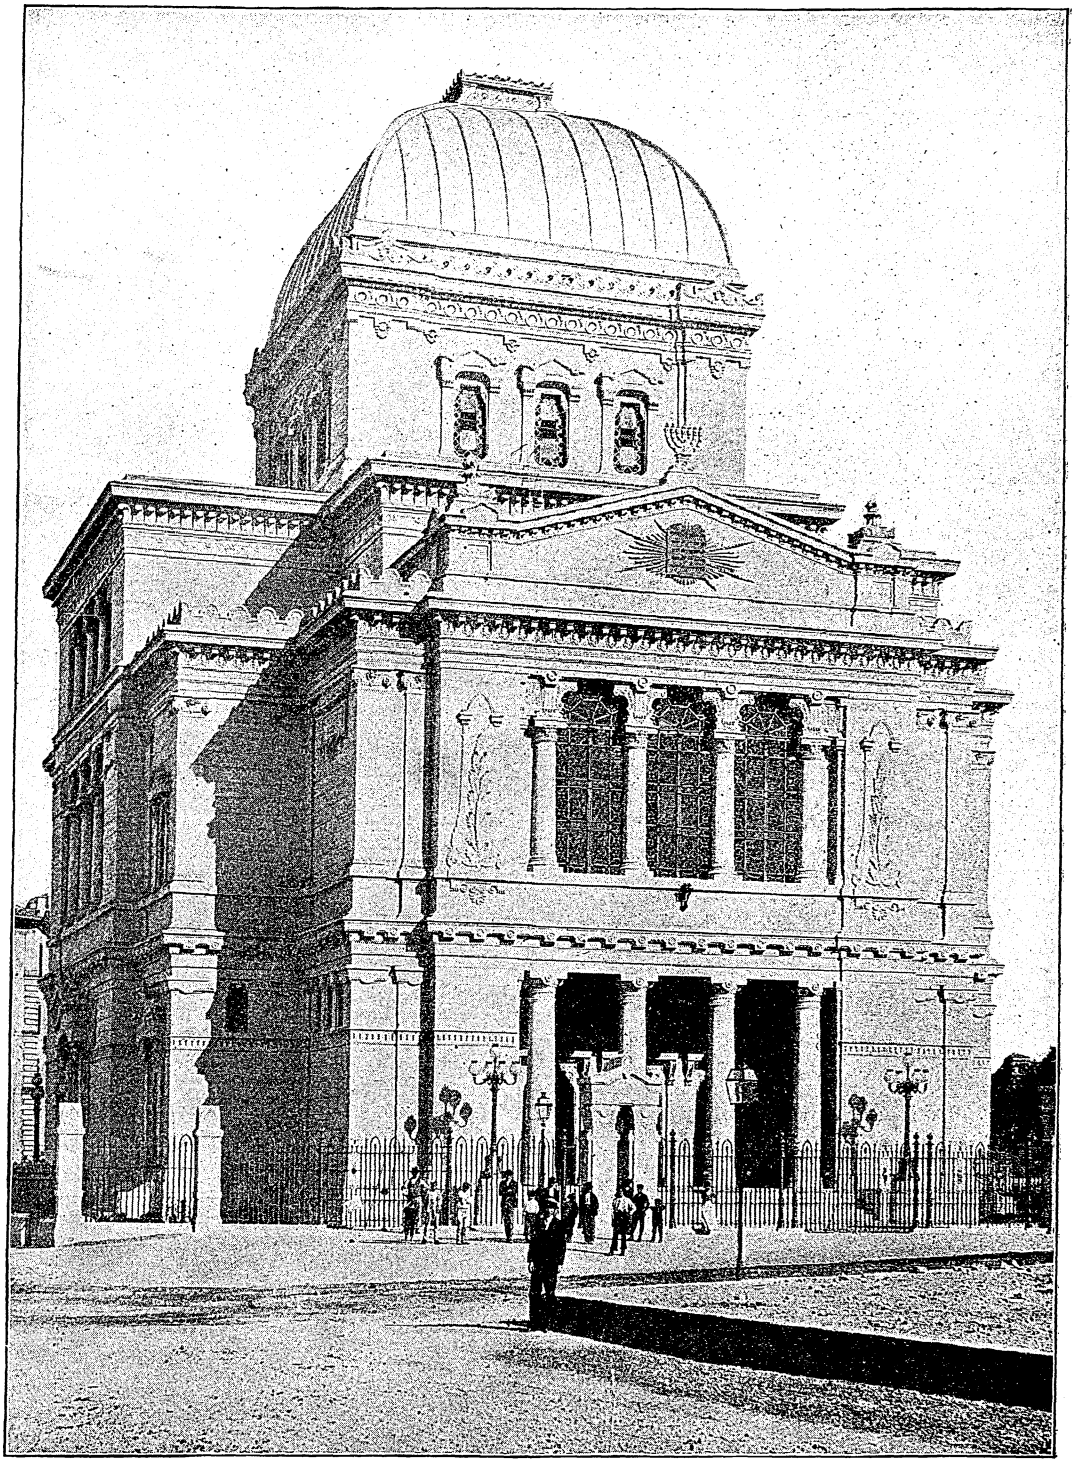
The modern synagogue, besides containing the minister's study, trustees' rooms, choir-rooms, and organ-loft, devotes much space to school purposes; generally the entire lower floor is used for class-rooms. The interior treatment of the synagogue allows great latitude in design, but the simplest and most dignified have proved to be the most successful; the same rules apply to the interior as to the exterior; note the effect of Great St. Helens in London (Jew. Encyc. viii. 159, *s.v.* London), and some of the synagogues in Paris, where architectural unity is preserved and a devotional atmosphere obtained.

The rectangular floor-plan universally employed permits a restful treatment of the ceiling, which is either paneled, as in the case of the Shearith Israel Synagogue in New York, or arched, as in Paris. The absence of the transept allows an unbroken surface, and there are instances of central domes, or semidomes, over the Ark. The galleries for women were formerly closely latticed, and in the ancient synagogue these galleries were often placed at a great height (see Venice). In modern times the lattice is discarded and the galleries are placed lower, so that the occupants may obtain a view of the Ark and the almemar.

The Ark.

The Ark is the most important feature of the interior, and is generally dignified by proper decoration and raised upon a suitable platform, reached by at least three steps, but often by more. It is crowned by the tables of the Law. Sometimes the elaboration is overdone, to the exclusion of other ornamentation in the building, as in the case of the old synagogue in Berlin (Jew. Encyc. iii. 71), where may be seen an arrangement in which the worshipers are provided with stands (known as "Städte") to hold their books, but not with seats. Another instance of this is in Husiatyn, where the Ark is decorated curiously and richly but not pleasantly. In the synagogue in Padua there is a beautiful Ark of marble, above which the ceiling is arched (see Ark of the Law).

The almemar is raised above the synagogue floor, whether it is in the center of the building or not; it is approached by steps, contains seats, and is surrounded by a railing. There are instances of curiously wrought and elaborate iron grilles, which



THE NEW SYNAGOGUE AT ROME, ERECTED ON THE SITE OF THE ANCIENT GHETTO.
(From a photograph.)

may be seen in the synagogue in Jerusalem (illustration, page 626) or in Casimir (illustration, page 636). See also CRACOW and LEMBERG.

The position of the pulpit varies; it may be placed on either side of the Ark, and is occasionally found in the center of the steps, as in the Shearith Israel Synagogue in New York (illustration, page 627). In some cases the desk on the almemar is used in the delivery of the sermon, as in the case of the Mikvé Israel Synagogue in Philadelphia (illustration, page 629), which has no pulpit. The treatment of the entrance varies according to the situation; at times the doors are approached by steps, as in Temple Beth-El, New York (illustration, page 627); in other instances the doors are flush with the street, as in the case of the Odessa synagogue (illustration, page 632).

Symbolic Designs.

In the desire to secure abundant light, good acoustics, large seating capacity, and comfort for the worshipers, modern synagogues have in many cases lost the suggestion of devotion. There are but few emblems which may be used that are characteristically Jewish; the interlacing triangles, the lion of Judah, and flower and fruit forms alone are allowable. The perpetual lamp hangs in front of the Ark; the tables of the Law surmount it. The seven-branched candlestick, or menorah, may be placed at the sides. Occasionally the shofar, and even the lulab, may be utilized in the design. Hebrew inscriptions are sparingly or seldom used; stained-glass windows, at one time considered the special property of the Church, are now employed, but figured subjects are not used.

J. A. W. B.

The only plan in existence presenting the interior arrangements of a Karaite synagogue is that of S. Weissenberg (in "Globus," lxxiv. 142), which is here reproduced (page 636). The synagogue, which is known as kenesah, is always built north and south, and is divided into two parts, for men and women. In the women's section, which is separated by a low grille from that of the men, there are two rows of seats (7), and a table (10) upon which to place the Bible, which each woman kisses as she enters the building. The men's section is divided into three parts, one known as the "meḳom 'asarah" (3), or place of the ten elders, in which is the Ark (1), and the "dukan" (2), or place for the reader, which is a small desk or pulpit. On each side are tables with seats (4) for the first and second readers. Steps (14) separate this section from the second section, the "place of the twenty" ("meḳom 'esrim") (5), and this again is separated by a balustrade (13) from the section known as the "moshab zeḳenim" (6), or seats for the aged, each of which contains a desk or box, and a receptacle for shoes, which must be removed before treading the holy soil. The vestibule (8) is termed "azarah." The pulpit and the place for the twelve elders is surrounded by a balustrade (12). It is somewhat difficult to understand the object of placing the more aged members of the community in a portion of the synagogue away from the body of the hall, but the probable reason is that the younger members are obliged to stand in the center (5) during the long services, while the place for the elders and the aged is provided with seats.

Reproductions of synagogues, other than those illustrating this article, occur under the following topics. The asterisk indicates that an interior view of the synagogue has been given.

J.

SYNAGOGUE, THE GREAT (כנסת הגדולה): The members of the Great Synagogue, or the **Great Assembly**, are designated in the Mishnah (Ab. i. 1) as those representatives of the Law who occupied a place in the chain of tradition between the Prophets and the earliest scholars known by name. "The Prophets transmitted the Torah to the men of the Great Synagogue. . . . Simon the Just was one of those who survived the Great Synagogue, and Antigonus of Soko received the Torah from him" (Ab. i. 1 *et seq.*). The first part of this statement is paraphrased as follows in Ab. R. N. i.: "Haggai, Zechariah, and Malachi received from the Prophets; and the men of the Great Synagogue received from Haggai, Zechariah, and Malachi." This is the reading of the first version; the second version (ed. Schechter, p. 2) reads: "The Prophets to Haggai, Zechariah, and Malachi; and these to the men of the Great Synagogue." In this paraphrase the three post-exilic prophets are separated from the other prophets, for it was the task of the former to transmit the Law to the members of the Great Synagogue. It must even be assumed that these three prophets were themselves included in those members, for it is evident from the statements referring to the institution of the prayers and benedictions that the Great Synagogue included prophets.

Included the Last Prophets.

According to R. Johanan, who wrote in the third century, "the men of the Great Synagogue instituted for Israel the benedictions and the prayers, as well as the benedictions for ḳiddush and habdalah" (Ber. 33a). This agrees with the sentence of R. Jeremiah (4th cent.), who states (Yer. Ber. 4d), in reference to the "Shemoneh 'Esreh," that "one hundred and twenty elders, including about eighty prophets, have instituted these prayers." These one hundred and twenty elders are undoubtedly identical with the men of the Great Synagogue. The number given of the prophets must, however, be corrected according to Meg. 17b, where the source of R. Jeremiah's statement is found: "R. Johanan said that, according to some, a baraita taught that one hundred and twenty elders, including some prophets, instituted the 'Shemoneh 'Esreh.'" Hence the prophets were in a minority in the Great Synagogue. Another statement regarding the activity of this institution alludes to the establishment of the Feast of Purim according to Esth. ix. 27 *et seq.*, while the Babylonian Talmud (Meg. 2a) states, as a matter requiring no discussion, that the celebration of the Feast of Purim on the days mentioned in Meg. i. 1 was instituted by the men of the Great Synagogue. But in the Palestinian Talmud R. Johanan (Meg. 70d; Ruth R. ii. 4) speaks of "eighty-five elders, among them about thirty prophets."

Their Number.

These divergent statements may easily be reconciled (see Krochmal, "Moreh Nebuke ha-Zeman," p. 97) by reading, in the one passage, "beside them" (עמהם) instead of "among them" (מהם); and in the other passage, "thirty" instead of "eighty." The number eighty-five is taken from Neh. x. 2–29; but the origin of the entire number (120) is not known. It was undoubtedly assumed that the company of those mentioned in Neh. x. was increased to one hundred and twenty by the prophets who took part in the sealing of the covenant, this view, which is confirmed by Neh. vi. 7, 14, being based on the hypothesis that other prophets besides Haggai, Zechariah, and Malachi were then preaching in Israel. These passages indicate that this assembly was believed to be the one described in Neh. ix.–x., and other statements regarding it prove that the Amoraim accepted this identification as a matter of course. According to Abba b. Kahana, the well-known haggadist of the latter half of the third century (Shem-Ṭob on Ps. xxxvi., end), "Two generations used the 'Shem ha-Meforesh,' the men of the Great Synagogue and the generation of the 'shemad'" (the persecution of Hadrian and the Bar Kokba war). This reference is explained in a statement by Giddel, a pupil of Rab (Yer. Meg. iii., end; Yoma 69b): "The word הגדול in Neh. viii. 6 indicates that Ezra uttered the great Tetragram in his praise of God."

The Generation of Ezra.

The combination of these two passages, which evidently have the same basis, offers another instance of the general assumption that all the members of this body were regarded as belonging to one generation, which included Ezra, while Joshua b. Levi, one of the earliest amoraim, even derived the term "Great Synagogue" from Neh. ix. 32. The authors of the prayers restored the triad of the divine attributes introduced by Moses (Deut. x. 17), although Jeremiah (xxxii. 18) and Daniel (x. 17, Hebr.) had each omitted one of the three attributes from their prayers. "The Great Assembly was so called because it gave the divine attributes their ancient 'greatness' and dignity" (Yoma 69b [with other authorities]; Yer. Ber. 11c and Meg. 74c; Shem-Ṭob on Ps. xix.; see also Ber. 33b); although this is merely a haggadic explanation of the old term, it indicates that the Amoraim did not think the Great Synagogue could be any other assembly or council than the one mentioned as the source of the prayers in Neh. ix.; and there are other examples in traditional literature evidencing this view. In Yer. Ber. 3a (Gen. R. xlvi., lxxviii.) this objection is raised in regard to a thesis of R. Levi based on Gen. xvii. 5 and referring to Neh. ix. 7: "Did not the men of the Great Synagogue call Abraham by his former name, Abram?" In the name of the men of the Great Synagogue, R. Abbahu (Gen. R. vi.) quotes the words "The heaven of heavens, with all their host" (Neh. ix. 6) as an explanation of Gen. i. 17; and the same authority is invoked in a haggadic passage by Abin (Tan., Shemot, i.) in reference to Neh. ix. 5 (*ib.* 2, anonymous), as well as in one by Samuel b. Naḥman (Ex. R. xli., beginning; Tan., Ki Tissa, 14) alluding to Neh. ix. 18.

R. Johanan connected the following story with Neh. x. 1–2 (Ruth R. ii. 4): "The men of the Great Synagogue wrote a document in which they voluntarily agreed to pay heave-offerings and tithes. This document they displayed in the hall of the Temple; the following morning they found the divine confirmation inscribed upon it." Since Nehemiah himself was a member, Samuel b. Marta, a pupil of Rab, quoted a phrase used by Nehemiah in his prayer (i. 7) as originating with his colleagues (Ex. R. li.; Tan., Peḳude, beginning). Ezra was, of course, one of the members, and, according to Neh. viii., he was even regarded as the leader. In one of the two versions of the interpretation of Cant. vii. 14 (Lev. R. ii. 11), therefore, Ezra and his companions ("'Ezra wa-ḥaburato") are mentioned, while the other version (Cant. R. *ad loc.*) speaks merely of the "men of the Great Synagogue" (compare the statements made above regarding the pronunciation of the Tetragram). In the targum to Cant. vii. 3, in addition to "Ezra the priest" the men mentioned in Ezra ii. 2 as the leaders of the people returning from the Exile—Zerubbabel, Jeshua, Nehemiah, Mordecai, and Bilshan—are designated as "men of the Great Synagogue." In the same targum (to vi. 4) the leaders of the exiles are called the "sages of the Great Synagogue."

It appears from all these passages in traditional literature that the idea of the Great Assembly was based on the narrative in Neh. viii.–x., and that, furthermore, its members were regarded as the leaders of Israel who had returned from exile and laid the foundations of the new polity connected with the Second Temple. All these men were regarded in the tannaitic chronology as belonging to one generation; for this reason the "generation of the men of the Great Synagogue" is mentioned in one of the passages already cited, this denoting, according to the chronological canon of Jose b. Ḥalafta (Seder 'Olam Rabbah xxx. [ed. Ratner, p. 141]; 'Ab. Zarah 8b), the generation of thirty-four years during which the Persian rule lasted, at the beginning of the period of the Second Temple. As the last prophets were still preaching during this time, they also were included. That prophecy began only at the end of this period, when the reign of Alexander the Great commenced, was likewise a thesis of the tannaitic chronology, which, like the canon of the thirty-four years, was adopted by the later Jewish chronologists (Seder 'Olam Rabbah *l.c.*; comp. Sanh. 11a), although the view occurs as early as Josephus ("Contra Ap." i., § 8).

Position in Tannaitic Chronology.

In view of these facts, it was natural that the Great Synagogue should be regarded as the connecting-link in the chain of tradition between the Prophets and the scholars. It may easily be seen, therefore, why Simon the Just should be termed a survivor of this body, for, according to the tradition current in the circle of Palestinian scholars, it was this high priest, and not his grandfather JADDUA, who met Alexander the Great, and received from him much honor (see Yoma 69a; Meg. Ta'an. for the 21st of Kislew; comp. ALEXANDER THE GREAT).

It is thus evident that, according to the only authority extant in regard to the subject, the tradition of the Tannaim and the Amoraim, the activity of this assembly was confined to the period of the Persian rule, and thus to the first thirty-four years of the Second Temple, and that afterward, when Simon the Just was its only survivor, there was no other fixed institution which could be regarded as a precursor of the academies. This statement does not imply, however, that such a body did not exist in the first centuries of the Second Temple, for it must be assumed that some governing council existed in those centuries as well, although the statements regarding the Great Synagogue refer exclusively to the first period. The term primarily denoted the assembly described in Neh. ix.-x., which convened principally for religious purposes—fasting, reading of the Torah, confession of sins, and prayer (Neh. ix. 1 *et seq.*). Since every gathering convened for religious purposes was called "keneset" (hence "bet ha-keneset" = "the synagogue"; comp. the verb "kenos," Esth. iv. 16), this term was applied also to the assembly in question; but as it was an assembly of special importance it was designated more specifically as the "great assembly" (comp. Neh. v. 7, "ḳehillah gedolah").

In addition to fixing the ritual observances for the first two quarters of the day (Neh. ix. 3), the Great Synagogue engaged in legislative proceedings, making laws as summarized in Neh. x. 30 *et seq.* Tradition therefore ascribed to it the character of a chief magistracy, and its members, or rather its leaders, including the prophets of that time, were regarded as the authors of other obligatory rules. These leaders of post-exilic Israel in the Persian period were called the "men of the Great Synagogue" because it was generally assumed that all those who then acted as leaders had been members of the memorable gathering held on the 24th of Tishri, 444 B.C. Although the assembly itself convened only on a single day, its leaders were designated in tradition as regular members of the Great Synagogue. This explains the fact that the references speak almost exclusively of the members of the Great Synagogue, the allusions to the body itself being very rare, and based in part on error, as, for example, the quotation from Ab. i. 2 which occurs in Eccl. R. xii. 11.

As certain institutions supposed to have been established in the first period of the Second Temple were ascribed to Ezra, so others of them were ascribed to the men of the Great Synagogue. There is, in fact, no difference between the two classes of institutions so far as origin is concerned. In some cases Ezra, the great scribe and the leader of the Great Synagogue, is mentioned as the author, in others the entire body is so mentioned; in all cases the body with Ezra at its head must be thought of as the real authors. In traditional literature, however, a distinction was generally drawn between the institutions of Ezra and those of the men of the Great Synagogue, so that they figured separately; but it is not surprising, after what has been said above, that in Tan., Beshallaḥ, 16, on Ex. xv. 7, the "Tiḳḳune Soferim," called also ("Oklah we-Oklah," No. 168) "Tiḳḳune 'Ezra" (emendations of the text of the Bible by the Soferim, or by Ezra; and according to the tannaitic source [see Bacher, "Ag. Tan." ii. 205], originally textual euphemisms), should be ascribed to the men of the Great Synagogue, since the author of the passage in question identified the Soferim (*i.e.*, Ezra and his successors) with them.

Institutions and Rulings.

The following rulings were ascribed to the men of the Great Synagogue: (1) They included the books of Ezekiel, Daniel, Esther, and the Twelve Minor Prophets in the Biblical canon; this is the only possible explanation of the baraita (B. B. 15a) that they "wrote" those books. The first three books, which were composed outside Palestine, had to be accepted by the men of the Great Synagogue before they could be regarded as worthy of inclusion, while the division of the Minor Prophets was completed by the works of the three post-exilic prophets, who were themselves members of that council. The same activity in regard to these books is ascribed to the men of the Great Synagogue as had been attributed to King Hezekiah and his council, including the prophet Isaiah, with regard to the three books ascribed to Solomon (see also Ab. R. N. i.) and the Book of Isaiah. It should be noted that in this baraita, as well as in the gloss upon it, Ezra and Nehemiah, "men of the Great Synagogue," are mentioned as the last Biblical writers; while according to the introduction to the Second Book of the Maccabees (ii. 13) Nehemiah also collected a number of the books of the Bible.

(2) They introduced the triple classification of the oral law, dividing the study of the Mishnah (in the larger sense) into the three branches of midrash, halakot, and haggadot, although this view, which is anonymous, conflicted with that of R. Jonah, a Palestinian amora of the fourth century, who declared that the founder of this threefold division of traditional science (see JEW. ENCYC. iii. 163, *s.v.* BIBLE EXEGESIS) was R. Akiba (Yer. Sheḳ. v., beginning). This view is noteworthy as showing that the later representatives of tradition traced the origin of their science to the earliest authorities, the immediate successors of the Prophets. The men of the Great Synagogue, therefore, not only completed

the canon, but introduced the scientific treatment of tradition.

(3) They introduced the Feast of Purim and determined the days on which it should be celebrated (see above).

(4) They instituted the "Shemoneh 'Esreh," as well as the benedictions and other prayers, as already noted. The tradition in regard to this point expresses the view that the synagogal prayers as well as the entire ritual were put into definite shape by the men of the Great Synagogue.

Other Activity.

The list of Biblical personages who have no part in the future world (Sanh. x. 1) was made, according to Rab, by the men of the Great Synagogue (Sanh. 104b), and a haggadic ruling on Biblical stories beginning with the phrase "Wa-yehi bayamim" (And it came to pass in those days) is designated by Johanan, or his pupil Levi, as a "tradition of the men of the Great Synagogue" (Meg. 10b). This is merely another way of saying, as is stated elsewhere (Lev. R. xi.) in reference to the same ruling, that it had been brought as a tradition from the Babylonian exile. There are references also to other haggadic traditions of this kind (see Bacher, "Ag. Tan." 2d ed., i. 192; *idem*, "Die Aelteste Terminologie," p. 107). Joshua b. Levi ascribes in an original way to the men of the Great Synagogue the merit of having provided for all time for the making of copies of the Bible, tefillin, and mezuzot, stating that they instituted twenty-four fasts to insure that wealth would not be acquired by copyists, who would cease to copy if they became rich (Pes. 50b). A haggadic passage by Jose b. Ḥanina refers to the names of the returning exiles mentioned in Ezra ii. 51 *et seq.* (Gen. R. lxxi. *et passim*), one version reading "the men of the Great Synagogue" instead of "sons of the Exile," or "those that returned from the Exile" ("'ole goleh"). This shows that the men of the Great Synagogue included the first generation of the Second Temple. In Esth. R. iii. 7 the congregation of the tribes mentioned in Judges xx. 1 is apparently termed "men of the Great Synagogue." This is due, however, to a corruption of the text, for, according to Luria's skilful emendation, this phrase must be read with the preceding words "Ezra and the men of the Great Synagogue"; so that the phrase corresponds to the "bene ha-golah" of Ezra x. 16.

There is, finally, a passage of three clauses, which the Mishnah (Ab. i. 12) ascribes to the men of the Great Synagogue as stated above, and which reads as follows: "Be heedful in pronouncing sentence; have many pupils; put a fence about the Torah." This aphorism, ascribed to an entire body of men, can only be interpreted as expressing their spirit and tendency, yet it must have been formulated by some individual, probably one of their number. At all events, it may be regarded as a historical and authentic statement of the dominating thought of those early leaders of post-exilic Israel who were designated in the tradition of the Palestinian schools as the men of the Great Synagogue. It must also be noted that this passage, like the majority of those given in the first chapter of Abot, is addressed to the teachers and spiritual leaders rather than to the people. These three clauses indicate the program of the scholars of the Persian period, who were regarded as one generation, and evidence their harmony with the spirit of Ezra's teaching. Their program was carried out by the Pharisees: caution in pronouncing legal sentences; watchfulness over the schools and the training of pupils; assurance of the observance of the Law by the enforcement of protective measures and rulings.

An attempt has thus been made to assign correct positions to the texts in which the men of the Great Synagogue are mentioned, and to present the views on which they are based, although no discussions can be broached regarding the views of the chroniclers and historians, or the different hypotheses and conclusions drawn from these texts concerning the history of the period of the Second Temple. For this a reference to the articles cited in the bibliography must suffice. Kuenen especially presents a good summary of the more recent theories, while L. Löw (who is not mentioned by Kuenen) expresses views totally divergent from those generally held with regard to the Great Synagogue; this body he takes to be the assembly described in I Macc. xiv. 25-26, which made Simeon the Hasmonean a hereditary prince (18th of Elul, 140 B.C.).

SYNOD: Representative council, composed of rabbis and laymen, and convened to deliberate upon and determine points of Jewish doctrine, policy, and practise. The "elders" in the time of Moses and the members of the Great Assembly in the time of Ezra may be regarded as the elements of a synodal organization. Hananiah ben Hezekiah ben Garon was the head of a synod that decided upon the Bible canon and compiled the "Megillat Ta'anit," the official scroll of the fast-days. Many important decrees were issued from Hananiah's retreat (Shab. 13b).

Origin of Synods.

In the Middle Ages the synod known as the "asefah" (assembly) was called into existence not only for the protection of Judaism but for the purpose of solving current problems concerning Jews and their relations to their Christian neighbors. Under the presidency of R. Tam (d. 1171) a synod composed of several hundred rabbis and scholars of northern France and Germany assembled frequently at Troyes and Rheims. Its decisions included regulations regarding civil cases, over which the Jews had special jurisdiction. In one of its meetings it was decreed that no Jew might purchase a crucifix or any church furniture, because such an act might endanger the Jewish community. An amendment to the ordinance of R. Gershom forbidding polygamy provided that in case the wife was insane the rule might be abrogated with the written consent of one hundred rabbis from three different provinces (*e.g.*, Francia, Normandy, and Anjou). The ban of excommunication was pronounced against all who transgressed these or other decisions of the synod.

A synod held at Mayence in July, 1223, regulated the special Jewish tax and enacted that no Jew might incur blame by dishonorable dealings with Christians or by passing counterfeit coin. About twenty rabbis were assembled, among them being R. Eleazar of Worms, author of the "Rokeaḥ." The synod of Spanish Jews held on Sept. 25, 1354, represented the communities of Catalonia, Aragon, Valencia, and Majorca ("He-Ḥaluẓ," i. 15–29). A synod of rabbis and communal leaders held at Mayence on Aug. 5, 1381, renewed the taḳḳanot of Speyer, Worms, and Mayence (known collectively as "Shum"), especially that regarding the protection of the childless widow against extortion or delay in her release through the ceremony of ḥaliẓah.

In the Middle Ages.

A synod was convened at Weissenfels, Saxony, in 1386 for the purpose of deliberating on certain religious questions and adopting resolutions concerning measures of public utility. The members provided themselves with safe-conducts from the Saxon princes; nevertheless brigands, with the connivance of the nobles, waylaid the travelers on their return journey, robbed them, and held them for ransom.

The Jews of Italy convened a synod, first at Bologna and then at Forli (1416–18), to consider measures for averting the dangers which were threatened by the attitude of the Dominican Vicente Ferrer. The rabbis of Safed, Damascus, Salonica, and Constantinople called a synod at Jerusalem in 1552 to determine the Sabbatical year (Azkari, "Sefer Yere'im," p. 83). A permanent synod of rabbis and leaders assembled at Lublin, Poland, in 1650, and occupied itself, among other things, in amending the stringent laws against the remarriage of an 'Agunah. The synod in Starokonstantinov on Rosh ha-Shanah, 1756, ratified the ban against the Frankists and appealed to R. Jacob Emden to enter upon a crusade against them. The sittings of the Council of Four Lands were held regularly from the middle of the sixteenth century to the beginning of the eighteenth century.

In Russia.

These synods assembled at the call of the interested communities or of the leading rabbis, and bore an international character. In some cases the government of the country in which a synod was to be held suspected a political design and prohibited its meeting. At other times the local government itself would call a synod of rabbis and Jewish representatives for the purpose of explaining Jewish law and usage. Such a synod was the notable convocation known as the French Sanhedrin (1806). Alexander I. of Russia, by an edict of Dec. 4, 1804, called for a Jewish deputation to meet at St. Petersburg ("Ha-Karmel," 1871, p. 587). The object and result of this synod are not clear. In 1843, by order of Nicholas I., under a commission headed by Count Uvarov, a synod consisting of leaders of the various Jewish groups assembled in St. Petersburg. R. Senior Zalman of Lodi and Israel Heilprin of Poland represented the Ḥasidim; R. Isaac of Volozhin represented the anti-Ḥasidim; while Bezaleel Stern of Odessa and Max Lilienthal represented the Haskalah movement. Sir Moses Montefiore and Isaac Adolphe Crémieux were invited, but did not attend (Ḥayyim Meïr, "Bet Rabbi," ii., Berdychev, 1902). The synod was interrogated on certain questions of Jewish law in relation to the national law, and on Jewish education in particular. Similar synods were called in St. Petersburg in 1857, 1862, and 1879. That of the last date was presided over by F. Blumenfeld, and included, besides rabbis, A. Harkavy and other prominent laymen. The government required information on the question of marriage and divorce; likewise as to whether polygamy is considered a crime, and, if so, what is the punishment attached to it ("Ha-Meliẓ," 1879, No. 28).

An interesting synod was held in Cracow Aug. 9, 1903, when about fifty rabbis from different countries assembled at the call of R. Elijah Ḥazzan, ḥakam-bashi of Alexandria, Egypt, the sessions being presided over by Ḥayyim Levi Horowitz, the rabbi of Cracow. A special feature of this synod was the public oath taken by the rabbis in declaring that the Blood Accusation was absolutely false, and that neither the Talmud nor any other rabbinical book contains any mention of the ritual use of blood, which would be contrary to Jewish law. This synod also warned the Jewish youth to refrain from joining the ranks of the Nihilists or the Socialists, whose object, the destruction of the existing government, it declared to be treasonable according to Jewish law.

These synods always gave decisions on traditional lines; they never attempted to change a doctrine or principle of faith or to abolish any law, although they modified the latter when there was urgent need, as in the case of the 'agunah. The object of the synod was rather to strengthen the Law and to fence it about. Another aim was to raise the ethical standard of the Jews and provide means to better their position among the Christians.

The synods of the Reform Jews were of a quite different character. In their first attempt to organize a synod, in 1845, through the Berlin Genossenschaft für Reform im Judenthum, they declared for "a synod which shall renew and establish Judaism in a form worthy of continuance as a living force." They desired a synod composed of a large number of like-minded persons—of theologians and leaders of communities elected by their congregations—its essential task to be "to see to it that its decisions expressed the convictions of the communities at large and satisfied their needs." The decree of the synod was to be decisive and binding on the congregations which united to form it—binding, but not forever. "We must not look upon the decrees of this synod as the authentic interpretation of the divine will, but as the complete expression of the contemporary religious consciousness and as the realization of the religious needs apparent in the Judaism of to-day" (S. Stern, "Die Gegenwart. Bewegung in Judenthume," 1845, pp. 44-45). Ludwig Philippson approved the plan of a German synod in 1848; Samuel Holdheim, Abraham Geiger, and Zacharias Frankel also were in favor of it; yet it did not meet till long afterward—in 1869 in Leipsic and in 1871 at Augsburg.

In America.

The appeal for a synod in Germany was echoed in America, where its principal advocate was Isaac M. Wise. It was largely due to his efforts that the Conference of American Rabbis, held in Cleveland, Ohio, in 1855, recommended the calling of a synod. Wise wrote many editorials in the "Israelite" in favor of a synod, supporting his contention by the authority of the Bible, the Talmud, and Jewish procedure. Wise, like Holdheim, though extremely radical, wished to give Reform a legal aspect by connecting it with the Talmud and with Jewish legalism. He combated the plea of priestly domination; and from the start he was confronted with strong opposition, particularly in the Eastern States. B. Felsenthal in 1856 strenuously opposed the creation of a synod, because the "modern Jewish consciousness is opposed to all sanhedrins, and denies them the right to usurp the authority which belongs to the individual Jew." David Einhorn, rabbi in Baltimore, Md.; James K. Gutheim, rabbi in New Orleans, La.; Emil G. Hirsch, and Kaufmann Kohler also opposed the idea. So strong was the opposition that the matter was dropped for over twenty years, until after the death of Wise, when the advocates of the synod were again heard from at the Central Conference held at Buffalo, N. Y., in 1900. H. G. Enelow, in a paper read before that body, reviewed the question in favor of establishing a synod on Reform principles for the purpose of readjusting ancient religious theories to a new environment and new conditions of life.

Revival of the Synod Question.

Joseph Silverman, of Temple Emanu-El, New York, in 1903 expressed himself in favor of a synod that would decide on questions of Jewish theology, on the way to further the observance of Sabbath and the festivals, and on the problems of intermarriage, proselytism, cremation, in uniformity in synagogal music and religious instruction. Joseph Krauskopf, acting president of the Central Conference held at Louisville, Ky., June 27, 1904, strongly recommended that the conference enter seriously and at once upon the formation of a synod.

Beside Felsenthal the most outspoken opponent of the synod was Solomon Schechter, president of the Jewish Theological Seminary of America. His negative attitude was inspired by the dread of hierarchical pretensions and sacerdotal tendencies on the part of such a synod. This dread, he said, might not be justified in the eastern countries of Europe, where the Torah is the source of authority and the rabbi is but the interpreter of the Law; but in western countries loyalty to the Torah is replaced by blind devotion to a favorite orator, and the rabbi assumes the rôle of an independent authority. But Schechter argues against the plea that a synod is needed to counteract the whim and caprice of the individual rabbi, as he fears that the remedy may prove worse than the evil of a permanent schism in the congregation of Israel. If the synod is to become a blessing, he declares, it must first recognize a standard of authority in the Bible, the Talmud, and the lessons of Jewish history as to what is vital and essential in Judaism.

SYNOD OF FOUR COUNTRIES. See Council of Four Lands.

SYNOD, THE GREAT. See Synagogue, The Great.

SYNOD OF USHA: In the middle of the second century C.E. an important synod of rabbinical authorities was convened in the Galilean city of Usha, near Shefar'am, Tiberias, and Sepphoris. There also R. Judah b. Baba ordained five (or seven) disciples, and there the Sanhedrin sometimes sat (Sanh. 31b). The reason for the Sanhedrin's frequent change of seat is to be sought in the turbulence of the period, but mainly, perhaps, in the Hadrianic persecutions; this, therefore, approximately establishes the terminus a quo of the Synod of Usha, while the terminus ad quem is indicated by the fact that Shefar'am, the later residence of Judah I., is mentioned as the next seat of the synod after Usha. The Galilean synod was convened, then, between these two dates—more exactly during the reign of Antoninus Pius, and after that emperor had, about 140, annulled the anti-Jewish laws instituted by Hadrian. For while Judah b. Baba had to suffer a martyr's death for his ordinations and these, therefore, must have taken place under Hadrian, this synod, though it was attended by large numbers of people and marked by special festivities, met unhindered; it must, therefore, have been convened after the annulment of the laws mentioned. The rabbinical sources give various and inconsistent accounts of the synod.

Assembled at Usha.

"Our teachers congregated in Usha at the termination of the persecution [בשלפי השמד]. They were R. Judah [b. Ilai], R. Nehemiah, R. Meïr, R. Jose, R. Simeon b. Yoḥai, R. Eliezer [son of R. Jose the Galilean], and R. Eleazar b. Jacob. They sent to the elders of Galilee, saying, 'Those who have already learned, come and teach; those who have not yet learned, come and be taught.' They met and arranged everything that was necessary; and when the time came to depart they said, 'It would be wrong to leave [without blessing] a place where we have been so well received.' The honor of the blessing they bestowed upon R. Judah because he was a son of that city, and R. Judah arose and preached. In like manner did the other rabbis also preach, as befitted the occasion" (Cant. R. ii. 5).

Pupils of R. Akiba.

The seven inaugurators of the synod here mentioned, at whose call other scholars of Galilee repaired to Usha, are no doubt identical with the seven pupils of R. Akiba mentioned elsewhere (Gen. R. lxi. 3). In the Jerusalem Talmud (Ḥag. 78d) reference is made to a synod held in the Valley of Rimmon, and the names of the seven elders calling it are given as Meïr, Judah, Jose, Simeon, Nehemiah, Eleazar b. Jacob, and Johanan ha-Sandalar. The intercalation of the extra month was agreed upon without dissension; but with regard to the degree of holiness and the ḥallah, Meïr and Johanan ha-Sandalar became involved in a violent dispute. In spite of this they kissed each other at parting, and their friendship became so strong that the one of them that possessed a garment of the kind the Rabbis donned when rendering legal decisions tore it into halves and gave one half to his friend, who had none (*ib.*). To commemorate the synod, each rabbi drove a nail into a block of marble which lay near by, and this block was thenceforth named the "nail-stone" (*ib.*).

This is the most valuable datum concerning the ceremonies attending an old Jewish synod. The incident of the garment is told somewhat differently elsewhere, and in regard to R. Judah ben Ilai and six pupils (Sanh. 20a); but the number seven seems to identify the two occurrences. In two other passages of the Babylonian Talmud, however, four and three teachers, respectively, are mentioned as having delivered the sermons preached at Usha; but in these passages Jabneh is mentioned as the place of meeting (Ber. 63b; Shab. 33b). This is no doubt due to a transmitter's mistake in naming Jabneh as the place more often cited; but to agree with Zacharias Frankel that there may have been two different synods, one in Jabneh and one in Usha, would seem out of the question.

Enactments of the Synod.

No less erroneous is Grätz's theory, which gives the enactments ("taḳḳanot") of Usha as belonging to the beginning of Hadrian's reign, while it places the synod under Antoninus Pius. It can not be with certainty determined whether these enactments were issued by the Sanhedrin while sitting at Usha, or by the synod. A resolution which concerns the calendar and which the Jerusalem Talmud attributes to the Synod of Usha, is elsewhere ascribed to the bet din of Usha (R. H. 32a; comp. Yer. R. H. 59c; Tosef., R. H. iv. 5). R. Simeon ben Gamaliel was patriarch at Usha at the time of the synod, though no patriarch is mentioned in connection with the synod. This points to the conclusion either that the patriarch was too young to officiate or that he refused to officially represent Judaism at the synod, fearing that his connection with it might be misconstrued.

Of the regulations adopted at Usha, the following are known, R. Jose b. Ḥanina being supposed to have transmitted them (Ket. 49b, 50a). These regulations, no doubt, were made necessary by the conditions then existing, when many Jews lived in such poverty that it was necessary to formally and legally order parents to take care of their children.

"(1) Parents must care for their sons and daughters so long as their children are minors. (2) Should a parent deed his property during his lifetime to his sons, the latter must support their parents from the estate. (3) One who spends freely may not use more than one-fifth of his fortune. [In Yer. Pe'ah 15b this is taken to mean that one may not use more than one-fifth of his fortune for ḥallah and tithes.] (4) The father must be patient in teaching his sons until they are twelve years of age; then he may send them out into the world [that is, may cease to support them if they will not study]. (5) Should a wife sell her marriage-portion while her husband is alive, if he survives her he may legally take the property from the purchasers. [Both the Jerusalem and the Babylonian Talmud state that this is an older enactment.] (6) The ḥallah must be burned [in six given cases of suspected uncleanness] (Shab. 15b). [This also is an older regulation, the reissue of which had become necessary.] (7) An enactment in regard to the 'etrog'" (see Tosef., Sheb. iv. 21; R. H. 15a).

These regulations form a part of the Halakah, and are treated more fully and confirmed in the Talmud, as well as in the compendiums.

SYRACUSE: City in the state of New York; situated on Lake Onondaga. The first settlement of Jews in Syracuse dates back to 1839, when the warehouse of Bernheim & Block served as a meeting-place for Jewish traders from neighboring cities and towns. In 1841 a permanent religious organization was established, with the name "Society of Concord"; services were then held in an upper room of Jacob Garson's house. The membership increased rapidly, and in 1846 a house in Madison street was purchased and converted into a synagogue, in which the congregation worshiped until, through the efforts of Jacob Stone, the present synagogue was built, and dedicated (Sept., 1850) by Isaac M. Wise, then rabbi in Albany, N. Y. Under the presidency of Joseph Falker and the spiritual guidance of Dr. Deutsch many reforms were introduced in the service. This resulted in a division of the congregation in 1864. The seceding members formed the Adath Jeshurun congregation, of which Joseph Wiseman became president and Jacob Levi reader. The pulpit of the Society of Concord is at present (1905) occupied by Dr. Adolph Guttman, who was called from Hohenems, Tyrol, in 1883.

There are several other congregations in the city: New Beth Israel (organized 1854), New Adath Jeshurun (1870), Adath Israel (1882), Poiley Zedek (1888), and several minor congregations that worship according to the Orthodox ritual. Joseph Hertz, David Levine, and Henry Morais successively occupied the rabbinate of the New Adath Jeshurun congregation. Temporarily Orthodox congregations have no rabbis, their services being conducted by readers.

The Syracuse community includes many prominent merchants, physicians, and lawyers. Gates Thalheimer, president of the Society of Concord, is a trustee of the State Industrial School at Rochester, N. Y.; Drs. H. L. Elsner, Nathan Jacobson, and I. H. Levy are professors in the Syracuse Medical College; and many Jewesses occupy positions as teachers in the public and high schools. The principal charitable and educational societies of the Jewish community are: the United Jewish Charities; two ladies' aid societies; several ḥebras, giving aid in cases of sickness and death; and a branch of the Jewish Orphan Asylum of Western New York. The Hebrew Free School for Boys occupies a commodious building, while an industrial school for girls and likewise a Boys' Culture Club have been established under the auspices of the local branch of the Council of Jewish Women.

The population of Syracuse is 121,000, of whom about 5,000 are Jews.

A. A. Gu.

SYRIA: Country in Asiatic Turkey. The terms "Syria" and "Syrians" do not occur in Hebrew; they are found first in the Greek period. Following Nöldeke, these terms are usually explained as abbreviations of "Assyria" and "Assyrians." The identity of the two names is affirmed by Herodotus (vii. 63), who regarded "Assyrians" as the barbarian form, and "Syrians" the Greek spelling. The name "Syrians" has recently been derived by Winckler (in Schrader, "K. A. T." 3d ed., pp. 27 *et seq.*) from the "Suri" mentioned in the cuneiform inscriptions as a Babylonian designation for "the West," including Mesopotamia, northern Syria, and Asia Minor as far as the Halys—regions which had been inhabited by Arameans since the middle of the second millennium. In the Septuagint "Syria" is used to translate the Hebrew "Aram."

Political Meaning and History.

In a political sense the name "Syria" denotes the empire of the Seleucids, the territory implied varying with the boundaries of their dominions; for the great Syrian kingdom, whose capital originally was Babylon, and then Antioch on the Orontes, had no essential unity, but lost one district after another, until, in 65 B.C., Pompey made the remnant a Roman province which corresponded in general to the Syria of the ancient and modern geographers. Strabo, Pliny, and Ptolemy give the boundaries of Syria as the Taurus on the north, the Arabian desert on the south, the Mediterranean on the west, and the lower portion of the Euphrates and the region now called the Syrian desert (but anciently termed the Arabian desert) on the east. The southern portions of this region, Arabia Deserta and Petræa, as well as Palestine, did not belong to the Roman province of Syria, but formed independent districts. The term "Syria" now includes the district which lies to the east of the Mediterranean, between Egypt and Asia Minor, and stretches from the coast to the desert. Whether this desert, the great Syro-Arabian desert, called the Hamaḍ (the Arabia Deserta of the ancients), is to be regarded as a part of Syria or Arabia is a question of minor importance.

The boundaries of Syria are essentially natural ones: the Mediterranean on the west, and the desert on the east and south, although the desert forms no hard-and-fast limit, since the area available for habitation and cultivation has varied at different times. Since early times it has been a problem, as it still is, whether even a strong government could protect the peasants that cultivated the land on the desert frontiers against the predatory attacks of the warlike Bedouins. When such protection could be given, the arable districts increased in extent; but when the reverse was the case, the desert gained, or, in other words, the nomads forced the peasants to withdraw. Thus, during the Roman period the Ḥauran (comp. PALESTINE) had many flourishing villages and a large population, while under Turkish dominion it has fallen into the hands of the nomads and become desolate. Only within the last two decades has the Turkish government assumed control in the border districts and placed certain localities under military control, thereby making a distinct change for the better and driving the Bedouins farther back.

The Taurus Range.

The northern boundary is formed by the great Taurus range that runs from west to east, from Lake Van to Cilicia Trachea, where it slopes down to the Mediterranean. In the northwest, Syria is separated from eastern Cilicia, or Cilicia Campestris, by the chain anciently known as the Amanus, which runs northeast, from the northeast corner of the Mediterranean (the Gulf of Issus) through the Taurus. This range, however, has several easy passes, so that Cilicia Campestris, even as far as the Taurus, was always influenced by Syrian civilization. The region bounded by these limits never formed a political unit, and it had a history only so far as it formed a part of some greater country. In civilization, on the other hand, it was one, for this entire region was under the immediate and powerful influence of Babylonia and Assyria, which had impressed their own characteristics on the culture of all these lands.

This district is marked geographically by a system of dips running through the entire region from north to south. The "great Syrian dip" begins in the valley of the Ḳarasu, north of the ancient Antioch, and traverses the valleys of the Orontes (Nahr al-Aṣi) and the Leontes (Nahr al-Liṭani). Between Lebanon and Anti-Lebanon the upper courses of both these rivers lie in the depression now called Al-Biḳa' and corresponding to the ancient Cœle-Syria. The dip then sinks quickly, with the Jordan valley, below the level of the Mediterranean, reaching its greatest breadth and depth (793 meters below sea-level) in the Dead Sea. From that point it rises again to the 'Arabah, but it may nevertheless be traced as far as the Gulf of Aila. This dip, caused by the faulting of the great cretaceous layers bounding the Syrian desert, divides the land geographically into two sections, the mountain-ranges in both running for the most part parallel with it. The deepest depression is reached in the Dead Sea, while the mountains attain their highest point in Lebanon and Anti-Lebanon, the former on the west and the latter on the east of the great dip, being separated by the plain of Al-Biḳa'. The highest peaks of Lebanon are the Jabal Makmal (3,052 meters) and the Ḍahr al-Ḳuḍib (3,063 meters), both east of Tripoli, while the highest point of Anti-Lebanon is Mount Hermon (2,860 meters).

In the north, the Lebanon range ends at the Nahr al-Kabir, being continued beyond this plain by the Jabal Nuṣairiyyah, while beyond the valley of the Orontes rise the mountains anciently known as the Amanus, although they have no generic modern name. In the south, Lebanon finds its continuation in the west-Jordan hill-country of Palestine, but on the east of the great depression the chain of Anti-Lebanon comes to its northern terminus south of the Lake of Ḥums, the valley of the Orontes being marked by only slight elevations. Southward, however, the east-Jordan plateau shows considerable elevations (comp. PALESTINE). The valley between the two halves has been fully described, so far as its lower portion, the Jordan valley, is concerned, in the article PALESTINE. The northern part, the fertile district of the ancient Cœle-Syria, has its watershed at Baalbek. In this vicinity arise the two great rivers which drain the plain. The Nahr al-Liṭani, the ancient Leontes, flows southward, and is separated by the chain of the Jabal al-

Ḍahr on the east from the source of the Jordan, the Nahr Ḥaṣbani, which flows parallel with it. The Leontes then turns sharply to the west, entering the Mediterranean a little to the north of Tyre. The course of the Orontes (Nahr al-Aṣi) is directly antithetical, since it flows for a long distance northward through the entire plain, and does not bend to the west until it reaches the northern limits of the Jabal Nuṣairiyyah.

The Seacoast.

The seacoast of Syria consists for the most part of a narrow strip of land, the Lebanon frequently extending almost to the water. In the north the coast has many more indentations than in the south, and consequently possesses better harbors. The best of these is St. George's Bay, on which is situated Beirut, now the commercial center of Syria. The coast district, for the greater part, is separated from the interior by a mountain chain which is crossed by few passes. It must, therefore, be distinguished from the interior in political relations also, since the fact that its inhabitants, the Phenicians, were a maritime and commercial people whose interests lay seaward rather than inland, had its basis primarily in geographical conditions. The southern portion of the eastern desert which borders on Palestine is barren and uninhabitable, but the greater part of the northern district between Anti-Lebanon and the Euphrates may be regarded as inhabitable. From Anti-Lebanon to the Euphrates a range of hills runs northeast, and in their northern portion in ancient times there was a series of settlements at the various springs, although now only heaps of ruins remain.

In like manner the road from Damascus to the Euphrates runs along the southern slopes through a series of oases which were inhabited. Of these the most important are Palmyra and Damascus. Palmyra, or Tadmor, still is, as it has ever been, a stopping-point for caravans from Damascus to Bagdad, and, having all natural facilities for the development of a great commercial city, it became the capital of a powerful kingdom in the third century of the present era. Damascus also is an extremely ancient city, and owes its greatness and its importance to the fact that it is an oasis in the desert. The water from the eastern slope of Hermon forms the Nahr al-Barada and the Nahr al-A'waj (respectively the Amana and the Pharpar of the Bible), and these streams, flowing to the east, are lost in swamps in the desert, thus forming a large oasis, in the center of which the city lies. Since there is no direct route from the valley of the Jordan to Cœle-Syria, the road from southern Syria to the north, like the highway of commerce from Arabia to the north, naturally passes through Damascus. It has already been stated that the route from the Euphrates to the sea was by way of Palmyra and Damascus.

With the exception of the latter city, all the ancient towns are now abandoned, and this entire region, which once was populated, has now fallen into the hands of the nomads, who continually press forward from the interior of Arabia. The statement has already been made that the extensive district of Syria never had a political unity of its own, nor does it appear in history, except as a part of some great empire, such as the Babylonian or the Persian. (For the earliest history compare DAMASCUS; HITTITES.) It was not until after the death of Alexander that a kingdom bore the name of Syria. When his dominions were divided among the Diadochi, who succeeded him, the greater part of the Asiatic provinces of the empire of the Achæmenidæ came, together with Babylon as the capital, into the possession of Seleucus I., Nicator, and his successors, this Seleucid kingdom being called Syria, although this term was scarcely accurate. The capital was soon shifted westward, Seleucus himself, the founder of the dynasty, making Antioch on the Orontes his metropolis, and thus creating a center of Greek civilization in western Asia. The inherent weakness of the new kingdom lay in the fact that it was a huge conglomerate of the most varied ethnic components, with no essential unity. An additional factor was the war with the Egyptian Ptolemies for the possession of Egypt. This conflict lasted for a century, and it did not end until the reign of Antiochus III. (198 B.C.), after it had seriously weakened the kingdom, especially under Antiochus I. (280-261). The danger was equally great when the Parthians won their independence in the middle of the third century. Even Antiochus III., the Great (222-187), who was able to resist Egypt, was powerless to subject the Parthians.

Ethnic Factors.

The war against the Romans ended in 190, when the battle of Magnesia broke the power of Antiochus. By the terms of peace he was forced to surrender all lands lying north of the Taurus and Halys. The kingdom now hastened to its fall. The endeavor of Antiochus IV., Epiphanes (175-164) to Hellenize the Jews led to the Hasmonean revolt and the loss of southern Syria. Despite all the struggles for the throne, the dynasty, although reduced in territory to Syria alone after the middle of the second century, retained a show of power until the invasion of the Armenians, who conquered the country under their king Tigranes in 83 B.C. Their power, however, was of short duration, for they in turn were soon crushed by the Romans. The last of the Seleucids, Antiochus XIII., Asiaticus (69-64), lost his kingdom in 64, when Pompey declared the entire country a Roman province. This province was placed under a Roman governor at Antioch, although the smaller Syrian dynasties, such as those of Commagene, Chalcis, Damascus, Petra, and Jerusalem, were left undisturbed. In 70 C.E. Palestine was separated from Syria, and itself became a province ruled by an imperial governor. Later, during the reign of Hadrian, Syria was divided into three parts: Cœle-Syria (with Antioch as the capital), Syria Euphratensis (with Hierapolis as the capital), and Phœnice (with Emesa [Ḥums] as the capital); the last-named province embraced the coast with the adjacent inland districts.

The present (1905) population of Syria is 3,317,600.

SYRKIN, MAXIMILIAN (MEYER-JEHUDAH): Russian jurist and editor; born at Ponjewezh, government of Kovno, Oct. 27, 1858; a descendant of the family of Joel Sirkes ב"ך. He studied law at the University of St. Petersburg, and is at present (1905) practising his profession at the St. Petersburg bar. He was associate editor of the "Regesty i Nadpisi" (documents relating to the history of the Jews in Russia), published by the Society for the Promotion of Culture Among the Russian Jews in 1899; since that time he has been editor of the "Voskhod." Syrkin is the author of a book on art, entitled "Plasticheskol Iskusstvo" (St. Petersburg, 1900).

SYZYGIES. See Cabala.

SZABOLCSI, MAX: Hungarian author; born at Tura Aug. 27, 1857. In his youth he studied Talmud, and for a short time attended the rabbinical seminary at Budapest, later writing for Hebrew periodicals under the pseudonym of "'Ibri Anoki," and preparing a Hungarian translation of the haggadic portions of the treatise Sanhedrin. His most important literary activity, however, began with the Tisza-Eszlár affair, in which he took prominent part by contributing articles for the defense to the "Debreczeni Ellenör." In 1884 Szabolcsi became editor of the "Jüdische Pester Zeitung," and two years later he assumed control of the Hungarian religious paper "Egyenlöség," published weekly at Budapest.

SZANTO (ABAUJ-SZANTO): Town of Hungary, on the slope of the hills of Tokay. Its Jewish community is one of the oldest in the country. Its age is shown by the two cemeteries, the more modern one of which has been in use since 1780. Its oldest existing Jewish document, relating to the ḥebra ḳaddisha, is dated 1790, at which time the society had ninety-six members. In a document dated 1787, which is extant, the community pledges itself to build a school. The first teacher was Leopold Singer.

The first rabbi of Szanto known by name was Rabbi Jeremiah, author of the "Sefer Moda'ah." His successors have been: his son Joab, author of the "Ḥen Ṭob"; Eleazar Löw, called "Shemen Roḳeaḥ" (d. 1837); Nathan Lipschitz; his son Leopold Lipschitz (d. 1904 in Budapest, where he was president of the Orthodox congregation); and the present incumbent (1905), Paul Jungreise (since 1896).

The Jews of Szanto number 1,500 in a total population of 5,000.

SZANTO, EMIL: Austrian philologist; born at Vienna Nov. 22, 1857; died there Dec. 14, 1904; son of Simon Szanto. He studied at the University of Vienna (Ph.D.), and in 1884 was appointed privat-docent at his alma mater; in 1893 he became assistant professor and in 1898 professor of Greek history and archeology.

Szanto was considered an authority in his specialty, Greek epigraphy. Among his works may be mentioned: "Untersuchungen über das Attische Bürgerrecht," 1881; "Plataä und Athen," 1884; "Anleihen Griechischer Staaten," 1885; "Hypothek und Scheinkauf im Griechischen Recht," 1887, in collaboration with Edward Haüler; "Das Griechische Bürgerrecht," 1892; and "Reise in Karien," 1892. In 1887 he brought out a second edition of Bojesen's "Handbuch der Griechischen Antiquitäten."

SZANTO, SIMON: Hungarian journalist; born at Nagy-Kanizsa, Hungary, Aug. 23, 1819; died in Vienna Jan. 17, 1882. He was a son of Rabbi Meïr Szanto, and when only ten years of age lost both parents. He received his education at the yeshibot at Lakenbach and Gross-Jenikau (Bohemia), the public school at Prague, the gymnasium at Presburg, and the University of Prague, studying philosophy and Jewish theology under S. J. L. Rapoport. In 1845 Szanto went to Vienna, where he founded (1849), together with his brother Josef, a Jewish school, of which he was the director. Later he was appointed docent at the Theologische Lehranstalt at Vienna.

In 1861 Szanto founded, together with his brother-in-law Pick, the weekly journal "Die Neuzeit," of which he became sole editor after having been associated for a short time with Kompert. For a time he was editor also of Busch's "Jahrbuch für Israeliten," and of J. von Wertheimer's "Jahrbuch für Israeliten." In 1864 he was appointed Hebrew interpreter at the juridical courts of Vienna, and in 1869 supervisor of religious instruction at the Jewish schools of Vienna.

Szanto contributed numerous feuilletons and essays to various periodicals. For Busch's "Jahrbuch für Israeliten" he wrote "Bilder aus Alexandriens Vorzeit"; for Wertheimer's "Jahrbuch," "Schullehrers Paradoxa" and "Fahrende Juden"; and for the "Wiener Zeitung," "Sturmpetition eines Pädagogen," these articles appearing over the pen-names "Dr. Unbefangen," and "S. Pflüger." He contributed also to "Ost und West," "Bohemia," the "Orient," the "Tagespresse," and the "Frauenzeitung." He was the author also of the poem "Der Juden Vaterland" (Vienna, 1848).

SZEGEDIN: Town of central Hungary. Jews are mentioned there as tax-farmers during the Turkish rule in Hungary (1552). When the Turks were driven out of that country the Jews of Szegedin had to leave; subsequently, in 1714, three Jews, who had settled there without the permission of the magistrate, were expelled, and at the conscription of 1768 the authorities claimed that not one Jew was living in the town.

In 1719 Charles III. granted to Szegedin the privilege, enjoyed by most of the free royal cities, of admitting Jews and Gipsies, or refusing to admit them, at its pleasure; and Szegedin, like the other cities, exercised this privilege with the utmost rigor to the disadvantage of the Jews. In 1781 Michael Ḥayyim Pollak settled in the city without permission of the magistrate, but three years later six families obtained such permission. After this the number of tolerated Jews gradually increased; there were 11 families in the town in 1785, 18 in 1786, and 58 in 1799. In virtue of the decree of 1790 the Jews were to remain unmolested in whatever circumstances they were at the time of the decree. This encouraged them to acquire houses within the limits of the city; and whereas in 1788 only the above-mentioned Pollak possessed a house, in 1807 ten Jews were house-owners. In 1813 a boundary-line was drawn within which Jews were permitted to acquire houses, but as early as 1824 the Jews encroached on ground beyond this boundary, though the ordinance was not repealed until 1859. In 1825 the community had increased to 111, in 1831 to 367, and in 1840 to 800. In 1884 there were 800 Jewish taxpayers in Szegedin.

Organization.

The first communal statutes, referring especially to worship, were drafted in 1791, and included nineteen sections; they were enlarged in 1801 and revised in 1830. Until 1867 a commissioner delegated by the municipal authorities presided at the election of the governing board. In 1825 it was decided to elect a committee of thirty-one members, whose rights and duties were determined in 1830 and revised in 1833. After a futile attempt to reorganize the community in 1842, a marked advance was achieved in 1857, when the magistrate undertook the work of organization. In 1863 Leopold Löw, the chief rabbi, drafted statutes that are still the basis of government. These statutes were modified in 1867 and thoroughly revised in 1870; in 1903 new statutes went into force. In the period between 1788 and 1902 twenty-three judges, or presidents, conducted the affairs of the community. Toward the end of the War of Liberation the Diet, the members of which had fled to Szegedin, emancipated the Jews (July 28, 1849); but this act had no practical results. The proposition of Provost Kremminger in 1861 to elect Jews to the municipal council shows the respect which the community enjoyed.

Synagogues.

As early as 1789 the community decided to build a synagogue, having so far held services in a hired apartment; but in consequence of the opposition of the municipal authorities this project could not be carried out until 1803; and when permission was given to build, it was on condition that the synagogue should have a chimney and a kitchen, so that it might have the appearance of being a private house. It contained 129 seats for men and 99 for women. This synagogue was replaced by a new building in 1839, with 400 seats for men and 260 for women, which was dedicated on May 19, 1843, by Löw Schwab, chief rabbi of Budapest. After the great floods of 1879 it was renovated, and services are still held there (1905). Opposite this building is a newer and more imposing synagogue, one of the notable edifices of the country, erected at a cost of 500,000 crowns; it seats 806 men and 623 women.

The first rabbi of Szegedin, R. Jehiel, officiated from 1789 to 1790; his successors have been Hirsch

Bak (1790–1843), Daniel Pillitz (1843–47), Leopold Löw (1850–75), Wilhelm Bacher (1876–77), and the present incumbent, Immanuel Löw (since 1878). In 1831 a dayyan was appointed as assistant to the chief rabbi, and in 1894 an associate rabbi also was engaged. The community has had a notary since 1824.

Synagogal and Philanthropic Societies.

The Szegedin Ḥebra Ḳaddisha was founded in 1787; about the same time the Jewish hospital was established, in a rented building; but in 1856 the community erected a hospital-building of its own. The first cemetery was laid out in 1793; it was enlarged in 1810; but in time it was surrounded by houses, in consequence of the rapid growth of the city, and the bodies had to be exhumed (1867) and reburied in a common grave in the new cemetery. The Ḥebra Ḳaddisha had 490 members in 1903, and a fund of 120,000 crowns. The Biḳḳur Ḥolim was founded in 1821, and reorganized in 1861 under the name "Rofe Ḥolim." In 1831 a society for the relief of the poor was founded under the name Ḥebrat Orḥe 'Aniyyim, and in 1837 a similar society, the Ḥebrat 'Aniyye 'Irenu, which still exists. The Women's Society, which was the first one of its kind in Hungary, was founded in 1835 by Johanna Kohen. Chief Rabbi Löw founded in 1860 the society Ḥebra de-Sandiḳos. A society for dowering poor girls was founded in 1865. Since 1892 the Orphan Society has had its own building, equipped with all modern improvements. The Young Women's Society conducts a kitchen during the winter for the benefit of poor children.

Schools.

The community founded in 1820 a school with four classes, in which only Jewish subjects were taught. At the same time the Talmud Torah was formed to provide instruction for poor children. In 1839 steps were taken to organize, with the funds of the Talmud Torah, a regular public school, but the project could not be carried out until 1844. The girls' school was opened in 1851, through the efforts of the society Ḥebrat Ne'urim (founded in 1833 and in existence until 1855). A new building was erected in 1871, but it was replaced by other buildings in 1883 and 1895. It has eight teachers and one assistant; in 1902 there were 546 children on its rolls. The community provides religious instruction in the secondary schools, which contained 454 children in 1902. The new hall of the community, built at a cost of 150,000 crowns, is one of the most beautiful edifices in the city. Among the charitable foundations should be mentioned the fund of 60,000 crowns donated by David Kiss for clothing poor children.

Szegedin has a total population of 87,410, including 5,863 Jews, 1,243 of whom are taxpayers.

S. A. Löw.

SZENES, PHILIP: Hungarian painter; born at Szent Miklos Török in 1864. After studying at the technical school at Budapest, he devoted himself to art, residing for several years successively at Munich, in Italy, and at Paris. In 1895 he was awarded first prize by the Paris Academy of Art, and on his return to Budapest he at once took rank with the foremost painters of Hungary. His chief works are: "Samson and Delilah," "Esther," "Judith," "St. Cecilia," "After Dinner," "The Evening Paper," "Sunbeams," and "The Shepherd." Collections of his works are found in the National Museum of Budapest, in the Kunstverein at Dresden, and in the private gallery of Emperor Francis Joseph I.

S. L. V.

SZERENCSÉS (FORTUNATUS), EMERICH: Hungarian deputy treasurer; died Aug., 1526. As a married man he had had illicit intercourse with a Christian woman, and when this became known, in order to escape severe punishment he was forced to embrace Christianity; he was baptized by Ladislaus Szalkai, Archbishop of Grau, while the palatine Emerich Perényi, whose first name he thenceforth adopted, acted as sponsor. After Szerencsés' conversion he was appointed deputy treasurer, in which position he exercised a great deal of influence in favor of his former coreligionists. Whenever they were in danger he sent them letters of warning written in secret characters; and on one occasion when he learned that an accusation of ritual murder had been lodged against the Jewish community of Ofen, he persuaded the king and the dignitaries to deliver the calumniator to him. When an order of expulsion was issued against the Jews of Prague he made great sacrifices in order to secure its revocation. He likewise rescued a Jew and a Jewess who had been condemned to death by fire; and he had the children of a baptized Jew brought up in the Jewish faith. As long as he lived he distributed alms among the poor Jews every Friday. As a token of their gratitude toward him the rabbis of Ofen, Padua, and Constantinople ordered that his sons, Abraham and Ephraim, who, like their mother, had remained Jews, should be called up to the Law by their father's name, and not, as was the custom when the father had become a Christian, by their grandfather's. This action was taken as an indication that Szerencsés was not considered an apostate at heart.

But meanwhile the nobility of the realm, headed by Stephan Werböczi, accused Szerencsés of being the cause of the financial embarrassment of the country; and some of the members of the Diet of 1525 even demanded that he be burned at the stake. Szerencsés, indeed, had been grossly negligent in his official duties, and, in common with many of the most respected noblemen of the time, had made free use of the state's money. He was therefore imprisoned by King Louis II., whose favorite he had been, but was released shortly afterward. On the adjournment of the Diet servants of the nobles, reenforced by the rabble, attacked and plundered his home, and he escaped the rage of the populace only by flight. At the same time the mob stormed the ghetto, and seized all the valuables belonging to the Jews. When the Diet convened in the following year (1526) on account of the threatening incursions by the Turks, Szerencsés was once more restored to favor, but he died shortly afterward. On his death-bed, surrounded by many Jews, he repented his sins, with tears and prayers. His descendants adopted the name of Sachs.

S. A. Bü.

SZILASI, MORIZ: Hungarian philologist; born 1854; died at Klausenburg, Hungary, May 15, 1905. He studied philology at Budapest and Leipsic, and was appointed teacher successively at a gymnasium in Budapest and at Eötvös College. In 1902 he was called to the chair of Hungarian language and literature in the University of Klausenburg.

Szilasi translated into Hungarian parts of the works of Plutarch and Thucydides, as well as Curtius' "Griechische Geschichte" and Church's "Roman Life in the Time of Cicero." He was the author also of a Vogulic dictionary and of a "Vocabularium Cseremissicum."

Bibliography: M. Eisler, in *Dr. Bloch's Oesterreichische Wochenschrift*, Vienna, June 2, 1905, pp. 342, 343.

S. F. T. H.

SZILI, ADOLF: Hungarian ophthalmologist; born at Budapest in 1848; educated at Vienna (M.D. 1872). In 1874 he went to Budapest, where he became head physician of the ophthalmological department of the Jewish hospital; in 1883 he was appointed privat-docent at the university, and in 1895 assistant professor. In 1902 King Francis Joseph I. elevated him to the Hungarian peerage, when he assumed the name "Szilsárkány." His chief works are: "Eine Innervationserscheinung der Iris" (1874); "Therapeutische Versuche mit Eserinum" (1877); "A Szemüveg," on spectacles (1882); "Zur Morphologie der Papilla," in "Centralblatt für Praktische Augenheilkunde," 1889; "Optische Verwerthung von Brillenreflexen," in Graefe's "Archiv für Ophthalmologie," 1893; "Ueber Disjunction des Hornhautepithels," (*ib.* 1900); "Augenspiegelstudien zu einer Morphographie des Sehnerveneintrittes beim Menschen" (1901).

SZOLD, BENJAMIN: American rabbi and scholar; a leader of the conservative wing of the Reform movement in America; born at Nemiskert, county of Neutra, Hungary, Nov. 15, 1829; died at Berkeley Springs, W. Va., July 31, 1902. He studied under Rabbis Jacob Fischer of Shalgaw, Wolf Kollin of Werbau, and Benjamin Wolf at the Presburg yeshibah, and received the rabbinical authorization from Judah Assod of Bur and Simon Sidon of Tyrnau. In 1848 he studied in Vienna, but when the revolution of that year broke out he went to Presburg. From 1849 to 1855 he tutored in private families in Hungary, and in the latter year entered the University of Breslau, where he remained until 1858. While a student he officiated during the holy days at Brieg, Silesia (1857), and at Stockholm, Sweden (1858). In 1859 he accepted a call from the Oheb Shalom congregation of Baltimore, in whose service he remained until his death, first as rabbi and later (after 1892) as rabbi emeritus. He arrived in the United States on Sept. 21, 1859, about a month after his marriage to Sophie Schaar, and immediately took active charge of the congregation. Under his guidance it grew rapidly, and, actuated by his example, it became widely known for its strict observance of the Sabbath. Before Szold's arrival the congregation had adopted for use in its Sabbath service the "Minhag America," though on the great fall holy days it reverted to the "Minhag Ashkenaz"; after much discussion with his congregation Szold introduced a new prayer-book, "'Abodat Yisrael," which closely followed traditional lines. The first edition of this prayer-book appeared in 1863, with German translation, and was widely adopted by congregations in the United States; new editions were published in 1864 and 1865 (the latter with English translation), and another, revised edition in 1871, Rabbis Marcus Jastrow of Philadelphia and Henry Hochheimer of Baltimore being associated with Szold in its publication.

During his entire career Szold opposed radicalism, and fought the extreme tendencies that had already manifested themselves when he went to the United States. He took prominent part in communal life, and besides aiding in establishing the charitable institutions of Baltimore, he devoted himself to helping Russian refugees who had emigrated to America on account of the iniquitous May Laws. He was in sympathy with the nationalist (later Zionistic) movement, speaking in its favor as early as the winter of 1893–94 before the Zion Society of Baltimore. As an exegete he developed a subtle and original system in which full account was taken of the work of the Masorites. His "Commentary on Job" (Baltimore, 1886), written in classical Hebrew and conceived in an original and deeply Jewish spirit, attests the accuracy of his scholarship. His publications include articles in Jewish and in secular periodicals, as well as sermons, lectures, religious schoolbooks, and devotional literature. He wrote also a commentary on the eleventh chapter of Daniel (Kohut Memorial Volume), edited "Bibelkritische Notizen" by Michael Heilprin, and published a sketch of Moses Mendelssohn on the occasion of the 150th anniversary of his birth. He left numerous manuscripts.

SZOLD, HENRIETTA: Eldest daughter of Benjamin Szold; born at Baltimore, Md. Since 1893 she has been secretary of the literary committee of the Jewish Publication Society of America, and in connection therewith has translated Darmesteter on the Talmud (Philadelphia, 1897), and Lazarus, "Ethics of Judaism" (*ib.* 1900). In association with Cyrus Adler she has edited the American Jewish Year Book, and, independently, has contributed numerous articles to the Jewish periodicals. She has attended for several years the classes of the Jewish Theological Seminary of New York.

ṬA'AMIM. See Accents; Cantillation.

TA'ANIT ("Fasts"): Treatise in the Mishnah, Tosefta, and both Talmuds, devoted chiefly to the fast-days, the practises peculiar to them, and the prayers which must be said thereon. In most editions this treatise is the ninth in the mishnaic order of Seder Mo'ed, and is divided into four chapters containing thirty-four paragraphs in all. The contents may be summarized as follows:

Contents.

Ch. i.: Concerning the time after which one must begin to mention rain in the second benediction of the "Shemoneh 'Esreh" and to pray for rain in the eighth benediction (§§ 1-3); the time during which one should fast on account of scarcity of rain—two successive periods of three days each, and a final one of seven days—and the distinctions between these various days with regard to strictness in fasting (§§ 4-6); nature of the national mourning in case no rain falls despite many fast-days (§ 7).

Ch. ii.: The ceremonies which must be observed in fasting (§ 1); the prayers and the blowing of the trumpet in this connection (§§ 2-5); the participation of the priests both in the fasts of three days and in that of seven days (§§ 6-7); days on which public fasts are prohibited according to the Megillat Ta'anit (§§ 8-10).

Ch. iii.: Cases in which the order of fasting may be changed, and the trumpet may be blown at the very beginning of the fast (§§ 1-3); other occasions on which a fast is held and the trumpet blown, as when a plague breaks out in a city or when an army marches against it (§§ 4-7); concerning Ḥoni (Onias) ha-Me'aggel, who prayed for rain (§ 8); cases in which fasting ceases when rain begins to fall (§ 9).

Ch. iv.: Days on which the priests raise their hands four times to bless the people (§ 1); the institution of lay assistants ("ma'amadot") for the sacrifice, the time when they assembled, the days on which they fasted, and the sections of Scripture which they read on each day (§§ 2-4); the day of the month appointed for the bringing of the wood-offering (Neh. x. 34) during the period of the Temple (§ 5); the Seventeenth of Tammuz and the Ninth of Ab, and the five sad events which befell the Jewish people on each of these days (§§ 6-7); the festivities which marked the Day of Atonement and the Fifteenth of Ab (the most important day of the wood-offering) in ancient times in Jerusalem, when the maidens, dressed in white, danced in the vineyards and called on the young men to seek worthy brides for themselves (§ 8).

The Tosefta to this treatise contains much that elucidates and supplements the Mishnah. Especially noteworthy are the account of the origin of the priestly classes (iv. 2), the changes which affected them after the return from the Captivity, and how they were again subdivided (ii. 1).

The two Gemaras contain, in addition to the explanations of individual mishnayot, a wealth of haggadic sayings, as well as many narratives and legends. The following sayings from the Babylonian Gemara may be cited here: "Why is learning compared to a fire? Because, as many chips burn better together than singly, so learning is promoted when it is pursued by many scholars studying in company." "A sage who holds himself aloof from other scholars deteriorates in learning." "R. Ḥanina said he had learned much from his teachers, but more from his colleagues, and most of all from his pupils." "Learning is like water; for as water can not remain in a high place, so learning can not be the possession of a proud and haughty man" (7a). "If a pupil finds study difficult, it is only because he has not systematically arranged the material to be learned" (8a). "If when Israel is visited with affliction a man severs fellowship with his brethren, the two angels who accompany each one come to him, lay their hands upon his head, and say: 'This man would not suffer with his people; therefore he shall not behold them when they are comforted and see days of happiness'" (11a). Among the narratives particular attention should be given to the story of Nicodemus b. Gorion (19b-20a) and to the legend of Onias ha-Me'aggel, who slept for seventy years (23a).

Noteworthy in the Palestinian Gemara is the account of the three scrolls of the Law which were in the Temple and which differed from one another in various passages. Where two of these scrolls agreed as regards a reading, it was accepted as the correct text (iv. 68a). This Gemara contains also a remarkable saying of R. Abbahu, which is evidently directed against Christianity: "If a man say, 'I am God,' he lieth; and if he say, 'I am the son of man,' he will have to repent; and if he say, 'I shall go up to heaven,' he will not do it, nor achieve what he promises" (ii. 65b). It likewise relates how Bar Kokba killed Eleazar of Modi'im, whom a Samaritan had falsely accused of treason (iv. 68d).

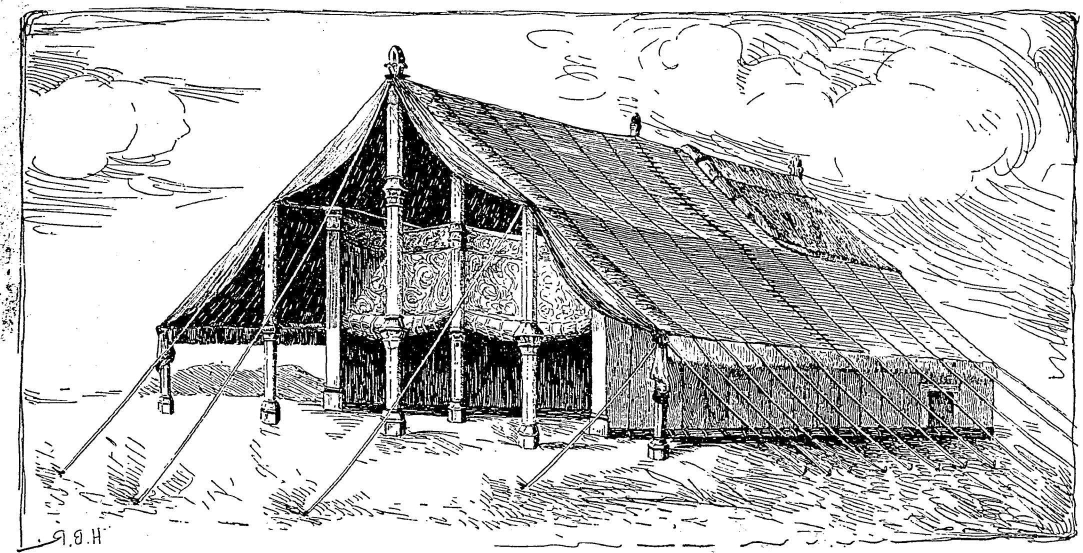
TABERNACLE: The portable tent-like structure that served the Israelites as a sanctuary during their wanderings in the wilderness and in the early period of their life in Palestine. It is chiefly in Ex. xxvi. and its parallel, *ib.* xxxvi. 8-38, that the oldest sanctuary of Yhwh is mentioned. Its fundamental part consisted of a framework of acacia-wood. Each board was 10 cubits long and 1½ cubits broad (an old Hebraic cubit measured probably, like the Babylonian, 55.5 cm.). The north and south sides each contained twenty such boards (*ib.* xxvi. 18, 20). The western side consisted of six similar boards (*ib.* verse 22), with the addition of two more which were to join the western with the northern and southern sides, respectively, in a manner rather obscurely described (*ib.* verses 23-25). These forty-eight boards were fixed in silver sockets, two to each board, by means of "hands" ("yadot"), *i.e.*, tenons, and they were kept from falling apart by five cross-bars on a side (*ib.* verses 26–28). The eastern side remained open.

Parts.

Since this framework was of course the first part to be set up (*ib.* xl. 18), it has been mentioned first here; but what really constituted the dwelling of the Lord, according to the express words of the Old Testament (*ib.* xxvi. 1, 6; xxxvi. 8, 13), were the inner curtains, which gave the structure its characteristic form. The quality and colors of these curtains were chosen accordingly; they were woven from the finest threads, some white, some bluish and reddish purple, and some scarlet. Pictures of cherubim were also woven in them (*ib.* xxvi. 1-6). A second set of curtains was made of goat-hair, which was the usual material for tents (*ib.* verses 7–13); these, by synecdoche (comp. König, "Stilistik," etc., p. 64), were called the "tent" (*ib.* xxvi. 7; xxxviii. 14, 18; xl. 19), inasmuch as they formed the chief part thereof; and upon them were placed two coverings, one of ramskin dyed red, and one of skins of the "taḥash." This latter was probably a seal; in any case it was a less common animal than the sheep, which Friedrich Delitzsch in his "Prolegomena zu einem Neuen Hebräisch-Aramäischen Wörterbuch" (p. 79) understands by "taḥash." With regard to the first-mentioned curtains, some scholars, as Winer ("B. R." *s.v.*) and Holzinger (on Ex. xxvi. 15, in "K. H. C." 1900), have declared that they formed not the walls of the Tabernacle, but merely an inner covering of those walls; but the contrary view is much more probable, and is the one adopted by De Wette, for instance ("Hebräische Archäologie," § 194), by Riehm ("Handwörterbuch des Biblischen Altertums," p. 1559), and by Baentsch ("Handkommentar zum Exodus," 1900, p. 228); indeed, the circumstance that these curtains are called "the dwelling" and that the tent-covering is placed upon them (Ex. xl. 19) is convincing evidence for the opinion that they enveloped the boards almost completely lest they might become soiled; they were not to touch the floor, and so were made only 28 cubits long. This fact would not be so comprehensible had the curtains been merely interior hangings. The objection has been raised, it is true, that cherubim were woven into them, and that in Solomon's Temple cherubim were carved on the inner walls; but the latter case presents a necessary modification which resulted naturally when the dwelling of the Lord no longer consisted chiefly of curtains. Moreover, the text contains no suggestion of hooks or any other appliances by means of which the curtains might have been suspended had they been intended merely to cover the inner surface of the walls.



The Tabernacle.
(Restored by Ferguson.)

Size.

The examination of the component parts of Yhwh's dwelling mentioned above leads to a consideration of its size. The height was undoubtedly 10 cubits; but the length was not simply 20 × 1½ cubits, since there must also be taken into consideration the eight boards on the western side. These measured 12 cubits by themselves; and, in addition, the thickness of the two boards by which the western wall was joined on one side to the southern and on the other to the northern wall (*ib.* xxvi. 23–25) must be reckoned in determining the exterior length of the Tabernacle. The thickness of these boards may be estimated from the following calculation: The Holy of Holies was 10 cubits high and 10 cubits long, since half of the inner covering, which was 40 cubits long, reached from the lower end of the western wall to the edge of the Holy of Holies (*ib.* xxvi. 33). This most holy place in all probability formed a cube of 10 cubits (comp. "ka'bah" = "cube"). If so the breadth of the Tabernacle must have

TITLE-PAGE FROM YOM-ṬOB ẒAHALON'S "SHE'ELOT U-TESHUBOT," VENICE, 1694, SHOWING GROUND-PLAN OF THE TABERNACLE.

(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

been 10 cubits, *i.e.*, the breadth of its inner space, whereas the eight western boards measured 12 cubits; and the southern and northern walls must each have covered one of the 12 cubits of the western wall; *i.e.*, the boards must each have been 1 cubit thick. The outer length of the Tabernacle was, then, $20 \times 1\frac{1}{2} + 1$ cubit $= 31$ cubits; and its outer width was $8 \times 1\frac{1}{2}$ cubits. But the inner length was 30 cubits, and the inner breadth 10 cubits; and since the inner space constituted the dwelling of the Lord, Josephus says ("Ant." iii. 6, § 3), not without reason, "its length, when it was set up, was 30 cubits, and its breadth was 10 cubits."

Holy Place.

This tent was divided, by means of a curtain hung 10 cubits from the western wall, into a most holy place ("Ḳodesh ha-Ḳodashim") and a holy place ("Ḳodesh"). This curtain was called "paroket," and was woven from the same four stuffs as the costly curtains which formed the inner covering (Ex. xxvi. 31–35). The eastern entrance to the holy place, which was 20 cubits long, was covered by a curtain ("masak") of the same materials (*ib.* verses 36 *et seq.*). Finally a court (ḥaẓer) formed in a certain measure a part of the Tabernacle. This court was 100 cubits long and 50 cubits broad (*ib.* xxvii. 9–13), and, since the Tabernacle was placed in its western part, it was rightly called a forecourt. The Tabernacle could be taken down (Num. x. 17); and it is therefore called a "tent." Its form does not need to have been that of a house (namely, that of Solomon's Temple), since (despite Holzinger's [*l.c.* p. 129] and Baentsch's [*l.c.* p. 231] statements) tents are sometimes made in an elongated form.

Name.

As has been mentioned above, this sanctuary of Yhwh (Ex. xxv. 8) was in the nature of things called the "dwelling" par excellence ("ha-mishkan") and the "tent" par excellence ("ha-ohel"); but its most frequent designation is "ohel mo'ed" (*ib.* xxvii. 21 *et seq.*). This term means "tent of mutual appointment," that is, "place of meeting [of God with Moses and with his successors]" (*ib.* xxv. 22; comp. the heathen "har mo'ed," Isa. xiv. 13). It was a mistake to interpret "mo'ed" here in a temporal sense, as if it had meant "tent of fixed time" (Targ., Pesh., Arabic). The expression means still less "tent of witness" (LXX.: *σκηνὴ μαρτυρίου*, wrongly upheld by A. Zahn, "Das Deuteronomium," 1891, p. 67). This interpretation can not be commended on account of the fact that the expression "ohel 'edut" = "tent of testimony" (Num. ix. 15, xvii. 22 *et seq.*, xviii. 2; II Chron. xxiv. 6) or "house of testimony" (Ex. xxxviii. 21; Num. i. 50, 53) also occurs; for if the same idea was to have been expressed the same word would have been used in both cases.

Age and Origin.

It was natural that the Ark of the Covenant should have been erected in some protected place; and such a place is expressly mentioned in Ex. xxxiii. 7–11 (which section is correctly ascribed to a comparatively ancient chronicler), and is called "ohel mo'ed." It is, to be sure, stated in the same place that Moses used to set up the Tabernacle outside of the camp (comp. König, "Syntax," §§ 157, 367e), and its position is so designated in Num. x. 32; xi. 24, 26 *et seq.*, 30; xii. 4, whereas according to Num. ii. 2, 17; v. 1 *et seq.*, the ohel mo'ed formed the central point of the camp. This obscurity in the memory of Israel is not to be denied; but, nevertheless, the question remains as to whether or not the Tabernacle, the description of which has been given above, is to be treated as a pure invention of the later priests, as is claimed by many exegetes and with special emphasis by Baentsch (*l.c.* p. 220). The argument that the splendor with which the Tabernacle was furnished according to Ex. xxvi. 1 *et seq.*, precludes its assignment to the time of Moses is of no weight, since the passage Ex. iii. 22 *et seq.* does not admit the conclusion that the Israelites who came out of Egypt were wholly destitute. Moreover, it is not remarkable, as has been claimed, that the tent of meeting should sometimes have been called "house" ("bayit"; comp. Josh. xviii. with Judges xviii. 31), since the tent which David erected for the Ark of the Covenant (II Sam. vi. 17) is similarly called "house of Jehovah" (*ib.* xii. 20); and if the Tabernacle was a product of the imagination, with Solomon's Temple as its prototype, other differences between the descriptions of the two would be hard to explain (*e.g.*, one candlestick instead of ten).

Symbolic Meaning.

It is probable that the characteristic features of the place of worship in the Old Testament bore, in addition to their outward purpose, an inner relationship to religious ideas. The following may be considered the chief of these: the opening of the gate toward the east had reference to the rising of the sun (comp. Isa. xli. 1 *et seq.*); the distinction between the holy place and the most holy place corresponded to the distinction between heaven and the innermost heaven ("sheme ha-shamayim"; I Kings viii. 27, etc.); and the forecourt, according to Isa. lxvi. 1, symbolized the earth. This interpretation was suggested by Josephus (*l.c.* iii. 6, § 4), and has been developed chiefly by Bähr ("Symbolik des Mosaischen Kultus," 1837).

E. C. E. K.

TABERNACLES, FEAST OF.—Biblical Data: Third of the great festivals on which all males were required to make pilgrimages to the Temple at Jerusalem. The celebration of this festival begins on the fifteenth day of the seventh month (Tishri). Originally it lasted seven days; but in the course of time its duration was extended to nine days. In the Bible it is variously styled חג הסכות, "the Feast of Tabernacles" (Lev. xxiii. 34; Deut. xvi. 13, 16; xxxi. 10; Zech. xiv. 16, 18, 19; Ezra iii. 4.; II Chron. viii. 13); חג האסיף, "the Feast of Ingathering" (Ex. xxiii. 16, xxxiv. 22), or merely החג, "the Feast" (I Kings viii. 2; Ezek. xlv. 23; II Chron. vii. 8); or חג יהוה, "Feast of the Lord" (Lev. xxiii. 39; Judges xxi. 19). In the Septuagint the first designation is rendered by *ἡ ἑορτὴ* (*τῶν*) *σκηνῶν* or *τῆς σκηνοπηγίας*; the second by *ἡ ἑορτὴ συντελείας* or *συναγωγῆς*. II Macc. x. 6 has *ἡ τῶν σκηνῶν ἑορτή*; Josephus ("Ant." iv. 209; comp. *ib.* iii. 247) and the New Testament (John vii. 2) *σκηνοπηγία*; Philo ("De Septenario," § 24) *σκηναί*; and Plutarch ("Symposiaca," iv. 6, 2) *σκηνή*. In later Hebrew literature חג (Aramaic, חגא) is generally employed.

Name.

From the frequent notice of it, as well as from its designation as "the Feast," it would seem that the Feast of Tabernacles held the most prominent place among Israel's festivals. That it was agricultural in origin is evident from the name the "Feast of Ingathering," from the ceremonies accompanying it, and from the season and occasion of its celebration: "At the end of the year when thou gatherest in thy labors out of the field" (Ex. xxiii. 16, xxxiv. 22, R. V.); "after that thou hast gathered in from thy thrashing-floor and from thy wine-press" (Deut. xvi. 13, 16, R. V.). It was more particularly a thanksgiving for the fruit harvest (comp. Judges ix. 27); but coming as it did at the completion of the entire harvest, it was regarded likewise as a general thanksgiving for the bounty of nature in the year that had passed.

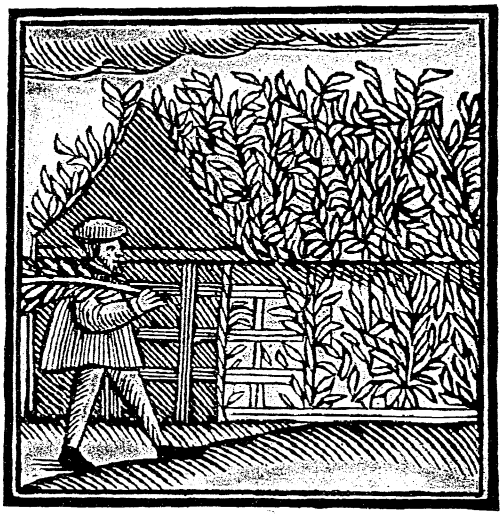
——**Critical View:** Connected with the possession of the land, it may have had a Canaanitish prototype (see Judges *l.c.*). Early, however, it appears as an Israelitish festival, celebrated yearly at Shiloh with dances by the maidens in the vineyards (*ib.* xxi. 19) and with family pilgrimages and sacrifices (I Sam. i. 3, 7, 21). Such even then was its prominence that it alone was celebrated at a central sanctuary, whereas the other festivals, it would seem from the absence of express statement regarding the question, were celebrated, if at all, at local shrines.

In early times the festival had no fixed date. Under the early kings it was apparently celebrated in the eighth month. In this month the Temple was completed (I Kings vi. 38); and it is most probable that the dedication followed immediately (*ib.* viii. 2, 65, would therefore be erroneous, as its dating involves a delay of eleven months). This date is further confirmed by the report (*ib.* xii. 32) that Jeroboam "ordained a feast, in the eighth month, on the fifteenth day of the month, like unto the feast that is in Judah." But in the earlier laws no definite time is appointed. As in I Sam. i. 20, so in Ex. xxxiv. 22, the phrase is at the "revolution of the year," or "when thou hast gathered in thy labors out of the field" (Ex. xxiii. 16). It is simply the "Feast of Ingathering," one of the three pilgrimage festivals, when all males are obligated to appear at the sanctuary (xxiii. 17, xxxiv. 23); no further directions as to the manner of celebration are given.

The Date.

No more definite is the date in Deuteronomy, where the festival is called "the Feast of Tabernacles" (xvi. 13–16), and, as in Exodus, its celebration is observed "after that thou hast gathered in from thy thrashing-floor and thy wine-press" (xvi. 13). Further particulars, however, are here added. The celebration is to take place only at the divinely chosen sanctuary. It is to be a joyous season, and, in the humanitarian spirit of Deuteronomy, the unfortunate and the dependent are to share in the festivity. The holiday is to last seven days (as already presupposed in I Kings viii. 66). The dwelling in booths is here taken for granted—presumably as an existing practise going back to the custom of living in booths during the fruit harvest, a custom which has survived to this day in Palestine. Further, it is ordained that every seventh year—the "year of release"—the Law is to be read to the assembled multitude (xxxi. 10, 11). It is also assumed that the Feast of Booths was the season for bringing to Jerusalem the first-fruits—a command for which Deut. xxvi. 1–11 assigns no time—as also for bringing the Deuteronomic tithes (see Cheyne, "Encyc. Bibl." *s.v.* "Tabernacles," § 4; Herzog-Hauck, "Real-Encyc." xl. 304).

The older law contained in Lev. xxiii. 39–43 amplifies the Deuteronomic legislation. As in the latter, the festival bears the general dating "when ye have gathered in the fruits of the land" (the beginning and end of the verse do not seem original); its duration is likewise seven days; and it is to be a season of rejoicing. Unlike the Deuteronomic provision (Deut. xvi. 14), its celebration is restricted to native Israelites (unless, as Bertholet supposes ["Die Stellung der Israeliten und der Juden zu den Fremden," pp. 171 *et seq.*], the text originally contained the words "and the strangers"). As a new provision occurs the command "And ye shall take you on the first day the fruit of goodly trees, branches of palm-trees, and boughs of thick trees, and willows of the brook" (Lev. xxiii. 40, R. V.). The use to which these branches are to be put is not indicated; and this omission gave rise to divergent interpretations at a later time. The Sadducees and Karaites maintained that they were meant for building the booth, as would appear from Neh. viii. 14–18, while their opponents contended that they were to be carried in the procession (see below, and Lulab). Originally these branches may have been used in the festal dances (Judges xxi. 19 *et seq.*), when it would be natural for those taking part in them to adorn themselves with sprigs and garlands (see also the passage from the Book of Jubilees quoted below); and here also their purpose was probably to be carried in the hand as was later the lulab. The dwelling in booths implied in Deuteronomy is in Leviticus expressly commanded. The booths themselves are, moreover, given a symbolic meaning, and are brought into relation with the wandering in the



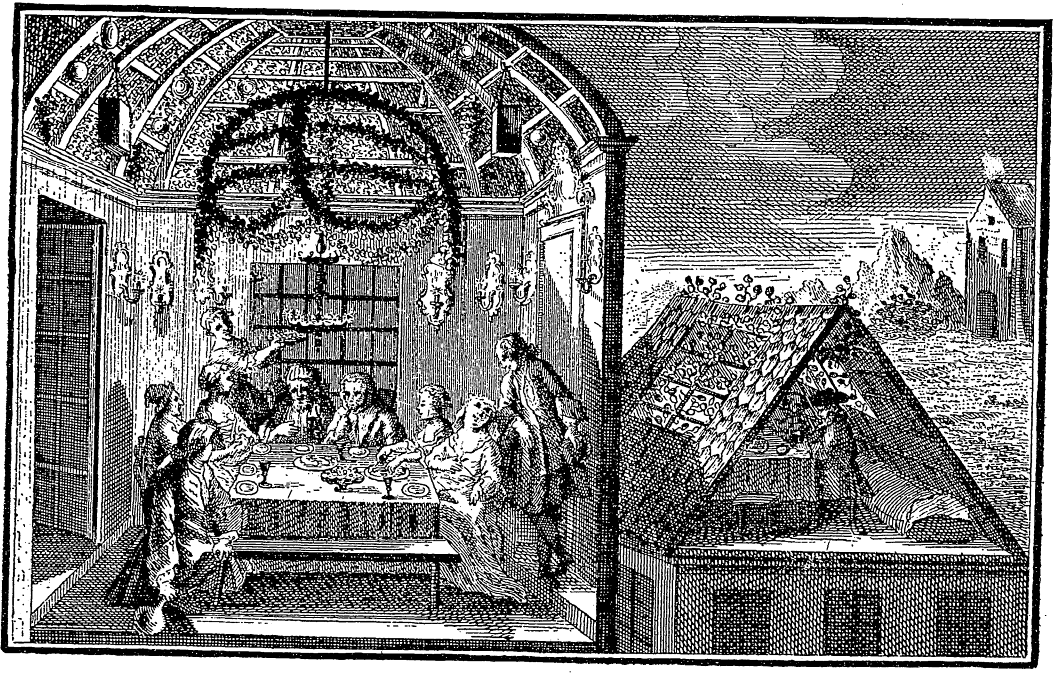
Sukkah or Booth.

(From the Amsterdam Haggadah of 1695.)

wilderness—"that your generations may know that I made the children of Israel to dwell in booths, when I brought them out of the land of Egypt." Significant in this new interpretation attached to the feast, is the conversion of the harvest festival into a historical festival.

Date in Ezekiel.

When the Deuteronomic reformation had made the Feast of Tabernacles a general Temple festival, a more exact date became necessary; and this need is supplied by Ezekiel xlv. 25. He designates the holy day as the "feast" or the "feast of the Lord," and fixes the fifteenth of the month as the time for beginning its celebration. This date had already become customary, it appears (I Kings viii. 2).



Feast of Tabernacles Among German Jews of the Eighteenth Century.

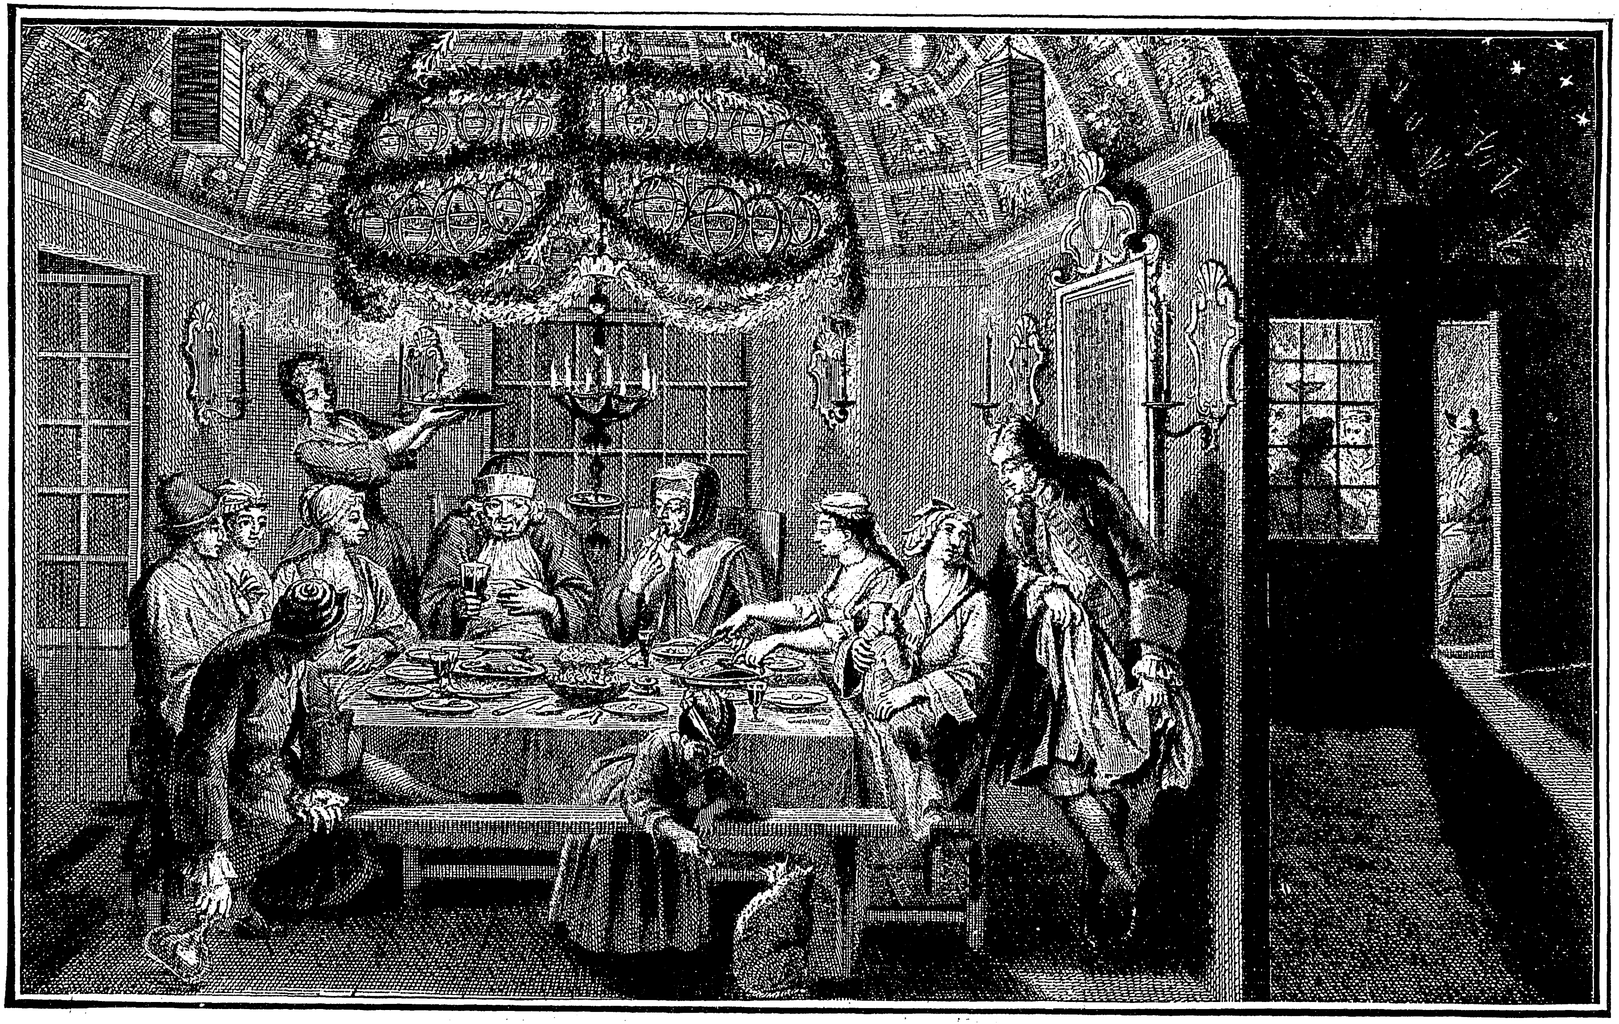
(From Bodenschatz, "Kirchliche Verfassung," 1748.)

More definiteness is also introduced in the method of observance. The sacrifices that were formerly voluntary are now prescribed—every day a burnt offering of seven bullocks and seven rams and a sin-offering of a he-goat; and with each bullock and each ram a meal-offering of an epha, and a hin of oil (Ezek. xlv. 23-24).

The last stage of legal evolution appears in Lev. xxiii. and Num. xxix. 12-38. The date and duration of the festival are the same as in Ezekiel; the name, as in Deuteronomy. As in Ezekiel, the agricultural significance is altogether absent. Furthermore, an eighth day is added as a concluding festival ("'aẓeret"; Lev. xxiii. 36, 39; Num. xxix. 35), which has an independent character: like the first day, it is a "holy convocation"; on it no labor is permitted, in which respect, as also in the sacrifices, it differs from the intervening six days. Exact sacrificial prescriptions are given in Num. xxix. 13-39, distinguishing this festival from the rest in the abundance of sacrifices. In addition to the daily regular offerings, there is to be a daily burnt offering of two rams, fourteen lambs, and bullocks—thirteen on the first day, twelve on the second day, and so diminishing by one daily on the other five days. In each case there is to be also the proper meal-offering of fine flour mixed with oil—three-tenths to each bullock, two-tenths to each ram, and one-tenth to each lamb. As a sin-offering a he-goat is to be sacrificed daily. On the eighth day the sacrifices differ, consisting of a he-goat as a sin-offering, and a single bullock, a ram, and seven lambs as a burnt offering—all of which are brought together with the meal-offering appropriate in each case.

Post-Exilic Celebration.

After the return from the Captivity occurs the first mention of a celebration of the festival in strict conformity with the Law. Mention of its observance is made in Ezra iii. 4; and a description is presented in Neh. viii. 14-18. Here it is said that the feast was observed in obedience to the command to dwell in booths. The people gathered "olive-branches, and branches of wild olive, and myrtle-branches, and palm-branches, and branches of thick trees, to make booths, as it is written," and they "made themselves booths, every one upon the roof of his house, and in their courts, and in the courts of the house of God, and in the broad place of the water gate, and in the broad place of the gate of Ephraim" (*ib.* viii. 15-16, R. V.). While no mention is here made of the sacrifices (as in Ezra iii. 4), the dwelling in booths is given special prominence, the writer adding that "since the days of



FEAST OF TABERNACLES AS OBSERVED BY DUTCH JEWS OF THE EARLY EIGHTEENTH CENTURY.

(From Picart.)

Jeshua the son of Nun unto that day had not the children of Israel done so" (Neh. viii. 17). The inference is that with the transfer of the festival to the Temple, the ancient practise had lost all significance, until revived with the historical meaning, and referred to the tents in which Israel had dwelt in the wilderness (on this point see Cheyne, "Encyc. Bibl." *s.v.* "Tabernacles"). According to Nehemiah's account of the celebration, the Law was read every day; the eighth day was duly celebrated as a solemn assembly (viii. 18). II Chron. vii. 8, transferring the festival of its time to antiquity, represents Solomon as celebrating an eight-day festival and as dismissing the people on the twenty-third day of the month (*i.e.*, the ninth day), whereas in reality Solomon dismissed the people on the eighth day (I Kings viii. 66).

The place held by the festival in post-exilic times shows itself clearly in Zech. xiv. 16-19. According to the author, Tabernacles is in the Messianic era to become a universal festival; and all the surrounding nations will make pilgrimages annually to Jerusalem to celebrate the feast there. Furthermore, the festival is here associated with the granting of rain—an idea further developed in later literature (see below)—the penalty to be visited on the nations who fail to come to Jerusalem being the withholding of rain.

In Post-Biblical Literature.

The festival continued to develop; and there were later added a number of features that are not described in the Biblical passages. In the liturgy it became known as the "season of our joy" ("zeman simḥatenu"). The Law in Lev. xxiii. 40 was generally interpreted to refer to the festal thyrsus, and minute regulations centered about it. The duty of dwelling in booths gave rise to much legislation as to what constituted a booth and what signified residence therein. Symbolic meanings were attached to the booth, the festal bouquet, and the other ceremonies. Practises, some perhaps of ancient origin, grew up, prominently the libation of water and the rejoicing connected therewith on the second evening of the festival. The seventh day of the feast assumed a special and solemn character (see HOSHA'NA RABBAH), and when the holy days were celebrated for two days the ninth day thus added took on distinctive features (see SIMḤAT TORAH).

In the Book of Jubilees the origin of the feast is carried back to Abraham (see ed. R. H. Charles, xvi. 20-31 and notes *ad loc.*). Abraham celebrates it with sacrifices (deviating in character, however, from the Biblical precepts) and by dwelling in booths, "for it is ordained forever regarding Israel that they should celebrate it and dwell in booths and set wreaths upon their heads and take leafy boughs and willows from the brook. And Abraham took branches of palm-trees and the fruit of good trees, and every day going around the altar with the branches seven times in the morning, he praised and gave thanks to his God for all things in joy." Jacob likewise celebrates the feast (*ib.* xxxii. 4-9). The description is strikingly at variance in a number of points with the later manner of celebration. The eighth day is not mentioned at all. Abraham is described as setting wreaths on his head—a detail that is unique. The marching around the altar seven times was later customary only on the seventh day. II Macc. x. 6-7 speaks of an eight-day celebration, similar to the Feast of Tabernacles, at the rededication of the Temple, in which the people carried wands encircled with foliage, palm-branches, and other beautiful branches (see also Ps. cxviii. 25). Josephus speaks of Tabernacles as a "most holy and important feast" ("Ant." viii. 4, § 1), describing it as an eight-day festival celebrated by dwelling in booths and by offering sacrifices in the Temple. On it the people "carry in their hands branches of myrtle and willow and a bough of the palm-tree with the addition of the pomecitron" (*ib.* iii. 10, § 4); the same fruit is elsewhere called "citron" (*ib.* xiii. 3, § 5). The feast is alluded to in John vii. 1-x. 21 also.

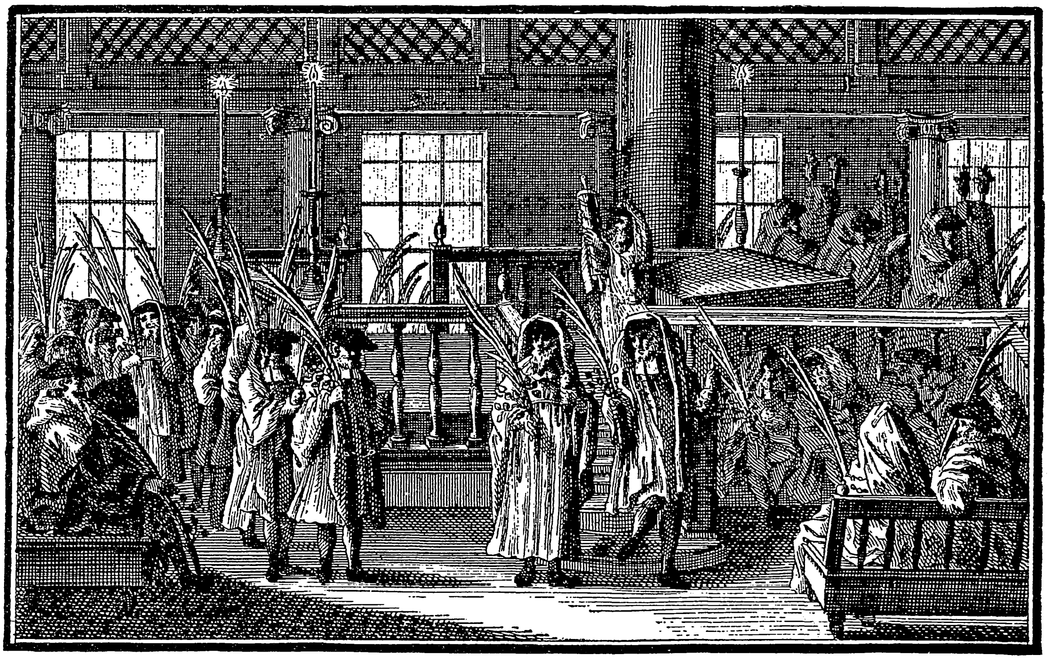
In Philo and the Mishnah.

Philo, unlike the other authorities, mentions none of the details of the celebration, and speaks of it as an agricultural feast of thanksgiving. Its duration is seven days, to which is added an eighth "as a seal." It teaches "equality, the first principle and beginning of justice . . . and that it is becoming also, after witnessing the perfection of all the fruits of the year, to give thanks to the Being who has made them perfect." Philo also mentions the historical significance of the feast. The eighth day he regards as the crowning of all the feasts of the year.

As enumerated in the Mishnah (Suk. iv. 1), the features of the feast are the following: the lulab, the willow-branch, the "Hallel" (Ps. cxiii.-cxviii.), the rejoicing, the sukkah, the libation of water, and the flute-playing or the festivity connected with the libation of water on the second evening of the feast ("simḥat bet ha-sho'ebah"). The lulab was used every day of the seven, except on the Sabbath, unless the first day of the festival fell on a Sabbath. During the chanting of Ps. cxviii. 1, 25, 29 it was waved. Willow-branches gathered daily from a place called Moẓa or Colonia were used to adorn the altar, around which a procession marched once on each of the first six days and seven times on the seventh day, to the sound of the trumpet—to commemorate the seven-day encompassment of the walls of Jericho—each man taking his festal bouquet in his hand and reciting Ps. cxviii. 25 (Suk. iv. 2-7). To such a practise, evidently, is reference made in Matt. xxi. 8, 9, 15 and in John xii. 12, 13. "Hallel" was recited every day; and the eighth day, too, was included in the "season of rejoicing."

The sukkah or booth was to be a structure especially built for the festival (Suk. i. 1), thatched so as to be a protection against the sun, while allowing the stars to shine through it at night. It was to serve as a permanent place of dwelling for the seven days (*ib.* ii. 9), and all males were obligated to reside in it, unless prevented by ill health or other cause (*ib.* ii. 7, 8, 9; Maimonides, "Yad," Sukkah, vi. 1, 2, 5, 6, 9; Shulḥan 'Aruk, Oraḥ Ḥayyim, 625, 629, 640).

The libation of water (Suk. iv. 1, 42b) was a ceremony to which grave importance was attached. The custom may perhaps be traced to the very ancient practise of drawing and pouring out water at religious services as reported in I Sam. vii. 6. It is regarded as symbolic of rain, which, as has been seen, was already associated by Zechariah with the festival, and which is more clearly connected with it in later literature. So the statement is made (R. H. i. 2; Ta'an. 2a) that at Tabernacles judgment is passed in regard to the rain. The "four kinds" of plants are associated with the rain (see Lulab), and God is made to say (R. H. 16a), "Pour out water before Me on the festival in order that your rains for the year may be blest." A prayer for rain is recited on the eighth day (Ta'an. i. 1, 2; Ber. v. 2). The practise is assigned an ancient origin in the Talmud (see Yer. Suk. iv., beginning; Suk. 34a, 54b); it is said to be referred to in Isa. xii. 3 (Suk. 48b, 51a); and the claim is even made that it originated in the six days of creation (*ib.* 51a). A golden pitcher holding three logs was filled by a priest with water from the Siloah, and brought through the water-gate, the multitude reciting Isa. xii. 3. Amid trumpet-blasts the water was poured simultaneously with a libation of wine into a tube in the altar, through which it flowed, mingling with the libation of wine, by an underground passage to the Kidron (Suk. iv. 9, 10; Tosef., Suk. iv.; the Sadducees seem to have opposed this practise [see Yer. Suk. v., beginning: Suk. 55a], perhaps because it was a popular innovation); and the officiating priest was required to lift up his hands, so that the assembled worshipers might see that the function had been properly discharged. Alexander Jannæus, who failed to do so, was pelted with etrogim by the multitude (Suk. iv. 9; "Ant." xiii. 13, § 5).



Procession Showing the Carrying of Palms During the Feast of Tabernacles.

(From Bodenschatz, "Kirchliche Verfassung," 1748.)

The Libation of Water.

The festivity of the season attained its height on the evening of the first day in the "simḥat bet ha-sho'ebah." Of this celebration it is said that whoever has not witnessed it has never seen a real festivity (Suk. v. 1). In the brilliantly illuminated court of the women, before the assembled multitude occupying the double gallery erected by the priests and Levites, the most prominent Israelites took part in a torch-dance, reciting at the same time hymns and songs of praise. Meanwhile on the steps of the inner court stood the Levites singing Ps. cxx.-cxxxiv., accompanied by various musical instruments. The celebration continued till cockcrow, when the two priests at the Nicanor gate sounded the signal, and the crowd departed, facing about, however, at the eastern gate, when the priests recited, "Our forefathers in this place turned their backs on the altar of God and their faces to the east, worshiping the sun; but we turn to God" (comp. Ezek. viii. 15, 16; Suk. v. 1-4; Tosef., Suk. iv.). Plutarch probably had in mind either this portion of the festivity or that connected with the lulab when he spoke of the festival as being one held in honor of Dionysus (*l.c.* iv. 6, 2). As the sukkah was later made symbolic of the "clouds of glory" with which God shielded Israel from harm in the wilderness (Oraḥ Ḥayyim, 625, 1), and the Lulab was likewise given symbolic significance, so this ceremony was spiritualized. In Yer. Suk. v. it is called "the house of drawing the water" because thence the Holy Spirit is drawn (comp. Tosef., Suk. iv., beginning; Levy, "Neuhebr. Wörterb." *s.v.* "Sho'ebah").

With the destruction of the Temple such practises as were bound up with the feast disappeared or were modified to fit altered conditions. The sukkah and the lulab remained; the latter was, however, not to be used on the Sabbath, even when this was the first day. In the synagogue the season was distinguished by the liturgy. The entire "Hallel" was recited even on the intervening days ("ḥol ha-mo'ed"). Hymns ("piyyuṭim") containing allusions to the festival were introduced in both morning and evening prayers. At the "Hallel" the lulab was waved as it had been in the Temple.

Every day selections from the Torah were read. The sections from the Pentateuch and the hafṭarot are such as refer to the festival. Thus on the first and second days Lev. xxii. 26-xxxiii. 44, which concludes with the Biblical law on Sukkot, is read; for the Mafṭir the selection is the sacrificial prescription for the day (Num. xxix. 12-16). The hafṭarah for the first day is the passage already discussed above (Zech. xiv. 1-21), and that for the second day is I Kings viii. 2-21, recounting the dedication of the Temple, an event which occurred on the festival.

Torah and Hafṭarah.

For the intervening days the Scriptural selection is from Num. xxix. 17-34, except when a Sabbath occurs, when the appropriate section from this passage is read for the mafṭir, and the Scriptural reading is Ex. xxxiii. 12-xxxiv. 26, wherein are contained the laws commanding the observance of Sabbath (xxxiv. 21) and of Tabernacles (xxxiv. 22); the hafṭarah is Ezek. xxxviii. 18-xxxix. 16, which is understood to refer to the time prophesied by Zechariah in ch. xiv. (For the readings from the Torah see Meg. 31a.) The Book of Ecclesiastes is read on such a Sabbath just before the Scriptural section, or, if no Sabbath occurs, it is read on Shemini 'Aẓeret. Ibn Yarḥi assigns as a reason for the practise that King Solomon read this book to the people who had assembled on Tabernacles ("Ha-Manhig," section "Sukkah," 27; see note to Ḳohelet in the Rödelheim edition of Maḥzor for Sukkot).

The Musaf is recited every day. On the first two days and on the last two the Dukan is pronounced. On the first seven days, except on a Sabbath, the Musaf is followed by a procession, the worshipers, lulab in hand, marching around the reading-desk and reciting hymns having as their refrain "Hosha'na!" (Deliver Thou!). This custom is a memorial of the libation of water in the Temple (see Vitry Maḥzor, ed. Hurwitz, § 381, p. 443; see also Hosha'na Rabbah; Shemini 'Aẓeret; and Simḥat Torah).

J. H. G. F.

ṬABI: **1.** Slave of Gamaliel II., known for his acquaintance with the Talmudic laws and for his piety; mentioned in several instances in the Mishnah. During the Feast of Tabernacles, Ṭabi used to sleep under the bed in the booth. In allusion to this habit Gamaliel observed, "Ṭabi, my slave, is a scholar; he knows that the law of booths does not apply to slaves, and therefore he sleeps under the bed" (Suk. ii. 1 [20b]). Yet Ṭabi used to wear phylacteries, a duty and privilege of free men; but, his piety being known, he was not interfered with (Yer. 'Er. x. 26a). Wishing to free him, but unable to do so since it would be contrary to the Law, Gamaliel, ostensibly by accident, put out one of his slave's eyes; then, meeting R. Joshua, he expressed his great joy at having found occasion to free his slave (comp. Ex. xxi. 26-27). Joshua, however, told him that he was mistaken, since no witnesses had been present and since he had confessed to the act himself (B. Ḳ. 74b; comp. Yer. Ket. iii. 28a). When Ṭabi died his master received condolences from his friends, a rare occurrence in the case of slaves (Ber. 16b). It is said in Azariah da Fano's "Gilgule Neshamot" (*s.v.* "Gamaliel") that Gamaliel's soul emanated from that of Shem, while Ṭabi's soul emanated from that of Ham, who was destined to be a slave to his brother (comp. Gen. ix. 25). Besides, according to the lesser numerical values ("mispar ḳaṭon") of the letters of the alphabet, the names of Ham and Ṭabi both have the same numerical value, namely, twelve.

2. Amora of the third generation (third and fourth centuries); mentioned in both Talmuds as transmitting halakot of R. Hamnuna (Yer. Suk. iv. 1), of R. Ḥisda (Yer. Shab. iii. 1), and, more often, of R. Josiah (Ber. 15b *et al.*). He disputed with Naḥman b. Jacob (Tem. 34b).

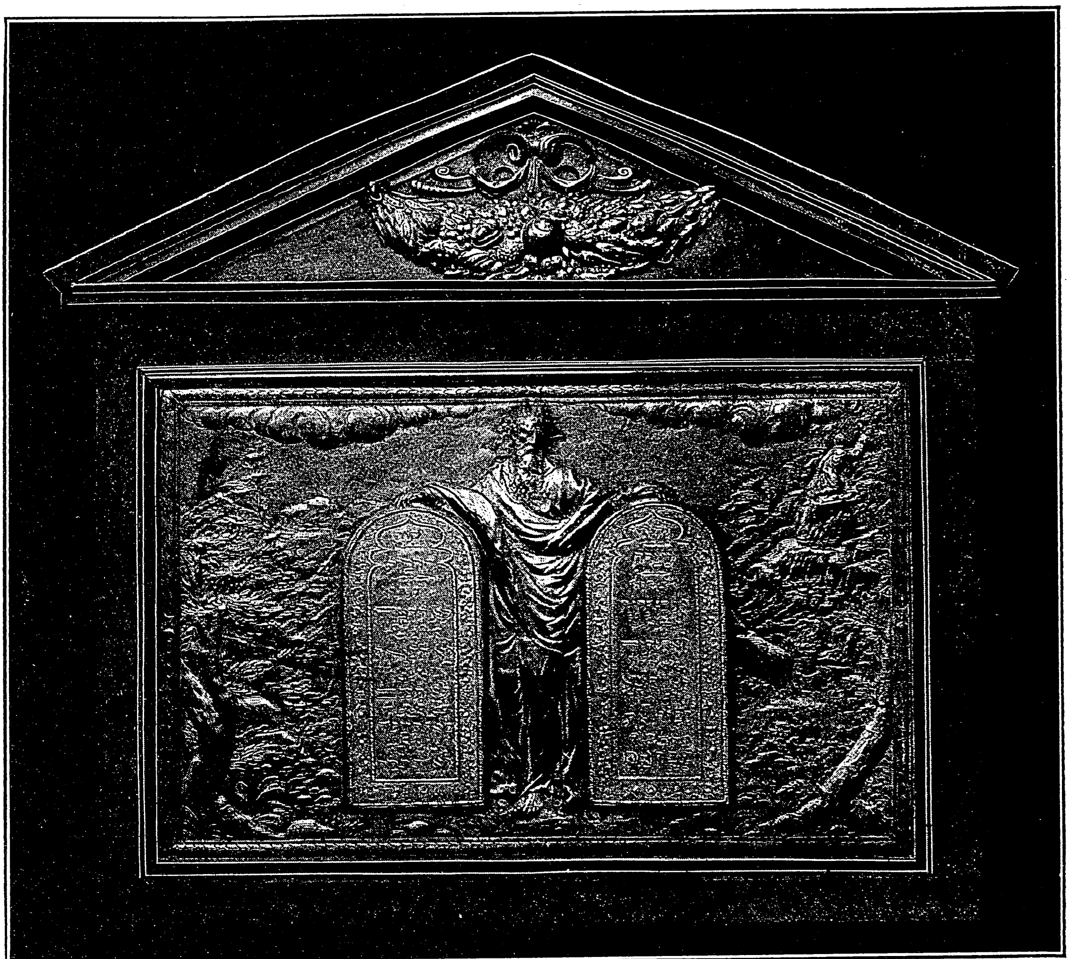
TABLES OF THE LAW: Tablets containing the Ten Commandments.—**Biblical Data:** Moses, bidden to go up to God on the mountain to receive "tables of stone, and a law ["Torah"], and commandments ["miẓwot"]" (Ex. xxiv. 12, R. V.), is given "two tables of testimony, tables of stone, written with the finger of God" (*ib.* xxxi. 18) "on both their sides" (*ib.* xxxii. 15), "the work of God" (*ib.* xxxii. 16). Descending from the mount with these two tables, Moses, beholding the iniquity of the golden calf (see Calf, Golden), cast them "out of his hands and brake them" (*ib.* xxxii. 19). Later he was ordered by God to hew two tables of stone like unto the first; and on these God wrote the words that had been written on the original tablets (*ib.* xxxiv. 1-4), that is to say, the words of the covenant, the Ten Commandments (*ib.* xxxiv. 28). These new tables also are designated "the two tables of the testimony" (*ib.* xxxiv. 29). According to I Kings viii. 9, these tables of stone were put by Moses into the Ark at Horeb (*ib.* xxv. 10 *et seq.*), and were still in it when the Solomonic Temple was dedicated. Compare Decalogue; Engraving; Revelation.

E. G. H.

——**In Rabbinical Literature:** The two tables furnish copious suggestions for amplifications and analogies. According to R. Berechiah, the tables were six handbreadths in length. In their delivery to Moses two handbreadths were held in the grasp of the Almighty, two constituted the distance between God and Moses, and two were seized by Moses (Ex. R. xxviii.). The number of the tables, two,

Why Two Tables.

corresponds to the natural coupling of pairs, such as bridegroom and bride, heaven and earth, this world and the world to come. By the circumstance that "luḥot" is written defectively without "waw," לחת, not לחות, the fact is indicated that the two tablets were perfectly equal (*ib.* xli.). The splendor of Moses' face (Ex. xxxiv. 30) was derived from the part of the tables that was between God and himself (*ib.* xlvii.). The first tables were given to Moses without effort on his part; the second, only after forty days of self-humiliation and privations (*ib.*). The angels objected to the writing of the second set by Moses on the ground that he might claim to be the author of the tables or might even go so far as to change their text and content; but God trusted him implicitly (with reference to Num. xii. 17; Ex. R. *l.c.*). Moses was commanded to write the second set, just as a royal husband who had written a matrimonial pact with his wife might, upon discovering that she had violated it, pardon her, but would most likely require her to draw up the second agreement (Deut. R. iii.; Ex. R. *l.c.*; Tan., Ki Tissa, ed. Buber, p. 117a). The word חרות in Ex. xxxii. 16 must be pointed חירות ("free"), indicating that death, earthly governments, and pain had no power over the Israelites, who accepted the tables (Lev. R. xviii.; Pirḳe R. El. xlvi.).



TABLES OF THE LAW FROM AN ITALIAN SYNAGOGUE, DATED 1671.
(In the Victoria and Albert Museum, South Kensington, London.)

Moses' Block of Sapphire.

Moses had in his tent a block of sapphire, created for the very purpose, from which he hewed the second set of tables (Pirḳe R. El. *l.c.*). The tables had a weight of 40 seah (Tan., *l.c.* p. 117b). Indeed, from the sale of the chips made in the course of the dressing of the block, Moses became rich (Ned. 38a). This sapphire was of a nature that admitted of the tables being rolled up (Ex. R. viii.; Cant. R. v. 14). The fact that the tables were of stone is emphasized as indicating that stoning was the punishment for infractions of the laws written thereon (Tan., *l.c.*, ed. Stettin, p. 158a). The letters of the inscription were 613 in number, suggesting the 613 COMMANDMENTS (Num. R. xviii.). Moses having thrown away the first set, it was only fair that he should provide the second (Deut. R. iii.). The sapphire from which Moses hewed the tables had been quarried from the solar disk (Cant. R. v. 14).

The Breaking of the Tables.

As to the arrangement of the words, rabbinical opinions differ: according to some, five commandments were inscribed on one table and five on the other; according to others, each table contained the complete DECALOGUE (Cant. R. v. 14). Moses was able to carry the heavy tables because God helped him; but when God saw that the people were worshiping the GOLDEN CALF, He withdrew His support; and this compelled Moses to cast the tables away. According to another version, the letters supported themselves as well as the stone in which they were encased; but, learning of Israel's lapse from grace, they flew back to heaven, and thus Moses was left, too feeble to carry the heavy burden. Again, the account is varied to introduce a struggle between God and Moses, or between Moses and the letters, Moses doing his utmost to save the tables from falling (Yer. Ta'an. iv.).

After all, it was well that the first tables were not delivered to Israel; for, having been written by the finger of God, they would have brought about the annihilation of every creature on account of their intense brightness (Tan., *l.c.*). As the first set had been given after loud proclamation and amid great pomp, the EVIL EYE had control over the tables; therefore the second set was given quietly to teach the lesson of humility (*ib.*). The seventy elders, indeed, endeavored to prevent Moses from breaking the tables; but in the struggle Moses prevailed. He, knowing their contents, would not deliver them to the faithless Israelites lest he should entail punishment on them; but when the letters flew away Moses was forced to drop the tables. When Moses broke the tables God was wroth with him: "Hadst thou worried and labored to produce them, thou wouldest have been more careful"; therefore Moses was commanded to hew the second set, which was given on the Day of Atonement, in the afternoon (Yalḳ., Ex. 392). According to some, Moses did not cast away the first set until God had encouraged him, saying, "May thy strength increase because thou brakest the tables" (Ab. R. N. ii. 3; Yalḳ., Ex. 363, 740). The instrument by which the inscription was traced was God's third finger (Pirḳe R. El. xlviii.). Moses broke the first set on the 17th of Tammuz (*ib.* xlvi.).

In the Cabala.

The tables were not of earthly but of celestial origin. The stone had been in existence from the very beginning of time, and the writing, too, had been extant equally long (*ib.*). The letters "mem" (final) and "samek" were miraculously supported in the stone, indicating "Meṭaṭron" and "Sandalfon" (comp. "Yalḳuṭ Ḥadash," p. 121a). In cabalistic expositions the numerical values of the text or of single words are utilized very extensively to indicate mystic and occult suggestions. The Divine Name, for instance, is by this method alleged to be found in the tables in varied combinations (see, for examples, *ib.* s.v. לוחות).

Both the second set and the fragments of the first were deposited in the Ark (Ber. 14b); and in connection with this the expression "fragments of the tables" came to be used to designate a learned man who in consequence of old age or infirmity had forgotten his learning, but to whom respect was nevertheless due. Similarly the phrase "the tables of the covenant" (לוחות הברית) was employed to paraphrase "the heart of Rabbi" (Yer. Kil. ix. 32b, above).

W. B. E. G. H.

——**Critical View:** In the account of the tables of the Law two historical reminiscences have been combined: (1) that in olden times laws and other public documents were written on stone; and (2) that a stone of some sort served as a tribal or national palladium, and was transported from place to place (in times of war more particularly) in a box specially made for it (comp. ARK OF THE COVENANT).

Tables of laws would naturally be set up in conspicuous places, and not, as in the case of those mentioned in Exodus, hidden away where none could see them. A "holy" stone, however, would thus be screened from vulgar eyes; for a profane gaze to rest upon it meant sure death for the perpetrator of the insufferable transgression. The early references to the Ark in Samuel make no mention of the tables which, according to the later theory, were contained therein. Furthermore, tradition is uncertain concerning the text of the inscription engraved on the tables (see DECALOGUE). This uncertainty probably gave rise, on the one hand, to the explanation that an older set of tables had been broken, and, on the other, to confusion with the invisible fetish hidden away in the chest. If none had seen the tables, there is small wonder that there was no agreement concerning the inscription. Furthermore, the dimensions of the ARK make it very improbable that two tables of the kind presupposed could be stored away therein. Significant as referring to tables of stone is Jeremiah's simile of "tables of the heart" (Jer. xxxi. 32).

E. G. H.

TABOR: 1. Mountain of Palestine, the modern Jabal al-Ṭur, on the northern edge of the plain of Jezreel. It is a dome-shaped hill with softly rounded outlines, and rises about 400 m. above the surrounding plain and 562 m. above sea-level. Standing out boldly on all sides, except in the northeast, where a low ridge connects it with the hill-country of Nazareth, it rises high above all the elevations in its vicinity and forms a landmark visible at a great distance. From the southwest it forms almost a semicircle. Its beauty and symmetry, together with its isolated position, render it, like Carmel and Hermon, important in history and tradition (Jer. xlvi. 18; Ps. lxxxix. 13 [A. V. 12]). In ancient times it formed the boundary between Zebulun, Issachar, and Naphtali (Judges iv. 6, 12, 14); and there Barak assembled his army to battle against Sisera (*ib.* iv. 6), while it was also the center of an ancient cult (Hos. v. 1). The Tabor mentioned in Judges viii. 18 must not be identified with this mountain, even in case the text does not require emendation (comp.

Moore, "Judges," p. 228), but is rather to be localized in the vicinity of Ophrah, the home of Gideon. In like manner "the plain of Tabor" mentioned in I Sam. x. 3 has no connection with the mountain under consideration, but the name seems to have been a frequent designation for places in the territory of Benjamin.

In later Jewish history Tabor is mentioned in the wars between Antiochus III., the Great, and Ptolemy VII., Philopator, the city of Atabyrium, which was situated on this mountain, being taken by Antiochus in 218 B.C. In 55 B.C. the proconsul Gabinius, the general of Pompey, defeated Alexander, the son of Aristobulus, in a bloody battle at the foot of Tabor. The mountain was fortified against Vespasian by Josephus as governor of Galilee (67 C.E.); but lack of water compelled those who survived the defeat in the plain to surrender to the general Placidus (Josephus, "B. J." iv. 1, § 8; *idem*, "Vita," § 37).

The sanctity ascribed to the mountain from very early times reappears in Christian legend; for the Gospel according to the Hebrews designates it as the scene of the transfiguration of Jesus (Matt. xvii. 1; Mark ix. 2; Luke ix. 28), and as early as the fourth century churches and monasteries were built on its summit. This tradition is incorrect, however; for a comparison of the statements of the Evangelists shows that they localized the event on a mountain north of the Lake of Gennesaret.

2. A city of Zebulun bordering on Issachar (Josh. xix. 22); a priestly city of the family of Merari (I Chron. vi. 62 [A. V. 77]). It was situated on a peak of the mountain of the same name, and covered a level surface of considerable extent, being about 900 m. from east to west and 400 m. from south to north, with a periphery, according to Josephus, of 26 stadia. The place existed even in the post-exilic period. Polybius (v. 70) calls it "Atabyrium"; and the walls with which Josephus fortified it may very possibly correspond to the outer walls of the peak in modern times.

TÁBÓRI, ROBERT: Hungarian author; born at Almas Nov. 10, 1855; educated at Baja, Budapest, and Vienna. He began his literary career in 1874 as a journalist on the Vienna "Fremdenblatt," later joining the staff of the "Morgenpost." From 1887 to 1890 he edited the "Südungarische Zeitung" at Temesvar, and at present (1905) he is the editor of the literary magazine "Uj Idök" in Budapest.

Of Tábóri's works, which have become especially popular among the young, may be mentioned: "A Szobor Titka," 1885, a novel; "Kulturképek," 1889, short stories; "Ildiko," 1890, a drama; "Párboj," 1890, a novel; "Az Etet Fobytatásokban," 1890, a novel; "Atalakulások," 1893, a novel; "Szabadtághösok," 1894, a novel; "Korhadt Oszlopok," 1895, a novel; "Oceania," 1898, short stories; and "Megfagyott Pezsgö," 1899, a novel.

BIBLIOGRAPHY: *Pallas Lex.*

S. L. V.

TABYOMI (generally known as **Mar**): Babylonian amora of the fifth century; died at the end of Yom Kippur, 468. He achieved a reputation as a teacher of the Law even during the lifetime of his father, ASHI, the famous director of the Academy of Sura (see Ber. 26a; Ḥul. 76b, 98a); and there is an allusion to his marriage, which took place in his father's house (Ket. 8a). Tabyomi was not elected director of the Academy of Sura until 455, twenty-eight years after his father's death, when he was chosen under the extraordinary circumstances narrated in B. B. 12b. He then officiated for the remainder of his life, a period of thirteen years.

Tabyomi continued his father's work in the revision of the Talmud; and Abraham ibn Daud mentions him, together with Maremar, as the final redactor of Babli. The statement of the same authority that Tabyomi received his name from the "happy days" ("yomin ṭobin") which prevailed during his lifetime, must be based on an earlier source, although this etymology is unhistorical, since the beginning of his official activity was marked by the bitter religious persecution by Yezdegerd III. That king died in 457; and his death was ascribed in part to Tabyomi's prayer (see Letter of Sherira Gaon in Neubauer, "M. J. C." i. 34, 187).

Few details are known of Tabyomi's official activity, although his relation to the house of the exilarchs is mentioned in Ḥul. 97b. He once alleged legal disability to sit in judgment on a scholar, making his plea in the characteristic words: "I love every scholar as myself; and no one can pronounce impartial sentence on himself" (Shab. 119a). The anecdote (Ḥul. 105b) which relates how he forced a demon into submission is typical of the views both of Tabyomi and of his time. His authority in the field of the Halakah is evidenced by a rule, probably of saboraic origin, in the "Seder Tanna'im we-Amora'im," to the effect that everywhere, with two exceptions, decisions are rendered according to Tabyomi's views (comp. Tosef., Sanh. 29b). No haggadic sayings of his have been preserved.

W. B.

TACHAU: City in Bohemia, thirty-three miles west of Pilsen; seat of one of the oldest Jewish communities of the country, as is shown by the remains of an ancient Jewish cemetery. R. Samuel b. Ḥasdai, a contemporary of Isaac Or Zarua' of the thirteenth century, lived there, so that Talmudists must have resided in Bohemia as early as the tosafistic period. When the country was first divided into districts, Tachau was the seat of a district rabbi; but the rabbinate was abolished about a century ago. Rabbi Schidloff, who died in 1894 at an advanced age, was very active in behalf of the Jews of Bohemia, and frequently presented petitions to the Austrian Reichstag relating to the improvement of the circumstances and the efficiency of the rabbis. The Jewish population of Tachau is now (1905) 260, and its rabbi is Dr. M. Wohl. The foundations and societies include a ḥebra ḳaddisha (with a fund of 6,000 crowns), an Ahabat Torah (for the maintenance of the school), a Talmud Torah, and a women's society for nursing and relieving the poor (with a fund of 8,000 crowns).

TADSHE. See Midrash.

TAGIN (Aramaic, תגין, תאגי, תגא; Hebrew, כתרים): Decorative "crowns" which are sometimes placed on the letters of the Hebrew alphabet. The taga is regularly composed of three flourishes or strokes, each of which resembles a small "zayin" and is called "ziyyun" (זיונים, זיון = "armor," *i.e.*, "dagger"). In the New Testament the taga is called "tittle" (Matt. v. 18). The seven letters צ, ג, ז, נ, ט, ע, ש have the crowns on the points of the upper horizontal bars. The flourishes are placed on the tops of the letters, and they are found only in the Scroll of the Law, not in the printed copies of the Pentateuch. The tagin are a part of the Masorah. According to tradition, there existed a manual, known as "Sefer ha-Tagin," of the tagin as they appeared on the twelve stones that Joshua set up in the Jordan, and later erected in Gilgal (Josh. iv. 9, 20). On these stones were inscribed the books of Moses, with the tagin in the required letters (Naḥmanides on Deut. xxvii. 8). The baraita of "Sefer ha-Tagin" thus relates its history: "It was found by the high priest Eli, who delivered it to the prophet Samuel, from whom it passed to Palti the son of Laish, to Ahithophel, to the prophet Ahijah the Shilonite, to Elijah, to Elisha, to Jehoiada the priest, and to the Prophets, who buried it under the threshold of the Temple. It was removed to Babylon in the time of King Jehoiachin by the prophet Ezekiel. Ezra brought it back to Jerusalem in the time of Cyrus. Then it came into the possession of Menahem, and from him was handed down to R. Neḥunya ben ha-Ḳanah, through whom it went to R. Eleazar ben 'Arak, R. Joshua, R. Akiba, R. Judah, R. Miyasha (מייאשא), R. Nahum ha-Lablar, and Rab."

Referred to in the Talmud.

The Aramaic language and the Masoretic style of the "Sefer ha-Tagin" would fix the time of its author as the geonic period. But the frequent references in the Talmud to the tagin suggest the probability of the existence of "Sefer ha-Tagin" at a much earlier period. Raba said the seven letters צ, ג, ז, נ, ט, ע, ש must each have a taga of three daggers (Men. 29b). The letter ח likewise has a taga (*ib.*). The taga of the ד is also referred to (Soṭah 20a). The taga of the "ḳof" is turned toward the "resh" (Shab. 104a; 'Er. 13a). R. Akiba was wont to interpret every point ("ḳoẓ") with halakic references ('Er. 21b). The Haggadah calls the tagin "ḳetarim." "When Moses ascended to heaven he found the Holy One 'crowning' the letters" (Shab. 89a). In the Midrash, in the comment on Hezekiah's reception of the ambassadors of Merodach-baladan, to whom he showed the "precious things" (Isa. xxxix. 2), R. Johanan says, "He showed them a dagger swallowing a dagger"; and R. Levi adds, "With these we fight our battles and conquer" (Cant. R. iii. 3; comp. Sanh. 104a; Pirḳe R. El. lii., end). Naḥmanides (1194–1270) quotes this midrash with the reading, "Hezekiah showed them the 'Sefer ha-Tagin'" (comment on Gen. i. 1). Maimonides evidently quotes the formula of the tagin for the phylacteries and the mezuzah scrolls from the "Sefer ha-Tagin" (see "Yad," Tefillin, ii. 9; Mezuzah, v. 3); in his responsa "Pe'er ha-Dor" (No. 68, p. 17b, ed. Amsterdam, 1765) he says, "The marking of the tagin in the Sefer Torah is not a later custom, for the tagin are mentioned by the Talmudists as 'the crowns on the letters.' . . . The Torah that Moses wrote also contained tagin."

The Vitry Maḥzor of R. Simḥah (written in 1208), a disciple of Rashi, copied the "Sefer ha-Tagin" (pp. 674–683). Menahem b. Zerahiah (1365), in "Ẓedah la-Derek" (I. i., § 20), says, "The 'Sefer ha-Tagin' is veiled in mysticism." Profiat Duran, in the introduction to "Ma'aseh Efod" (ed. Friedländer, p. 12, Vienna, 1865), says of the "Sefer ha-Tagin," "They were scrupulous in maintaining the form of the letters as revealed to Moses, inasmuch as they feared that a change might affect the efficacy attached to them." To R. Eleazar of Worms (1176–1238), the author of "Roḳeaḥ" and of several cabalistic works, also is ascribed a "Sefer ha-Tagin" (Neubauer, "Cat. Bodl. Hebr. MSS." No. 1566), which was, perhaps, his commentary on the text of "Sefer ha-Tagin"; he was not the author of the original book, as Zunz erroneously thought (see Zunz, "Z. G." p. 405, and note 2), since Naḥmanides, who flourished about the same time as R. Eleazar of Worms, quotes the "Sefer ha-Tagin" from the Midrash.

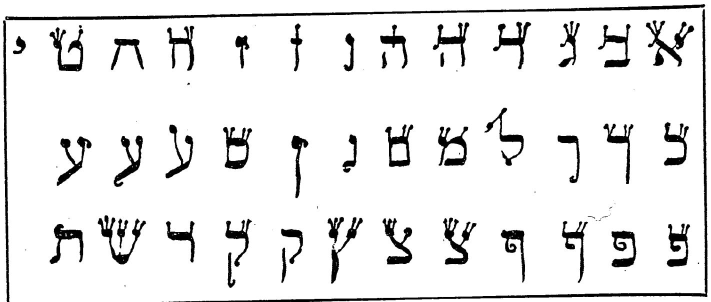
Cabalistic Significance.

The significance of the tagin is veiled in the mysticism of the Cabala. Every stroke or sign is a symbol revealing, in connection with the letters and words, the great secrets and mysteries of the universe. The letters with the tagin are supposed, when combined, to form the divine names by which heaven and earth were created, and which still furnish the key to the creative power and the revelation of future events. These combinations, like the Tetragrammaton, were sometimes misused by unscrupulous scholars, especially among the Essenes. Hence, perhaps, the injunction of Hillel: "He who makes a common use of the crown [taga] of the Torah shall waste away" (Ab. iv. 7); to which is added, "because one who uses the Shem ha-Meforash has no share in the world to come" (Ab. R. N. xii., end); the words of Hillel, however, may be interpreted figuratively (Meg. 28b).

A plausible explanation of the tagin is that they are scribal flourishes, "'iṭṭur soferim" (decoration of the scribes), the intention being to ornament the scroll of the Law with a "keter Torah" (crown of the Law), for which purpose the letters ז, נ, ט, ע, ש, צ, ג were chosen because they are the only letters that have the necessary bars on top to receive the tagin, excepting the letter "waw," of which the top is very narrow, and the "yod," whose head is turned aside and has a point ("ḳoẓ") on the bottom. The tagin of the other letters were intended probably to serve as diacritical points for distinguishing between ב and כ, ה and ח, ד and ר, ו and ז, ם and ס wherever a mistake was possible. Technically, as noted above, a taga is composed of three ziyyunin, or daggers. A line or stroke placed on a letter with a flat top is called "ḳeren" (= "horn"), but as a rule authors are not careful to descriminate between the terms "horn" and "dagger."

List.

The "Sefer ha-Tagin" gives a list of the unusual occurrences of the tagin and other flourishes in the Pentateuch, as follows (the tops of the letters being called "heads" and the shafts "legs"): (1) *alef*, 7 letters each with 7 tagin; (2) *bet*, 4 letters with 3; (3) *gimel*, 3 letters with 4; (4) *dalet*, 6 letters with 4, and 1 letter with 1; (5) *he*, 360 letters with 4 horns disjoined (not penetrating inside); (6) *he*, 18 letters with 1 horn and joined (penetrating inside); (7) *waw*, 38 letters with raised heads and legs coiled forward; (8) *zayin*, 14 letters with only one taga in the center; (9) *zayin*, 9 letters without tagin, but with coiled heads; (10) *ḥet*, 28 letters with 3 horns, 2 backward and 1 forward; (11) *ḥet*, 37 letters with legs astride; (12) *ṭet*, 67 letters with 4; (13) *yod*, 83 letters coiled like a "kaf"; (14) *kaf*, 58 letters with 3; (15) final *kaf*, 74 letters with 4 horns; (16) final *kaf*, 3 letters with their legs coiled forward; (17) *lamed*, 44 letters with long necks, and tagin lowered from the top beside the neck, forming something like a "yod" at the lower end; (18) *mem*, 39 letters with 3; (19) final *mem*, 130 letters with 3 tagin disjoined; (20) *nun*, 50 letters with their hooks coiled backward; (21) final *nun*, 16 letters with heads coiled, but without tagin; (22) *samek*, 60 letters with 4 tagin disjoined; (23) *'ayin*, 17 letters with hind heads suspended; (24) *'ayin*, 8 letters with tails coiled backward; (25) *'ayin*, 6 letters with heads coiled backward; (26) *pe*, 83 letters with 3; (27) *pe*, 191 letters without tagin, but with the mouth coiled inside; (28) final *pe*, 11 letters with 3; (29) final *pe*, 3 letters with mouth coiled inside; (30) *ẓade*, 70 letters with 5; (31) *ẓade*, 2 letters without tagin (all the rest have 3 tagin); (32) final *ẓade*, 8 letters with 5; (33) *ḳof*, 181 letters with 3 tagin disjoined; (34) *ḳof*, 2 letters without tagin, but with legs coiled backward; (35) *resh*, 150 letters with 2 horns; (36) *shin*, 52 letters with 7 horns; (37) *taw*, 22 letters with higher heads than are usual.



Letters with Tagin, as Described in "Sefer ha-Tagin."

(Compare "Sefer ha-Tagin," opposite p. 55; Vitry Maḥzor, opposite p. 800).

Variations.

There are some variations of this list in the Vitry Maḥzor, in the "Badde ha-Aron" of R. Shem-Ṭob (13th cent.), and in Ginsburg's "Massoretico-Critical Text of the Hebrew Bible." Maimonides (Responsa, No. 68) says, "The tagin vary in the number of daggers, some letters having one, two, three, or as many as seven. . . . Owing to the lapse of time and the exilic troubles there were so many variations in this Masorah that the authorities considered the advisability of excluding all tagin. But since the validity of the scroll does not depend on the tagin, the Rabbis did not disturb them." This probably accounts for the fact that only the tagin on the letters צ, ג, ז, נ, ט, ע, ש have been retained; those on all the other letters have been omitted in the scrolls of the Law used during the last three or four centuries (see R. Judah Minz, Responsa, No. 15; Shulḥan 'Aruk, Oraḥ Ḥayyim, 36, 3).

T. J. D. E.

TAḤANUN: Prayer for grace; said after the "'Amidah" of the morning ("shaḥarit") and afternoon ("minḥah") prayers on week-days. It is so called from the initial words of "Raḥum we-ḥannun" ("O Merciful and Gracious; I have sinned before Thee. O Lord, full of compassion, have mercy upon me and accept my supplications"). This is followed by Ps. vi., and then by "Wa-anaḥnu lo neda'" ("Neither know we what to do: but our eyes are upon Thee" [II Chron. xx. 12]) and several verses from the Psalms. On Mondays and Thursdays poetical verses are interpolated pleading for divine intervention, evidently composed during the Crusades and persecutions. These verses begin: "O Lord of Israel, turn from Thy fierce wrath. . . . Strangers say, 'There is no hope or expectation for thee.' Be gracious unto a people that trust in Thy Name. O Lord, spare us in Thy tender mercy, and deliver us not into the hands of the cruel . . . ." After every stanza the congregation answers with the refrain, "Yet, despite all this, we have not forgotten Thy Name: we beseech Thee, forget us not." On public fast-days is added "Shomer Yisrael" ("O Guardian of Israel, guard the remnant of Israel, and suffer not Israel to perish, who recite 'Shema' Yisrael,'" etc.). The modern minhag always couples this with the "Taḥanun." The verse "Wa-yomer Dawid" (II Sam. xxiv. 14), preceding the "Taḥanun," is a later addition, first mentioned by Jehiel Michael Epstein in his "Kiẓẓur Shelah" (p. 56, Amsterdam, 1701). Its insertion is due to the fact that it contains the words, "Let us fall," since the "Taḥanun" is known also as the "prostration" prayer, it being customary for the worshiper while reciting the prayer in silence to sit with the head resting on the arm and with the face downward. The head reclines on the left arm, unless the tefillin are adjusted on that arm,

Prostration.

when the right is substituted. Prostration is not performed in a place where there is no Sefer Torah. The "Taḥanun" is entirely omitted in a case of mourning or of joy; nor is it said on Sabbath, holy days, or semiholy days.

The ceremony of prostration is derived from Moses, who "fell down before the Lord" (Deut. ix. 18), and Joshua, who "fell to the earth upon his face" (Josh. vii. 6). The custom is connected with the expression "mappilim taḥanunenu" (Dan. ix. 18), which means, literally, "we cause our supplications to fall." It is mentioned in the Talmud as being the practise of the Babylonian Jews: when Rab happened to be in Babylon on a public fast-day he noticed that all the people fell on their faces in supplication. He, however, refused to do so, because, it is explained, he either considered it a pagan custom or regarded it as not obligatory upon a distinguished personage (Meg. 22b). The efficacy of prostration is shown in the case of R. Eliezer b. Hyrcanus, who in that way brought about the death of R. Gamaliel ha-Nasi (B. M. 59b).

The Zohar connects Ps. xxv. with the prostration prayer (Zohar, section "Ba-Midbar," p. 120b). This psalm is also given in the Vitry Maḥzor (p. 70), and is substituted in the Sephardic ritual for Ps. vi. Maimonides ("Seder Tefillot") gives quite a different version of the "Taḥanun"; the fact is that there was no fixed formula for this prayer up to the fourteenth century (see Ṭur Oraḥ Ḥayyim, § 131); and even as late as the sixteenth century it was composed in various forms to suit different minhagim (Shulḥan 'Aruk, *l.c.*). See ADORATION, FORMS OF.

J. J. D. E.

ṬAHARAH: Ceremony of washing a dead body before burial. This rite is performed by the members ("mit'assekim") of the "ḥebra ḳaddisha." The body is lifted from the ground, where it has been placed after death, and laid, feet toward the door, on the cleansing-table known as the "ṭaharah-board." The black cover and the old garments are removed, and a white sheet put under it, while the members assembled say a prayer for the dead, and recite, "Take away the filthy garments from him. And unto him he said, Behold, I have caused thine iniquity to pass from thee, and I will clothe thee with change of raiment" (Zech. iii. 4). Then begins the washing. The body is thoroughly rubbed and cleansed with lukewarm water, during which process the mouth is covered so that no water may enter it. Next water is poured over the head, while Ezek. xxxvi. 25 is recited: "Then will I sprinkle clean water upon you, and ye shall be clean." This is followed by washing each limb downward, the appropriate verses of Cant. v. 11 *et seq.* being repeated as the washing progresses: "His head is as the most fine gold . . . His eyes are as the eyes of doves," etc.

The position of the body is changed with the successive stages of the operation. First it lies face upward; next, upon the right and the left side; finally it is returned to its original position. After the body has been cleansed nine measures ("ḳabs") of cold water are poured over it while it is in a partly upright position. This last operation really constitutes the ceremony of ṭaharah. The body is then thoroughly dried, care being taken to keep it covered. It is then clothed in the shroud, appropriate verses being recited. The bodies of women undergo the same process of purification at the hands of their own sex (comp. Acts ix. 37).

A more elaborate ceremony is performed over the body of a great man. The order of the "grand washing" ("reḥiẓah gedolah") for such occasion is credited to Hillel the Elder (see "Ma'abar Yabboḳ," p. 42b, end). The ceremony should be performed by two persons at least, and the water be perfumed with essence of roses, with myrtle, or with spices. Fumigation with aromatic spices is an ancient custom (II Chron. xvi. 14); the Mishnah mentions especially the myrtle in connection with ceremonies for the dead (Beẓah 6a; Ber. viii. 1). The Mishnah mentions also the practise of cleansing and anointing the body, forbidding the ceremony on the Sabbath (Shab. xxiii. 5). It appears that in the early periods the body was washed in a regular bath; and Babylon was criticized because the ceremony was not observed there, and was called "Shinar" (see Gen. xi. 2) because the Babylonians "die in filth, without a candle and without a bath" (Yer. Ber. iv. 7b; Gen. R. xxxviii. 5; see Joseph Perles, "Leichenbestaltung," p. 12). The so-called "Tombs of the Kings" in Jerusalem has a bath below the entrance to the courtyard. Other ancient tombs are similarly provided with baths.

The reason assigned for the washing is the verse "As he came, so shall he go" (Eccl. v. 15, Hebr.): "When born he is washed, and when dead he is washed" ("Sefer Ḥasidim," § 560). **Object of Washing.** The washing is for the purpose also of removing all impurities, that the body may not be repulsive to the attendants ("Kol Bo," p. 114). The "Kol Bo" gives as a reason for rubbing the dead with beaten eggs that eggs symbolize the perpetual wheel of life (*ib.*; see the cabalistic view in "Ma'abar Yabboḳ," iii. 12). R. Benjamin, in his "Binyamin Ze'eb" (responsum No. 204, ed. Venice, 1539), records the testament of R. Eliezer ha-Levi ordering that his body should be cleansed carefully, including the ears and the fingers, and that his nails should be pared and his hair combed, that he may go to his rest as he was wont to go to the synagogue on Sabbath eve ("Darke Mosheh" on Ṭur Yoreh De'ah, 352). In ancient times the hair was cut (M. Ḳ. 8b), but now it is only washed and combed. The nails are not cut, but are cleansed with a special kind of pin.

After the ceremony the ṭaharah-board is cleansed and dried. There is a superstition that if it is turned with the upper surface downward, another person will die within three days (R. Judah he-Ḥasid, Testament, vi. 10). Those who perform the ṭaharah cleanse their hands with salt water.

In the time of R. Jacob Mölln (d. 1427) there was in Prague a separate cleansing-house ("bet ṭaharah") annexed to the cemetery ("Sefer ha-Maharil," end; "Yosef Omeẓ," p. 190a). In modern times the ṭaharah is performed in the house of the deceased. See BURIAL; FUNERAL RITES; PURITY OF RACE.

E. C. J. D. E.

TAḤASH (תחש): A word translated in the A. V. by "badger." Taḥash-skins were used in making the outer covering of the tent of meeting (Ex. xxvi. 14), and covers for various utensils used in the Tabernacle: for the Ark of the Covenant (Num. iv. 6), the showbread table (*ib.* iv. 8), the candelabrum (*ib.* iv. 10), the golden altar (*ib.* iv. 11), and the altar (*ib.* iv. 14). They were used also in the making of sandals (Ezek. xvi. 10). The Targum on Ex. xxv. 5 translates "taḥash" by "brilliant"; the Septuagint reads *ὑακίνθινα* = "hyacinth-colored"; the Vulgate, similarly. Rashi and Ibn Ezra take it as the name of an animal, but make no attempt at identification (commentary *ad loc.*). Modern commentators disagree. It has been suggested that it means the dolphin, or some animal like it. This is based on a comparison with the Arabic "tukhas." An Egyptian origin is assigned it by Bondi. Delitzsch ("Prolegomena," pp. 77 *et seq.*) has probably solved the problem by a comparison with the Assyrian word "taḥshu" = "wether," and from the passages quoted it is clear that wether-skin was also used by the Assyrians for purposes of covering; *e.g.*, Shalmaneser used such skins for covering boats. The expression used by him, "mashak taḥshu," corresponds exactly with the Hebrew term "'orot teḥashim" (= A. V. "skins of badgers"); and the Targum translates "'orot" by "mashke," which is exactly the same word as the Assyrian "mashak." "Wether-skins," therefore, seems the most probable interpretation of the Hebrew "'orot taḥash"; at all events, "badger-skins" is quite impossible, since far too few badgers were to be found to allow of such extensive use as is indicated by Num. iv. and Ex. xxvi.

TAḤKEMONI. See AL-ḤARIZI, JUDAH.

TAIKOS (טייקוס), **GEDALIAH BEN ABRAHAM MENAHEM**: German scholar of the eighteenth century. Under the title "Be'er ha-Torah" he translated into German the Pentateuch, the Haftarot, and the Five Scrolls, and published the work in Amsterdam in 1758. Taikos was the author of: "Sefer Torat Ḳaṭan," divided into two parts, the first, entitled "Eleh ha-Miẓwot," containing the 613 commandments, and the second, entitled "Ḥen ha-Lashon," comprising the rudiments of Hebrew grammar (*ib.* 1765); and "Emunot Yisrael," the ethical principles of Judaism, with a German translation (Amsterdam, 1764; Wilna and Grodno, 1837; Warsaw, 1844 and 1861).

ṬAIṬAZAḲ: Name of a prominent Spanish family, several members of which distinguished themselves as Talmudic authorities. Various opinions have been expressed as to the origin of the name, the exact orthography and signification of which can not be ascertained. After the expulsion from Spain in 1492 Solomon Ṭaiṭazaḳ, with his two sons Joseph and Judah, settled at Salonica, where members of the family subsequently became the leading spirits of the community. The most prominent were:

Jacob ben Samuel Ṭaitazaḳ: Talmudist of the sixteenth century; author of a responsum inserted in Samuel di Medina's collection entitled "She'elot u-Teshubot MaHRaSHDaM" (vol. iii., § 203, Salonica, 1598).

Joseph ben Solomon Ṭaiṭazaḳ: Talmudic authority and cabalist; lived at Salonica in the fifteenth and sixteenth centuries. With his father and his brother he went in 1492 from Spain, his native land, to Salonica, where he became rabbi. He was considered one of the greatest Talmudists of his time, even Joseph Caro invoking his authority ("Abḳat Rokel," § 56). Among Joseph's disciples were Isaac Adarbi and Samuel di Medina. Joseph was a fervent adherent of the Cabala, in which he was well versed, and led an ascetic life. Elijah de Vidas, in his "Reshit Ḥokmah" ("Sha'ar ha-Ḳedushshah," ch. vii.), relates that, with the exception of Sabbath nights, Joseph for forty years never slept in a bed, but on a box, with his feet on the ground. With such a disposition to asceticism and mysticism it was but natural that Joseph should become enthralled by the Messianic vagaries of Solomon Molko, whom he supported while preaching at Salonica in 1529.

Joseph's scientific activity lay chiefly in the field of Biblical exegesis. He was the author of "Ben Porot," a commentary on Ecclesiastes (Venice, 1599), and of "Leḥem Setarim," on the Book of Daniel and the Five Scrolls (*ib.* 1608), and on Psalms, Job, and Proverbs (Neubauer, "Cat. Bodl. Hebr. MSS." Nos. 206, 2; 329; 969; 2270, 8; 3521). Joseph wrote also: a commentary on the sayings of the fathers; responsa, some of which have been included in the writings of his contemporaries and pupils; notes on casuistical matters; commentaries on haggadic passages; and a treatise on the astrolabe (Neubauer, *l.c.* Nos. 834, 7, 10; 2080, 3; 2254, 8). According to Isaac Adarbi ("Dibre Ribot," p. 64), Joseph was the author also of novellæ on Alfasi.

Judah ben Solomon Ṭaiṭazaḳ: Talmudist; brother of Joseph ben Solomon; lived at Salonica in the fifteenth and sixteenth centuries. He was the author of "She'erit Yehudah" (Salonica, 1599–1600), commentating and supplementing Joseph Caro's "Bet Yosef," on the second volume of the Ṭurim.

S. I. BR.

TAḲḲANAH (plural, **Taḳḳanot**): An enactment which (1) revises an ordinance that no longer satisfies the requirements of the times or circumstances, or which (2), being deduced from a Biblical passage, may be regarded as new. It is, therefore, the antithesis of the GEZERAH. Taḳkanot were framed even in the time of the Second Temple, those of unknown origin being ascribed to earlier leaders, and they have been promulgated at all subsequent periods of Jewish history. The term is applied also to the institution provided for in the enactment.

Among the earlier taḳḳanot are especially noteworthy the institutions ascribed to Moses (see also Sinaitic Commandments): (1) the observance on holy days of the ceremonies peculiar to the festivals in question (Meg. 32a; comp. Tosef., Meg. vii.); (2) reading aloud from the Torah on the Sabbath, on holy days, on New Moons, and on the semifestivals (Meg. 28a; Yer. Meg. iv. 1); (3) the first blessing in the grace after meals (Ber. 48b); (4) the eight watches of the priests, four by Eleazar and four by Ithamar, which Samuel and David increased to twenty-four (Ta'an. 27a); (5) the seven days of wedding festivities for a virgin, and seven days of mourning for the dead (the festivities for a widow's wedding were later ordained to last three days; Yer. Ket. i. 1; comp. Ket. 3a, b). Other taḳḳanot were ascribed as follows:

To Joshua: (1) the second blessing in the grace after meals (Ber. 48b); (2) ten regulations which, however, are not taḳḳanot in the strict sense of the term (B. Ḳ. 80b, 81b, 114a; Tosef., B. M. xi.; comp. Bloch, "Institutionen des Judenthums," i. 54-68).

To Boaz, the ancestor of David: the salutation in the name of God (Ber. 54a).

To David: (1) increase of the eight watches of the priests to twenty-four (see above); (2) the recitation of a hundred benedictions daily (Num. R. xviii., but comp. Men. 43b); (3) the third blessing in the grace after meals (Ber. 48b).

Taḳḳanot of Moses, Solomon, and Others.

To Solomon: (1) the practise regarding the 'Erub (Shab. 14b; 'Er. 21a; Yalḳ., Cant. 23); (2) the washing of the hands before Kiddush, which Shammai and Hillel made obligatory for Terumah as well, while later authorities extended it to still other occasions (Shab. 14b; 'Er. 21b); (3) the regulation regarding entrance upon another's fields after the harvest (possibly enacted by Joshua also; B. Ḳ. 80b).

To the Earlier Prophets: (1) the singing of Hallel on every important occasion, and especially after escape from danger (Pes. 117a); (2) the introduction of twenty-four divisions of laymen, corresponding to the twenty-four watches of the priests (Ta'an. 27a).

To the Prophets before the destruction of the Temple: (1) the payment of terumah and tithes in Babylon as well as in Palestine (Yad. iv. 3); (2) the payment of the second tithe ("ma'aser sheni") in the seventh year (*ib.*); (3) payment of it in Egypt, Ammon, and Moab likewise (*ib.*); (4) payment of the tithe for the poor ("ma'aser 'ani") even in the seventh year (*ib.*).

To the Prophets after the destruction of the Temple: fasting on the Seventh of Tammuz, Ninth of Ab, First of Tishri, and Tenth of Ṭebet ("Yede Eliyahu," ed. Constantinople, 1728, xl. 14).

Taḳḳanot of Ezra.

To Ezra: (1) the reading of ten verses of the Torah by three men on Monday and Thursday (Men. 82a); (2) the reading of Lev. xxxiii. 14-46 before the Passover, and of Deut. xxvii. 15-69 before New-Year (Meg. 31b); (3) sessions of the courts on Monday and Thursday (B. Ḳ. 82a); (4) the washing of clothes on Thursday (*ib.*); (5) the eating of garlic on Friday (*ib.*); (6) early rising on Friday morning for the purpose of baking (*ib.*); (7) the wearing of a girdle by women for reasons of modesty (*ib.*); (8) the obligation of the ritual bath (*ib.*); (9) the regulation obliging pedlers to traverse the city in case they deal in articles necessary for women (*ib.*); (10) ritual baths for those who have become unclean (*ib.*).

To the 120 elders, including the Prophets (the "men of the Great Sanhedrin"): (1) the recitation of the "Shemoneh 'Esreh" on week-days; (2) the insertion of the prayer against heretics in the time of Gamaliel, and, much later, of the "Adonai Sefatai" before the "Tefillah," and of the "Yiheyu le-Raẓon" after it (Meg. 17b).

To Ezra and his court: the use of the words "min ha-'olam we-'ad ha-'olam" as the conclusion of the blessings in the morning prayer.

To the "men of the Great Synagogue": (1) the reading of Megillat Esther in the villages and unwalled cities on the Fourteenth of Adar and in walled cities on the following day; banquets on those days; and the giving of alms (Meg. 2a); (2) the introduction of seven blessings into the "Tefillah" on the Sabbath and on holy days; the addition of nine benedictions to the musaf for the New Moon and for the semifestivals, and of twenty-four on fast-days (Ber. 33a); (3, *a*) recitation of a number of prayers, (*b*) period of duration of each prayer, (*c*) the offering of prayer daily, (*d*) three times on week-days, (*e*) four times on the Sabbath, festivals, fasts, and New Moons, and (*f*) five times on the Day of Atonement; later addition of the "Magen Abot" from the "Tefillah" on Friday evening, and the genuflection before and after the first blessing ("Abot") and before and after the penultimate "hoda'ah" (Ber. 26b); (4) introduction of Benediction, prayer, Kiddush, and Habdalah (Ber. 33a).

To John Hyrcanus (135-106 B.C.): (1) decree forbidding the recitation of the prayer of thanksgiving, "Widdui Ma'aser" (Deut. xxvi. 5-10), by any who have not paid the proper tithes at the end of the third year (Yer. Soṭah ix. 11); (2) the appointment of officials to collect the tithes (Tosef., Soṭah, xiii.; Ma'as. Sh. v. 16); (3) the use of rings in the shambles to force the animals to stand still (Soṭah 47a); (4) prohibition of blacksmithing on semifestivals (*ib.*; M. Ḳ. 11a).

In his "Hodegetica in Mischnam" Frankel considers the first generation of the Tannaim as the true period of the taḳḳanot; but only a few of the extant ordinances of this period are ascribed to Simeon b. Sheṭaḥ or to John Hyrcanus, the remainder being attributed to the court of the Hasmoneans or to the "court of the priests." The following ordinances were instituted in the first century B.C.:

By the court of the Hasmoneans: (1) the solemn celebration of the Ḥanukkah festival, beginning on the 25th of Kislew (Meg. Ta'an.; Shab. 21b); (2) insertion of the name of God in legal documents (R. H. 18b; subsequently abrogated).

By the court of the priests: (1) the daughter of a priest to be entitled to 300 zuzim under her marriage contract, and the widow of a priest to 100 zuzim (Ket. 12a); (2) the ketubah of a woman about to contract a levirate marriage to form a lien on the property of her first husband; and if he had no property, that of the levir to be appropriated (Yeb. 39a; Ket. 82b); (3) the ketubah of a virgin to be of the value of 200 zuzim, and that of a widow or divorcée, 100 zuzim (Ket. 10a).

Taḳḳanot of Simeon ben Sheṭaḥ.

By Simeon b. Sheṭaḥ: (1) all the real estate of the husband to be entered in the marriage contract in favor of the wife (Shab. 14b; Ket. viii., end), but the former may employ the dowry in his business; (2) compulsory attendance at school (*ib.*); (3) the declaration that foreign glass is impure (*ib.*).

By Hillel (75 B.C.–5 C.E.): (1) introduction of the Prosbul (Sheb. x. 3, 4; Giṭ. 36a); (2) the purchase-money of a house to be deposited in the Temple; the original owner may seize it by force in order to prevent its payment to the seller before the expiration of a year (ʿAr. 31b; Giṭ. 74b).

By Gamaliel I. (middle of 1st cent.): (1) the condemnation of 2,000 (subsequently increased) ells of ground in which the New Moon witnesses might freely move on the Sabbath (R. H. 23b); (2) the full names of the husband and the wife to be inserted in a bill of divorce (Giṭ. 34b); (3) the signatures of witnesses to the bill of divorce (*ib.*); (4) a widow may take the portion secured to her by her marriage contract only after all claims of the orphans have been fully satisfied (*ib.*); (5) a bill of divorce may be declared invalid only in the presence of the messenger who has brought it, or in the presence of the wife before she has received it (Giṭ. 32a).

The following taḳḳanot date from the last century before the common era and the first century of that era:

Priestly Ordinances.

Enactments concerning the priestly office: (1) the casting of lots by the priests for taking the ashes from the altar (Yoma 21a); (2) the exact determination of the time of the daily sacrifice (Pes. 58a); (3) the festal sacrifice ("ḥagigah") on the day of the Passover (Pes. 69b); (4) the distribution of the skins of the sacrificial victims (Tosef., Yeb. xi.); (5) the expense of the drink-offerings to be defrayed by the communal treasury from the "lishkah" (Sheḳ. vii. 4, 5); (6) the same ordinance for the sacrifice by a Gentile (*ib.* vii. 6); (7) the same for a dead proselyte (*ib.*); (8) in case of the death of a high priest, his sacrifice to be offered at the expense of the community (*ib.*); (9) the priestly usufructs of the salt and wood given to the Temple (*ib.*); (10) abrogation of the sacrifice for the use of the ashes of the red heifer (Men. 51b); (11) a pair of doves which have become unfit for sacrifice to be replaced at the expense of the community (Sheḳ. vii. 7); (12) those who guard the after-growth in the fields during the Sabbatical year to receive their wages from the "terumah ha-lishkah" (Sheḳ. iv. 1; B. M. 118b; Men. 84a); (13) the priest who burns the red heifer becomes unclean (Parah iii. 7), and (14) must pass the period of his uncleanness in a certain hall of the Temple (*ib.* iii. 1); (15) the mezuzah at the door of the antechamber in which the priest spends the time before the Day of Atonement (Yoma 10a); (16) promulgation of rules concerning the shekels on the First of Adar (Ex. xxx. 11 *et seq.*); the reading on New Moon in case it falls on a Sabbath (Ex. xxx. 11; Sheḳ. i. 1); (17) exhortation to caution against sowing mixed seed (Sheḳ. i. 1); (18) men must be sent on the Fifteenth of Adar to repair the public highways, grounds, and cisterns, to repaint tombstones, and to perform similar duties (*ib.*); (19) each man must have the "widdui bikkurim" (see Deut. xxvi. 3) recited, or repeat it himself, in the presence of the person whom it concerns (Bik. iii. 7); (20) double separation of the Ḥallah, once for the heave-offering and once for the priest (Ḥal. iv. 8); (21) for this purpose a housewife gives one part in twenty-four, and a baker one in forty-eight (Ḥal. ii. 7); (22) the great heave-offering, when given by a generous person, amounts to one part in forty; when given by an avaricious man, to one in sixty; and when given by one who is neither, to one part in fifty (Ter. iv. 3); (23) an ox, corresponding in value to the terumah, may be brought to the priest (Ḥal. 134b); (24) every one must have the Lulab in the house on the first day of Sukkot, in case this festival falls on a Sabbath (Suk. 42); (25) the lulab and the "ʿarabah" preponderate in the Temple on the Sabbath in case that day coincides with the seventh or last day of Sukkot (Suk. 42b); (26) testimony relating to the New Moon may be received only from those who are properly qualified (R. H. 22a); (27) the reading of Ex. xxx. 11, Deut. xxv. 18, Num. xix. 1, and Ex. xii. 1 on the four special Sabbaths before the Passover; (28) regulations governing the reading of the Torah (Meg. 21a); (29) permission to import vegetables in the Sabbatical year (Sheb. vi. 4); (30) concerning the collection of wood and stones in a neighbor's field.

Ordinance ascribed to Joshua b. Gamla (*c.* 65 C.E.): appointment of teachers in all the cities of Judea for children between six and seven years of age (B. B. 21a).

Taḳḳanot of Johanan ben Zakkai.

Most of the ordinances of Johanan b. Zakkai were promulgated before the time of the destruction of the Temple, and were consequently modified after the year 70. Frankel enumerates eleven of these decrees in his "Hodegetica," although Bloch lists nine only (comp. R. H. 31b), which are as follows: (1) the New Moon witnesses must go to the place where the court assembles (R. H. 31b); (2) the testimony of such witnesses to be received at any time during the day (*ib.* 30b); (3) they may not desecrate the Sabbath by traveling, except in Nisan and Tishri, the most important two months (*ib.* 21b); (4) the shofar to be blown even on the Sabbath (R. H. 29b); (5) the lulab to be swung on all the seven days of the festival (*ib.* 30a); (6) the consumption of new grain is forbidden during the entire day of the waving of the ʿOmer (*ib.*); (7) priests may not wear sandals when they ascend the "dukan," or platform, to pronounce the benediction (Soṭah 40a; R. H. 31b); (8) a proselyte must deposit a quarter-shekel in the treasury to be able to bring his sacrifice when the Temple shall be rebuilt (this was repealed by Johanan b. Zakkai himself; Ker. 9a; R. H. 31b); (9) abolition of the ritual governing trials for adultery (Soṭah 47a).

Ordinance ascribed to Gamaliel II. and the court of Jabneh: agriculture is permitted until the first day of the Sabbatical year (Tosef., Sheb. i.).

Taḳḳanah ascribed to the court of Jabneh: the fourth benediction in the grace after meals in memory of those who fell at Bethar (Ber. 48b).

After R. Gamaliel's death the Sanhedrin of Jabneh seems to have gone to Usha (the modern Al-Us) for reasons which are no longer known, and the grounds of its taḳḳanot are equally obscure. In view of their ethical import, however, these enactments soon became binding. They were as follows: (1) a man must support his minor children; (2) if a man transfers his property to his sons, both he and his wife enjoy a life income from it; (3) the gift of more than one-fifth of one's property for alms is forbidden; (4) a father must deal gently with his son until the latter reaches the age of twelve; but after that age he may be severe with him; (5) after a wife's death the husband may sell the property included in her dowry; (6) one who attacks an old man must pay one pound of gold for the injury; (7) elucidation of the seven doubtful reasons through which the terumah becomes unfit for use and must be burned (Ket. 49a, 50b; Yer. Ket. iv. 28b; M. Ḳ. 17a; Yer. M. Ḳ. iii. 8; Shab. 15b). These ordinances were enacted by the rabbis of the second generation of tannaim, R. Ishmael being especially mentioned (B. B. 28b; Niddah 14b).

An ordinance is also extant which dates from the time called the period of religious persecution ("shemad"). When Hadrian issued his decree forbidding the Jews to observe their religion, the teachers, including R. Akiba, R. Ṭarfon, and R. Jose the Galilean, met in council and agreed that during the time of the persecution the Law might be transgressed in all respects, except as regarded the commands relating to idolatry, chastity, and morality, although this regulation was observed only superficially and only when necessary in order to deceive the Roman spies.

Three ordinances have been preserved which were promulgated by R. Jose b. Ḥalafta of Sepphoris, of the third generation of tannaim, who flourished about the middle of the second century. They are as follows: (1) during a funeral the mourners must remain standing while those who console them pass by (Sanh. 19a); (2) women living in lonely places must associate with one another, so as not to attract the attention and evil desire of any man (*ib.*); (3) a child accompanied by its mother must not lag behind on the road, lest it come to harm (*ib.*).

Ordinances of the Last Tannaim.

The following ordinances are ascribed to the last generation of tannaim (end of the second and beginning of the third century): To R. Judah I., ha-Nasi: (1) messengers must be sent every month to announce the new moon to the Diaspora (R. H. 22b); (2) concerning the purchase of fields among the Sicarii (Giṭ. 55b); (3) on menstruation (Niddah 66a).

Ordinances from the period of the Mishnah and relating to women are as follows: (1) an orphan girl married during her minority may leave her husband without a bill of divorce on attaining her majority (Ket. 46b); (2) the permission to marry a feeble-minded girl (Yeb. 112b); (3) a virgin should be married on a Wednesday (Ket. 1a); (4) various laws of purification (Niddah 11a); (5) the earnings of the wife belong to her husband (Ket. 46a); (6) the husband must pay all bills for his wife's illness (Ket. 51a); (7) a husband must ransom his wife from captivity (*ib.* 76b); (8) a husband must defray the expenses of his wife's burial (*ib.* 76a); (9) whatever is found by the wife belongs to her husband (B. M. 12a); (10) a widow is entitled to remain in the house of her deceased husband and to share in the income (*ib.* 52b); (11) orphan girls share the income from their father's estate until they reach their majority (*ib.* 52b); (12) male heirs succeed to the property of the mother, even after their father's death (*ib.* 52b); (13) the daughter is entitled to a certain portion of her father's estate as her dowry (*ib.* 67a); (14) a bill of divorce must be written and signed in the presence of the messenger who is to deliver it (Giṭ. i. 1); (15) the date must be given in all legal documents (*ib.* 17a); (16) in a bill of divorce the date must be given according to the state calendar (Giṭ. 79b; later it was also dated according to the era of Creation); (17) witnesses must sign a bill of divorce in the presence of each other (*ib.* 10a); (18) introduction of the "geṭ mekushshar" to make divorce more difficult (B. B. 160a); (18) a woman becomes free even though only a single witness testifies to her husband's death (Yeb. 87b).

Ordinances "for the Sake of Peace."

The more the Jews came in contact with the Romans and the Persians, the more they were obliged to modify the letter of their laws, and to introduce ordinances of the class characterized as necessary (*a*) "for the preservation of the order of the world," or (*b*) "for the sake of peace." The regulations of this type, like those already mentioned, date from the mishnaic period, and were promulgated for the sake of morality. In addition, there were other taḳḳanot designed (*c*) to facilitate repentance and (*d*) to contribute to "the interests of the market" or of business.

(*a*) Taḳḳanot "for the preservation of the order of the world": (1) a servant who is half free may compel his master to manumit him entirely; but he must give a note for one-half his value; and this debt must be paid (Giṭ. 41a); (2) the ransom paid for prisoners must not exceed the usual sum (*ib.* 45i); (3) prisoners must not be allowed to escape (*ib.*); (4) phylacteries and other sacred articles must not be taken from any who are not Gentiles (*ib.*); (5) if land in Palestine is sold to a Gentile, the first-fruits must be forfeited (*ib.* 47a); (6) if one divorces his wife for immorality, he may never take her back again (*ib.* 45a); (7) on demand, one who has suffered injury is to receive reimbursement from the best of the estate; a creditor, from the medium; and a wife, with her marriage contract as security, from the worst (*ib.* 48b); (8) if there is any property without encumbrance, nothing may be taken in payment of a debt from a field which has been mortgaged (*ib.*); (9) the least desirable portion of the real estate of orphans may be taken in payment of debts (*ib.*);

(10) mortgaged property may not be applied to the pleasure or support of the wife (*ib.*); (11) one who finds anything shall not take an oath (*ib.*); (12) a guardian may not be compelled to take an oath (*ib.* 52a); (13) accidental defilement of holy vessels either by a layman or by the priest in the Temple is punishable (*ib.* 52b).

(*b*) Ordinances "for the sake of peace": (1) the call to the reading of the Law to be made in a definite order (Giṭ. 59a); (2) the "'erub" may be arranged even with unoccupied houses (*ib.*); (3) the cistern nearest the river is to be filled first (*ib.*); (4) hunting includes robbery (*ib.* 59b); (5) things found in the possession of one to whom they would not normally come imply theft (*ib.*); (6) the poor are permitted to pluck fruit from a neighbor's tree, but taking what remains on the ground is theft (*ib.*); (7) even the Gentile may share in the harvest gifts to the poor (*ib.*).

(*c*) Ordinances facilitating repentance: (1) one who steals a beam and builds it into his house need pay for the damage to the beam only (Giṭ. 55a); (2) if a robber or a usurer wishes to restore goods or money taken, they or it shall not be accepted (*ib.*); (3) purchase and sale by persons not regularly dealing in the wares in question are valid, in case such persons have reached years of maturity, in order that they may support themselves (Giṭ. 59a); (4) if one brings a stolen animal as a sin-offering before the theft is known, the sacrifice is valid (*ib.* 55a).

(*d*) Taḳḳanah in "the interests of the market" or of business: if one unwittingly purchases stolen goods, the owner must refund the money paid for them (B. Ḳ. 114b).

Business Taḳḳanot.

Ordinances relating to legal proceedings, like those which governed the religious life, were highly important so long as the Jews retained their own judicial system in the Diaspora. These regulations fall, according to Bloch (*l.c.*), into three categories: ordinances relating (*a*) to commerce; (*b*) to civil law; and (*c*) to the oath.

(*a*) Ordinances relating to commerce: (1) it is permissible to take possession of real estate under certain conditions (B. M. 10a, b); (2) movables may be acquired only by actual possession, not by purchase (*ib.* 44a); (3) movables when together with immovables are acquired by purchase or contract (Ḳid. 26a); (4) acquisition by a verbal conveyance of the three parties concerned is legal (Giṭ. 13b; Ḳid. 48a; this is not, however, expressly declared to be an ordinance); (5) a verbal conveyance of property by one who is moribund is legally binding (B. Ḳ. 146b); (6) a proselyte may be the heir of a Gentile father (Ḳid. 17b); even before taking possession a son may dispose of a part of his deceased father's property to defray the funeral expenses (B. M. 16a; Tosef., Ned. vi.).

(*b*) Ordinances relating to civil law: (1) in actions for debt testimony may be accepted without further investigations (Sanh. 3a, 32a); (2) actions for debt may be tried even by judges who have not yet received the "semikah" (ordination; Sanh., beginning); (3) a contract may be authenticated only by the witnesses who have signed it (Ket. 18b); (4) on the strength of his contract a creditor may collect his debts either from the heirs or from those who purchase from the debtor (B. B. 176a).

Ordinances on the Oath.

(*c*) Ordinances relating to the oath: (1) if a laborer demands his wages and his employer asserts that he has paid them, the former must take an oath before he can obtain payment (Shebu. 44b); (2) one who has been robbed must take an oath before he can recover his property (*ib.* 44b); (3) one who asserts that he has been injured by another person must take an oath before he can recover damages (*ib.*); (4) if a manager asserts that he has paid an employee, and the latter denies it, both parties take the oath, and the employer pays them both (*ib*); (5) if a contract is falsified by the wife or by the creditor, they must each take an oath before they can receive payment (Ket. 87a); (6) if an employer has only one witness to testify to the payment of a contract, the claimants must take an oath before they can receive their money (Ket. 97a); (7) money due from the property of orphans may be paid only under oath (*ib.* 87a); (8) the payment of debts from mortgaged property may be made only under oath (*ib.*); (9) payment in the absence of the debtor may be made only under oath (*ib.*); (10) liquidation of a debt by means of property dedicated to the sanctuary may be made only under oath (Shebu. 42b); (11) expenses incurred in behalf of the wife's property may be recovered only under oath (Ket. 79b); (12) if two parties each claim to have received the same piece of property at the same time, they must take oath to that effect (B. M. 2a); (13) if one asserts that a piece of property entrusted to him has been stolen from him, he must take an oath to that effect (B. M. 34b); (14) one who has unwittingly purchased stolen property must take an oath before he can recover his money (B. Ḳ. 114b); (15) if one has unintentionally damaged the property of another, he must take an oath to that effect before he can be released from the payment of damages (B. M. 82b).

Other ordinances dating from the mishnaic period were as follows: Ordinances relating to the Passover: (1) leaven must be sought with a light on the eve of the 13th of Nisan (Pes. 2a); (2) on Passover eve bitter herbs, mixed with "ḥaroset," must be eaten (*ib.* 120a); (3) four cups of wine must be drunk (*ib.* 99b); (4) those who partake must recline while eating, in token of freedom (*ib.*).

Miscellaneous ordinances: (1) if a Sabbath follows a holy day, an "'erub tabshilin" is made in order that food for the Sabbath may be prepared on the holy day (Beẓah 15b); (2) on the Sabbath and on holy days one may move freely within a radius of 2,000 cubits ('Er. 49b); (3) the owner of lost property must bring witnesses to testify that he is not dishonest, and he must then describe his property before he is entitled to recover it (B. M. 28b); (4) lost articles to be announced in the synagogue (*ib.* 28a).

The privilege of making new ordinances did not end with the completion of the Mishnah: enactments were promulgated also in the amoraic, saboraic, and geonic periods, although their exact dates are no longer known. The post-mishnaic ordinances which belong in this category are as follows: (1) the dowry of a wife and the movables of orphans may be taken in payment of debt (comp. Mordecai on

Post-Mishnaic Ordinances.

Ket. 10; Maimonides, "Yad," Ishut, 15); (2) movables may be attached for the dowry of orphan girls (Ṭur Eben ha-'Ezer, 112, 113); (3) an oath is valid in cases involving real estate ("Halakot Gedolot," xxii.); (4) no oath may be taken on the Bible ("Sha'are Ẓedeḳ," v. 4, § 22); (5) criminal cases may be tried in Babylon (*ib.* iv. 1, § 62); (6) the property of orphans may be taken for the marriage portion of the wife ("Ḥemdah Genuzah," p. 60a); (7) the debtor must take an oath if he is unable to pay (Ṭur Ḥoshen Mishpaṭ, 61, 2); (8) the debtor must take an oath if he has obliged the creditor to do so (*ib.* 87); (9) a widow is obliged to take an oath only in case the property bequeathed to her by her husband is insufficient to discharge her marriage contract ("Sha'are Ẓedeḳ," iv. 59); (10) in legal trials both the principals and the witnesses must remain seated (Maimonides, "Yad," Sanhedrin, xxi. 5); (11) Mohammedan wine is not "issur" (responsa, "Ge'onim Ḳadmonim," xlvi.); (12) the priest to be the first one called up to the reading of the Law, he preceding even the nasi (Ṭur Oraḥ Ḥayyim, 135); (13) permission to trade with Gentiles on their holy days (Ṭur Yoreh De'ah, 149); (14) the fast-day on the Thirteenth of Adar (Abudarham, ed. Prague, p. 78d); (15) an apostate may draw up a bill of divorce ("Ḥemdah Genuzah," li., lxxxvi.); (16) if a Samaritan betroths a Jewess, she must have a bill of divorce before any one else can marry her (Ṭur Eben ha-'Ezer, 44); (17) the passage Ex. xxxii. 11-14 must be read on fast-days ("Ḥemdah Genuzah," iv.; Masseket Soferim xvii.; Meg. 31b; Tosef., Ber. xix.); (18) the interruption of the first and last three benedictions of the "Tefillah" by the supplications זכרנו לחיים, מי כמוך, וכתוב לחיים, בספר חיים ("Ḥemdah Genuzah," cxii.; "Halakot Gedolot," p. 9a); (19) the recitation of the morning benediction in the synagogue (Ṭur Oraḥ Ḥayyim, 46); (20) the recitation of the prayer "Ahabah Rabbah" in the morning and of "Ahabat 'Olam" in the evening ("Ḥemdah Genuzah," cxxv.); (21) the recitation of the Biblical passage "Praised be the Lord in eternity, Amen and Amen" (Ps. xli. 13) in the daily evening prayer before the "Tefillah" (Ṭur Oraḥ Ḥayyim, 236); (22) the insertion of the passage I Chron. xxix. 10-13 in the morning prayer (*ib.* 51); (23) the recitation of the "Shema'" in the "Ḳedushshah" (Abudarham, p. 53c); (24) introduction of the prayer beginning with the words כתר יתנו לך in the "Ḳedushshah" of the musaf, and the prayers beginning with the words אז בקול רעש and ממקומך מלכנו in the "Ḳedushshah" of the Shaḥarit Tefillah of Sabbath (Ṭur Oraḥ Ḥayyim, 221); (25) the recitation of Ps. cxix. 142 at the Minḥah prayer on the Sabbath, in memory of the death of Moses (*ib.* 292); (26) the benediction for the bridal night (Abudarham, p. 115a); (27) "Parashat ha-Musafim" (Ṭur Oraḥ Ḥayyim, 283).

The following are ordinances of the ninth century, chiefly directed, according to Weiss, against Karaite teachings: (1) the benediction when the Sabbath candles are lit (earliest source of the "Siddur Rab 'Amram"; Maimonides, "Yad," Shab. v.; ROSH on Shab. ii., § 18); (2) the counting of the "'omer" in the evening ("Halakot Gedolot," p. 101c); (3) the ring in the marriage ceremony ("Sha'are Ẓedeḳ," i. 3, §§ 12, 16); (4) the Mishnah "Ezehu Meḳoman" in the morning prayer (Ṭur Oraḥ Ḥayyim, 50).

Geonic Taḳḳanot.

Only the following five ordinances, so far as known, bear the name of a gaon: (1) of Rab Rabbah of Pumbedita and R. Huna of Sura (7th cent.): if a woman demands a bill of divorce, it must be drawn up for her immediately (Weiss, "Dor," iv. 5, 9, 37; "Sha'are Ẓedeḳ," iv. 4, § 15); (2) of R. Huna at Pumbedita and Mar Rab Bibai of Sura (8th cent.): a debt and a marriage portion may be recovered even from the property of orphans (*ib.* iv. 28, 37, 41, 45); (3) of Mar Rab Zadok of Sura (9th cent.): in suits relating to real estate the defendant must take an oath (controverting Shebu. 45a; Weiss, *l.c.* pp. 43, 123); (4) of R. Naḥshon of Sura (end of 9th cent.): the introduction of "Amen" before the "Tefillah" ("Seder ha-Eshkol," ed. Halberstadt, 1867, i. 9; Weiss, *l.c.* p. 124); (5) of Hananiah b. Judah of Pumbedita (1000): abrogation of the "ketubat benin dikrin" ("Sha'are Ẓedeḳ," iv. 4, 17; Weiss, *l.c.* pp. 162, 203).

Taḳḳanot of R. Gershom.

Although the succeeding ordinances belong to the same period, their place of origin is Europe instead of the East. The first to promulgate enactments in Europe was R. GERSHOM; and, while it is no longer possible to determine how many rules he authorized, their number was doubtless considerable, since the renewal of old taḳḳanot in the thirteenth and fourteenth centuries seems to have been due to him. The following ten ordinances by Gershom are found in a manuscript in the possession of N. Brüll: (1) one who wittingly enters a thoroughfare against the orders of the court is liable to punishment; (2) the prohibition of bigamy; (3) respect for the privacy of letters; (4) services in the synagogue must not be interrupted on account of a quarrel; (5) the owner of a synagogue may not refuse admission to any one on the score of a personal grievance; (6) services may be interrupted to search for a lost object, and he who finds it without reporting the fact is liable to excommunication; (7) a majority may refuse to obey a regulation of the communal directors only with the consent of the court; (8) property held in trust may not be retained maliciously; (9) no case may be carried before a secular court except one involving heavy damages; (10) a divorce may not be forced upon a woman (comp. Meïr of Rothenburg, Responsa, p. 111d; "Kol Bo," ed. Fürth, Appendix, 1a).

The following taḳḳanot also are ascribed to R. Gershom: (1) no one ought to leave the synagogue if only ten are present; but if one should leave, the service may be continued; (2) a Jew is forbidden to rent to another Jew who lives with a Gentile; (3) if absence or poverty renders it impossible for a man to support his wife, the community must provide for her; (4) in case of an altercation with serious consequences, both parties are liable to punishment: and if one of them falls ill a second time in consequence of the brawl, he may bring the matter into court; (5) one who is summoned to court by a messenger must attend (Meïr of Rothenburg, *l.c.* pp. 112d–113a).

Taḳḳanot of Synods.

During the twelfth century rabbinical synods were convened for the first time in the post-Talmudic period in the chief cities where fairs were held. The object of these synods was to promulgate new ordinances as circumstances required and to harmonize Talmud law with the conditions obtaining in Christian Europe, from a religious, legal, and moral point of view. R. Tam seems to have acted as the chairman of several synods, although the precise ones over which he presided are uncertain. The chief scholars mentioned as members of these bodies were RaSHBaM, Isaac b. Solomon of Sens, Solomon b. Jacob of Auxerre, Isaac b. Nehemiah of Drôme, and Menahem b. Perez of Joigny. Seven ordinances are ascribed to these conventions, although their exact provenience is no longer known. One of the earliest of the enactments seems to have been that governing commercial relations with Christians, which was promulgated as a result of the persecutions during the Second Crusade. The ordinances in question are as follows: (1) no Jew may purchase crucifixes, ecclesiastical vessels, vestments, ornaments, or prayer-books; (2) cases may be tried in the national court only with the mutual consent of plaintiffs and defendants; (3) if the case of either party has been prejudiced by this procedure, the plaintiff must make amends according to the judgment of the seven directors of the community; (4) no one may accept an appointment from the government; (5) if a wife dies within a year of her marriage, her husband must return her dowry; (6) if the dowry was payable at a later date, the husband has no claims upon it; (7) a bill of divorce, when once drawn up, may not be questioned or criticized ("Kol Bo," ed. Fürth, 1782, § 117; "Sefer ha-Yashar," No. 579; Grätz, "Gesch." [Hebr. ed.] iv. 235-236).

When the representatives of the Jews convened at Mayence in the early part of the thirteenth century (1220 or 1223) to regulate the taxes and imposts to be paid to the emperor, they promulgated new ordinances which were accepted throughout Judaism, and they also revised earlier enactments. Among the members of the first synod were David b. Kalonymus of Münzenberg, Baruch b. Samuel of Mayence, Hezekiah b. Reuben of Boppard, Simḥah b. Samuel of Speyer, Eliezer b. Joel ha-Levi of Cologne, and Eleazar b. Judah of Worms. These ordinances have been preserved under the name of "taḳḳanot Shum" (שום = Speyer, Worms, and Mayence), and are indicative of the status of the German Jews of the period. Six of the enactments may be ascribed with some degree of certainty to the first synod, and are as follows: (1) no Jew should be guilty of bad faith toward a Christian, or of counterfeiting; (2) one who has caused harm by lodging information must make amends for it; (3) court Jews are not to be exempt from the communal taxes; (4) quiet and devotion must rule in the synagogue; (5) a brother-in-law must enter upon the levirate marriage without raising any objections; (6) controversies must be decided by the rabbis of Mayence, Speyer, and Worms (Meïr of Rothenburg, *l.c.* p. 112a; Moses Minz, Responsa, No. 202; Luria, "Yam shel Shelomoh" on Yeb. iv., No. 18).

In 1245 in one of these same three cities another synod of rabbis convened, at which David b. Shaltiel, Isaac b. Abraham, and Joseph b. Moses ha-Kohen were present. The ordinances of the earlier synod were confirmed, and two new ones were promulgated: (1) the rabbi may not excommunicate any one without the consent of the community, nor may the congregation do so against the will of the rabbi; (2) if rabbis from other cities should endeavor to induce a local rabbi to excommunicate any person, he must refuse to do so unless he gains the consent of the community concerned (Meïr of Rothenburg, *l.c.*, end; Moses Minz, *l.c.* No. 102, p. 153b).

The German rabbis again assembled at the time of the Black Death, to renew the ancient ordinances, their enactments referring chiefly to the dissolution of levirate marriages and to the division of an estate between the widow and the levir. Other synods convened toward the end of the fourteenth century (at Weissenfels) and in the middle of the fifteenth century (at Nuremberg and Bingen), but no record of their ordinances has been preserved. A single taḳḳanah by Jacob Weil, however, is extant, and reads thus: "The following is one of the many enactments which we have promulgated at Nuremberg: if one of the two parties wishes to use the German language in court, the other party must do likewise" (Weil, Responsa, No. 101). The ordinances which Seligman Oppenheim issued at the Bingen synod were originally intended to be enforced only in the district of the lower Rhine; and when he attempted to enforce them for the upper Rhine, a controversy resulted which destroyed the permanent validity of his enactments.

To these synods must be ascribed also the following ordinances of uncertain date which have been preserved under the name "taḳḳanot ha-ḳehillot me-ashkenaz": (1) no Jew may wear a garment or cuffs after the Christian fashion, nor may he have his beard cut with a razor; (2) no wine made by Christians may be used by Jews; (3) no Jew may cause a jar to be filled with water by a non-Jew on the Sabbath; (4) a Jew may not gamble with a Christian; (5) the punishment of guilt by solitary confinement in an apartment of the synagogue in enjoined; (6) entertainments and banquets are prohibited; (7) Jews who were recipients of charity had to give tithes of same; (8) all persons must wear the "kittel" in the synagogue; (9) the margins of a book must not be cut (Moses Minz, *l.c.* No. 102; "Codex Halberstadt," No. 49).

At the end of the fifteenth and at the beginning of the sixteenth century taḳḳanot were issued at Toledo; and after the expulsion from Spain others were promulgated at Fez by the scholars of Castile. Additional enactments seem to have been made by Isaac b. Sheshet (RIBaSH) and Simeon b. Ẓemaḥ Duran (RaSHBaẒ). Twelve ordinances were promulgated at Toledo, and thirty-two at Fez, the latter including four concerning the taking of a second wife in the lifetime of the first; five dealing with the attitude of a husband toward his wife when the latter has deserted him; and fourteen devoted to lawsuits ("Kerem Ḥamar," ii. 34a-36b).

Various taḳḳanot were also promulgated from time to time by the COUNCIL OF FOUR LANDS. Some of these ordinances, which were binding on all Polish Jews in the sixteenth, seventeenth, and eighteenth centuries, were published in a volume bearing the name of Joshua ben Alexander FALK ha-Kohen, and entitled "Ḳonṭres 'al Dine Ribbit" (Sulzbach, 1692; Brünn, 1775).

W. B. S. O.

ṬAL. See GESHEM.

TAL, TOBIAS: Dutch rabbi; born at Amsterdam 1847; died at The Hague Oct. 24, 1898; studied at Dünner's theological seminary (1862-74) and at the University of Utrecht (D.D. 1874). After officiating for a short time as rabbi at Amsterdam, Tal accepted a call as chief rabbi of Gelderland in 1880, and removed to Arnhem on June 26, 1881; here he remained until 1895, when he was called to The Hague as successor to chief rabbi Berenstein. From 1880 to 1881 he was engaged in a controversy with Professor van Oort of the University of Leyden concerning the ethical value of the Talmud.

In 1898 Tal published, under the title "Oranjebloesems," a history of the Jews of the Netherlands, deriving his material for this work chiefly from unpublished documents in the private archives of Queen Wilhelmina. He was the editor of "Choreben Jedidjah," a periodical which appeared in Rotterdam (1887), and in which he published several articles over the pseudonym of "Jotham."

BIBLIOGRAPHY: J. H. Dünner, *T. Tal*, in *De Amsterdammer*, No. 1115, Nov. 6, 1898 (with portrait); *Centraal Blad*, Oct. 28, 1890, xiv. 30; *Weekblad voor Israelietische Huisgezinnen*, xxix. 44 (with portrait).

S. E. SL.

TALKAR, DANIEL RAHAMIM: Beni-Israel soldier; enlisted in the 4th Rifles on April 1, 1842. He was made jemidar and native adjutant on Jan. 1, 1857; subahdar on Jan. 1, 1861; subahdar-major and bahadur in 1878. He served with the reserve forces in the expedition to Bahawalpur in 1846, and two years later left Karachi for Mooltan on field service, being present at the successful attack on the enemy's position in the suburbs of the latter city on Dec. 27, 1848. Though wounded he was with the regiment when it stormed the breach and captured the city, and he was engaged in all the subsequent siege operations until the capitulation of the fort and citadel on Jan. 22, 1849 (medal and clasp). Talkar served also in the Persian campaign of 1856-57, during which he was present at the occupation of the island of Kurrack, at the landing in Hallilah Bay, and at the advance on and surrender of the town and fort of Bushire; he took part also in the forced march on Barazgoon, the night attack of Feb. 6, 1857, and the battle of Khooshab (medal and clasp). In 1858 he served in the Central India Field Forces.

J. J. HY.

TALKAR, EZEKIEL: Beni-Israel soldier; born at Ahmedabad, India, in 1848; joined the 3d Regiment, Native Light Infantry, now called Bombay Rifles, on Sept. 16, 1864. He was promoted jemidar Jan. 1, 1877; subahdar Oct. 5, 1879; and subahdar-major June 12, 1890. During this period the regimental school owed its efficiency in musketry largely to his skill, most of the officers and senior non-commissioned officers receiving from him instruction in the theory of firing small arms. Talkar served in the Kathiawar Field Forces from 1865 to 1868, took part in the Afghan war (1879-80), was engaged in the affair at Kucheli Pass (medal), and saw active service also during the Burmese war of 1886-88 (medal and two clasps). In 1893 he retired from the service and joined the Dhrangadhra State Police as police inspector, later acting in a similar capacity at the city of Bhavnagar. In 1896 the maharaja Saheb, who greatly appreciated his services, transferred him to the State Regiment, in which he still (1905) holds the rank of second in command.

J. J. HY.

TALLAGE: A tax arbitrarily imposed upon a community, which was made collectively responsible for the entire sum. This tax was frequently levied on the English Jews during the twelfth and thirteenth centuries. A tallage of £60,000, known as the "Saladin tallage," was levied on them, for example, at Guildford in 1189, the ostensible object being the crusade then being prepared against Saladin. Another tallage, of 10,000 marks (£6,666 13s. 4d.), which was probably levied at an earlier date, is also referred to. It is reported that John tallaged the Jews in 1210 to the extent of 60,000 marks (£40,000). There are likewise records of tallages under Henry III. of 4,000 marks (1225) and 5,000 marks (1270). Important tallages were made by Edward I. in the second, third, and fourth years (£1,000), and in the fifth year (25,000 marks), of his reign. These taxes were in addition to the various claims which were made upon the Jews for relief, wardship, marriage, fines, law-proceedings, debts, licenses, amercements, etc., and which they paid to the English exchequer like their fellow subjects, though probably on a larger scale.

It has been claimed that the loss of the income from the Jews was the chief reason why Edward I. was obliged to give up his right of tallaging Englishmen in general.

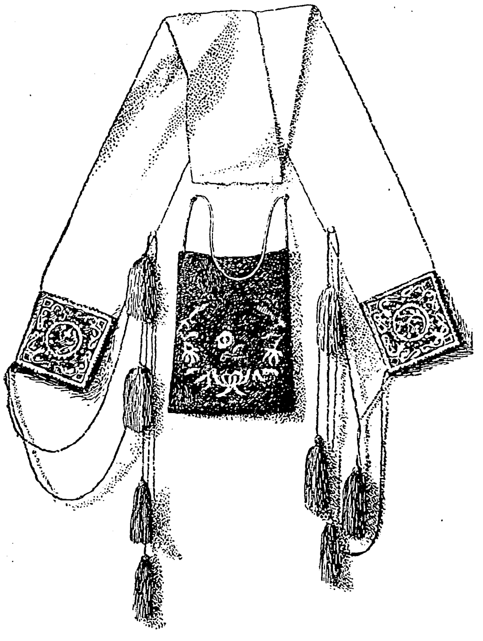
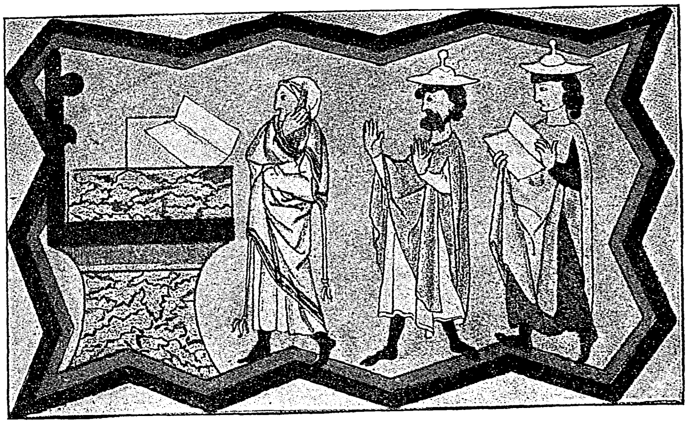
J.

ṬALLIT (טלית): Mantle with fringes (ẓiẓit) at the four corners; a prayer-shawl worn over the garments, and used by men after marriage and, in modern times, by boys after their confirmation as "bar miẓwot." The ṭallit, which can be spread out like a sheet, is woven of wool or silk, in white, with black or blue stripes at the ends. The silk ones vary in size, for men, from about 36 × 54 inches to 72 × 96 inches. The woolen ṭallit is proportionately larger (sometimes reaching to the ankle) and is made of two lengths sewed together, the stitching being covered with a narrow silk ribbon. A ribbon, or, for the wealthy, a band artistically woven with silver or gold threads (called "spania"), with the ends hanging, and about 24 inches long by from 2 to 6 inches wide, is sewed on the top of the ṭallit. From the four corners of the ṭallit hang ẓiẓit, in compliance with the Mosaic law (Num. xv. 38 *et seq.*; see Ẓiẓit). The woolen ṭallit is preferred by the pious, especially if made of coarse and half-bleached lamb's wool from the Holy Land, when it is known as a "Turkish ṭallit." Woolen ṭallits are made in Russia also, but are finer spun and almost pure white. The silken ṭallit was formerly made principally in Germany; but of late several silk manufacturers in the United States (at Paterson, N J.) have produced the bulk of the American supply.

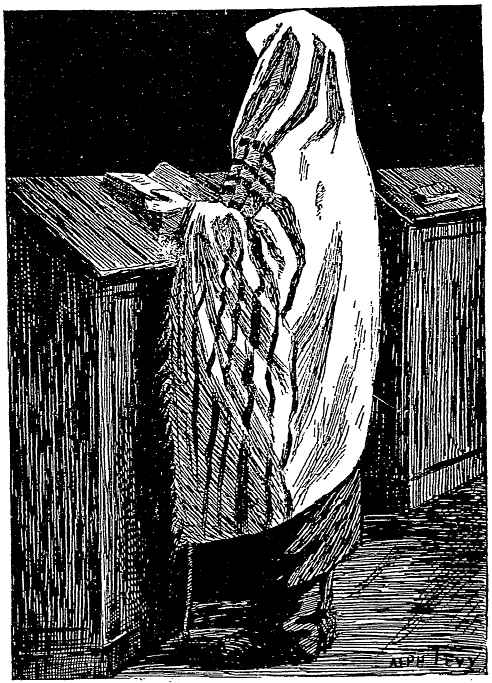


Karaite Ṭallit and Bag.
(From a photograph.)



Jew with Ṭallit.
(From an illuminated maḥzor of the fifteenth century.)

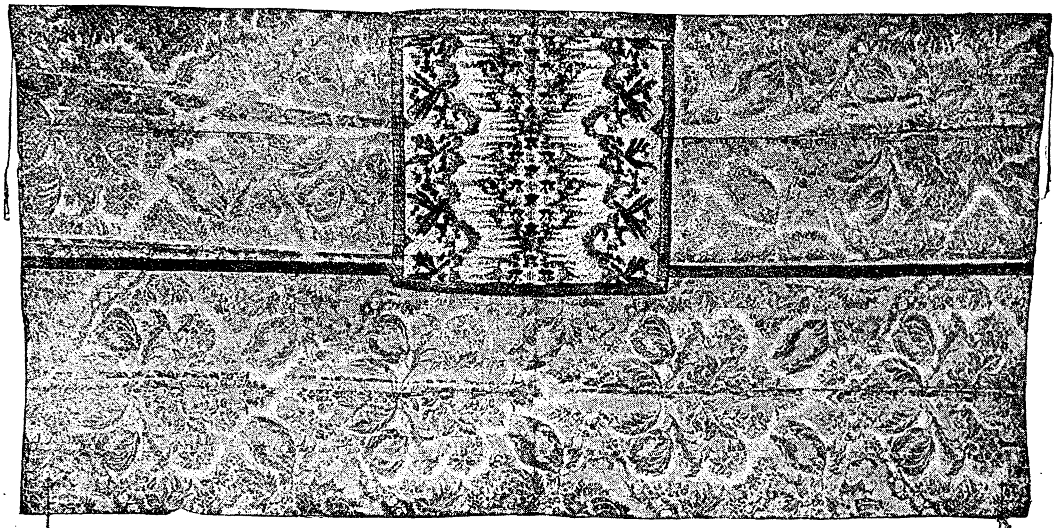
The original ṭallit probably resembled the "'abayah," or blanket, worn by the Bedouins for protection from sun and rain, and which has black stripes at the ends. The finer ṭallit, very likely, was similar in quality to the Roman pallium, and was worn only by distinguished men, rabbis, and scholars (B. B. 98a; Gen. R. xxxvi.; Ex. R. xxvii.). The ṭallit of a "talmid ḥakam" extended to within a handbreadth of the length of the bottom of his undergarment (B. B. 57b). The ṭallit was sometimes worn partly doubled, and sometimes with the ends thrown over the shoulders (Shab. 147a; Men. 41a).



Jew with Ṭallit.
(From a drawing by Alphonse Lévy.)

The most approved style of adjusting the ṭallit is the Turkish ("'aṭifat yishma'elim"), and is as follows: The scarf is thrown over the head with the middle point of one of the longer edges over the middle of the forehead and the left-hand end hanging over the left shoulder; the right end is then also thrown over the left shoulder so that all the four corners are upon the left side; a short pause is then made, and the corners are allowed to fall back in their original position, two corners suspended from each shoulder. The portion covering the head is next pushed backward, and may be removed entirely therefrom and made to rest on the back of the neck. The more modern style is to roll up the ṭallit like a scarf, put it round the neck, and let the ends hang from the shoulders (comp. Yalḳ., Ps. 723; Pesiḳ. R., ed. Friedmann, ix. 32a, note).

The cabalists considered the ṭallit as a special garment for the service of God, intended, in connection with the phylacteries, to inspire awe and reverence for God at prayer (Zohar, Exod. Toledot, p. 141a). The ṭallit is worn by all male worshipers at the morning prayer on week-days, Sabbaths, and holy days; by the ḥazzan at every prayer while before the Ark; and by the reader of the scroll of the Law when on the almemar. In earlier times the ṭallit was likewise spread over the canopy at the nuptial ceremony.



Embroidered Ṭallit.
(In the possession of the Gesellschaft zur Erforschung Jüdischer Kunstdenkmäler, Frankfort-on-the-Main.)

In the Talmudic and geonic periods the phylacteries were worn by rabbis and scholars all day, and a special ṭallit at prayer; hence they put on the phylacteries before the ṭallit, as appears in the order given in "Seder R. 'Amram Gaon" (p. 2a) and in the Zohar (Ba-Midbar, 120b). In later times, when the phylacteries came to be worn at morning prayer only, the ṭallit was put on first, after a special benediction had been recited. See Fringes.

TALLY: A piece of wood on which is written a deed of indebtedness, the sum due being indicated by notches along the edge. The stick is then cut in two in such a manner that each piece thereof contains a part of every notch. One part is then given to the debtor, and the other to the creditor. This was, in the medieval ages, the ordinary way of giving receipts to Jews and others. A certain number of these tallies have been discovered at Westminster, each containing the record of a debt due to a Jew before the Expulsion. The object of the device was to prevent fraud. When a Jew claimed a certain amount as his debt, the two parts of the tallies were brought together, and if there was any discrepancy in the joining of the notches, the sum indicated in the tally kept in the archa by the chirographer for the debtor was held to be decisive. Tallies were used also for general receipts by the British exchequer, and it is stated that when the British Houses of Parliament were burned down in 1832 the fire was the result of carelessness in burning the stock of tallies. The same means of checking fraud was used in American cities; for example, Philadelphia, within the last thirty years.

J.

TALMID ḤAKAM (plural, **Talmide ḥakamim**): Honorific title given to one well versed in the Law. Prizing knowledge, especially that of the Torah, above all worldly goods, the talmide ḥakamim formed in Jewish society a kind of aristocracy having many privileges and prerogatives as well as duties. To the Jews, birth, riches, and other advantages are as nothing in comparison with learning. The Mishnah says: "A scholarly bastard takes precedence over an ignorant high priest" (Hor. 13a). In the Middle Ages the talmid ḥakam enjoyed the full confidence of his coreligionists, who consulted him not only in spiritual matters, but also in worldly affairs. Even when he held no official position in the community, he supervised the cult, determined the time and form of prayers, verified weights and measures, etc. To enable him to devote himself entirely to study, Jewish legislation exempted him from the payment of taxes and from performing any specific duties (Shulḥan 'Aruk, Yoreh De'ah, 243).

Although modesty is one of the cardinal virtues of the talmid ḥakam, he is enjoined to uphold his rank and not to compromise his dignity. As in the case of a king, he is not permitted to allow any one to omit the performance of any public act of reverence due to him, inasmuch as in him the Law is honored or slighted (Maimonides, "Yad," Teshubah, iii.). There are, according to the Talmud, six acts which a talmid ḥakam ought to avoid: to go abroad in perfumed garments; to walk alone at night; to wear shabby shoes; to converse with a woman in the street, even if she be his wife; to sit in the society of an ignoramus; and to be the last to enter the bet ha-midrash (Ber. 43b). With regard to association with an ignoramus, the Talmud says: "The talmid ḥakam is first likened by the ignoramus to a vase of gold; if he converses with him, he is looked upon as a vase of silver; and if he accepts a service from him, he is regarded as a vase of earth" (Sanh. 52b). Among the privileges of the talmid ḥakam is the right of declining to present himself as a witness in suits concerning money transactions before a judge who is his inferior in knowledge (Shulḥan 'Aruk, Ḥoshen Mishpaṭ, 28).

The talmid ḥakam was expected to be familiar with all branches of human learning. "He who understands astronomy," says R. Johanan, "and does not pursue the study of it, of that man it is written: 'But they regard not the work of the Lord, neither consider the operation of his hands'" (Isa. v. 12). R. Johanan says also that only he who is able to answer all halakic questions, even those which deal only with the insignificant treatise Kallah, is a talmid ḥakam worthy to be appointed leader of a community (Shab. 114a). In accordance with this view of the standard of learning required in one who aspires to the title of talmid ḥakam, some later rabbinical authorities assert that in modern times no one deserves to be called by that epithet ("Keneset ha-Gedolah" on Yoreh De'ah, § 18).

The principles in accordance with which the talmid ḥakam must live are enumerated in the first chapter of Derek Ereẓ Zuṭa, opening with the following sentence: "The way of the wise is to be modest, humble, alert, and intelligent; to endure injustice; to make himself beloved of men; to be gracious in his intercourse even with subordinates; to avoid wrong-doing; to judge each man according to his deeds; to act according to the motto 'I take no pleasure in the good things of this world, seeing that life here below is not my portion.' Wrapped in his mantle, he sits at the feet of the wise; no one can detect anything unseemly in him; he puts pertinent questions, and gives suitable answers."

Chief Rabbi of Szegedin, Hungary; Author of "Die Aramäischen Pflanzennamen."

S. H. MARGULIES, Ph.D.,
Principal of the Jewish Theological Seminary; Chief Rabbi of Florence, Italy.

H. OORT, D.D.,
Professor of Hebrew Language and Archeology at the State University, Leyden, Holland.

ABBÉ PIETRO PERREAU,
Formerly Librarian of the Reale Biblioteca Palatina, Parma, Italy.

MARTIN PHILIPPSON, Ph.D.,
Formerly Professor of History at the Universities of Bonn and Brussels; President of the Deutsch-Israelitischer Gemeindebund, Berlin, Germany.

SAMUEL POZNANSKI, Ph.D.,
Rabbi in Warsaw, Russia.

E. SCHWARZFELD, LL.D.,
Secretary-General of the Jewish Colonization Association, Paris, France.

LUDWIG STEIN, Ph.D.,
Professor of Philosophy, University of Bern, Switzerland; Editor of "Archiv für Geschichte der Philosophie," etc.

HERMANN L. STRACK, Ph.D.,
Professor of Old Testament Exegesis and Semitic Languages, University of Berlin, Germany.

CHARLES TAYLOR, D.D., LL.D.,
Master of St. John's College, Cambridge, England; Editor of "Sayings of the Jewish Fathers," etc.

SYSTEMS OF TRANSLITERATION AND OF CITATION OF PROPER NAMES*

A.—Rules for the Transliteration of Hebrew and Aramaic.

1. All important names which occur in the Bible are cited as found in the authorized King James version; *e.g., Moses,* not Mosheh; *Isaac,* not Yiẓḥaḳ; *Saul,* not Sha'ul or Shaül; *Solomon,* not Shelomoh, etc.

2. The spellings of names that have gained currency in English books on Jewish subjects, or that have become familiar to English readers, are generally retained; cross-references are given when topics are treated under forms transliterated according to the system tabulated below.

3. Hebrew subject-headings are transcribed according to the scheme of transliteration; cross-references are made as in the case of personal names.

4. The following system of transliteration has been used for Hebrew and Aramaic:

א *Not noted at the beginning or the end of a word; otherwise ' or by dieresis; e.g., pe'er or Meïr.*

ב *b*	ז *z*	ל *l*	פּ (*with dagesh*), *p*	שׁ *sh*
ג *g*	ח *ḥ*	מ *m*	פ (*without dagesh*), *f*	שׂ *s*
ד *d*	ט *ṭ*	נ *n*	צ *ẓ*	ת *t*
ה *h*	י *y*	ס *s*	ק *ḳ*	
ו *w*	כ *k*	ע ʿ	ר *r*	

NOTE: The presence of dagesh lene is not noted except in the case of פּ. Dagesh forte is indicated by doubling the letter.

5. The vowels have been transcribed as follows:

◌ָ (ḳameẓ) *a*	◌ֻ *u*	◌ַ *a*	◌ֱ *e*	וֹ *o*
◌ָ (ḳameẓ ḥatuf) *o*				
◌ֵ *e*	◌ֶ *e*	◌ֳ *o*	◌ִי *i*	
◌ִ *i*	◌ְ *e*	◌ֲ *a*	וּ *u*	

The so-called "Continental" pronunciation of the English vowels is implied.

6. The Hebrew article is transcribed as *ha*, followed by a hyphen, without doubling the following letter. [Not *hak-Kohen* or *hak-Cohen*, nor *Rosh ha-shshanah.*]

B.—Rules for the Transliteration of Arabic.

1. All Arabic names and words, except such as have become familiar to English readers in other forms, as *Mohammed, Koran, mosque,* are transliterated according to the following system:

أ *See* א *above*	خ *kh*	ش *sh*	غ *gh*	ن *n*
ب *b*	د *d*	ص *ṣ*	ف *f*	ه *h*
ت *t*	ذ *dh*	ض *ḍ*	ق *ḳ*	و *w*
ث *th*	ر *r*	ط *ṭ*	ك *k*	ي *y*
ج *j*	ز *z*	ظ *ẓ*	ل *l*	
ح *ḥ*	س *s*	ع ʿ	م *m*	

2. Only the three vowels—a, i, u—are represented:

◌َ *a* ◌ِ *i* ◌ُ *u*

No account has been taken of the *imalah; i* has not been written *e,* nor *u* written *o.*

---

* In all other matters of orthography the spelling preferred by the STANDARD DICTIONARY has usually been followed. Typographical exigencies have rendered occasional deviations from these systems necessary.

3. The Arabic article is invariably written *al*, no account being taken of the assimilation of the *l* to the following letter; *e.g.*, *Abu al-Salt*, not *Abu-l-Salt; Nafis al-Daulah*, not *Nafis ad-Daulah.* The article is joined by a hyphen to the following word.

4. At the end of words the feminine termination is written *ah;* but when followed by a genitive, *at; e.g.*, *Risalah dhat al-Kursiyy*, but *Hi'at al-Aflak.*

5. No account is taken of the overhanging vowels which distinguish the cases; *e.g.*, *'Amr*, not *'Amru* or *'Amrun; Ya'kub*, not *Ya'kubun;* or in a title, *Kitab al-Amanat wal-I'tikadat.*

C.—Rules for the Transliteration of Russian.

All Russian names and words, except such as have become familiar to English readers in other forms, as *Czar*, *Alexander*, *deciatine*, *Moscow*, are transliterated according to the following system:

А а	*a*	Н н	*n*	Щ щ	*shch*
Б б	*b*	О о	*o*	Ъ ъ	mute
В в	*v*	П п	*p*	Ы ы	*y*
Г г	*h*, *v*, or *g*	Р р	*r*	Ь ь	half mute
Д д	*d*	С с	*s*	Ѣ ѣ	*ye*
Е е	*e* and *ye* at the beginning.	Т т	*t*	Э э	*e*
Ж ж	*zh*	У у	*u*	Ю ю	*yu*
З з	*z*	Ф ф	*f*	Я я	*ya*
И и І і	*i*	Х х	*kh*	Ѳ ѳ	*F*
К к	*k*	Ц ц	*tz*	Ѵ ѵ	*œ*
Л л	*l*	Ч ч	*ch*	Й й	*i*
М м	*m*	Ш ш	*sh*		

Rules for the Citation of Proper Names, Personal and Otherwise.

1. Whenever possible, an author is cited under his most specific name; *e.g.*, Moses Nigrin under *Nigrin;* Moses Zacuto under *Zacuto;* Moses Rieti under *Rieti;* all the Kimhis (or Kamhis) under *Kimhi;* Israel ben Joseph Drohobiczer under *Drohobiczer.* Cross-references are freely made from any other form to the most specific one; *e.g.*, to Moses *Vidal* from Moses *Narboni;* to Solomon Nathan *Vidal* from Menahem *Meïri;* to Samuel *Kansi* from Samuel Astruc *Dascola;* to Jedaiah *Penini* from both *Bedersi* and *En Bonet;* to *John* of Avignon from Moses de *Roquemaure.*

2. When a person is not referred to as above, he is cited under his own personal name followed by his official or other title; or, where he has borne no such title, by "of" followed by the place of his birth or residence; *e.g.*, *Johanan* ha-Sandlar; *Samuel* ha-Nagid; *Judah* he-Hasid; *Gershom* of Metz; *Isaac* of Corbeil.

3. Names containing the words *d'*, *de*, *da*, *di*, *van*, *von*, *y*, *of*, *ben*, *ha-*, *ibn*[*] are arranged under the letter of the name following this word; *e.g.*, de Pomis under *Pomis*, de Barrios under *Barrios*, Jacob d'Illescas under *Illescas.* The order of topics is illustrated by the following examples:

Abraham of Augsburg
Abraham of Avila
Abraham ben Azriel
Abraham de Balmes
Abraham ben Baruch
Abraham of Beja
Abraham ben Benjamin Aaron
Abraham ben Benjamin Zeeb
Abraham Benveniste

---

[*] When IBN has come to be a specific part of a name, as IBN EZRA, such name is treated in its alphabetical place under "I."

NOTE TO THE READER.

Subjects on which further information is afforded elsewhere in this work are indicated by the use of capitals and small capitals in the text; as, ABBA ARIKA; PUMBEDITA; VOCALIZATION.

LIST OF ABBREVIATIONS

THE
JEWISH ENCYCLOPEDIA

TALMUD (תלמוד): Name of two works which have been preserved to posterity as the product of the Palestinian and Babylonian schools during the amoraic period, which extended from the third to the fifth century C.E. One of these compilations is entitled "Talmud Yerushalmi" (Jerusalem Talmud) and the other "Talmud Babli" (Babylonian Talmud). Used alone, the word "Talmud" generally denotes "Talmud Babli," but it frequently serves as a generic designation for an entire body of literature, since the Talmud marks the culmination of the writings of Jewish tradition, of which it is, from a historical point of view, the most important production.

The Name.

"Talmud" is an old scholastic term of the Tannaim, and is a noun formed from the verb "limmed" = "to teach." It therefore means primarily "teaching," although it denotes also "learning"; it is employed in this latter sense with special reference to the Torah, the terms "talmud" and "Torah" being usually combined to indicate the study of the Law both in its wider and in its more restricted sense, as in Pe'ah i. 1, where the term "talmud Torah" is applied to study as a religious duty. On the other hand, the learning acquired by study is also called "talmud," so that Akiba's pupil Judah ben Ilai could say: "He from whom one derives the greater part of his knowledge ["talmudo"] must be regarded as the teacher" (Tosef., B. M. ii., end; Yer. B. M. 8d; B. M. 33a has "ḥokmah" instead of "talmud"). To designate the study of religion, the word "talmud" is used in contrast with "ma'aseh," which connotes the practise of religion. Akiba's view that on this account the "talmud" ranked above the "ma'aseh" was adopted as a resolution by a famous conference at Lydda during the Hadrianic persecution (see Sifre, Deut. 41; Ḳid. 40b; Yer. Pes. 30b; Cant. R. ii. 14). The two terms are contrasted differently, however, in the tannaitic saying (B. B. 130b), "The Halakah [the principles guiding decisions in religious law] may not be drawn from a teaching of the master ["talmud"] nor be based upon an act of his ["ma'aseh"], unless the master expressly declare that the teaching or act under consideration is the one which is applicable to the practise."

In the second place, the word "talmud"—generally in the phrase "talmud lomar"—is frequently used in tannaitic terminology in order to denote instruction by means of the text of the Bible and of the exegetic deductions therefrom. In the third place, the noun "talmud" has the meaning which alone can be genetically connected with the name "Talmud"; in tannaitic phraseology the verb "limmed" denotes the exegetic deduction of a halakic principle from the Biblical text (for examples see R. H. ii. 9; Sifre, Num. 118); and in harmony with this meaning of the word "talmud" denotes that exposition of a halakic saying which receives an exegetic confirmation from the Biblical text. Of the terms, therefore, denoting the three branches into which the study of the traditional exegesis of the Bible was from earliest times divided by the Tannaim (see Jew. Encyc. iii. 163, *s.v.* Bible Exegesis), "midrash" was the one identical in content with "talmud" in its original sense, except that the Midrash, which includes any kind of Biblical hermeneutics, but more especially the halakic, deals with the Bible text itself, while the Talmud is based on the Halakah. The Midrash is devoted to Biblical exposition, the result being the Halakah (comp. the phrase "mi-kan ameru" [= "beginning here the sages have said"], which occurs frequently in the tannaitic Midrash and which serves to introduce halakic deductions from the exegesis). In the Talmud, on the other hand, the halakic passage is the subject of an exegesis based on the Biblical text.

Relation to Midrash.

In consequence of the original identity of "Talmud" and "Midrash," noted above, the former term is sometimes used instead of the latter in tannaitic sentences which enumerate the three branches of traditional science, Midrash, Halakah, and Haggadah (see Ber. 22a [comp. M. Ḳ. 15a and Yer. Ber. 6c, 39]; Ḳid. 30a; Suk. 28a; B. B. 134a; Ab. R. N. xiv. [comp. Masseket Soferim, xvi. 8]; Yer. B. Ḳ. 4b, 31 [comp. Sifre, Deut. 33]; Tosef., Soṭah, vii. 20 [comp. Yer. Soṭah 44a]), while sometimes both "Talmud" and "Midrash" are used (M. Ḳ. 21a; Ta'an. 30a); it must be noted, however, that in the editions of the Babli, "Gemara" is usually substituted for "Talmud," even in the passages here cited. The word "Talmud" in all these places did not denote the study subsequently pursued by the Amoraim, but was used instead of the word "Midrash," although this did not preclude the later introduction of the term "Talmud" into tannaitic sayings, where it either entirely displaced "Midrash" or was used side by side with it.

After the term "Talmud" had come to denote the exegetic confirmation of the Halakah, it was applied also to the explanation and exposition of halakic passages in general. As early as the end of the tannaitic period, when the halakot were finally redacted by the patriarch Judah I. and were designated as "Mishnah," a term originally applied to the entire system of traditional learning, the Talmud was developed as a new division of this same science; and it was destined to absorb all others. In a baraita dating, according to the amora Johanan, from the days of Judah I. (B. M. 33a; comp. Yer. Shab. 15c, 22 *et seq.*), the Mishnah and the Talmud are defined as subjects of study side by side with the "Miḳra" (Bible), the study of the Talmud being mentioned first. To this baraita there is an addition, however, to the effect that more attention should be given to the Mishnah than to the Talmud. Johanan explains this passage by the fact that the members of Judah's academy, in their eagerness to investigate the Talmud, neglected the Mishnah; hence the patriarch laid stress upon the duty of studying the Mishnah primarily. In these passages the word "Talmud" is used not in its more restricted sense of the establishment of halakot by Biblical exegesis, but in its wider signification, in which it designates study for the purpose of elucidating the Mishnah in general, as pursued after Judah's death in the academies of Palestine and Babylon. This baraita is, furthermore, an authentic document on the origin of the Talmud.

Three classes of members of the academy are mentioned in an anecdote referring to Judah I. (B. B. 8a): (1) those who devoted themselves chiefly to the Bible ("ba'ale Miḳra"); (2) those whose principal study was the Mishnah ("ba'ale Mishnah"); and (3) those whose main interest lay in the Talmud ("ba'ale Talmud"). This is the original reading of the passage, although the editions mention also the "ba'ale Halakah" and the "ba'ale Haggadah" (see below). These three branches of knowledge are, therefore, the same as those enumerated in B. M. 33a. Tanḥum b. Ḥanilai, a Palestinian amora of the third century, declared, with reference to this threefold investigation ('Ab. Zarah 19b): "Let the time given to study be divided into three parts: one-third for the Bible, one-third for the Mishnah, and one-third for the Talmud." In Ḳid. 33a this saying is quoted in the name of the tanna Joshua b. Hananiah, although this is probably a corruption of the name of Jose b. Ḥanina (amora). Yudan, a Palestinian amora of the fourth century, found in Eccl. xi. 9 an allusion to the pleasure taken in the three branches of study, Miḳra, Mishnah, and Talmud.

The Three Subjects of Study.

The old trichotomy of traditional literature was changed, however, by the acceptance of the Mishnah of Judah I., and by the new study of the Talmud designed to interpret it. The division termed "Halakot" (singular, "Halakah") in the old classification was then called "Mishnah," although in Palestine the Mishnah continued to be designated as "Halakot." The Midrash became a component part of the Talmud; and a considerable portion of the halakic Bible hermeneutics of the Tannaim, which had been preserved in various special works, was incorporated in the Babylonian Talmud. The Haggadah (plural, "Haggadot") lost its importance as an individual branch of study in the academies, although it naturally continued to be a subject of investigation, and a portion of it also was included in the Talmud. Occasionally the Haggadah is even designated as a special branch, being added as a fourth division to the three already mentioned. Ḥanina ben Pappa, an amora of the early part of the fourth century, in characterizing these four branches says: "The countenance should be serious and earnest in teaching the Scriptures, mild and calm for the Mishnah, bright and lively for the Talmud, and merry and smiling for the Haggadah" (Pesiḳ. 110a; Pes. R. 101b; Tan., Yitro, ed. Buber, p. 17; Massek. Soferim, xvi. 2). As early as the third century Joshua ben Levi interpreted Deut. ix. 10 to mean that the entire Law, including Miḳra, Mishnah, Talmud, and Haggadah, had been revealed to Moses on Sinai (Yer. Pes. 17a, line 59; Meg. 74d, 25), while in Gen. R. lxvi. 3 the blessings invoked in Gen. xxvii. 28 are explained as "Miḳra, Mishnah, Talmud, and Haggadah." The Palestinian haggadist Isaac divided these four branches into two groups: (1) the Miḳra and the Haggadah, dealing with subjects of general interest; and (2) the Mishnah and the Talmud, "which can not hold the attention of those who hear them" (Pesiḳ. 101b; see Bacher, "Ag. Pal. Amor." ii. 211).

According to a note of Tanḥuma ben Abba (of the latter part of the 4th cent.) on Cant. v. 14 (Cant. R. *ad loc.*), a student must be familiar with all four branches of knowledge, Miḳra, Mishnah, Halakah (the last-named term used here instead of "Talmud"), and Haggadah; while Samuel b. Judah b. Abun, a Palestinian amora of the same century, interpreted Prov. xxviii. 11 as an allusion to the halakist ("man of the Talmud") and to the haggadist ("man of the Haggadah"; Yer. Hor. 48c; see also Pesiḳ. 176a; Lev. R. xxi., Talmud and Haggadah). Here may be mentioned also the concluding passage of the mishnaic treatise Abot (v., end): "At the age of five to the Bible; at the age of ten to the Mishnah; at the age of fifteen to the Talmud." This is ascribed by many to the ancient tanna Samuel ha-Ḳaṭon (see Bacher, "Ag. Tan." i. 378), although the sequence of study which it mentions is evidently that which was customary during the amoraic period (comp. also the saying of Abaye in Ket. 50a).

The following passages from the Babylonian Talmud may likewise serve to illustrate the special usage which finally made the word "Talmud" current as the name of the work. Samuel, one of the earliest Babylonian amoraim, interpreted the words of Zech. viii. 10, "neither was there any peace to him that went out or came in," as applying to the restlessness of one who turns from the Talmud and confines himself to the study of the Mishnah (Ḥag. 10a). Johanan, the younger Palestinian contemporary of Samuel, extends the allusion to "him also who turns from one Talmud to study another," referring here to Babli and to Yerushalmi. It is very possible that he had noticed that in the case of his numerous Babylonian pupils the transition from the mishnaic exegesis which they had acquired at home to that of the Palestinian schools was not made without disturbing their peace of mind. Allusions to the "Talmud of Babylon" by two prominent Babylonians who settled in Palestine (Ze'era and Jeremiah) have likewise been preserved (B. M. 85c; Sanh. 24a); and they confirm Johanan's conception of the meaning of the term.

The Gemara.

In Babylonia the Aramaic noun "gemar" (emphatic state, "gemara") was formed from the verb גמר (which does not occur in Palestinian texts), having the meaning of "learn." This substantive accordingly designates that which has been learned, and the learning transmitted to scholars by tradition, although it is used also in a more restricted sense to connote the traditional exposition of the Mishnah; and it therefore gained currency as a designation of the Talmud. In the modern editions of the Babylonian Talmud the term "Gemara" occurs very frequently in this sense; but in nearly every case it was substituted at a later time for the objectionable word "Talmud," which was interdicted by the censor. The only passage in which "Gemara" occurs with the meaning of "Talmud" in the strict sense of that term and from which it was not removed by the censor is 'Er. 32b, where it is used by Naḥman bar Jacob, a Babylonian amora of the second half of the third century. For further details see Bacher, "Gemara," in "Hebrew Union College Annual," pp. 26-36, Cincinnati, 1904, where the word is shown to have been used for "Talmud" from the geonic period (see also *idem*, "Die Terminologie der Amoräer," pp. 31 *et seq.*, Leipsic, 1905). The later editions of the Talmud frequently substitute for the word "Gemara" the abbreviation ש"ס (Aramaic, שתא סדרי = "the six orders of the Mishnah"), which has come to be, with the pronunciation "Shas," a popular designation for the Babylonian Talmud.

Here may be mentioned the term "Shem'ata" (שמעתא), which was used in Babylonia to designate the halakic portion of the Talmud, and which was thus contrasted with "Haggadah" (see Ḥag. 26a; Soṭah 20a; Sanh. 38b; comp. also M. Ḳ. 23a, where "Shemu'ah," the Hebrew form, occurs in a baraita). In the tenth century this word was used in Mohammedan circles to designate Jewish tradition as well as its chief source, the Talmud; so that Mas'udi refers to Saadia Gaon as an "ashma'ti" (*i.e.*, a believer in the tradition), using this term in contrast to "Karaite" (see Pinsker, "Liḳḳuṭe Ḳadmoniyyot," i. 5). A "Kitab al-Ashma'ah" (*i.e.*, "Talmud") is also mentioned ("Z. D. M. G." lviii. 659).

The theorem that the Talmud was the latest development of traditional science has been demonstrated by this discussion of the meaning and the use of the word itself. The Talmud accordingly dates from the time following the final redaction of the Mishnah; and it was taught in the academy of Judah I. as the commentary on the tannaitic Halakah. The editorial activity which, from the mass of halakic material that had accumulated since Akiba's Mishnah, crystallized the Talmud in accordance with the systematic order introduced by that teacher, implied the interpretation and critical examination of the Halakah, and was, therefore, analogous to Talmudic methodology.

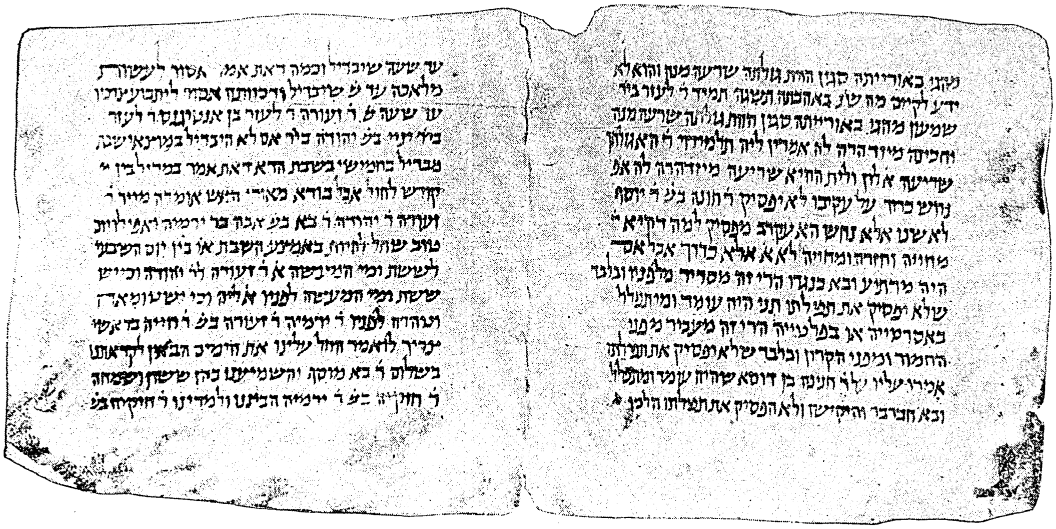
There were, likewise, many elements of tannaitic tradition, especially the midrashic exegesis of the Bible, as well as numerous halakic interpretations, lexicographical and material, which were ready for incorporation into the Talmud in its more restricted meaning of the interpretation of the Mishnah of Judah I. When this Mishnah became the standard halakic work, both as a source for decisions of questions of religious law, and, even more especially, as a subject of study in the academies, the Talmud interpretation of the mishnaic text, both in theory and in practise, naturally became the most important branch of study, and included the other branches of traditional science, being derived from the Halakah and the Midrash (halakic exegesis), and also including haggadic material, though to a minor degree. The Talmud, however, was not an independent work; and it was this characteristic which constituted the chief difference between it and the earlier subjects of study of the tannaitic period. It had no form of its own, since it served as a running commentary on the mishnaic text; and this fact determined the character which the work ultimately assumed.

Relation to Mishnah.

The Talmud is practically a mere amplification of the Mishnah by manifold comments and additions; so that even those portions of the Mishnah which have no Talmud are regarded as component parts of it and are accordingly included in the editions of Babli. The history of the origin of the Talmud is the same as that of the Mishnah—a tradition, transmitted orally for centuries, was finally cast into definite literary form, although from the moment in which the Talmud became the chief subject of study in the academies it had a double existence, and was accordingly, in its final stage, redacted in two different forms. The Mishnah of Judah I. was adopted simultaneously in Babylon and Palestine as the halakic collection par excellence; and at the same time the development of the Talmud was begun both at Sepphoris, where the Mishnah was redacted, and at Nehardea and Sura, where Judah's pupils Samuel and Rab engaged in their epoch-making work. The academies of Babylon and of Palestine alike regarded the study of the Mishnah and its interpretation as their chief task. The Amoraim, as the directors and members of these academies were called (see AMORA), became the originators of the Talmud; and its final redaction marked the end of the amoraic times in the same way that the period of the Tannaim was concluded by the compilation of the Mishnah of Judah I. Like the Mishnah, the Talmud was not the work of one author or of several authors, but was the result of the collective labors of many successive generations, whose toil finally resulted in a book unique in its mode of development.

Before entering into any discussion of the origin and peculiar form of the Talmud, the two recensions of the work itself may be briefly described. The general designation of the Palestinian Talmud as "Talmud Yerushalmi," or simply as "Yerushalmi," is precisely analogous to that of the Palestinian Targum. The term originated in the geonic period, when, however, the work received also the more precise designations of "Talmud of Palestine," "Talmud of the Land of Israel," "Talmud of the West," and "Talmud of the Western Lands." Yerushalmi has not been preserved in its entirety; large portions of it were entirely lost at an early date, while other parts exist only in fragments. The editio princeps (ed. Bomberg, Venice, 1523 *et seq.*), on which all later editions are based, terminates with the following remark: "Thus far we have found what is contained in this Talmud; and we have endeavored in vain to obtain the missing portions." Of the four manuscripts used for this first edition (comp. the note at the conclusion of Shab. xx. 17d and the passage just cited), only one is now in existence; it is preserved in the library of the University of Leyden (see below). Of the six orders of the Mishnah, the fifth, Ḳodashim, is missing entirely from the Palestinian Talmud, while of the sixth, Ṭohorot, it contains only the first three chapters of the treatise Niddah (iv. 48d–51b). The treatises of the orders of the Mishnah are arranged in the following sequence in this Talmud; the pagination also is given here, in parentheses, to indicate the length of the several treatises:

The Palestinian Talmud.



Pages from a Manuscript of the Jerusalem Talmud.
(From the Cairo Genizah.)

I. **Zera'im:** Berakot (2a–14d); Pe'ah (15a–21b); Demai (21c–26c); Ki'layim (26d–32d); Shebi'it (33a–39d); Terumot (40a–48b); Ma'aserot (48c–52a); Ma'aser Sheni (52b–56d); Ḥallah (57a–60b); 'Orlah (60c–63b); Bikkurim (63c–65d).

II. **Mo'ed:** Shabbat (2a–18a); 'Erubin (18a–26d); Pesaḥim (27a–37d); Yoma (38a–45c); Sheḳalim (45c–51b); Sukkah (51c–55d); Rosh ha-Shanah (56a–59d); Beẓah (59d–63b); Ta'anit (63c–69c); Megillah (69d–75d); Ḥagigah (75d–79d); Mo'ed Ḳaṭan (80a–83d).

III. **Nashim:** Yebamot (2a–15a); Soṭah (15a–24c); Ketubot (24c–36b); Nedarim (36c–42d); Giṭṭin (43a–50d); Nazir (51a–58a); Ḳiddushin (58a–66d).

IV. **Neziḳin:** Baba Ḳamma (2a–7c); Baba Meẓi'a (7c–12c); Baba Batra (12d–17d); Sanhedrin (17d–30c); Makkot (30d–32b); Shebu'ot (32c–38d); 'Abodah Zarah (39a–45b); Horayot (45c–48c).

VI. **Ṭohorot:** Niddah (48d–51b).

In order ii. the last four chapters of Shabbat are missing from the Palestinian Talmud, while the treatise Sheḳalim has been incorporated into the editions of the Babylonian Talmud from Yerushalmi, and is found also in a Munich manuscript of Babli. In order iv. the treatises Abot and 'Eduyot are missing in both Talmudim, and the concluding chapter of Makkot is wanting in Yerushalmi. In order vi. the treatise Niddah ends abruptly after the first lines of ch. iv.

Maimonides expressly states in the introduction to his commentary on the Mishnah that in his time Yerushalmi was extant for the entire first five orders (comp. Abraham ibn Daud, ed. Neubauer, "M. J. C." i. 57); therefore he must have seen the Yerushalmi of the order Ḳodashim, although he himself does not quote it in his commentary on this order (see Frankel, "Mebo," p. 45b). Except for the treatise Niddah, on the other hand, there was, according to Maimonides (*l.c.*), no Yerushalmi for the sixth order. A South-Arabian work of the fifteenth century, however, quotes the Gemara "on 'Uḳẓin in the Gemara of the people of Jerusalem," which is said to contain a passage on the zodiac (see Steinschneider, "Catalog der Hebräischen Handschriften der Königlichen Bibliothek zu Berlin," p. 65, Berlin, 1878). The author of this quotation, therefore, knew Yerushalmi for the last treatise of the sixth order, although it is possible that the passage quoted may have been in the lost portion of the treatise Niddah, and that the name "'Uḳẓin" may have been used instead of "Ṭohorot." For further details on the missing sections of Yerushalmi see Frankel, *l.c.* pp. 45a *et seq.*; Weiss, "Dor," iii. 232; Buber, in Berliner's "Magazin," v. 100–105; and Strack, "Einleitung in den Talmud," pp. 63–65. The mishnaic text on which the Palestinian Talmud is based has been preserved in its entirety in a manuscript belonging to the library of the University of Cambridge, and has been edited by W. H. Lowe ("The Mishnah on Which the Palestinian Talmud Rests," Cambridge, 1883).

The Palestinian Talmud is so arranged in the editions that each chapter is preceded by its entire mishnaic text with the paragraphs numbered, this being followed by the Talmud on the several paragraphs. In the first seven chapters of Berakot the paragraphs are designated as "First Mishnah" (מתני' א'), "Second Mishnah," etc.; while in the remaining chapters and all the other treatises the paragraphs are termed "halakot" (הלכה א'). In the early chapters the mishnaic text of each paragraph is repeated entire in the Talmud at the beginning of the paragraph; but later only the first words are prefaced to the Talmudic text. Even in cases where there is no Talmud the designation of the paragraph and the beginning of the mishnaic text are given. The editio princeps seems to have borrowed this arrangement from the manuscripts, although the system is much more simple in the fragment of Yerushalmi edited by Paul von Kokowzoff in the "Mémoires de la Société Archéologique de St. Petersbourg" (xi. 195–205), which contains some paragraphs of the sixth and eighth chapters of Baba Ḳamma. This fragment begins with the concluding lines of the Talmudic text of ch. v.; but between them and the beginning of ch. vi. the Mishnah is lacking, so that the superscription, "Chapter vi.," is followed immediately by the Talmudic text. There is no reference to the beginning of the paragraph, either in the first or in the succeeding paragraphs; nor is there any explanation of the fact that paragraphs 4 and 7 of ch. viii. have no Talmud. It is clear, therefore, that the manuscript to which this fragment belonged contained only the Talmudic text, thus presupposing the use of a special copy of the Mishnah. It is likewise noteworthy that in the first two chapters of Berakot the sections of the Talmudic text on some of the paragraphs are designated in the editions by the word "pisḳa" (section), a term found occasionally also in other portions of the text of Yerushalmi.

The Style of the Yerushalmi.

The style of Yerushalmi may be indicated by a brief analysis of a few sections, such as Ber. i. 1; R. H. i. 1, 2; Giṭ. ii. 1; and B. B. i. 6.

Ber. i. 1: The text of this paragraph, which begins the Mishnah, is as follows:

> "During what time in the evening is the reading of the 'Shema'' begun? From the time when the priests go in to eat their leaven [see Lev. xxii. 7] until the end of the first watch of the night, such being the words of R. Eliezer. The sages, however, say until midnight, though R. Gamaliel says until the coming of the dawn."

The Talmud on this paragraph (2a, line 34–3a, line 3) contains three sections, which correspond to the three opinions and the contents of which are as follows: (1) A citation, from a baraita, of another tannaitic regulation defining the Mishnah that governs the reading of the "Shema'" in the evening; two sayings of Jose (a Palestinian amora of the 4th cent.), serving to elucidate the baraita (2a, 34–45). Remarks on the position of one who is in doubt whether he has read the "Shema'," with analogous cases, according to Jeremiah, whose views were transmitted by Ze'era II. (4th cent.), the first case being decided according to the baraita already mentioned (2a, 45–2b, 4). Another passage from the baraita, designating the appearance of the stars as an indication of the time in question; explanation of this baraita by Abba bar Pappai (transmitter, Phinehas; both of the 4th cent.); other passages on the appearance of the stars as bearing on the ritual, together with a dialectic explanation by Jose b. Abin (second half of the 4th cent.) and a saying by Judah b. Pazzi (2b, 5–31). A baraita on the division between day and night, and other passages bearing on the same subject (*ib.* lines 31–41). The meaning of "ben ha-shemashot" (twilight), and an answer by Tanḥuma b. Abba (latter part of the 4th cent.), together with another solution given by a baraita (*ib.* lines 41–46). Discussion of this baraita by Aḥa and Jose (4th cent.); reference by Mani to a question dealing with this subject which he addressed to Hezekiah of Cæsarea (4th cent.) from Mishnah Zab. i. 6, and the answer of the latter (2b, 46–2c, 9). Amoraic sayings and a baraita on the beginning of the day (*ib.* lines 9–20). A sentence of tannaitic origin in no way related to the preceding matters: "One who prays standing must hold his feet straight," and the controversy on this subject between Levi and Simon (3d cent.), the one adding, "like the angels," and the other, "like the priests"; comments on these two comparisons (2c, 20–31). Further discussion regarding the beginning of the day, introduced by a saying of Ḥanina's (3d cent.); haggadic statements concerning the dawn; a conversation between Ḥiyya the Elder and Simeon b. Ḥalafta (latter part of the tannaitic period); cosmological comments: dimensions of the firmament, and the cosmic distances expressed in units of 50 and 500 years, together with similar haggadic material, chiefly tannaitic in origin; Haggadic sayings on Gen. i. 6, introduced by a saying of Abin's (4th cent.), and including sayings by Rab, Judah b. Pazzi, and Ḥanina; Haggadic material on Isa. xl. 22, introduced by a controversy between Johanan and Simeon b. Laḳish (3d cent.), and on Gen. ii. 4 (2c, 31–2d, 11). On the second part of the first mishnaic sentence; the views of Judah I. and Nathan on the number of the night-watches, and an exegetic discussion of them, with an allusion to Ps. cxix. 62 ("at midnight"), as well as haggadic material concerning David and his harp, with especial reference to Ps. lvii. 9 (2d, 11–44).

Examples.

(2) Assi in the name of Johanan: "The ruling of the sages ["until midnight"] is the valid one, and forms the basis for the counsel given by Jose [4th cent.] to the members of the academy" (*ib.* lines 45–48). Baraita on the reading of the "Shema'" in the synagogue; a question bearing on this matter, and Huna's answer in the name of the Babylonian amora Joseph (*ib.* lines 48–52), an illustration being given in an anecdote regarding Samuel b. Naḥman, together with a haggadic saying by him (*ib.* lines 52–58). A contradictory view by Joshua b. Levi, together with pertinent haggadic sayings to the effect that the "Shemoneh 'Esreh" must follow immediately the after-benediction of the "Shema'" (*ib.* lines 59–73).

(3) R. Gamaliel's view compared with an analogous opinion of Simeon b. Yoḥai, together with a question which remains unanswered (2d, 74–3a, 3).

R. H. i. 1, 2: These two paragraphs, which are combined into one in Babli, deal with the commencement of the four seasons (new years): Nisan 1, Elul 1, Tishri 1, and Shebaṭ 1 (or 15). The Talmud on par. 1 is found in 56a, 44–56d, 52, and that on par. 2 in 56d, 52–57a, 30.

Talmud on par. 1: (*a*) The "new year of the kings." Exegetic deductions and elucidations, beginning with the interpretation of Ex. xii. 1; Johanan's explanation of II Chron. iii. 2; a controversy between Hananiah and Mani regarding the same verse; an explanation by Aḥa of Ex. xii. 1; a baraita by Samuel on the same verse; and similar material (56a, 44–56b, 10). Ḥanina's saying that even the years of Gentile kings were dated from Nisan, and the confirmation thereof by Biblical passages from Haggai and Zechariah, together with the contradictory view of the Babylonian amora 'Efa or Ḥefa; remarks and objections by Jonah and Isaac (56b, 10–29). Jonah on the practical importance of the new year for dating business documents (*ib.* lines 29–33). On the new year in the chronology of the kings of Israel and Judah, together with an interpretation of I Kings ii. 11, and several haggadic passages referring to David (*ib.* lines 33–52).

(*b*) The "new year of the feasts." Statement that according to Simeon b. Yoḥai Nisan 1 marks the beginning of the year for the sequence of the feasts; a tannaitic midrash of considerable length on Lev. xxiii. 38, and a reply by Ela (4th cent.) to a question bearing on this matter; additional remarks and objections by amoraim of the fourth century, together with the citation of a saying by the scholars "of that place" (*i.e.*, Babylonia; 56b, 52–56c, 15); various discussions on kindred subjects, especially those whose content involved halakic exegesis (56c, 15–56d, 14).

(*c*) The "new year for tithes of cattle," declared by Meïr to be Elul 1. Proof by the Babylonian amora Huna, who deduced an opposing view from Ps. lxv. 14; the relation between Ben 'Azzai, who is mentioned in a baraita belonging to this passage, and Akiba (*ib.* lines 14–33); interpretation of Mishnah Bek. vii. 7 as being analogous in content; a citation by Mani of a halakic exegesis by his father, Jonah (*ib.* lines 33–52).

Talmud on par. 2: (*a*) Tishri 1, the "new year for the counting of the years." Deductions from Biblical passages; discussion on the subject between Jonah and the members of the college; Jonah's quotation of Ḥanina's saying on the names of the months, and a saying of Simeon b. Laḳish on the names of the angels (56d, 52–77). (*b*) The "new year for the Sabbatical years and the years of jubilee." Biblical inference (56d, 77–57a, 2). (*c*) The "new year for the planting of trees." Explanation and exegetical deduction (*ib.* lines 3–14). (*d*) The "new year for vegetables." Elucidation and discussion (*ib.* lines 14–23). (*e*) The "new year for trees," this section being supplemented by an example from a tannaitic account of Akiba's practise, with explanations (*ib.* lines 23–30).

Further Examples.

Giṭ. ii. 1: Inadequate attestation of the preparation of a bill of divorce. The Talmud on the passage (44a, 34–71); a special case in the Mishnah shown to contain the opinion of Judah b. Ilai (*ib.* lines 34–40); two casuistic questions by Jose and the Babylonian amora Ḥisda, and the answers furnished by the Mishnah (*ib.* lines 40–50); a more detailed discussion of another question of similar content, with reference to a controversy between Johanan and Simeon b. Laḳish, together with notes thereon by Ammi and Ze'era, and a discussion concluding with a comment by Mani (*ib.* lines 50–71).

B. B. i. 6: (*a*) A short exegetic proof by Ela, based on Prov. xviii. 11 (12d, 71 *et seq.*). (*b*) A baraita dealing with analogous matter, together with a remark by Jose b. Abin (*ib.* lines 72–75).

Although this analysis of the contents of four parts of Yerushalmi gives no adequate idea of the structure of the entire work, it will serve to show the difference between its several parts in regard both to their length and to their amplifications of the simple explanations of the Mishnah. A comparison of the portions of the Palestinian Talmud here summarized with the corresponding sections of Babli, as given below, is especially instructive.

Passages Repeated.

Yerushalmi, when regarded as a work of literature, is noteworthy for a textual peculiarity which is characteristic of it, though found also in Babli, namely, the large number of literal repetitions. Entire passages, sometimes whole columns, of the Talmud are found in two, occasionally in three, separate treatises, in which they differ from each other by mere variants, most of them due to corruptions of the text. These repetitions throw some light on the redaction of the Talmudic text, since they prove that before the editing of the treatises was undertaken a uniform mass of material was already at hand in a definitely revised form; they likewise show that in the compilation of the Talmud one portion was explained by another, as was natural in view of the character of the contents. The opportunity was gladly seized, moreover, to repeat didactic material in passages where it did not strictly belong. These repetitions are obviously of great value in the textual criticism of the Talmud. Since sufficient attention has never yet been paid to this phenomenon of Yerushalmi, a list is here given of those passages of the first order, Zera'im, which are repeated in other orders. It must be noted, however, that this list includes neither citations based on passages of another treatise nor parallel passages consisting of a single sentence.

(*a*) Passages from the order i. repeated in the order ii.:

Ber. 3b, lines 10–55 = Shab. 3a, 69–3b, 20. Ber. 4a, 30–56 = Sheḳ. 47a, 13–59 = M. Ḳ. 83c, 40–83d, 8. Ber. 5a, 33–62 = M. Ḳ. 82b, 14–47. Ber. 5d, 14–20 = Shab. 3a, 55–61. Ber. 5d, 65–6a, 9 = M. Ḳ. 83a, 5–27. Ber. 6c, 4–17 = Yoma 44d, 58–68. Ber. 6d, 60–67 = Meg. 73d, 15–22. Ber. 7b, 70–7d, 25 = Ta'an. 67c, 12–67d, 47. Ber. 7d, 75–8a, 59 = Ta'an. 65c, 2–69. Ber. 8c, 60–69 = R. H. 59d, 16–25. Ber. 9a, 70–9b, 47 = Ta'an. 63c, 66–63d, 44. Ber. 9c, 20–31 = Meg. 75c, 8–19. Ber. 9c, 49–54 = Meg. 75b, 31–36. Ber. 10a, 32–43 = Pes. 29c, 16–27. Ber. 11c, 14–21 = Pes. 37c, 54–71. Ber. 12c, 16–25 = 'Er. 22b, 29–37. Ber. 12c, 44–62 = Suk. 24a, 6–21 = Meg. 72a, 15–31. Ber. 13d, 72–14a, 30 = Ta'an. 64a, 75–64b, 35. Pe'ah 15a, 67–15b, 21 = Ḥag. 76b, 24–53. Pe'ah 17a, 39–72 = Ḥag. 76b, 13–47. Pe'ah 18d, 16–33 = Sheḳ. 46a, 48–67. Pe'ah 18d, 66–19a, 5 = Sheḳ. 48c, 75–48d, 13. Pe'ah 21a, 25–29 = Sheḳ. 48d, 55–58. Dem. 22a, 31–40 = Sheḳ. 48d, 40–49. Kil. 29b, 27–61 = 'Er. 19c, 15–49 = Suk. 52a, 40–73. Kil. 29b, 62–76 = Suk. 52a, 73–52b, 11. Sheb. 34c, 27–49 = M. Ḳ. 80b, 26–52. Sheb. 38a, 50–60 = Shab. 3c, 55–65. Ter. 44a, 32–38 = Shab. 44d, 4–10. Ter. 45d, 42–51 = Shab. 3d, 2–15 (comp. 'Ab. Zarah 41d, 13–28). Ter. 46a, 41–46b, 35 = Pes. 28a, 34–28b, 37. Ma'as. 49a, 22–28 = Suk. 53d, 43–53. Ma'as. 49b, 14–32 = Shab. 6b, 17–36. Ma'as. 49b, 39–48 = Beẓah 62b, 72–62c, 6. Ma'as. Sh. 53b, 6–44 = Yoma 45c, 2–36 (comp. Shebu. 32b, 56–34c, 3). Ma'as. Sh. 54b, 48–58 = Sheḳ. 51b, 15–25. Ma'as. Sh. 55a, 23–55 = 'Er. 24c, 33–66. Ma'as. Sh. 55d, 62–67 = M. Ḳ. 80b, 72–80c, 10. Ḥal. 57c, 16–20 = R. H. 57b, 60–63.

(*b*) Passages from the order i. repeated in the order iii.:

Ber. 6a, 35-6b, 17 = Naz. 56a, 12-68. Ber. 6b, 51-56 = Ḳid. 61c, 11-17. Ber. 9d, 3-19 = Giṭ. 47b, 49-63. Ber. 11b, 42-68 = Naz. 54b, 2-27. Ber. 14b, 45-70 = Soṭah 20c, 40-64. Pe'ah 15b, 41-47 = Ket. 32c, 10-16. Pe'ah 15c, 7-16 = Ḳid. 61a, 75-61c, 10. Dem. 25b, 60-25c, 7 = Ḳid. 63a, 75-63b, 21. Kil. 32a, 64-32d, 7 = Ket. 34d, 74-35b, 56. Sheb. 36b, 25-68 = Ḳid. 61c, 56-61d, 17. Ter. 40c, 42-40d, 6 = Yeb. 13c, 70-13d, 32. Ter. 42b, 44-53 = Naz. 53d, 16-27. Ter. 44c, 9-44d, 44 = Ket. 27b, 5-27c, 39. Ma'as. Sh. 55a, 69-55b, 13 = Giṭ. 47d, 55-70. 'Orlah 61b, 8-33 = Naz. 55c, 32-63. Bik. 64a. 32-44 = Yeb. 9b, 71-9c, 8.

(*c*) Passages from the order i. repeated in the order iv.:

Ber. 3a, 52-69 = Sanh. 30a, 65-30b, 8 = 'Ab. Zarah 41c, 46-63. Ber. 6b, 20-41 = Sanh. 20a, 43-60. Pe'ah 16b, 22-25, 43-60 = Sanh. 27c, 38-60. Sheb. 35b, 26-40 = 'Ab. Zarah 44b, 27-41. Sheb. 39b, 14-38 = Mak. 31a, 33-50. Ter. 45c, 24-45d, 11 = 'Ab. Zarah 41a, 18-41b, 3. Ter. 47c, 66-47d, 4 = 'Ab. Zarah 41c, 13-23. Ma'as. Sh. 54d, 71-55a, 8 = Sanh. 19a, 63-76. Ma'as. Sh. 56c, 9-18 = Sanh. 18d, 13-22. 'Orlah 62b, 49-62c, 10 = 'Ab. Zarah 45a, 32-45b, 10.

The following parallel passages from the second and fourth orders may also be mentioned on account of their length: Shab. 9c, 62-9d, 59 = Sanh. 24c, 19-24d, 14; Shab. 14d, 10-15a, 1 = 'Ab. Zarah 40d, 12-41a, 4.

Despite these parallel passages in the four orders of Yerushalmi, which might be regarded as a proof of the uniform redaction of the entire work, there is proof to the contrary, which shows that the first two orders differ in origin from the third and fourth. While the first and second contain a large number of baraitot with the introductory formula "Samuel transmits [תני שמואל]," there is not a single baraita by Samuel in the third and fourth orders. These latter two include, on the other hand, many controversies between Mani and Abin, two amoraim of the second half of the fourth century, while Zera'im and Mo'ed contain very few (see Bacher, "Ag. Pal. Amor." iii. 398). The redaction of Yerushalmi is discussed in further detail below.

The Haggadot of the Yerushalmi.

The haggadic portions of Yerushalmi are also characteristic of its style. As in Babli, they frequently have only a slight bearing, sometimes none at all, on the subject of the mishnaic section and its Talmudic interpretation, being added to the passages in which they are found either because they were mentioned in the academy on account of some subject under discussion, or because, in the process of the redaction of the treatise, this haggadic material, which was valued for some special reason, seemed to fit into the Talmudic text at the passage in question. Many haggadic portions of Yerushalmi are likewise found almost word for word in the earlier works of Palestinian midrashic literature, especially in Genesis Rabbah, Leviticus Rabbah, Pesiḳta di-Rab Kahana, Ekah (Lamentations) Rabbati, and Midrash Shemuel. These parallel passages do not always prove actual borrowing; for the same earlier source may have been used in the redaction both of Yerushalmi and of the midrashic works. The haggadot of the Palestinian Talmud were collected and annotated by Samuel ben Isaac Jaffe Ashkenazi in his "Yefeh Mar'eh" (Venice, 1589), and they were translated into German by Wünsche ("Der Jerusalemische Talmud in Seinen Haggadischen Bestandtheilen," Zurich, 1880).

Linguistically, the Palestinian Talmud is Aramaic, in so far as its framework (like the elucidations of the mishnaic text by the members of the academies and the amoraic discussions connected with them) is redacted in that language; the greater portion of the terminology is in like manner Aramaic. The same dialect is employed in general for the narrative sections, including both the haggadot and the accounts of the lives of the sages and their pupils. The Aramaic portion consequently comprises all that is popular in origin or content. The Hebrew sections, on the other hand, include the halakic sayings of the Tannaim, the citations from the collections of baraitot, and many of the amoraic discussions based on the tannaitic tradition, together with other sayings of the Amoraim. This linguistic usage is due to the fact that both in Palestine and in Babylon the Halakah was for the most part elucidated and expanded by the Amoraim themselves in the language in which it had been transmitted by the Tannaim. In the academy the Hebrew of the Mishnah held its place side by side with the Aramaic, thus giving to the latter a certain coloring, especially from a lexicographic point of view. Hebrew was retained in great measure also in the amoraic Haggadah. The Aramaic, which assumed a fixed literary form in Yerushalmi, is almost the same as that of the earlier Palestinian midrashic works, differing from them only in a few peculiarities, mostly orthographic. This idiom, together with that of the Palestinian Targum on the Pentateuch, has been analyzed in G. Dalman's "Grammatik des Jüdisch-Palästinischen Aramäisch" (Leipsic, 1894; 2 ed. 1905).

Editions of the Babli.

The first complete edition of the Babylonian Talmud (תלמוד בבלי) was printed at Venice, 1520-23, by Daniel Bomberg, and has become the basis, down to the present day, of a very large number of editions, including that of Basel, 1578-81, which, with the changes and omissions made by the censor, exerted a powerful influence on later texts until the edition of Frankfort-on-the-Main, 1720-22, with its additions, became the model of all subsequent editions of the Talmud (see below). The external form of Babli was determined by the editio princeps. While the first edition of Yerushalmi, in its two columns on each folio page, contains only the text, the editio princeps of Babli adds the commentary of Rashi on one margin and the tosafot on the other, together with kindred matter. Especially noteworthy is the fact that the first edition of Babli has a pagination which has been retained in all subsequent editions, thus rendering it possible to quote passages with exactness, and to find citations readily. The mishnaic treatises which have no Babylonian Talmud are included in the editions of the Talmud, together with commentaries, and these same tractates are likewise found in the only complete manuscript of Babli (that at Munich), where they form an appendix, although they precede the post-Talmudic treatises, which are likewise contained in the editions. It has been noted above that the editions of Babli contain the Yerushalmi for the treatise

Shekalim; and this is also the case in the Munich manuscript.

The following list gives the names of the treatises of Babli which have been preserved, together with the sequence generally followed in the editions, and the number of folios in each tractate, the pagination always beginning with fol. 2. Of the 570 leaves of the Munich codex, containing about eighty lines to a page, 490 belong to Babli; this gives an approximate idea of the size of this Talmud. The amount of text on each page of the editions, however, varies greatly on account of the varying length of the commentary of Rashi and the tosafot which accompany it; but the number of leaves shows the comparative lengths of the several treatises.

I. **Zera'im:** Berakot (64).

II. **Mo'ed:** Shabbat (157); 'Erubin (105); Pesaḥim (121); Beẓah (40); Ḥagigah (27); Mo'ed Ḳaṭan (29); Rosh ha-Shanah (35); Yoma (88); Sukkah (56); Ta'anit (31); Megillah (32).

III. **Nashim:** Yebamot (122); Ketubot (112); Ḳiddushin (82); Giṭṭin (90); Nedarim (91); Nazir (66); Soṭah (49).

IV. **Neziḳin:** Baba Ḳamma (119); Baba Meẓi'a (119); Baba Batra (176); 'Abodah Zarah (76); Sanhedrin (113); Shebu'ot (49); Makkot (24); Horayot (14).

V. **Ḳodashim:** Zebaḥim (120); Menaḥot (110); Bekorot (161); Ḥullin (142); 'Arakin (34); Temurah (34); Keritot (28); Me'ilah (22); Tamid (9).

VI. **Ṭohorot:** Niddah (73).

Missing Gemaras.

Babli thus contains but one treatise each of the first and sixth orders; of the second, Sheḳalim (see above) is lacking; and there is no Talmud on 'Eduyot or Abot either in Babli or Yerushalmi. The fifth order of Babli contains neither Middot nor Ḳinnim, nor the third, fifth, sixth, and seventh chapters of Tamid. It is incorrect, however, to speak of missing portions of the Babylonian Talmud, since in all probability the sections which it omits were entirely disregarded in the final redaction of the work, and were consequently never committed to writing (for a divergent opinion see Weiss, "Dor," iii. 271). It will be shown further on that the mishnaic treatises lacking in Babli were subjects of study in the Babylonian academies.

In the editions the Babylonian Talmud is so arranged that each paragraph of the Mishnah is followed by the portion of the Talmud which forms the commentary on it; the portions are frequently divided into sections, rubricked by the successive sentences of the mishnaic paragraph on which they are based, although an entire paragraph occasionally serves as a single text. Thus Babli on Ket. ii. 1 (16a–18b) is divided into six sections; but there is no division into sections for ii. 2 (18b–20b), ii. 3 (20b–22a), ii. 5 (23b), and ii. 9 (27b–28a). There are three sections for ii. 4 (23a); two for ii. 6 (23b–26a), ii. 7 (26b–27a), and ii. 8 (27a, b); and eight for ii. 10 (28a, b). In the Munich codex, which is based on a manuscript of the middle of the ninth century (see Lewy in "Breslauer Jahresbericht," 1905, p. 28), the text of the entire chapter of the Mishnah is written in large characters on the inner portion of the page, separated from the Talmudic text, which is in a different script. In the fragments in the Bodleian Library, Oxford, written in 1123 and containing a portion of the treatise Keritot (see "J. Q. R." ix. 145), each chapter is headed by the entire mishnaic text on which it is based. Then follow the sections of the Talmud, each beginning with the word 'מתני and the first part of the mishnaic paragraph in question, although some sections are marked by the superscription 'פיס (= פיסקא). The superscription גמרא, which in the editions marks the beginning of the Talmud on each paragraph of the Mishnah, is found neither in the Munich codex nor in the Bodleian fragments. Most of the manuscripts containing one or more treatises of Babli, and described by R. N. Rabbinovicz in the introductions to vols. i., iv., viii., ix., and xi. of his "Diḳduḳe Soferim," are so arranged that the entire mishnaic text is placed at the beginning of the chapter; and this is also occasionally the case in the editions, as in the first chapter of the treatise Sanhedrin. In a St. Petersburg manuscript said to date from 1112 the paragraphs are repeated in their proper places (*ib.* viii. 3). A number of codices in the Vatican Library are arranged partly in the one way and partly in the other (xi. 13, 15, 17, 18), while the system adopted in the printed texts occurs in manuscripts also (see *ib.* iv. 6, 8; xi. 20). It may be mentioned as a curious circumstance that in one manuscript of the Vatican (*ib.* xi. 19), containing the treatise Pesaḥim, many passages are vocalized and accented, as is also the case in a Bodleian fragment of Yerushalmi on Berakot ("J. Q. R." ix. 150). A fragment of considerable length in the Cambridge Library, and possibly the earliest extant manuscript of Babli, also contains the treatise Pesaḥim; it has been edited by Lowe ("The Fragment of Talmud Babli of the Ninth or Tenth Century," Cambridge, 1879); and in its four folios it includes the text of fols. 7a, below –9a, middle, and 13a, below –16a, above, of the editions. The pages are divided into two columns; and the entire mishnaic text precedes the chapter; the several sections, even those beginning with a new paragraph of the Mishnah, have an introduction only in the case of the first word of the mishnaic passage in question, with the word 'מתני as superscription.

Earliest Manuscript of the Babli.

The character of Babli and its divergencies from Yerushalmi may best be illustrated by a citation of its commentary on the same passages of the Mishnah as those contained in the sections of the Palestinian Talmud already analyzed.

Ber. i. 1 (divided in Yerushalmi into four paragraphs, but in Babli forms one only, the explanations of which are given in 2a–9a; for the purposes of the present comparison, only those discussions in Babli which refer to that part of the Mishnah which in Yerushalmi forms the first paragraph are here summarized): (*a*) The initial question of the Mishnah and its basis; two divergent answers, together with an objection and its refutation (2a; all anonymous). The initial statement of the Mishnah, and an interpretation of Lev. xxii. 7 based on a baraita on this verse and concluding with a note of Rabbah b. Shela (2b), and the method of teaching this interpretation in Palestine. The contradictions between the statement of the Mishnah and three baraitot which are successively stated and dialectically refuted (all anonymous). A discussion of the third baraita (3a). The opinion of R. Eliezer ("until the end of the first watch of the night"), and the problem whether

הדרן עלך האומר התקבל מאי

three or four night-watches were implied; a haggadic baraita with a saying of R. Eliezer on the three watches of the night, together with a discussion of it. A haggadic excursus of some length, beginning with Rab's saying regarding the three watches of the night, and containing a baraita (a poem by Jose b. Ḥalafta) and a disquisition on it (3b). Further details of the night-watches, beginning with a controversy between Judah I. and Nathan (in a baraita); a haggadic saying of Joshua b. Levi transmitted by Zeriḳa and Ammi, this section concluding with a saying of Ashi. Another saying of Joshua b. Levi, transmitted in like manner, together with two versions of a comment by Abba b. Kahana. Discussion of the first saying of Joshua b. Levi, beginning with the rising of David "at midnight" (Ps. cxix. 62), and devoted in the main to the connotation of the word "neshef" (*ib.* cxix. 147), together with sayings of Babylonian amoraim. The way in which David knew when midnight had arrived, and concerning his harp (4a). Further details regarding David, Ps. lvii. 9, and Ex. xi. 4, with an exegesis by Ashi, which concludes the entire discussion. Additional haggadic material concerning David, and a controversy between the Palestinian haggadists Levi and Isaac on Ps. lxxxvi. 2 with reference to Ps. cxix. 62, together with comments and citations of a kindred nature.

Examples from the Babli.

(*b*) Dialectic exposition of the relation of the view of the scholars to the opinions of R. Eliezer and R. Gamaliel, together with the citation of a baraita (4b). A controversy between Johanan and Joshua b. Levi on the sequence of the "Shema'" and prayer, based on a sentence in this baraita ("the 'Shema'' is read: prayer is offered"), together with a discussion devoted chiefly to exegetic inferences. An objection alleged by Mar b. Rabina and based on a passage in the Mishnah, and a haggadic saying of Eleazar b. Abina to the effect that he who recites Ps. cxlv. thrice daily is assuredly a son of the world to come, the citation being made in this place on account of an aphorism of similar content given by Johanan in the course of the same debate. A discussion of these matters, and a saying of Johanan on Ps. cxlv., together with another haggadic aphorism by Eleazar b. Abina on the angels Michael and Raphael, and its elucidation. The view of Joshua b. Levi on the evening "Shema'," which should be recited in bed (5a), and amoraic sayings on the same subject, together with a confirmation, by a citation of Ps. iv. 6, of the ruling of Joshua b. Levi; a haggadic saying of Simeon b. Laḳish transmitted by Levi b. Laḥma, as well as another aphorism of this scholar transmitted by the same authority. A haggadic saying by Isaac on reading the "Shema'" in bed, and a comment by Ashi, followed by another haggadic aphorism by Isaac based on Job v. 7; interpretation of this verse as denoting afflictions sent by God ("yissurim"), against which the study of the Torah gives protection; haggadic sentences on the Law. A long series of haggadic sayings by Palestinian and Babylonian amoraim, and especially by Johanan, regarding affliction (5b), with anecdotes from Palestine and Babylon. A baraita with a saying of Abba Benjamin regarding prayer before retiring, and its elucidation, together with three other baraitot and haggadic sayings of Abba Benjamin regarding prayer (6a), regarding demons (with various sayings of Babylonian authors), and praying in the synagogue. A haggadic saying by Isaac on the last subject transmitted by Rabin b. Adda, together with a saying of Ashi and additional elucidations, followed by another aphorism transmitted by Rabin in the name of Isaac regarding the "phylacteries of God," and by a discussion of the subject by Babylonian amoraim, the view of Ashi standing last. A third haggadic saying of Isaac, of similar transmission, concerning prayer in the synagogue (6b), and a series of aphorisms of a like nature, the first being by Johanan, and the second by Huna transmitted by Ḥelbo. These, interspersed with other sayings, are followed by five more aphorisms transmitted by Ḥelbo in the name of Huna and regarding departure from the synagogue, the Minḥah prayer, participation in marriage festivities, the fear of God, and the refusal to return a salutation. A series (7a) of five haggadic sayings transmitted by Johanan in the name of Jose ben Ḥalafta: the prayer offered by God, pacification of an angry neighbor, discipline of one's own conscience, three requests of Moses, and the teaching that a threat or promise by God is not recalled, even though given only conditionally, and that neither, therefore, is ever unfulfilled. After a number of sayings, partly tannaitic and partly amoraic in origin, come six haggadic aphorisms (7b) transmitted by Johanan in the name of the tanna Simeon ben Yoḥai, the second treating of the same subject as the corrresponding one in the previous series. To these sayings are appended various aphorisms and elucidations, followed by a conversation between Naḥman b. Jacob and Isaac, in which the latter cites a sixth saying, concerning prayer in the synagogue, transmitted by Johanan in the name of Simeon ben Yoḥai. Additional haggadic aphorisms (8a) on this subject as well as on the importance of the synagogue, followed by three sayings of 'Ulla transmitted by Ḥiyya b. Ammi, and by various aphorisms on the reading of the Torah in the synagogue (8b) and other kindred matters. This portion is concluded by the instructions which Joshua b. Levi gave to his sons, and by the analogous instructions which Raba gave to his children, as well as by elucidations of details of these teachings and by sayings of a similar import.

(*c*) In the name of Samuel, Judah declares that the opinion of R. Gamaliel is authoritative. A baraita giving a similar view by Simeon ben Yoḥai, followed by an interpretation of it with a final decision by Joshua ben Levi, and by another version of the relation to it of the ruling of Joshua ben Levi. The section (9a) terminates with an opinion on this baraita by a scholar who had come from Palestine to Babylon.

R. H. i. 1 (§§ 1–2 in Yerushalmi; the Talmud on these sections is contained in 2a–15b): (*a*) Ḥisda's answer to the question as to the practical importance of the "new year of the kings," with a citation of the mishnaic passage (Sheb. x. 5) regarding antedated and postdated promissory notes. A baraita on the reckoning of regnal years, and its elucidation (2b), together with hermeneutic deductions from the Bible regarding Nisan as the begin-

Further Examples.

ning of the regnal year, introduced by an inference of Johanan based on I Kings vi. 1 as compared with Num. xxxiii. 38, Deut. i. 3, 4, Num. xxi. 1 (3a), and similar passages, preference being finally given to Eleazar's deduction founded on II Chron. iii. 2. A baraita giving the deduction of Johanan. The assertion of Ḥisda that the regnal years of non-Israelitish kings were reckoned from Tishri, together with Biblical passages in confirmation of this view, beginning with Neh. i. 1 and its hermeneutic exposition (3b), the conclusion being formed by a variety of haggadic material on the Persian kings mentioned in the Bible (4a).

(*b*) Ḥisda's answer to the query why Nisan 15, the first day of the Feast of Passover, was not made the "new year of the feasts," while a baraita shows that this view was promulgated by Simeon ben Yoḥai himself. Another baraita (4b) on the ritual order of the festivals, together with exegetic deductions from the views contained therein and additional discussions, concluding with an elucidation (5a) of other halakic and exegetic sayings on festivals and sacrifices. Baraita (5b) on Deut. xxiii. 22 *et seq.*, and a detailed discussion, followed by a similar section (6a, b) on Deut. xxiii. 24. Baraita (7a) on Nisan 1 and its four meanings, the first being deduced from Ex. xii. 2 and Deut. xvi. 1, although an objection caused Lev. xxiii. 39 to be regarded by Ḥisda as the basic passage, while Zech. i. 7 was cited to refute an allegation made by Rabina, additional Biblical passages being quoted by the Babylonian amoraim 'Ulla, Kahana, and Ashi; the section is concluded by a deduction of the three other meanings of Nisan 1 (7b) mentioned in the baraita.

(*c*) The signification of Elul 1 as the "new year for tithes of cattle," as taught by R. Meïr. The various origins of the sentences collected in R. H. i. 1, together with a saying by Joseph, followed by a series of aphorisms of later Babylonian amoraim, and one by Ashi (8a). Johanan's deduction, from Ps. lxv. 14, of the double view concerning the new year for tithes of cattle, and its dialectic elucidation.

Second half of the mishnaic paragraph: (*a*) The question regarding the practical utility of the new year for the counting of the years, answered by Pappa in exactly the same way as Ḥisda had solved the question concerning the new year of the kings; solution of the discrepancy and further elucidations of the principle that Tishri 1 was the new year for the counting of the years. Two baraitot on Ps. lxxxi. 4 *et seq.* (8b).

(*b*) An inference regarding the year of jubilee, based on Lev. xxv. 4; and the obviation of the difficulty presented by Lev. xxv. 9 (with reference to the Sabbatical year) by means of a baraita on the following verse, together with two other baraitot on the same subject (9a) and an elucidation of Tishri 10, concluded by a baraita on Lev. xxv. 11 and its interpretation (9b).

(*c*) Biblical deduction regarding the planting of trees and a baraita thereon, with an inference drawn from the Bible by Johanan (10a), and an elucidation of another baraita cited in explanation of the first. Johanan's deduction from Gen. viii. 13 regarding the opposing views of R. Meïr and R. Eleazar (10b) as to whether a day may be reckoned like a year, thus introducing a baraita containing the controversy between R. Eliezer and R. Joshua on the month of Creation, the former arguing for Tishri and the latter for Nisan; exegetic haggadot of considerable length (11a–12a) on this section.

(*d*) A baraita stating that "tithes" and "vows" as well as "vegetables" belong to Tishri 1, together with interpretations by hermeneutics and other methods (12b), and with discussions of the subject by the Palestinian and Babylonian schools, and halakic exegeses (13a–14a).

(*e*) An argument by Hoshaiah transmitted by Eleazar (14a), and a baraita recording the practise of R. Akiba (14b–15b), as well as elucidations of it. Another baraita on Shebaṭ 15, with a controversy between Johanan and Simeon ben Laḳish, and a discussion of it.

Giṭ. ii. 1 (the Talmud on this section is contained in 15a–17a): (*a*) The purpose of the entire paragraph, although its content is immediately apparent from the opening sentence of the mishnaic treatise.

(*b*) The problem of the connotation of "the half" of the bill of divorce, and Ashi's answer.

(*c*) The law regarding a case in which only "the half" of a bill of divorce is signed by witness in the presence of the bearer; the more rigorous interpretation of it by Ḥisda and subsequent modifications by Raba and (15b) Ashi, as well as a dialectic discussion of these three sayings. Analogous cases from other branches of the Halakah and casuistic questions bearing on them (16a), concluding with one by Pappa which remains unanswered.

(*d*) Case in which one of the bearers of a bill of divorce witnesses the engrossing of the document and the other the signature; exact definition given by Johanan and transmitted by Samuel b. Judah (16b); the answer of the latter to the objection of Abaye, although another version of the entire affair makes Ashi the author of the objection; controversy on the subject between Hoshaiah and 'Ulla. Anecdote of a visit made by Judah b. Ezekiel to Rabbah bar bar Ḥana during an illness of the latter, and their conversation on a problem connected with Giṭ. i. 1.

(*e*) The case in which the engrossing of a bill of divorce is witnessed by one and the signature by two persons (17a), and the exact definition of such an event, given by Johanan and transmitted by Ammi, the section being concluded by a discussion between Ammi and Assi.

Legal Example.

B. B. i. 6 (the Talmud on this section is contained in 7b–11a): (*a*) "One who is part owner of a courtyard is obliged to contribute to the cost of the gateway as well as of the door itself"; the citation of a legend concerning Elijah to prove that a gateway is not necessarily a subject for praise, concluded by a casuistic definition of the case presupposed by the Mishnah.

(*b*) According to R. Simeon b. Gamaliel, "Every courtyard is not adapted to a gateway"; a baraita containing the complete version of this saying.

(*c*) According to R. Simeon b. Gamaliel, "One who dwells in a city is obliged to contribute toward the building of the walls and the doors," etc.; a baraita containing the complete version of this saying. Johanan's answer to the query advanced by Eleazar concerning the method of levying contributions, followed by a second version of the same account. The patriarch Judah II. and the scholars contributed toward building the wall, although the legality of this action was questioned by Simeon b. Laḳish on the basis of a haggadic deduction from Ps. cxxxix. 18, while Johanan proposed another verse, Cant. viii. 10, to aid in the solution of the problem (8a); Rabbah's interpretation of this passage of Canticles. An instance of contributions on the part of the scholars of Babylonia, and the proof of their illegality furnished by the exegesis of three Biblical passages, taken respectively from the Pentateuch, the Prophets, and the Hagiographa. Pappa's proof that a certain tax was imposed on orphans, and a discussion of it, followed by a tannaitic account (half Aramaic) by Judah I. of the support of scholars during a time of famine.

(*d*) "How long must one dwell in a city to have equal rights with its citizens? Twelve months"; a conflicting baraita which speaks of thirty days; Rabbah's solution of this contradiction, while Johanan reconciles the discrepancy between the period of twelve months and that given in another baraita. The saying of Johanan as to the liability of scholars to taxation, and various statements regarding the practise of the Babylonian sages. The way in which Joseph (4th cent.) expended a sum of money sent him by the mother of King Sapor, together (8b) with an interpretation of Jer. xv. 2. Baraita on the mode of levying taxes for the poor, and the right of assessment of municipal taxes. The rule of the Mishnah (Sheḳ. v. 2) that the smallest number of persons who may be entrusted with raising taxes is two, and its Biblical basis according to Naḥman b. Jacob, together with sayings and examples bearing on this matter. An interpretation of Dan. xii. 3 as referring to the collectors and trustees of the tax for the poor, followed by two baraitot on these collectors and Abaye's statements regarding the practise of Rabbah b. Naḥmani, as well as (9a) by a note of Ashi and an opinion of Rabbah. Baraita on the auditing of the accounts of the trustees of the tax for the poor, and elucidations of it. Notes and anecdotes illustrating Mishnah Pe'ah viii. 7 (on the amount to be given to the poor), followed by haggadic passages on the importance of almsgiving, among these aphorisms being one cited by Rabbah as transmitted to Eleazar by a certain 'Ulla with a curious surname, which forms the basis of an anecdote. Further haggadic passages on the charity of Eleazar, Isaac, and others. A baraita giving R. Meïr's answer (10a) to the question why God Himself does not nurture the poor, followed by an account of the conversation on this subject between R. Akiba and Tineius Rufus. Sermon by Judah b. Shalom (Palestinian amora of the 4th cent.) on Jer. lvii. 17, and anecdotes from the lives of Johanan b. Zakkai and Pappa. Haggadic sayings by tannaim and amoraim on alms. The vision of Joseph b. Joshua b. Levi (10b) of the future life, together with baraitot on the interpretation of Prov. xiv. 34 by Johanan b. Zakkai and his scholars as well as by Gamaliel II. and the other sages of Jabneh. The charity of the mother of Sapor, and two baraitot: one (11a) the story of the beneficence of Benjamin ha-Ẓaddiḳ; the other an account of the generosity of King Monobaz.

(*e*) "If one obtains a dwelling-place in the city, he immediately receives equal rights with the citizens"; an opposing view by Simeon b. Gamaliel transmitted in two versions.

Framework of Commentary.

This analysis of four different passages of the Babylonian Talmud shows, in the first place, that the framework, as in the Palestinian Talmud, is formed by a running interpretation of the Mishnah, despite the heterogeneity of the material which is interwoven with it. The Talmud, however, is not a mere commentary on the Mishnah, since, in addition to its haggadic portions, it contains a varied mass of halakic material, connected only loosely, if at all, with the contents of the mishnaic paragraphs in question; and while the Talmud sometimes adheres closely to the text of such a paragraph, its commentary on a single section of the Mishnah is often expanded into the compass of a small book. In this respect Babli is much more free than Yerushalmi, which is more concise in other regards as well; the wider interests of the former and its greater variety and length are due at least in large part to the fact that the Babylonian academies enjoyed a longer existence and hence its redaction extended over a more protracted period.

The fact that the Haggadah is much more prominent in Babli, of which it forms, according to Weiss ("Dor," iii. 19), more than one-third, while it constitutes only one-sixth of Yerushalmi, was due, in a sense, to the course of the development of Hebrew literature. No independent mass of haggadot developed in Babylon, as was the case in Palestine; and the haggadic writings were accordingly collected in the Talmud. The most curious example of this is a midrash on the Book of Esther, found at the end of the first chapter of the treatise Megillah (pp. 10b-17a). Except for the fact that the text of this section naturally alludes to the Book of Esther, the midrash has no connecting-link with the preceding portion of the Talmud. It is a true midrashic compilation in the style of the Palestinian midrashim, introduced by sixteen proems (mostly by Palestinian authors), and followed by exegeses and comments on individual verses of Esther in the order of the text, each preceded by a catchword (for further details on this midrash see Bacher, "Ag. Bab. Amor." p. 119). A fragment of a similar compilation on Lamentations, treating of a few verses of the first two chapters, is found in the last chapter of Sanhedrin (104, 4 *et seq.*), this fragment being inserted there on account of the preceding casual allusion to the Babylonian exile (*ib.* p. 120). The treatise Giṭṭin (55a-58a) contains a haggadic compilation on the destruction of Jerusalem, its elements being found partly in the Palestinian literature, partly in Ekah Rabbati, and partly in the treatise Ta'anit of the Jerusalem Talmud. This haggadah, which begins with a saying by Johanan, is appended to the brief halakic elucidation of the first sentence of the mishnaic paragraph on the law of the Sicarii (Giṭ. v. 6), mentioning those who fell in the war against

Haggadah of the Babli.

the Romans. In Babli such haggadic interpolations, often of considerable length, are extremely frequent, while the very content of the mishnaic paragraphs often affords a basis for lengthy haggadic excursuses. Thus the last (in Yerushalmi, next to the last) chapter of Sanhedrin is made the foundation for a mass of haggadic comments, most of them only loosely connected by an association of ideas with the text of the passages of the Mishnah to which they are assigned. In this exceptionally long chapter of Babli (pp. 90a–113b) only that portion (111b–112b) which refers to the Law in Deut. xiii. 12 *et seq.* is halakic in nature. The haggadic conclusion of the first chapter of Soṭah furnishes the basis for further Talmudic comments in the style of the Haggadah (8b, 14a); so that, for example, the interpretation of Ex. ii. 4, cited in the Mishnah (11a), is followed (11a–13b) by an independent section which forms a running midrash on Ex. i. 8–ii. 4. Additional examples may be found in nearly every treatise of the Babylonian Talmud. The haggadic sections of this Talmud, which form an important part of the entire work, have been collected in the very popular "‘En Ya‘aḳob" of Jacob ibn Ḥabib (1st ed. 1516), as well as in the rarer "Haggadot ha-Talmud" (Constantinople, 1511; comp. Rabbinovicz, "Diḳduḳe Soferim," viii. 131); and they have been translated into German by A. Wünsche ("Der Babylonische Talmud in Seinen Haggadischen Bestandtheilen," 3 vols., Leipsic, 1886–89).

An important factor in the composition of the Talmud, and consequently one it is necessary to consider in a discussion of its literary form, is the frequent juxtaposition of several sayings ascribed to one and the same author. These sayings, which are frequently linked together by the name of their common transmitter as well as by that of their author, were evidently taught in this connected form in the academies, thus finding their way into the appropriate passages of the Talmudic text. Such groups of aphorisms are extremely frequent in Babli; and several of them are found in the passage from Ber. 2a–9a which has been analyzed above (regarding Yerushalmi see Frankel, "Mebo," p. 39a). Other circumstances which must be considered in discussing the composition of the text of the Talmud are set forth in the account of its origin and redaction given below.

Style and Language.

The remarks already made concerning the relation of the Hebrew and the Aramaic elements in the vocabulary of Yerushalmi apply with little modification to Babli, although the Aramaic of the latter is more nearly akin to the Syriac (the eastern Aramaic dialect then current in Babylonia) and is even more closely related to Mandæan (see Nöldeke, "Mandäische Grammatik," p. xxvi., Halle, 1875; on the Persian elements in the vocabulary of Babli see Jew. Encyc. vii. 313b, *s.v.* Judæo-Persian). In regard to Greek and Latin terms Levy makes the incomprehensible statement ("Neuhebr. Wörterb." iv. 274a) that "no Greek or Latin words are found in the Babylonian Talmud." This is, however, incorrect; for a large number of words from the Latin and Greek (see Krauss, "Lehnwörter," i. p. xxiii.) are employed in the Talmud, both in the tannaitic passages found in Babli, and in the sayings of Palestinian as well as of Babylonian amoraim, such as Rab (see Bacher, *l.c.* p. 32). On the exegetic terminology as applied in Biblical and traditional hermeneutics, see Bacher, "Terminologie der Amoräer," Leipsic, 1905. An interesting linguistic peculiarity of Babli is the fact that tannaitic traditions, especially stories, are occasionally given entirely in Aramaic, or an anecdote, begun in Hebrew, is continued in Aramaic (such as the story, designated by תנו רבנן as a baraita, concerning Joshua b. Peraḥyah and his pupil Jesus [Sanh. 107b]).

The Halakah in Babli.

The contents of the Talmud—this term being restricted to Babli, although much which applies to it holds true of Yerushalmi as well—fall into the two main divisions of Halakah and Haggadah. Although, as stated above, the Mishnah itself frequently furnishes the ground for the inclusion of haggadic elements in the Talmud, and although the subjects discussed in the Halakah frequently lead of themselves to haggadic treatment, the Haggadah occupies only a secondary position in the Talmud, since this is, both in origin and in purpose, a halakic work, and was intended to serve as a commentary on the chief authoritative work of the tannaitic Halakah, the Mishnah of Judah I. Those portions, therefore, which treat of the interpretation of the Mishnah are the substance of the Talmud. This interpretation, however, was not merely theoretical, but was primarily devoted to a determination of the rules applying to the practise of the ceremonial law; on the other hand, the development of the Halakah had not ceased in the academies of the Amoraim, despite the acceptance of the Mishnah, so that the opinions and the decisions of the Amoraim themselves, even when they were not based merely on an interpretation of the Mishnah and other tannaitic halakot, became the subject of tradition and comment. In addition to the Mishnah, furthermore, the Midrash (the halakic exegesis of the Bible) and the Halakah in the more restricted sense became the subject of tradition and of study, and were preserved in different collections as being the other results of the tannaitic period. In this way the Talmud, in its strict connotation of the interpretation of the Mishnah, was increased by an inexhaustible mass of material, which afforded the amoraic academies a basis both for the interpretation and for the criticism of the Mishnah; for since the Talmud deals with the criticism of the Mishnah, not only in text and meaning, but also in its relation to the baraitot, these baraitot themselves were frequently interpreted in the same way as were mishnaic passages (*e.g.*, R. H. 10a, 12b, 29a), and were supplied with their Talmud. Moreover, the Talmud was further augmented by the inclusion within it of the views which the scholars expressed in the course of their public, judicial, and other activities, as well as by the data regarding their private lives and their religious practises which were discussed and memorized in the academies. If this brief sketch of the Talmud as regards its halakic contents be supplemented by the statement that the sayings of the several amoraim as well as the opposing views of their contemporaries and the members of the academies, whether teachers or pupils, are frequently recorded in connection with the report of the discussions of the academies, a more complete view of the nature of the Talmud and a better conception of its form may be gained.

The Framework Anonymous.

The real framework of the Talmud, however, on which the entire structure was built, was, as noted above, provided by the questions, comments, and discussions which are based on individual paragraphs of the Mishnah, and which are anonymous, or not ascribed to any author. Appended to these passages and interspersed among them are sayings whose authors are named; and this class frequently preponderates greatly. The anonymous framework of the Talmud may be regarded as the warp resulting from the united activity of the members of the academy, and upon which the woof of the Talmud was interwoven and developed during three centuries, until its final redaction gave it definitive form. The Talmud is really the work of the body of scholars in the academies, who devoted themselves to it generation after generation, and kept its traditions alive. Although many members of the academies—the great as well as the small, teachers as well as pupils—are mentioned as the authors of various sayings and decisions, and as taking part in the discussions and controversies, some of them being deemed scholars worthy of record on account of a single remark, the background of the Talmud, or rather the background for those elements regarding whose authorship statements are made, was formed by the united efforts of those who labored to produce that work. The manifold objections and refutations introduced by the word "metibi" (= "they object"), and the questions (generally casuistic in nature) preceded by the formula "ibba'ya lehu" (= "they have asked") refer to this body of scholars, regardless of the date at which they lived.

Redaction.

This allusion to the anonymous framework of the Talmud suggests the problem of its redaction, which is partially answered by the allusion itself; for the work began with the inception of the collection, and the first amoraim laid the foundation for the task, which was carried on by succeeding generations, the final result being the Talmud in its present form. The system of mishnaic hermeneutics, which was in a sense official, and was at all events sanctioned by the lectures delivered in the academy, was determined as early as the first generation, and remained valid thenceforth. It is interesting to notice that the only certain occurrence of the word "Gemara" in the sense of "Talmud" ('Er. 32b) is found in connection with an account which throws a flood of light upon the first stages of the redaction of the Talmud. This account begins with the interpretation of 'Er. iii. 4, and is as follows: "R. Ḥiyya b. Abba, R. Assi [Palestinian amoraim in Babylon], and Rabba b. Nathan sat; and beside them sat also Rab Naḥman. They sat and said [here follows a dialectic discussion on the nature of the place of the tree mentioned in the paragraph of the Mishnah]. Then R. Naḥman said: 'It is correct; and Samuel also has approved of this explanation.' Then the first three asked: 'Hast thou established this explanation in the Gemara?' [*i.e.*, "Hast thou included it as a fixed element in the Talmud? Naḥman answers in the affirmative, whereupon a confirmatory amoraic tradition is added; and, in the name of Samuel, Rab Naḥman interprets the mishnaic passage under consideration in the light of that exegesis]." The term "ḳaba'" ("establish") was used in a later age by Sherira Gaon to designate the incorporation of portions that were used to make up the Talmud into its text (see Lewy, "Interpretation des Ersten Abschnitts des Palästinischen Talmud-Traktates Nesikin," p. 4; Bacher, in "Hebrew Union College Annual," 1904, p. 34), while in the Talmud itself the word was applied to the redaction of tannaitic traditions (see R. H. 32a, above; Ḳid. 25a; Sanh. 21b; Zeb. 114b). This account, which dates from the beginning of the amoraic period in the Academy of Nehardea, is, curiously enough, an isolated instance; for among the many dates and accounts which the Talmud contains in reference to the academy and its members, there is no direct statement concerning the redaction of the text, either in its earlier stages or at its conclusion, although certain statements on divergent traditions of amoraic sayings and discussions afford an idea of the way in which the Talmudic text emerged from the various versions given by the scholars and schools that transmitted it. These statements, which have been collected by Lewy (*l.c.* pp. 4-14), use the verb "tanni" ("pa'el" from תני) in referring to lectures on the Talmudic text as well as amoraic sayings or discussions on them (Bacher, "Terminologie der Amoräer," p. 239). Thus it is stated (Shab. 48b; B. B. 86a) that at Sura a certain interpretation was given in the name of Ḥisda and at Pumbedita in that of Kahana. There are a number of other similar statements concerning traditions, in regard to differences, as between Sura and Pumbedita, and between Sura and Nehardea, in the wording of the amoraic sayings and in their ascribed authorship (Giṭ. 35a). Especially frequent is the mention of amoraim of the fourth and fifth centuries as transmitters of these divergent statements, either two amoraim being named as authorities for two different versions, or an amora being cited as opposing another version to an anonymous tradition. As examples of the former may be mentioned Rabba and Joseph (Zeb. 25b), Pappa and Zebid (Shab. 66b), Kahana and Tabyomi (Ned. 16b), Ashi and Mar Zuṭra (Shab. 119a), and Rabina and Aḥa (Ket. 31b); while many other instances are cited by Lewy (*l.c.*).

Particularly interesting are the cases in which a divergent account is presented before Ashi, and thus before the one who projected the definitive redaction of the Talmud, Ashi appearing in all these cases as representing the version first given. Thus the amora Mordecai said to Ashi: "Thou teachest thus; but we teach differently" (Men. 42b; Ber. 5a). In addition to such statements, which are ascribed to members of the Babylonian academies, and which indicate divergencies in amoraic tradition, the extant text of the Talmud contains also a number of other

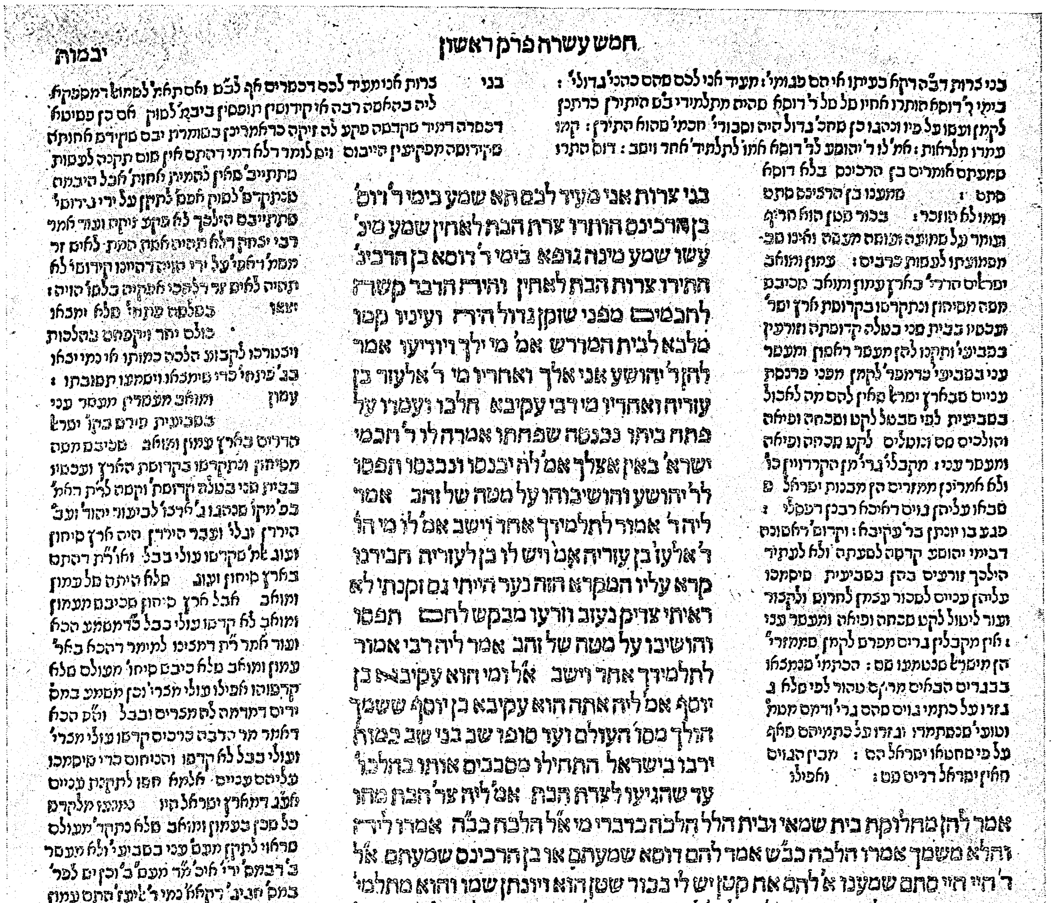
Technical Terms for Tradition.

variants, which are included without such statements. These are introduced by such formulas as "And if you will say" (ואי תימא), referring to other authorities, or "There are those who say," or "There are those who teach," and similar phrases. The expression "another version" (לישנא אחרינא) frequently appears in the text as a superscription to a divergent account (Naz. 9b; B. Ḳ. 59a; Ḥul. 119b; Tem. 5a, 6a, 9b, 11b, 30b [comp. Frankel in "Monatsschrift," 1861, x. 262]; Niddah 29a, 38a). All these instances afford an idea, even though but an imperfect one, of the gradual development of the Talmudic text. To comprehend why only practically a single Talmud was produced, despite the various academies, the great number of authoritative transmitters of the mass of material, and the number of generations that collaborated on the work, it must be borne in mind that there was a continual interchange of ideas between the academies, and that the numerous pupils of the successive generations who memorized the Talmud, and perhaps committed at least a part of it to writing, drew from a single source, namely, the lectures of their masters and the discussions in the academies; further, that, since the work on the Talmud was continued without interruption along the lines laid down by the first generation of amoraim, all succeeding generations may be regarded as one body of scholars who produced a work which was, to all intents and purposes, uniform. This unity finds its expression in the phraseology adopted in the anonymous framework of the Talmud, which terms the authors "we," exactly as a writer speaks of himself as "I" in an individual work. Examples of this phraseology occur in the following formulas: והוינן בה ("We then raised the question"; see Shab. 6b, 71a, 99b; Yoma 74a, 79b; Suk. 33a; Meg. 22a; Yeb. 29b; Ḳid. 49a; Giṭ. 60b; Shebu. 22b; 'Ab. Zarah 35a, 52b; Niddah 6b); ורמינהו ("We have opposed [another teaching to the one which has been quoted]"); תנן ("We have learned," or, in other words, "have received by tradition"), the conventional formula which introduces mishnaic passages; and, finally, מנא לן ("Whence have we it?"), the regular preface to an inquiry regarding the Biblical basis of a saying. In all these formulas the "we" denotes the authors of the Talmud regarded as a collective unity, and as the totality of the members of the academies whose labors, covering three centuries of collaboration, resulted in the Talmud. It was in the Babylonian Academy of Sura, moreover, that the final redaction of the Talmud took place, the very academy that took the lead in the first century of the amoraic period; and the uniformity of the Talmud was thus assured, even to the place of its origin.

Date of Redaction.

The statements already made concerning the continuous redaction of the Babylonian Talmud apply with equal force to the Yerushalmi, this fact being expressed by Lewy (*l.c.* pp. 14–15) in the following words: "In Palestine, as in Babylon, there may have been different Talmudim in the various schools at different periods. . . . Similarly in the Palestinian Talmud different versions of amoraic sayings are quoted in the names of different authors, from which it may be inferred that these authors learned and taught different Talmudim." Lewy speaks also (*l.c.* p. 20) of several redactions which preceded the final casting of the Palestinian Talmud into its present form. The actual condition of affairs can scarcely be formulated in these terms, however, since the divergencies consist, for the most part, of mere variants in certain sentences, or in the fact that there were different authors and transmitters of them; and although many of these deviations are cited by R. Jonah and R. Jose, who lived and taught contemporaneously at Tiberias, this fact scarcely justifies the assumption that there were two different Talmudim, one taught by Jonah and the other by Jose; it will nevertheless be evident, from the statements cited above, that the Talmud existed in some definite form throughout the amoraic period, and that, furthermore, its final redaction was preceded by other revisions. It may likewise be assumed that the contemporaneous schools of Tiberias, Sepphoris, and Cæsarea in Palestine taught the Talmud in different redactions in the fourth century. Lewy assumes, probably with correctness, that in the case of Yerushalmi the treatise Neziḳin (the three treatises Baba Ḳamma, Baba Meẓi'a, and Baba Batra) was taken from a redaction differing from that of the other treatises. (Allusion has already been made to a difference of content between the first two and the last two orders of the Yerushalmi.) With regard to Babli, Frankel has shown ("Monatsschrift," x. 194) that the treatise Tamid, in which only three chapters out of seven are accompanied by a Talmud, belongs to a different redaction from that of the other treatises; and he endeavors to show, in like manner (*ib.* p. 259), both "that the redactor of the treatise Ḳiddushin is not identical with that of Baba Batra and Nedarim," and "that the redactor of the treatise Giṭṭin is not the same as that of Keritot and Baba Batra." However, as these remarks refer to the final redaction of the Talmud, they do not touch upon the abstract unity of the work as emphasized above. It is sufficient to assume, therefore, that the final redaction of the several treatises was based on the versions used in the different academies. It may be postulated, on the whole, that the Palestinian Talmud received its present form at Tiberias, and the Babylonian Talmud at Sura (comp. the passages in Yerushalmi in which הכא [= "here"] refers to Tiberias, and those in Babli in which the same word denotes Sura [Lewy, *l.c.* p. 4]).

The chief data regarding the academies of Palestine and Babylon, whose activity resulted in the Talmud, have been set forth elsewhere (see Jew. Encyc. i. 145–148, *s.v.* Academies), so that here stress need be laid only on those events in the history of the two schools and of their teachers which are especially noteworthy in connection with the origin and the final redaction of the two Talmudim. It may be said, by way of preface, that the academies of Palestine and Babylon were in constant intercommunication, notwithstanding their geographical position. Many prominent Babylonian scholars settled permanently in Palestine, and many eminent Palestinians sojourned in Babylon for some time,



חמש עשרה פרק ראשון

יבמות

בני צרות אני מעיד לכם תא שמע בימי ר' דוס'
בן הרכינס הותרו צרת הבת לאחין שמע מינ'

PAGE FROM THE FIRST COMPLETE EDITION OF THE BABYLONIAN TALMUD, PRINTED BY BOMBERG, VENICE, 1520-23.

(From the Sulzberger collection in the Jewish Theological Seminary of America, New York.)

or even for a considerable portion of their lives. In the second half of the third century Babylonian students sought the Palestinian schools with especial frequency, while many pupils of Johanan went during the same period to Babylon; and in the troublous days of the fourth century many Palestinian scholars sought refuge in the more quiet regions along the Euphrates. This uninterrupted association of scholars resulted in an active interchange of ideas between the schools, especially as the activity of both was devoted in the main to the study of the Mishnah. The Jerusalem Talmud accordingly contains a large number of sayings by Babylonian authorities, and Babli quotes a still larger number of sayings by Palestinian scholars in addition to the proceedings of the Palestinian academies, while it likewise devotes a very considerable space to the halakic and haggadic teachings of such Palestinian masters as Johanan, Simeon b. Laḳish, and Abbahu. Anonymous Palestinian sentences are quoted in Babli with the statement, "They say in the West"; and similar maxims of Babylonian origin are quoted in Yerushalmi in the name of "the scholars there." Both the Talmudim thus acquired more traits in common than they had formerly possessed despite their common foundation, while owing to the mass of material which Babli received from the schools of the Holy Land it was destined in a measure to supplant the Palestinian Talmud even in Palestine.

Activity of Jonah and Jose.

The history of the origin of Yerushalmi covers a period of two centuries. Its projector was Johanan, the great teacher of Tiberias, who, together with his pupils and contemporaries, some of them of considerable prominence, laid the foundations for the work which was continued by succeeding generations. The extreme importance of Johanan in the genesis of the Palestinian Talmud seems to have been the basis of the belief, which first found expression in the twelfth century, although it is certainly older in origin, that he was the author of Yerushalmi (see Frankel, "Mebo," p. 47b). As a matter of fact, however, almost a century and a half elapsed after the death of Johanan (279) before this Talmud received its present form, but it was approximated to this form, toward the end of the fourth century, by Jonah and Jose, the two directors of the Academy of Tiberias. Their joint halakic sentences, controversies, and divergent opinions on the utterances of their predecessors are scattered throughout Yerushalmi; but the conclusion that Jose redacted it twice, which has been drawn from certain statements in this Talmud, is incorrect (Frankel, *l.c.* p. 101a; Weiss, "Dor," iii. 113 *et seq.*, 211; see Lewy, *l.c.* pp. 10, 17; Halevy, "Dorot ha-Rishonim," ii. 322). Jonah's son Mani, one of the scholars most frequently named in Yerushalmi, seems, after studying at Cæsarea, where noteworthy scholars were living in the fourth century, to have raised the school of Sepphoris to its highest plane; and a large number of the sayings of the "scholars of Cæsarea" was included in Yerushalmi (see "Monatsschrift," 1901, pp. 298-310). The only other halakist of importance among the Palestinian amoraim is Jose b. Abin (or Abun). According to Frankel (*l.c.* p. 102a), he occupied about the same position in regard to the redaction of Yerushalmi as was held by Ashi in regard to that of Babli (see also Weiss, *l.c.* iii. 117). The final redaction of the Talmud was reserved for the succeeding generation, probably because the activity of the Academy of Tiberias ceased with the discontinuance of the patriarchate (*c.* 425). This was the time during which Tanḥuma b. Abba (see Bacher, "Ag. Pal. Amor." iii. 502) made his collection and definite literary arrangement of the haggadic exegesis of the amoraic period.

The beginnings of the Babylonian Talmud are associated both with Nehardea, where the study of the tradition had flourished even before the close of the tannaitic period, and with Sura, where Rab founded a new academy which soon surpassed Nehardea in importance. Rab and Samuel, who respectively presided with equal distinction over the two schools, laid the foundation of the Babylonian Talmud through their comments on the Mishnah and their other teachings. Their views are frequently contrasted in the form of controversies; but on the other hand they are often mentioned as the common authors of sentences which were probably transmitted by certain pupils who had heard them from both masters. One of these pupils, Judah b. Ezekiel, when asked to explain some of the more obscure portions of the Mishnah, subsequently alluded plaintively to the "hawayyot" of Rab and Samuel, meaning thereby the questions and comments of the two masters on the entire Mishnah (Ber. 20a and parallels). In like manner, scholars of the fourth century spoke of the hawayot of Abaye and Raba, which formed, as it were, the quintessence of the Talmud, and which, according to an anachronistic addition to an old baraita, were even said to have been included in the branches of knowledge familiar to Johanan b. Zakkai (Suk. 28a; B. B. 134a).

The pupils of Rab and Samuel, the leading amoraim of the second half of the third century—Huna, Ḥisda, Naḥman b. Jacob, Sheshet, and the Judah mentioned above, who is especially prominent as a transmitter of the sayings of his two teachers—added a mass of material to the Talmud; and the last-named founded the Academy of Pumbedita, where, as at Sura, the development of the Talmud was continued. Pumbedita was likewise the birthplace of that casuistic and hair-splitting method of interpreting and criticizing halakic passages which forms the special characteristic of the Babylonian Talmud, although the scholars of this academy devoted themselves also to the study of the collections of tannaitic traditions; and at the beginning of the fourth century the representatives of the two movements, "Sinai" Joseph and Rabbah, the "uprooter of mountains," succeeded their master Judah and became the directors of the school. Their sayings and controversies, together with the still more important dicta and debates of their pupils Abaye and Raba, form a considerable part of the material of the Talmud, which was greatly increased at the same time by the halakic and haggadic sentences brought from Palestine to Babylon. All the six orders of the Mishnah were then studied, as is stated by Raba (not Rabba; see Rabbinovicz, "Diḳduḳe Soferim," on Ta'anit, p. 144), although in Judah's time the lectures had been confined to the fourth order, or, according to the view of Weiss ("Dor," iii. 187), which is probably correct, to the first four orders (comp. Meg. 28b; Ta'an. 24a, b; Sanh. 106b; Raba's pupil Pappa expresses a similar view in Ber. 20a).

Activity of Raba.

Rab's activity marks the culmination of the work on the Talmud. The time had now come when the preservation and arrangement of the material already collected were more important than further accretions. Naḥman b. Isaac, pupil and successor of Raba (d. 352), whom he survived but four years, expressed the task of the epigoni in the following words (Pes. 105b): "I am neither a sage nor a seer, nor even a scholar as contrasted with the majority. I am a transmitter ["gamrana"] and an arranger ["sadrana"]." The combination of the former term with the latter, which occurs only here, very concisely summarizes the activity of the redactor. It is clear that Naḥman b. Isaac actually engaged in this task from the fact that he is mentioned as the Babylonian amora who introduced Mnemonics ("simanim"), designed to facilitate the memorizing and grouping of Talmudic passages and the names of their authors. The mnemonics ascribed to him in the Talmud (see J. Brüll, "Die Mnemonotechnik des Talmuds," p. 21; Bacher, "Ag. Bab. Amor." p. 134), however, constitute only a very small part of the simanim included in the text of that work. These again form but a remnant of the entire mass of what N. Brüll ("Jahrb." ii. 60) terms the "mnemotechnic apparatus," of which only a portion was included in the printed text of the Talmud, although many others may be traced both in the manuscripts of the Talmud and in ancient citations (see N. Brüll, *l.c.* pp. 62 *et seq.*, 118 *et seq.*). The material, to which the epigoni of the second half of the fourth century had added little, was now ready for its final redaction; and it was definitively edited by Ashi (d. 427), who during his long period of activity infused fresh life into the Academy of Sura. In view of his recognized authority, little was left for the two succeeding generations, except to round out the work, since another redaction was no longer possible. The work begun by Ashi was completed by Rabina (Abina), whose death in 499 marks, according to an ancient tradition, the end of the amoraic period and the completion of the redaction of the Talmud.

Committed to Writing.

The date at which the Talmud was committed to writing is purely conjectural. The work itself contains neither statements nor allusions to show that any complete or partial copy of the work redacted and completed by Ashi and Rabina had been made in their days; and the same lack of information characterizes both Yerushalmi and the Mishnah (the basis of both the Talmudim), as well as the other works of the tannaitic period. There are, however, allusions, although they are only sporadic, which show that the Halakah and the Haggadah were committed to writing; for copies were described as being in the possession of individual scholars, who were occasionally criticized for owning them. This censure was based on an interdiction issued in the third century, which forbade any one to commit the teachings of tradition to writing or to use a manuscript of such a character in lecturing (see Giṭ. 60a; Tem. 14b). Replying to the scholars of Kairwan, Sherira Gaon in his letter (ed. Neubauer, "M. J. C." i. 26) alludes to this prohibition as follows: "In answer to your question asking when the Mishnah and the Talmud were respectively committed to writing, it should be said that neither of them was thus transmitted, but both were arranged [redacted] orally; and the scholars believe it to be their duty to recite them from memory, and not from written copies." From the second part of this statement it is evident that even in Sherira's time the "scholars," a term here restricted to the members of the Babylonian academies, refrained from using written copies of the Talmud in their lectures, although they were sufficiently familiar with it to be able to recite it from memory. The statement that the exilarch Naṭronai (8th cent.), who emigrated to Spain, wrote a copy of the Talmud from memory (see Brüll, "Jahrb." ii. 51), would show that the scholars of the geonic period actually knew the work by heart. Although this statement is not altogether free from suspicion, it at least proves that it was believed to be within the powers of this exilarch to make a copy of the Talmud without having an original at hand. This passage also throws light upon the period of the development and redaction of the Talmud, during which the ability to memorize the mass of material taught in the schools was developed to an extent which now transcends conception.

On the other hand, Sherira's statement shows that his denial of the existence of the Talmud and the Mishnah in written form was limited to an officially recognized redaction; for manuscripts of the kind mentioned by him were then current, as they had been in the geonic period, despite the interdiction; for they were used at least as aids to study, and without them the Talmud could not possibly have been memorized. In like manner, this prohibition, in the light of Sherira's words, does not preclude the existence of private copies of portions of the traditional literature, even in earlier times. The concealed rolls ("megillot setarim") with halakic comments which Rab found in the house of his uncle Ḥiyya (Shab. 6b; B. M. 92a), as well as the note-books (πίνακες) mentioned at the beginning of the amoraic period and in which such scholars as Levi b. Sisi, Joshua b. Levi, Ze'iri, and Ḥilfai or Ilfa (Shab. 156a; Yer. Ma'as. 49d, 60b; Men. 70a) entered sentences, some of them halakic in character, indicate that such personal copies were frequently used, while the written Haggadah is repeatedly mentioned. It may therefore be assumed that the Mishnah and other tannaitic traditional works were committed to writing as early as the time of the Amoraim. In like manner, there may have been copies of the amoraic comments on the Mishnah, as aids to the memory and to private study. In the early part of the fourth century Ze'era disputed the accuracy of the halakic tradition taught by the Babylonian amora Sheshet; and as he based his suspicions on Sheshet's blindness, he evidently believed that it was impossible for the Babylonian scholar to confirm and verify his knowledge by the use of written notes (see Bacher, "Ag. Pal. Amor." iii. 4). When Ashi undertook the final redaction of the Talmud he evidently had at his disposal notes of this kind, although Brüll (*l.c.* p. 18) is probably correct in ascribing to Rabina the first complete written copy of the Talmud; Rabina had as collaborators many of the Saboraim, to whom an ancient and incontrovertible tradition assigns numerous additions to the Talmudic text.

No Formal Ratification.

When Rabina died a written text of the Talmud was already in existence, the material contributed by the Saboraim being merely additions; although in thus extending the text they simply continued what had been done since the first redaction of the Talmud by Ashi. The Saboraim, however, confined themselves to additions of a certain form which made no change whatsoever in the text as determined by them under the direction of Rabina (on these saboraic additions as well as on other accretions in Babli, see the statements by Brüll, *l.c.* pp. 69-86). Yet there is no allusion whatever to a formal sanction of the written text of the Talmud; for neither did such a ratification take place nor was a formal one at all necessary. The Babylonian academies, which produced the text in the course of 300 years, remained its guardians when it was reduced to writing; and it became authoritative in virtue of its acceptance by the successors of the Amoraim, as the Mishnah had been sanctioned by the latter and was made the chief subject of study, thus becoming a basis for halakic decisions. The traditions, however, underwent no further development; for the "horayot," or the independent exegesis of the Mishnah and the halakic decisions based on this exegesis, ceased with Ashi and Rabina, and thus with the completion of the Talmud, as is stated in the canon incorporated in the Talmud itself (B. M. 86a). The Mishnah, the basal work of halakic tradition, thenceforth shared its authority with the Talmud.

Among the Jews who came under the influence of western Arabic culture the belief that the Talmud (and the Mishnah) had been redacted orally was superseded by the view that the initial redaction itself had been in writing. This theory was first expressed by R. Nissim of Kairwan ("Mafteah," p. 3b), although even before his time the question addressed, as already noted, to Sherira Gaon by the Jews of Kairwan had shown that they favored this view, and the gaon's response had received an interpolation postulating the written redaction of the Talmud.

The definitive redaction of the Babylonian Talmud marks a new epoch in the history of the Jewish people, in which the Talmud itself becomes the most important factor, both as the pivotal point of the development and the manifestation of the spirit of Judaism, and as a work of literature deeply influenced by the fortunes of those who cherished it as their palladium. On the internal history of Judaism the Talmud exerted a decisive influence as the recognized source for a knowledge of tradition and as the authoritative collection of the traditional religious doctrines which supplemented the Bible; indeed, this influence and the efforts which were made to escape from it, or to restrict it within certain limits, constitute the substance of the inner history of Judaism. The Babylonian academies, which had gradually become the central authority for the entire Jewish Diaspora, found their chief task in teaching the Talmud, on which they based the answers to the questions addressed to them. Thus was evolved a new science, the interpretation of the Talmud, which produced a literature of wide ramifications, and whose beginnings were the work of the Geonim themselves.

Influence of the Talmud.
